CONCLUSIONS:
Our data show that patients with T2DM have smaller pineal gland volumes and pineal gland volume is negatively related to emotional disorders. We hypothesize that volumetric changes in the pineal gland of T2DM patients may be involved in the reduced melatonin secretion in these patients. Further studies will be necessary to investigate the potential role of the pineal gland in the pathophysiology of T2DM.

低级别胶质瘤及病理分型的基因表达谱荟萃分析

王思琪,范文亮,邹嫣,韩萍
华中科技大学同济医学院附属协和医院

研究**目的** 2016 版分类标准结合分子学特征和病理表现对胶质瘤进行分类，我们通过对低级别胶质瘤相关的芯片进行荟萃分析，筛选出与低级别胶质瘤及不同病理分型相关的潜在靶向标志物，为探索低级别胶质瘤的分子机制提供理论基础，为特异性分子靶点的个体化治疗提供参考。
材料与**方法** 我们使用 INMEX 对 8 个独立的芯片数据集进行荟萃分析，并对差异基因进行 GO 功能注释、KEGG 信号通路分析及网络荟萃分析，筛选出低级别胶质瘤潜在靶向基因，通过 TCGA 数据库，我们对潜在靶向基因进行了表达验证，并进行了生存分析，最后我们搜集了 6 例低级别胶质瘤及 6 例正常脑组织标本对潜在差异基因进行免疫组化检测。
结果 （1）我们筛选出的 8 块低级别胶质瘤芯片共包括 291 个低级别胶质瘤和 83 个对照脑组织，使用 INMEX 软件进行荟萃分析，发现低级别胶质瘤与脑组织相比，共有 708 个差异表达基因，包括 385 个上调基因和 323 个下调基因。进一步我们筛选出具有两种病理分型（星形细胞瘤和少突胶质细胞）的 5 块芯片进行差异分析，发现 497 个差异基因（222 个上调基因和 275 个下调基因）。（2）功能注释得出一系列与肿瘤发生发展有关的信号通路。（3）基于网络的荟萃分析得出 FN1 和 APP 为低级别胶质瘤的关键枢纽基因。（4）通过 TCGA 数据库中低级别胶质瘤的相关数据进行分析，我们验证了 6 个关键基因（SPARC，MTHFD2，PTPRZ1，RBP4，CCKBR，STX1A）的表达情况，并发现 HIP1R 的高表达与总生存期增加显著相关（P＝0.0010），而 TBXAS1 的高表达与总体生存降低显著相关（P＝0.0031）。（5）进一步免疫组化验证显示 MTHFD2 和 SPARC 在低级别胶质瘤中阳性表达，而 RBP4 在低级别胶质瘤中阴性表达。
结论 我们的研究结果揭示了一系列低级别胶质瘤中诊断和治疗的潜在分子生物学标记，为未来研究提供了丰富而新颖的基因资源库。

Diffusion Kurtosis Imaging for Detection of Early Brain Changes in Parkinson’s Disease

Jitian Guan[1],Xilun Ma[1,2],Yuanyu Shen[1],Zhiwei Shen[1],Yanzi Chen[1],Renhua Wu[1]
1.Department of Radiology， the Second Affiliated Hospital of Shantou University Medical College，Shantou， China
2.Department of Radiology， the First Affiliated Hospital of Shantou University Medical College，Shantou， China

We aimed to evaluate microscale changes in the bilateral red nucleus and substantia nigra of patients with Parkinson’s disease (PD) using diffusion kurtosis imaging

(DKI). Twenty-six patients with PD (mean age: 62.5 ± 8.7 years, Hoehn-Yahr stage: 0-4.0, Unified Parkinson's Disease Rating Scale (UPDRS) scores: 8-43) and 15 healthy controls (mean age: 59.5 ± 9.4 years) underwent DKI of the substantia nigra and red nucleus. Imaging was performed using a General Electric (GE) Signa 3.0 Tesla MR Imaging System. Patients with PD were divided into two groups consisting of 12 patients with UPDRS scores ≥30 and 14 patients with UPDRS scores <30. All DKI data processing operations were performed with commercial workstations (GE, ADW 4.6) using Functool software to generate color-coded and parametric maps of mean kurtosis (MK), fractional anisotropy (FA), and mean diffusivity (MD). MK values in the bilateral substantia nigra were significantly lower in patients with early- and advanced-stage PD than in controls. Moreover, MK values in the left substantia nigra were significantly lower in patients with advanced-stage PD than in those with early-stage PD. Patients with advanced-stage PD also exhibited significant decreases in MK values in the bilateral red nucleus relative to controls. No significant differences in FA or MD values were observed between the PD and control groups. There were no significant correlations between MK, FA, or MD values and UPDRS scores. Our findings suggest that decreased MK values in the substantia nigra may aid in determining the severity of PD and help provide early diagnoses.

Pineal gland abnormality in fragment reading

Dan Feng[1],Guo-Yan Chen[1],Ke Xu[2],Jie Zhang [1],Chang-Jun Su[1],Guang-Bin Cui[1],Wen Wang[1]
1.Tangdu Hospital, Air Force Medical University
2.Student Brigade, Air Force Medical University

BACKGROUND:
Fragmented reading has been linked to autism and depression with sleep disorders etc. Melatonin, which is secreted by the human pineal gland, plays an important role in sleep and circadian rhythm, our understanding of the mechanisms behind it have remained unclear. Studies have shown that low melatonin levels in ASD could be linked to a decrease of the pineal gland volume (PGV). The aim of the present study was to evaluate and compare pineal gland volumes in before and 1 month after fragment reading.
SUBJECTS AND METHODS:
We retrospectively evaluated the pineal gland volumes of 33 groups, including 33 cases of before fragment reading, 30 cases of 1 month after fragment reading. The total pineal gland volume of all groups was measured via magnetic resonance images using 3D slicer software, and the total mean pineal volume of each group was compared.
RESULTS:
The mean pineal volumes of people with before and 1 month after fragment reading were 87.89±53.29 mm^3, 88.49±46.90 mm^3, respectively. The mean pineal volume of 1 month after fragment reading was similar than that of before fragment reading but with borderline difference.
CONCLUSIONS:
Our data show that people with before and 1 month after fragment reading demonstrated no difference in their pineal volumes.

The vitro study of a novel MR and fluorescence dual-modality bioimaging nanoprobe

Liping Guo
Department of Radiology, Ningbo Huamei Hospital, Chinese Academy of Sciences University

Abstract **Background** In recent decades, molecular imaging, especially the study of multimodality probe, has been flourishing at an unprecedented pace and stimulating intense interest from various of discipline as it will surely offer revolutionary tools not only for fundamental studies but also for clinical applications. As an non-radiative and high resolution imaging modality, magnetic resonance imaging (MRI) has been used extensively in clinical diagnosis. Moreover, Gadolinium (Gd)-based MRI contrast agents have been successfully applied for detecting tumors by providing accurate and reliable details of the tumor. Meanwhile, optical imaging has drawn much attention for its excellent imaging sensitivity, cost effectiveness, operational simplicity and real-time imaging features. It is urgent to develop a MR and fluorescence dual-modality contrast agent by combining the superiority of different imaging modalities.

Methods we report a novel MR and fluorescence dual-modality carbon quantum dot functionalized by gadolinium chelates (named as Gd-CQDs) that is obtained through one-step pyrolysis of gadopentetate monome-glumine, which provides simultaneously a carbon and gadolinium source. Cell culture and Imaging, In vitro CCK-8 and FITC-Annexin Apoptosis Detection tests confirmed the low toxicity and high biocompatibility of Gd-CQDs. In vitro fluorescence imaging of Gd-CQDs and MR imaging of Gd-CQDs and clinical contrast agent of Omniscan and Magnevist has been made to detect the double modal imaging performance of vitro.

Results In this study, we demonstrated a new MR and fluorescence dual-modality carbon quantum dot functionalized by gadolinium chelates as Gd-CQDs, which can be easily prepared by one-step pyrolysis. In vitro test has confirmed the low toxicity and high biocompatibility and outstanding imaging performance. Even more noteworthy is that Gd-CQDs display much higher Magnetic performance with longitudinal relaxation rate of 11.2 $mM \cdot L^{-1}S^{-1}$ than the clinical MRI contrast agents of Magnevist at the same Gd^{3+} content. In vitro fluorescence imaging of Gd-CQDs has proved that they has wide range imaging and fluorescence can be observed at the excitation wavelength of 365nm (blue), 488nm (green) and 525nm (red) at the studied concentration of 50 $ug \cdot mL^{-1}$, 100 $ug \cdot mL^{-1}$ and 200$ug \cdot mL^{-1}$, In addition, time and concentration-dependent effect also can be found not in imaging but also in toxicity test. Moreover, in accordance with toxicity test, time and concentration-dependent effect also can be found in the uptake of Gd-CQDS and brightness of fluorescence.

Conclusion The new MR and fluorescence dual-modality carbon quantum dot functionalized by gadolinium chelates prepared by one-step pyrolysis could be a potential contrast agent for clinical applications owing to the favourable resolutions, outstanding imaging sensitivities and practicability, ease of preparation, higher biocompatibility and negligible toxicity.

PU-1316

A Study of the Effects of Acute Drinking on CBF and OEF in Memory-related Brain Regions of Young People

Fei Sang,Guanxun Cheng
Peking University Shenzhen Hospital

Objective: 3D PCASL and ASE EPI were used to study the effects of different doses of acute alcohol on cerebral blood flow(CBF) and oxygen extraction fraction(OEF) in the memory-related brain regions of healthy young people, and to analysis the relationship between CBF and OEF in memory-related brain regions after different doses of acute alcohol consumption. **Method:** Twenty-nine young volunteers were fed with different doses of Chinese alcohol. After drinking, blood alcohol concentration(BAC) was measured. BAC≥0.04%was the low concentration group, BAC≥0.06%was the medium concentration group, and BAC≥0.08% was the high concentration group, respectively. All subjects were examined by the memory function test and brain MRI before drinking and 30 minutes after drinking. The data before drinking was as the control group. The values of CBF and OEF in left middle frontal gyrus, parietal lobe, occipital cortex, bilateral cingulate gyrus, hippocampus, amygdala and bilateral cerebellar hemisphere were compared before and after drinking respectively. **Results:** (1) Compared with pre-drinking, 30 minutes after drinking, the CBF of left middle frontal gyrus, parietal lobe, occipital cortex, bilateral cingulate gyrus, hippocampus, amygdala increased(P<0.05), and the CBF of bilateral cerebellar hemisphere decreased(P<0.05). The difference of CBF within mild, moderate and severe dose groups was statistically significant (P<0.05) by multiple comparison of LSD-t test. (2) Compared with pre-drinking, 30 minutes after drinking, the OEF of left middle frontal gyrus, parietal lobe, occipital cortex, bilateral cingulate gyrus, hippocampus, amygdala decreased (P<0.05), and the OEF of bilateral cerebellar hemisphere increased(P<0.05). The difference of OEF within mild, moderate and severe dose groups was statistically significant (P<0.05) by multiple comparison of LSD-t test. **Conclusion:** After different doses of drinking, the changes of CBF and OEF of left middle frontal gyrus, parietal lobe, occipital cortex, bilateral cingulate gyrus, hippocampus, amygdala and bilateral cerebellar hemisphere were helpful in explaining the brain blood flow regulation and brain metabolism information after drinking, and it is significant to reveal the mechanism of the effect of alcohol on the memory-related brain regions.

PU-1317

A Preliminary Study of the Gender Differences in the Effects of Acute Drinking on the Memory-related Brain Regions of Young People Based on 3D pcASL and ASE EPI

Fei Sang,Guanxun Cheng
Peking University Shenzhen Hospital

Objective: 3D pcASLand ASE EPIwere used to explore the gender differences in the effects of acute alcohol consumption on CBF, OEF and vCBV in memory-related brain regions of healthy young people. **Method:** All of the 15 male and 14 female healthy volunteers were evaluated for the brain MRI scan before drinking and 30 minutes after drinking. 3D pcASL and ASE EPI data were post-processed at GE AW4.6 workstation, and the CBF, OEF and vCBV of left middle frontal gyrus, parietal lobe, occipital cortex, bilateral cingulate gyrus, hippocampus and cerebellar hemisphere of different genders were compared before and after drinking respectively. **Results:** (1) Before drinking, there were no significant differences between different gender volunteers of CBF, OEF and vCBV in left frontal gyrus, parietal lobe, occipital cortex, bilateral cingulate gyrus, hippocampus and cerebellar hemisphere ($P>0.05$). (2) 30 minutes after drinking, the CBF of left frontal gyrus, parietal lobe, occipital cortex, bilateral cingulate gyrus, and hippocampus was higher in female volunteers than that of in male volunteers respectively ($P<0.05$). The OEF and vCBV of left frontal gyrus, parietal lobe, occipital cortex, bilateral cingulate gyrus and hippocampus were lower in famale volunteers than in male volunteers ($P<0.05$). **Conclusion:** After drinking, male and female subjects showed changes and differences in CBF, OEF, vCBV in left frontal gyrus, parietal lobe, occipital cortex, bilateral cingulate gyrus, hippocampus and cerebellar hemisphere, it has a certain significance for revealing the gender difference of alcohol in the brain function related to memory-related brain regions.

PU-1318

Increased Intrinsic Default-mode Network Activity as A Compensatory Mechanism in aMCI: Resting-state Functional Connectivity MRI Study

Yunfei Li[1],Qili Hu[1],Jiali Liang[2],Xiangbing Wang[3],Yingjie Song[1],Xiaohu Zhao[1]

1.Department of Medical imaging, the Fifth People's Hospital of Shanghai Fudan University, Shanghai 200240, China

2.The Second Affiliated Hospital, Zhejiang University School of Medicine Hangzhou, 310009, China

3.Department of Medical imaging, Tongji Hospital of Tongji University Shanghai 200065, China

OBJECTIVE: Numerous studies have investigated the differences in the mean functional connectivity (FC) strength between amnestic mild cognitive impairment (aMCI) patients and normal subjects using resting-state functional magnetic resonance imaging (fMRI). However, whether the mean FC strength is increased, decreased or unchanged in aMCI patients compared with that in normal controls remains unclear. In our opinion, two factors led to inconsistent results: the determination of regions of interest (ROI) and the reliability of FC.

METHODS: In this study, for the first time, we explored the difference in FC and the degree centrality (Dc) constructed by the bootstrap method, between and within networks (default-mode network (DN), frontoparietal control network (CN), dorsal attention network (AN)), resulting from a hierarchical- clustering algorithm for aMCI and normal subjects. Meanwhile, we investigated the relationships between the Mini Mental State Examination (MMSE) scores and FC as well as Dc.

RESULTS：The current results indicated that the mean FC within the DN and CN was significantly increased (P < 0.05, uncorrected) in the patient group. Significant increases (P < 0.05, uncorrected) in the mean FC were also found in patients between DN and CN and between DN and AN. Five pairs of FC (false discovery rate (FDR) corrected) and the Dc of six regions (Bonferroni corrected) displayed a significant increase in the patient group. Finally, lower cognitive ability (lower MMSE scores) was significantly associated with a greater increase in the Dc of the left superior temporal sulcus (STS).
Figure 1: Dendogram of the hierarchical cluster analysis of the correlations and spatial distribution of the three networks. Colors in (a) indicated magnitude of correlation. In the sub-graph (b), the green, red and blue regions expressed the DN, CN and AN, respectively.
Figure 2: The comparisons of Dc. (a) and (b) illustrated the T value and the significant alteration (Bonferroni corrected) between two groups, respectively.

CONCLUSIONS：Our results demonstrate that the early dysfunctions in aMCI disease are mainly compensatory impairments. In addition, the results open doors for investigations into other brain illnesses.

Sample entropy and surrogate data analysis for Alzheimer's disease

Xiaohu Zhao[1],Yunfei Li[1],Yingjie Song[1],Qili Hu[1],Xuewei Wang[2],Fei Li[2], Qiang Lin[2],Zhenghui Hu[2]
1.Department of Imaging, The Fifth People's Hospital of Shanghai，Fudan University, Shanghai 200024, China
2.College of Science, Zhejiang University of Technology, Hangzhou 310023, China

ABSTRACT: Alzheimer's disease (AD) is a neurological degenerative disease, which is mainly charac- terized by the memory loss. As electroencephalogram (EEG) device is relatively cheap, portable and non-invasive, it has been widely used in AD-related studies. We proposed a method to detect the differences between healthy subjects and AD patients, which combines classical sample entropy (SampEn) and surrogate data method. EEGs from 14 AD patients and 20 healthy subjects were analyzed. The results based on the original data showed that the SampEn of AD patients was significantly decreased (p < 0.01) at electrodes c3, f3, o2 and p4, which confirmed that AD could cause complexity loss. However, using original data could be subject to human judgement, so we generated a series of surrogate data. We found that, there were significant difference of SampEn between the original time series and their surrogate data at c3 and o2 electrodes. We believe that this approach verifies the difference between healthy subjects and AD patients at c3 and o2 electrodes in a different and more rigorous way. Our method is capable of distinguishing AD patients from healthy subjects, which is consistent with the concept of physiologic complexity, and providing insights for the understanding of AD.

PU-1320

Large-scale Granger causal brain network based on resting-state fMRI data

Xiaohu Zhao[1],Yunfei Li[1],Yingjie Song[1],Qili Hu[1],Ru Wang[2],Xuewei Wang[2],Fei Li[2],Qiang Li[2],Zhenghui Hua[2]
1.1.Department of Imaging, The Fifth Peoples Hospital of Shanghai, Fudan University, Shanghai, China
2.College of Science, Zhejiang University of Technology, Hangzhou, China

OBJECTIVE: The causal connections among small-scale regions based on resting-state fMRI data have been extensively studied and a lot of achievements have been demonstrated. However, the causal connection among large-scale regions was seldom discussed.
METHODS: In this paper, we applied global Granger causality analysis to construct the causal connections in the whole-brain network among 103 healthy subjects (33M=66F, ages 20-23) based on a resting-state fMRI dataset. We further explored four large-scale cognitive networks which have been widely known: central executive network (CEN), default mode network (DMN), dorsal attention network (DAN) and salience network (SN). These four cognitive networks are particularly important for understanding higher cognitive functions and dysfunction. Based on the above research, Out-In degree were introduced to identify the driving and driven hubs. Studying the driving and driven hub of brain network is of great significance for assessing the functional mechanism of the brain network.
RESULTS: There were 817 directed edges identified as significant among the 8010 possible causal connections; seven driving hubs including the inferior frontal gyrus (IFGoperc) etc. and ten driven hubs including the bilateral precuneus (PCUN) etc. were identified in the whole-brain network. In CEN, the dorsolateral prefrontal cortex (DlPFC) and the superior parietal cortex (SPC) were the driven and driving hubs, respectively; in DMN, they were the posterior cingulate cortex (PCC) and the medial prefrontal cortex (MPFC); in DAN, they were the frontal eye fields (FEF) and the intraparietal sulcus (IPS); and in SN, they were the frontoinsular cortex (FIC) and the medial frontal cortex (MFC).
CONCLUSIONS: These findings may provide insights into our understanding of human brain function mechanisms and the diagnosis of brain diseases.

PU-1321
基于 DTI 轻度认知功能障碍患者脑结构网络研究

胡绮莉[1],李芸菲[1],王湘彬[2],万凯明[1],宋英杰[1],赵小虎[1]
1.复旦大学附属上海市第五人民医院
2.同济大学附属同济医院医学影像科

目的 利用 DTI 数据，构建大脑结构网络，探讨轻度认知障碍（mild cognitive impairment, MCI）患者脑结构网络的小世界属性及相关参数变化。
方法 采集 50 例 MCI 患者（MCI 组）和 30 名正常老年人（NC 组）的大脑 DTI 数据。采用 SPM5 软件对图像进行预处理，利用自动解剖标定模板（automated anatomical labeling，AAL）模板将大脑皮质划分为 90 个区域，采用确定性纤维示踪算法示踪纤维，以纤维连接数目（FN）为阈值构建

白质纤维连接网络。若满足 $\gamma > 1$ 且 $\lambda \approx 1$，或 $\delta = \gamma / \lambda > 1$，则说明其具有小世界特性。计算最短路径长度（$L_p$）、聚集系数（$C_p$）、全局效率（$E_{global}$）及局部效率（$E_{local}$）。通过双样本 t 检验，对比研究 MCI 患者大脑结构网络小世界参数的变化。

结果 在 1≤FN≤6 范围内，MCI 组和 NC 组均符合 $\gamma > 1$ 且 $\lambda \approx 1$。MCI 患者的最短路径长度（L_p）高于 NC 组，且在各阈值范围内差异均有统计学意义（$P<0.05$）；MCI 组全局效率（E_{global}）低于 NC 组，在 FN=1、2、3、4 时差异有统计学意义（$P<0.05$）；MCI 组局部效率（E_{local}）值低于 NC 组，在 FN=1 时差异有统计学意义（$P<0.05$）。

PU-1322

近期皮质下小梗死形态学演变及影响演变结局的相关因素分析

李芸菲[1],宋英杰[1],王媚媚[2],张思斯[2],刘浩[2],赵小虎[1]
1.复旦大学附属上海市第五人民医院
2.同济大学附属同济医院放射科

背景及目的 本研究旨在探索小动脉闭塞型近期皮质下小梗死（RSSI）的演变结局及影响其转归的相关因素，重点分析梗死灶直径对演变结局影响。**方法** 回顾性分析确诊的 96 例 RSSI 患者。收集临床信息包括年龄、性别、高血压病、高血脂、血清同型半胱氨酸等，基线头颅 MRI 影像资料包括梗死灶部位、数量、DWI 和 T2WI 横轴位最大直径、WMH 评分等及随访时 RSSI 演变结局。将 RSSI 结局转归分为腔化组（腔隙灶）和非腔化组（WMH 和消失）。找出可能与腔化有关的变量和独立预测因素。**结果** 96 例 RSSI 患者中位年龄 64.5 岁（四分位范围，58-73 岁），MRI 随访中位间隔时间 11.6 月（四分位范围，6.3-11.8 月）。59 例（62.5%）转化为腔隙灶，32 例（33.2%）转化为脑白质高信号（WMH），5 例（5.2%）病灶消失。在单变量分析中，腔化组 RSSI 的 DWI 和 T2WI 梗死灶最大直径、男性比例均明显高于非腔化组（$P<0.05$），提示上述变量与腔化灶形成可能相关，而年龄、高血压史、高血脂史、糖尿病史、血清同行半胱氨酸、随访 MRI 间隔时间、病灶部位、DWMH、PWMH 及总 WMH 评分、腔隙灶数量无显著差异性。在二分类 logistic 回归分析中，DWI 上梗死灶最大直径是腔化的独立预测因素（$P=0.022$, OR: 1.138, 95%CI: 1.019-1.271），并且以 DWI 上梗死灶最大直径≤10mm 组为参照，DWI 上最大直径＞15mm 组腔化风险是 DWI 上最大直径≤10mm 组约 7.5 倍（$P=0.010$，OR: 7.464，95%CI：1.621-34.371）。**结论** 约 62.5%RISS 演变为腔隙灶，约 38.2%RSSI 演变为脑白质高信号或者消失，RSSI 在 MRI 成像中的 DWI 直径越大，腔化可能性越大。

PU-1323

Primary Disruption of the Memory-Related Subsystems of the Default Mode Network in Alzheimer's Disease: Resting-State Functional Connectivity MRI study

Xiaohu Zhao[1],Yunfei Li[1],Yingjie Song[1],Qili Hu[1],Huihui Qi[2],Hao Liu[2]
1.1.Department of Imaging, The Fifth People's Hospital of Shanghai, Fudan University, Shanghai 200024, China
2.2.Department of Medical imaging, Tongji Hospital of Tongji University Shanghai 200065, China

BACKGROUND: Recent studies have indicated that the default mode network (DMN) comprises at least three subsystems: The medial temporal lobe (MTL) and dorsal medial prefrontal cortex (DMPFC) subsystems and a core comprising the anterior MPFC (aMPFC)

and posterior cingulate cortex (PCC). Additionally, the disruption of the DMN is related to Alzheimer's disease (AD). However, little is known regarding the changes in these subsystems in AD, a progressive disease characterized by memory impairment. Here, we performed a resting-state functional connectivity (FC) analysis to test our hypothesis that the memory-related MTL subsystem was predominantly disrupted in AD.

METHODS: To reveal specific subsystem changes, we \calculated the strength and number of FCs in the DMN intra- and inter-subsystems across individuals and compared the FC of the two groups. To further examine which pairs of brain regional functional connections contributed to the subsystem alterations, correlation coefficients between any two brain regions in the DMN were compared across groups. Additionally, to identify which regions made the strongest contributions to the subsystem changes, we calculated the regional FC strength (FCS), which was compared across groups.

RESULTS: For the intra-subsystem, decreased FC number and strength occurred in the MTL subsystem of AD patients but not in the DMPFC subsystem or core. For the inter-subsystems, the AD group showed decreased FC strength and number between the MTL subsystem and PCC and a decreased number between the PCC and DMPFC subsystem. Decreased inter-regional FCs were found within the MTL subsystem in AD patients relative to controls: The posterior inferior parietal lobule (pIPL) showed decreased FC with the hippocampal formation (HF), parahippocampal cortex (PHC) and ventral MPFC (vMPFC). Decreased inter-regional FCs of the inter-subsystems were also found in AD patients: The HF and/or PHC showed decreased FC with dMPFC and TPJ, located in the DMPFC subsystem, and with PCC. AD patients also showed decreased FC between the PCC and TLC of the dMPFC subsystem. Furthermore, the HF and PHC in the MTL subsystem showed decreased regional FCS.

CONCLUSIONS: Decreased intrinsic FC was mainly associated with the MTL subsystem of the AD group, suggesting that the MTL subsystem is predominantly disrupted.

基于树枝状高分子的 Met 靶向分子探针在胶质瘤精确边界显示中的应用探究

诸晋煜[1],樊奇[2]
1.上海交通大学附属第六人民医院
2.上海交通大学医学院附属第九人民医院

目的

c-Met 是参与肿瘤细胞生长、侵袭、转移和血管生成的酪氨酸激酶跨膜受体，在恶性胶质瘤中往往呈过度表达。因此我们探究基于树枝状高分子的 Met 靶向分子探针对于脑胶质瘤的边界显示。

方法

本实验主要采用了人胶质瘤细胞系 U87 和大鼠星形胶质细胞系。利用针对 c-Met 受体短肽 cMBP 肽合成了靶向分子探针 Den-cMBP-Gd 及对照探针 Den-PEG-Gd。通过磁共振扫描，在体内检测三种对比剂 Gd-DTPA、DEN-CMBP-Gd 和 DEN-PEG-Gd 的适用性。

结果

免疫荧光染色结果分析表明，Met 受体主要分布于胶质瘤肿瘤边缘和新生血管周围。在三种对比剂中，常规对比剂 Gd-GTPA 的 T1 弛豫时间下降率最高（57%），而 DEN-CMBP-Gd（下降 36%）和 DEN-PEG-Gd（下降 29%）的弛豫时间下降率表现出相似的程度。DEN-CMBP-Gd 在整体肿瘤的增强中无明显优势，但在肿瘤边缘区域增强更明显，其 T1 弛豫时间在肿瘤边缘区下降 53%，而在肿瘤中心区下降 30%（Gd-DTPA 组边缘区 31%，中心区 68%；DEN-PEG-Gd 组边缘区 14%。中心区 43%）。

结论

该实验研究证明基于树枝状高分子的 Met 靶向分子探针具有亲和力强，靶向性高的特点，其多位点效应有助于显示胶质瘤浸润边界,以更好地判定其生物学行为，指导临床靶向治疗。

胶质瘤相关基因的挖掘及预测

赵聪选
辽宁省肿瘤医院

胶质瘤是中枢神经系统最常见的原发性肿瘤，尽管临床采用多模式治疗，但大多数患者的总体预后很差，特别是胶质母细胞瘤（Glioblastoma,GB），这与胶质瘤的生物学特性有关。而基因的改变，如 1p / 19q 的共缺失，O^6-甲基鸟嘌呤-DNA 甲基转移酶（MGMT）基因启动子的甲基化，PTEN 的突变和 $p16^{INK4a}$ 的纯合缺失，表皮生长因子受体（EGFR）的突变/扩增等已被证实与胶质母细胞瘤的发生发展密切相关。不同基因表达对胶质瘤具有指导治疗与预后预测功能，因此深入挖掘胶质瘤背后的基因将使我们有可能为病人选择最佳的治疗方案，实现个体化医疗。

MRI 影像组学模型对高级别胶质瘤患者术后总生存期的预测价值

张欢欢[1],胡春洪[3],朱虹[2]
1.上海市第五人民医院
2.上海市闵行区肿瘤医院
3.苏州大学附属第一医院

目的 探讨 MRI 影像组学在预测高级别胶质瘤（HGGs）术后总生存期（OS）的价值，比较基于不同影像组学特征模型的预测效能，尝试建立一个基于影像组学评分（Radiomic Score, RS）的预后分析模型。

材料和方法 回顾性分析 60 例术后联合放化疗 HGGs 患者的临床影像资料，随机分为训练集 40 例，验证集 20 例。收集患者术后 1 周内和同步放化疗后 1 月内 T_1WI 增强、T_2WI 和 FLAIR 图像。使用 MATLAB 软件进行 ROI 分割、特征提取，通过组内相关系数和 LASSO 方法对特征进行筛选，筛选后的特征纳入多因素 Cox 生存分析模型，通过一致性指数（C-index）比较不同模型预测效能的差异。根据最优模型所筛选的特征计算 RS 评分，构建基于评分和临床资料列线图的预测模型，并评价其区分度和校准度。

结果 基于联合序列在肿瘤残留强化区提取的组学特征变化值有着更好的 OS 预测效能，经过筛选后共发现 4 个与 OS 相关度最高的影像组学标签（Maximum 3D diameter、Variance、Energy、Correlation），据此得出 RS 评分及 Cox 比例风险模型。在训练集中，RS 对患者 OS 的预测效能高于临床资料（C-index: 0.858 VS 0.825），将两者结合后模型的预测效能有进一步提高（C-index: 0.908），上述结果在验证集中得到验证，多因素 Cox 回归模型显示 RS 是 HGGs 术后 OS 的独立风险因素，训练集中 HR=1.534（$P = 4.95\times10^{-05}$），验证集中 HR=1.775（$P = 0.001$）。包含 RS 及

临床资料的列线图预测模型效能高于临床资料（C-index: 0.905 VS 0.825），通过校准曲线显示列线图预测结果与实际 OS 有较好的一致程度。
结论 利用 MRI 影像组学可以预测 HGGs 术后 OS，影像组学标签及 RS 评分均有较高的预测效能。

化学交换饱和转移技术用于体内检测阿尔茨海默病的淀粉样蛋白-β靶向探针

王润润,吴仁华,戴卓智
汕头大学医院院第二附属医院

背景和目的 可靠和可重复的检测 Aβ沉积物的方法将有益于阿尔茨海默病（AD）的早期诊断。
方法 在本研究中，评估了使用 angiopep-2 作为探针进行 Aβ沉积物检测的化学交换饱和转移（CEST）的可行性。
结果 我们证明了 CEST 可在体外检测 angiopep-2 和 Aβ-angiopep-2 结合物。此外，在体实验中与对照相比，注射 angiopep-2 的 APP / PS1 小鼠表现出显着更高的体内 CEST 效应。最后，通过 CEST 成像检测的 Aβ沉积物的分布与组织学染色结果一致。
讨论：本研究首次报道了一种可靠的外源性 CEST 探针，用于非侵入性评估 APP / PS1 小鼠中的 Aβ沉积物。此外，这些结果证明了使用 CEST 成像与 angiopep-2 探针进行临床 AD 诊断，并且它可能成为
Aβ靶向药物治疗评估的一种手段

Brain amide proton transfer imaging of rat with Alzheimer’s disease using saturation with frequency alternating RF irradiation method

Runrun Wang,Renhua Wu
Department of Medical Imaging, 2nd Affiliated Hospital, Shantou University Medical College, Shantou

Background and aims: Amyloid-β (Aβ) deposits and some proteins play essential roles in the pathogenesis of Alzheimer’s disease (AD). Amide proton transfer (APT) imaging, as an imaging modality to detect tissue protein, has shown promising features for the diagnosis of AD disease.
Methods: In this study, we chose 10 AD model rats as the experimental group and 10 sham-operated rats as the control group. All the rats underwent Y-maze test before amide proton transfer image acquisition, using saturation with frequency alternating RF irradiation (APTSAFARI) method on a 7.0 T animal MRI scanner.
Results: Compared with the control group, APT (3.5ppm) values of brain were significantly reduced in AD models ($p<0.002$). The APT_{SAFARI} imaging is more significantly than APT imaging ($p<0.0001$). AD model mice showed spatial learning and memory loss in the Y-maze experiment. In addition, there was significant neuronal loss in the hippocampal CA1 region and cortex compared with sham-operated rats.

Conclusion: In conclusion, we demonstrated that APT imaging could potentially provide molecular biomarkers for the noninvasive diagnosis of AD. APT_{SAFARI} MRI could be used as an effective tool to improve the accuracy of diagnosis of AD compared with conventional APT imaging.

PU-1329

Angiopep-2 as an exogenous chemical exchange saturation transfer contrast agent

Runrun Wang, Rennhua Wu
Department of Medical Imaging, 2nd Affiliated Hospital, Shantou University Medical College, Shantou

Background: Chemical exchange saturation transfer (CEST) is a novel imaging modality for clinical practice and scientific researches. Angiopep-2 is an artificial peptide that can penetrate blood-brain barrier. The aim of this study was to explore the feasibility of Angiopep-2 to be used as an exogenous CEST contrast.
Methods: Phantoms of Angiopep-2 with different concentrations were prepared, which were then scanned using 7.0T small animal MRI scanner. Different parameters were used including saturation powers and saturation duration to achieve the most optimal CEST effect. Z-spectra, asymmetric spectra as well as phantom CEST imaging were used to determine the best parameters. CEST scanning of dimethyl sulfoxide (DMSO), the substance helping Angiopep-2 to be dissolved in water, was performed to exclude its contribution for the CEST effect.
Results: A broad dip was observed from 2.5 to 3.5ppm from the Z-spectra of Angiopep-2 phantoms. The most robust CEST was generated at 3.2ppm when using formula $(M_{-3.2ppm} - M_{+3.2ppm}) / M_{-3.2\ ppm}$. CEST effect of Angiopep-2 was concentration dependent. The effect increased as the concentration increased. In addition, CEST effect was more obvious as the saturation power increased and peaked at 5.0μT. For different saturation duration, the CEST effect increased as the duration increased. DMSO showed nearly 0% of CEST effect at 3.2ppm.
Conclusions: The results of our study demonstrated for the very first time that Angiopep-2 could be used as an excellent exogenous CEST contrast. As it can pass blood-brain barrier and bind amyloid-β protein, Angiopep-2 CEST could be potentially used as a novel imaging modality for early diagnosis of Alzheimer's disease by quantitative measurement of amyloid-β protein.

Super normal cerebrovascular responses to vasodilator stimuli in acute concussion

Runrun Wang[1], Renhua Wu[1], David Mikulis[2]
1.Department of Medical Imaging, 2nd Affiliated Hospital, Shantou University Medical College, Shantou

2.1Joint Department of Medical Imaging， University Health Network， The University of Toronto，Toronto， Ontario， Canada

Introduction: There is evidence that cerebrovascular reactivity (CVR) increases within the first week after concussion indicating disruption of normal autoregulation. We sought to extend these findings to investigate the effect of acute concussion on the speed of CVR response and to visualize global and regional impairments in individual patients with acute concussion.
Methods: We scanned twelve subjects within a week of concussion using EPI BOLD at 3T. All patients aged between 18 and 40 years old. Symptoms were assessed with the Acute Concussion Evaluation (ACE) tool. Twelve age and sex-matched healthy subjects formed the control group. In each subject, we used different analyses to provide a number of metrics including CVR magnitude (ramp and step, grey matter, white matter) and CVR response (τ). We used a separate healthy control group to create a magnitude CVR atlas (mean and standard deviation over 39 subjects at each voxel in standard space). Each subject’s CVR magnitude response map was z-scored against the atlas and the histogram of z-scores were counted. We compared these counts and also the whole brain average CVR magnitude z-scores between concussed and healthy groups. The same analysis was repeated for CVR response time.
Results: All studies were well tolerated without any serious adverse events. Anatomical MRI was normal in all study subjects. No differences in CO_2 stimulus and O_2 targeting were seen between the two participant groups during BOLD MRI. The acute concussion subjects exhibited significantly larger and faster CVR responses than the healthy control group, especially in the white matter.
Conclusion: Concussion is associated with patient-specific abnormalities in BOLD cerebrovascular responsiveness that occur in the setting of normal global CVR. This study demonstrates that measurement of CVR using BOLD MRI and precisely controlled CO_2 has shown to be a safe, reliable, reproducible, and clinically useful method for concussion patients. It has the potential to be an important tool for assessing the severity and duration of symptoms after concussion and concussion diagnosis.

AQP1 在胶质瘤瘤周水肿及浸润组织中表达

鲁宏
重庆市第七人民医院

目的 探究水通道蛋白-1（AQP1）表达上调/干扰后胶质瘤瘤周水肿及浸润组织的病理改变，阐明 AQP1 在大鼠脑胶质瘤瘤周水肿及浸润组织中的作用机制。
材料方法 选取 60 只健康成年 Wistar 大鼠，计算机随机法分为对照组（C6 对照组）、AQP1 上调组（C6-AQP1 组）、上调空载体组（C6-PCDH 组）、AQP1 干扰组（C6-AQP1-sh3 组）、干扰空载体组（C6-shRNA 组），采用立体定位法成功建立大鼠胶质瘤模型 40 例。于造模后 15 天，取瘤体最大层面切片并行 HE 染色，镜下观察胶质瘤分化程度、瘤周水肿及瘤细胞浸润情况。免疫组织化学及 Western blot 检测瘤周水肿区 AQP1 的表达量。
结果
AQP1 主要表达于胶质瘤细胞胞膜、胞浆，部分表达于血管内皮细胞。C6-AQP1 组瘤周 AQP1 表达水平高于 C6 对照组，C6-AQP1-sh3 组瘤周 AQP1 表达水平低于 C6 对照组，而 C6-PCDH 组、C6-shRNA

组与 C6 对照组比较差异无统计学意义。HE 染色提示实验各组胶质瘤均为高级别胶质瘤；C6-AQP1 组瘤周细胞间隙增宽、间质疏松程度较 C6 对照组明显，C6-AQP1-sh3 组瘤周细胞间隙增宽、间质疏松程度较 C6 对照组轻；C6-AQP1 组瘤周细胞浸润数目较 C6 对照组增多，C6-AQP1-sh3 组瘤周细胞浸润数目较 C6 对照组减少，而 C6-PCDH 组、C6-shRNA 组与 C6 对照组比较差异无统计学意义。

自身免疫性脑炎患者 18F-FDG PET/CT 影像学特征

付畅,徐俊玲
河南省人民医院

【摘要】**目的** 研究自身免疫性脑炎(AE)患者脑部 18F-氟代脱氧葡萄糖（2-[^{18}F]fluoro-2-deoxy-D-glucose,^{18}F-FDG)正电子发射计算机断层显像（PET/CT)影像学特征，探讨 PET/CT 在 AE 早期诊断中的应用价值。**方法** 收集 2012 年 3 月至 2017 年 12 月 16 例(男 11 例，女 5 例，年龄 11~68 岁)未经免疫治疗的脑脊液或（和）血清自身免疫抗体阳性的 AE 患者资料，分析患者 ^{18}F-FDG PET/CT、磁共振（MRI）的影像及临床特征。**结果** 16 例 AE 患者中有 9 例抗 N-甲基-D-天冬氨酸受体（NMDAR）抗体脑炎、7 例边缘性脑炎（LE），LE 组中抗γ-氨基丁酸 B 型受体（$GABA_BR$）抗体脑炎 3 例、抗富亮氨酸胶质瘤失活蛋白 1（LGI1）抗体脑炎 2 例、抗 Hu 抗体脑炎 1 例、抗 Yo 抗体脑炎 1 例。15 例显示脑内散在的 ^{18}F-FDG 代谢增高或减低灶，阳性率 93.75%(15/16）；其中抗 NMDAR 抗体脑炎表现为散在的额、颞、顶叶等高代谢灶、枕叶低代谢灶，LE 表现为颞叶海马等边缘系统的高代谢灶，同期 CT 密度均未见异常。 MRI 示为部分患者 T2、T2 液体衰减反转恢复序列（FLAIR）、扩散加权成像（DWI）的稍高信号，阳性率 43.75%（7/16）。**结论** 不同类型的 AE 患者脑 PET/CT 影像特征亦不同。18F-FDG PET/CT 对 AE 患者的早期诊断阳性率较 MRI 高

PU-1333
AQP4 在脑创伤半暗带水肿中表达的实验研究

鲁宏
重庆市第七人民医院

目的 探讨大鼠脑创伤半暗带（TP）不同时相点的水肿与水通道蛋白-4(AQP4)表达之间的关系。
方法 88 只成年雄性 Wistar 大鼠，按随机数字表法分为对照组和创伤组，创伤组，根据时相点又分 1，6，12，24，48，72 h、7 d 共 7 个亚组，每组 11 只。建立中度脑创伤模型，组织学观察脑组织水肿，免疫组化半定量 IgG 的表达检测血脑屏障（BBB）的变化，免疫荧光和 WB 观察 AQP4 表达。
结果 对照组的病理及 IgG 染色未见异常，AQP4 表达量较少。创伤 1 h 组即在创伤周边出现染色浅淡的水肿带，之后逐渐增加，12 h 组达到最宽，为（1.589±0.020）mm，之后变窄，除 24 h 与 48 h 和 72 h 与 7 d 外，余各时相点差异均有统计学意义。1 h 创伤周边呈血管源性水肿；6 h 出现细胞内水肿；12 h 血管源性水肿与细胞内水肿均明显加重；72 h 细胞内水肿占优势。IgG 染色于 1，12 ，48 h 呈 3 度强阳性；6，24，72 h 及 7 d 呈 1 度弱阳性。创伤后 1 h AQP4 表达下降，6 h 稍回升，12 h 达峰值，之后又随损伤时间降低，72 h 再次上调，伤后 7 d 时基本恢复至基线水平，除 6 h 与 7 d(P＞0.05)、12 h 和 24 h（P＞0.05）、24 h 和 72 h(P＞0.05)外，余各时相点之间比较差异有统计学意义。
结论 脑组织水肿是 TP 主要的病理改变，且水肿类型和程度随时间动态变化。AQP4 可能参与机体的防御反应。

PU-1334
基于统计参数图的脑内不对称分析在 18F-FDG PET 代谢显像对单侧颞叶癫定侧定位诊断上的应用

王晓阳,赵春雷,陈自谦
中国人民解放军联勤保障部队第九〇〇医院(原福州总医院)

目的 评价基于 SPM 的脑内不对称分析法在 18F-FDG PET 代谢显像对单侧难治性颞叶癫（TLE）患者致灶辅助定侧定位诊断中的应用价值。
方法 回顾性分析 73 例［男 42 例，女 31 例，年龄（27.10±9.78）岁］单侧 TLE 患者及 30 例［男 17 例，女 13 例，年龄（33.79±5.46）岁］健康对照组的临床及影像学资料。通过 18F-FDG PET/CT 检查对 TLE 患者主要致灶进行定侧定位， 18F-FDG PET 图像分析采用基于 SPM 的脑内不对称分析法、视觉分析法及不对称指数（AI）分析法，定侧定位结果综合术后病理及预后，对这 3 种图像分析方法在单侧 TLE 患者主要致灶检出符合率上的差异进行比较。数据分析采用 χ2 分析。
结果 运用基于 SPM 的脑内不对称分析法、视觉分析法及 AI 分析法对单侧 TLE 患者定侧定位诊断符合率分别为 87.67%(64/73)、75.34%(55/73)及 69.86%（51/73），总体差异有统计学意义（$\chi^2=6.993\ 3$，$P<0.05$）；两两比较的结果显示，脑内不对称分析法与 AI 分析法、脑内不对称分析法与视觉分析法间差异有统计学意义（$\chi^2=8.480\ 6$ 和 5.818 2，均 $P<0.05$），视觉分析法与 AI 分析法间差异无统计学意义（$\chi^2=0.5000$，$P>0.05$），脑内不对称分析法的符合率明显高于视觉分析法及 AI 分析法。
结论 基于 SPM 的脑内不对称分析法可以相对客观、准确地对单侧难治性 TLE 患者的主要致灶进行定位，有较高的临床应用价值。

PU-1335
计算机认知功能训练改善抑郁症患者工作记忆的 fMRI 研究

范嘉晨[1,3,4],刘加成[1,2]
1.东南大学附属中大医院
2.核医学科
3.东南大学医学院
4.江苏省分子影像与功能影像重点实验室

目的 抑郁症患者常伴随认知功能受损如工作记忆能力的下降，而工作记忆是认知功能的中枢，信息的加工、处理、转化均需工作记忆的参与。近年来，研究表明应用计算机认知功能训练（CCT: computerized cognitive training）可有效改善抑郁症病人的工作记忆，但关于认知功能训练如何改善工作记忆的脑机制尚缺乏研究，深入了解计算机认知功能训练背后的脑机制，对改进认知训练程序，完善认知训练计划具有重要的指导意义。

方法 本研究共纳入 25 名抑郁症患者，其中对照组 9 人，治疗组 16 人。两组患者均在入组前及入组 4 周后接受 Philips Ingenia Ⅱ 3.0T 磁共振 BOLD 扫描。扫描过程中，患者需要完成数字 N-back 范式（0-back、1-back、2-back）。本研究采用一套名为“捉球”的计算机认知功能训练程序对治疗组患者进行为期 4 周共计 30 小时的认知治疗。

结果 1-back 任务：治疗组患者与对照组患者在基线期脑区激活无统计学差异；在第 4 周时，治疗组患者相比于对照组患者在左侧额上回，左侧额中回，左侧 BA9 区出现负性激活(p=0.001 ，未校正，簇阈值>20)。2-back 任务：治疗组与对照组在基线期脑区激活无统计学差异；在第 4 周时，治疗组相比于对照组在右侧额中回出现负性激活，在左侧楔前叶、左侧矩状叶、左侧胼胝体压部、左侧颞上回出现正性激活(p=0.001 ，未校正，簇阈值>20)。

结论 CCT 改善抑郁症患者工作记忆的机制可能与额上回、额中回、BA9 区、胼胝体、颞上回等脑区激活改变有关。

Can amide proton transfer-weighted imaging differentiate tumor grade and predict Ki-67 proliferation status of meningioma?

Hao Yu[1,2], Yueqin Chen[1], Zhanguo Sun[1], Zhibo Wen[2]
1. Affiliated hospital of jining medical university
2. Zhujiang hospital of southern medical university

Abstract

Objectives: To determine the utility of the amide proton transfer-weighted MR imaging in differentiating the WHO grade and predict proliferative activity of meningioma.

Methods: Fifty-three patients with WHO grade Ⅰ meningiomas and twenty-six patients with WHO grade Ⅱ meningiomas underwent conventional and APT-weighted sequences on a 3.0 Tesla MR before clinical intervention. The APT-weighted (APTw) parameters in the solid tumor region were obtained and compared between two grades using the t-test, the receiver operating characteristic (ROC) curve was used to assess the best parameter for predicting the grade of meningiomas. Pearson's correlation coefficient was calculated between the $APTw_{max}$ and Ki-67 labeling index in meningiomas.

Results: The $APTw_{max}$ and $APTw_{mean}$ values were not significantly different between WHO grade Ⅰ and grade Ⅱ meningiomas (*P=0.103* and *P=0.318*). The $APTw_{min}$ value was higher and the $APTw_{max-min}$ value was lower in WHO grade Ⅱ meningiomas than in WHO grade Ⅰ tumors. (*P=0.027* and *P=0.019*). But the $APTw_{min}$ was higher and the $APTw_{max-min}$ was lower in microcystic meningiomas than in WHO grade Ⅱ meningiomas(*P=0.001* and *P=0.006*). The $APTw_{min}$ combined with $APTw_{max-min}$ showed the best diagnostic performance in predicting the grade of meningiomas with an AUC of 0.772. The $APTw_{max}$ value was positively correlated with Ki-67 labeling index (r=0.817, *P*<0.001) in meningiomas, the regression equation for the Ki-67 labeling index (%) (Y) and $APTw_{max}$ (%)(X) was Y=4.9×X－12.4 (R^2=0.667, *P<0.001*).

Conclusion: As a noninvasive imaging method, the ability of APTw-MR imaging in differentiating the grade of meningiomas is limited, but the technology can be used to predict the proliferative activity of meningioma.

PU-1337

腮腺良性肿瘤磁共振波谱成像后处理技术的应用价值

王博成,吴金亮,黄晓蕾,孙冰冰,司明珏
上海交通大学医学院附属第九人民医院

目的 探讨腮腺良性肿瘤患者磁共振波谱成像后处理技术的应用价值及作用。
方法 回顾分析 26 例病理确诊腮腺原发良性肿瘤患者行磁共振波谱成像（MRS）后得到的代谢产物信号图，测量其肿瘤代谢产物如胆碱（Choline,Cho）、肌酸(Creatine,Cr)、乳酸脂质（Lactate and Lipid,LL)峰含量及 Cho/Cr 比值的变化。比较代谢产物波峰形态的区别及其代谢产物含量与不同类型肿瘤（多形性腺瘤和腺淋巴瘤）之间的区别。
结果 经统计分析得到肿瘤区内的 Cho 峰、LL 峰明显升高且 Cho/Cr 比值均高于正常腮腺组织（P<0.01）,Cr 峰浓度含量未见明显变化（P>0.01）。这些代谢产物的含量及形态在多形性腺瘤和腺淋巴瘤的诊断中不具有鉴别价值。
结论 腮腺良性肿瘤磁共振波谱成像技术能准确地识别出兴趣区内代谢产物浓度的含量变化，是临床评价肿块占位的重要功能性检查手段之一。

PU-1338
Pineal gland abnormality in major depressive disorder

Wenming Zhao
The First Affiliated Hospital of Anhui Medical University

Background: Patients with major depressive disorder (MDD) often have circadian rhythm alteration and sleep disturbance. The pineal gland regulates circadian rhythm and sleep by secretion of melatonin neurohormone. However, the relationship between pineal abnormality and MDD remains elusive. In this study, we aimed to investigate MDD-related pineal abnormality by comparing pineal cyst prevalence and PPV between patients suffering from MDD and gender- and age-matched healthy controls. We hypothesized that patients with MDD would have higher pineal cyst prevalence and reduced pineal volume relative to healthy controls.
Methods: 50 patients with MDD and 35 gender- and age-matched healthy controls (HC) underwent high-resolution structural MRI. Pineal parenchymal volume (PPV) was measured manually. Inter-group differences in prevalence of pineal cyst and PPV were examined. In addition, we investigated the correlations between PPV and symptom severity as well as sleep
variables in the patient group.
Results: The patient and control groups did not differ in gender, age, and educational years ($P > 0.05$). Compared with HC, MDD patients exhibited reduced TIV ($t = -2.055$, $P = 0.043$), and increased HAMD ($t = 13.527$, $P < 0.001$) and HAMA ($t = 11.921$, $P < 0.001$).
Patients with MDD had a higher prevalence of pineal cyst (chi-square test, $x^2 = 4.000$, $P = 0.046$) compared to HC. The *ICC* of inter-rater PPV measurement was 0.991, implying an excellent inter-rater reliability. Patients had significantly decreased PPV ($F = 4.985$, $P = 0.028$) relative to controls when controlling for age, gender, educational years and TIV. There were no significant differences between individuals with and without pineal cysts for both patient and control groups ($P > 0.05$). In patients with MDD, we did not find any significant correlations between PPV and clinical variables (HAMD, HAMA and PSQI) ($P > 0.05$). In addition, there were no

significant correlations between PPV and PSG parameters ($P > 0.05$) in the patient group.

Conclusions: In this study, we present evidence that patients with MDD had higher prevalence of pineal cyst and reduced parenchymal volume relative to healthy controls, suggesting a critical role of pineal abnormality in the interaction between sleep disturbance and depression.

PU-1339

MR Evaluation of Targeted Adoptive Immunotherapy for Glioma Using Biotinylated Adoptive T Lymphocytes

Hua Zhang
Department of Radiology, The Affiliated Hospital of Qingdao University

PURPOSE

To explore biotinylation of adoptive T lymphocytes and its feasibility of targeted adoptive T cells immunotherapy (ACT) for glioma based on biotin receptor.

METHOD AND MATERIALS

Adoptive CD8+ T lymphocytes were co-cultured with Sulfo-NHS-Biotin to form biotinylated adoptive T lymphocytes in vitro, and Alexa Four 647-labeled streptavidin was further co-cultured with biotinylated adoptive T lymphocytes.The overall biotinylation efficiency of adoptive T lymphocytes was detected by FCM. The killing performance of the biotinylated adoptive T lymphocytes on glioma cells was observed at different time points, and proportion of glioma cells apoptosis and death further were analyzed by FCM. Glioma cells recruiting biotinylated adoptive T cells was observed by CLSM, and finally using enhanced MRI to observe the size changes of in situ gliomas at different time points after targeted ACT and using transferase-mediated deoxyuridine triphosphate-biotin nick end labeling (TUNEL) detected apoptosis in tumor tissues, and analyzed the proportion of glioma recruiting biotinylated adoptive T lymphocytes by FCM.

RESULTS

FCM showed that the overall biotinylation efficiency of adoptive T lymphocytes reached 96.3%. CCK-8 assay showed the biological activity of biotinylated adoptive T lymphocytes was not significantly different from that of the untreated control group. The apoptosis proportion of glioma cells induced by biotinylated adoptive T lymphocytes (34.14%) was significantly increased. FCM showed that the proportion of biotinylated CD8+ T lymphocytes in the targeted glioma area was 4.77%, and the total proportion of CD8+ T lymphocytes (8.89%) was more obvious than the control group (1.81%). Enhanced MRI found that only 20% of the individuals in the targeting group had a reducedtumor volume, but the mean value was not significantly different from the control group ($p>0.05$). In addition, the TUNEL apoptosis assay found that level of tumor cell apoptosis in the targeting group was only slightly better than the nontargeting group.

CONCLUSION

Biotinylation of adoptive T lymphocytes increases the proportion of gliomas recruited, enhancing the killing of glioma cells, but the killing performance of in situ glioma remains to be further improved.

PU-1340

Biotin-conjugated Upconversion Nanoparticles for Metabolic MR Imaging of Invasive Margin of Glioma

Hua Zhang
Department of Radiology, The Affiliated Hospital of Qingdao University

PURPOSE
To prepare one stable biotinylated/polyethylene glycolylated upconversion nanoprobes (biotin/PEG-UCNPs) to study the expression level of biotin receptor in GL261 glioma and its feasibility for detection invasive margin of glioma
METHOD AND MATERIALS
Hydrophobic multifunctional upconversion nanoparticles (UCNPs) were synthesized by solvothermal method. TEM, XRD ,fluorolog-3 modular fluorescence spectrometer and other instruments were used to analyze the surface features such as uniformity and dispersion of nanoprobes. Cell counting kit-8 (CCK-8) analyzed the effect of bion-UCNPs on the activity of RAW264.7 and BCECs. CLSM was used to observe the endocytosis efficiency of GL261 glioma cells for biotinylated and non-biotinylated nanoprobes, then the distribution of nanoprobes in glioma tissues compared with pathology. GE Discovery 3.0T MR analyzed the relaxation rate of biotinylated nanoprobes and the relative signal intensity (rSI) of biotinylated nanoprobes in gliomas at different time points. HE staining of cortical, striatum, hippocampal and hematological parameters of normal C57BL/6 mice were evaluated the potential toxicity of biotinylated nanoprobes to living organisms.
RESULTS
Biotinylated nanoprobes with similar particle size (particle size of about 25 nm) possessed good dispersibility, low toxicity and single-band UCL spectrum centered at 660 nm. The relaxation rate reached 6.124 mM-1S-1. Under CLSM, the glioma cells significantly endocytosed biotinylated nanoprobes rather than the non-biotinylated nanoprobes. After biotin receptor presaturation, the glioma cell endocytosis was significantly reduced. T1 signal generated by the biotinylated nanoprobes in the glioma region could still be observed in 24 hours, and the tumor developing area was expanding. The body boundary of biotinylated nanoprobes well corresponded to the HE-stained glioma border, but the tumor cells were scattered around the boundary. No obvious adverse reactions were observed in the cortical, striatum, hippocampal.
CONCLUSION
GL261 gliomas highly express biotin receptors. Biotinylated UCNPs are able to efficiently target glioma via biotin receptors, and show a significant contrast effect on the edge of glioma invasion.

PU-1341
基于 MRI 影像组学预测脑胶质母细胞瘤 MGMT 蛋白表达的价值研究

李梦双
徐州医科大学附属医院

目的 目前研究已经证实 DNA 修复酶—O6-甲基鸟嘌呤 DNA 甲基转移酶(O6-methylguanine-DNA methyltransferase，MGMT)在脑胶质母细胞瘤组织中的表达与肿瘤的耐药性有一定的关系，并且能够影响肿瘤的化疗效果。因此本文通过分析脑胶质母细胞瘤术前磁共振影像组学特征与 MGMT 蛋白表达的关联性，以实现术前 MGMT 蛋白的表达情况及术后个性化医疗。 **方法** 回顾性收集收集徐州医科大学附属医院 2017 年 5 月至 2018 年 5 月期间，186 例患者术前 MRI 影像并人工勾画 ROI，随后在 TIWI 增强序列上提取 720 个高维 3D 影像组学特征，并采用 Pearson 相关和 LASSO 回归进行特征选择，最后用 Logistic 回归进行 MGMT 蛋白表达状态分类预测。 **结果** 在内部验证集上的 AUC 为 0.94，符合率 89.2%，敏感度 80%，特异度 100%。 **结论** 脑胶质瘤是常见的颅内恶性肿瘤。患者在患病期间常伴有较严重的认知功能障碍。并且具有较高的死亡率，胶质母细胞瘤患者具有不同程度的预后，预后程度与治疗方式与肿瘤组织病理学分型有关。随着对脑胶质瘤研究的深入，发现脑胶质瘤多存在分子异常变化，如 DNA 修复酶—O6-甲基鸟嘌呤 DNA 甲基转移酶(O6-methylguanine-DNA methyltransferase，MGMT)。通过检测 O6-甲基鸟嘌呤-DNA 甲基转移酶状态，不仅可作为诊断依据，也可用于预后评估，预测 TMZ 化疗的疗效。影像组学方法为肿瘤学的决策支持提供了强大的工具，对医学影像信息的深入挖掘将会对肿瘤的早期诊断、预后预测和疗效评估起到重要的作用，基于医学大数据影像的影像组学分析已成功应用于肿瘤学的研究。本文研究结果表明，影像组学方法可在术前无创的预测脑胶质母细胞瘤患者 MGMT 蛋白的表达状态和提供术后个性化医疗的依据。

Glrlm 纹理特征评估纯磨玻璃 IA 的 p-53、ki-67

马双春,李智勇,刘爱连
大连医科大学附属第一医院

目的 探讨利用灰度级游程矩阵（Glrlm）纹理分析评价纯磨玻璃 IA 的 p-53、ki-67 情况。**方法** 回顾性收集 2015 年 1 月至 2018 年 1 月期间于大连医科大学附属第一医院经手术病理证实为肺浸润性腺癌（IA），同时薄层 CT 上呈现为肺纯磨玻璃结节（pGGN）的患者总计 40 例。所有病例均为单发 IA 病灶，总计 40 个 pGGNs。回顾性采集所有研究对象的免疫组化情况：p53 突变率，ki-67 增殖指数，观察并测量薄层 CT 上 pGGN 的 glrlm 纹理特征：ShortRunLowGrayLevelEmphasis，ShortRunHighGrayLevelEmphasis，RunVariance，GrayLevelNonUniformity，LongRunEmphasis，ShortRunEmphasis，RunPercentage，RunEntropy，RunLengthNonUniformityNormalized。将所有患者的免疫组化指标与 glrlm 纹理特征做相关性分析。**结果** p53 突变率与 glrlm 纹理特征均无相关性；ki-67 增殖指数与 RunVariance（p=0.013，r=0.448）、GrayLevelNonUniformity（p=0.041，r=0.376）、LongRunEmphasis（p=0.015,r=0.441）呈正相关；ki-67 增殖指数与 ShortRunEmphasis（p=0.021,r=-0.421）、RunPercentage（p=0.019，r=-0.426）、RunPercentage（p=0.023，r=-0.414）呈负相关。 **结论** ki-67 增殖指数与 glrlm 纹理特征具有一定相关性，其中 RunVariance 相关性最强，分析薄层 CT 上 pGGN 的 glrlm 纹理特征，对评价患者肿瘤 ki-67 增殖活性有一定的临床价值。

pH-Sensitive Nanoparticles for Cell Membrane Targeted Photodynamic Therapy Based on Bio-orthogonal Tumor Labeling

Ruili Wei
Second Affiliated Hospital, School of Medicine, South China University of Technology

Objective
To construct pH-sensitive nanoprobe based on in situ bio-orthogonal click chemistry pre-positioning system to figure out its advantages and feasibility of the integration of early diagnosis and treatment of breast cancer.
Methods
The integrated probe s-NP and ins-NP were synthesized and their physical and chemical properties were characterized. MTT assay was used to detect the toxicity of the probe and the photodynamic effect on 4T1 cells under near-infrared irradiation. The Ce6 fluorescence on the tumor cell membrane was qualitatively and quantitatively analyzed by single photon confocal microscopy and flow cytometry respectively. Ac_4ManNAz nanoparticles were injected through the tail vein of nude mice for three consecutive days, and s-NP was injected on the fourth day. In vivo fluorescence/MR imaging was performed at 2h, 4h, 6h, 12h and 24h after injection. The tumor site was irradiated with a 660 nm laser at 0.1 W/cm^2 for 30 min. The tumor volume was measured for 21 consecutive days. The main organs and tumor tissues were taken for pathological section for H&E staining and Tunel detect the proliferation and apoptosis of cells in tissues.
Results
The s-NP solution has a particle size of about 100 nm at pH 7.4, and switch to about 10 nm at pH 6.5, which shows good pH sensitivity, while the control ins-NP has a particle size of 100 nm at both pH 7.4 and 6.5. MTT experiments showed that the probe had no toxic effect on cells without near-infrared laser. Ac_4ManNAz particles were pre-administered, and the cell membrane treated with s-NP (pH 6.5) expressed Ce6 fluorescence, and the cell survival rate was significantly lower than that of the ins-NP control group after near-infrared laser irradiation. In vivo fluorescence imaging and MR imaging of Balb/c nude mice showed that the tumor site had significant fluorescence signals. The animal experiment also showed that the probe had significant inhibitory effect on tumor growth.
Conclusion
In this study, an integrated molecular nanoprobe based on tumor in situ bio-orthogonal click chemistry pre-positioning system was synthesized for photodynamic therapy of breast cancer under the guidance of "MR/fluorescence" imaging, and achieved ideal results. This study also has important reference significance for the integration of multimodal diagnosis and treatment of other tumors.

自载体的 pH 响应核-壳型纳米棒用于非小细胞肺癌的协同靶向诊疗

李亚楠
山西医科大学第一医院

目的 制备自载体的 pH 响应核-壳型紫杉醇-阿霉素（PTX-DOX）双药纳米棒，用于非小细胞肺癌的协同性靶向治疗，评价其临床应用效果。**方法** 采用溶剂交换法制备 PTX 纳米棒，化学偶联法制备同时包含亲水基团 PEG 和疏水基团 PMHC18 的 DOX 前药 DOX-PEG-PMHC18，按照 5:1 的体积比均匀混合两种药物，依次经超声和搅拌处理后组装并制备出核-壳型双药联合纳米棒复合体系 PTX-DOX，用扫描电镜（SEM）、透射电镜（TEM）表征纳米棒的形貌和尺寸，紫外-可见分光光度计表征两种药物的复合情况，在不同 pH 值（pH=7.4，5.0）的生理缓冲液中测试药物的释放曲线，用共聚焦激光扫描显微镜（CLSM）实时表征纳米药物的细胞内吞过程，MTT 法测试纳米药物对肿瘤细胞的协同抑制效果，并评价功能化聚合物的生物相容性。**结果** 经过严格控制实验条件，本实验中，我们可大量制备形貌尺寸均匀的核-壳型 PTX-DOX 双药纳米棒（长度 500 nm，直径 40 nm），505 nm 处的特征吸收峰验证了 DOX 的成功组装，纳米双药可在 PBS 缓冲液中稳定分散 6 个月以上而不出现团聚体，当体外释放 250 h 时，药物在 pH=7.4 的缓冲液中的释放率为 30%，而在 pH=5.0 的酸性缓冲液中的释放率大于 75%，该纳米双药可被肿瘤细胞快速内吞，当细胞与药物纳米棒共孵育 2 h 时达到内吞峰值且稳定，另外，纳米双药表现出协同增强的抗肿瘤活性，抗癌效果明显优于单药及双药混合物。**结论** 新型的自载体 pH 响应核-壳型 PTX-DOX 双药纳米棒分散性好、性能稳定、可被肿瘤细胞快速内吞并表现出酸性响应的药物释放和协同增强的抗肿瘤活性，为恶性肿瘤靶向治疗提供新的药物设计思路和用药指导。

TIM-3 靶向纳米金探针在小鼠肺结核模型 CT-荧光双模态成像中的初步研究

何欣源[1],施裕新[2],单飞[2],张志勇[3]
1.平安健康（检测）中心
2.上海市公共卫生临床中心
3.复旦大学

目的 观察 TIM-3 抗体合成 CT-荧光双模态靶向对比剂在肺结核感染 BALB/c 小鼠模型体内 CT-荧光双模态成像效果，探索最佳成像时间窗，通过观察结核感染小鼠模型的 CT-荧光双模态成像效果实现结核病变的靶向动态观察。
材料及方法 合成荧光金纳米团簇（Au NCs）作为 CT-荧光双模态探针，耦联 TIM-3 抗体合成 CT-荧光双模态靶向对比剂。建立肺结核小鼠模型，将合成的 CT-荧光双模态靶向对比剂行小鼠尾静脉注射，以 Au NCs 以及碘海醇为对照，分别在注射前、注射后 2h、6h 及 12h 观察肺结核病灶的 CT 增强效果，并于注射对比机后 12h 取肺结核小鼠离体器官（心、肝、脾、肺、肾）行体外荧光成像，判断靶向探针在体内 CT-荧光双模态成像的效果。
结果 成功建立 23 个肺结核感染 BALB/c 小鼠模型，注射对比剂后 2 h 肺内病变增强率抗体组高于 2 h 的碘海醇组（$P<0.01$，$\alpha=0.05$）；抗体组在 6 h 和 12 h 肺内病变增强率均明显高于同时间的无抗体组和碘海醇组，具有显著统计学差异（$P<0.001$，$\alpha=0.05$）。抗体组及无抗体组

的肺脏、肝脏及肾脏均有不同程度的荧光显像，心脏及脾脏普遍未检测出荧光信号。抗体组的肺脏荧光强度显著强于无抗体组及碘海醇组（P＜0.001， α ＝0.05）。
结论 本研究成功制备了 CT 及荧光成像效果优秀的 Au NCs 靶向对比剂探针，实现了体、内外 CT/荧光双模态成像。观察 CT 及荧光成像的最佳成像时间点为注射对比剂后 6h 到 12h。

F304&IR-1061@PLGA 自组装纳米探针用于乳腺癌淋巴结 转移的多模态成像研究

蔡武[1],胡春洪[2],曾剑峰[3],范国华[1],沈钧康[1],徐亮[1]
1.苏州大学附属第二医院
2.苏州大学附属第一医院
3.苏州大学

目的 探讨 FIP NPs 用于乳腺癌淋巴结转移的磁共振成像(MRI)/光学成像(OI)/光声成像(PAI)/单光子发射计算机断层成像(SPECT)多模态纳米探针的可行性。
方法 ①采用足垫注射表达荧光素酶的小鼠乳腺癌 4T1-Luc 细胞的方法建立乳腺癌淋巴结转移模型。②对不同浓度 FIP NPs 进行 MRI/OI/PAI 体外性能评估，同时对 FIP NPs 进行放射性核素 ^{99m}Tc 标记，并评估其放射性标记稳定性。③将 FIP NPs 经活体瘤内注射后，注射纳米探针前及注射后 8 h 内不同时间点进行 MRI/OI/PAI/ SPECT 体内多模态成像，观察并测量淋巴结转移瘤区各种信号值的变化。
结果 ①足垫注射建模 1 周后，在小白鼠同侧腘窝处触摸到肿大的淋巴结，并通过腹腔内注射底物 D-荧光素钠盐后行活体成像可观察到足垫原发肿瘤和同侧腘窝肿大淋巴结处有生物发光信号，离体解剖并经病理证实已发生淋巴结转移。②FIP NPs 具有较好的光学成像、光声成像及磁共振成像造影效果，磁共振横向驰豫率高达 172.73 mM^{-1} s^{-1}；不仅如此，FIP NPs 还能非常容易地实现放射性核素 ^{99m}Tc 标记，标记产物 24 h 内的放化纯维持在 95.0%以上。③活体成像结果显示 FIP NPs 瘤内注射后，转移淋巴结区域 T_2 信号较注射探针前明显降低，而 NIR-II 荧光信号、光声信号及放射性核素信号较前明显增强，且在注射探针后 2~3 h 转移淋巴结中对比剂浓度达到最高及信号最强。
结论 FIP NPs 具有良好的 MRI/OI/PAI/SPECT 多模态成像效果，实现了活体乳腺癌淋巴结转移的精确定位示踪。

F304&IR-1061@PLGA 自组装纳米探针用于乳腺癌淋巴结 转移的光热治疗研究

蔡武[1],胡春洪[2],曾剑峰[3],范国华[1],沈钧康[1],徐亮[1]
1.苏州大学附属第二医院
2.苏州大学附属第一医院
3.苏州大学

目的 探讨 FIP NPs 用于乳腺癌淋巴结转移光热治疗的可行性。
方法 ①通过对 2 只 4T1-Luc 淋巴结转移瘤模型足垫原发肿瘤瘤内分别注射相同体积生理盐水和 FIP NPs，2 h 后给予相同功率（1.25 W/cm^2）的 808 nm 激光照射腘窝处淋巴结转移瘤部位 10 min，并用红外光热成像仪实时记录和比较淋巴结转移瘤部位温度的变化。②将 12 只 4T1-Luc 乳腺

癌淋巴结转移瘤模型随机分为单纯 FIP NPs、生理盐水+PTT 和 FIP NPs+PTT 共 3 组，之后手术切除每组原发肿瘤，治疗后监测淋巴结转移瘤的生长和生物发光信号情况以及有无远处转移。
结果 ①通过 FIP NPs 对活体乳腺癌淋巴结转移瘤的光热治疗升温效应研究，发现注射 FIP NPs 小白鼠较生理盐水具有更显著的升温效果，前者温度可升高达 54 ° C 且升高了 19.3° C，而后者仅升高了 8.7 ° C。②3 组治疗组中，通过瘤内注射 FIP NPs 后 2 h 联合 808 nm 激光照射及原发肿瘤手术切除，淋巴结转移瘤被消除并且在 45 d 内无复发和转移，而其他 2 组小白鼠淋巴结转移瘤生长未见明显抑制，并出现远处肺转移。
结论 FIP NPs 具有良好的光热治疗效果，将来有望用于乳腺癌淋巴结转移患者的光热治疗。

Synergistic Triple-combination Therapy with Hyaluronic Acid-shelled PPy/CPT Nanoparticles Results in Tumor Regression and Prevents Tumor Recurrence and Metastasis in 4T1 Breast Cancer

Wei Sun[1,2],Yang Du[2],Jianjun Zheng[1],Jie Tian[2],Yinhua Jin[1]
1.Hwa Mei Hospital， University of Chinese Academy of Sciences (Ningbo No 2 Hospital)
2.Institute of Automation， Chinese Academy of Sciences

Breast cancer is characterized by high aggression, poor prognosis, and high recurrence rate. Early detection and specific targeted treatment with less toxicity are the ultimate goals for breast cancer therapy.To improve antitumor therapeutic effects, we developed a novel polypyrrole nanoparticle using the near infrared dye IRDye800CW with camptothecin (CPT)-conjugated hyaluronic acid (HA) shell (PPy@CPT-HA-IRDye800CW) and performed a photothermal therapy(PTT), along with chemotherapy, guided by fluorescence and photoacoustic dual-modality imaging, in combination with immunotherapy.Irradiation with near infrared (NIR)light offered a strong PTT effect and promoted CPT drug release in tumors. Moreover, we found that chemo-photothermal therapywith PPy@CPT-HA-IRDye800CW NPs, in combination with immune checkpoint inhibitor anti-PD-L1 immunotherapy, synergistically enhanced the anti-tumor immune response, thereby eliminating primary breast cancer and preventing tumor metastasesand recurrencesin 4T1 tumor-bearing mice. This approach may provide important clues for the clinical managementof breast cancer and other malignant tumors.

NaGdF4 纳米粒子用于肿瘤靶向磁共振成像和治疗研究

陈一鑫[1],付宇[1],李晓东[1],陈宏达[2],王振新[2],张惠茅[1]
1.吉林大学第一医院
2.长春应用化学研究所

研究**目的** 被多肽修饰后的 $NaGdF_4$ 纳米粒子对 MCF-7 乳腺癌细胞的抑制作用及对皮下接种乳腺癌的裸鼠 T1 加权磁共振成像

功能。
研究**方法** 通过体外细胞实验及体内动物实验研究 $NaGdF_4$ 纳米粒子对 MCF-7 细胞的杀伤、抑制作用；通过体内实验研究对皮下接种乳腺癌的裸鼠的 T1 加权磁共振成像。
研究**结果** 实验结果表明 NaGdF4 @ bp-peptide NPs 具有 T1 加权磁共振成像（MRI）功能和肿瘤靶向作用，并且能够抑制肿瘤生长而不引起全身毒性。
结论 应用多肽的多种生物学功能，使用简便的方法制备了具有治疗与诊断功能的纳米粒子，该纳米粒子具有作为分子成像引导治疗的抗癌剂的潜力。

19F-MRI Monitoring Metabolism of Intratracheal Delivery of Perfluorocarbon Nanoprobe and its Biosafety Assessment

Hongbin Wang[1,2], Yingbo Li[1,2], Xiaona Li[1,2], Shuang Liu[1,2], Lina Wu[1,2], Xilin Sun[1,2]
1. Molecular Imaging Research Center, Harbin Medical University (MIRC)
2. TOF-PET/CT/MR Center, The Fourth Hospital of Harbin Medical University

Background and Purpose

The morbidity and mortality of lung cancer are increasing rapidly due to the lack of typical clinical symptoms and effective detection methods. Therefore, exploring new diagnostic and therapeutic strategies is of great significance for the early diagnosis and prognosis of this formidable disease. Accompanying the fast development of nanotechnology, the intratracheal (I.T.) delivery of novel nanoparticles provides a non-invasive way and a promising future because it takes advantages of the anatomic and pathological features of lung cancer. Perfluorocarbon (PFC) are widely used in molecular biology and biomedical fields as drug delivery carrier and blood substitutes due to its high gas solubility, low surface tension, high specific gravity, and stable chemical properties. Due to its high concentration of fluorine and almost no background in the body, ^{19}F-MR imaging with high sensitivity, high spatial resolution and high signal noise ratio can be realized. In our previous study, we showed that intratracheal delivery perfluorocarbon nanoprobe (PFC NP) can sustainably and significantly enhance the ^{19}F-MR signal of lung tumor in rabbits, and that $\alpha_v\beta_3$-targeted PFC NP specifically target and quantitatively assessment tumor angiogenesis using ^{19}F-MRI. Our results confirmed that the feasibility and efficiency of intratracheal delivery of PFC NP, the objective of the present research was to monitor the metabolism of intratracheal delivery PFC NP by ^{19}F-MRI and assess its biosafety on rodent models, providing experimental foundation for clinical transformation of novel imaging nanoprobes.

Methods

Three kinds of PFC NP were employed, including perfluorocarbon crown ether nanoprobe (PFCE NP), perfluorooctylbromide nanoprobe (PFOB NP) and the original PFOB molecule. 45 healthy C57BL/6 mice were selected to perform the intratracheal delivery of three kinds of PFC NP respectively. Deionized water (H_2O) was used as positive control. Bruker 9.4T Micro MRI system was employed to monitor ^{19}F-MRI signals in the lung. The general condition and food consumption of mice were daily monitored, and the body weight was monitored every the other day. Fluorescence imaging was employed to testify

the distribution of nanoparticles in the lungs at different times (days 1, 7, and 21). Lung tissue, heart, liver, spleen and kidney were isolated for histopathological H&E and Masson staining to detect pathological damage and collagen deposition. RT-PCR of lung tissue was analyzed to detect relative expression level of inflammatory cytokines.

Results

The C57BL/6 mice receiving PFOB NP had a persistence for 6 hours in ^{19}F-MR signals after I.T. delivery then significantly diminished at 36h. The PFOB molecules exhibited an even faster clearance rate. In contradistinction, the ^{19}F-MR signal was persistently high in the mice administrated PFCE NP as long as 21d. Confocal fluorescence images showed that the distribution of nanoprobes in the lung decrease over time. All the administration mice lost appetite and slightly reduced weight caused by acute exposure of exogenous nanoprobes during intratracheal delivery, then recuperated quickly. The results of RT-PCR showed that the relative expression level of inflammatory factors after administrated PFC NP was increased, compared to positive control group (H_2O). There was no obvious abnormal pathological damage in H&E and Masson staining of lung tissues. After I.T. administration, these three kinds of PFC NP were only detected in lung, without presence in any other organs such as heart, liver, kidney and spleen by detection of ^{19}F-MRI.

Conclusions

In this study, three kinds of ^{19}F-MR imaging PFC nanoprobes have different metabolic characteristics, but all exhibit good biosafety and excellent ^{19}F-MR imaging response after intratracheal delivery. This study provides favorable condition and basis for clinical transformation of PFC-based ^{19}F-MRI molecular imaging nanoprobe of lung cancer.

PET-CT 在 T1 期肺腺癌临床分期和评估预后中的临床应用

朱磊,徐文贵
天津医科大学肿瘤医院

目的 探讨 ^{18}F-FDG PET-CT 显像指标 SUVmax 和肿瘤最大径在 T1 期肺腺癌中的特点，为更好的提高 PET-CT 在肺腺癌临床分期和评估预后中的临床应用。

方法 回顾性分析研究 126 例经过病理证实的 T1 期肺腺癌的 PET-CT 显像资料，通过不同实体肿瘤的大小（最大径）和标准摄取值 SUVmax 来分析比较无复发生存期 Recurrence-free survival (RFS)的差异性以及临床分期及转移特点的不同。

结果 在肿瘤最大径≤2cm 时 RFS 无显著差异性（P=0.12），肿瘤最大径在 2～3cm 区间时 RFS 具有明显差异性（P＜0.01）。将肿瘤最大径和 SUVmax 的不同分为 4 组，a 组：肿瘤大小≤2cm，SUVmax≤2.0；b 组：肿瘤大小≤2cm，SUVmax >2.0；c 组：肿瘤大小 2～3cm，SUVmax≤3.9；d 组：肿瘤大小 2～3cm，SUVmax > 3.9。b 组和 c 组组间表现出相似的 RFS，RFS 在多组间的差异均具有显著统计学意义，其中 a 组与 b+c 组组间比较，（P＜0.01）；b+c 组与 d 组组间比较，（P = 0.0011）。无论是 T1 期肺腺癌肿瘤最大径≤2cm 还是肿瘤最大径在 2～3cm 区间者均出现转移情况，导致临床分期改变，两者之间具有显著统计学差异（P＜0.05），T1 期肺腺癌肿瘤的 SUVmax

在ⅠA 期（2.42±1.56）和非ⅠA 期（5.45±3.44）肺腺癌患者组间亦具有显著统计学差异（P＜0.01）。

结论 SUVmax 和肿瘤最大径能够很好的反映 T1 期肺腺癌患者的预后，并能够提供准确的临床分期。

PU-1352
多巴胺应激心肌出血早期磁共振心肌应变的初步研究

夏睿[1],何博[2],朱桐[2],张钰[2],陈榆舒[2],王磊[2],廖继春[1],李咏梅[1],吕发金[1],郜发宝[2]
1.重庆医科大学附属第一医院
2.四川大学华西医院

目的 结合多巴胺应激应用磁共振成像(MRI)心肌应变技术研究心肌梗死再灌注模型大鼠不同节段的心肌应变特点。**材料与方法** 10 只 SD 大鼠行冠状动脉左前降支结扎 60 min 后松开制备心肌梗死再灌注模型，在再灌注 48 h 采集 MRI 数据，首先采集 T2*mapping 序列确定心肌出血的节段，经大鼠尾静脉注入磁共振对比剂〔按 0.1 mmol/kg 体质量注入钆喷酸葡胺(Gd-DTPA)〕，10 min 后采用 Fisp-cine 序列采集对比剂延迟增强图像（LGE），确定心肌梗死的范围，同时测量心内膜心肌应变运动参数，包括径向应变（RS）、周向应变（CS）峰值，在每一层心肌选取心肌出血、完全心肌梗死、部分心肌梗死 3 个节段进行统计学分析。然后经尾静脉注射多巴胺〔按 3 mg/kg 体质量注入盐酸多巴胺注射液〕，再次采集 Fisp-cine 数据，心肌应变分析方法与注射前类似。**结果** 再灌注 48 h 出现心肌出血层面一共 19 层(n=19)，完全心肌梗死节段一共 27 层(n=27)及部分心肌梗死节段一共 30 层(n=30)，心肌出血节段与完全心肌梗死节段在多巴胺注射前 RS 及 CS 之间无统计学差异（*P*均>0.05），但在多巴胺注射后 RS（*P*<0.05）及 CS（*P*<0.01）之间出现统计学差异；心肌出血节段与部分心肌梗死节段在多巴胺注射前 RS 及 CS 之间有统计学差异（*P*均<0.05）；而完全心肌梗死节段与部分心肌梗死节段在多巴胺注射前、后 RS 及 CS 之间均无统计学差异（*P*均>0.05）。**结论** 心肌梗死再灌注早期采用多巴胺应激可以将心肌出血节段与完全梗死节段的心肌应变区分开来，但完全梗死节段及部分梗死节段心肌应变峰值在应激前后都没有差异。提示心肌梗死再灌注早期出现心肌出血比心肌梗死更加限制心肌的运动能力。

PU-1353
巨噬细胞在早期心肌缺血再灌注大鼠心肌内的分布及动态变化：USPIO 在 7T MR 的初步研究

夏睿[1],朱桐[2],张钰[2],陈榆舒[2],王磊[2],廖继春[1],李咏梅[1],吕发金[1],郜发宝[2]
1.重庆医科大学附属第一医院
2.四川大学华西医院

目的 本研究通过心脏磁共振(CMR) T2*mapping 序列，采用 USPIO 初步分析心肌缺血再灌注大鼠早期心肌内巨噬细胞的分布及动态变化。

方法 采用心梗 60min 再灌注 48h 大鼠，7T MR 扫描序列包括：T2*mapping 序列，T2mapping 序列及 LGE 技术(TR/TE：5.2/2ms，FA：25°)，首先在 USPIO 注射前采用 T2*mapping 序列、T2mapping 序列及 LGE 技术（按 0.15 mmol/kg 通过尾静脉注射 Gd-DTPA 勾画出心肌水肿(ME)、心肌出血(MH)及心肌梗死(MI)范围。6h 后通过尾静脉注射 USPIO（粒径 27nm），分别在 0.5h,2h,6h,15h,24h 行 T2*mapping 与 T2mapping 扫描，在每个时间点分析正常心肌、心肌水肿与心肌出血内信号变化。CMR 后处死大鼠，行 Prussian 蓝染色以确定 Fe 的沉积。

结果 心肌水肿在 USPIO 注射前及注射后 0.5h,2h,6h,15h,24h 的 T2 值分别为 48.7±3.4ms、30±2.3ms、40.8±0.8ms、37.1±2.6ms、35.5±4.2ms、42.4±3ms，T2*值分别为 28.5±4.0ms、

11.8±1.2ms、14.6±2.3ms、17.9±0.6ms、17.7±1.1ms、16.5±2ms。心肌出血的 T2*值分别为 30.9±3ms、11.9±1.1ms、15.5±4ms、17.7±0.4ms、18.9±1.5ms、17.1±0.4ms。Prussian 蓝染色证实心肌水肿及心肌出血内 Fe 沉积。

结论 USPIO 注射间接提示巨噬细胞在心肌内先升高后降低，其中心肌水肿较正常心肌巨噬细胞存留时间长，而心肌出血较心肌水肿巨噬细胞存留时间长。

2. TOF-PET/CT/MR Center, Fourth Hospital of Harbin Medical University

Abstract

Objective

Radiotherapy is one of the most widely used clinical treatment methods for cancer. While, its therapeutic effect is largely hindered by various factors, such as tumor resistance, tumor hypoxia and so on. Therefore, it is necessary for us to find effective and safe radiosensitizers to enhance the radiation therapy effect. Silicon nanomaterials can be used as photosensitizers for photodynamic therapy. However, due to the limited penetration of near-infrared light, they can only be used for the treatment of superficial tumors. Indeed, X-rays have high penetration ability. Above all Si quantum dots (SiQDs) can produce electron-hole pair by photoelectric effect, Compton scattering or electron pair annihilation under the high energy rays excitation which can make bio-molecules produce reactive oxygen species (ROS) by redox reaction. Therefore, this study uses X-ray as the illumination source to explore the synergistic therapeutic effect of silicon quantum dots as radiotherapy sensitizers for the treatment of lung cancer.

Methods

Firstly, we synthesized the semiconductor silicon quantum dots by hydrothermal method and carried out detailed physical and chemical analysis. And we detected the biocompatibility of semiconductor SiQDs by MTT method. Using PI staining, we showed the effect of SiQDs combined with radiotherapy on tumor cell cycles. In addition, we used active oxygen indicator examining the effect of SiQDs combined with radiotherapy on the production of reactive oxygen species in tumor cells. In ex vivo experiments, we verified the inhibitory effect of SiQDs combined with radiotherapy on tumor cells was. Thereafter, we established subcutaneous tumor model of NSCLC (NCI-H460) in nude mice. The SiQDs were delivered via intratumoural and intravenous approaches based on the enhanced permeability and retention effect. The tumor size was measured by vernier calipers every other day, monitoring for 16 days. On the 2nd and 16th day of treatment, the tumor-bearing mice were sacrificed and the tumor tissues were taken out. Through HE section staining and immunohistochemical section, we observed the therapeutic effect of the tumor and the influence on vital organs in the tissue level.

Results

The synthesized SiQDs were measured by DLS to have an average size of 48.78±3.78 nm and a zeta potential of -43.27±6.73 mv. In the cellular level, SiQDs can induce tumor cells to produce large amounts of ROS under radiation therapy and regulate the cell cycle. We found that the binding of SiQDs to radiation can inhibit H460 cells in the GO/G1 phase and significantly promote tumor cell apoptosis. Importantly, we also found that SiQDs combined with radiotherapy in vivo experiments significantly inhibited the growth of subcutaneous xenografts. HE staining at the tumor tissue level also confirmed that SiQD combined with radiotherapy can better promote tumor tissue apoptosis. At the same time, the vital organs of the tumor-bearing mice on the second and last day didn't have significant acute or chronic damage. However, at the tissue level, we found that SiQD combined with radiotherapy did not improve the hypoxia of tumor tissue by immunofluorescence assay.

Conclusion

This study preliminarily verified that SiQDs combined with radiotherapy have obvious radiosensitizing effect in the cellular and in vivo levels, which showed inhibiting action of tumor growth. This work presented that semiconductor SiQDs can play a role as a novel nano-radiation sensitizer in the therapeutics of tumors.

肺部流感嗜血杆菌感染的影像学表现

黄仁军,李勇刚
苏州大学附属第一医院

目的 探讨肺部流感嗜血杆菌感染的 X 线及 CT 表现特征，提高临床影像诊断及鉴别诊断的能力。**方法** 回顾性分析我院经病原学确诊的流感嗜血杆菌感染患者的胸部 X 线及 CT 的影像学表现，总结其表现特点。**结果** X 线表现：
流感嗜血杆菌感染可为局限（节段性或大叶性肺炎），也可为弥漫性（支气管肺炎）分布。成人常规胸部平片表现为多样性但无特异性，肺内病变多先累及肺段，由肺间质受累逐渐转为肺泡的浸润，多表现为斑片状或节段性分布的实变影，实变可为单侧或双侧，以肺野外周带较常见，边缘多锐利；支气管炎则表现为散在多发的小结节或网状结节影，可单独存在或与肺泡实变同时出现；50%的患者可见胸腔积液，而脓胸则不是常见的胸片表现。CT 表现：CT 主要表现为单侧或双侧肺内的斑片状或肺段性实变影，多同时伴有支气管壁增厚，有时也可是磨玻璃密度病变；肺周围带的小叶中心结节和“树芽征”是支气管肺炎的常见表现，部分可见双肺弥漫性小叶中心结节，直径一般小于 5mm；多发病变则可见融合性改变；约 50%患者可见单侧或双侧胸腔积液，支气管扩张及空洞一般不常见；胸部淋巴结肿大也较为少见。**结论** 胸部 X 及 CT 对于流感嗜血杆菌感染具有较高的诊断及鉴别诊断价值，CT 能够提供更多的信息，具有更高的价值。

肺炎葡萄球菌感染的影像学表现

黄仁军,李勇刚
苏州大学附属第一医院

目的 探讨肺炎葡萄球菌感染的 X 线及 CT 表现特征，提高临床影像诊断及鉴别诊断的能力。**方法** 回顾性分析我院经病原学确诊的肺炎葡萄球菌感染患者的胸部 X 线及 CT 的影像学表现，总结其表现特点。**结果** X 线表现：在常规 X 线平片上，病变呈多发性斑片、结节状影分布，进展快，常累及两个肺叶以上；出现典型蜂窝状透亮影、空洞影、肺气囊影，其中肺气囊是诊断本病的一个重要特征，小气囊呈多发，环形，位于两肺中上野的中外带，靠近肺边缘处多见，大气囊是婴幼儿原发金黄色葡萄球菌性肺炎的特征性表现。大气囊在发病的 1～2 天即可出现，数目 1 个或几个，大气囊常并发有脓气胸，其可压迫肺组织，出现肺不张；胸膜改变如肋膈角变钝；气胸、脓气胸；心影增大、心包积气及纵隔气肿等。CT 表现：（1）肺气囊：薄壁、张力高、多发成簇状分布的肺气囊是血源性金黄色葡萄球菌肺炎最具有特征性的表现之一；（2）炎性渗出性病灶：主要表现为以两肺下叶外带为主的、胸膜下小片状或楔形高密度病灶，病灶边界模糊，与血管关系密切，可伴有少许实变。病变多发展迅速，部分患者检查后数小时至 1 天内可由单一病灶迅速发展为多发病灶，炎性渗出灶大部分互相融合成大片状的高密度影或融冰样肺梗死改变；（3）胸腔积液、气胸、液气胸：血源性金黄色葡萄球菌性肺炎早期可侵犯胸膜即发生液气胸、脓胸及脓气胸等，可同时伴有胸膜增厚；（4）肺脓肿液化、坏死：坏死灶与血管的关系密切，坏死病灶周围肺组织表现为密度增高等感染的表现，中央的液化坏死灶可与支气管相通，并形成空洞，CT 表现为多发散在的圆形空洞（薄壁或厚壁）。早期表现为大片状磨玻璃密度、密度逐渐增高，经治疗后空洞可吸收或残存纤维灶；（5）纤维条索；（6）心包积液。以上表现往往是多种类型并存。**结论** 胸部 X 及 CT 对于肺炎葡萄球菌菌感染具有较高的诊断及鉴别诊断价值，CT 能够提供更多的信息，具有更高的价值。

PU-1357

NSCLC 中高表达 G6PD 通过 STAT3-GLUT1 促进 NSCLC 葡萄糖摄取且提示预后不良

陈龙,李淑娟,谢燃,杨聪慧,李韵蕾
云南省肿瘤医院

目的 研究 G6PD 与非小细胞患者预后的关系，探讨 G6PD 对非小细胞肺癌细胞葡萄糖摄取能力的影响及分子机制。

方法 收集非小细胞肺癌(NSCLC)患者及肺部良性结节患者 PET-CT 影像学资料 40 例，统计分析上述两组患者中 G6PD 表达水平与 SUVmax 及 SUVmean 的相互关系。采用肺癌及癌旁组织工程芯片，免疫组化检测 G6PD 在肺癌和癌旁组织工程芯片中的表达并评分，分析两组间 G6PD 表达水平与总生存期及无疾病进展期的关系。通过皮下移植瘤模型构建上述 3 株细胞的裸鼠荷瘤模型，检测成瘤时间、生长速度及代谢。

结果 1、NSCLC 患者 SUVmax 及 SUVmean 较肺部良性结节患者明显升高（且 G6PD 表达水平与 SUVmax 正相关。

2、NSCLC 中高表达 G6PD 的患者总生存期及无疾病进展期明显缩减。

3、G6PD 在肺癌细胞中高表达，敲减 G6PD 的肺癌 A549 细胞葡萄糖摄取减少，同时伴有 STAT3 及 GLUT1 表达下降；过表达 G6PD 之后，A549 细胞的葡萄糖摄取增加且 STAT3 及 GULT1 表达水平升高；上述两种细胞系中抑制 STAT3 的活性发现敲除或过表达 G6PD 不影响 GLUT1 的表达。

4、裸鼠荷瘤模型显示，敲除 G6PD 的小鼠成瘤能力明显下降伴代谢减低；过表达 G6PD 之后小鼠成瘤能力增加且代谢增高。

结论 1、NSCLC 患者中 G6PD 过表达且提示预后不良。2、G6PD 通过 STAT3/GLUT1 轴调控 NSCLC 葡萄糖摄取。

18F-FDG PET/MR 一体机成像关于非小细胞肺癌葡萄糖代谢参数与体素内不相干运动扩散加权成像参数相关性的初步研究

王鹏远
中国医科大学附属盛京医院

目的
PET/MR 的多参数、多模态成像对于恶性肿瘤的诊断具有重要价值和广泛的应用前景，本文应用 ^{18}F-FDG PET/MR 一体机观察非小细胞肺癌糖代谢参数（SUVmax、SUVmean）与 IVIM 参数（D、D*、f ）的相关性。
材料与方法
对 31 例非小细胞肺癌患者行胸部 PET/MR 检查，包括 IVIM 序列。采用随机自带软件,利用轴位像对 PET 图像、IVIM 图像及 T2 Propeller 图像进行自动配准,并在同一层面以 T2 Propeller 图像边界为基础勾画 ROI,于 PET 图像测量肿瘤 SUV 最大值(SUVmax)和 SUV 平均值(SUVmean)，于 IVIM 图像测量 D 值、D*值、f 值。应用 Pearson 相关系数分析相关性。
结果
SUVmax 值与 f 值之间具，有相关性（r=0.395 P=0.028），SUVmean 值与 D 值及 f 值之间具有相关性（r=0.409 P=0.022，r=0.489 P=0.005）
结论
IVIM 序列参数 D 值，f 值提供的肿瘤组织水分子受限及微循环灌注信息，与 PET 图像参数 SUVmax 和 SUVmean 提供的肿瘤糖代谢信息之间存在联系。可应用 ^{18}F-FDG PET/MR 的多参数、多模态成像对非小细胞肺癌的糖代谢等病变内部信息进行评价。

1H-NMR spectroscopy identify potential biomarkers in serum metabolomic signatures for early stage of esophageal squamous cell carcinoma

Zhongxian Yang[1],Yanyan Liu [1],Limin Ma[2],Xuqing Wen[2],Huanlin Ji[3],Renhua Wu[1]
1.Department of Medical Imaging Center， the 2nd Affiliated Hospital， Medical College of Shantou University， Shantou， Guangdong， 515041， China
2.Department of Cardiothoracic Surgery， The 2nd Affiliated Hospital， Medical College of Shantou University， Shantou，Guangdong， 515041， China
3.Department of Public Health， Shantou University Medical College， No.22 Xinling Road， Shantou，Guangdong 515041， China

BACKGROUND: Esophageal squamous cell carcinoma (ESCC) is one of the prevalent types of upper gastrointestinal malignancies. Here, we used ^{1}H nuclear magnetic resonance spectroscopy (1H-NMR) to identify the potential serum biomarkers in patients with early stage ESCC.
METHODS: 65 serum samples from early ESCC patients (n=25) and healthy controls (n = 40) were analysed by ^{1}H-NMR spectroscopy. We distinguished different metabolites

through principal component analysis, partial least squares-discriminant analysis, and orthogonal partial least squares-discriminant analysis (OPLS-DA) using SIMCA-P+ version 14.0 software. Receiver operating characteristic (ROC) analysis was conducted to verify potential biomarkers.
RESULTS: Using OPLS-DA, 31 altered serum metabolites were successfully identified between the groups. Based on the area under the ROC curve (AUROC), and the biomarker panel with AUROC of 0.969, six serum metabolites (α-glucose, choline, glutamine, glutamate, valine, and dihydrothymine) were selected as potential biomarkers for early stage ESCC, especially the dihydrothymine could stand for a new feasible biomarker associated with tumor occurrence.
CONCLUSIONS: ^{1}H-NMR spectroscopy may be a useful tumour detection approach to identify useful metabolic ESCC biomarkers for early diagnosis and to explore the molecular pathogenesis of ESCC.

FDG PET/CT 定量参数评价前上纵隔肿瘤的代谢负荷

朱磊,付蔷,黄慧,徐文贵,陈薇
天津医科大学肿瘤医院

目的 应用 ^{18}F-FDG PET/CT 体素基础上定量评价前上纵隔肿瘤的代谢负荷，包括肿瘤代谢体积和糖酵解总量。
材料和方法 选择 127 例来我院就诊的前上纵隔肿瘤患者，术前或穿刺活检前行 PET/CT 检查。依据组织学结果，将所有患者分为 4 组，包括胸腺上皮来源肿瘤组、淋巴瘤组、生殖细胞肿瘤组和其他组。比较 4 组患者的肿瘤代谢体积和总糖酵解量，评价体素基础上各代谢参数的诊断效能。
结果 各亚组肿瘤的代谢参数存在组间差异(F=6.72, P<0.001)，淋巴瘤组 SUVmax 最高，其次为生殖细胞肿瘤和胸腺上皮来源肿瘤。各亚组间肿瘤代谢负荷，包括肿瘤代谢体积和总糖酵解量，均存在显著差异 (F=4.96, P<0.01; F=5.08, P<0.01)，淋巴瘤组 TLG 和 MTV 均最高。其中 TLG 和 MTV 在鉴别淋巴瘤与其他前上纵隔肿瘤方面，二者具有相似的敏感性和特异性 (65.9% vs. 70.7%, and 69.7% vs. 73.8%)，ROC 曲线显示 TLG 的曲线下面积为 0.738，略高于 MTV。
结论 肿瘤代谢负荷，包括肿瘤代谢体积和总糖酵解量，能够反映肿瘤的代谢差异，可以帮助鉴别淋巴瘤和其他前上纵隔肿瘤。

CT quantitative analysis study for angiogenesis,and degree of ischemic necrosis and glucose metabolite in non-small cell lung cancer

Iang min J[1],Hao yue Lu[2],Xiuhong Shan[1]
1.affiliated people's hospital of Jiangsu University
2.Medical cology of Jiangsu University

OBJECTIVE: We aimed at exploring the feasibility of noninvasive late arterial phase enhanced CT imaging in evaluating tumor angiogenesis, ischemic necrosis, and glucose

metabolism, thereby providing pathological information for the comprehensive treatment plan in non-small cell lung cancer (NSCLC).
PATIENTS AND METHODS: 52 cases of NSCLC were enrolled in this study. The mean ischemia necrosis CT quantitative value (INCTQ) and CT enhanced value (CTe) of the tumor were determined, and the immunohistochemical staining of factors relating to tumor angiogenesis, ischemic necrosis and glucose metabolism, including VEGF, VEGFR-2, HIF-1α, CAIX, GLUT1, and GLUT3, were conducted.
RESULTS: The mean INCTQ values of different expression grades of VEGF, VEGFR-2, HIF-1α, and CAIX have no significant difference, but the mean INCTQ values of different expression grades of GLUT1 or GLUT3 have significant differences ($p < 0.001$), respectively. However, INCTQ value has a positive correlation with CAIX expression. In addition, CTe value was positively correlated with VEGF. CONCLUSIONS: To sum up, late arterial phase CT enhanced images of NSCLC not only can assess the tumor angiogenesis, but also can reflect the degree of ischemic necrosis, effectively reflecting the level of glucose metabolism in tumor and tumor angiogenesis, for the comprehensive treatment program.

胸痛三联一站式多层螺旋 CT 扫描技术与临床应用

李林峻
重庆三峡中心医院

目的 对肺动脉、冠状动脉及主动脉的 CT 联合扫描成像的探讨与临床引用
方法 扫描方案:患者仰卧位，脚先进，胸部扫描体位，连接静脉套管针（20G），连接心电监护。扫描时不要求强制憋气，平静呼吸即可。
扫描参数:
主动脉及肺动脉采用螺旋扫描，管电压 100KV，管电流 200-300mA，扫描层厚 0.625mm,球管旋转时间 0.28s,探测器宽度 12-16cm。
冠脉采用全部采用前门控轴扫模式，管电压 100KV,管电流 SmartmA 200-700mA，扫描层厚 0.625mm,球管旋转时间 0.28s,探测器宽度 12-16cm。
采用 Revolution CT 完成扫描,采用小剂量测试，层面选取肺动脉主干、主动脉根部，算出目标血管峰值时间，修改各血管扫描延迟时间。造影剂注射方案根据 BMI 设定，对比剂注射完成后，注射生理盐水 50ml 冲管，流速 4-5ml/s。
结果: 肺动脉、冠状动脉、主动脉数据为单独的序列，单独显示，后处理方便。
结论: 可迅速准确进行鉴别，避免了重复检查，并降低了辐射剂量及造影剂剂量。

PU-1363
基于生物正交点击化学预定位体系的乳腺癌诊疗一体化探针的构建及可视化评价

韦瑞丽
华南理工大学附属第二医院

目的

构建基于肿瘤原位生物正交点击化学反应预定位体系的酸敏感纳米探针，通过细胞及动物实验考察其在乳腺癌“MR/荧光”双模态成像及光动力治疗中的作用，评价其对乳腺癌早期诊疗一体化的优势和可行性。

方法

合成诊疗一体化探针 s-NP 与 ins-NP，并对其理化性质进行表征（不同 pH 值颗粒溶液的粒径、荧光强度、ROS 产生情况、T1 弛豫率曲线等）。MTT 法检测探针的细胞暗毒性以及近红外照射下对 4T1 细胞的光动力杀伤效果。通过单光子共聚焦显微镜、流式细胞仪分别定性和定量分析不同处理组之间肿瘤细胞膜上 Ce6 的荧光强度。建立裸小鼠乳腺癌皮下移植瘤模型，连续三天尾静脉注射 Ac4ManNAz 颗粒,第四天注射 s-NP，于注射后 2h、4h、6h、12h、24h 进行小动物活体荧光/MR 成像。注射后第 6、12 小时，用 0.1 W/cm^2的 660nm 激光照射肿瘤部位 30min，连续 21 天对小鼠肿瘤体积进行测量，结束治疗后取主要脏器及肿瘤组织做病理切片用于 H&E 染色及 Tunel 检测组织中细胞的增殖和凋亡情况。

结果

s-NP 溶液在 pH 7.4 时粒径约为 100nm，在 pH 6.5 时粒径约为 10nm，具有良好的 pH 敏感性，而对照组 ins-NP 在 pH 7.4 与 6.5 时粒径均在 100nm。MTT 实验显示，探针在无近红外激光条件下对细胞无毒性作用。预先给予 Ac4ManNAz 颗粒，经 s-NP(pH 6.5)处理后的细胞膜表达 Ce6 荧光，在近红外激光照射后细胞存活率较 ins-NP 对照组明显降低。Balb/c 裸鼠活体荧光成像与 MR 成像结果显示纳米颗粒在肿瘤部位有显著的荧光信号，小鼠治疗实验结果显示该探针对肿瘤生长具有明显的抑制作用。

结论

本研究合成了基于肿瘤原位生物正交点击化学预定位体系的诊疗一体化分子探针，用于“MR/荧光”双模态成像指导下的乳腺癌原位光动力治疗，取得良好效果。该研究对其他肿瘤的多模态诊疗一体化也有重要的借鉴意义。

PU-1364

IIIA（N2）期乳腺癌术前 18F-FDG PET/CT 双时相显像与术后腋窝淋巴结转移对比研究

张建功[2,1],史讯[1],李勇刚[2]
1.盐城市第一人民医院
2.苏州大学附属第一医院

目的通过对比分析 IIIA(N2)期乳腺癌术前 18F-FDG PET/CT 双时相显像与术后腋窝淋巴结转移情况，探讨其研究价值及最佳诊断阈值。**资料与方法** 回顾性分析 23 例 IIIA(N2)期乳腺癌患者的临床资料。所有患者在术前均行 PET/CT 双时相显像，以病理结果为金标准，确定与术前 PET/CT 相匹配的淋巴结 148 枚，其中转移性淋巴结 97 枚、非转移性淋巴结 51 枚，分别测定两组淋巴结短径、两次显像 SUVmax 值，并应用 ROC 分析诊断效能。**结果** 淋巴结 SUVmax 比较：转移性淋巴结组延迟明显高于早期，差异有统计学意义（P<0.01）；非转移性淋巴结组延迟与早期差异无统计学意义（P=0.49）；转移性淋巴结组与非转移性淋巴结组间早期相和延迟相 SUVmax 差异均有统计学意义（P <0.001）。淋巴结短径比较：转移性淋巴结短径大于非转移性淋巴结，差异无统计学意义（P=0.069）。淋巴结双时相 SUVmax ROC 曲线分析：早期相曲线下面积为 0.970，（0.948-0.993），p=0.000；延迟相曲线下面积为 0.910，（ 0.866-0.953），p=0.000；早期相及延迟相曲线下面积差异有统计学意义（z=3.85，P=0.0001）。转移性淋巴结亚组 SUVmax 比较：4.00＜短径≤6.00mm 组，延迟与早期）差异无统计学意义（P=0.06）；6.00＜短径≤8.00mm 组，延迟高于

早期差异有统计学意义（P<0.01）；8.00＜短径≤10.00mm 组，延迟高于早期差异有统计学意义（P<0.01）。原发灶乳腺癌 SUVmax 比较：延迟显像高于早期显像，差异有统计学意义（P<0.01）。**结论** 18F-FDG PET/CT 早期相对乳腺癌腋窝淋巴结转移具有重要临床诊断价值；延迟相淋巴结 SUVmax 升高倾向于转移，但对较小的转移性淋巴结诊断灵敏度会降低。

PU-1365
18F-FDGPET 在肺内多发病灶穿刺部位选择中的临床价值

杨超
中国人民解放军联勤保障部队第九〇〇医院(原福州总医院)

目的 探讨 18F-FDG PET/CT 在选择肺内多发病灶穿刺部位中的临床价值。
方法 164 例经手术病理结果证实的经皮肺穿刺的患者，其中 60 例经 18F-FDG PET/CT 指导选择穿刺部位，104 例行 CT 增强指导选择穿刺部位。
结果 60 例患者根据 18F-FDG PET/CT 指导选择的穿刺部位，59 例获得准确病理结果，穿刺准确度 98.3%，其中 57 穿刺部位为 SUV 最浓聚处；104 例患者根据 CT 增强指导选择穿刺病灶，其中 86 例获得准确病理结果，穿刺准确度 82.7%。两组对比差异有统计学意义（Ｘ2=7.63,P＜0.05）
结论 依据 18F-FDG PET/CT 指导选择 SUVmax 最高的病灶及位点作为穿刺部位，比根据 CT 增强指导选择穿刺部位有更高的诊断准确度。

PU-1366
The diagnostic value of PET/CT radiomic features in 2 solitary pulmonary nodules with low metabolism

Zhenzhen Wang
Henan Province People's Hospital

Purpose To develop and validate a PET/CT radiomics model to differentiate malignant SPNs from benign ones with low-metabolism. Patients and Methods The radiomics model was built by extracting radiomic features from the retrospective dataset obtained from PET/CT center of Henan Provincial People's Hospital. The dataset included 140 patients (training set, n=98; test set, n=42) with low-metabolic SPNs. Univariate analysis and multivariate analysis were performed to screen out low metabolic SPNs-related features. A ridge-logistic regression was used to build the model. The model performance was validated by the area under corresponding the receiver operating characteristic curve (AUC). Results The radiomics model contained 8 radiomic features (4 radiomic features from CT and 4 radiomic features from PET). The AUC of the training set was 0.84 (95% CI: 0.77- 0.91) and the AUC of the test set was 0.81 (95% CI: 0.65-0.94), which implied a good forecasting result. Conclusions For patients with low-metabolic SPNs, the PET/CT radiomics model showed a great discriminatory capability between benign and malignant tumors, which adds to the diagnostic value of PET/CT.

PU-1367

Long noncoding RNA HOTAIR promotes cell injury induced by chronic intermittent hypoxia via regulating p38MAPK signaling pathway

Qingshi Chen,Siqing Cai
The Second Affiliated Hospital of Fujian Medical University

OBJECTIVE: Mounting evidences have illustrated an important role of HOTAIR in cancer progress. However, its function in cardiac hypertrophy induced by chronic intermittent hypoxia (CIH) remains unknown. This study aimed to investigate the regulatory mechanism of HOTAIR in H9c2 cells under CIH condition.
METHODS: H9c2 cardiomyocytes were divided into seven groups: control group, CIH, HOTAIR group (CIH cells treated with HOTAIR), NC group (CIH cells treated with empty plasmid), HOTAIR siRNA group (CIH cells treated with siRNA HOTAIR), SB203580 group (CIH cells treated with p38MAPK inhibitor), and HOTAIR+SB20358 group. RT-PCR was used to determine the expressions of HOTAIR. The content of reactive oxygen species (ROS), malondialdehyde (MDA), super oxide dismutase (SOD) and lactate dehydrogenase (LDH) was determined. Cell viability was detected by CCK8 assay. Apoptotic cells were observed by flow cytometry. Cell apoptosis related proteins bcl-2, bax and caspase-3 and roundabout 1 (Robo1) were measured using Western blot. Statistical analysis was performed using SPSS 18.0.
RESULTS: The decreased cell viability and increased expressions of HOTAIR and p-p38 were observed in CIH H9c2 cells ($P<0.05$). Besides, H9c2 cells under CIH condition had an elevation in p-p38, ROS, MDA and LDH with the increased apoptotic cells, but a reduction in SOD, and these similar changes were more obvious in those CIH cells treated with HOTAIR when compared with Controls (all $P<0.05$). However, the H9c2 cells treated with SB203580 and HOTAIR siRNA led to opposite results compared with HOTAIR group (all $P<0.05$). Importantly, SB203580 could reverse the function of HOTAIR in aggravating the CIH injury of H9c2 cells.
CONCLUSION: HOTAIR can promote the apoptosis and oxidative stress of H9c2 cells by activating p38MAPK pathway, thus aggravating the damage of H9c2 cells induced by CIH, which could add our understanding of the molecular mechanisms in OSA- induced cardiac hypertrophy.

PU-1368

临床特征联合 18F-FDG PET-CT 显像对肺腺癌表皮生长因子受体基因突变的预测

王珍珍
河南省人民医院

目的 探讨临床特征联合 ^{18}F-脱氧葡萄糖（^{18}F-fluorodeoxy glucose） 正电子发射计算机断层扫描（ positron emission tomography ／computed tomography，PET-C T）的 CT 与 PET 代谢特征对肺腺癌表皮生长因子受体 EGFR 突变的预测价值

方法回顾性分析了 216 例经病理证实的肺腺癌患者的临床及 CT、PET 影像学特征，依据 EGFR 突变情况将病人分为突变型与野生型 2 组，用秩和检验、T-检验、卡方检验或 Fisher 精确检验比较 2 组间统计学差异，然后把有统计学意义的特征纳入多变量 logistic 回归模型，找出独立相关因素，画出 ROC 曲线评价检验效能。

结果 216 位肺腺癌患者分成两组，EGFR 野生组 104 例，EGFR 突变组 112 例，其中女性（P＜0.001）、无肺气肿（P=0.01）、有血管纠集征（P＜0.001）、肿瘤消失率越大（P＜0.047）的肺腺癌患者 EGFR 基因突变率高，而年龄、TNM 分期、位置、形态、分型、密度、边缘、胸腔/心包积液、肺内转移、胸膜凹陷征、钙化、支气管充气征间无统计学差异。PET 所有代谢指标 ＳＵＶｍａｘ、ＭＴＶ 和 ＴＬＧ野生组均高于突变组，有统计学意义（p=0.022、0.012、0.004、＜0.001）。Logistic 多因素回归分析结果显示 TLG、性别、血管纠集征、肺气肿为预测肺腺癌 EGFR 基因突变的独立因素。 最后我们根据预测概率与 EGFR 病理结果得到 ROC 曲线。其曲线下面积 AUC 为 0.791(95%的置信区间为 0.730-0.851)。使用最大 Youden 指数选择截断点 0.4687，预测 EGFR 突变的敏感性为 0.768 和特异性分别为 0.701。

结论 研究表明，临床联合 ^{18}F-FDG PET、CT 影像特征能提高肺腺癌 EGFR 基因突变的预测价值。

PU-1369

Expression profile of long non-coding RNAs in rat models of OSA-induced cardiovascular disease: new insight into pathogenesis

Qingshi Chen, Siqing Cai
The Second Affiliated Hospital of Fujian Medical University

Purpose Long noncoding RNAs (lncRNAs) have emerged as a novel class of regulatory molecules involved in numerous biological processes, but their role in a rat model of chronic intermittent hypoxia (CIH) remains unknown. Therefore, we aimed to reveal lncRNAs expression profiles and explore their potential functional roles in rat models of CIH.

Methods We applied a well-established CIH rat model and performed lncRNA microarray experiments on the left ventricular tissue of rats with CIH and under normoxia control. Differentially expressed lncRNAs and mRNAs were identified through fold-change filtering and verified by quantitative reverse transcription polymerase chain reaction (qRT-PCR). Bioinformatics analyses were applied to predict the potential biological roles of key lncRNAs. Co-expression analysis was conducted to determine the transcriptional regulatory relationship of differentially expressed lncRNAs and mRNAs between two groups.

Results We found that 157 lncRNAs and 319 mRNAs were up-regulated, whereas 132 lncRNAs and 428 mRNAs were down-regulated in the rat model of CIH compared with sham control. Pathway analyses indicated that 31 pathways corresponded to up-regulated transcripts and 28 pathways corresponded to down-regulated transcripts. Co-expression networks were also constructed to investigate the potential regulatory roles of differentially expressed lncRNAs on mRNAs. In this CNC network construction, a single lncRNA could correlate with many mRNAs and vice versa. LncRNAs, namely, XR_596701, XR_344474, XR_600374, ENSRNOT00000065561, XR_590196, and XR_597099, were validated by qRT-PCR. The qRT-PCR results were in agreement with the microarray findings and showed the same trends of up- or downregulation for each lncRNA.

Conclusions In conclusion, the present study first revealed the expression profiles of lncRNAs in a rat model of CIH, providing new insight into the pathogenesis of obstructive sleep apnea-induced cardiovascular disease.

原发性食管恶性黑色素瘤一例

罗应斌
铜仁市人民医院

1 病例资料

患者男性，67 岁，因“进食哽噎 1 月余”入院。患者 1 月前无明显诱因开始出现进食时哽咽感，以进固体较硬食物时症状明显，偶有嗳气，不伴返流症状，无呕吐， 无烧心，腹痛腹胀，无声嘶，无呛咳，无呕血、黑便。1 月来患者症状未有明显变化。2 周前患者就诊于当地医院行胃镜示：食管距门齿 35cm 可见不规则隆起物，表面糜烂，取病理，活检病理为低分化鳞状细胞癌。自发病以来，精神睡眠可，大小便正常，近三个月来，体重下降 20kg。有 40 年饮酒（白酒）史，半斤/日。查体：T：36.50℃；P：80 次/分；R：20 次/分；BP：105/73mmHg；H：170cm；W：69.0Kg；S：1.80m^2；ECOG：0 级；疼痛等级：0 级。双侧锁骨上未及肿大淋巴结。视诊：呼吸运动正常，呼吸节律正常，肋间隙未见明显异常。触诊：双侧语颤正常，胸膜摩擦感未触及。叩诊：双肺叩诊清音，听诊：呼吸音音清，未闻及干湿啰音，双侧语音传导正常、对称，胸膜摩擦感未触及。

共负载 Fe304/AZD6244 的纳米磁性脂质体用于 MRI 介导的多靶向肿瘤诊疗

李亚楠
山西医科大学第一医院

目的 通过制备共负载超顺磁造影剂 Fe_3O_4 和 MEK 抑制剂 AZD6244 的纳米磁性脂质体载药体系，系统地表征其体内外磁靶向性、磁共振成像（MRI）特性、肿瘤抑制效果、MRI 介导的疗效追踪，同时明确药物作用机制和药代动力学过程，为恶性肿瘤的临床诊断及用药提供指导。**方法** 采用共沉淀一步法制备外包葡聚糖的 Fe_3O_4 纳米颗粒，包载 AZD6244 后得到纳米磁性脂质体，精确表征其物化性质及药物含量。测试纳米磁性脂质体的稳定性及体外释放特性，绘制药物释放曲线。采用 MTT 法评价载药体系的体外细胞毒性，蛋白免疫印迹和 RNA 干扰技术评价载药体系对 MAPK 信号通路的影响，流式细胞术分析载药体系对肿瘤细胞周期的影响，裸鼠移植瘤实验测试载药体系的体内肿瘤抑制效果，小动物活体磁共振成像系统测试载药体系的体内磁共振成像特性，进一步评价载药体系对肿瘤治疗过程的实时监测作用。**结果** 经过精确控制实验条件，可大量制备超顺磁 Fe_3O_4 纳米颗粒，将 Fe_3O_4 和 AZD6244 共负载得到纳米载药体系，该体系具有优良的磁学性质、多靶向性、储存稳定性、刺激响应药物释放特性等。选择两种 MAPK 高活化的结肠癌细胞株（Colo205，HT29），体内体外实验表明该载药体系具有优良的磁响应性、肿瘤组织内药物聚集特性、肿瘤抑制和 MRI 对抑瘤效果的实时示踪效果。机理研究发现，Pim1 的代偿性激活是导致 MEK 耐药的新型分子机制，且

该载药体系具有良好的安全性和小鼠耐受性。**结论** 本研究中所制备的纳米磁性脂质体可高效地负载药物，具有优良的体内外磁学特性、多靶向性、磁共振成像、肿瘤抑制和疗效示踪效果，将为恶性肿瘤的早期诊断、驱动治疗和疗效评估提供新的设计思路和制备策略。

18F-FDG PET/MR 在肝外胆管癌成像及诊断的应用价值

杜名,辛军
中国医科大学附属盛京医院

【目的】评估 ^{18}F-FDG PET/MR 在肝外胆管癌成像及诊断的应用价值
【方法】回顾性分析 22 例病理证实肝外胆管癌患者 PET/CT 及 PET/MR 的成像及参数特征。患者 PET/CT 全身检查后，行 PET/MR 腹部局部加扫，磁共振序列包括 LAVA、T2 Propeller、fs T2 Propeller、DWI（b=800）、MRCP；将 T2 Propeller 序列与 PET 进行融合。将患者信息、病灶大小、病灶数量、病灶 SUVmax、ADC 值计数后，进行统计学分析。
【结果】22 例肝外胆管癌患者中，男性 15 人，女性 7 人，中位年龄 55 岁，19 名患者伴有 CA199 升高，15 人伴皮肤巩膜黄染。确诊肝门部胆管癌 10 例，肝总管胰头部胆管癌癌 12 例；PET/CT 扫描中，共发现 32 处病灶（均位于腹部，无远处转移），包括胆管原发病灶、周围淋巴结转移及肝内转移；原发灶 SUVmax 为 8.45±0.46，转移灶 SUVmax 为 6.78±0.81；PET/MR 腹部局部扫描中，除 PET/CT 确定病灶外，发现额外 6 处病灶，均为肝内转移，病灶直径为 1.2±0.13cm，SUVmax 值为 4.88±0.56；原发灶 SUVmax 为 9.67±0.55，ADC 为（0.65±0.01）×$10^{-3}$$mm^2$/s；其余转移灶 SUVmax 为 7.35±0.46，ADC 为（0.56±0.03）×$10^{-3}$$mm^2$/s；两组原发灶及转移灶具有统计学差异。
【结论】PET/MR 在胆管癌诊断中，具备同 PET/CT 的诊断效能，在此基础上，T2 压脂、LAVA 序列联合 MRCP 可以对病灶大小、形态及位置进行评估，精确诊断胆管癌类型（肿块型、管壁增厚型），结合标准摄取值，对肿瘤性质及 T 分期具有较 PET/CT 更重要的应用价值；同时，PET/MR 较 PET/CT 还可以准确定位及诊断转移灶，尤其肝内转移，确定肿瘤 N 分期及 M 分期，对患者未来治疗方案的决定具有重要意义

PU-1373
多模态影像学方法在小儿先天性肾脏及尿路畸形中应用价值

王芳,邵剑波
华中科技大学同济医学院附属武汉儿童医院

目的 探讨多模态多参数影像学表现对于儿童先天性肾脏及尿路畸形（CAKUT）诊断价值，并对其在临床诊疗中应用进行全面评估。**方法** 收集我院 2018 年 1 月至 6 月期间临床诊断 CAKUT 232 例患儿病史资料，其中男 130 例，女 102 例，年龄 1 月至 10 岁，≤2 岁 186 例（80%）；各种肾脏畸形 42 例，重肾重输尿管畸形 17 例，肾盂输尿管连接畸形 85 例，膀胱输尿管返 80 例，后尿道瓣膜（PVU）7 例，神经源性膀胱 1 例。检查设备采用 GE Discover NM SPECT/CT 670 Pro 机、GE Healthcare Optima CT540 扫描仪及 GE Discovery MR750 3.0T MRI 设备；对于首诊发热患儿均行肾皮质显像，尿路梗阻畸形行 EC 显像，肾脏畸形行 DTPA 显像，并对显像不明确畸形患儿进行低剂量 MSCT 或 MRI 平扫，显像常规方法采集，应用 Xeleris3.1 TM 功能成像系统后处理重建图像，CT 扫描采用传统滤波反投影法进行图像重建，功能成像患儿分别计算分肾功能，对肾实质损害程度进行分级并于 CAKUT 畸形对比分析。**结果** 形态学检查方法 B 超对于 CAKUT 明显畸形能够初步筛查优于传统 X 线检查；低剂量 MSCT 或 MRI 能够清晰显示 CAKUT 畸形，优于并取代静脉尿路造影；排

泄性膀胱尿路造影对于膀胱输尿管反流特异性高，但存在较大电离辐射，检查需综合慎重选取；功能学肾脏动静态联合检查对于 CAKUT 分肾实质损害程度、瘢痕形成、GFR 功能进行精准定量诊断，并对上尿路梗阻 CAKUT 进行梗阻情况鉴别； Mann-Whitney U 轶和检验结果 CAKUT 与肾实质损害程度差异有统计学意义（$p < 0.05$）。**结论** CAKUT 多模态影像学检查方法相结合能够对于分肾功能进行定量及畸形类型定性诊断，为临床提供形态及功能影像学诊断依据，对于临床早期发现 CAKUT 并及时予以干预，选择正确治疗方法及有效预防远期肾损害，防止发展。

Visualization of the Biological Behavior of colorectal cancer using multimodal molecular imaging

Hailong Xu, Ke Ren, Zhendong Ren, Qiu Guo
Xiang'an Hospital affiliated to Xiamen University

Objective : Molecular imaging such as PET provide a noninvasive method to assess different types of tumors in staging, prognosis, and therapy response of oncology patients. The aim of this study was to evaluate the value of ^{18}F-FDG 、3′-deoxy-3′-^{18}F-fluorothymidine (^{18}F-FLT) and ^{18}F-fluoromisonidazole (^{18}F-FMISO) PET in the identification of colorectal liver metastases xenograft model with different metastatic potential and to examine the relationship of uptake of ^{18}F-FDG 、^{18}F-FMISO and ^{18}F-FLT to tumor biology，combing with machine learning method for medical imaging

Methods: Human CRC cell lines SW480 、SW620 、LOVO、HT29 were cultured. Firstly, In vivo imaging features of colorectal cancer model with low and high metastatic potential was assessed after injection of each tracer, Region of interest (ROI) was drawn over tumor and liver to calculate SUVmax ratio (tumor/liver). Immunohistochemical and Western-Blot techniques were used to detect expression level of the biological markers related to invasion and metastasis: vascular endothelial growth factor (VEGF), proliferating cell nuclear antigen (Ki67) and leukocyte differentiation antigen cluster 44 (CD44).

Results: Micro-PET scan showed that The T / NT ratios of ^{18}F-FDG in SW480 and SW620 liver metastases were 2.84±0.72 and 3.04±0.83, respectively ($p > 0.05$); while the T / NT ratios of ^{18}F-FLT were 1.68±0.23 and 1.49±0.19, respectively ($p < 0.05$). All parameters of FLT were significantly higher in SW480 tumors than SW620 tumors.. A moderate relationship was found between metastases in liver and ^{18}F-FLT uptake in tumors （r=0.73, p=0.0019）.

Conclusion: The uptake of ^{18}F-FLT in metastatic tumor can reflect the different biological behaviors of colon cancer cells. Taking multiple radionuclide uptake values as the characteristic parameters, the machine learning method can classify and predict the four kinds of colon cancer cells with different invasiveness . Meanwhile ^{18}F-FLT can distinguish two colorectal liver metastases xenograft models and evaluate the metastatic potential of colon cancer in nude mice. The combination ^{18}F-FDG with ^{18}F-FLT can predict the prognosis the nude mice

基于 I 型胶原蛋白的肝纤维化 MR 分子影像研究

刘钊,雷军强
兰州大学第一医院

肝纤维化是慢性肝病的共同转归，早期肝纤维化是可逆性病变，而晚期则不可逆。 I 型胶原蛋白是肝纤维化细胞外基质的主要成分，并与肝纤维化的严重程度呈正相关。现已证实：序列为 LRELHLNNN 的多肽可特异性识别并结合型胶原蛋白。我们课题组首次发现：基于该多肽的 MR 分子探针 TICTP1 可特异性结合并显像肝纤维化并定量研究。本研究以肝纤维化组织中过量沉积的 I 型胶原蛋白为靶点，设计研发相应 MR 多肽探针，用于多参数特异性显像早期肝纤维化。本研究实现了肝纤维化的 MR 特异性可视化显像，并进行了初的分期研究（图见附件）。实现早期肝纤维化的特异性显像及相关的定量研究，对肝纤维化的早期临床诊断、精准分期及临床治疗具有重大意义。

PU-1376
Three-dimensional Turbo-spin-echo Amide Proton Transfer-weighted MR Imaging for Cervical Squamous Cell Carcinoma

Yonglan He[1],Chengyu Lin[1],Yafei Qi[1],Xiaoqi Wang[2],Hailong Zhou[1],Huadan Xue[1],Zhengyu Jin[1]
1.Peking Union Medical College Hospital
2.Philips Healthcare

Objective: To evaluate the clinical feasibility of amide proton transfer (APT) magnetic resonance (MR) imaging for cervical squamous cell carcinoma. **Methods:** Between September 2017 and September 2018, 27 patients with cervical squamous cell carcinoma and 27 healthy volunteers prospectively underwent pelvic APT and DWI MR imaging on a 3T MR scanner. APT and ADC values were independently measured by two radiologists on the maximum area of the cervical tumor and normal cervix. Inter-observer inter-class correlation coefficient was computed. Student's t-test was used to compare the differences of APT and ADC values between cervical squamous cell carcinoma and normal cervix, receiver operating characteristic analysis was performed. **Results:** Excellent measurement agreement was found between two observers (all ICC>0.9). APT values of cervical squamous cell carcinoma and normal cervical stroma were 2.80±0.36 and 1.81±0.38 respectively with significant difference ($p<0.0001$). ADC values of cervical squamous cell carcinoma and normal cervical stroma were $0.98\pm0.17\times10^{-3}mm^2/s$ and $1.56\pm0.32\times10^{-3}mm^2/s$ respectively with significant difference ($p<0.0001$). Area under the curve for differentiating cervical squamous cell carcinoma from normal cervical stroma was 0.996 for APT values and 0.963 for ADC values. **Conclusion:** Compared with ADC values, APT values showed similar diagnostic performance in differentiating cervical squamous cell carcinoma from normal cervix, but it provides another perspective on diagnosing cervical squamous cell carcinoma.

PU-1377
胃肠道腺癌 18F-FDG PET/CT SUV 与 DWI ADC 相关性分析

王琪,汪秀玲
徐州医科大学附属医院

目的 利用 PET/CT-MRI 三模式，确立胃肠道腺癌多 b 值磁共振弥散加权成像(DDWI)单指数及双指数模型表观弥散系数(ADC) 与脱氧葡萄糖(FDG) PET/CT 中标准摄取值(SUV)之间的相关性。
方法 连续选择 29 例未经治疗的胃肠道腺癌患者，该患者均行 PET/CT 及 MR 检查。利用 Pearson 相关分析胃肠道腺癌 SUV 及单指数及双指数模型 ADC 间的关系。
结果 胃肠道腺癌的 SUV 与 ADC slow 有显著负相关关系(r=-0.586, P=0.008)。
结论 胃肠道腺癌 PET 中的参数 SUV 与 DWI 中双指数模型的 ADC slow 有相关性，这种相关性提示胃肠道腺癌葡萄糖代谢及水分子弥散间有一定关系。

PU-1378
应用体素内不相干运动扩散加权成像（IVIM-DWI）评价早期慢性移植肾肾病的初步研究

张声旺, 容鹏飞,颜智敏,彭锋,李婷,王维
中南大学湘雅三医院

目的 探讨应用体素内不相干运动扩散加权成像（IVIM-DWI）技术无创性评价早期慢性移植肾肾病（CAN）的可行性及临床应用价值。**方法** 收集符合本研究纳入与排除标准的住院患者 16 例，其中经病理诊断为早期慢性移植肾肾病（CAN 组）的患者 8 例，移植肾肾功能长期稳定的志愿者（对照组）8 例。采用多 b 值 DWI 序列对移植肾进行磁共振扫描，利用 IVIM2b_new 软件获取移植肾的 IVIM-DWI 各定量参数伪彩图及测量肾实质的 IVIM-DWI 各定量参数值，包括真实扩散系数（D）、灌注相关扩散系数（D^*）和灌注分数（f）。采用独立样本 t 检验对 CAN 组和对照组的 IVIM 各定量参数值进行比较，对差异具有统计学意义的指标进行 ROC 分析，并计算曲线下面积。**结果** CAN 组的定量参数 D 值大于对照组，差异具有统计学意义（P<0.05），两组间 D*及 f 值的差异无统计学意义（P>0.05）。真实扩散系数 D 鉴别早期 CAN 的敏感度和特异度分别为 62.50%、87.50%，曲线下面积为 0.828。**结论** IVIM-DWI 的定量参数 D 能在一定程度上无创性评价早期 CAN。IVIM-DWI 技术有望成为一种筛查早期 CAN 的新型有效、简单无创手段，以协助移植肾活检早期诊断与动态监测 CAN。

PU-1379
靶向肝纤维化的铋基纳米材料在能谱 CT 的应用

吴诗熳[1],孟宪福[2],步文博[2],姚振威[1]
1.复旦大学附属华山医院
2.华东师范大学

目的 肝纤维化目前难以用常规医学影像学技术检出，而早期诊断肝纤维化有助于逆转其向肝硬化发展。本研究旨在把靶向纳米探针 $BaBiF_5$@PDA@HA（五氟铋钡@多巴胺@透明质酸）作为宝石能谱 CT（GSCT）的造影剂，用于诊断肝纤维化。
材料与方法 合成 $BaBiF_5$纳米颗粒[1]后用 PDA 使其转换为亲水性，然后将 HA 衍生物（肝纤维化的特异性标志物）缀合到表面上，从而得到 $BaBiF_5$@ PDA @ HA 纳米探针。 使用肝纤维化小鼠模型（8 周 MCD 饮食诱导[2]）作为实验组，常规饮食的小鼠作为对照组 1，分别通过尾静脉注射 $BaBiF_5$@

PDA @ HA；为进一步验证 HA 的靶向性，注射无靶向性 $BaBiF_5$@PDA 纳米颗粒注射到另一组肝纤维化模型小鼠中，作为对照组 2。注射后对各小鼠进行 GSCT 扫描，在生成的 40 至 140keV 单能量图像测量其肝脏 CT 值。实验结束后对所有小鼠取肝病理染色验证，并对各组 CT 值进行统计学分析。
结果 注射 $BaBiF_5$@PDA@HA 纳米颗粒后 10 分钟到 80 分钟，实验组小鼠的肝脏 CT 值显着高于对照组（P <.0001）。注射后 30 分钟后纳米颗粒在肝纤维化病灶富集量最大，两组肝脏 CT 值差异达到最高点（88.33±11.00HU VS 47.78±3.53HU）；此时分析实验组肝脏的能谱 HU 曲线，发现随着单能量水平的降低，含 $BaBiF_5$ @ PDA @ HA 肝脏的 CT 值会不断升高。因此，40keV 的单能量成像时，实验组小鼠的肝脏 CT 值达到最大值 130.67±13.96HU，而且显示的肝纤维化的病灶范围更接近于病理染色结果。而两组对照组小鼠在注射后纳米材料后，其肝脏仅观察到一过性的 CT 值增高。
结论 铋的 X 射线衰减特征赋予 $BaBiF_5$@PDA@HA 更好的 GSCT 成像能力，其 HA 靶向探针提高了检测的灵敏度，因此 $BaBiF_5$@PDA@HA 纳米颗粒结合 GSCT 应用能无创早期诊断肝纤维化。

PU-1380

Age-related Changes of SUV in Blood Pool and Liver: A Decade Retrospective Study with Analysis of 2850 Asymptomatic Population Outcomes

Yuan Cao, Zhiyun Jia
West China Hospital of Sichuan University

Objective: To record the range of variation in blood-pool and liver SUV of the asymptomatic population under different age stages and to identify possible mechanisms of variability.
Method: 2850 asymptomatic subjects receiving ^{18}F-fluorodeoxyglucose (FDG) positron emission tomography/computed tomography (PET/CT) examination were included. Pearson correlation and multivariate regression analysis were performed to assess the associations between individual factors and standardized uptake values (SUVs) of blood pool and liver and find the most related factor influencing the SUVs. Subjects were divided into eight age groups. The metabolic activity of blood pool and liver were presented as mean and maximum SUVs, trends over age were also recorded.
Results: Positive correlations in individual factors with SUVs were found and age appeared to be the most important predictor of SUVs, significantly associated with blood pool SUV_{max} (ß = 0.462, P = 0.000), SUV_{mean} (ß = 0.385, P = 0.000), and liver SUV_{max} (ß = 0.325, P = 0.000) and SUV_{mean} (ß = 0.376, P = 0.000). Blood pool and liver SUVs grew rapidly before the age of 29, slowly grew to age of 50, and then reached a platform.
Conclusion: Age was an extremely important factor for variation of blood pool and liver SUVs in asymptomatic populations. Determining the normal range of blood pool and liver SUV under various age stages will help to detect diseases more accurately. Our studies shed light on the understanding of age-related SUVs variation tendency and provide an important framework for potential connections of age- related quantity of glucose transporters.

前列腺影像报告和数据系统联合表观扩散系数图像定量分析 对外周带前列腺癌的诊断价值

冯智超,颜智敏,罗慕晴,廖云杰,容鹏飞,王维
中南大学湘雅三医院

目的 探讨第 2 版前列腺影像报告和数据系统(prostate imaging reporting and data system version 2，PI-RA DS V2)
评分联合表观扩散系数(apparent diff usion coeffi cient，ADC)图像定量参数对外周带前列腺癌的诊断价值。**方法** 回顾性
搜集 50 例前列腺多参数磁共振成像(multiparametric MRI，mpMRI)检查提示存在外周带结节的患者，且均经穿刺活检
获得病理诊断。由两名高年资影像科医师根据 PI-RADS V2 标准对病灶进行定位及评分，分别利用后处理软件在 ADC
图像上分析、计算对应病灶区的 12 种 ADC 图像定量参数。根据病理结果将病灶分为癌灶组和良性病灶组。比较两组
病灶各 ADC 定量参数的差异，对组间差异有统计学意义的参数采用逻辑回归逐步法拟合建模，通过受试者工作特征
(receiver operating characteristic，ROC)曲线和决策曲线分析(decision curve analysis，DCA)评价不同方法的诊断效能和临床
受益。**结果** 最终共获得外周带癌灶 28 个、良性病灶 25 个。PI-RA DS V2 评分、ADC 模型及联合模型(PI-RA DS V2 评分+
ADC 模型)区分外周带癌灶和良性病灶的 ROC 曲线下面积、敏感度、特异度分别为 0.803，60.71%，92.00%；0.857，
89.29%，76.00%；0.891，71.43%，92.00%，联合模型较 PI-RA DS V2 评分的诊断效能有明显提升(P=0.012)，且在阈概率
0.05~0.27 和 0.46~0.81 范围内该联合模型具有相对最佳的总体净受益率，优于 PI-RA DS V2 评分。**结论** PI-RA DS V2 联合
ADC 图像定量分析能显著提高其区分外周带前列腺癌和良性病变的诊断效能，并改善临床受益。

PU-1382
CT 动脉增强分数评估肝硬化患者肝功能水平

容鹏飞,冯智超,郭睿,郑薇,胡跃群,李静宜,王维
中南大学湘雅三医院

目的:探讨 CT 动脉增强分数(arterial enhancement fraction,AEF)评估肝硬化患者肝功能损伤程度的可行性及临床价值。方法:前瞻性招募符合纳入及排除标准的 52 例肝硬化患者(Child-Pugh A,B,C 级肝硬化患者组分别为 13,20 及 19 例)和 17 例无肝脏疾病者作为对照。受试者均行肝 3 期增强 CT 扫描,利用 CT Kinetics 软件进行后处理获得 AEF 彩图及其定量参数肝 AEF(hepatic AEF,HAEF)、肝与脾 AEF 比值(H/S)。比较不同 Child-Pugh 级别间 HAEF,H/S 的差异,并计算受试者工作特征曲线下面积(area under the receiver operating characteristic curve,AUROC),对肝硬化患者的 HAEF,H/S 与终末期肝病模型评分进行 Spearman 相关性分析。结果:HAEF,H/S 的观察者

间一致性高,组内相关系数分别为 0.918,0.946。对照组与 Child-PughA,B,C 级肝硬化患者组间的 HAEF,H/S 差异有统计学意义(均 P<0.001);肝硬化患者 HAEF,H/S 随 Child-Pugh 分级增加呈升高趋势,且除 Child-Pugh A 级组与 B 级组 H/S 外差异均有统计学意义(均 P<0.001)。在所有肝硬化患者中,HAEF,H/S 用于诊断 Child-Pugh A 级的 AUROC 分别为 0.933,0.821;用于诊断 Child-PughC 级的 AUROC 分别为 0.925,0.915。肝硬化患者 HAEF,H/S 与 MELD 评分呈显著正相关。结论:CT AEF 相关参数 HAEF,H/S 与肝硬化严重程度及预后密切相关,能简单、有效地评估肝功能损伤状况。

Machine learning-based quantitative texture analysis of CT images of small renal masses: Differentiation of angiomyolipoma without visible fat from renal cell carcinoma

zhichao Feng[1],Pengfei Rong[1],Peng Cao[2],Qingyu Zhou[1],Wenwei Zhu[1],Zhimin Yan[1],Qianyun Liu[1],Wei Wang[1]
1.The Third Xiangya Hospital， Central South University
2.GE Healthcare， Shanghai

Objective To evaluate the diagnostic performance ofmachine-learning based quantitative texture analysis of CTimages to differentiate small (≤ 4 cm) angiomyolipoma with-out visible fat (AMLwvf) from renal cell carcinoma (RCC).Methods This single-institutional retrospective study in-cluded 58 patients with pathologically proven small renal mass (17 in AMLwvf and 41 in RCC groups). Texture fea-tures were extracted from the largest possible tumorousregions of interest (ROIs) by manual segmentation in pre-operative three-phase CT images. Interobserver reliabilityand the Mann-Whitney U test were applied to select fea-
tures preliminarily. Then support vector machine with re-cursive feature elimination (SVM-RFE) and synthetic mi-nority oversampling technique (SMOTE) were adopted to establish discriminative classifiers, and the performance ofclassifiers was assessed. Results Of the 42 extracted features, 16 candidate featuresshowed significant intergroup differences (P < 0.05) andhad good interobserver agreement. An optimal feature sub-set including 11 features was further selected by the SVM-RFE method. The SVM-RFE+SMOTE classifier achievedthe best performance in discriminating between small AMLwvf and RCC, with the highest accuracy, sensitivity,specificity and AUC of 93.9 %, 87.8 %, 100 % and 0.955,respectively.Conclusion Machine learning analysis of CTtexture featurescan facilitate the accurate differentiation of small AMLwvf
from RCC.

Radiomics and its advances in hepatocellular carcinoma

Mengtian Ma,Zhichao Feng,Ting Peng,Haixiong Yan,Pengfei Rong,Mustafa Jumbe Mwajuma
The Third Xiangya Hospital， Central South University

Liver cancer is the second leading cause of cancer-related death worldwide, so early detection and treatment response prediction is of great benefit to hepatocellular carcinoma (HCC) patients. Currently, needle biopsy and conventional medical imaging play a significant and basic role in HCC patients' management, while this two approaches respectively contain the shortage of sample error and observer-dependent. Radiomics can make up for this deficiency, because radiomics is an emerging non-invasive technic to acquire comprehensive information of tumor to reflect the tumor situation across spatial-temporal limitation. This review describes the basic pipeline of radiomics including (a) image acquisition, (b) region of interest segmentation and reconstruction, (c) feature extraction, selection and classification, (d) model building and performance evaluation. This review also expounds the current advances and potential prospect of radiomics in HCC studies containing the field of diagnosis, treatment response prediction, prognosis evaluation and radiogenomics.

PU-1385
磁共振/光声双模态对比剂 MNP-Gd 的研究及其在原位肝癌成像中的应用

刘仕杰[1],张瑞平[1,2]
1.山西医科大学第一医院
2.山西大医院

目的 合成新型磁共振纳米对比剂—黑色素-钆纳米颗粒（MNP-Gd），利用原位肝癌模型，探究其作为磁共振/光声双模态对比剂的应用。
方法 1.材料的合成及表征：合成黑色素-钆纳米颗粒（MNP-Gd），并通过透射电镜，动态光散射，紫外分光光度计及电感耦合等离子体-质谱法等方法表征目标材料。2.体外实验： CCK-8 法检测细胞毒性；细胞电镜观察细胞摄取情况；激光共聚焦显微镜和流式细胞免疫荧光法分别定性和定量地检测细胞摄取情况；磁共振及光声成像系统扫描不同浓度梯度 MNP-Gd 溶液观察其成像效果。3.体内实验：建立原位肝癌裸鼠模型，鼠尾静脉注射 MNP-Gd 后，于注射前及注射后不同时间段分别进行磁共振及光声扫描，观察裸鼠肿瘤及重要脏器成像情况。在注射材料不同时间后处死裸鼠，取出其肿瘤以及肝脏、肾脏、肺、心脏、脾等重要器官，用苏木精伊红染色法做病理组织分析。
结果 1. 材料的合成及表征：MNP-Gd 是一种尺寸均一、分布均匀的纳米颗粒，尺寸在 16 纳米左右，电势在 3±0.5mV，每个黑色素纳米颗粒可以螯合大约 45 个钆离子。在 pH=7.4 和 pH=5.5 的条件下， MNP-Gd 表现出了很好的稳定性。2.体外实验：CCK-8 结果表明 MNP-Gd 对细胞没有明显毒性；透射电镜和激光共聚焦显微镜观察到在细胞质内的 MNP-Gd； MNP-Gd 弛豫率更高；光声扫描显示 MNP-Gd 成像效果较好。3.体内实验：给原位肝癌裸鼠注射 MNP-Gd 后，磁共振扫描示肿瘤信号逐渐升高，7h 信号达到最高；注射后肝脏信号在 0.5h 信号达到最高；肿瘤与肝脏信号差异大，增强时间有所不同，可区分肿瘤与正常肝脏组织；给原位肝癌裸鼠注射 MNP-Gd 后，光声扫描示肿瘤信号 8h 信号达到最高；注射后肝脏信号在 0.5h 信号达到最高；肿瘤与肝脏信号差异大，可明显区分。
结论：MNP-Gd 有望成为一种新型磁共振/光声双模态对比剂。

PU-1386
二硫键优化透明质酸介导的肝癌靶向钠米探针动物实验初步研究

刘国顺
广州市第一人民医院

目的:初步探讨二硫键优化透明质酸介导的肝癌靶向钠米探针（HA-SS-PCL@SPIO/DOX）在体内动物水平的高效抗癌性及 MR 成像的可行性。**方法** 1）将 21 只皮下肝癌移植瘤裸鼠模型随机分成生理盐水组、HA-PCL@DOX/SPIO、HA-SS-PCL@DOX/SPIO 组，每组 7 只，实验组经尾静脉按 Fe 5 mg/kg 注射探针，对照组经尾静脉注射同等量的生理盐水，注射前及注射后不同时点(2 h、4 h、8 h)分别进行 MR 成像，测量感兴趣区(肿瘤）T_2值，计算其下降率。2）将 21 只原位肝癌移植瘤裸鼠模型随机分成生理盐水组、HA-PCL@DOX/SPIO、HA-SS-PCL@DOX/SPIO 组，每组 7 只，实验组连续 3 次间隔一天经尾静脉按 DOX 2 mg/kg 注射探针，对照组经尾静脉注射同等量生理盐水。连续观察 15 天，计算肿瘤的抑制率。**结果** 1）HA-SS-PCL@DOX/SPIO 组各时间点其 T_2值较注药前有明显下降（F=105.973，P＜0.05），较 HA-PCL@DOX/SPIO 组其 T_2值下降率更为明显。2）HA-SS-PCL@DOX/SPIO、HA-PCL@DOX/SPIO 组瘤体生长速度明显低于对照组（F=21.513，P＜0.05），前者对肝癌移植瘤抑制效果最明显。**结论** 二硫键优化透明质酸介导的肝癌靶向钠米探针在体内动物水平具有高效抗癌性及 MR 显像功能于一体，可在分子影像水平实现对肿瘤疗效的早期监测。

PU-1387
抗-PSMA×抗-CD3 双功能抗体的构建及 MRI 成像效果的初步研究

黄旭方
空军军医大学西京医院

目的 1.构建双功能抗体（抗-PSMA×抗-CD3）的基因序列并完成质粒表达及纯化。2.鉴定双功能抗体对前列腺癌细胞系的促凋亡作用；鉴定生物素化的双功能抗体与超顺磁性氧化铁纳米颗粒的偶联效果及 MRI 成像效果。
方法 1.将抗-PSMA 单链抗体与抗-CD3 单链抗体基因序列进行分析，通过 Vector NTI9 软件将基因序列重组，然后通过质粒转染并诱导表达及纯化。2.培养人前列腺癌细胞系 LNCaP 和人前列腺正常细胞 RWPE-2 以及人 T 淋巴细胞系 H9，利用 Western blot 检测 PSMA 在体外培养的前列腺癌细胞系中的表达以及 CD3 在 T 淋巴细胞系中的表达；生物素化的双功能抗体与几株细胞系孵育，通过链霉亲和素标记的 FITC 检测细胞荧光成像效果。3.将生物素化的双功能抗体与链霉亲和素标记的超顺磁性氧化铁纳米颗粒偶联并在 3.0T 磁共振设备中检测其与细胞系及荷瘤裸鼠的 MRI 成像效果。
结果 1.成功构建双功能抗体抗-PSMA×抗-CD3 基因序列，并实现原核表达及纯化。2.Western blot 证实人前列腺癌细胞系 LNCaP 高表达 PSMA；人前列腺正常细胞 RWPE-2 几乎不表达 PSMA 以及 CD3；人 T 淋巴细胞系 H9 高表达 CD3。细胞免疫荧光检测发现双功能抗体可以使 LNCaP 细胞和 H9 细胞膜显像，而 RWPE-2 细胞膜不显像。3.双功能抗体偶联超顺磁性氧化铁颗粒可以有效降低 LNCaP 细胞系的 T2 值以及荷瘤裸鼠模型的 T2 值。
结论 1.双功能抗体可以识别 PSMA 阳性细胞系与 CD3 阳性细胞系。2.生物素化的双功能抗体可以偶联链霉亲和素标记的超顺磁性氧化铁纳米颗粒并有效降低 LNCaP 细胞系及荷瘤裸鼠模型的 T2 值。

18F-FDG 和 18F-FLT 在预测结直肠癌肝转移模型肿瘤生物学特性方面的价值

徐海龙,任克,任振东,郭秋
厦门大学附属翔安医院

目的 正电子发射断层扫描（PET）提供了一种无创方法来表征肿瘤的不同代谢活动，为肿瘤患者的分期，预后和治疗反应提供信息。本研究的目的是评价 ^{18}F-脱氧葡萄糖（^{18}F-FDG）和 3'-脱氧-3'-18F-氟胸苷（^{18}F-FLT）PET 在预测结直肠癌肝转移肿瘤生物学特性中的价值。
方法 采用体外细胞摄取法测定 SW480 和 SW620 细胞对 ^{18}F-FDG 和 ^{18}F-FLT 的摄取率。将感兴趣区域（ROI）绘制在肿瘤和肝脏上，以计算肝转移模型中来自 PET 图像的最大标准摄取值（SUVmax）比值（肿瘤/肝）。通过线性回归评估肝转移灶中示踪剂摄取与 VEGF，Ki67 和 CD44 表达之间的相关性。
结果 与 SW620 荷瘤小鼠相比，SW480 荷瘤小鼠存活时间短，肝转移率高。^{18}F-FDG 在 SW480 和 SW620 细胞中的摄取率分别为 6.07±1.19%和 2.82±0.15%（t = 4.69，P = 0.04）。 ^{18}F-FLT 分别为 24.81±0.45%和 15.57±0.66%（t = 19.99，P <0.001）。 Micro-PET 扫描显示 SW480 肿瘤的 FLT 各项参数均显着高于 SW620 肿瘤。肝脏转移和肿瘤 ^{18}F-FLT 摄取之间存在中度关系（r = 0.73，P = 0.0019）。 ^{18}F-FLT 摄取与 CD44 表达呈正相关（r = 0.81，P = 0.0049）。
结论 ^{18}F-FLT 在转移瘤中的摄取可反映结肠癌细胞的不同生物学行为。同时，^{18}F-FLT 可用于评估裸鼠结肠癌的转移潜能。

PDZ 蛋白调节 PTEN 磷酸化进而抑制胃癌细胞增殖

赵春娟
山西医科大学第一医院

PTEN 的磷酸化在胃癌的发生和发展中起着重要作用。然而，PTEN 磷酸化调节的基本机制仍然不清。在本研究中，PDZ 蛋白 PDZK1 是通过 PDZK1 的羧基末端和 PDZ 结构域与 PTEN 结合而鉴定出的一种新的 PTEN 结合蛋白。PDZK1 通过与 PTEN 的直接作用抑制了 PTEN 在 S380/T382/T383 位点上的磷酸化，进一步增强了 PTEN 抑制 PI3K/Akt 激活的能力。PDZK1 通过抑制 PTEN 磷酸化抑制 PI3K/Akt 激活抑制胃癌细胞增殖。PDZK1 在胃癌标本中的表达经常下调，与胃癌患者的进展和预后不良有关。PDZK1 的下调与临床标本中 PTEN 失活、Akt 信号传导和细胞增殖激活有关。因此，胃癌标本中 PDZK1 水平低，通过 PTEN 在 S380/T382/T383 位点的磷酸化和 PI3K/Akt 信号的组成性激活，导致胃癌细胞增殖增加，导致胃癌患者预后不良。

磁共振成像对比剂 CuS 空心纳米花介导热化联合治疗肝细胞癌

陈耀东
山西医科大学第一医院

目的

肝细胞癌（Hepatocellular carcinoma，HCC）是原发性肝癌的主要类型，约 50%的 HCC 患者位于我国。多数 HCC 患者确诊时已达中晚期，失去了最佳的手术时机。如何彻底消除肿瘤病灶，进而降低原位复发和转移率已成为 HCC 治疗研究的重点及难点。本课题拟合成新型纳米载药材料，以实现磁共振成像引导下的热化联合治疗，为 HCC 的精准治疗提供理论和技术基础。

方法

采用脉冲激光烧蚀锌板技术制备出 ZnO 纳米颗粒；采用 355 nm 波长的非聚焦激光辐照技术在 ZnO 纳米颗粒表面包被 CuO，制备出 CuO 空心纳米花；采用硫化铵中的 S 元素置换 CuO 空心纳米花中的 O 元素，制备出 CuS 空心纳米花；将 CuS 空心纳米花置于 DOX 的水溶液中，搅拌 6h，使其搭载 DOX。采用扫描电子显微镜和透射电子显微镜表征样品的形态、结构和粒径；采用 Rigaku X 射线衍射仪表征样品的 X 射线衍射图谱；采用紫外-可见-近红外分光光度计检测样品的光吸收谱；采用傅立叶变换红外光谱仪检测样品的傅立叶变换红外光谱。采用 T1 mapping、T1WI 和 T2-FLAIR 磁共振成像序列检测样品的磁共振成像能力。在 HCC 细胞系中和裸鼠皮下瘤模型中检测载 DOX 的 CuS 空心纳米花对 HCC 的热化联合治疗能力。

结果

本课题采用激光烧蚀技术和离子交换反应等方法，成功制备出了由二维纳米板组成的三维 CuS 空心纳米花，粒径约为 200 nm，具有良好的光热转换能力和对化疗药物 DOX 的搭载能力。CuS 空心纳米花的纵向弛豫率为 0.49 $mM^{-1}s^{-1}$，具有良好的 T1WI 磁共振成像效果。该纳米材料的生物相容性良好，没有明显的细胞毒性和溶血性。体内和体外实验均表明该纳米材料可以使 DOX 化疗和光热治疗发挥协同抗癌作用，其抑瘤率高于单纯的光热治疗或 DOX 化疗。

结论

载 DOX 的 CuS 空心纳米花可以在 T1WI 磁共振成像引导下实现对 HCC 的热化联合治疗。

A GPC1-targeted and GEM-loaded biocompatible nanoplatform for pancreatic cancer multimodal imaging and therapy

Huifeng Zhang
Affiliated Hospital of Nanjing University of Chinese Medicine

Background: Biomarker-targeted nanocarrier holds promise for early diagnosis and effective therapy of cancer. Materials & Methods: This work successfully designs and evaluates glypican-1(GPC1) targeted, gemcitabine (GEM)-loaded multi-functional gold nanocarrier for near-infrared fluorescence (NIRF)/magnetic resonance (MR) imaging and targeted chemotherapy against pancreatic cancer in vitro and in vivo. Results: Blood biochemical and histological analyses show that the in vivo toxicity of GPC1- GEM-NPs was negligible. Both in vitro and in vivo studies demonstrate that GPC1-GEM-NPs can be used as NIRF/MR contrast agent for pancreatic cancer detection. Treatment of xenografted mice with GPC1-GEM-NPs shows a higher tumor inhibitory effect compares with controls. Conclusion: This novel theranostic nanoplatform provides early diagnostic and effective therapeutic potential for pancreatic cancer.

新型载氧纳米材料在小鼠乳腺癌 MR 诊疗一体化的实验研究

石秀东[1],杨维涛[2],刘峰君[1],张兵波[2],施裕新[1]
1.上海市公共卫生临床中心/复旦大学附属公共卫生临床中心
2.同济大学医学院

目的 实体肿瘤的乏氧微环境与细胞增殖过快和血管分布紊乱有关。乏氧环境限制了光动力治疗的效果。设计具有载氧功能的纳米颗粒可以提高肿瘤部位的氧含量，进而提高治疗效果。
方法 本研究设计一种具有 MR 成像功能及载氧性能的纳米颗粒。通过常规理化检测评价纳米颗粒的分散性、稳定性及弛豫性能、载氧性能。通过 MR 检测其体内、体外的成像效果，并引导光动力治疗，进一步评价治疗效果。
结果 纳米颗粒具有良好的分散性、稳定性及 MR 成像性能，并能够在肿瘤部位有效富集，同时兼具载氧功能。疗效评价显示，高效载氧的纳米颗粒具有良好的光动力治疗效果。
结论 本研究设计的载氧纳米颗粒具有载氧性能，并能实现 MR 成像引导的高效肿瘤光动力治疗及多模态评估，提供了一种新型多功能诊疗一体化平台用于肿瘤治疗。

PU-1393

Study of Targeted Delivery Systems Based on Therapeutic MiR-34a for Pancreatic Cancer Cells Suppression and Tracing

Yan Tang
Shanghai jiaoTong University School of Medicine Shanghai Ninth People ‘s Hospital

Objective: To investigate the tumor suppressive activities of SPIO@miR-34a-cNGR in vitro and in vivo and monitory targeted delivery functionality via magnetic resonance imaging (MRI). **Methods:** We conjugate cNGRto SPIONs loading with FAM modified miR-34a to develop a novel systemic miRNA delivery platform (SPIO@miR-34a-cNGR) for treatment of pancreatic cancer. The TEM, dynamic light scattering, T2 relaxometry,qRT-PCR, western blot, flow cytometry, laser confocal microscopy, prussianblue staining and MRI were performed to detect the physicochemical property, biological specificity and the capacity for targeted delivery miR-34a to tumor site. **Results:** TEM showed that SPIO@miR-34a-cNGR was about rounded shap, and the diameter was about 12.5 nm. The hydrodynamic diameter by DSL was about (93.3±3.4) nm, zeta potential was +6.5 (mV). The r2 values was 175.35 mM-1s-1. Laser confocal microscopy and Prussian blue staining showed SPIO@miR-34a-cNGR was localized inside the PANC-1 cells and surrounded the nuclei (DAPI). Compared with liposomal transfection, qRT-PCR and western blot experiments demonstrated miR-34a and its target protein expression level was significantly regulated in SPIO@miR-34a-cNGR group. Flow cytometry results showed the relative cell apoptosis ratio in SPIO@miR-34a-cNGR group was higher than the lipo-miR-34a group and SPIO@miR-34a group (4.28% vs 3.48%, 4.86% vs 3.58%, $P< 0.05$). And a much less time-dependent increase in tumor growth was observed after consecutively intravenous injection with SPIO@miR-34a-cNGR than the control saline group. MRI showed that the T2 SNR values of PANC-1 subcutaneous xenograft had a trend of gradual decrease (21.68±0.1087 to 11.08±0.4630,$P< 0.05$). Prussian blue staining of tumor tissues from the sacrificed mice showed that the blue iron particles were identified mainly enriched in tumor tissues, and slightly uptake by liver/spleen. HE staining found cells apoptosis ratio

was significantly increased in tumor tissues after treated by SPIO@miR-34a-cNGR. **Conclusion:** SPIO@miR-34a-cNGR could provide a promising multifunctional platform for microRNAs therapeutics of PDAC.

基于 ESWAN 评估子宫肌瘤高强度聚焦超声治疗前后瘤周肌层的研究

程启超,李菲,王宗英,王锡臻
潍坊医学院附属医院

【摘要】**目的** 探讨增强型 T2*加权血管成像（ESWAN）在子宫肌瘤高强度聚焦超声(HIFU)治疗后对周围正常子宫肌层影响。**方法** 选取 18 例子宫肌瘤患者作为研究对象，所有患者术前及高强度聚焦超声治疗后均行均行磁共振常规序列及 ESWAN 序列检查。记录感兴趣区（ROI）的磁矩值、相位值、R2*值和 T2*值等指标。检验结果采用配对样本 t 检验。通过 ROC 曲线分析，计算曲线下面积(AUC)、灵敏度、特异度、最佳截止点。**结果** 子宫肌瘤患者正常子宫肌层术前及术后正常子宫肌层 ESWAN 磁矩值、相位值、R2*、T2*值 1885.00±352.13、0.02±0.09、22.55±5.47、43.24±7.84；1709.40±313.84、0.01±0.08、23.23±8.07、40.55±23.83。治疗后瘤周肌层磁矩值低于治疗前（*P*=0.046）存在统计学意义。当区分 HIFU 治疗前后肌层组织时，磁矩值、相位值、R2*值和 T2*值的 AUC 分别为 0.648（P= 0.1138）、0.500 (P= 1.0000)、0.664 (P= 0.0794)和 0.583 (P= 0.4012)。**结论** 通过 ESWAN 不同参数评价子宫肌瘤 HIFU 治疗后瘤周肌层存在一定变化，为指导临床治疗提供宝贵的资料。

Peptide regulated self-assembly of indocyanine green nanofibers for localized pancreatic tumor photothermal therapy

Wenjia Zhang[1],Shukun Li[2],Yang Du[3],Xuehai Yan[2],Jie Tian[3],Huadan Xue[1]
1.Peking Union Medical College Hospital，Chinese Academy of Medical Sciences
2.State Key Laboratory of Biochemical Engineering， Institute of Process Engineering， Chinese Academy of Sciences
3.Institute of Automation Chinese Academy of Sciences， Key Laboratory of Molecular Imaging

Purpose: Pancreatic tumor is featured as low five-year survival rate. Photothermal therapy (PTT) that relies on efficient light-to-heat conversion of photothermal agents to ablate tumor cells has gained remarkable interest in tumor therapy. We present short peptide (H-His-Phe-OH, HF) modulated indocyanine green (ICG) fibril self-assemblies (HF-ICG NFs) to develop an effective therapeutic modality, using local phototherapy, and to determine the efficacy of the novel interventional photothermal

therapy using an orthotopic xenograft model of human pancreatic cancer. **Methods:** HF-ICG NFs remained their high capability of photothermal conversion and evaluated temperature induced irreversible damage to tumor cells, demonstrating highly efficacy for localized pancreatic tumor photothermal therapy. Mice bearing BxPC3-luc orthotopic xenograft pancreatic tumors were divided into three groups randomly (n=6) with different treatments (HF-ICG NFs group and PBS group) and then treated with laser irradiation. The tumor volume changes were assessed by dual-modal magnetic resonance imaging and bioluminescence imaging. After treatment, all tumor samples were analyzed by immunohistochemical staining for a-SMA to access stroma fibrosis and for ki67 to monitor the proliferation. **Results:** During the PTT, the temperature within the tumors of mice treated with HF-ICG NFs increased rapidly to more than (51.1±1.13)℃ whereas the tumors of mice treated with PBS only reached (35.4±2.29)℃. The evaluated temperature in HF-ICG NFs group showed a complete tumor suppression and consequently, the tumor volumes is only (59.6±21.2)mm^3 within the observation period, while the tumor volumes in PBS group reached to (235.0±27.6)mm^3. After treatment, no significant changes in HF-ICG NFs group mice weight. The harvested organs in this group showed lower ki67 index and expression of a-SMA. **Conclusion:** In this study, we provided a facile method for efficient photothermal nanoagents fabrication, create opportunities for pancreatic tumor photothermal therapy.

PU-1396

Preparation and preliminary molecular imaging of TTR molecular probe for specific diagnosis of liver fibrosis

Baoping Zhang,Qiyong Guo
Shengjing hospital affiliated to China medical university

Objective:Transthyretin (TTR) is a short half-life protein synthesized mostly by the liver, which can immediately reflect the liver's synthesis ability. Studies have shown that the synthesis of TTR is different in different stages of liver fibrosis.We attempted to prepare a targeted molecular probe [^{18}F] TTR-ASO targeting at TTR mRNA and explore the effectiveness of this molecular probe in the evaluation of liver fibrosis by targeting at TTR mRNA imaging in a rat liver fibrosis animal model.
Methods: The molecular probe was prepared using transmembrane peptide and TTR-antisense oligonucleotide (TTR-ASO).(1)we added fluorescent-labeled TTR-ASO molecular probes into cultivated rat liver cells, observed the entry of the probes into liver cells with a fluorescence microscope and drew the fluorescence curve. The inhibition of TTR mRNA expression of liver cells caused by different doses of molecular probes was detected by western-blotting.(2)The [^{18}F] TTR-ASO molecular probe was prepared by labeling ^{18}F on a TTR-ASO molecular probe using benzaldehyde as a carrier. PET/CT scanning were performed in a liver fibrosis model group and a normal rat after injecting [^{18}F] TTR-ASO molecular probe to collect dynamic and delayed images.(3) The liver tissues of the scanned rats were taken and pathological analysis was done using Hematoxylin-eosin(HE) staining, Masson staining and Sirius red-staining to determine the stages of liver fibrosis. The expression of TTR in liver tissue was analyzed by immunohistochemistry and compared with PET/CT imaging information.

Results: In the cytology experiments, we observed through fluorescence microscope that TTR-ASO molecular probe had successfully entered liver cells in 80 minutes and reached its peak in 12 hours; in the animal experiments, [^{18}F] TTR-ASO molecular probe can be successfully taken in by liver tissue of normal rat and liver fibrosis rat for PET imaging; the SUV_{max} and SUV_{mean} of normal rat (S0) were significantly higher than that of liver fibrosis rat (S4) in 80 minutes after injection of probes ($P < 0.05$); the concentration difference of probes in liver tissue was consistent with the results of cytology and immunohistochemistry.
Conclusion: We successfully prepared [^{18}F]TTR-ASO molecular probe by labeling TTR-ASO.The molecule probe can be uptake by liver tissue and targeted TTR mRNA imaging in the cytoplasm of liver cells. It is hopeful to become a new type of targeted molecular probe to provide a new way for early non-invasive diagnosis of liver fibrosis.

Development and Validation of a Radiomics Nomogram for Prediction of Lymph Node Metastasis in Lesser curvature in CT-T(1-2) Gastric Cancer

wang xiaoxiao[1],Di Dong[1,2],Xiuhong Shan[1]
1.Department of Radiology, Affiliated Renmin Hospital of JiangSu University, Zhenjiang, Jiangsu Province, P.R. China
2.CAS Key Laboratory of Molecular Imaging, Institute of Automation, Chinese Academy of Sciences, Beijing P.R. China.

Purpose: Effective evaluation of lymph node metastasis (LNM) is the main basis necessary for the correct selection to select early gastric cancer (GC) treatment plan. The aim of , this study was to develop and validate a radiomics nomogram for prediction of No.3 (lesser curvature) LNM in cT-$T_{(1-2)}$ GC.
Patients and Methods: One hundred fifty nine cT-$T_{(1-2)}$ GC patients who underwent surgery between March 2012 and November 2017 were divided into a primary cohort (n = 80) and a validation cohort (n = 79). Radiomics features were extracted from venous‐phase computed tomography (CT) images of each patient, and a radiomics signature was then constructed with the minimum redundancy maximum relevance (mRMR) algorithm in the primary cohort. Combined with independent risk factors, a radiomics nomogram was built with a multivariate logistic regression model. Nomogram Performance was assessed in the primary cohort and validated in the validation cohort. Finally, Decision curve analysis was performed with the combined primary and validation cohort to estimate the clinical usefulness of the nomogram.
Results: The radiomics signature, consisting of 7 seven lymph node (LN) status-related features, achieved favorable prediction efficacy. The 7 radiomic features, which contained 6 features from primary lesions were selected as image predictors RS1, and 1 features from lymph node as RS2, for LN prediction. The radiomic nomogram, which incorporated the radiomics signature and CT-reported LN status, also showed good calibration and discrimination in the primary cohort (area under the curve (AUC) 0.943; 95% confidence interval (CI), 0.828-0.964) and the validation cohort (AUC 0.885; 95% CI, 0.765-0.928). The decision curve indicated the the nomogram's clinical usefulness.

Encouragingly, the nomogram also showed favorable discriminatory ability in the CT-reported LN-negative (LN0) subgroup (AUC 0.984; 95% CI, 0.8943-0.9847).
Conclusion: The presented Our radiomics nomogram, a non-invasive preoperative prediction tool that incorporating the radiomics signature and CT-reported LN status, shows favorable predictive accuracy for LNM in patients with early GC.

PU-1398

Underlying Pathophysiological Mechanism of ALPPS in Rabbit VX2 Liver Tumors Model: Molecular and function Imaging Finding

Zhen Quan,Xilin Sun
The Fourth Hospital of Harbin Medical University

Objectives: Performing systematic analyses of the pathophysiological mechanisms of associating liver partition and portal vein ligation in staged hepatectomy (ALPPS) is essential for clinical successful. In this study, an ALPPS model on rabbits with liver VX2 tumor was established, then assessed the pathophysiological mechanisms by multiplexed positron emission tomography (PET) tracers and dynamic contrast enhanced magnetic resonance imaging (DCE-MRI).
Methods: Two weeks after VX2 tumor implantation, tumor-bearing rabbits were randomly divided into the ALPPS group and the Sham group. Three rabbits were selected from each groups to receive PET/CT scan with ^{18}F-FDG,^{18}F-FCH,^{18}F-FLT and DCE-MRI scan on day 0 , 1 , 3 , 7 and 14 after surgery individually.Then the tumor and FLR samples were received immunohistochemical staining for CD31,a-SMA,ki67 and GLUT1. The FLR functional volume were calculated by PET/CT ($FLRV_{FCH}$).
Results: The actual liver function is assessed by Valid volumetric function (VVF) that is $FLR_{SUVmean}\times FLRV_{FCH}$.The tumor volume in the ALPPS group increased more rapidly on day 14 than the Sham group. The ^{18}F-FDG SUV_{max} of the tumor significantly increased on day 7, which in accordance with the GLUT1 expression. No significant changes in the ^{18}F-FLT SUV_{max} of FLR and tumor were observed in either group, although high Ki67 index were found.The VVF measured by ^{18}F-FCH showed more potential in accurately monitoring the dynamic and functional liver regeneration time window (day 3 to day 7). Quantitation of k^{trans} DCE-MRI detected changes in the vascular hyperpermeable function (tumor and FLR) , and the peaks were both on day 7. **Conclusions:** Molecular and functional imaging are promising noninvasive methods to investigate the underlying pathophysiological mechanisms of ALPPS and to determine the optimal time for the second stage of ALPPS. Based on these results, we conclude that the best time for the second stage operation should between day 3 and day 7.

PU-1399

Lipid Encapsulation of Superparamagnetic Iron Oxide and Quantum Dot Inside For Dual Modal Imaging

Wenjie Tang
Guangzhou First People's Hospital, School of Medicine, South China University of Technology

Objective: To explore a novel fluorescence/magnetic dual-modal molecular probe and investigate its physicochemical properties and targeting effect on ovarian carcinoma cells in vitro.
Methods: The RGD targeting dual-modal molecular probe is synthesized in the following steps: long-circulating liposome is prepared by film dispersion method; water-soluble superparamagnetic iron oxide(SPIO) nanoparticles and Quantum dots(QDs) are loaded in the hydrophilic and hydrophobic layer of liposome, respectively; RGD polypeptides are coupled on the former functional liposomes. Transmission electron microscopy(TEM) and particles size analyzer are used to measure sizes and Zeta potential. SPIO and QDs entrapment efficiency is measured through orthopenanthroline spectrophotometric method and sephadex column. Characterization of RGD is investigated by ^{1}H-NMR, FT-IR and elemental analysis. The MRI T_2 relaxation rate of RGD-lipo(QDs)-SPIO is measured through T_2 map scanning on 3.0T MRI system. The stability of the probes in different physiological solutions is investigated. Cytotoxicity of molecular probes is assessed by MTT assay. Prussian blue staining and fluorescence imaging are carried out to determine the targeted ovarian carcinoma cells uptake of nanoparticles.
Results: The targeting fluorescence/magnetic dual-modal probes appeared spherical or para-spherical, with a mean diameter of (132.2±1.2)nm. The entrapment efficiency was up to 80%. RGD polypeptides were successfully coupled on the former functional liposomes with the bind rates of 33.05%. MRI T_2 magnetic relaxation rate is 0.6368×10^{6} $M^{-1}s^{-1}$. The probes feature the high stability in saline, PBS, DMEM and FBS after 3 months' standing. The molecular probe was shown to be low cytotoxicity on human umbilical vein endothelical cell (HUV-EC-C) by MTT study. Prussian blue staining and fluorescence imaging studies showed that the nanoparticles could target $\alpha_v\beta_3$ receptor overexpression ovarian carcinoma cells.
Conclusion: The novel RGD targeting dual-modal molecular probes are excellent physicochemical properties and stability, besides it has high T_2 relaxation rate and strong targeting effect on cancer cells. It has laid a foundation for the dual-modal tomography of tumor.

LP-PEI-SPION 传递系统在肿瘤诊疗中的研究

金光玉,宋晓伟
延边大学附属医院

目的 制备一种兼具核磁共振成像诊断及基因治疗双功能的基因传递系统（LP-PEI-SPION），探讨其在肿瘤诊疗中的可行性及效果。
方法 应用共沉淀法合成超顺磁性氧化铁纳米粒子（SPION），以硫脲反应将聚乙烯亚胺（PEI）修饰在其表面。利用动态光散射仪、X 射线衍射仪、红外光谱仪对 PEI-SPION 进行表征。应用热重分析仪判断 SPION 表面 PEI 的包裹率，通过振动样品磁强计检测 SPION 和 PEI-SPION 的磁性强弱。采用乙醇注入法合成阳离子脂质体 LP-PEI-SPION，并应用动态光散射仪、Zeta 电位仪及透射电子显微镜对其进行表征。通过琼脂糖凝胶电泳实验，细胞毒性实验及体外转染效率实验，筛选脂质体的

最优处方。选用 pEGFP-N2 为目的基因，在荧光显微镜下观察转染后绿色荧光蛋白的表达情况。应用普鲁士蓝染色实验检测细胞对于纳米粒子的摄取率。体外核磁共振成像实验检测 LP-PEI-SPION 传递系统的核磁共振成像效果。

结果 LP-PEI-SPION/DNA 在电镜下呈均匀类球形，水和粒径为 253.07±0.90 nm，Zeta 电位为 41.31±2.67 mV；MTT 实验表明当 LP-PEI-SPION 与 DNA 的质量比由 6 增加至 14 时，HepG2，SPC-A1 和 A549 的细胞存活率均在 80%以上；体外转染效率实验结果显示当 LP-PEI-SPION 与 DNA 的质量比为 6 时转染效率最高；普鲁士蓝染色实验可见 HepG2 细胞和 SPC-A1 细胞对 LP-PEI-SPION/DNA 的摄取后呈现的蓝染颗粒；三种细胞体外核磁共振成像图像信号均随 LP-PEI-SPION 与 DNA 的质量比增加而降低。

结论 成功制备了 LP-PEI-SPION/DNA，其细胞毒性低，转染效率高，核磁共振成像效果好。为进一步体内实验及临床研究提供依据。

卵泡膜细胞-纤维瘤伴囊变的 MR 影像学分型及其相关因素分析

张思斯[1],王媚媚[1],刘浩[1],李运菲[2],赵小虎[2]
1.上海市同济医院(同济大学附属同济医院)
2.复旦大学附属上海市第五人民医院

目的 卵泡膜细胞-纤维瘤伴囊变是引起误诊的重要原因之一。本研究旨在对囊变位置和形态学进行分型，分析与囊变相关的临床及影像学因素，提高对其非典型表现的认识和诊断。**方法** 回顾经病理证实的 38 例卵泡膜细胞-纤维瘤的 MR 影像特征，测量肿瘤的最大径，分析囊变情况，重点探讨囊变的分型及其 MR 信号特点。并对可能影响肿瘤囊变的临床及影像相关因素进行分析。**结果** 38 例卵泡膜细胞-纤维瘤 MRI 表现为实性肿块 22 例（57.89%），实性伴囊变肿块 12 例（31.58%），囊性肿块 4 例（10.53%），肿瘤最大径为 1.0~21.3cm，均值为（6.65±4.70）cm。实性伴囊变肿块分为瘤外囊变 2 例（16.67%）及瘤内囊变 10 例（83.33%）；其中周围型 4 例（33.33%））、弥漫型 5 例(41.67%)、中央型 1 例（8.33%）。卵泡膜细胞-纤维瘤伴囊变时实性成分 T_1WI 呈等低信号，T_2WI 抑脂序列呈等或稍高信号；囊性成分表现为明显的 T_2WI 高信号；增强后肿瘤实性成分轻度强化（50.0%），囊性成分无强化（42.1%）。统计分析表明肿瘤大小是影响囊变的重要因素（P=0.008），≥6cm 的肿瘤囊变率为 68.8%（11/16），＜6cm 的肿囊变率为 27.3%（6/22）。**结论** 卵泡膜细胞-纤维瘤囊变率为 42.1%（16/38），囊变表现为实性肿块伴囊变和单纯囊性肿块，其中弥漫型囊变最多（41.67%）。肿瘤大小是影响囊变的重要因素之一，直径越大的肿瘤越易囊变。认识囊变的分型，对提高对本病的认识及诊断和鉴别诊断有重要意义。

PU-1402
MPIO 对胃癌细胞示踪及早期淋巴结转移的 micro-MRI 研究

陈健
复旦大学附属儿科医院

目的
本研究的目的是评估超顺磁性氧化铁颗粒（micron-sized superparamagnetic iron oxide，MPIO）在体外及体内对人胃癌细胞的示踪作用及在胃癌淋巴结微转移中的价值。
方法

用带有绿色荧光的 MPIO 标记 SGC-7901 胃癌细胞，通过普鲁士蓝染色和流式细胞仪定量分析 MPIO 标记率，从而在多个时间点对细胞 MPIO 摄取率进行体外监测；再将 MPIO 标记的胃癌细胞植入裸鼠皮下，在不同时间点进行 MRI 扫描，观察植入区肿瘤在 T2WI 扫描序列中信号变化情况。

结果

经过 24 小时的培养，与对照组相比，MPIO 在体外对胃癌细胞的标记和吸收效率均达到 90.0%，MPIO 颗粒在 16 天内使用多种观测方法均可持续在胃癌细胞内被检测到，在小鼠体内进行为期数周的 MRI 跟踪扫描时，5 周内均可在所有进行 MRI 扫描的成瘤的裸鼠肿瘤处见到明显的信号减低区，组织学结果也可在肿瘤内发现聚集的 MPIO 颗粒，数量随着时间的增加而递减，而对照侧则无明显信号改变。3 只裸鼠在第 4 周及第 5 周 MRI 扫描时，在同侧淋巴结内发现了点样信号减低，组织学结果证实其淋巴结内存在转移的铁标记的胃癌细胞。

结论

MRI 可对 MPIO 标记的胃癌细胞进行活体示踪检测，对观察胃癌细胞在裸鼠体内的迁徙及代谢过程具有一定帮助，对细胞影像学在检测胃癌淋巴结早期微转移临床应用的探索具有意义。

PU-1403

胰腺纤维化动物模型的分子磁共振诊断

刘日
中国人民解放军北部战区总医院

目的 构建不同胰腺纤维化程度小鼠模型，为纤维化分子 MRI 做准备。探讨含钆 I 型胶原蛋白靶向探针（EP3533）分子 MRI 技术在胰腺纤维化的诊断和分级诊断研究的可行性与应用价值。

方法 选取 42 只雄性 C57BL/6 小鼠，随机分为对照组、轻度胰腺纤维化组、中重度胰腺纤维化组，分别腹腔注射生理盐水（对照组），雨蛙素（50 g/ kg），乙醇（3g / kg，33%）联合雨蛙素，持续注射 6 周，造模结束后三组小鼠各取 4 只，鼠尾静脉注射提前合成的 Cy5.5-EP3533(500 g Cy5.5/ kg)，1 小时后处死小鼠取出胰腺，在小动物活体光学成像系统中进行荧光定量观察。余下三组模型小鼠经尾静脉注射 EP3533(20μmol/ kg)，增强后 5-60min 内的多次采集 T1WI 图像，扫描结束后，处死小鼠取出胰腺进行病理学评估与纤维化分级,验证不同严重程度的胰腺纤维化模型是否建立。比较不同组小鼠间在 EP3533 增强后各时间点的强化程度。两相关样本的比较采用配对样本 t 检验或符号秩检验；重复测量资料采用重复测量的方差分析进行组间比较。采用 SPSS 21 进行统计分析，检验水准α取双侧 0.05。

结果 病理证实轻度胰腺纤维化组、中重度胰腺纤维化组模型均发生胰腺纤维化改变，经病理证实并且后者纤维化分级高于前者。在 EP3533 注射后 30min、40min、60min 时间点胰腺 ROI 中ΔSNR 值显示中重度纤维化>轻度纤维化>对照组，组间效应方差分析结果显示，三个组别的差异有统计学意义（p<0.001）。Cy5.5-EP3533 注射 1 小时后，正常胰腺、轻度纤维化胰腺与中重度纤维化胰腺的荧光强度依次升高。

结论 我们成功建立了两种不同胰腺纤维化程度的小鼠模型，并且发病机制模拟人类酒精性慢性胰腺炎。EP3533 在增强 30min、40min、60min 时的ΔSNR 能帮助鉴别不同纤维化程度的小鼠模型。

PU-1404

双时相 PET/CT 检查技术在膀胱癌诊断中的价值

陈杰,陈自谦
中国人民解放军联勤保障部队第九〇〇医院(原福州总医院)

目的 探讨双时相 PET/CT 显像技术在膀胱癌及其术后复发中的诊断价值。
方法 回顾性分析临床可疑膀胱癌或术后复发患者 57 例,全部进行 PET/CT 常规及延迟扫描,并对双时相扫描病变 SUV 值进行比较,据双时相病灶 SUV 值摄取程度、延迟前后 SUV 值变化情况、病灶形态变化、是否有淋巴结和远处转移判断是否为恶性肿瘤,诊断以病理和临床随访结果为最终依据。
结果 延迟扫描较常规扫描诊断准确率明显提高,常规扫描准确率 71.9%,延迟扫描准确率 93.0%。常规病变 SUV 与延迟病变 SUV 差异无统计学意义。常规尿液组 SUV 与延迟尿液组 SUV 差异有统计学意义。常规病变 SUV 与常规尿液 SUV 差异有统计学意义。延迟病变 SUV 与延迟尿液 SUV 差异有统计学意义。 结论 时相 PET/CT 检查技术简单易行,对膀胱癌的诊断有较高的应用价值。

PU-1405
定量图谱磁共振成像技术（Magic 技术）在直肠癌及其周围脂肪浸润中的初步临床应用

朱可心,刘屹
中国医科大学附属第一医院

目的 探讨定量图谱磁共振成像技术在直肠癌及其周围脂肪浸润中的临床应用价值。
材料与方法 回顾性分析经手术及活检病理证实为直肠癌病例 38 例（年龄 24~78 岁，平均年龄 57 岁）。其中 T1、T2 期患者 12 例，T3、T4 期患者 26 例。所有患者均进行 3.0TMRI 直肠检查，包括 magic 序列（层厚 4mm，TR4500ms，TE100ms，fov384mm）。采用 signa pioneer 工作平台中 magic 技术（100.1.1 版本）测量直肠病灶、正常肠壁、周围脂肪间隙的 T1 值、T2 值、PD 值。使用 Cochran&Cox 近似 t 检验、Wilcoxon 符号秩检验、Mann-Whitney U 检验用于比较直肠癌及周围组织的 T1、T2、PD 值，使用受试者操作特征(ROC)曲线评价诊断效能。P 值＜0.05 视为具有统计学意义。
结果 直肠癌与正常直肠管壁比较，T2 值高（P=0.000462），T1 值和 PD 值未见统计学差异。采用 ROC 曲线分析**结果** T2 值（AUC=0.706；95%CI=0.591~0.822）。T3/4 期直肠癌周围脂肪与 T1/2 期直肠癌周围脂肪比较，T1 值、T2 值和 PD 值均高（P=0.00），采用 ROC 曲线分析**结果** PD 值（AUC=0.808，95%CI=0.685~0.930），T1 值（AUC=0.997，95%CI=0.998~1.000）、T2 值（AUC=0.850；95%CI=0.699~1.000）。25 例 EMVI 患者中， TI 值为 985.68±429.86ms，T2 值为 116.92±16.76ms，PD 值中位数为 90.30，四分位距为 24.40。
结论 magic 序列在直肠癌及其周围脂肪侵犯中具有较高的应用价值。其中 T2 值在直肠癌诊断中具有更高的诊断价值。其中 T1 值在周围脂肪侵犯诊断中具有更高的诊断价值。

PU-1406
CT perfusion imaging in assessing metastatic involvement of perigastric lymph nodes in patients with gastric cancer

Zongqiong Sun
Affiliated Hospital of Jiangnan University, The Forth People's Hospital of Wuxi City

Purpose This study used CT perfusion imaging (CTPI) technology to evaluate the diagnostic efficacy in differentiating metastatic from inflammatory perigastric lymph nodes in patients with gastric cancer.

Methods A total of 115 perigastric lymph nodes of 60 patients with gastric cancer confirmed by gastroscopy underwent CTPI scan before operation. The scan data were postprocessed by using commercial software to calculate perfusion parameters including blood flow (BF) and permeability surface (PS), and to measure the size of lymph nodes. According to the post-operative pathology result used as a golden standard, the perigastric lymph nodes were divided into two groups: metastatic nodes and inflammatory nodes. Perfusion parameters values and the size of lymph nodes between two groups were respectively compared statistically by t test, and a receiver-operating characteristic (ROC) analysis was used to determine the optimal diagnostic cutoff value with sensitivity, specificity and area under the curve (AUC).

Results Examined perigastric lymph nodes were metastatic in 65 and flammatory in 50. Mean values of perfusion parameters in metastatic and inflammatory lymph nodes, respectively, were BF of 90.05 vs. 79.31 ml/100 mg /min ($p < 0.01$), and PS of 42.19 vs. 35.89 ml/100 mg /min ($p < 0.01$). Mean values of the size in metastatic and inflammatory lymph nodes were 1.34 cm vs. 1.16 cm ($p > 0.05$). The sensitivity of 81.5%, specificity of 66.0 % and AUC of 0.784 for BF with cutoff value of 80.76 ml/100 mg /min for differentiating metastatic from inflammatory nodes were higher than those of PS or the size of lymph nodes ($P < 0.05$).

Conclusions BF value might be a more effective marker than PS or the size of lymph nodes for differentiating metastatic from inflammatory nodes in patients with gastric cancer.

PU-1407
基于三元纳米材料硒铋铜同步实现 肝癌放疗增敏和放疗防护

杜江锋,张辉
山西医科大学第一医院

目的 已有纳米放疗增敏剂可显著增强放射线对肿瘤的治疗，但无法改善放射线对机体造成的毒副作用，同时因其难以降解和代谢，具有潜在长期毒性。本研究将制备一种新型纳米放疗增敏剂，使其不但可以增强对肿瘤组织的放疗增敏效果，还可以利用材料降解后的硒元素增强机体免疫力，显著降低放疗副作用，并降低潜在的毒副作用。

方法 利用硒代半胱氨酸可生物降解利用的特性，以硒代胱氨酸作为硒源，采用温和热解法制备一种联合热疗既可以对肿瘤组织放疗增敏，又可以降低放疗对正常组织毒副作用的可降解硒铋铜纳米放疗增敏剂。基于该纳米颗粒对 X 射线较大的衰减能力和对近红外二区光的吸收，探索 CT 和光声多模态成像指导的肿瘤精准诊疗一体化方案，实现纳米颗粒联合热疗和放疗对肿瘤的增敏治疗，通过检测硒酶、白细胞水平和骨髓 DNA 的含量等，评价放疗的副作用的降低。

结果 通过对该纳米材料体内和体外的生物安全性进行评价，发现其具有良好的生物相容性，没有明显的细胞和动物毒性。硒铋铜中的+1 价铜离子通过类芬顿和 Haber-Weiss 反应可以源源不断的产生单线态氧增加对肿瘤的杀伤效果。利用硒代半胱氨酸参与硒酶合成的特性有效提高机体的抗氧化能力，刺激细胞免疫因子释放增强机体免疫力，进而降低放疗副作用。该纳米材料联合 X 射线和近红外二区光可显著增强放疗效果。当纳米材料降解后，硒可以持续不断的被释放进入血液循环系统。通过对放疗毒副作用指标的分析，发现血液中的超氧化物歧化酶、谷胱甘肽过氧化物酶、细胞因子 IL 2，IL-6，G-CSF 和 TNF-α 、血液中的白细胞数、骨髓 DNA 含量等，相对单独 X 射线照射组都有显著升高，表明该纳米材料可以增强免疫力，降低放疗副作用。

讨论：本研究通过开发一种新型放疗增敏剂，发现了一种新的放疗增敏机制，系统性的从细胞和动物水平上系统评价该纳米颗粒的生物安全性和体内代谢转化过程，为新型纳米放疗增敏剂的开发提供一种新的设计思路。

PU-1408
双磁共振报告基因和 Deltex-1 基因修饰的人间充质干细胞治疗闭合性阴茎损伤的活体磁共振成像研究

郭若汨,王劲
中山大学附属第三医院

目的 探讨铁蛋白重链亚单位（Fth）和转铁蛋白受体（TfR）双基因磁共振成像报告基因的示踪可行性，为活体内 Deltex-1（DTX1）基因促进人间充质干细胞（hMSC）分化为平滑肌细胞（SMC）治疗闭合性阴茎骨折（CPF）的研究提供可视化依据。
方法 产生多基因共表达的 hMSC，对其表达进行评估，并对其生物学特性进行了测定和比较。评估细胞内铁的吸收，同时检测分化为 SMC 的能力。将 50 只 CPF 模型家兔随机移植 PBS、hMSC、Fth-TfR-hMSC、DTX1-hMSC 和 Fth-TfR-DTX1-hMSC。采用活体 MR 技术检测移植细胞的分布、迁移和 CPF 的愈合过程，并与与组织病理学联系。
结果 该多基因修饰 MSC 的表达水平较高。转基因不能影响 hMSC 的生物学特性。双磁共振报告基因增加了铁的积累能力，DTX1 基因促进 hMSC 向 SMC 分化。磁共振成像可明显检测双报告基因修饰的 hMSC 的分布和迁移，CPF 的愈合状态可通过组织学证实。
结论 双 MRI 报告基因能提供足够的 MRI 对比，并能在体内检测 MSC 的分布和迁移。DTX1 基因可促进 MSC 向 SMC 分化，治疗 CPF，有效抑制肉芽组织形成。

PU-1409
肝脏糖代谢的化学交换饱和转移成像：7.0T MRI 初步研究

王丹,沈智威,钟梓杰,陈丽花
汕头大学医学院第二附属医院

目的 探讨 7.0TMRI 化学交换饱和转移成像技术（chemical exchange saturation transfer,CEST）对肝脏糖代谢试管模型及正常 SD 大鼠禁食前后肝脏糖原 CEST 成像的可行性和相关影响因素。
方法 实验在安捷伦 7.0 T 动物 MR 扫描仪上完成。分别准备不同浓度糖原（10mM、20 mM、40mM、80mM、160mM、320mM）、不同 PH 值（PH 值分别为 6.8、7.0、7.2、7.4）的糖原模型及正常 SD 大鼠。采用 7.0TMRI 对模型用不同预饱和脉冲参数（从 1s 到 5s 的不同持续时间，以及从 1ut 到 6ut 的不同能量）、不同 TR 时间进行 CEST 成像，以得到糖原的 CEST 成像的最佳饱和脉冲参数。并用试管模型的最优参数对正常 SD 大鼠禁食前后进行肝脏糖原 CEST 成像，通过 CEST 效应及 Z 谱进行量化分析。
结果 7.0TMRI 可检测到不同浓度糖原之间信号（0.5-1.5ppm）有差异，信号强度随着浓度增加而增强。6 种不同浓度糖原模型的差谱峰值随浓度增高而增高。糖原的最佳 CEST 成像饱和脉冲持续时间是 4s，饱和脉冲能量 B1 为 3.0ut。不同 PH 值环境 CEST 效应也有差异，随着 PH 值降低，糖原

CEST 效应降低。浓度为 80mmol/L 的糖原模型在 PH 为 7.4 时，MTRasym 为 19.63%，而 PH 降低到 6.8 时 MTRasym 仅为 2.02%。7.0TMRI 可以进行正常 SD 大鼠的肝脏糖原 CEST 成像。正常进食的 SD 大鼠肝脏糖原 CEST 效应（MTRasym 为 9.07%）高于禁食 12h 后的 SD 大鼠（MTRasym 为 2.69%）。
结论 7.0 T MRI 进行 CEST 成像评价糖原代谢是可行的，且其 CEST 效应受糖原浓度、代谢环境 PH 值、预饱和能量和持续时间等因素影响。SD 大鼠肝脏的糖原 CEST 成像也是可行的，我们有望获得 SD 大鼠在体的肝糖原浓度分布结构图。

肝脏少见原发性恶性血管肿瘤的 CT 表现

王阳阳,周志刚
郑州大学第一附属医院

目的 探讨肝脏少见原发性恶性血管肿瘤的 CT 表现特点。
方法 对经病理证实的 20 例肝脏少见原发性恶性血管肿瘤的 CT 表现进行回顾性分析，并结合文献分析其 CT 表现特点。
结果 血管肉瘤 8 例，CT 平扫表现为肝内低密度影，可有出血、坏死及囊变，增强后强化区域呈由外向内的“向心状”和（或）由内向外的“离心状”扩大，可完全充填，部分病灶见“假包膜征”。上皮样血管内皮瘤 10 例，CT 平扫表现多发实性结节状低密度影，肝外周分布密集，典型特征为“包膜收缩征”、“晕征”及“棒棒糖征”。增强后分为“快进慢出型”（直径≤3cm）和“慢进慢出型”（直径＞3cm）向心式强化。恶性血管外皮瘤 2 例，CT 平扫为单发实性或囊实性肿块状低密度影，密度不均，可见包膜，动脉期边缘明显不均匀强化，门脉期持续强化，延迟期呈等密度。
结论 CT 三期增强扫描的不同强化特征对鉴别肝脏肿瘤的起源及病理类型具有一定的价值，结合临床资料和影像表现可提高诊断准确率,确诊仍需病理学检查。

18F-FDG PET/CT 在前列腺癌诊断中的应用价值

付丽媛,钱根年,赵春雷,陈自谦
中国人民解放军联勤保障部队第九〇〇医院(原福州总医院)

目的 初步探讨 18F-FDG PET/CT 在前列腺癌鉴别诊断、远处转移、临床评价等方面的应用价值。
方法 回顾性分析 32 例显示放射性浓聚灶的前列腺疾病患者的 18F-FDGPET/CT 显像资料，将所得结果与病理或临床随访结论比较。
结果 经手术或穿刺活检病理证实为前列腺癌 29 例（29/32），前列腺增生 3 例（3/32）。
结论 18F-FDG PET/CT 对于前列腺癌的鉴别诊断、远处转移、临床评价等方面具有重要价值和意义。

PU-1412

肝样腺癌的 CT 表现与临床病理特征研究

杨倩,刘玉林

湖北省肿瘤医院

目的 分析胃肝样腺癌的 CT 影像表现，提高对胃肝样腺癌的诊断准确率。
方法 回顾性分析 14 例经病理组织学证实的肝样腺癌患者，进行 CT 扫描（10 例男性和 4 例女性；年龄 36-72 岁，平均年龄 57.9 岁），分析病灶发生部位、形态、强化特征、邻近器官侵犯范围、淋巴结肿大及远处转移、静脉癌栓形成。
结果 肿瘤形态表现为局限溃疡（n = 6）、浸润溃疡（n = 5）、肿块（n =3）；肿瘤侵犯浆膜下层结缔组织 4 例，10 例侵犯浆膜外脂肪间隙；所有肿瘤增强扫描均表现持续强化；5 例邻近器官受侵：肝脏（n =3）（其中 2 例合并胰腺受侵）、胰腺（n =1）和食管（n = 1）；11 例胃周区域淋巴结转移，其中 2 例转移淋巴结短轴小于 0.8cm；9 例远处转移（肝脏，n =8；非胃周区域淋巴结，n = 1）。3 例静脉癌栓形成（门静脉，n=2（一例同时合并脾静脉、肠系膜上静脉癌栓）；胃网膜右静脉，n=1）。**结论** CT 扫描显示胃肝样腺癌多表现溃疡形成，侵犯浆膜外脂肪间隙，增强扫描持续强化，易发生淋巴结、肝脏转移及门静脉癌栓。

PU-1413
不同前置 ASiR-V 的选择在肝门静脉 CTPV 能谱扫描中成像效果的研究

谭碧雯[1,2],黄华[1,2],徐雅静[1,2],周斌[1,2]
1.深圳大学总医院
2.深圳大学临床医学科学院

目的 不同前置 ASiR-V 的选择在肝门静脉能谱扫描成像中效果研究。
方法 用 GE Resolution CT 能谱成像上腹部模式行三期扫描（BIM<30），临床疑附壁血栓 11 例，每组选择前置 ASiR-V0%~100%范围，间距为 10%的 A1~A11 组数据，对 11 组图像行同层面肝门静脉 CT 值和 SD 值及背景噪声（BN）计算并比较各组图像的 SNR、CNR 及 PDFI，对图像行主观评价、评分（标准：①门静脉强化明显，信噪比高，VR 重建好，利于诊断，3 分；②门静脉强化一般，信噪较好，VR 重建一般，不影响诊断，2 分；③门静脉强化差，噪声大，VR 重建失真，不利诊断，1 分）。扫描条件：探测器宽度 80mm，管电压 70Kvp，管电流自动毫安（范围 150～450mAs），噪声指数 NI 为 18，螺距 0.992mm，FOV（45cm×45cm），自动触发扫描，扫描层厚 5mm，重建层厚 1.25mm，重建层间距 1.25mm。采用组内相关系数检验（ICC）进行统计学分析。
结果 取 A1～A11 共 11 组数据，对各组肝门静脉分析，其中 8 例 ASiR-V 为 30%-50%时显示附壁血栓效果好，ASiR-V 为 70%时 1 例失败，ASiR-V 为 80、100%时 2 例不符合临床诊断，CNR 为 68~75Kvp，其敏感性及特异性分别为为 86.5%、87.0%，约登指数 0.820。11 组测量肝门静脉的强化度值范围为 72%～85%、信噪比均值范围为 78%～85%，CT 值均值范围约为 250～320HU，经 ICC 检验，ASiR-V 对不同百分比条件下肝门静脉的强化度、CT 值及信噪比等评估指标具有高度一致性，ICC 值分别为 0.972、0.953、0.932（P 均＜0.05），具统计学意义，剂量（PDFI）随 ASiR-V 增加而逐渐降低。
结论 日常能谱 CT 扫描中，合理运用不同前置 ASiR-V 的选择会对肝门静脉附壁血栓的 VR 显示效果极佳，利于临床术中引导。

PU-1414

Dynamic evaluation of endothelial progenitor cells transplantation for treatment of hepatic ischemia-reperfusion injury in rats by DCE-MRI

Linpeng Yao,Rong Yang,Xing Xue,Xiaoli Wang,Siying Zhang,Jun Yang
The first affiliated hospital, Zhejiang University School of Medicine

OBJECTIVE: To evaluate the efficacy of endothelial progenitor cells in the treatment of hepatic ischemia-reperfusion injury in rats by quantitative parameters obtained by dynamic enhanced nuclear magnetic resonance (DCE-MRI).
METHODS: Rat model of hepatic ischemia-reperfusion was established and divided into two groups (n=48). In the experimental group, 0.2 ml (1.0×106/ml) of the primary cultured endothelial progenitor cells (EPCs)[1] were injected into the portal vein, and the control group was injected with the same amount of PBS. At 6 hours and 1, 3, and 7 days postoperatively, routine MRI and DCE-MRI scans[2, 3] were performed. After the MRI scan, serum biochemical index of the rats was measured by collecting eyelid blood sampling. HE staining and tunnel staining were performed on the lesioned liver tissue to observe and score the pathological damage of liver tissue. Correlation analysis was performed between the pathological immunohistochemical staining results and the DCE quantitative parameters obtained by post-processing software analysis.
RESULTS: In T2WI, liver ischemia-reperfusion rats showed no significant difference in liver signals between the experimental group and the control group. In the DCE-MRI images, the Ktrans values at 6 hours and 1, 3, and 7 days of the experimental group were 0.44±0.14, 1.02±0.15, 0.56±0.18, and 0.22±0.10, respectively, While the control group were 0.50. ±0.16, 1.12±0.30, 0.76±0.29, 0.33±0.12; the Ktrans values of the experimental group were lower than the control group at each time point (P<0.01).The Suzuki scores in HE staining tissues showed that the experimental group was lower than the control group at each time point (P<0.01). Serum biochemical analysis showed that ALT and ALP were lower in the experimental group than in the control group either (P<0.01). Correlation between pathological examination and DCE-MRI parameters showed that there was a positive correlation between Ktrans value with pathological HE staining Suzuki score and Tunnel index (P <0.05).
CONCLUSION: Transplantation of endothelial progenitor cells can improve liver ischemia-reperfusion injury. The DCE-MRI and Ktrans values can accurately reflect the degree of hepatic ischemia-reperfusion tissue necrosis, and play an important role in the evaluation of liver tissue damage and treatment prognosis.

原发性肾上腺淋巴瘤的 CT 及 MRI 特征分析

吴开富,郭建强,谭永明,占雅如,陈优,舒雨晴,何来昌
南昌大学第一附属医院

[摘要]目的　分析原发性肾上腺淋巴瘤（PAL）的 CT 和 MRI 表现，提高对本病的认识和诊断水平。方法　回顾性分析 10 例经病理证实的 PAL 的 CT/MRI 表现，观察肿瘤大小、形态、边界、密度/信号及强化特征。结果　10 例患者中，9 例为弥漫性大 B 细胞淋巴瘤，1 例为 NK/T 细胞淋巴

瘤。双侧 3 例，单侧 7 例（左侧 5 例、右侧 2 例），共 13 个病灶，肿瘤最大径约 5.7～9.8（8.2±1.1）cm，9 个表现为椭圆形或类圆形肿块，2 个为类三角形，2 个为不规则形；边界清晰 10 个，边界不清 3 个；2 例体积较大者累及同侧肾脏和血管；5 例伴腹膜后淋巴结肿大。所有病灶 CT、MRI 动态增强呈轻中度渐进性强化。结论　原发性肾上腺淋巴瘤具有一定影像学特征，据此可提示诊断。

超高 b 值扩散峰度成像评估前列腺癌肿瘤组织侵袭性

李敏,王明帅,张继洋,蒋涛,张晓东
首都医科大学附属北京朝阳医院

目的　采用超高 b 值扩散峰度成像（Diffusion Kurtosis Imaging，DKI）评估低、高级别前列腺癌（Prostate Cancer, PCa）肿瘤组织的侵袭性。
材料与方法　回顾性分析，经前列腺根治术后病理证实为 PCa 患者的术前 7 个 b 值（(0, 400, 800, 1200, 2000, 3000 及 4000 s/mm^2) DWI 图像。采用西门子 Prisma 3T MRI，18 通道体部线圈。感兴趣区(Region of Interest，ROI)选取外周带（Peripheral Zone, PZ）或移行带(Transitional Zone, TZ)侵袭性最强的癌灶，于 ADC 上手动勾画出整个肿瘤体积。计算 DKI 扩散系数（D_{7b}）及峰度系数（K）。采用独立样本 t 检验比较两组间（低级别组，Gleason=3+3,3+4；高级别组，Gleason≥4+3）差异。采用受试者工作特征(Receiver Operating Characteristic，ROC)曲线比较 D、K 及 $DKI_{(D+K)}$值预测 PCa 侵袭性的诊断效能。
结果　低级别组 PCa 8 例，高级别组 PCa 15 例。高级别癌灶的 D 值显著低于低级别组（0.832±0.13 vs 1.171±0.36, p=0.003），K 值显著高于低级别组（0.854±0.15 vs 0.718±0.12, p=0.001）。D 及 K 值诊断高、低级别 PCa 的灵敏度分别为 75.0%、80.0%，特异度分别为 74.33%、55.0%，ROC 曲线下面积分别为 0.767 及 0.792。$DKI_{(D+K)}$诊断高、低级别 PCa 的灵敏度为 86.7%，特异度为 61.5%，ROC 曲线下面积为 0.817。
结论　非高斯分布模型 DKI 的拟合需要较高 b 值，当 b 值最高达到 4000s/mm^{2}时， D 及 K 值可用于预测不同级别前列腺癌。K 值可提高 DKI 模型对 PCa 侵袭性评估的灵敏度及综合诊断效能，D 值的特异度最高。

恶性神经鞘瘤的影像学表现分析

黄仁军,李勇刚
苏州大学附属第一医院

目的　探讨分析恶性神经鞘瘤（Malignant Neurinoma, MN）的影像学表现特点，为以提高对该病的认识，为临床诊断、治疗提供依据。**资料与方法**　回顾性分析 5 例 经病理证实的 MN 患者的 CT 及 MRI 影像学资料，分别从病灶大小、形态、密度、边缘、境界及强化方式这 5 个方面进行分析。**结果**　5 例 MN 中，分别位于椎管内、胃、大腿、降结肠及左肺门。除降结肠病灶外，病变最大径均大于 5CM，形态均呈不规则，边缘均欠光整，除发生于结肠的病灶外，其余病灶的境界均较为清晰；发生于胃的病灶密度欠均匀，呈囊实性，并以囊性为主，其他部分的病灶为等或稍低密度；发生于椎管内及股骨的病灶均伴有溶骨性骨质破坏区，骨质破坏区内见残存的骨质；胃部及降结肠病变行增强检查，增强后前者可见包膜强化，囊性区未见明显强化，后者呈持续性轻中度强化。**结论** MN 多表现为体积较大、形态不规则、边缘欠光整的软组织肿块，可发生坏死囊变，发生骨或骨周

围的可伴有溶骨性骨质破坏，CT 及 MRI 能够为我们对病变的特征、与周围结构的邻近关系及鉴别诊断提供有价值的信息，但是最终确诊需要依靠病理。

Evaluating the Correlation of the Impairment between Skeletal Muscle and Heart using Cardiovascular MRI in a Spontaneous Type 2 Diabetes Mellitus Rhesus Monkey Model

Yushu Chen,Fabao Gao
West China Hosptial of Sichuan University

Purpose: To investigate the correlation of impairment in skeletal muscle and heart in spontaneous type 2 diabetes mellitus (T2DM) rhesus monkeys using cardiovascular magnetic resonance image (MRI).
Materials and Methods: Fifteen T2DM monkeys and fourteen healthy control (HC) monkeys were included. The microcirculation of skeletal muscle (skeletal muscle blood flow [SMBF], skeletal muscle oxygen extraction fraction [SMOEF]) and the function and strain of heart were evaluated by MRI. Three regions of interests were chosen on the soleus muscle (SOL), gastrocnemius muscle (GAS) and tibialis anterior muscle (TA) for image analysis.
Results: Seven T2DM monkeys and seven HC monkeys were obtained the full data. The SMBF reserves and SMOEF reserves were found significant decreased in T2DM during inflation in SOL, GAS and TA muscles (all $p < 0.05$), and the SMBF reserves decreased during hyperemia in GAS and TA muscles (all $p < 0.05$). In these monkeys, the global peak longitudinal strain (longitudinal PS), peak systolic longitudinal strain rate (longitudinal PSSR) and peak diastolic longitudinal strain rate (longitudinal PDSR) were seen significant difference in T2DM compared to HC monkeys (all $p < 0.05$). The longitudinal PSSR were found negative correlated with SMBF reserves in SOL, GAS and TA during inflation in all monkeys.
Conclusions: A negative correlation existed between the longitudinal PSSR and the SMBF reserves in the T2DM monkeys accompanied with the impaired microcirculation of skeletal muscle and the myocardial deformation.

Rheumatoid Arthritis Involving the Tibialis Posterior Tendon: A Study on the Early Diagnostic Value of Power Doppler Ultrasonography and a Comparison with Surgery

Xiaohu Zhao[1], Yun-fei LI[1],Ying-jie SONG[1],Qi-li HU [1],Jian-ying MAO[2],Hao DAI [2],Xiao-jun GAO[2],Lin-lin LU[2]
1.Department of Imaging, The Fifth People's Hospital of Shanghai，Fudan University, Shanghai 200024, China
2.Department of Ultrasound, Guanghua Hospital of Integrated Traditional and Western Medicine, Shanghai 200052, China

OBJECTIVE: To explore the value of power Doppler ultrasonography (PDUS) for the early diagnosis of tibialis posterior tendon (TPT) injury induced by rheumatoid arthritis (RA).
METHODS: Forty-eight patients (60 feet) with RA tendinopathy were selected as the RA tendinopathy group; 12 patients (20 feet) with non-RA tendinopathy were included in the non-RA tendinopathy group; and 10 healthy volunteers (20 feet) were selected as the control group. The blood flow signals in pannus in all the subjects were observed with PDUS to determine whether the tendon was injured and to assess the degree of injury. The detection of pannus in the tendon was considered a tendon injury. The degree of injury was determined by grading blood flow signals. In the present study, the following indexes were compared and analyzed with statistical methods: ① positive rate for a blood flow signal; ② grade of the blood flow signal; and ③ spatial distribution of the blood flow signal (diffuse or local).
RESULTS: Positive blood flow signals were detected only in the RA tendinopathy group and the non-RA tendinopathy group; the positive rates were 88.34% (53/60) and 40% (8/20), respectively. For healthy volunteers, the positive rate for a blood flow signal was 0% (0/20), indicating that there was no blood flow signal detected in the tendon (the grade of the blood flow signal was zero). There were significant differences in the positive rates for blood flow signals between the RA tendinopathy group and the non-RA tendinopathy group ($P<0.01$).The positive rate for a grade III blood flow signal in the RA tendinopathy group was 20% (12/60), while this was not observed in the non-RA tendinopathy group. The positive rates for a grade II blood flow signal in the RA and non-RA tendinopathy groups were 36.67% (22/60) and 10% (2/20), respectively. The positive rates for a grade I blood flow signal in the RA and non-RA tendinopathy groups were 31.67% (19/60) and 30% (6/20), respectively. There were significant differences in the grades of blood flow signals between the RA and non-RA tendinopathy groups ($P<0.01$). The spatial distribution of the blood flow signal in the RA tendinopathy group was significantly different from that in the non-RA tendinopathy group. In the RA tendinopathy group, blood flow signals were detected throughout the whole tendon from its origin to its scaphoid attachment. However, blood flow signals were mainly distributed around the scaphoid attachment in the non-RA tendinopathy group, encompassing a 14 mm zone, beginning 40 mm proximal to the scaphoid insertion of the tendon. In this study, three patients with grade III blood flow signals detected on preoperative PDUS were treated with surgery. The synovial sheath of the tibial tendon was remarkably thickened and surrounded by abundant neovascularization (pannus) in all three patients. The intraoperative findings were consistent with the preoperative ultrasound results, indicating that PDUS can detect the formation of microvasculature within the tendon.
CONCLUSIONS: PDUS can detect neovascular formation in tenosynovitis, which is valuable for the early diagnosis of tendon injury and determination of RA versus non-RA types of tendinopathy, which result from degeneration and strain. Power Doppler technology can detect early tendon injury before the appearance of foot deformities induced by RA, which can guide early clinical intervention to prevent the occurrence of deformities and other serious consequences.

PU-1420

非接触性急性前交叉韧带撕裂骨挫伤分布特点及与其他伴随损伤的相关性分析

孟凡华
复旦大学附属上海市第五人民医院

目的　探讨非接触性急性前交叉韧带（ACL）撕裂者的骨挫伤分布特点，并分析骨挫伤与内外侧半月板(MM、LM)、内外侧副韧带（MCL、LCL）及关节软骨损伤相关性。 方法　回顾性分析 201 经临床证实为非接触性 ACL 撕裂患者的 MRI 资料。201 例病例均行常规 MRI 矢状位、冠状位和横断位 T2WI、脂肪抑制 FSE 双回波序列扫描。结果　在 201 例病例中，发现骨挫伤 172 例（85.6%），其中单纯内侧间室骨挫伤 6 例（3%），单纯外侧间室骨挫伤 50 例（24.9%），联合间室均骨挫伤 116 例（57.7%），29 例未见骨挫伤（14.4%）。无骨挫伤组、单纯外侧间室骨挫伤组、联合间室骨挫伤组间伴发 LM 损伤发生率、MCL 损伤发生率和关节软骨发生率逐步提升（20.7%44%53.4%，P=0.006；10.3%24%37.9%，P=0.008；012%23.3%，P=0.006）。联合间室骨挫伤者和单纯外侧间室骨挫伤者伴发 LM 损伤发生率较无骨挫伤者均有明显差异（P=0.002，0.037），联合间室骨挫伤组和单纯外侧间室骨挫伤组间无明显差异（P=0.264）；与无骨挫伤者相比，联合间室骨挫伤者伴发 MCL 损伤和关节软骨损伤发生率间有明显差异（P=0.005，0.004），单纯外侧间室骨挫伤和无骨挫伤者、联合间室骨挫伤者间无明显差异（P 值均大于 0.05）。结论　非接触性急性 ACL 撕裂后骨挫伤常见，联合间室骨挫伤最常见，其次为单纯外侧间室，而单纯内侧间室骨挫伤罕见。骨挫伤部位分布与伴发 LM 损伤、MCL 损伤及关节软骨损伤具有一定的相关性，随着骨挫伤范围的扩大，LM、MCL 和关节软骨损伤的发生率趋向于逐步增高。联合间室骨挫伤者和单纯外侧间室骨挫伤者较无骨挫伤者更易于伴发 LM 损伤，联合间室骨挫伤者较无骨挫伤者更易于伴发 MCL 损伤和关节软骨损伤。

生育与未生育女性髂尾肌形态及功能的 MRI 初步研究

潘冬刚[1],陆好悦[2],单秀红[1]
1.江苏省镇江市第一人民医院
2.江苏大学医学院

目的　通过自然及增加腹压状态 MRI 分析比较生育与未生育女性髂尾肌形态及功能，探讨妊娠和自然分娩对髂尾肌有无明显损伤。
方法　对 67 名女性自愿者进行自然及增加腹压状态 MR 成像，测量髂尾肌厚度和角度，采用独立样本 t 检验比较各组间两种状态髂尾肌厚度及角度的差异。
结果　自然状态生育组矢状位右侧髂尾肌角和左右平均髂尾肌角明显大于未生育组，p=0.007、0.003；两组髂尾肌厚度、冠位左右髂尾肌角及矢位左侧髂尾肌角均无明显差异。自然分娩组矢位左右平均髂尾肌角明显大于剖宫产组，p=0.042。增加腹压状态生育组矢位左右髂尾肌角及左右平均矢位髂尾肌角明显大于未生育组，p=0.014、0.000 和 0.000，两组冠位髂尾肌角均无明显差异。自然分娩组与剖宫产组增加腹压状态下冠、矢位髂尾肌角均无明显差异。
结论:妊娠对髂尾肌后下部功能有明显的损伤，自然分娩对髂尾肌后下部可能也有轻微的损伤，而对髂尾肌的功能无明显影响。

18F-FDG PET/CT 在朗格汉斯细胞组织细胞增生症中的应用价值

董楚宁,姜阳,李娴,王云华
中南大学湘雅二医院

目的 总结朗格汉斯细胞组织细胞增生症（LCH）患者的临床特点及影像学表现，探讨 *^{18}F-FDG PET/CT* 在该病中的应用价值。
方法 回顾性分析 2013 年 8 月至 2019 年 7 月在我院行 PET/CT 检查的经病理证实的 LCH 患者的临床资料及影像学资料。
结果 共纳入 14 名患者，其中男 9 例，女 5 例，年龄 43.07±11.72 岁，主要临床表现包括骨痛、尿崩、咳嗽、乏力、局部肿块等。*^{18}F-FDG PET/CT* 影像学表现：9 例患者出现糖代谢增高的溶骨性骨质破坏，5 例单发，4 例多发，病灶共计 47 个，主要分布于颅骨、髂骨、椎体及附件等，FDG 摄取不同程度增高，SUVmax 为 7.77±3.97，MTV 为 2.76±3.21，TLG 为 13.99±18.81；2 例患者出现垂体柄增粗伴 FDG 摄取，SUVmax 为 24.36±28.81，MTV 为 0.79±0.38，TLG 为 15.27±20.03，纳入患者中 4 例出现口干、多饮、多尿症状，敏感性约为 50%；4 例患者出现肺部结节及囊状透亮影，FDG 轻度摄取，SUVmax 均小于 2.13；6 例患者出现多处肿大淋巴结伴 FDG 摄取，病灶共计 65 个，主要分布于纵隔、腋窝、腹股沟及盆壁，SUVmax 为 4.14±2.64，MTV 为 1.47±1.13，TLG 为 3.77±3.55；另见 1 例肝内多发结节患者，1 例甲状腺肿块患者，FDG 均明显摄取。其中 2 例患者治疗后进行 *^{18}F-FDG PET/CT* 复查，1 例患者表现为溶骨性骨质破坏灶密度增高，1 例表现为肿大淋巴结缩小，2 例患者 FDG 摄取均降低。
结论 *^{18}F-FDG PET/CT* 可系统性的评估 LCH 的骨病变、淋巴结病变、肺结节及囊变等特点，对于累及垂体的患者，建议结合垂体动态增强磁共振进行综合评价，因此 *^{18}F-FDG PET/CT* 对于 LCH 的诊断、活检定位、治疗效果等评估均有重要的临床价值。

2. State Key Laboratory for Modification of Chemical Fibers and Polymer Materials, Key Laboratory of Science and Technology of Eco-Textiles, Ministry of Education, College of Chemistry, Chemical Engineering and Biotechnology, Donghua University
3. Department of Radiology, Shanghai Public Health Clinical Center, Fudan University
4.State Key Laboratory for Modification of Chemical Fibers and Polymer Materials, College of Materials Science and Engineering, Donghua University

With great potential in nanomedicine, the integration of a metal organic framework (MOF) with a
nanocarrier for smart and versatile cancer theranostics still seeks to expand. In this study, MOF was successfully merged with hollow mesoporous organosilica nanoparticles (HMONs) with a polydopamine(PDA) interlayer to form molecularly organic/inorganic hybridized nanocomposites (HMONs-PMOF).The well-defined nanostructure and favorable biocompatibility of HMONs-PMOF were demonstrated first. Doxorubicin hydrochloride (DOX) and indocyanine green (ICG) were separately loaded into the interior cavity of

HMONs and the outer porous shell of MOF with high loading efficacy, respectively. The obtained dual drug-loaded nanocomposites (DI@HMONs-PMOF) displayed favorable photothermal properties and pH/NIR-triggered DOX release manner. Furthermore, in vitro cell experiments validated that HMONs-PMOF can efficiently deliver DOX into cancer cells. Upon entry into cancer cells, the photothermal effect of DI@HMONs-PMOF can induce the lysosome rupture, thereby facilitating the “lysosome escape” process and accelerating the DOX diffusion in the cytoplasm. Benefiting from the iron ion coordinated on PDA and ICG confined in MOF, magnetic resonance (MR) and photoacoustic (PA) dualmodality imaging were performed to verify the effective accumulation of DI@HMONs-PMOF at the tumor site. Interestingly, the results also suggested that the existence of ICG can cooperatively enhance the MR imaging capability of prepared nanocomposites. In addition, the significantly improved synergistic therapeutic efficacy was confirmed both in vitro and in vivo. Thus, our results indicated that the merged nanostructure of HMONs and MOF is promising for versatile cancer theranostics.

基于增强分子聚集态分子运动提高光声成像和光热治疗效果

周鑫[1],刘顺杰[2],史林启[3],丁丹[3],唐本忠[2]
1.山西医科大学第一医院
2.香港科技大学
3.南开大学

目的 肿瘤光热治疗具有微创、毒副作用小等优点，近年来发展迅速。相较于无机材料的光热治疗剂，有机纳米材料具有更理想的生物相容性和生物降解性，因此受到广泛关注[1]。如何提高有机材料的光热转化效率是现在研究的热点。我们将分子内扭曲电荷转移（TICT）性质与聚集诱导发光（AIE）逆过程进行有机结合，将分子转子和支化长烷基链引入染料分子主干中，从而增强染料分子在聚集态时分子运动，提高 TICT 性质，增强非辐射跃迁，从而有更多的能量用于产热。
方法 苯并双噻二唑为强电子受体，噻吩为电子给体，三苯胺既作为电子给体又作为分子转子，支化长烷基链位于噻吩单元上，从而制备出带有不同长度烷基链的染料分子。通过吸收/发射光谱、聚集态发射、相对量子效率、光热转化效率等表征，研究染料分子的光物理及光热性质。利用了一种 pH 响应聚合物（PAE-b-PEG）包裹染料制成 pH 响应纳米粒子，从而增强染料分子在肿瘤部位的富集[2]。之后在体内外研究纳米粒子的光声成像效果。并且利用纳米粒子对荷瘤小鼠进行光声指导的光热治疗。
结果 相对于直链分子 NIR6、短支链分子 NIRb6 和 NIRb10、以及金纳米棒（GNR），长支链分子 NIRb14 具有更好的光热转化性能。这是因为在聚集态下，烷基链的支化作用可以有效减弱分子间强相互作用，给分子内旋转提供空间，因而有利于 TICT 态的形成，从而增强了非辐射跃迁和光热转化效率。体外光声结果表明，NIRb14 纳米粒子具有最强的光声信号。在 PAE 材料的作用下，纳米粒子在小鼠肿瘤部位聚集明显增强，且在体内循环时间增长。光热治疗结果显示，相对于对照组（生理盐水及 PEG 包裹纳米颗粒），NIRb14-PAE/PEG 纳米粒子在肿瘤部位产生更高的温度，对肿瘤生长有明显的抑制作用。
结论 我们提出一种通过调控 TICT 性质增强光热性能的新方法，进而提高有机染料对小鼠体内肿瘤的光声成像和光热治疗效果。

PU-1425

用于实时检测β-葡萄糖醛酸苷酶活性的近红外荧光探针

周鑫[1],张国强[2],张辉[1],丁丹[2]
1.山西医科大学第一医院
2.南开大学

目的 开发检测人体代谢酶活性的荧光探针对评估机体处置药物能力、实现临床个性化用药、疾病的早期诊断和及时干预治疗意义重大。β-葡萄糖醛酸苷酶（β-Glucuronidase，GLU）是溶酶体酶家族的一员，广泛表达于多种肿瘤组织，参与转移、侵袭等过程，并与肿瘤细胞的增殖和凋亡密切相关，是重要的肿瘤标志物[1]。快速定量检测 GLU 活性以及实时可视化分析 GLU 的分布对肿瘤的早期诊断、肿瘤组织轮廓的确认具有重要意义。
方法 将 GLU 特异性识别基团葡萄糖醛酸与具有近红外发射的荧光团 DCM 相结合，从而制备出基于 GLU 特异性葡萄糖醛酸苷键水解反应、可用于 GLU 体内成像的近红外荧光探针[2]。通过检测探针与不同浓度 GLU 反应前后的吸收/发射光谱，研究荧光探针在 GLU 作用下光学性质变化。同时检测了探针和其他酶反应后光学性质是否发生变化，从而确定探针的特异性。通过细胞毒性试验，研究探针的细胞相容性。之后在体外检测荧光探针对人肝癌细胞 HepG2 中 GLU 的成像效果，并进一步对肝癌荷瘤小鼠体内的 GLU 活性进行实时生物成像。
结果 荧光探针在 GLU 作用下，吸收光谱发生红移。以新的最大吸收峰的波长作为激发波长，发现近红外荧光明显增强。同时，该探针还表现出超高的灵敏性和选择性，可区分人体内多种具有类似水解功能的同功酶。体外细胞实验结果显示，该探针具有很好的细胞膜透过性，能够对细胞内的 GLU 进行荧光成像，并且没有细胞毒性。此外，该探针还成功对荷瘤小鼠体内的 GLU 的活性进行实时、可视化监测。
结论 我们制备出一种新型的用于实时检测体内外β-葡萄糖醛酸苷酶活性的点亮型近红外荧光探针。它具有高灵敏度和特异性，以及很好的生物相容性，可作为检测体内 GLU 活性的有力工具，为肝癌的诊断提供依据，并可作为近红外的 GLU 的工具分子应用于影像导航下的肿瘤切除术。

PU-1426
肾静态皮质显像对小儿泌尿系感染诊断价值评估

王芳,邵剑波
华中科技大学同济医学院附属武汉儿童医院

目的 探讨 $^{99}Tc^{m}$二疏基丁二酸（DMSA）肾皮质显像在小儿尿路感染的影像表现，对其在临床诊疗中应用价值进行评估。**方法** 收集我院 2018 年 1 月至 12 月期间临床诊断上尿路感染 390 例患儿病史资料，其中男 232 例，女 158 例，年龄 1 月至 12 岁，≤2 岁 312 例（80%）。检查设备采用 GE Discover NM SPECT/CT 670 Pro 机，所有患儿均行肾皮质显像 DMSA 检查，常规方法采集，应用 Xeleris3.1 TM 功能成像系统后处理重建图像，分别计算分肾功能、计算病灶与正常摄取区比值并进行统计学分析。**结果** 390 例患儿中 67 例显像正常，诊断为下尿路感染；149 例 DMSA 显像异常诊断为上尿路感染，其中急性肾盂肾炎 261 例， VUR 导致共 101 例（左 50 例，右 27 例，双侧 24 例）；先天性肾发育畸形 55 例；肾瘢痕 30 例。下尿路感染分肾功能为 45.5%～54.5%。上尿路感染单肾受累者，分肾功能均低于 45%（7.3%～44%）。肾皮质功能受损区与正常皮质摄取区比值约为 0.2-0.70。Mann-Whitney U 轶和检验结果两组差异有统计学意义（$p < 0.05$）。**结论** 肾皮质显像能够鉴别尿路感染及其病因分析，对肾脏实质损害程度进行相对定量评估，准确诊断肾瘢痕，为诊断急性肾盂肾炎及肾瘢痕的“金标准”，有助于临床尽早明确诊断，选择正确治疗方法及有效预防远期肾损害的早期干预，提高患儿长期生存质量。

PU-1427
磁靶向介导骨髓间充质干细胞治疗大鼠肾脏缺血再灌注损伤的实验研究

王灵杰,乔英,张华,何生,岳华杰
山西医科大学第一医院

目的:
评估骨髓间充质质干细胞（BMSCs）对肾缺血再灌注损伤（RIRI）的影响，并动态监测体内移植的 BMSCs 的归巢、存活，以早期预测其在大鼠模型中的治疗效果。
方法
通过夹闭左肾动脉 45 分钟制备大鼠 RIRI 模型。在肾动脉夹闭后一周，将 2×10^6 个超顺磁性氧化铁（SPIO）标记的 BMSC 注射到肾动脉中。然后，在细胞移植后的第 1,7,14 和 21 天进行肾脏的 MR 成像。在移植后的第 21 天，评估大鼠血清肌酸酐（Scr）和尿素氮（BUN）水平，同时进行 HE 染色和 TUNEL 测定。
结果 SPIO-BMSC 组体重增长率显着高于 PBS 组（P <0.05），Scr 和 BUN 水平也显着低于 PBS 组（P <0.05）。 HE 染色显示 SPIO-BMSC 组肾小管上皮细胞的变性程度和空泡样变性明显优于 PBS 组。 TUNEL 测定显示 SPIO-BMSC 组中凋亡的肾小管上皮细胞的数量显着低于 PBS 组。肾脏病变的 T2 值在细胞移植后的第 1 天最高，并且在 PBS 和 SPIO-BMSC 组中随时间逐渐降低，但在 SPIO-BMSC 组中始终是最低的。**结论**
移植 SPIO 标记的 BMSC 的治疗方法可显著促进大鼠 RIRI 的恢复，也可以通过 MRI 对移植的 BMSC 进行无创性动态监测，以早期预测治疗效果。

PU-1428
新型 GNRs@MNPs-Gd3+纳米探针用于肿瘤光声/磁共振双模态成像引导下的光热治疗

陈安琪,张瑞平
山西医科大学

目的 制备新型 GNRs@MNPs-Gd^{3+}纳米探针，其中 MNPs 用于提高纳米探针生物相容性，GNRs 可以提高 MNPs 的近红外光吸收效应，提高光声成像及光热治疗效果，Gd^{3+}的加入可以产生 MRI 信号，从而实现 PAI、MRI 双模态成像引导下的光热治疗，有望成为一种新型多功能纳米制剂用于肿瘤的诊疗一体化。
方法 （1）GNRs@MNPs-Gd^{3+}纳米探针的构建及表征；以 $HAuCl_4$、CTAB 为原料制备 GNRs，将 MNP 用 PEG 进行表面修饰，后将 GNRs 与 MNP-PEG 混合，室温搅拌 24h 制得 GNRS@MNPs 纳米粒。将 GNRS@MNPs 与 $GdCl_3$ 室温孵育 30 min，离心得 GNRs@MNPs-Gd^{3+}纳米探针。采用 TEM 观察探针形貌及尺寸，使用 UV 测试吸收光谱，采用 ICP-MS 测量纳米探针中 Au 及 Gd^{3+}含量。

（2）GNRs@MNPs-Gd^{3+}纳米探针的体外实验；将 GNRs@MNPs-Gd^{3+}纳米探针与 Hep2 细胞共同孵育，采用生物 TEM 观察纳米探针细胞内分布，同时观察纳米探针被细胞吞噬后形貌是否发生改变。采用 CCK8 法检测不同浓度纳米探针细胞毒性。将不同浓度探针溶液按比例稀释，利用 MRI、PAI 成像系统检测探针和对照溶液信号强度，找出最佳成像浓度。

（3）GNRs@MNPs-Gd^{3+}纳米探针的体内实验；建立裸鼠皮下肿瘤模型，尾静脉注射纳米探针，以 PBS 作为对照，通过 PAI、MRI、PTT 进行动物活体成像及治疗效果监测。

结果 成功合成 GNRs@MNPs-Gd^{3+}纳米探针，TEM 证明其棒状结构及表面修饰的 MNP，Mapping 证明金属离子 Gd^{3+}成功引入其表面，粒径约 45-50nm.UV 吸收峰位约 780nm，可以用于 808nm 近红外光的光声及光热。体内外实验证明其良好的成像及治疗效果。
结论 成功制备一种新型 GNRs@MNPs-Gd^{3+}探针用于肿瘤诊疗一体化。

PU-1429
多模态协同治疗增强抗肝癌血管生成的可视化研究

李雪
天津医科大学第二医院

目的 动脉化疗栓塞等非手术疗法极易引起肿瘤局部微环境发生缺氧从而诱导残存的肝癌细胞产生适应性乏氧应答，导致病理性血管生成，引起复发及转移。因此，降低肝癌细胞的乏氧应答对于抑制血管生成、提高肝癌远期疗效具有重大意义。通过 RNAi 阻断抗血管生成是一种较为理想的治疗方法，但存在着 siRNA 的摄取量低，单通路阻断不完全、疗效评估缺乏实效性且不敏感等缺陷。为了增强抗肝癌血管生成的治疗效果，设计并构建了一种可视化的纳米基因载体，同步投递 HIF-1α 的 siRNA，增强基因水平的抗血管生成效果；联合放疗的协同效应，提高肝癌治疗效果，同时，多模态成像深入分析治疗效果，实现疗效的实时动态监测。
方法 将 PtTPTBP、HIF-1α-siRNA、纳米簇基因载体、PEG 长循环物质等进行多功能组装，实现双基因抑制抗血管生成、放疗增敏、MR/CT/荧光多模态示踪、体内长循环等多功能高效协同。
结果 所制备的纳米基因载体粒径均匀，正电性强，可高效负载/释放 siRNA。
同时具有放疗增敏、MR/CT/荧光多模态示踪的作用。通过一系列体外乏氧响应性、安全性、稳定性、多模成像实验及肝癌模型鼠活体治疗实验，成功验证了其功效。
结论 所制备的多模态纳米基因载体可高效的负载 HIF-1α-siRNA，降低其在循环过程中的降解，同时增强 HIF-1α-siRNA 的细胞摄取效率及溶酶体逃逸；基因治疗联合放疗可以有效提高肝癌的治疗效果，这是因为 HIF-1α-siRNA 的高效投递可避免“乏氧应答” 产生的血管生成的代偿性激活，使紊乱的血管网趋于正常化，减少因为局部氧分压低所造成的放疗不敏感，同时，多模态成像可深入分析治疗效果，及时反映抗血管生成的治疗效果，实现疗效的实时动态监测，对于制订个性化治疗方案及预测预后具有重要的临床意义。因此，本实验为最大程度地提高肝癌的治疗效果提供重要的科学依据。

PU-1430
Targeted probe for trimodal accurate imaging and risk-stratification of breast cancer

Defan Yao,Dengbin Wang
Xinhua Hospital， Shanghai Jiao Tong University School of Medicine

PURPOSE
Extradomain-B fibronectin (EDB-FN) is a marker for epithelial-to-mesenchymal transition (EMT), a biological process associated with tumour invasion, metastasis and drug resistance. EDB-FN is highly expressed in the extracellular matrix of aggressive human breast cancers. For non-invasive accurate detection and risk-stratification of breast cancer, a peptide-targeted goldnanorods, Pep-Sq@AuNRs, is synthesised for

sensitive fluorescent/photoacoustic/computed tomography (FL/PA/CT) imaging of extradomain-B fibronectin in aggressive breast tumors.
METHOD AND MATERIALS
A EDB-FN-targeted peptide modified goldnanorods, Pep-Sq@AuNRs, was synthesized using a three-step process and this probe is composed of three moieties. The first moiety is EDB-FN-targeted peptide (Pep), preferably targeting EDB-FN. The sencond moiety is an NIR fluorescent dye (Sq), of which its essential properties of NIR FL/PA imaging and phototherapy.The third moiety is gold nanorods (AuNRs), acting as CT/PA contrast agent.
RESULTS
This complex probe can effectively target aggressive MDA-MB-231 triple negative breast cancer in mice, but not in low-risk slow-growing MCF-7 tumors. The NIR FL/PA signals were activated by EDB-FN for imaging, and the AuNRs was used for CT imaging and photothermal/ photodynamic therapy (PTT/PDT). These results demonstrate that trimodal imaging with Pep-Sq@AuNRs may provide accurate detection and risk-stratification of breast cancer.
CONCLUSION
In summary, we developed a novel platform, Pep-Sq@AuNRs, as a model to distinguish aggressive MDA-MB-231 triple negative breast cancer and low-risk slow-growing MCF-7 tumors in mice. The results demonstrate that Pep-Sq@AuNRs could effectively target the aggressive MDA-MB-231 triple negative breast cancer and kill cancer cells by PTT/PDT.

PU-1431

MRI T1 加权成像在评估过渡金属硫化物的有机-无机杂化纳米粒子 MoS2@PZAC 作为诊疗一体化纳米平台在光热治疗 PTT 领域潜在应用中的作用

迟彬,汪晶
华中科技大学同济医学院附属协和医院

目的 利用 MRI T1 加权成像来评估基于顺磁性两性离子两亲聚合物杂化二硫化钼在 PTT 领域中的潜在应用价值。
方法 制备合成 MoS_2@PZAC，取不同浓度的 MoS_2@PZAC 于离心管中，扫描得到体外 T1 加权 MR 图像。在种有皮下 4T1 肿瘤的 balb/c 雌性小白鼠上，对小鼠肿瘤进行扫描，得到不同时间点的 T1 加权 MR 图像，并收集不同时间点肿瘤区域的信号强度。尾静脉注射 MoS_2@PZAC 1 d，7 d，14 d，取其心、肝、脾、肺、肾，固定组织 24 h，H&E 染色切片用显微镜观察。（1）只注射 300 μL（下同）PBS，（2）只注射 MoS_2@PZAC（3 000 μL/mL），（3）注射 PBS 4 h 后用 808 nm 激光（2.0 W/cm^2）辐射肿瘤部位 10 min，（4）注射 MoS_2@PZAC（3 000 μL/mL）4h 后用 2.0 W/cm^2的 808 nm 激光辐射肿瘤部位 10 min。每 2 分钟记录一次肿瘤部位的温度，特定时刻测定肿瘤体积。
结果 体外 MRI 测试结果表明 MoS_2@PZAC 的弛豫率 r_1 = 11.2 mM^{-1} s^{-1}，是临床用 Magnevist®的 2.5 倍。大分子造影剂 MoS_2@PZAC 则由于尺寸效应在体内循环时间增加，在肿瘤内聚集的更多。

结论 MoS_2@PZAC 能够迅速在肿瘤部位积累，T1 信号增强效果明显，可以用来引导 PTT。

PU-1432

Evaluation of methotrexate-conjugated gadolinium(III) for cancer diagnosis and treatment

Dan Xu, Shu-Ting Lu, Yu-Shuang Li, Aju Baidya, Hao Mei
Zhongnan Hospital of Wuhan University

Purpose: In this study, a novel theranostic agent MTX-DOTA-Gd (MTX-Gd) was synthesized, which integrates magnetic resonance imaging (MRI) with anticancer treatment.
Methods: MTX-Gd was synthesized by connecting MTX and Gd through 1,4,7,10-tetraazacyclododecane-1,4,7,10-tetraacetic acid (DOTA). The characterization of MTX-Gd was detected by ultraviolet (UV) and infrared spectroscopy (IR). To confirm the antitumor effect of MTX-Gd, the cytotoxicity of MTX-Gd was examined by the MTT assay. The contrast enhancement of the MTX-Gd was measured through MRI *in vitro*. Then, nude mice bearing C6 tumor xenografts were used to study *in vivo* imaging capabilities.
Results: The ultraviolet-visible-near infrared radiation (UV-NIR) absorption curve indicated that MTX-Gd had a broad absorption in the region of 500-700 nm. The formation of MTX-Gd was confirmed from the characteristic bands of MTX-DOTA-Gd in the 1413 cm^{-1} (C-N), 1577 cm^{-1} ($-NH_2$), and 3429 cm^{-1} (N-H), in the fourier-transform infrared (FTIR) spectra. MTX-Gd showed little difference in the cell viability compared with MTX, except for the highest concentration (270 μM). *In vitro,* the imaging of MTX-Gd was significantly brighter than Gd-DOTA at the same concentration, and the brightness and signal intensity of MRI were increased followed by the increased concentration of MTX-Gd. And it also showed that MTX was not visualized on MRI. The other images revealed that the concentration of 4 mM MTX-Gd had the same imaging effect with the concentration of 10 mM Gd-DOTA. Then, MTX-Gd was injected in nude mice bearing C6 tumor xenografts through the tail vein. Significant contrast enhancement was observed at the tumor site from 0.5 h to 3 h. The signal of tumor area was strongest at 3 h due to accumulation by size effect of macromolecules.
Conclusion: A novel stable and unique theranostic agent(MTX-Gd) was successfully synthesized, and it has good stability, strong anticancer ability and excellent magnetic capacity. The methotrexate component of MTX-Gd, as a chemotherapeutic agent, played an important role in targeted therapies of cancer. The DOTA-Gd component of MTX-Gd performed as the MRI contrast agent. The superior MRI imaging performance and synergetic chemical antineoplastic ability of MTX-Gd was revealed, and it has great potential in the diagnosis and treatment of glioma and potentially other cancers, with prospects of clinical application in the near future.

PU-1433

Yb Based Nanoprobes for Tri-modal Bioimaging

Jianhua Liu, Cui Fengzhi , Chen Cailing
The second hospital of Jilin University

Objective:

To investigate the effect of tri-modal bioimaging (fluorescence/MR/CT) with Yb based upconversion nanocrystals.

Methods and materials:

Sub-10 nm Sr_2LuF_7:Yb/Er@Sr_2GdF_7@SrF_2 core-shell upconversion nanocrystals (NCs) were well designed and synthesized using a seed-mediated growth process. Each of parts assumes respective role and works together to achieve multimodal bioimaging.

Results:

The inert shells reduced the surface defects and increased the upconversion fluorescence intensity of the NCs so as to realize the in vitro cell imaging with low auto-fluorescence. In vivo magnetic resonance (MR) imaging was also achieved with these designed nanocrystals due to the presence of Gd^{3+}. More significantly, these specifically core-shell upconversion NCs exhibited high contrast in in-vivo X-ray computed tomography (CT) imaging because of the good X-ray absorption ability of Lu^{3+}, Gd^{3+} and doped Yb^{3+} and Er^{3+} ions.

Conclusions:

These results indicate that the core-shell upconversion NCs can be as promising contrast agents for upconversion fluorescence / MR / CT tri-modal bioimaging.

PU-1434

Synthesis of Untrasmall Bi-Based Nanoprobes for Esophageal Fluoroscopy Imaging

Biying Yuan, Fengzhi Cui, Jianhua Liu, Qinghai Yuan
The Second Hospital of Jilin University

Background: Fluoroscopy imaging was an important examination in diagnosis esophageal diseases, such as esophagitis and esophageal diverticulum. As an organ of esophageal tract, a positive contrast agent was used for measuring the esophagus. Nowadays, barium sulfate contrast agent is the first choice as positive contrast agent. However, barium sulfate had potential risk to other organs. Therefore, we constructed PEG-Bi_2S_3 nanoparticles for esophageal fluoroscopy imaging.

Methods: The morphology of prepared nanodots was characterized through TECNAI G2 HRTEM (high resolution transmission electron microscope). Transmission electron microscope evaluations were achieved on a JEM-2010EX TEM. XRD features were acquired on a D8 ADVANCE using Cu K radiation. X-ray photoelectron evaluations were achieved from ESCALAB-MKII spectrometer. Siemens digital gastrointestinal machine was applied to obtain the fluoroscopy imaging of PEG-Bi_2S_3. MTT test, Hematoxylin and eosin (H&E) staining and body weight were used for measuring the toxicity. The Kunming mice and Wister rats were obtained from Jilin University. concentrations were measuring through inductively coupled plasma mass spectrometry (ICP-MS).

Results: PEG-Bi_2S_3 nanoprobes were successfully prepared through a “hot injection” process. From the TEM results, PEG-conjugated Bi_2S_3 nanoprobes were showed a diameter around 3-4 nm, and nanoprobes dispersed well without further aggregation. The crystal structure of PEG-conjugated Bi_2S_3 was proved by XRD analysis. Incubation of PEG-conjugated Bi_2S_3 nanoprobes with 48 hours, the results showed that more than 80% of 4T1 cells survived, which indicating relative low cytotoxicity of PEG-conjugated Bi_2S_3

nanoprobes. H&E staining proved the no damaged evaluation of long-term toxicity. The blood compatibility was carried out to evaluate the biocompatibility of PEG-conjugated Bi_2S_3 nanoprobes. No hemolysis was observed after incubation of blood with PEG-conjugated Bi_2S_3 nanoprobes, suggesting good blood compatibility. Results of fluoroscopy imaging showed the excellent esophageal imaging effect.
Conclusions: In conclusion, we successfully synthesized PEG-conjugated Bi_2S_3 nanoprobes. The esophageal fluoroscopy imaging results indicated that the PEG-conjugated Bi_2S_3 nanoprobes exhibited better imaging features, which is feasible to potential esophageal fluoroscopy applications.

PU-1435
基于人源蛋白兼具肿瘤靶向及可代谢的 MRI 纳米探针

赵阳
天津医科大学第二医院

目的 长期以来钆类螯合物作为临床最常用的 MRI 造影剂在磁共振影像诊断中发挥着重要作用，但此类造影剂目前仍存在着无组织特异性、弛豫率偏低、诱发肾源性系统纤维化和微量体内残留等缺陷，本研究预探索一种以人类自体蛋白——转铁蛋白为载体的全新钆类磁共振分子探针的功能。
方法 本研究结合最新分子生物和纳米技术，预合成出一种以人类自体蛋白——转铁蛋白为载体，兼具肿瘤主动靶向能力的全新钆类磁共振分子探针。
结果 经过大量表征和实验证明，该全新钆类磁共振分子探针物理性质上表现出良好的稳定性、超小的粒径（水合粒径=9nm）和优异的磁共振 T1 增强效果；细胞成像实验证实，通过生物矿化技术合成的分子探针，既实现了钆纳米粒子以蛋白为模板的“内生长”，还较好的保存了天然转铁蛋白重要的肿瘤靶向功能（由于代谢旺盛，转铁蛋白受体在大多数肿瘤细胞表面过表达）；在活体成像实验中，该探针展现出高度特异的肿瘤靶向磁共振增强效果，以及可快速进、出肿瘤组织的“shuttle-like” 特性，提示该探针未来有望作为载体被应用于药物或其他治疗元件向肿瘤组织的可视化精准“递送”，最后该探针可通过肝胆系统代谢排出体外，展现出良好的体内清除能力，有望实现未来的临床转化。
结论 本研究我们通过简单、可重复的生物矿化方法成功合成了一种具备更为良好的生物兼容性、靶向性和体内清除率的新型 MRI 造影剂——全新钆类磁共振分子探针。Gd@Tf NPs 保留了 Tf 蛋白的固有生物学功能（即，生物相容性，肿瘤靶向性和可代谢能力）以及优异的 T1 弛豫率。这些结果表明 Gd@Tf NPs 有望用于临床实施 MR 早期检测恶性肿瘤。此外，纳米材料保留的 Tf“shuttle-like”特征也使得制备的 NP 能够用作 MRI 成像引导的递送载体，诊疗应用广泛。

PU-1436
基因与纳米探针协同介导的前列腺癌靶向磁共振研究

赵阳
天津医科大学第二医院

目的 构建在前列腺癌内特异性表达 TfR 及 Luc 蛋白的光学、磁共振双报告基因，结合磁性纳米探针 Tf-USPION，以实现在细胞及活体动物模型中，基因、分子水平上的前列腺癌多模态靶向光学及磁共振成像，为早期、定位诊断前列腺癌及前列腺癌的局部、定向治疗提供新的检查手段和研究方向

方法 设计受前列腺癌特异性启动子 DD3 promotor 调控、TfR 及 Luc 为目的基因、WPRE 为增强子的前列腺癌靶向基因探针，借助分子克隆、基因重组和腺病毒包装技术成功构建前列腺癌靶向双报告基因探针 Ad.PDD3-TfR-WPRE-PCMV-Luc (Ad.PDD3)。
结果 以 Ad.PDD3 基因探针转染不同类型细胞后，Luc 荧光检测及 Western Blotting 定量分析均表明该腺病毒载体可在前列腺癌细胞内特异性过表达 TfR 和 Luc 蛋白。在活体光学成像中，LNCaP 前列腺癌种植瘤小鼠在病毒注射 24h 后肿瘤内即出现荧光，荧光强度在第 7-10 天达到峰值，而后逐渐减弱，荧光范围与肿瘤大小成正比；全部 14 天检测，小鼠除肿瘤外全身无其他组织出现荧光；病毒注射 7 天后的 TfR 免疫组化结果证实，小鼠全身仅肿瘤内 TfR 明显过表达，且表达量明显高于未注射病毒的对照组肿瘤；在磁共振成像实验中，本课题组成功构建了 10nm 级 Tf-USPION 磁共振探针，经体循环注射该探针后，预先完成基因探针 Ad.PDD3 转染的小鼠，肿瘤区域出现明显的 T2 增强效应，显影速度明显加快，肿瘤组织的位置、大小及边界显示清晰、与肿瘤周围组织对比明显，T2 值下降迅速、显著；未经病毒处理的小鼠肿瘤区 T2 信号虽信号减低但变化缓慢，延时数小时后肿瘤区信号变化不均匀，且无法确切辨别肿瘤范围。
结论 本研究成功合成可实现前列腺癌靶向双模态分子成像纳米探针，同时，本研究借助基因探针显著提高了前列腺癌组织内的 TfR-Tf 转运系统能力，因此具备良好的临床转化前景，用于前列腺癌的早诊早治。

PU-1437
基于天然黑色素与聚氧金属氧酸盐纳米粒子的光声成像引导下的光热治疗

韩亚红,张瑞平
山西医科大学

目的 构建一种新型黑色素-聚氧金属氧酸盐纳米粒子（MNP-POMs），能通过光声成像达到早期诊断和监测肿瘤的目的，在成像引导下光热治疗，实现诊疗一体化。
方法 1、合成与表征 在黑色素的水溶液中滴加适量冰乙酸，使其电荷翻转，由负变正，通过静电吸引的作用将 MNP 与 POMs 连接，得到 MNP-POMs。利用透射型电子显微镜观察 MNP-POMs 的大小和形态；采用动态光散射法观察其水溶液粒径和电位；使用紫外-可见分光光度计测试吸收光谱。2、细胞实验 采用 CCK8 法检测 MNP-POMs 对乳腺癌细胞的安全性，对 MNP-POMs 标记的肿瘤细胞进行体外光声成像和光热治疗。3、活体实验 选用乳腺癌细胞建立裸鼠肿瘤模型，将 MNP-POMs 经鼠尾静脉注射到荷瘤裸鼠中，进行活体的光声成像与光热治疗评价研究。
结果 MNP-POMs 纳米颗粒水溶性良好，且具有较强的光热效应，在 CCK8 实验中，溶液浓度低于 500 μg/mL 时，标记后对细胞生存率基本无影响。材料在体内与体外均展现了良好的光声成像能力，与对照组相比，具有 MNP-POMs 的光热治疗组显示出显著的治疗功效并显著延长小鼠的寿命。
结论 MNP-POMs 纳米探针合成简单，体内生物相容性良好，能通过光声成像引导下对肿瘤进行精准治疗和疗效监测，有望作为一种新型的多功能纳米制剂用于肿瘤诊疗一体化研究。

PU-1438
Macrophage-targeted and clearable iron-based MRI/NIRF nanoprobes for atherosclerosis molecular imaging

Jiahui Wang,Xuening Zhang,Shuang Liu,Qizhen Peng,Jianwen Hao
The second hospital of tianjin medical university

Objective: This study aims to explore non-invasive imaging of atherosclerotic plaque through magnetic resonance imaging (MRI) and near-infrared fluorescence (NIRF) by using Scavenger Receptor-AI (SR-AI) targeted magnetic iron oxide nanoparticles (PP1-IR820-USPIOs) as multimodality molecular imaging probe in murine model of atherosclerosis.
Materials and Methods: PP1-IR820-USPIOs were constructed by conjugating the SR-AI-specific peptide PP1 and IR820 fluorescent dye to the surface of USPIO nanoparticles via condensation reaction. Murine atherosclerosis model was induced in ApoE-/- mice by high fat and cholesterol diet (HFD) for 20 weeks. The plaque areas in arteries were detected with Oil Red O staining. Immunofluorescent staining and Western blot analysis were applied respectively to investigate SR-AI expression. In vivo MRI and NIRF imaging of atherosclerotic plaque were carried out before and 24 h after intravenous injection of USPIOs.
Results: The obtained PP1-IR820-USPIOs had favorable biocompatibility and exhibited pronounced increased fluorescence and transverse relaxivity. Oil Red O staining showed that the plaque area was significantly increased in HFD group ($p<0.05$). Immunofluorescence staining revealed that SR-AI protein was highly abundant within plaque in HFD group. In vivo MRI and NIRF imaging revealed that PP1-IR820-USPIOs accumulated in atherosclerotic plaque of arteries. There was a good correlation between the signals of MRI and fluorescence intensities of NIRF imaging in animals with USPIOs injection. Most importantly, no observable toxicity or side effects of IR820-USPIOs were found in a variety of toxicity studies.
Conclusion: PP1-IR820-USPIOs is a promising dual modality imaging probe, which may evolve into a clinically translational, a noninvasive tool for detecting and monitoring rupture-prone atherosclerotic plaques in vivo.

PU-1439
基于 BSA-Bi2S3-MnO2-Pep 纳米探针在肿瘤诊疗一体化作用的研究

陈琪,张瑞平
山西医科大学

目的 制备一种新型的 BSA-Bi_2S_3-MnO_2-Pep 纳米探针。采用生物矿化法合成，它可以实现磁共振成像（MRI），光声成像（PAI）双模态成像引导下的光热治疗（PTT），并且具有低毒性。在上述纳米颗粒外连接特定肽链以增加其在肿瘤部位的聚集。
方法 1、BSA-Bi_2S_3-MnO_2-Pep 纳米探针的构建及表征。生物矿化法合成 BSA-Bi_2S_3-MnO_2 纳米探针，将所选定的肽链与 BSA-Bi_2S_3-MnO_2 纳米颗粒交联，透析后冻干，得到 BSA-Bi_2S_3-MnO_2-Pep 纳米探针。采用透射电镜、动态光散射、X 射线光电子能谱分析、X 射线衍射、紫外-可见光光度计等测试方法考察上述纳米探针的形貌、结构、粒径、Bi 和 Mn 的含量等。2、BSA-Bi_2S_3-MnO_2-Pep 纳米探针的体外实验及表征。采用 CCK-8 法检测纳米探针的细胞毒性。配置不同浓度的纳米探针溶液，加入适量的 H_2O_2 和 mmp-2 酶模拟肿瘤微环境，监测该溶液产氧量及粒径等表征。3、BSA-Bi_2S_3-MnO_2-Pep 纳米探针的体内多模态成像和光热治疗。建立肿瘤模型，尾静脉注射纳米探针，进行 MR 和 PA 扫描，观察两种成像效果。利用红外热成像仪进行测温并拍照。

结果 1、BSA-Bi2S3-MnO2-Pep 纳米探针水溶性良好，通过 TEM 和 DLS 测量平均粒径在 6-8nm 之间，具有良好的光热效应。2、CCK-8 实验表明标记后的细胞基本上无毒性；BSA-Bi2S3-MnO2-Pep 纳米探针具有良好的 MR、PA 和光热效应，并且依靠纳米颗粒的被动靶向和肽链的主动靶向效应在肿瘤部位大量聚集，能够成功标记喉癌细胞并进行在多模态成像引导下的光热治疗。
结论 BSA-Bi2S3-MnO2-Pep 诊疗一体化纳米探针合成工艺简单，低毒性，能够通过 MRI 和 PAI 成像引导肿瘤的光热治疗和疗效监测，作为一种新型多功能纳米探针用于肿瘤的诊疗一体化有广阔前景。

PU-1440

生物源对比剂在磁共振分子成像中的应用

赵阳
天津医科大学第二医院

目的
生物源对比剂如蛋白内生型分子探针是以蛋白为基础而合成的一类新型纳米材料，本文旨在总结分析生物源对比剂-蛋白内生型分子探针在磁共振分子成像中的应用。
方法
通过几个具体案例及本课题相关研究详细介绍蛋白内生型分子探针在肿瘤诊疗中的应用
结果
1.蛋白内生型钆类对比剂可用于磁共振分子成像，且 T1WI 增强效果优于 Gd-DTPA；
2.蛋白内生型纳米材料易于表面修饰，可实现多模态成像以及诊疗一体化，有望为疾病诊断提供多种成像信息，并可被活体代谢，生物清除率高。
3.多模态分子成像探针对于临床研究是至关重要的。然而，大多数探针显示“始终在线”信号，可能导致肿瘤-背景比(TBR)较差，还不能有效地满足早期诊断恶性肿瘤的需求。日前叶德举教授课题组设计并合成了一种小分子基可激活 NIR 荧光/ MRI 双模态探针，并通过酶介导荧光反应和原位自组装将其用于体内成像。该策略利用酶的催化活性增强了 MR 特性并增加了靶组织中的探针积累。使用 ALP 作为模型酶，研究表明，可激活双模态探针能够实现皮下 ALP 阳性肿瘤的非侵入、高敏感和空间分辨成像以及 NIR 荧光引导的原位肝脏肿瘤的实时手术切除。
4.在前人工作基础上，我们以 Tf 作为靶向蛋白和合成模板，在其内部生成成像元件 Au，制备 Tf-Au NCs 纳米探针，实验结果发现 Tf-Au NCs 具有良好的靶向性、优异显像效果，并可经活体代谢，生物相容性好，因此 Tf-Au NCs 有望应用于 TfR 高表达肿瘤的靶向成像及早期诊断中。同时，通过联合应用基因与纳米探针，大幅提高了纳米探针对前列腺癌的靶向递送效果。
结论
蛋白内生型分子探针在保持蛋白生物活性和靶向能力的前提下，获得了良好的肿瘤诊疗能力，同时合成工艺简单，探针的材料学特性如粒径、水溶性等良好，同时也易于进一步用另外的配体进行靶向修饰。基于这些优点，蛋白内生型分子探针在肿瘤诊断和治疗领域备受关注。

PU-1441

Construction of a Targeted FI/MRI Multimodal Molecular Probe for Precise Image-guided Surgery in Breast Cancer

Aiwei Zhang
Department of Radiology, Affiliated Hospital of Xuzhou Medical University

Purposes: Breast cancer has become the most serious malignant tumor for women. It’s hard for surgeons to detect surgical margins and micrometastasis precisely, resulting in tumor relapse or surgical complication. Imaging methods capable of precisely detecting tumor boundaries and micrometastases, which can be used to guide surgery.
Methods: In this study, we present a microwave-assisted one-pot way to prepare magnetic‐fluorescent Gd- carbon hybrid nanoparticals (GCNPs). GCNPs were efficiently synthesis via one-pot, multi-component reaction of DTPA, $GdCl_3$ and ethylenediamine in water. Cluster of differentiation 44 (CD44) antibody has been modified on the surface of GCNPs as a targed ligand.
Results: The transmission electron microscopy (TEM) images showed the GCNPs were well separated with a quasi-circular shape and the size of GCNPs was 35.38±4.93 nm. The GCNP aqueous solution emitted bright blue light upon irradiation with a UV lamp (365 nm) with a high quantum yield of 62.17%.The longitudinal relaxivity (r_1) of GCNPs was much larger than that of Gd-DTPA (8.54262 for GCNPs and 2.07956 for Gd-DTPA). The cell imaging showed the 4T1 cell (the breast cancer cell) incubated with GCNPs-CD44 showed intense multicolor luminescence and a significant enhancement MRI signal. In vivo, the tumor boundaries of GCNPs-CD44 group was significantly developed and lasted for nearly 1 week.
Conclusions: This project creatied a fluorescent - magnetic resonance double modal nano-probe, constructing an integrated molecular probe for providing important clinical value for precise surgery, and detection of recurrence and metastasis of breast cancer.

PU-1442

磁共振监测 2-DG 标记的载 PTX 氧化铁纳米粒靶向三阴性乳腺癌 4T-1 诊疗效果研究

卢超[1],熊非[2],单秀红[1],顾宁[1,2]
1.镇江市第一人民医院
2.东南大学

目的 分析比较 Fe_3O_4@OA@PLA-PEG NPs、Fe_3O_4@OA@PLA-PEG-DG NPs 和 Fe_3O_4@OA-PTX@PLA-PEG-DG NPs 靶向三阴性乳腺癌的诊疗效果。**方法** 热分解法合成靶向诊疗纳米粒 Fe_3O_4@OA-PTX@PLA-PEG-DG NPs。分别经尾静脉注射 0.25 mg Fe/ml 的 Fe_3O_4@OA@PLA-PEG-DG NPs、Fe_3O_4@OA-PTX@PLA-PEG-DG NPs、Fe_3O_4@OA@PLA-PEG NPs 混悬液 250 μl 到荷 4T1 乳腺癌荷瘤裸鼠体内，间隔三天注射一次，共三次。注射前和注射后 1d、3d、6d、9d、12d、15d 行裸鼠动态 MR 快速自旋回波 T2、自旋多回波脉冲序列及 SWI 成像，计算分析各组注射前后 T2 信号强度、T2 值。**结果** 注射 Fe_3O_4@OA-PTX@PLA-PEG-DG NPs 后肿瘤生长受到抑制，瘤组织切片普鲁士蓝染色瘤内可见较多蓝染颗粒。注射 Fe_3O_4@OA@PLA-PEG-DG NPs 组未见明显肿瘤生长抑制，瘤内未见蓝染颗粒。**结论** Fe_3O_4@OA@ PLA-PEG-DG NPs、Fe_3O_4@OA-PTX@PLA-PEG-DG NPs 可被三阴性 4T1 乳腺癌主动靶向吸收。载 2-DG、PTX 的氧化铁纳米粒可有效抑制三阴性乳腺癌瘤体生长。

PU-1443

2-DG 修饰的超顺磁性氧化铁纳米粒标记人脐带间充质干细胞效率研究

卢超[1],熊非[2],单秀红[1],顾宁[2]
1.镇江市第一人民医院
2.东南大学

目的 探索 2-脱氧葡萄糖（2-DG）修饰的超顺磁性氧化铁纳米粒（γ-Fe_2O_3@DMSA-DG NPs）标记人脐带间充质干细胞(hUCMSCs)和体外示踪的可行性。**方法** 制备γ-Fe_2O_3@DMSA-DG NPs。采用组织块贴壁培养法分离、纯化人脐带间充质干细胞。用不同浓度(8、16、32、64、128μg/mL)纳米铁标记人脐带间充质干细胞，采用普鲁士蓝染色观察标记率，利用 CCK-8 及 Transwell 实验检测纳米铁对 hUCMSCs 活力及迁移能力的影响，用 MRI T2WI 观察磁标记细胞群信号强度，在 T2 图测量细胞群 T2 值并计算横向弛豫率 R2 值(R2=1/T2)。**结果** 普鲁士蓝染色显示标记铁浓度高于 32 μg/mL，标记率可达到 96%以上，细胞内蓝染颗粒随铁浓度升高逐级增多;铁浓度在 128μg/mL 及以下时，磁标记细胞活力未见显著下降;铁浓度在 128μg/mL 时，磁标记细胞迁移能力下降。磁标记细胞群 T2 信号随铁浓度升高逐级降低，R2 值同铁浓度呈直线相关。**结论** γ-Fe_2O_3@DMSA-DG NPs 可有效标记 hUCMSCs，最适标记铁浓度为 64μg/mL。

PU-1444

裸鼠鼻咽癌移植瘤模型对 18F-FDG 的摄取及其与 ELAM-1 基因表达的关系

刘露
广西医科大学附属肿瘤医院

目的 检测鼻咽癌皮下及爪垫荷瘤裸鼠移植瘤组织中 ELAM-1 的表达。观察并比较转移组和非转移组荷瘤裸鼠 PET/CT 分子成像扫描的区别并研究分析荷瘤裸鼠移植瘤 SUVmax 及 T/NT 值与 ELAM-1 的相关性。
方法 建立裸鼠鼻咽癌皮下及爪垫移植瘤模型后第 8 周进行 ^{18}F-FDG PET/CT 显像，观察评估图像质量并测定瘤体及对侧肌肉的 SUVmax 并计算 T/NT 比值，分析 SUVmax 及 T/NT 比值与移植瘤体积及 ELAM-1 蛋白表达的关系；根据 HE 染色结果将 16 只爪垫模型荷瘤裸鼠分为转移组和非转移组；采用免疫组织化学法（SP）检测两组移植瘤组织中 ELAM-1 蛋白的表达并使用 Image J 软件进行定量分析。
结果 皮下移植瘤模型：平均 SUVmax 为 3.42±1.71，平均 T/NT 比值为 4.36±3.72；SUVmax 与裸鼠移植瘤体积没有明显相关性（r=0.212，P=0.557≥0.05），T/NT 比值与裸鼠移植瘤体积有明显相关性（r=0 .549，P=0.050≤0.05）；爪垫移植瘤模型：转移组与非转移组平均 SUVmax 为（3.04±1.16vs2.67±0.69，t=0.747，P=0.467≥0.05）；转移组与非转移组平均 T/NT 比值为（3.17±1.49vs2.89±0.66，t=0.515，p=0.616≥0.05）；SUVmax 与裸鼠移植瘤体积没有明显相关性（r=0.207，P=0.441≥0.05），T/NT 比值与裸鼠移植瘤体积有明显相关性（r= 0.185，P= 0.493≥0.05）； SUVmax 与裸鼠移植瘤 ELAM-1 表达无明显相关性（r=0.150，P=0.580≥0.05），T/NT 比值与裸鼠移植瘤 ELAM-1 表达无明显相关性（r=0.062，P=0.410≥0.05）。
结论 SUVmax 及 T/NT 比值指标不能有效评估鼻咽癌转移等预后情况。

Gastric MRI by Functionalized Nanoprobe

Lihua Gao,Lei Wang,Jianhua Liu,Qinghai Yuan
The Second Hospital of Jilin University

Background: Gastric diseases, such as gastritis, gastric ulcer, gastric cancer and gastric stromal tumors represented a wide variety of conditions, which affecting anatomy, physiology, and motility of the stomach. Magnetic resonance imaging (MRI) can provide diagnostic information to the stomach. Therefore, we developed polydopamine conjugated (PDA) Co-P nanocomposites for gastric MR imaging.
Methods: We have successfully constructed polydopamine conjugated (PDA) Co-P nanocomposites (Co-P@PDA). XRD was applied to measure the crystalline structures of nanoprobes. FT-IR was applied to measure the conjugated PAA. MTT test was applied to measure the *In vitro* cytotoxicity of nanomaterials. Hematoxylin and eosin (H&E) staining was used to measure the In vivo cytotoxicity of nanomaterials. Kunming mice and Wister rats were obtained from Jilin University. MR imaging evaluation was carried out on a clinical GE Discovery MR750.
Results: From the results of the transmission electron microscope, the prepared Co-P@PDA owned uniform morphology and monodispersed. From the results of the XPS spectrum, the feature from the peak of N 1s further proved the successful conjugating PDA on Co-P nanocomposites. The HAADF-STEM (high angle annular dark field scanning transmission electron microscopy) showed that homogeneous distribution of N and C elements on the Co-P, which indicated the core-shell structure. The r_2 value (transverse relaxivity) was measured to be 224.61 mm^{-1} s^{-1}, which is higher than commercial agents, such as Combidex or Feridex. From results of MTT, after 24 h of incubation with Co-P@PDA, viability of cell exceeded 80%, which indicated low cytotoxicity. The results of H&E-stained organ sections also indicated low cytotoxicity. From the results of in vivo gastric MR imaging acquired through 3.0 T MRI scanner, an obvious darkening signal of the stomach can be showed.
Conclusions: Above all, PDA conjugated Co-P nanomaterials were constructed and served as contrast agents for gastric MR T_2 imaging. The results from gastric MR T_2 imaging proved that the nanocomposites showed better contrast effect than commercial agents. With low side effects, PDA conjugated Co-P nanomaterials could be a promising contrast agents for gastric MR T_2 imaging.

PAI/NIR-II双模态示踪干细胞移植治疗小鼠急性药物性肝损伤

蔡雯雯[1],张瑞平[2]
1.山西省肿瘤医院
2.山西大医院

目的 本研究主要通过非侵入性的光声成像及近红外II荧光成像示踪干细胞治疗急性药物性肝损伤的动态过程。
方法 1）MNP-PEG-H2 的合成；2）表征检测：TEM、DLS 及 UV-VIS 等；3）细胞毒性（CCK-8）检测；4）细胞摄取实验：激光共聚焦及近红外II荧光显微镜观察细胞摄取情况；5）MNP-PEG-H2 标

记干细胞后 PAI/NIR-Ⅱ体外成像；6）MNP-PEG-H2 标记干细胞后 PAI/NIR-Ⅱ活体成像；6）急性药物性肝损伤模型构建；7）动态观察干细胞移植治疗后分布情况；8）治疗效果评价。
结果 1）MNP-PEG-H2 通过羧合反应成功合成，TEM 呈圆形，粒径大约为 85nm 左右，UV-VIS 显示在 750nm 左右有吸收；2）CCK8 结果显示，MNP-PEG-H2 在浓度达 200μg/ml 对细胞的活性基本上没有影响；3）激光共聚焦及近红外Ⅱ荧光显微镜均显示 MNP-PEG-H2 不需要转染，能够通过溶酶体的摄取进入细胞内；4）200、100、50、25、12.5μg/ml 不同浓度 MNP-PEG-H2 标记干细胞后能够在体外成功进行 PAI/NIR-Ⅱ双模态成像；5）裸鼠皮下注射 MNP-PEG-H2 标记好的干细胞后，能够在活体内 PAI/NIR-Ⅱ荧光成像双模态下监测细胞；6）小鼠腹腔注射对乙酰氨基酚能够成功构建急性药物性肝损伤模型；7）通过鼠尾静脉注射 MNP-PEG-H2 标记干细胞后通过 PAI/NIR-Ⅱ荧光成像双模态观察，干细胞主要在肝脏中富集；8）血液学肝功 ALT、AST 和尿素及病理学 HE 组织切片检查证实干细胞能够治疗小鼠急性药物性肝损伤。
结论 我们合成和 MNP-PEG-H2 能够成功标记干细胞，并在非侵入性 PAI/NIR-Ⅱ荧光双模态成像下观察干细胞在体内的情况，并成功治疗急性药物性肝损伤。

黑色素新吲哚菁绿的多模态成像和光热治疗

张小敏
山西省肿瘤医院

目的 为了弥补单独成像技术的不足,将多种成像手段整合在一起来提高成像准确性,这将会是医学成像发展的必然趋势，,在临床应用上也具有极大的潜在价值。一般的癌症诊断和治疗是两个独立的过程,在这漫长的过程中存在着诸多的不稳定因素,会导致肿瘤治疗效果不显著。若能够将癌症的诊断与治疗有机地结合起来,实现全新的诊疗一体化医疗模式,利用诊疗一体化试剂的多种成像功能,准确地获取肿瘤相关信息,由此来制订个性化治疗方案,对癌症进行早期诊断和有效治疗,这将有机会成为癌症研究的主流。基于此,将多功能成像造影剂与癌症治疗药物装载在纳米载体上,实现多模态成像诊断疾病和治疗,这将会为癌症治疗提供新的思路和策略。
方法 ：以黑色素为载体基础，将小分子染料 IR820 作为光热剂将光能转化为热能,通过局部组织热效应来治疗癌症，聚乙二醇（PEG）的连接用来增加纳米材料的稳定性，’水溶性，以及 Mn 作为顺磁性物质的结合来形成 mnp-peg-ir820-mn 纳米颗粒，接着对所构建的纳米材料进行表征，以及进行细胞毒性，细胞摄取，肿瘤细胞杀伤试验，检测体内生物分布和 mnp-peg-ir820-mn 的体内抗肿瘤功效。 在裸鼠肿瘤模型上进行体外和体内实验。
结果 纳米颗粒传承了黑色素低毒性的特点。光热治疗效果明显。
结论 材料在体外及体内展现了良好的核磁和光声成像能力，与对照相比，具有 mnp-peg-ir820-mn 组的光热治疗显示出显著改善的治疗功效并显着延长小鼠的寿命。实现了多模态成像下引导的光热治疗。

The first hospital of jilin university

Herein, multifunctional nanoparticles (MnIO-MCP) have been constructed for active-tumor targeting T_1-weighted and T_2-weighted (T_1-T_2) dual-modal magnetic resonance imaging (MRI)-guided biological-photothermal therapy (Bio-PTT) through bioconjugation of the monocyclic peptides (MCP, the CXC chemokine receptor 4 (CXCR4) antagonist) with manganese doped iron oxide nanoparticles (MnIO NPs). MnIO-MCP displays both T_1-weighted and T_2-weighted MR contrast abilities (r_1 = 13.1 mM^{-1} S^{-1}; r_2 = 46.6 mM^{-1} S^{-1}, and r_2/r_1 = 3.56), allowing generation of enhanced T_1-T_2 dual-modal MRI. The MnIO-MCP exhibits reasonable photothermal conversion efficiency (28.8% with 200 μg mL^{-1} MnIO-MCP in H_2O) under 808 nm NIR laser irradiation, endowing them with the capacity for PTT of tumor. Moreover, MnIO-MCP affords the strong tumor targeting and inhibition of cancer cell growth by the interactions of MCP with over expressed CXCR4 in tumor. We demonstrate that MnIO-MCP can accumulate in MCF-7 tumors as high as ~15.9 %ID g^{-1} at 1 h after intravenous injection into mice with the aid of an external magnetic field (MF), creating opportunity for complete eradication of tumor by T_1-T_2 dual-modal MRI-guided Bio-PTT

Preliminary experimental study on intraoperative navigation of glioblastoma based on IRDye800CW targeted fluorescent probe

Dandan Xu,Hongwei Chen,Xiangming Fang
Wuxi people's hospital

Background: Glioblastoma usually shows diffuse infiltration and the intracranial anatomy is very complicated.It is difficult to distinguish the boundary between normal brain tissue and glioblastoma.Intraoperative fluorescent navigation technology can visualize the tumor in real-time.It has great advantage of determining the boundary of the tumor.Fluorescence probe technique can combine specific antibodies with fluorescent substances by means of probe synthesis technique to improve the imaging ability of tumor.

Objective:(1)To construct a fluorescent probe with biosafety performance targeting EGFR, named Cetuximab-IRDye800CW(Cet-IRD);(2)To detect the imaging efficiency of the fluorescent probe; (3)To investigate whether the probe has potential application value in guiding the resection of glioblastoma.

Methods: (1) The expression level of EGFR in glioblastoma tissues was detected by immunohistochemistry;(2)The probe Cet-IRD targeted EGFR was constructed.It's performance was determined by fluorescence spectrophotometer. (3)The biosafety of Cet-IRD was evaluated by CCK-8 and H&E staining.(4)The subcutaneous model was

constructed to detect the imaging efficiency of fluorescent probes.(5)The orthotopic implantation model was constructed to detect whether Cet-IRD could locate the tumor site in real time and guide surgical resection.

Results:(1)Immunohistochemistry results showed that EGFR is strongly positive in glioblastoma tissues.(2)Fluorescence spectrophotometer showed that the fluorescence signals of Cet-IRD and IRDye800CW can be received by the near-infrared fluorescence imaging equipment. (3)The results of CCK-8 cytotoxicity experiment showed that the cell viability of Cet-IRD incubation group was not statistically different from that of the control group.H&E staining showed that no inflammation, hemorrhage, necrosis or other obvious damage occurred in the main organs of the nude mice.(4)The subcutaneous tumor model of nude mice was successfully constructed. The average fluorescence intensity of tumors of Cet-IRD group was higher than that of the IRD group($p<0.05$).(5)The orthotopic implantation model of nude mice was successfully constructed.The tumor contour was clearly visible under intraoperative real-time fluorescence imaging,and the glioblastoma was resected under the guidance of near-infrared fluorescence equipment.

Conclusion:(1)EGFR was strongly positive in glioblastoma tissues;(2) Cet-IRD probe has a good biosecurity;(3)The imaging efficiency of Cet-IRD is better than IRD, and it has the best imaging efficiency at 24h after injection;(4)Cet-IRD has the ability to visualize glioblastoma,it can locate the tumor site,guide the surgery,and preliminarily realize the objective of intraoperative navigational on glioblastoma resection.

Application of Small Molecule Fluorescent Probes in Early Activation Imaging of CD8 + T Lymphocytes

Xuan Zhou
The Third Xiangya Hospital of Central South University

As a subset of T lymphocytes, CD8+ T lymphocytes play a vital role in the body's immune system. CD8+ T lymphocytes are responsible for the clearance of target cells through direct killing, such as cells infected with viruses, malignant transformed cells and allogeneic cells. And, it is also involved in the occurrence of transplant rejection. Activated CD8 + T lymphocyte-mediated granulocytosis is considered to be the most significant pathway for killing "alien cells". The granzyme of the serine protease family member is the main granule component that enters the target cell after immunological recognition. Among them, Granzyme B (GzB) is extremely fast and effective and rich in content, which can induce cell death in multiple pathways. Fluorescence spectrometry has been widely used in analytical chemistry, especially in biological analysis because of its high sensitivity and selectivity. Most biological molecules have no fluorescence or weak fluorescence and low detection sensitivity. In order to make them highly sensitive, people use strong fluorescence labeling reagents or fluorescence generation reagents to label the substances which are to be tested. Meanwhile covalent or non-covalent binding substances with high fluorescence intensity are produced, which greatly increases the detection rate. In recent years, with the

development of molecular imaging, fluorescence imaging has become one of the most important method to monitor biomolecules and biological processes in living cells and living organisms, and fluorescent probes with excellent performance are the material basis for imaging analysis.
Compared with the blue or green fluorophore, the deep red or near-infrared fluorophore has stronger tissue penetration and lower spontaneous fluorescence, which is more suitable for bioimaging. Therefore, this study designed a novel near-infrared small molecular probe that can be specifically recognized and cleaved by granzyme B, using fluorescence microscope, which is the main effector of cytotoxic CD8+ T lymphocytes—Granzyme B is imaged in living cell.
Acute rejection is mainly caused by cytotoxic T lymphocyte-mediated cytotoxicity, and many literatures indicate that the expression levels of perforin and granzyme b increase in the early stages of acute rejection. Therefore, granzyme b can be used as an early predictor of acute rejection, and we designed a fluorescent probe to trace granzyme b, which can more directly and dynamically observe the role of CTL activation in transplant rejection.

基于 MnO2 纳米片层的增效型纳米光敏剂的构建

蔡权宇,贾宁阳
海军军医大学第三附属医院（上海东方肝胆外科医院）

光动力疗法(photodynamictherapy，PDT)作为一种新型的局部治疗方法，为肿瘤的治疗提供新的方法。二氧化锰（Manganese Dioxide，MnO2）纳米片层以其均衡的理化特性及独特的生物学效应，成为了近期纳米载药系统研发的热点。我们结合前期在光敏剂改进方面取得的成果和经验，以肿瘤微环境响应及 PDT 增效型二氧化锰纳米片层为载药系统，通过自组装方式装载光敏剂，构建了增效型二氧化锰纳米光敏剂。一方面，MnO2 纳米片层可作为光敏剂的猝灭剂可以有效提高光敏剂体内外稳定性的同时增加肿瘤荧光成像效果；作为光敏剂的载体，可装载大量光敏剂并将光敏剂靶向运送到肿瘤部位，在提高 PDT 效果的同时大幅度降低药物引起的副作用；分解生成的 Mn2+还可作为磁共振造影剂为多模态成像提供思路。通过本研究，为光动力治疗能更有效地应用于肿瘤的临床治疗提供理论依据，为后续实现诊疗一体化奠定基础。

Affibody molecule for Positron Emission Tomography Imaging of Human Epidermal Growth Factor Receptor: Validation in Mouse Models and Human Cancer Tissues

weizhi Chen[1],Shuang Miao[1],Yang Liu[1],Yao Sun[2],Chunhe Wang[1],Xiang Liu[1],Zhen Cheng[3],Xilin Sun[1]
1.Molecular Imaging Research Center, Harbin Medical University
2.Key laboratory of Pesticides and Chemical Biology, Ministry of Education, College of Chemistry, Central China Normal University, Wuhan, Hubei

3.Molecular Imaging Program at Stanford (MIPS), Department of Radiology, Stanford University School of Medicine, Stanford, California 94305, USA

Purpose: To design and evaluate whether, in xenografts with NSCLC, an affibody-based radiotracer can be quantified and imaged using positron emission tomography and to evaluated the capacity of the probe to detect EGFR expression status in clinical patients' tumor samples.
Experimental Design: Affibody ($Z_{EGFR:1907}$) was conjugated to NOTA and labeled with ^{68}Ga. Cell assays, PET/CT imaging and biodistribution or western blotting were performed in cells or tumor-bearing nude mice with different EGFR expression. Human tumor samples were collected and co-incubated with radiotracers ex vivo. The binding ability was observed by autoradiography and verified by immunofluorescence and immunohistochemistry.
Results: Binding assays performed in NSCLC cells showed significantly EGFR-specific uptake ($P < 0.0001$). In vivo PET imaging showed accumulation was preferential in EGFR-positive tumor. Blocking assay significantly reduced the tumor uptake in HCC827 xenografts. EGFR-negative H520 xenografts were barely visible by PET at any time point. Western blotting, immunofluorescence and immunohistochemistry suggested that is associated with EGFR expression level ($P < 0.01$). Autoradiography of NSCLC patients' tumor samples showed heterogeneous ^{68}Ga-NOTA-$Z_{EGFR:1907}$ distribution, and EGFR immunofluorescence and immunohistochemistry showed heterogeneous staining, partly corresponding with regions of high tracer uptake. Moreover, the overall accumulation of autoradiography was positively correlated with immunohistochemical score ($R^2 = 0.62$, $P < 0.0001$).
Conclusions: Our study demonstrates that the affibody-based radiotracer ^{68}Ga-NOTA-$Z_{EGFR:1907}$ is suitable for identification of EGFR expression status in vitro, in vivo and ex vivo. It has the potential of further exploration and clinical translation for noninvasive imaging and guide the precise targeted EGFR targeted treatment of cancer.

肿瘤还原微环境的磁共振成像技术

吴波
武汉大学中南医院

通过影像学手段无创早期诊断胶质瘤，获取准确的分子、生理及病理等方面的信息，从而制定科学的个体化治疗方案，是建立个体化精准治疗的关键基础，对于患者意义重大。而当前早期诊断主要通过病理活检，操作复杂且风险较大，而通过影像手段无创早期定性诊断仍然是临床难点。针对当前研究中造影剂无法反映病理信息的问题，本课题利用胶质瘤强还原性与胶质瘤恶性程度的关系，通过构建的还原响应启动 MRI 探针发展胶质瘤影像学无创早期定性诊断方法。本项目所设计的纳米探针具有还原性越强，触发启动成像越快，信号变化越大的特点，因此可通过探针的程序信号变化建立的胶质瘤早期定性诊断模型。本项目研究发现，通过还原敏感聚合物 S-S-peg 修饰 IONPs，制备还原敏感 IONPs 对比剂，可实现还原触发的粒径改变及 MRI 成像效果的放大及启动切换，可定量检测肿瘤组织还原性强弱，并由此判断胶质瘤性质及用于早期诊断。此外，该纳米探针具有还原性越强，触发启动成像越快，信号变化越大的特点，因此可通过探针的程序信号变化建立的胶质瘤早期定性诊断模型。并将这些纳米对比剂应用于胶质瘤的早期诊断治疗。结果表明，通过一系列体内体外的生物学评价及成像效果考察，取得了较好的效果，本项目的顺利实施，可为新型智能造影剂

的发展提供新思路，为胶质瘤的影像学无创早期诊断提供新方法，将会对胶质瘤患者具有极大的意义。

基于近红外二区荧光量子点的多功能纳米探针的靶向成像与治疗

Jiaojiao Ma,MeiYan Liao,WeiGuo Cai,HaiBo Xu
武汉大学中南医院

近红外二区荧光成像信噪比更高、穿透深度更深、分辨率更高[1-3]；CT 成像则可以提供高分辨率的组织解剖学信息、检测深度不受限、且成像速度快。因此，我们将光稳定性好，荧光强度高的近红外二区荧光量子点与高原子序数，强 X 射线吸收效率的 Bi 元素结合，构建了近红外二区荧光-CT 多功能纳米生物探针，实现了小鼠体内近红外二区荧光/CT 双模靶向成像，获取更为全面的影像诊断信息。构建的多功能纳米生物探针表现出优异的近红外二区荧光特性及强的近红外（NIR）吸收，表明其具有长时间术中导航和光热治疗的潜力。

PU-1455
靶向纤连蛋白 NIR-II 荧光/NIR-I 光声双模态纳米探针用于乳腺癌及其肺转移的成像及光热治疗

姚德帆,王彦姝,汪登斌
上海交通大学医学院附属新华医院

目的
肿瘤转移是乳腺癌患者死亡的主要原因。早期诊断高危乳腺癌，包括转移，需要精确的肿瘤生物标志物成像，以进行适当的治疗。纤连蛋白表达增加是上皮-间充质转化的一个重要标志，与高风险乳腺癌及其转移有关。针对目前光学成像组织穿透深度和空间分辨率的不足的问题，本文合成了一种靶向纤连蛋白的近红外二区（NIR-II）荧光/近红外一区（NIR-I）光声双模态纳米探针用于乳腺癌及其肺转移的成像及光热治疗。
材料与方法
通过有机合成手段，本文开发了基于方酸菁染料的 NIR II 荧光染料（SQ），该类荧光染料在 930 nm 具有最大吸收峰，在 1000-1100 nm NIR-II 范围内具有较强的荧光发射。针对在乳腺癌细胞膜表面过表达纤连蛋白（EDB-FN）的特点，本文利用聚乙二醇磷脂（DSPE）包裹 NIR-II 荧光染料 SQ，并引入纤连蛋白特异性结合多肽（CREKA）修饰制备了 NIR 荧光纳米探针 SQ@DSPE。
结果
该纳米探针可用于小鼠深部动脉血管的 NIR-II 荧光成像。另外，由于乳腺癌肿瘤靶向多肽的引入，NIR-II 荧光纳米点 SQ@DSPE 也可用于小鼠皮下的乳腺癌肿瘤的 NIR-II 荧光/NIR-I 光声成像及其可视化的肿瘤靶向光热治疗。
结论
本文报道了靶向纤连蛋白 NIR-II 荧光/NIR-I 光声双模态纳米探针用于乳腺癌及其肺转移的成像及光热治疗的研究。该纳米探针已成功地用于 NIR 荧光成像和 NIR-I 光声成像，用于精确的无创血管成像。通过靶向纤连蛋白，该纳米探针实现了乳腺癌及其肺转移病灶的高特异性和高敏感性诊断，并利用其优异的光热转换性能用于乳腺癌的光热治疗。因此，近红外二区纳米探针在监测和可视化血管和乳腺组织异常方面具有广阔的应用前景。

PU-1456

PET-MRI 探针对结直肠癌化疗疗效评价及光热/化疗协同增敏作用的实验研究

刘佳鑫
吉林大学白求恩第一医院

目的: 构建以 IGF-1R 为靶点新型 Affibody 修饰多巴胺包覆的 PET-MRI 探针；并通过细胞和动物实验应用 PET-MRI 技术分析结直肠癌 IGF-1R 表达水平，探讨 IGF-1R 表达在结直肠癌铂类化疗疗效评价中的价值。

方法 反向微乳法合成 Fe2O3-@PDA-PEG，连接放射性核素 F，对其进行表征，并将该探针应用于活体结直肠癌小鼠模型，进行 MRI 成像及肿瘤辅助治疗研究。

结果 实验结果显示 F 能成功连接到 Fe2O3-@PDA-PEG 纳米探针上，基本无生物毒性，在动物实验模型中能提高肿瘤诊断的敏感性，并且该探针在近红外光照射下具有增敏铂类药物化疗疗效的作用。

结论 IGF-1R 靶点构建多巴胺包覆新 F-PEG-Fe2O3@PDA-PEG-ZIGF1R:4551，该探针可无创评估结直肠癌 IGF-1R 表达水平与铂类化疗药物疗效之间的相关性，并且在近红外光照射下该探针具有增敏铂类药物化疗疗效的作用。

PU-1457

Differentiation of suprasellar meningiomas from non-functioning pituitary macroadenomas by 18F-FDG and 13N-Ammonia PET/CT

Fangling Zhang[1],Lei Ding[2],Xiangsong Zhang[2]
1.Affiliated Stomatological Hospital of Sun Yat-Sen University
2.The First Affiliated Hospital of Sun Yat-Sen University

Objective: Differentiation of suprasellar meningiomas (SSMs) from non-functioning pituitary macroadenomas (NFPMAs) is beneficial for clinical management. We investigated the utility of ^{13}N-ammonia combined with ^{18}F-FDG positron emission tomography (PET)/computed tomography (CT) in distinguishing SSMs from NFPMAs in this study.

Patients and Methods: Fourteen patients with histopathologic diagnosis of NFPMAs and eleven patients with SSMs were included in this study. Every patient underwent both ^{18}F-FDG and ^{13}N-ammonia PET/CT scans. The tumor to gray matter (T/G) ratios were calculated for the evaluation of tumor uptake.

Results: The uptake of ^{18}F-FDG was higher in NFPMAs than SSMs whereas the concentration of ^{13}N-ammonia was lower in NFPMAs than SSMs. There were significant differences of ^{18}F-FDG and ^{13}N-ammonia uptake between the two groups (0.92[0.46] vs 0.59[0.29], $P<0.05$, ^{18}F-FDG; 1.58±0.56 vs 2.80±1.45, $P<0.05$, ^{13}N-ammonia). Tumor classification demonstrated a high overall accuracy of 96.0% for differential diagnosis. When the two traces were combined, only 1 SSM were misclassified into the NFPMA group.

Conclusion: SSMs and NFPMAs have different metabolic characteristics on ^{18}F-FDG and ^{13}N-ammonia images. The combination of these two tracers can effectively distinguish SSMs from NFPMAs with high confidence.

PU-1458

Application of Fluorine-19 MRI in Diabetes Research

Sayuan Liang[1], Feng Chen[2]
1. PHLIPS (CHINA) INVESTMENT CO., LTD
2. The First Affiliated Hospital, College of Medicine, Zhejiang University

Introduction

Diabetes remains one of the increasing threats to human health. The failure of pancreatic beta cell function to produce insulin or loss of beta cell mass may explain the cause of the disease. Hence, non-invasive imaging techniques are recognized as a high-priority field in diabetes research to monitor beta cell mass and function longitudinally[1]. Thanks to its unique feature with no background signal and possible quantification, fluorine based contrast agents together with ^{19}F MRI technique have attracted attention in the field of cellular imaging with first successful applications in immune cell tracking for immunotherapy[2]. The purpose of this study is to explore the feasiblity and application of ^{19}F MRI technique in diabetes research.

Methods

In this study, both fluorine labelled D-mannoheptulose (19FMH) and perfluoro-5-crown-ether (PFCE) have been test *in vitro* and *in vivo* as contrast agents. For *in vitro* experiment, beta cell like INS-1E cell and pancreatic islets isolated from Wistar rat were included for the determination of vability, uptake efficacy and functionality of the iselts/cells after labelling. For *in vivo* longitudinal study, different labeling strategies (*in situ* and *ex vivo*) and transplantation methods (intravenous and subcutaneous) are used on Swiss nude mice. All MRI were performed using 9.4T Biospec small animal MRI system equipped with a home-made surface coil tunable and matchable to both ^{1}H and ^{19}F.

Results

We have successfully set up a quantifiable ^{19}F MRI imaging platform for both *in vitro* and *in vivo* experiments. With optimized labelling protocol, *in vitro* results confirmed good uptake of fluorinated contrast agents by islets/ cells without affecting their functionality and morphology. Immediately after the transplatation of contrast agents, clear ^{19}F signal showed up in *in vivo* images. Follow-up scans further confirmed the feasibility of longitudinal study using ^{19}F MRI as the signal could last for up to three weeks.

Conclusions

As conclusion, ^{19}F MRI is a potential powerful tool for tracking, monitoring and quantification of pancreatic islets/ cells in diabetes research and beyond. Future work by cross validate with other imaging modalities may help to improve its limitations in terms of sensitivity, resolution and specificity of the individual ^{19}F MRI method.

PU-1459
活体生物发光成像监测 JNK/c-Jun:ATF2 信号通路 介导的肿瘤顺铂耐药

杨帆
中山大学附属第五医院

目的 探索 JNK/c-Jun:ATF2 信号通路在肿瘤顺铂（CDDP）耐药中的作用，进一步通过活体生物发光成像监测该通路在肿瘤 CDDP 治疗后的动态变化。
方法 首先，10 μM CDDP 或 DMSO 处理 Hep 3B 肝癌细胞后，检测 p-JNK、p-c-Jun、p-ATF2 的水平，并检测 c-Jun:ATF2 结合元件 ATF 的活性以及其调控的 DNA 损伤反应（DDR）相关基因的 mRNA 水平。进一步，使用 JNK 抑制剂 SP600125 或 ATF-decoy 抑制该信号通路，检测它们能否与 CDDP 发挥协同杀伤 Hep 3B 细胞的作用。最后，分别将 CMV-Luc2（反映肿瘤细胞数目）和 ATF-Luc2（反映 ATF 元件的绝对活性）报告基因标记的 Hep3B 细胞种植到裸鼠皮下，腹腔注射 CDDP（10 mg/kg）或 PBS 后，活体生物发光成像检测 ATF 元件活性的动态变化。
结果 CDDP 处理组的 p-JNK、p-c-Jun 和 p-ATF2 的水平均高于对照组；CDDP 处理 12 h 后，ATF 元件活性增强；部分 DDR 相关基因 mRNA 水平在 CDDP 处理 12 h 或 24 h 后上调。SP600125 或 ATF-decoy 联合 CDDP 处理 Hep 3B 细胞 36 h 后，双链 DNA 损伤标志物（H2AX、p-H2AX）及细胞凋亡标志物（cleaved-caspase 3、cleaved-PARP）的蛋白水平增加。活体生物发光成像结果显示，药物处理 12 h 后，CDDP 处理组的 ATF-Luc2/CMV-Luc2 比值（反映 ATF 元件的相对活性）是 PBS 处理组的 1.7 倍。
结论 CDDP 给药导致肿瘤细胞 JNK/c-Jun:ATF2 信号通路激活、c-Jun:ATF2 结合元件 ATF 活化以及其调控的 DDR 相关基因的 mRNA 水平上调；抑制 JNK/c-Jun:ATF2 信号通路能增加肿瘤细胞对顺铂的敏感性；活体生物发光成像证实 CDDP 给药后肿瘤 JNK/c-Jun:ATF2 信号通路激活。

近红外荧光有机纳米颗粒用于肿瘤长期监测和光动力治疗

刘瑞源,陈子康,周宇平
南方医科大学

目的 开发一种近红外荧光生物成像和光动力疗法结合的单分子药物，用于肿瘤长期检测和光动力治疗。
方法 设计合成新型光敏剂（TPVTR），包封在 Pluronic F127 中以制备 NIR 荧光有机纳米粒子 TPVTR dots。用 ABDA 作为指示剂检测 TPVTR 细胞外 ROS 产生能力。用 HepG2 细胞作为实验对象，进行 TPVTR dot 细胞内吞，细胞成像和长期监测实验。TPVTR dots 的细胞内 ROS 产生能力使用 DCFH-DA 检测试剂盒测定。细胞活力采用 CCK-8 法检测。用皮下荷 HepG2 肿瘤裸小鼠为动物模型评价 TPVTR dots 的体内荧光示踪和光动力治疗效果。
结果 制备了 NIR 有机纳米粒子 TPVTR dots。其荧光发射光谱范围在 600 至 900nm，峰值为 695 nm，属于近红外区。ABDA 和 TPVTR dots 混合物的吸光度照射 270 秒后减少 72%,没有混合 TPVTR dots 的 ABDA 仍然约为 90%。TPVTR dots 可以进入细胞，积聚在胞浆中，显示红色荧光。用 TPVTR dots 标记的 HepG2 细胞 16 天后仍然可以观察到荧光。TPVTR dots 标记后的 HepG2 细胞注射后 8 天，小鼠移植肿瘤细胞的部位仍然可以检测到荧光信号。HepG2 细胞和 50μMTPVTR dots 共培养，活力仍然接近 80%。HepG2 细胞用 25μMTPVTR dots 共培养后施加激光照射，存活率急剧下降至 50%以下。PDT 治疗组组的肿瘤在 21 天后明显消融。

结论 设计和合成一种近红外发光有机荧光小分子，TPVTR。制备了相应的有机荧光纳米粒子，TPVTR dots，具有近红外发射，大的斯托克斯位移（210 nm），非常出色的光稳定性，良好的生物相容性，适用于体外和体内长期细胞追踪。此外，TPVTR dots 在体内外有良好的 PDT 效果，揭示 TPVTR dots 是一种有潜力的荧光成像介导癌症治疗的试剂。

PU-1461
近红外吸收有机纳米粒子的肿瘤光声成像和光热治疗研究

刘瑞源,陈子康,何庚翰
南方医科大学

目的 构建一种基于近红外吸收有机纳米粒子用于光热治疗（PTT）和光声成像（PAI）。
方法 设计构建近红外吸收有机小分子 TPTHM。将 TPTHM 封装在 Pluronic F127 中以制备有机纳米颗粒（TPTHM NPs）。通过测量在连续 808nm 激光照射下 NPs 水分散体的温度随时间的变化而变化计算光热转换效率。用 4T1 细胞作为实验对象，进行 TPTHM NPs 的细胞内吞，PAI 和 PTT 性能测试。用皮下移植 4T1 肿瘤小鼠为动物模型，研究 TPTHM NPs 的体内 PAI 和 PTT 效果。
结果 合成并制备了近红外吸收有机纳米粒子 TPTHM NPs。其具有近红外吸收，吸收峰在 695nm 和 758nm。TPTHM NPs 的光热转换效率达到 38%。与 TPTHM NPs 共培养的 4T1 细胞表现出明显的 PA 信号，其比未处理的 4T1 细胞亮 9 倍。TPTHM NPs 注射 10 分钟后，荷瘤小鼠肿瘤区域中的 PA 信号显着增加，信号与背景比为 3。TPTHM NPs 共培养，没有 NIR 辐射条件下，细胞的代谢活性仍保持约 90%；TPTHM NPs 共培养后，NIR 照射条件下，细胞的代谢活性显著降低。小鼠接受 TPTHM NPs 注射与激光放射治疗组合显示出显着的肿瘤抑制和完全肿瘤消融。PTT 治疗组中的小鼠存活超过 50 天而没有复发。其他三组小鼠的肿瘤大小迅速增长，39 天后没有小鼠存活。
结论 合成了一种新型近红外吸收有机小分子（TPTHM）。制备了相应的有机纳米粒子，TPTHMNPs。其具有高光热转换效率（38%），近红外吸收，高光稳定性和良好的生物相容性，可以应用于体外和体内的光热治疗。此外，TPTHM NPs 在体外和体外都表现出强光声信号。这些结果表明 TPTHM NPs 是潜在的 PAI/PTT 试剂。这项研究开发了有前途的 PAI/PTT 制剂，为生物成像和进一步的图像引导临床应用提供了策略。

PU-1462
粘度响应的溶酶体靶向近红外荧光探针及其应用

刘瑞源,陈子康,周宇平
南方医科大学

目的 开发一种新型粘度响应的溶酶体靶向近红外荧光探针，用于溶酶体的荧光成像以及检测溶酶体的粘度变化。
方法 以 4-二甲基氨基肉桂醛和苯并噻唑-2-乙腈为原料，设计合成近红外荧光探针 Lyso-BTC。表征其结构和不同粘度下的光学性能。选择 PC3 细胞作为模型细胞，采用 CCK-8 法进行细胞毒性研究。用市售的 Lyso-Tracker Green 进行共定位实验，激光共聚焦显微镜观察目标荧光探针活细胞靶向溶酶体成像。在连续激光照射下，Lyso-BTC 标记的 PC3 细胞以 30s 时间间隔拍摄图像，通过 ImageJ 软件比较每个图像的荧光强度进行光稳定性研究。用氯喹诱导细胞溶酶体粘度改变，同时用目标荧光探针进行溶酶体粘度变化的监测。
结果 合成了一种全新的近红外荧光探针 Lyso-BTC。研究发现随着体系的粘度增加，Lys-BTC 的荧光强度显着增强。yso-BTC 在含有 99%甘油的溶液中比在纯 DMSO 中的强度增强约 5.4 倍。在细胞

中共孵育的 Lyso-BTC 的浓度增加至 20μM，细胞活力仍保持在 80%以上。Lyso-BTC 的红色荧光与 Lyso-Tracker Green 的绿色荧光非常好地重叠，强度散点图显示出良好的相关性，Pearson 共定位系数为 0.91，线性 ROI 的强度分布也显示出紧密的同步性。在连续激光照射超过 8 分钟后，来自 Lyso-BTC 的红色荧光信号保持大于 89%。当细胞与氯喹一起孵育然后用 Lyso-BTC 处理，观察到红色荧光强度增加 3.1 倍。

结论 Lyso-BTC 表现出大的斯托克斯位移（~180nm），近红外（NIR）发射（685nm），良好的生物相容性，优异的光稳定性和对粘度的荧光响应。此外，体外研究的结果显示 Lyso-BTC 是溶酶体靶向的，并且可以用于检测由氯喹处理引起的溶酶体的粘度变化。这些结果证实 Lys-BTC 可用于监测活细胞中的溶酶体粘度变化，是一种新型的粘度响应的溶酶体靶向荧光探针

聚碘海醇-多巴胺纳米颗粒在 CT 成像引导光热治疗中的应用

雷鹏[1],曹媛[2]
1.中南大学湘雅医院
2.天津医科大学

癌症已成为威胁人类健康的主要因素之一，发展可用于体内 CT 成像和抗肿瘤治疗的新型纳米粒子具有重要意义。针对目前小分子造影剂肾脏清除速度快、体内循环时间短等问题，本研究采用简单的合成方法制备了新型聚碘海醇-多巴胺纳米粒子，用于体内 CT 成像和抗肿瘤光热治疗。聚碘海醇-多巴胺纳米颗粒的制备方法较为简单，容易获取，具有良好的 CT 成像能力和光热治疗效果，可作为上消化道和下消化道 CT 成像的对比剂，能较清晰地显示消化道细节，延长对比剂在体时间；此外，该纳米粒子还可作为体内抗肿瘤光热治疗剂，通过近红外激光照射进行肿瘤治疗，控制肿瘤的生长甚至消除肿瘤。本研究制备的聚碘海醇-多巴胺纳米颗粒具有低毒性、良好的生物相容性、较好的 CT 成像能力和有效的光热治疗等特点，具有广阔的应用前景。

PU-1464
超顺磁锰铁氧化物纳米粒的合成及其在巨噬细胞中的代谢研究

张亮,张亚,刘云,龚明福,张冬
陆军军医大学附属新桥医院放射科

目的 合成并表征铁锰氧化物纳米粒，评价其对巨噬细胞的毒性效应，研究其在巨噬细胞内的代谢过程。

方法 采用高温热解法合成铁锰氧化物 NPs，并进行 TEM、EDS 及 ICP-AES 表征。以不同浓度的 NPs 标记 RAW264.7 巨噬细胞，采用 CCK-8 法测定 NPs 的细胞毒性、流式分析 NPs 的促细胞凋亡作用及普鲁士蓝染色分析细胞的标记率；连续传代 NPs 标记的细胞，普鲁士蓝染色及 ICP-AES 检测细胞内 Fe 和 Mn 变化趋势；抽提 NPs 标记细胞 RNA，qRT-PCR 分析细胞内金属稳态相关基因表达特点。

结果 TEM 显示其为球形颗粒，单分散性良好，平均粒径约 8.5nm，EDS 显示 NPs 由 Fe、Mn 和 O 元素，ICP-AES 显示 Fe/Mn 比例约为 2.8。CCK-8 及流式分析显示 160μM NPs 处理导致细胞倍增时间及凋亡率分别增加 10.8h 和 20.7%，在浓度低于 40μM 时，NPs 对细胞无明显毒性效应。160μM 的 NPs 标记细胞 24h 时细胞内 Fe 和 Mn 含量分别为 6.5 和 1.1pg/细胞，传至第 2 代时分别为 0.82 和 0.07 pg/细胞，在第 6~8 代时细胞内 Fe 和 Mn 水平与对照组水平一致。qRT-PCR 结果显示，在 NPs 处理的 24h 内，FPN 高表达，促进 Fe 和 Mn 的外排，而 FtH、DMT1、IRPs 和 ZIP14 表达均受抑

制，阻止摄取及存储；细胞继续培养至 48h 时，所有被测基因均高表达；在 72h 时，DMT1 和 SPCA1 表达水平受抑制，而 ZIP14 接近对照水平，FPN、Hamp2、FtH 和 IRPs 均高表达。

结论 铁锰氧化物 NPs 对细胞的存活率、凋亡率及标记率具有时间及浓度依赖性，NPs 标记巨噬细胞后培养至第 6~8 代时细胞内 NPs 可完全代谢排出，参与维持细胞内金属稳态的基因包含 FPN、Hamp2、FtH、DMT1、IRPs、ZIP14 和 SPCA1，基因表达水平的改变程度与 NPs 标记浓度相关，且随时间动态变化。

PU-1465
氧化铁纳米粒团簇的形貌控制合成及其磁共振成像性能研究

孙涛,周春宇,刘云,龚明福,张冬
陆军军医大学附属新桥医院放射科

目的：通过热分解法合成氧化铁纳米粒团簇，改变反应参数控制氧化铁团簇的形貌，并利用柠檬酸修饰纳米粒团簇，构建 MRI 纳米探针，考察所制备的 MRI 探针的体外磁共振弛豫性能，筛选出具有高弛豫率的纳米探针，并表征其生物相容性与活体成像效果。

方法：以羰基铁（$Fe(CO)_5$）为前驱体，在油酸和氟化钠的作用下，热分解法合成不同形貌的氧化铁纳米粒团簇，透射电子显微镜（TEM）表征纳米粒团簇的形貌及微观结构，X 射线衍射仪（XRD）确认纳米粒团簇的物相组成，振动样品磁强计（VSM）分析纳米粒团簇的磁性能。选用柠檬酸（CA）为配体修饰纳米粒团簇，使其具有良好的水分散性，标定浓度后，采用 3.0 T 磁共振扫描仪研究其 T_2 弛豫性能。以人肝癌细胞 HepG2 和人肺癌细胞 A549 为细胞模型，采用 cck8 法评估纳米探针的细胞毒性；以 C57 小鼠为动物模型，尾静脉注射纳米探针后，在不同时间段行 T_2 扫描，分析活体成像效果。

结果：通过改变油酸用量，可以方便地控制合成产物的形貌和尺寸，得到八足、立方和球形氧化铁纳米粒团簇；XRD 分析表明纳米粒团簇的主要物相为 Fe_3O_4 或 γ-Fe_2O_3；M-H 曲线表明，各种形貌的氧化铁团簇均为超顺磁性；体外 MRI 成像结果显示，各种形貌氧化铁团簇均具有较高的 r_2 弛豫率，其中八足团簇的 r_2 最高，达 476 $mM^{-1}s^{-1}$，均为优良的 T_2 造影剂。细胞毒性实验结果表明，被不同浓度的氧化铁纳米粒团簇孵化不同的时间以后，细胞活性始终保持 90%以上，说明氧化铁纳米粒团簇的细胞毒性较低，可以应用于生物体内。动物成像结果表明，注射后比注射前的图像明显偏暗，信号有明显的减弱，小鼠肝脏部位的信号减弱更加明显，表现出明显的造影效果。

结论：本研究通过控制反应物用量，可以方便地合成氧化铁团簇并控制其形貌；所制备的氧化铁团簇均具有较高 r_2 弛豫率，以该团簇构建的 MRI 探针，具有良好的生物相容性和活体 T_2 造影效果。

PU-1466
TARGET EFFICIENCY OF FITC-NGR-GD PROBE TO HEPG2 CELLS IN VITRO

Xiaoguang You
The first affiliated hospital of Hainan Medical University

Objective: To construct FITC-NGR-Gd targeted contrast agents and observe its targeting efficiency to HEPG2 cells in vitro.

Methods: To use amide linkage to chemically synthesize the stable connector of FITC-NGR-Gd. To establish HEPG2 experimental group and HT-29 control group for cell fluorescence assay and observe the targeting efficiency of contrast agent to HEPG2 in vitro. To establish HEPG2 experimental group and HT-29 control group for cell in vitro MRI test, change the gadolinium concentration and observe the targeting efficiency of contrast agent to HEPG2 in vitro by measuring changes in T1 values.
Results: FITC-NGR-Gd has a higher T1 relaxivity; immunofluorescence assay shows that in the cell test, HEPG2 experimental group has more CY3 targeted red fluorescence on the surface of cell membrane and the HT-29 control group has no marked red fluorescent substance on the cell membrane; FITC-NGR-Gd cell fluorescence assay shows that HEPG2 experimental group has more green FITC targeted fluorescence on the surface of cell membrane and HT-29 control group has no marked green fluorescent substance on the cell membrane. In vitro the cell MRI test shows T1 values of HEPG2 experimental group are significantly higher than that of HT-29 control group, P <0.05. There is statistically significant difference between two groups. With the increasing concentrations of gadolinium, T1 values of experimental groups increase progressively and the intensity enhances.
Conclusion: FITC-NGR-Gd can take HEPG2 cells as target in vitro and realize targeted fluorescence imaging and MRI imaging.

磁共振动脉粥样硬化斑块分子成像新进展

王勇胜,姜兴岳,田燕
滨州医学院附属医院

动脉粥样硬化是心血管疾病和死亡的主要原因。在过去的 20 年中，越来越多的研究关注于动脉粥样硬化斑块的早期检测和监测。在几种有创和无创的成像方式中，磁共振成像(MRI)是一种很有前途的选择。其优点包括它的通用性，良好的软组织对比斑块表征和缺乏电离辐射。在这篇综述中，我们将结合高分辨磁共振分子成像和分子探针技术讨论动脉粥样硬化斑块成像的最新研究进展。

组织蛋白酶 B 响应性纳米探针用于三阴性乳腺癌多模态成像介导下的光疗

王彦姝,姚德帆,汪登斌
上海交通大学医学院附属新华医院

目的 基于组织蛋白酶 B（cathespin B，CathB）在三阴性乳腺癌（TNBC）中高表达的特性，构建集 CathB 响应性近红外荧光成像、MR 成像、光声成像、光热治疗、光动力治疗为一体的靶向探针 Pep-SQ@USPIO，并将其用于多模态成像引导下的光动力/光热治疗。
方法 制备萘二甲酰亚标记的、内含靶向肽 CREKA 序列及可被 CathB 特异性剪切的 GFLG 序列的方酸菁近红外染料多肽探针 Pep-SQ。将 Pep-SQ 与 USPIO 复合形成 Pep-SQ@USPIO，复合后 USPIO 吸收光谱可淬灭相应荧光光谱；当 CathB 剪切 Pep-SQ@USPIO 中 GFLG 序列，USPIO 与荧光基团解离，荧光恢复。体外行探针表征，验证荧光信号“开-关”响应性。激光扫描共聚焦成像、荧光酶标仪检

测等明确不同细胞系中探针定位、荧光强度。建立不同分化程度荷瘤鼠模型，通过小动物光声成像系统、活体小动物荧光成像仪、11.7T 小动物磁共振观察成像效果。体内外观察探针光动力/光热治疗效果。

结果 该纳米探针有较好的分散性、稳定性、生物相容性。吸收光谱显示探针可被 CathB 剪切分离成单体，近红外荧光恢复。探针单体具有光动力效应，聚集时光热效应增强。与探针共孵育后，高表达 CathB 的 MDA-MB-231 细胞荧光强度显著高于 CathB 低表达的 MCF-7 细胞。体内成像显示 TNBC T2 变化值、光声、荧光信号强度明显高于其他类型乳腺癌，以荧光信号强度差异最为显著。体内、外光疗结果显示，探针能显著抑制肿瘤生长。

结论 纳米探针 Pep-SQ@USPIO 能特异性靶向 TNBC 肿瘤区域并发挥 MR/光声成像效果，在 TNBC CathB 高表达环境下探针近红外荧光被“点亮”，显著提高 TNBC 检出灵敏度。该探针同时可发挥光热、光动力治疗作用，实现 TNBC MR/近红外荧光/光声成像及多模态成像引导的可视化光动力/光热治疗。

PU-1469
SR-AI 靶向的多模态纳米探针对动脉粥样硬化斑块的分子影像研究

王嘉慧,刘爽,郝剑文,彭期臻,张雪宁
天津医科大学第二医院

目的 通过构建一种靶向的双模态成像纳米探针，实现对动脉粥样硬化（atherosclerosis，AS）易损斑块形态和成分性质的早期诊断和无创动态监测。

方法 本研究利用泡沫巨噬细胞表面高表达的清道夫受体 AI（scavenger receptor-AI，SR-AI）作为分子探针靶点，以 Gd 修饰的纳米金簇（nanoclusters, NCs）作为载体，构建靶向 SR-AI 的磁共振（MR）/荧光双模态纳米探针(PP1-Au@GSH@Gd NCs)，并明确探针的表征、生物相容性和在体内组织器官的生物学分布。建立 $ApoE^{-/-}$ 小鼠动脉粥样硬化模型，利用 MR 和荧光成像分别从细胞和在体水平观察探针在斑块的分布，通过活体成像评估动脉粥样硬化斑块的负荷和性质，并进行组织学定量分析验证。

结果 本研究合成的 PP1-Au@GSH@Gd NCs 纳米探针具有良好的胶体稳定性和生物相容性，适合作为易损斑块分子成像的造影剂。体外细胞结合实验表明，PP1-Au@GSH@Gd NCs 对泡沫巨噬细胞具有很高的亲和力。体内 MR/荧光双模态成像结果显示，注射分子探针 24 小时后，$ApoE^{-/-}$鼠主动脉易损斑块处 T1WI 信号及荧光信号均显著增强。斑块组织切片镀银染色证实 PP1-Au@GSH@Gd NCs 在血管壁易损斑块处明显聚集。

结论 本研究构建的多功能纳米探针 PP1-Au@GSH@Gd NCs 可准确靶向具有易损倾向的斑块，为实现真正意义上的易损斑块分子水平早期诊断提供了理论依据和实验证据支持，在 AS 易损斑块临床诊疗中有非常广阔的应用前景。

靶向载药多功能脂质体对动脉硬化不稳定斑块的诊疗一体化研究

史张,刘崎
海军军医大学第一附属医院（上海长海医院）

目的 在动脉硬化（AS）靶向探针研究的基础上[1]，构建靶向不稳定斑块的多功能脂质体 CD38-US-Lip，测定该纳米载体的性质表征，并从体内及体外两个层面，评价其对不稳定斑块的影像监测和极化逆转作用，探讨其作用机制。

方法 （1）构建共载 MRI 对比剂 USPIO 和辛伐他汀的纳米脂质体，并通过 CD38 单克隆抗体进行修饰，形成靶向不稳定斑块的多功能脂质体 CD38-US-Lip。（2）测定 CD38 靶向多功能脂质体的表征。（3）评估 CD38 靶向多功能脂质体在体外对 M1 型巨噬细胞和血管内皮细胞的靶向结合能力、MRI 成像能力和巨噬细胞极性诱导作用（图 1）。（4）采用球囊损伤+高脂饲料法建立家兔 AS 模型，通过 MRI 成像及病理检测的方法测定斑块组织的 CD38 表达情况。（5）研究 CD38 靶向多功能脂质体在家兔模型中的药代动力学、体内分布以及 MRI 靶向造影诊断功能（图 2）。（6）检测 CD38 靶向多功能脂质体的体内逆转斑块炎性情况，并结合分子影像学及组织生物学评估 CD38-US-Lip 对家兔 AS 模型不稳定斑块的诊断、治疗、监测功能。

结果 新型 CD38-US-Lip 靶向载药多功能脂质体可用于 AS 不稳定斑块的磁共振成像及药物治疗后斑块变化的疗效检测，其可有效结合 M1 型巨噬细胞和血管内皮细胞并在体外使 T2WI 信号明显减低，而且载他汀类药物的多功能脂质体可诱导 M1 型巨噬细胞向 M2 型转化。体内实验表明，该多功能脂质体可与家兔 AS 模型不稳定斑块靶向结合，并作为新型多功能脂质体用于不稳定斑块的诊断、治疗、监测功能。

结论 本研究率先将不稳定斑块中 M1 型巨噬细胞的靶向造影与极化治疗相结合，综合运用分子影像学、纳米技术及免疫调节等手段，以实现对 AS 不稳定斑块的诊断、早期治疗和实时监测作用。

PU-1471

MR Ventriculography by Upconversion Nanoprobes across the Blood-CSF Barrier

Xiaoshuang Wang
Huashan Hospital of Fudan University

Purpose: The goal of this study was to explore a novel contrast agent to realize non-invasive MR cisternography.

Method and materials: In this work, we developed a novel dual-targeting MR imaging nanoprobe - UCNPs (ANG/PEG-UCNPs) by labeling Angiopep-2 (ANG, TFFYGGSRGKRNNFKTEEY) on UCNPs through a PEG linker. Its ventricular imaging function was demonstrated both in animal model and in vitro blood-cerebrospinal fluid barrier model while the PEG-UCNPs and Gd-DTPA group were set as control group. Moreover, the cytotoxicity of as-synthesized UCNPs was assessed by a typical 3-(4,5-dimethylthiazol-2-yl)-2, 5-diphenyltetrazolium bromide (MTT) reduction assay.

Results: T1-weighted MR signal intensity of the ventricular system was dramatically increased in the ANG/PEG-UCNPs injection group compared to the PEG-UCNPs and Gd-DTPA group under the same experimental conditions. In contrast, both PEG-UCNPs and Gd-DTPA failed to delineate the ventricular system. Besides, it showed well ability to pass through the blood–cerebrospinal fluid barrier (BCB) in vitro blood-cerebrospinal fluid barrier model, while the cell viabilities are above 80% after 24 h incubation with ANG/PEG-UCNPs at concentrations ranging from 0 to 1000 μg/mL.

Conclusion: ANG/PEG-UCNPs could cross BCB and realize cisternography in MR imaging, with a negligible toxicity. Such a MR imaging nanoprobe is believed to be able to provide a safe and effective method for locating the site of the CSF leakage correctly before operation, which can help to plan a more appropriate treatment and minimize the number of procedures. Besides, other applications in diagnosis of CSF and ventricle-related diseases remain to be explored, and even the diagnosis and treatment can be

integrated as intraventricular tumors are difficult to get well treated due to the difficulty in penetrating the BCB.

PU-1472
Survivin-Loaded Gold Nanocage Probe for Targeted Bimodal Imaging of Pancreatic Cancer

Lina Song[1], Yali Yue[1], Shuai Ren[1], Huifeng Zhang[1], Wenli Qiu[1], Kai Guo[1], Yajie Wang[1], Xiao Chen[1], Yu Zhang[2], Zhognqiu Wang[1]

1. Department of Radiology, Affiliated Hospital of Nanjing University of Chinese Medicine, Nanjing 210029, P. R. China

2. State Key Laboratory of Bioelectronics, Jiangsu Key Laboratory for Biomaterials and Devices, School of Biological Science and Medical Engineering & Collaborative Innovation Centre of Suzhou Nano Science and Technology, Southeast University, Nanjing 210096, P. R. China.

Pancreatic cancer is one of the most common cancers of the digestive tract [1]. According to the latest statistics, pancreatic cancer accounts for 94% of the cases (n=432,000), making it the seventh most deadly cancer [2]. It is expected to rise to the fourth in the future [3]. To develop an effective approach to diagnosis pancreatic cancer in an early stage has certain economic and social significance.

Methods: In this study, a survivin-loaded gold nanocage probe (Sur-AuNC•Gd-Cy7) was constructed for targeting imaging and treatment of pancreatic cancer. As shown in Schematic 1, gold nanocages were fabricated as the carriers to load Gd-DOTA inside the holes. Polythylene glycol (PEG) was modified on the surface to increase their biocompability. Survivin oligonucleotide and Cy7 fluorescent agent endowed the probes with the ability of targeting and fluorescence imaging. In vitro and in vivo experiments were observed to evaluate its antitumor effect and targeting imaging.

Results: This survivin-loaded gold nanocage probe, with core size of around 35 nm and hydrodynamic size of about 55 nm, was an effective injectable nano-delivery System. Sur-AuNC•Gd-Cy7 probes showed superior pancreatic cancer cell apoptosis- promoting effect. The apoptosis of pancreatic cancer cells may related with the consequent intracellular ROS overload. Also, the Sur-AuNC•Gd-Cy7 probes exhibited effective target Magnetic Resonance Imaging and near-infrared fluorescence imaging.

Conclusions: Our studies demonstrated that the appropriate design and preparation of nanoprobes enables the generation of better anticancer nanomedicines, which may providing an efficient approach for pacreatic cancer diagnosis.

PU-1473
MR 靶向动脉粥样硬化斑块中 Tenascin-X 体内成像的实验研究

马占龙
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨 Tenascin-X 靶向 USPIO 分子探针在主动脉斑块中的 MR 体内成像的可行性，为分子成像的扩展进一步提供实验研究。

方法 高脂饲养雄性 40 只 $ApoE^{-/-}$小鼠建立动脉粥样硬化动物模型，分别于喂养的第 30 周进行 7.0 磁共振扫描，扫描前随机将其分为实验组和对照组，每组各 20 只，每组小鼠在未打药前均进行首次腹主动脉扫描。扫描结束后实验组通过尾静脉注射由化学偶联法合成的靶向 TNX 的磁共振成像探针（anti-TNX-USPIO），对照组注射单纯的超微超顺磁性纳米氧化铁颗粒（USPIO）。于注射 12h 后再次进行 MR 成像，采用标准化相对信号改变率来计算斑块相对信号改变量。成像结束后取出小鼠腹主动脉标本进行 TNX 免疫组化染色和普鲁士蓝染色，观察斑块内 TNX 的表达和铁颗粒的沉积并分析斑块的信号改变。

结果 实验组打药后 12h 斑块信号降低较对照组明显，并且斑块信号改变率较对照组具有统计学意义（实验组 12h：-24.98±13.54% vs 对照组 12h：-4.88 ±3.08%，F=23.152，P＜0.001＝。免疫组化染色显示实验组和对照组斑块中均存在 Tenascin-X 表达及普鲁士蓝铁颗粒沉积，并且普鲁士蓝染铁颗粒在实验组斑块中明显高于对照组。

结论 anti-TNX-USPIO 探针可活体检测动脉粥样硬化斑块中 Tenascin-X 的表达，且斑块的相对信号改变率为斑块中 TNX 的吸收提供一种定量的评估方法。为动脉粥样硬化分子成像进一步奠定了基础。

PU-1474
标记树突棘钙信号的特异型分子探针的构建及其在功能成像中的应用

吕金风
武汉大学中南医院

目的 构建树突棘特异性钙离子探针，实现大脑神经元单个突触水平的功能成像。**方法** 基于树突棘特异性分布的乙酰胆碱受体亚基（Dα7）和遗传型钙探针（GCaMP5G），利用基因重组的方法设计合成了一种能特异性标记树突棘钙信号的探针 Dα7-GCaMP5G。然后以果蝇运动视觉神经元为模型，使用 UAS/Gal4 基因操作系统，在果蝇运动视觉神经元中垂直感受神经元（LPTC-VSs）上测试了 Dα7-GCaMP5G 对活体果蝇神经元树突棘的标记特性。最后，采用双光子成像系统对 VS 树突棘进行在体成像研究，分析了单个树突棘对运动视觉方向刺激的响应特性，包括方向选择性、强度特性以及钙衰减动力学特性。**结果** 1）免疫荧光染色结果显示，Dα7-GCaMP5G 特异性分布在高级树突分枝的尖端区域，而胞体、树突区域只标记到少许膜结构，轴突则基本不被标记。2）双光子活体成像结果显示，当给果蝇提供垂直向下的运动视觉刺激时，被荧光标记的 VS 树突棘发生明显的荧光亮度的变化，并且其钙信号响应（ΔF/F）曲线与典型的钙信号响应曲线相符。3）功能成像分析结果展示，在方向选择性方面，VS 树突棘的方向选择偏好和其胞体的方向选择响应特征一致，即 VS 神经元的胞体和大多数 VS 树突棘都表现出对垂直向下运动的偏好性（>75%）。在钙信号响应强度方面，树突棘的平均响应强度与树突、胞体的平均响应强度没有显著差异（P<0.05）。另外，在钙信号衰减动力学分析中发现，与胞体和树突相比，树突棘钙峰的衰减时间显著较短（P<0.05）。**结论** 本研究成功合成了一种能标记树突棘钙信号的特异性探针，并利用 Gal4/UAS 系统实现了果蝇运动视觉神经元 VS 树突棘的特异性标记以及单个树突棘的功能成像。这项研究不仅对具体理解突触可塑性的分子机制及突触功能的特异性有重要意义，而且也为我们理解神经网络功能基础和脑功能提供了一个窗口。

PU-1475
磁粒子成像（MPI）的当前发展与临床应用前景

彭鹏

广西医科大学第一附属医院

磁粒子成像（MPI）是一种全新的基于断层影像技术检测超顺磁性氧化铁纳米颗粒（SPIONs）空间分布的示踪方法。MPI 具有三维成像，高时间分辨率、高空间分辨率和高灵敏度，且无电离辐射危害的优点。此外，使用的示踪剂不含肾毒性和造成全身系统严重副作用的物质。MPI 成像不显示解剖结构，无背景信号干扰，信号强度与示踪剂浓度成比例，是一种可以获得定量数据的检查方法。这些特性预示着 MPI 具有医学应用潜力。现在 MPI 已进入了临床前期阶段，探索其在医学中的应用因此成为了研究重点。目前主要探索研究有血管成像与介入治疗；靶向成像：干细胞追踪、标记红细胞、免疫相关影像、鉴别动脉粥样硬化易损斑块、肿瘤影像诊断；肿瘤治疗；功能性神经影像等。MPI 除了可以进行静态和动态成像外，产生的磁场还可作用于磁性材料，拉、推、折弯和扭曲磁性材料。这些可能导致全新的应用，如磁性微机械的驱动或医疗设备的导航等。相信 MPI 在今后几年一定会经历一个高速发展期，一旦成熟的理论框架形成并通过安全可靠的设备实现功能，MPI 在临床诊断和治疗等领域必将发挥重要作用。

9.4T 23Na MRI 监测 EGFR 突变非小细胞肺癌

程永娜,刘爽,Linda Osei Poku,程立欣,王凯,孙夕林
哈尔滨医科大学附属第四医院

目的 肺癌目前已经成为中国发病率和死亡率双第一的癌症，以诊断的肺癌中 85%为非小细胞肺癌，由于受呼吸运动及心脏和肺动脉搏动的影响，有关肺癌的磁共振研究还很少。钠（^{23}Na）在肿瘤异常生物学行为中发挥的重要作用。^{23}Na *MRI* 可在体检测生物组织中钠离子浓度及其分布情况，可用于诊断疾病和评估疾病的预后及治疗效果。本实验旨在探究 9.4T ^{23}Na MRI 在监测 EGFR 突变非小细胞肺癌（NSCLC）中的价值。

方法 配置不同浓度的加入 4%凝胶的 Nacl 胶体液和不加凝胶的 Nacl 溶液水膜，模拟细胞内外钠离子状态，应用 9.4T 小动物磁共振成像系统，UTE-SQ/TQ 序列进行组织总钠/细胞内钠成像，应用 Matlab 绘制 TSC（组织钠浓度）、ISC（细胞内钠浓度）与 SNR（信噪比）回归曲线。在动物水平，建立 NSCLC EGFR 突变细胞系 H1975 裸鼠皮下瘤模型，肿瘤体积达到 300mm^{3}后，每三天进行一次 UTE-SQ/TQ 和 DWI 成像，对肿瘤区（避免坏死区）TSC、ISC、ADC 进行定量分析，并比较 TSC、ISC 值变化趋势与 ADC 值的关系。在细胞水平，配置不同浓度的 Nacl 溶液与 H1975 细胞共孵育进行 CoroNa 染色，通过荧光强度定量分析 H1975 细胞内钠浓度。

结果 水膜成像得到 TSC 与 SNR 的回归曲线为 y=320.66x+5512.8，R^2=0.9962,ISC 与 SNR 的回归曲线为 y=57.725x+5820.6，R^2=0.9989。在动物水平成像显示，TSC、ISC 值与肿瘤体积成正相关，TSC 增加 1.89mM/d,而 ADC 值无明显变化。CoroNa 染色得到了与 ^{23}Na *MRI* 相符合的结果。

结论 应用 UTE-SQ/TQ 进行 ^{23}Na *MRI* 得到满意的图像，并可以进行定量分析，获得钠离子浓度及细胞内外钠离子的分布进行早期监测。本实验为以后应用 ^{23}Na *MRI* 进行肺癌的临床诊断和疗效监测奠定了基础。

Application of dendritic nano-material loaded with 2,4,6-Triiodobenzoic acid in the CT imaging of cancer

Weiwei Zou
Shanghai Changzheng Hospital

Prupose:

CT (computed tomography) is one of the most widely used clinical diagnostic methods in modern medicine and plays an important role in the diagnosis and treatment of cancer. At present, the most commonly used contrast agent is 2,4,6 -triiodobenzoic acid (TIBA) and its derivatives. Although it can greatly improve the diagnosis of cancer, there are still some defects: (1) it has small molecular weight and size, which resulting the metabolism in the body is too fast; (2) the in vivo distribution is not specificity, and iodine atoms density in the tumor site is low; (3) a large number of contrast agents show through serious damage on kidney, leading to serious side effects. Therefore, in view of the current insufficiency of CT iodine contrast agent, this study is aimed to further optimizae the dosage form, local density of iodine atom and the molecular weight to improve its diagnostic efficiency for cancer.

Method and materials:

Polyamidoamine (PAMAM) is one of the most widely used dendritic molecules, and as a carrier has been used in the study of CT contrast agents, whose biocompatibility has been effectively assessed. Thus, in this study, we loaded 2,4,6-TIBA on the surface of PAMAM and modificated with Polyethyleneglycol (PEG). Furthermore, the molecular structure was identified by the magnetic resonance hydrogen spectrometry, and the physical and chemical indexes such as hydration particle size and zeta potential were obtained. At last, we examined the biocompatibility of the new nano-material in vitro and in vivo.

Result:

The density of the iodine atom in nano-materials of DEN-TIBA-PEG is increased exponentially. PEG modification of DEN-TIBA-PEG have effectively evaded the identification of reticular endothelial system by PEG-modified PAMAM and significantly prolonged its half-life in blood circulation and reduced its nonspecific distribution in normal organs. Through the xenograft tumor model in vivo, it was proved that after 24 hours injection of new nano-material was injected later, there are still functional CT imaging ability.

Conclusion:

A novel nano-contrast agent, with a PEG-modified dendritic molecule PAMAM as a carrier and a surface-loaded 2,4,6-TIBA, was successfully synthesized.

碳纳米管载药系统用于肿瘤热疗的研究

银涛,张辉,乔志星
山西医科大学第一医院

脑胶质瘤是颅内最常见的恶性肿瘤之一，也是死亡率最高的肿瘤之一。然而，大多数治疗药物由于受血脑屏障（BBB）限制或缺乏靶向性等因素而难以自主向胶质瘤富集，治疗效果欠佳。因此，发展高效低毒的综合治疗是攻克肿瘤难题的有效途径。首先采用氧化法处理 CNT，使其表面形成羧基（*-COOH*），然后将 PEG 修饰到*-COOH* 上，形成高亲水性、良好生物相容性的载体。通过 SEM、TEM、XRD、AFM、拉曼光谱、BTE 等表征材料特性。以改性 CNT 作为负载抗肿瘤药物载体的核心，一是改善了 CNT 的水溶性，有利于将具有肿瘤靶向作用的分子或多肽衍生到 CNT 表面，构建出同时具有光疗和热疗能力的肿瘤靶向给药系统；二是 CNT 能够进入脑组织，其较大的比表面积有助于负载更多的抗肿瘤药物，同时改性增强了 CNT 的生物相容性；三是 CNT 在近红外（near infrared, NIR）光谱范围有很强的吸收，并能将这些能量高效地转化为热量，而 NIR 范围光线对生物体有非

常好的穿透性，CNT 的这一性质使其能够用于肿瘤热疗。实验中以 π－π 堆积的方式将小分子光敏剂 HMME 修饰到 CNT-PEG-ANG 表面上（PEG：聚乙烯醇，ANG：Angiopep-2 靶向胶质瘤多肽链），通过化学反应联结上异硫氰酸荧光素（FITC），离心，超纯水重复洗涤数次，收集离心管上部溶液，得到 FITC-CNT-PEG-ANG/HMME，构建出同时具有光热疗的靶向给药系统。研究结果表明通过与 C6 细胞共同孵育 3h，荧光显微镜观察到载药系统被 C6 细胞逐渐摄取，在 808 nm 近红外激光的照射下，诱导了肿瘤细胞的死亡，达到了治疗的目的。研究结果有助于理解纳米材料的生物学效应，也有助于评价治疗脑胶质瘤的药效。

肿瘤微环境活性氧 磁共振成像技术

吴波,梅豪,黄雄,徐海波
武汉大学中南医院

光动力疗法(PDT)作为一种新兴的癌症治疗方法已被广泛研究。活性氧(ROS)，尤其是单线态氧(1O2)可诱导细胞凋亡或组织破坏，是治疗效果的关键。荧光法、化学发光法、电化学法等多种方法可用于体外检测活性氧。然而，由于这些方法具有如光漂白和自氧化等固有缺点，使得体内 ROS 的定量测定仍然是一个挑战，这严重限制了光动力疗法在体内的应用。本文报道了一种利用 ROS 敏感的超顺磁性氧化铁纳米粒子(RSPIONs)作为响应性磁共振(MR)成像对比剂来特异性检测活体 ROS 的磁共振成像方法，并用于 PDT 中产生的 ROS 的影像检测。该对比剂可以特异性地响应肿瘤环境中的 ROS，并通过聚集疏水性的增强将其作为 MR 信号放大。体外实验结果表明，激光照射后，RSPIONs 聚集并显著提高了横向弛豫率(R2)。体内实验证明该特异性对比剂可对光动力治疗过程中产生的 ROS 进行快速的捕获并成像，改方法可用于 PDT 在癌症治疗过程中 ROS 的磁共振可视化成像及定量分析，对 PDT 在肿瘤治疗中的应用具有极大的意义。

一氧化氮供体诱导谷胱甘肽消耗和乏氧缓解增强光动力疗效联合双模态成像

姚旺
华南理工大学附属第二医院

目的 设计一种肿瘤靶向荧光纳米探针，消耗肿瘤区域 GSH 并释放 NO 缓解乏氧，增强肿瘤 PDT 疗效，结合 MRI 对比剂进行荧光-MR 双模态成像，实现肿瘤靶向诊疗一体化。
方法 通过化学合成方法构建一种近红外荧光纳米探针 NO-PA NPs，与单独的 PA NPs 进行对照，检测 ROS 产生及与 GSH 反应后 GSH 浓度变化，MTT 验证材料毒性，660nm 光照后验证细胞杀伤效果。与 4T1 细胞共孵育，用 GSH 探针和 NO 探针标记，CLSM 观察其在 4T1 细胞中对 GSH 消耗及释放 NO。用 ROS 及活死细胞染色荧光探针标记，在 660nm 光照后，CLSM 观察材料摄取、ROS 产生及活死细胞荧光。流式细胞仪检测材料摄取及诱导细胞凋亡效果。小动物成像仪检测体外荧光强度，MRI 检测核磁信号强度。BALB/C 裸鼠构建 4T1 乳腺癌体表移植瘤模型，尾静脉注射药物，验证材料肿瘤区域靶向富集及体内荧光、MR 成像效果，660nm 光照观察肿瘤 PDT 治疗效果。肿瘤组织病理切片染色，CLSM 观察 NO 缓解肿瘤乏氧效果。
结果 NO-PA NPs 及 PA NPs 溶液均有很强的 ROS 产生，GSH 检测试剂盒检测仅 NO-PA NPs 有 GSH 下降，MTT 显示药物均无暗毒性，光照后 NO-PA NPs 组死亡细胞更多。在激光共聚焦显微镜下可以观察到材料摄取荧光、NO-PA ROS 荧光增强、GSH 消耗后荧光减弱及 NO 产生荧光，通过活死细胞染

色可以观察到 NO-PA NPs 有更多的细胞死亡。流式细胞仪可检测出材料在细胞中摄取，NO-PA NPs 有更多的细胞凋亡。通过小动物成像仪及 MRI 可以进行小鼠体内双模成像。
结论 通过构建新型荧光纳米探针 NO-PA NPs，可以有效消耗肿瘤区域 GSH，缓解肿瘤乏氧，增强 PDT 治疗肿瘤效果，同时还可结合荧光-MR 进行肿瘤双模态成像，实现肿瘤靶向诊疗一体化。

诱导人骨髓间充质干细胞成脂培养基的研发

姜增誉,何生,韩英,陈文青
山西医科大学第一医院

目的 本研究旨在建立一种快速诱导脂肪分化方法

材料与方法 通过全骨髓贴壁法成功分离培养获得 hBMSCs，贴壁培养 P0 细胞，细胞呈集落生长，细胞形态多呈细长梭形，传代后，hBMSCs 呈旋涡状排列，更接近于成纤维样细胞形态。第 4 代 hBMSCs 接种于 12 孔板，每孔 10000 个细胞，细胞融合率达 90%，开始诱导成脂分化，实验分 6 组，参照试剂盒说明进行油红 O 染色，镜下观察细胞染色的分布，并计算各组成脂情况。

结果 成脂诱导阳性组形成大量脂滴，分布密集；统计分析发现阳性组成脂率明显高于阴性组（P<0.05），差异有统计学意义
结论 本研究研发了一种迅速且高效诱导 hBMSCs 成脂分化的培养基，诱导阳性组可见细胞内大量的脂滴形成

PU-1482

探讨 PETCT 高龄受检者的质量控制

杨思远
合肥平安健康检测中心

目的 提升高龄受检者检查完成率，提高图像质量。
方法 随机抽取一年内 20 例高龄受检者，其中男 14 例，女 6 例，最低年龄 80 岁，最高年龄 91 岁，均行 PETCT 检查。使用设备为西门子 Biograph Horizon PETCT 扫描仪。试剂为 18F-FDG 氟代脱氧葡萄糖试剂，半衰期为 109.6min。受检者静脉注射 18F-FDG（剂量为 0.1mCi/kg 计算注射）检查前受检者禁食 4~6h，血糖控制在 3.9~8.3mmol/L,注射后安静休息 40~60min 后上机检查。
结果 除 1 例幽闭恐惧症未能完成检查外，其余 19 例均完成 PETCT 检查，其中，轮椅进入的 2 例，平车进入的 1 例，保留导尿管 3 例，腹腔导流管 1 例，糖尿病 7 例（1 例血糖不在正常范围内）。
结论 1.高血糖容易造成图像质量变差，因此，血糖为 PETCT 检查的最重要的指标，需要工作人员提前做好干预措施。2.高龄受检者由于自身原因（如行动不便，需要轮椅、平车）容易导致无法按时到达科室开始检查，因此在到科室的时间容易出现迟到的问题。3。空腹时间较久（约 6h），高龄受检者容易产生低血糖等情况，并且身体状况较差，容易产生心慌呕吐等现象，护师应时刻注意受检者状态。4.PETCT 面向人群大多是肿瘤相关疾病，很多受检者携带便袋，导流袋等，扫描时容易造成扫描伪影，影响图像效果。

PU-1483
磁化标记胎盘间充质干细胞靶向结直肠癌的 MR 示踪研究

王芳[1],熊瑶[1],胡洁婷[1],何花[2],王一帆[2],郭玉林[2]
1.宁夏医科大学
2.宁夏医科大学总医院

目的 通过向小鼠结直肠移植瘤模型内注射磁化标记的人胎盘间充质干细胞(PMSCs)，探讨 3.0T MR 活体示踪的可行性及 PMSCs 对结直肠肿瘤生长的作用。方法 培养 PMSCs，多聚赖氨酸(PLL)转染 USPIO，用 PLL-USPIO 对 PMSCs 进行标记并鉴定其生物学特性。建立裸鼠 HT-29 皮下移植瘤模型 30 只，随机分为实验组和对照组，每 2-3 d 进行扫描，观察两组移植瘤生长情况及 MR 信号变化，描绘肿瘤生长曲线及 MR 时间信号曲线，每次扫描后随机处死实验组与对照组各 2 只小鼠取皮下移植瘤，病理切片行 HE 染色、普鲁士蓝染色及免疫组化染色，对比染色结果并计算微血管密度。结果 1、PLL-USPIO 可安全有效标记胎盘间充质干细胞，标记率大于 95% ，细胞生物学特性无明显影响。2、实验组注射 PMSCs 第 1 d MR 可监测到肿瘤内低信号，随着时间增加信号逐渐增高，信号差异有统计学意义(p<0.05)，第 14d 时与对照组信号无差异（p>0.05）。实验组与对照组移植后第 1d-第 14d 肿瘤体积组间差异无统计学意义(p>0.05)。病理染色与 MR 扫描图像相对应。结论 MRI 可有效进行胎盘间充质干细胞移植后的活体示踪，PMSCs 通过不同的抑瘤和促瘤机制影响结直肠肿瘤的生长。

肿瘤微环境激活的 MRI/药物递送诊疗纳米探针的构建 及其在卵巢癌靶向诊疗中的应用研究

赵明明
徐州医科大学附属医院

一、目的
我们设计具有 AS1411 适体及 ATP 适体的探针。DNA 支架由 ATP 适体及其互补的单链 DNA 构成。在 ATP 存在下，这导致 DNA 双链体解离，从双链体到适体这种结构变化导致插入的阿霉素从双链体释放。基于此，本项目拟以 MnO_2纳米片层作为纳米载体和 MRI 纳米对比剂，以阿霉素为治疗药物，制备出肿瘤微环境激活的 MRI/药物递送诊疗纳米探针，探针中含有的 AS1411 适配体作为靶分子用于卵巢癌的磁共振靶向成像及治疗。
方法
高性能肿瘤微环境激活的 MRI/药物递送诊疗纳米探针的制备、表征及其性能研究
（1）根据文献做相应调整制备 MnO2 纳米片层。
（2）Probe-cDNA 载药量的优化。
（3）肿瘤微环境激活的 MRI/药物递送诊疗纳米探针的表征及性能测试 。
1.2 卵巢癌靶向肿瘤微环境激活的 MRI/药物递送诊疗纳米探针对 HO-8910 卵巢癌细胞的体外靶向 MRI
肿瘤微环境激活的 MRI/药物递送诊疗纳米探针的磁共振成像及靶向治疗：
1.3 肿瘤微环境激活的 MRI/药物递送诊疗纳米探针对卵巢癌载瘤裸鼠的在体靶向磁共振增强成像及靶向治疗
（1）荷瘤裸鼠模型构建（2）荷瘤裸鼠在体 MR 靶向成像（3）靶向治疗效果评估
结果
1.对 MnO2 纳米片层级及纳米探针表征分析。

2.纳米探针有无肿瘤微环境存在下的 MRI 信号差别。
3.MnO2 纳米片层对细胞及纳米探针对小鼠的毒性测试。
4.HO-8910 细胞细胞体外 MRI 检测及不同细胞计数 HO-8910 细胞的体外 MRI 成像。
5.载瘤裸鼠的磁共振成像。
结论
1. 成功制备肿瘤微环境激活的磁共振成像纳米对比剂 MnO2，其具有较好的生物相容性以及较高的 T1 弛豫率的特点。
制备出肿瘤微环境激活的 MRI/药物递送诊疗纳米探针，实现对卵巢癌细胞的磁共振成像。
3.MnO2 作为肿瘤微环境激活磁共振对比剂，初步实现了载瘤裸鼠的活体磁共振增强成像。

Synthesis and Application of Dual Drug Delivery/Sequential Release Nanotheranostic Agent in Liver Cancer

Qinghe Han,Qinghai Yuan,Rui Ma
radiology department. the second hospital of jilin university

Purpose: To explore synthesis and Application of Dual Drug Delivery/Sequential Release Nanotheranostic Agent in Liver Cancer.material and method: Synergistic therapy and multi-mode combination therapy of two hepatocellular carcinoma drugs can overcome drug resistance and side effects in the treatment of hepatocellular carcinoma.Gold nanoparticles have been widely used in optical imaging, CT/MRI imaging, biomarkers, targeted drug therapy and other fields, and are an advanced integrated platform for nano diagnosis and treatment.Co-delivery of two drugs with diverse physicochemical properties and specific administration orders, coupled with combined cancer theranostics are vitally important for conquering drug resistance and reducing side effects. rusult: we explored a unique amphiphilic PCL-AuNC/$Fe(OH)_3$-PAA Janus nanoparticle (JNP) to simultaneously preserve the hydrophilic drug (doxorubicin) and hydrophobic drug (docetaxel) in their distinct domains. Owing to their extraordinary heterostructure and independent pH and NIR sensitive properties, the optional sequential drug release by a single inorganic JNP was realized for the first time, and the results presented the synchronous release of two drugs had 5% better therapeutic effect.In addition, the excellent CT/MR imaging capabilities from AuNC/$Fe(OH)_3$ suggested our JNPs could effectively guide the cancer therapy. Furthermore, the mice treated with dual drug loaded PCL-AuNC/$Fe(OH)_3$-PAA JNPs under near infrared (NIR) laser irradiation showed better tumor inhibition than solo drug, cocktail and dual drug treated groups, indicating the effectivity and significance of combined cancer therapy.conclusion:we synthesised PCL-AuNC/$Fe(OH)_3$-PAA Janus nanoparticle with hydrophilic drug (doxorubicin) and hydrophobic drug (docetaxel) in their distinct domains, and it has better effect in anti-lier cancer.

双重载药、按需释放纳米诊疗剂的合成及其在肝癌诊疗中的应用研究

韩庆贺,袁庆海,王雷
吉林大学第二医院

肝癌发病率和死亡率较高，其治疗策略一般需要联合治疗，如何能够做到早期发现及诊断肝癌，并达到最佳治疗效果，拯待解决。肝癌治疗的多模式联合治疗，以及两种肝癌治疗药物的协同作用，同时克服耐药性和副反应，发挥最大的治疗作用值得我们进行深入的研究。金纳米粒子在光学成像、CT 成像、MRI 成像、生物标记、靶向药物治疗等领域得到了广泛的应用，是一种先进的纳米诊疗一体化应用平台。

本文合成了一种新型的双亲性聚己内酯-金纳米笼/氢氧化铁-聚丙烯酸（定义为 PCL-AuNC / $Fe(OH)_3$-PAA）JNP 纳米粒子，具有独特的异质结构、以及 pH 值和 NIR 近红外光谱敏感特性，能够同时负载亲水药物（doxorubicin 阿霉素）和疏水药物（docetaxel 多烯紫杉醇），能够对两种负载药物进行可选择顺序释放，通过体内外实验、小鼠实验的验证，结果表明两种药物的同步释放能够提升疗效，并降低了毒副作用。

此外，本文通过表征证实合成的纳米诊疗剂稳定、可靠，生物相容性较好，毒副作用低，且由于 AuNC/$Fe(OH)_3$的具有较好的 CT 和 MRI 成像能力，通过体内及体外实验证实了其在肝癌当中出色的成像能力。此外，在小鼠肿瘤模型实验中，负载双药的 PCL-AuNC/$Fe(OH)_3$-PAA JNPs 纳米粒子在 PH 值和近红外光照刺激下产生的协同治疗效果表现出比单药治疗组、混合用药治疗组有更好的肿瘤抑制作用。因此，新型 PCL-AuNC / $Fe(OH)_3$-PAA）JNPs 纳米粒子在肝癌诊疗当中具有很好的应用前景。

乳腺钼靶在早期乳腺癌中的诊断价值

陈旭,印宇
贵州省肿瘤医院

（摘要）**目的** 探究乳腺钼靶在早期乳腺癌中的诊断价值。**方法** 选取 78 例早期乳腺癌患者为探究对象，分别进行乳腺钼靶检查，观察乳腺中的肿块大小，边缘改变度，钙化大小，密度改变度，结构复杂度，乳头凹陷度等特点，并分别将其进行对比。**结果** 患者在钼靶检查后，对早期的乳腺癌特点较敏感，检出率较高。**结论** 乳腺钼靶能准确有效地检测出早期乳腺癌，能起到很好的诊断效果。

PU-1488
基于 Co-P 纳米诊疗剂的构建及其在小鼠乳腺癌诊疗中的应用基础研究

金龙海,刘建华,袁庆海
吉林大学第二医院

乳腺癌严重威胁女性的健康，提高其早期诊断的精确度和治疗效果能够有效的降低乳腺癌患者的死亡率。

目的 本研究旨在构建具备良好生物相容性的新型多功能纳米诊疗剂应用于小鼠乳腺癌的多模磁共振成像诊断和多模抗肿瘤治疗，从而提高其早期诊断及治疗效率。

方法 通过高温热分解法合成 Co-P 纳米材料，以其作为核，介孔二氧化硅作为壳，并载入化疗药物 DOX，用二氧化锰（MnO_2）作为封口剂，合成 Co-P@mSiO$_2$@DOX-MnO_2；通过扫描电镜、透射电镜、X 射线能量散射谱、氮气吸附/脱附实验、药物负载/释放等实验对该纳米材料进行表征；利用 MTT 法测试纳米材料的细胞毒性；通过小鼠体内实验验证纳米材料的体内毒性；使用磁共振成像仪评价纳米材料的体内、外 MR 成像效果；利用红外热像仪评价纳米材料的体内、外光热性能；通过 MTT 试验和荷瘤小鼠的抗肿瘤实验来评价纳米材料对小鼠乳腺癌的治疗效果。

结果 通过表征测试、毒性实验证明了纳米材料均一的形貌、尺寸和良好的生物相容性，通过药物释放和光热性能实验印证了纳米材料优越的 pH-响应的药物释放能力和光热转化性能，通过体内及体外 MR 成像实验和抗肿瘤治疗实验证实了纳米材料显著的 T_1 和 T_2 双模 MR 成像效果和抗肿瘤治疗效果。

结论 我们设计、合成了 Co-P@mSiO$_2$@DOX-MnO_2 纳米诊疗剂，在 Co-P 核介导 T_2 MR 增强成像及光热治疗的基础上，利用介孔二氧化硅壳的孔道装载化疗药物，在肿瘤的酸性环境中 MnO_2 快速分解成 Mn^{2+} 离子，从而释放 DOX 并发挥化疗作用，同时顺磁性的 Mn^{2+} 离子能够介导 T_1 MR 增强成像，实现了 pH 响应的 T_1 和 T_2 双模 MR 成像引导的化疗与光热协同抗肿瘤治疗。并首次将其应用于生物医学领域，在体外实验和体内动物实验中展示出了良好的生物相容性及出色的肿瘤诊断和治疗效果，实现了对小鼠乳腺癌诊断和治疗的同步进行，为今后纳米诊疗剂的临床应用提供了理论和实践依据。

基于 CESM 的影像组学诺莫图预测乳腺癌新辅助化疗疗效的可行性研究

王中一,谢海柱
烟台毓璜顶医院

目的 探讨基于对比增强能谱 X 线摄影（CESM）的影像组学诺莫图术前预测乳腺癌新辅助化疗疗效的价值。

材料和方法 回顾性分析我院 135 名术前接受新辅助化疗的乳腺癌患者（训练组 100 ，验证组 35），按照实体瘤疗效评价标准（RECIST）评价患者新辅助化疗的疗效，并将患者分为有效组和无效组。从每个病人的 CESM 图像中提取影像组学特征。然后在训练集中用 LASSO 算法建立影像组学标签。结合独立的临床预测因子，采用多元 Logistic 回归模型建立诺莫图。诺莫图的效能在训练集中进行评估，并在验证集中进行验证。

结果 由 9 个特征组成的影像组学标签，具有良好的预测效果。包括影像组学标签、ki67、HER2 的诺莫图在训练集（AUC 0.87；95%CI，0.82-0.91）和验证集（AUC 0.85；95%CI，0.80-0.90）中也显示出良好的效能。决策曲线表明了我们列线图的临床实用性。

结论 基于术前 CESM 影像组学特征和临床预测因子建立的诺莫图模型在预测乳腺癌患者新辅助化疗疗效方面具有重要的价值。

Novel redox-responsive polymeric magnetosomes with tunable magnetic resonance property for in vivo drug release visualization and dual-modal cancer therapy

Zhongling Wang
The Shanghai first hospital , Shanghai Jiaotong university

Nanotheranostics provide promising strategies towards precise cancer diagnosis and therapy. However, monitoring of *in vivo* drug release from nanotheranostics by non-invasive approaches remains very challenging. In this work, we developed novel redox-responsive polymeric magnetosomes (PolyMags) with tunable magnetic resonance imaging (MRI) properties for *in vivo* drug release monitoring and effective dual-modal cancer therapy. The theranostic PolyMags were prepared by co-encapsulation of a T_2 MRI contrast agent (SPIO) and a chemotherapeutic drug (doxorubicin, DOX) in well-defined disulfide cross-linked micelles (DCM). The encapsulation of DOX significantly decreased PolyMags' T_2 MR contrast enhancement and transverse relaxation rate R_2, depending on the amount of drug payload. The T_2 MR enhancement and R_2 could be recovered once the drug was released upon the disassembly of the PolyMags in the presence of glutathione (GSH). We visualized the *in vivo* drug release pattern by virtue of such tunable MRI capacity in nude mice bearing breast cancers. Interestingly, the PolyMags possessed excellent photothermal effect, which could be further enhanced by the loading of DOX. Moreover, the PolyMags showed excellent biocompatibility and were highly efficacious to treat breast tumors on xenograft model with the combination of tumor-targeted photothermal therapy and chemotherapy, achieving a complete cure rate of 66.7%. The concept reported in this paper is generally applicable to other micellar and liposomal systems for image-guided drug delivery & release applications toward precision cancer therapy. R2*, ADC. DWI

PU-1491

A Novel novel clustered SPIO nanoplatform with enhanced magnetic resonance T2 relaxation rate for micro-tumor detection and synergistic photothermal synergistic therapy via low dose laser trigger

Zhongling Wang
The Shanghai first hospital , Shanghai Jiaotong university

Construction of micro tumor sensitive theranostic nanoagents that can increase the accuracy of imaging diagnosis and boost the therapeutic efficacy has been demonstrated for a promising approach for diagnosis and treatment of cancer. Herein, we reported a novel super-paramagnetic iron oxide (SPIO) based nanoplatform that possess significantly enhanced magnetic resonance property and photothermal effect for tumor theranostic purpose. This PEG-B4/CNTs@ph/SPIO (BCPS) nanoplatform was simply prepared via integrated super-paramagnetic iron oxide (SPIO), porphyrin (ph), and PEG-B4 on the

surface of CNTs. Subsequently, a significant T2 relaxation rate enhanced can be achieved by the reduced accessibility of water to SPIO clustering. Moreover, the synergetic enhanced photothermal from BCPS nanoplatform contributed to better photothermal effect for cancer therapy. Furthermore, the targeting ability to sialic acid overexpressed tumor was further introduced from phenylboronic acid from PEG-B4. We showed that BCPS nanoplatform could not only selectively identify solid tumors and detect micro-sized metastatic tumor (1 mm) in the liver, but also effectively ablate tumors in an xenograft model, thereby achieving a complete cure rate of 100% at low laser dose.

Two-way Magnetic Resonance Tuning Nanoprobe Enhanced Subtraction Imaging for in vivo Molecular Target Quantification and Small Tumour Visualization

Zhongling Wang
The general hospital, Shang hai Jiaotong University

Distance-dependent magnetic resonance tuning (MRET) technology has many advantages over fluorescence-based Förster resonance energy transfer (FRET) in sensing/imaging biological targets. These include deeper tissue penetration and fewer undesirable interactions with the surrounding biological environment. However, the contrast enhancement and stability of current T_1-based MRET technology needs significant improvement before it can achieve broad *in vivo* applications. Here we report a new two-way magnetic resonance tuning (t-MRET) nanoprobe with dually activatable T_1&T_2 magnetic resonance signals coupled with dual-contrast enhanced subtraction imaging (DESI) to dramatically enhance contrast in targeted tissues and suppress the background signal from normal tissue. We demonstrated that this integrated platform could quantitatively image molecular targets in tumours and sensitively detect very small intracranial brain tumours (~0.75mm^3) in patient-derived xenograft models with a tumour-to-normal-tissue ratio (TNR) >10. We anticipate that the t-MRET nanoprobes and complementary DESI technology with ultra-high TNR will offer new opportunities for enhanced molecular diagnostics and image-guided biomedical applications.Distance-dependent magnetic resonance tuning (MRET) technology has many advantages over fluorescence-based Förster resonance energy transfer (FRET) in sensing/imaging biological targets. PU-1493

Intracranial Applications of Magnetic Resonance-guided Focused Ultrasound

Leijing Xu
Shanghai general hospital

Purpose: Central nervous system disease is difficult to treat because of its complex internal structure. Notably the existence of the blood-brain barrier (BBB) which restricts the delivery of drugs. Chemical methods can cause complete destruction of the BBB, while physical methods are noninvasive and better able to open the BBB reversibly. Focused ultrasound (FUS) can temporarily change vascular or cell membrane permeability and release or activate various compounds for targeted drug delivery or gene therapy. Magnetic resonance guided focused ultrasound (MRgFUS) is regarded as an innovative method to be applied to remedy the limitation of ultrasound to place and treat discrete lesions within the human brain accurately.

Methods: We review each of the emerging indications for MRgFUS for both applications and highlight future directions for this promising means of treating brain-based diseases.

Results: In brain diseases, MRgFUS serves two purposes: 1) to focally ablate neural tissue or 2) to open the BBB. Therefore, MRgFUS is a great breakthrough that be used for non-invasive treatment and real-time monitoring of brain diseases, including essential tremor, brain tumor, Parkinson's disease and so on.

Conclusions: Targeting and removing a few millimetres of brain lesions through the skull with the power of MRgFUS is a remarkable technique that could potentially be a major neurotherapeutic milestone. A number of phase I studies have supported that transcranial MRgFUS is noninvasive and safe, achieving clinical and radiologic effects similar to open neurosurgery. However, large-scale, multicenter studies and long-term postoperative follow-up are still needed to better characterize and validate the safety, effectiveness and long-term durability. But, predictably, if borne out, in the future, MRgFUS will be an ideal option for patients with indications as technology advances and technological maturity.

NLRP3 inflammasome is involved in pig to mouse islet xenotransplantation

Cheng Chen,Wei Wang
Department of Radiology, The Third Xiangya hospital, Central South University

Introduction: A large loss of islet cells occurred several days after islet transplantation, which is mainly mediated by nonspecific inflammatory factors. Evidences show that the release of IL-1β and High Mobility Group Box 1(HMGB1) are the major causes involved in islets loss. NLRP3 inflammasome is largely reported as a key node for the production and release of IL-1β and HMGB1 in innate immune. Here, we aim to investigate whether NLRP3 inflammasome is involved in the islet graft inflammatory response after porcine to mouse islet xenotransplantation.
Methods: NICCs were transplanted to NSG mouse under the kidney capsule. Expression of Insulin, NLRP3 and ASC in islet were examined by IHC 6 weeks after transplantation. NICC cells were exposed to hypoxia(1% O_2) in intro for indicated time to mimic the post-transplantation hypoxic condition in vivo. Releasing of IL-1β and HMGB1 was detected by ELISA. Protein level of inflammsome component NLRP3, ASC, cleaved caspase-1 and precursor/mature form of IL-1β and IL-18 was measured by Western blot. Caspase-1 inhibitor Ac-YVAD-cmk was utilized to block the Capase-1 signal.
Results: Insulin were detected in islet grafts 6 weeks after transplantation. NLRP3 and ASC expression were also detected mainly in insulin producing cells in islet grafts. In intro assay, hypoxia increased protein level of cleaved caspase-1 and mature form of IL-1β and IL-18 and decreased precursor form of them. IL-1β and HMGB1 releasing is up-regulated exposure to hypoxia.Finally, pretreated with Caspase-1 inhibitor Ac-YVAD-cmk significantly decreased hypoxia induced up-regulation of protein level of cleaved caspase-1 and mature form of IL-1β and IL-18.
Conclusions: NLRP3 inflammasome is involved in pig to mouse islet xenotransplantation. Caspase-1 inhibitor Ac-YVAD-cmk might be a potential treatment to improve islet xenotransplantation outcome.

Dynamic monitoring the hyperpolarized 13C metabolic signals of cells using an NMR-compatible perfusion bioreactor

Ting Sun[1,2],Renuka Sriram[2],Shubhangi Agarwal[2],Joao Piraquive Agudelo[2],John Kurhanewicz[2],Huadan Xue[1],Michael Ohliger[2]
1.Peking Union Medical College Hospital
2.University of California, San Francisco

Background: Hyperpolarized (HP) ^{13}C MR is a powerful technology for monitoring real-time metabolism. The metabolic changes of [1-^{13}C]lactate and [1-^{13}C]alanine from [1-^{13}C]pyruvate is near-universally observed in many pathological changes including cancers.(1) Recently, an NMR-compatible perfusion bioreactor has been proposed as a method to dynamically monitor cell hyperpolarized ^{13}C metabolic signal.(2) **Aim:** The aim of this study is to use an NMR-compatible perfusion bioreactor to investigate the changes of intracellular and extracellular ^{13}C metabolites from [1-^{13}C]pyruvate of cells.
Methods: Embryonic kidney HEK293 cells were used in this study. These cells were

prepared for bioreactor NMR experiments by electrostatic encapsulation into alginate microspheres.[3] The cell-laden microspheres were maintained at physiological conditions by circulating DMEM media at 37℃ with continuing oxygen in the 5mm NMR tubes used in bioreactor. Experiments were conducted on a 500 MHz Varian Inova with a 5mm probe at 37℃. 7.0μL of [1-^{13}C]pyruvic acid was hyperpolarized using a HyperSense DNP polarizer operating at 3T and subsequently dissolved and neutralized for a final concentration of 50mM. 900uL of this solution was infused into the bioreactor system and NMR experiments were performed by application of a 30° degree pulse every 3s and for a total acquisition time of 300s, using a sweep width of 100ppm. Cell viability was dynamically monitored by measuring the peaks of nucleoside triose phosphate produced by the ATP molecule using ^{31}P NMR. **Results:** A simple schematic diagram of bioreactor was shown in Figure 1a. Following injection with hyperpolarized [1-^{13}C]pyruvate, the productions of intracellular and extracellular lactate, alanine and bicarbonate signals were observed(Figure 1b). And extracellular lactate was higher than intracellular lactate suggesting a rapid lactate export in cells(Figure 1c). **Conclusion:** Using a perfusion bioreactor system and cells, we were able to observe the hyperpolarized metabolic signal changes generated within cells. In the future, this system will enable better understanding of the HP ^{13}C signals of different cancer cell lines, expanding the way these changes can be used to monitor tumor treatment response in vivo.

新型 Mn(II)肝胆磁共振造影剂体内成像评价

李盼
川北医学院

作为一种非侵入影像诊断技术，磁共振成像（MRI）具有高空间分辨率和高软组织对比度的特点。磁共振造影剂（MRI contrast agents）可以提高 MRI 灵敏度、增加成像对比度和清晰度，是 MRI 技术的重要组成部分[1]。MRI 多参数、多方位成像特点对于肝脏检查具有独特优势。肝细胞癌（HCC）是癌症相关死亡的主要原因之一，占原发性肝癌的 90％以上。肝特异性造影剂对于 HCC 的早期诊断十分重要，早期诊断和有效治疗可使 HCC 5 年生存率提高 50％-70％。**目的** 针对 Gd(III)造影剂肾源性系统纤维化[2]和短期内反复使用存在脑沉积[3]潜在风险，本文旨在以生物相容性更佳的 Mn(II)为顺磁金属中心，设计合成肝胆特异造影剂[Mn(BnO-TyrEDTA)]$^{2-}$， 并通过体内成像评价其肝靶向成像特点、体内分布与排泄。**材料与方法** 从酪氨酸（Tyrosine）出发，经多步反应合成具有疏水结构的类 EDTA 配体，与 Mn^{2+}配位得到[Mn(BnO-TyrEDTA)]$^{2-}$。以临床肝靶向造影剂普美显（Primovist®，Gd-EOB-DTPA）为对照，经小鼠尾静脉注射（0.1 mmol/kg），冠状位连续扫描成像（3.0 T，GRE-T_1WI），分析 MR 信号强度（肝脏、肾脏、血液）随时间变化的规律， ICP-MS 检测 24 h 后小鼠体内造影剂残留。**结果** 体内成像表明，[Mn(BnO-TyrEDTA)]$^{2-}$多组织器官增强明显，其肝靶向性、体内清除途径与普美显[4]相似，注射造影剂 24 小时后动物体内无残留。

Huc-MSCs protect procine islets from hypoxia and ROS-induced cell death via enhancing pro-survival pathways

Yixiong Tan,Wei Nie,Cheng Chen,Xuesong He,Yuzhi Xu,Xiaqian Ma,Juan Zhang,Mengqun Tan,Pengfei Rong,Wei Wang
Cell Transplantation and Gene Therapy Institute， The Third Xiangya Hospital， Central South University， Changsha， Hunan 410000， China

Background: Hypoxia and oxidative stress are major causes of damage to transplanted islets. Mesenchymal stem cells (MSCs) have been shown to enhance islet survival mainly through paracrine secretion. But mechanisms of action underlying MSC protective effects on islets have not been fully elucidated. In this study, we investigated whether human umbilical cord-derived MSC (huc-MSC) could inhibit hypoxia and ROS related cell death of neonatal porcine islet cell clusters (NICCs) and further determine the underlying molecular mechanisms.
Methods: NICCs were cultured in vitro under normoxic (20% O_2) and hypoxic (1% O_2) conditions with or without MSC-conditioned medium (MSC-CM) or MSC exosomes. Apoptosis and ROS detection assays were performed to identify potential cytoprotective effects and western blot analysis was used to detect possible pathways involved.
Results: Compared with the control group, MSC-CM suppressed hypoxia-induced cell death and oxidative stress of NICCs. Furthermore, MSC-CM activated several pro-survival pathways in NICCs under hypoxic condition. The multi-functional benefits of MSC-CM could be recapitulated by MSC derived exosomes.
Conclusions: This study showed that MSC-CM and MSC exosomes protected NICCs from hypoxia-induced cell death by regulating cell redox state and cell signaling pathways. This increased understanding may enable MSCs to become a more promising adjuvant cell therapy for islet transplantation.

Inlaying Radiosensitizer onto the Polypeptide Shell of Drug-Loaded Ferritin for Imaging and Combinational Chemo-Radiotherapy

Jingwen Chen[1],Qiuhong Zhang[2],Han Wang[1]
1.Department of Radiology， Shanghai General Hospital， Shanghai Jiao Tong University School of Medicine
2.Tate Key Laboratory of High Performance Ceramics and Superfine Microstructure， Shanghai Institute of Ceramics， Chinese Academy of Sciences

Rationale: Ferritin with unique hollow cavity is an emerging protein-based nanoplatform for anticancer-drug delivery, but the in vivo chemotherapeutic effectiveness is still unsatisfactory with such a monotherapy modality, which is urgently in need of improvement.
Methods: Here a novel ferritin nanotheranostic with anticancer-drug doxorubicin encapsulated into its hollow interior and nanoradiosensitizer bismuth sulfide nanocrystals inlayed onto its polypeptide shell was synthesized for combinational therapeutic benefits. The formation mechanism of bismuth sulfide nanocrystals based on ferritin has been analyzed. The in vitro and in vivo treatment effects were carried out on HeLa cancer cells and tumor-bearing mice, respectively. The biocompatibility

and excretion of the ferritin nanotheranostic have also been evaluated to guarantee their biosafety.

Results: The polypeptide shell of ferritin provides nucleation sites for the bismuth sulfide nanocrystals through coordination interaction, and simultaneously inhibits the further growth of bismuth sulfide nanocrystals, rendering the bismuth sulfide nanocrystals like rivets inlaying onto the polypeptide firmly, which can not only strengthen the architectural stability of ferritin to prevent drug burst leakage during systemic circulation, but also act as excellent computed tomography contrast agents and nanoradiosensitizers for in vivo imaging-guided cancer combinational treatments.

Conclusions: The design concept of inlaying bismuth sulfide nanocrystals onto the polypeptide shell of doxorubicin-encapsulated ferritin significantly inhibits the tumor growth and simultaneously further broadens the application of ferritin in nanomedicine.

PU-1499

Red/Near-Infrared Emissive Metalloporphyrin-Based Nanodots for Magnetic Resonance Imaging-Guided Photodynamic Therapy In Vivo

Jingwen Chen[1],Wu Fengshou[2],Wang Han[1]

1.Department of Radiology， Shanghai General Hospital， Shanghai Jiao Tong University School of Medicine

2.Key Laboratory for Green Chemical Process of the Ministry of Education School of Chemical Engineering and Pharmacy

Near-infrared emissive (NIR) porphyrin-implanted carbon nanodots (PCNDs or MPCNDs) are prepared by selectively carbonization of free base or metal complexes [M = Zn(II) or Mn(III)] of tetra-(meso-aminophenyl)porphyrin in the presence of citric acid. The as-prepared nanodots exhibit spontaneously NIR emission, small size, good aqueous dispersibility, and favorable biocom-patibility characteristic of both porphyrins and pristine carbon nanodots. The subcellular localization experiment of nanodots indicates a lysosome-targeting feature. And the in vitro photodynamic therapy (PDT) results on HeLa cells indicate the nanodots alone have no adverse effect on tumor cells, but display remarkable photodynamic efficacy upon irradiation. Moreover, MnPCNDs containing paramagnetic Mn(III) ions, which possesses good biocompatibility, NIR luminescence, and magnetic resonance imaging and efficient singlet oxygen production, are further studied in magnetic resonance imaging-guided photodynamic therapy in vivo.

Human HLA-DR+CD27+ regulatory T cells are superior to other Treg subsets in protection of porcine islet xenografts

Xiaoqian Ma,Lu Cao,Pengfei Rong,Juan Zhang,Wei Nie,Chen Chen,Wei Wang
The Third Hospital of Central South University

Aims: *To achieve effective suppression and avoid opportunistic infection and malignancy for clinical xenotransplantation, xenoantigen-specific Treg will be required. Previously, we have shown that a CD27+HLA-DR+subset of Treg separated from xenoantigen stimulated human Treg (XnTreg) were potent and xenoantigen-specific in vitro. In this study, we aim to determine their xenoantigen specificity and potency in protecting against neonatal porcine islet cell clusters (NICC) xenograft rejection in vivo.*

Methods: *Human XnTreg were separated by cell sorting, using the Treg cell surface markers CD27 and HLADR, into non-selected, CD27+HLADR+ and non-CD27+HLADR+ Treg subsets prior to cotransfer into NICC recipient NOD-SCID IL2rg-/- mice in association with autologous PBMC at a 1:25 ratio of Treg ($4x10^5$): PBMC ($1x10^7$). Serum, spleen and NICC xenografts were harvested from recipient mice at day 60 after human cell transfer for analysis of xenograft survival and Treg in vivo function.*

Results: *Recipient mice transferred with human PBMC alone rejected their xenografts completely within 35 days. Co-transfer with CD27+HLADR+ Treg prolonged NICC xenograft survival beyond 60 days with detectable serum porcine C-peptide and intact xenografts which stained positive for insulin and were surrounded but not infiltrated by a few human CD8+ effector cells. By contrast, non-selected and non-CD27+HLADR+ Treg co-transferred at the same ratio did not protect against rejection.*

Conclusions: *Human CD27+HLADR+ memory-like Treg were sufficient to suppress porcine islet xenograft rejection at a 5-fold decreased cell number compared to that previously reported for polyclonal Treg in same model, suggesting they are more potent at preventing rejection than polyclonal Treg in vivo.*

前列腺癌多模态诊疗一体化分子影像研究进展

许磊晶
上海市第一人民医院

目的 前列腺癌是男性常见恶性肿瘤，也是全球男性癌症死亡的第五大原因，因此前列腺癌的早期诊断和个体化治疗十分重要。前列腺癌的复发、远处转移和对药物的抵抗，使得常规影像诊断和内、外科治疗的效果受到限制，而基于纳米探针的多模态分子影像研究为前列腺癌的诊治提供了新的潜在可行方案。

方法 通过回顾近年来超声、核素、CT、MRI 和光学等多种成像模态的纳米探针在前列腺癌诊疗方面的进展，并对其研究方向、临床应用潜力及局限性进行讨论。

结果 前列腺癌分子成像涵盖声学成像、CT 成像、MRI 成像、光学成像、PET 成像以及多模式成像等多种成像方式，且成像探针也从单模态向多模态发展。运用将成像与治疗功能结合于一体的多功能 NP，将有助于实现前列腺癌的早期诊断和同步的可视化治疗,也是纳米医学在前列腺癌诊治领域的研究热点。此外，利用 NP 的载体作用，携带成像和治疗双重材料，可使追踪药物动力学过程和释放、纳米药物的分布和代谢更加清晰直观，进一步促进肿瘤治疗发展。
结论 肿瘤诊疗一体化分子影像 NP 是多学科交叉融合的产物，得益于生物、化学、材料学和组织工程学领域的研究推进与协作互补。多功能靶向 NP 的出现，为前列腺癌的诊疗打开了崭新的视界与可期的前景。但应该正视，这一研究领域仍存在许多挑战：（1）NP 的制备方法复杂繁琐，不仅要考虑材料本身的生物相容性和安全性，还要考虑探针体积大小和细胞穿透能力的匹配性；（2）癌细胞的异质性也对 NP 的敏感性和特异性提出高要求，仍需寻找更合适的作用靶点。因此，目前这一领域的多数研究报道仍局限于临床前的阶段。尽管如此，笔者坚信，随着相关学科的快速发展，临床前研究的深入，以及多中心前瞻性研究的积极推进，基于纳米医学的肿瘤诊疗一体化新手段终将提高包括前列腺癌在内的多种恶性肿瘤的临床诊治效率，使病患获益。

The applications of MRI-based theranostic nanoprobes

Meijuan He,Han Wang
shanghai general hospital

Owing to the better soft tissue specificity, MRI-based theranostic nanoprobes have been studied extentively. The mechanism of theranostic nanoprobes accumulating at tumor site can be classified as passive targeting and active targeting. The passive targeting utilizes the intrinsic characteristics of tumor blood vessels. And active targeting expolits the overexpressed receptors and microenvironment of tumor to guide its affinity to nanoparticles. To enhance the effiency of therapy, researchers tend to modificate nanocarriers or choose the functional ones. Functional nanocarriers serve as potential platform for imaging or therapeutic function thanks to their electronic properties, optical properties and thermal properties. Based on these special characteristics, kinds of novel therapeutic methods have emerged like photothermal therapy(PTT) and photodynamic therapy(PDT). In this review, we will show you the applications of MRI-based theranostic nanoprobes in recent years. Firstly, we will introduce the passive and negative targeting for nanopartiles acceleration in the tumor sites. Then the applications of MRI-based theranostic nanoprobes will be presented in details by the classification of normal and functional nanocarriers.

碳纳米管载药系统用于脑胶质瘤的靶向治疗

银涛,张辉,乔志星
山西医科大学第一医院

脑胶质瘤是颅内常见的发生于神经外胚层的恶性肿瘤，大多数治疗药物由于受血脑屏障（BBB）限制或缺乏靶向性等因素而难以自主向胶质瘤富集，治疗效果欠佳。碳纳米管（CNT）用作抗脑胶质瘤药物载体，不仅能够进入脑组织，通过肿瘤部位渗透增强和滞留（EPR）效应还能够将药物进一

步富集于胶质瘤内。因此，以 CNT 为核心的载药系统用于治疗脑胶质瘤具有重要的意义，然而目前仍缺乏基于 CNT 的纳米载药系统靶向肿瘤细胞的系统性研究，对于深入阐述载药系统抑制肿瘤生长相关通路的调控作用需要进一步的探索。因此，在前期研究的基础上，应用细胞及动物活体荧光成像的方法，系统地考察 CNT 载药系统诱导胶质瘤细胞调亡的能力、抑制肿瘤细胞生长相关通路的调控作用。研究结果表明 CNT 表面修饰具有脑胶质瘤靶向功能的嗜神经性病毒衍生肽（RVG29），分散于 PBS 中水浴持续超声状态下联结异硫氰酸荧光素（FITC），并负载抗肿瘤药物阿霉素（DOX），与 C6 细胞共同孵育 2h，C6 细胞摄取 FITC-CNT-PEG-RVG29 的能力显著强于 FITC-CNT-PEG，说明 RVG29 修饰的载药系统更易被细胞摄取，荧光示踪揭示了组合物进入细胞后主要分布在溶酶体中。通过构建 C6 荷瘤鼠模型，FITC-CNT-PEG-RVG29 以细胞内吞的方式进入胶质瘤中并具有更强的荧光性能，同时延长了 C6 荷瘤鼠的存活时间。研究结果有助于理解 CNT 的生物学效应，为进一步的研究奠定了一定的基础。

DC 疫苗 MRI 及 MPI 双模态分子影像示踪的研究

齐亚飞[1,2],杜洋[2],雷晶[1],薛华丹[1],田捷[2],金征宇[1]
1.中国医学科学院北京协和医院
2.中科院自动化所中科院分子影像重点实验室

目的 探究 MRI 及 MPI 双模态成像示踪 DC 细胞的可行性。
方法 构建 MRI 及 MPI 双模态分子影像探针-Fe@OVA-TAT，通过透射电镜等进行表征；提取 C57BL/N6 小鼠骨髓细胞，诱导产生 BMDC，经 CD11c 流式细胞技术鉴定 BMDC；不同浓度 Fe@OVA@Cy5-TAT 与 BMDC 共培养，通过流式细胞仪测定 BMDC 摄取 Fe@OVA@Cy5 -TAT 的通路，激光共聚焦测定 Fe@OVA@Cy5-TAT 的溶酶体逃逸。PBS、LPS（终浓度 1ug/mL）、OVA 及 Fe@OVA-TAT（OVA 终浓度 6ug/mL）与 BMDC 共孵育，经 CD80 及 CD86 流式细胞技术鉴定 BMDC 成熟能力；Fe@OVA-TAT（铁浓度 60ug/mL）与 BMDC 共孵育 4h 后，经右侧足垫处注射 DC 疫苗，于注射前、注射后 4h、24h、48h 及 72h 利用 MRI 及 MPI 成像观察 DC 的淋巴结迁徙情况，并于 72 小时后处死小鼠，解剖腘窝及腹股沟淋巴结，HE 染色及普鲁士蓝染色观察淋巴结内 DC 迁徙。
结果 经 CD11c 流式细胞技术鉴定，可通过分离小鼠骨髓细胞的方式成功获取 BMDC；流式细胞仪测定，BMDC 摄取 Fe@OVA@Cy5 -TAT 的通路可被盐酸氯丙嗪阻断，表明 Fe@OVA@Cy5 - TAT 通过 Clathrin 通路摄取；激光共聚焦实验证实， Fe@OVA@Cy5-TAT 可通过早期核内体-晚期核内体-溶酶体通路摄取，但 4h 后探针荧光信号位于溶酶体外，表明探针可溶酶体逃逸，从而具有交叉提呈的能力；CD80 及 CD86 流式细胞技术结果表明，Fe@OVA-TAT、LPS、OVA 均可刺激 BMDC 成熟，成熟度分别为 90%、60%和 40%（$p<0.05$）。经探针标记的 DC 疫苗于足垫处注射后，4h 即可观察到腘窝及腹股沟淋巴结 MRI T2WI 信号降低，MPI 信号增高。
结论 MRI 及 MPI 双模态成像可对 DC 细胞进行示踪，为 DC 疫苗进一步开发奠定基础。

长余辉敏化光动力治疗

雷鹏
中南大学湘雅医院

光动力治疗（PDT）是一种利用光敏剂和光产生细胞毒性单线态氧(102)杀死肿瘤细胞的治疗方法，具有毒性低、侵袭性小等优点。传统的光敏剂水溶性较差，不能高效的用于光动力治疗。光动力治疗的光源也是影响光动力治疗效果的重要因素，长时间的激光照射往往会对机体产生损伤。长余辉纳米材料是一种在外光源停止激发后仍能发光的材料，并且可被可见光再激发，合理利用长余辉材料能有效避免外光源对机体的损伤，但传统合成的长余辉材料存在颗粒过大以及生物相容性不佳的缺点，而人血清白蛋白是一种负载能力强且生物相容性好、生物安全性极高的材料，因而本研究设计了一种具有良好光动力治疗效果的纳米探针 PLNPs@HSA-Ce6，采用具有良好生物相容性以及超高负载能力的人血清白蛋白（HSA）善了长余辉材料的水溶性及生物安全性，并负载光敏剂二氢卟吩 e6（Ce6），在外光源 LED 灯协同照射下，长余辉材料作为内在光源，对肿瘤组织进行光动力治疗。研究结果表明 PLNPs@HSA-Ce6 纳米探针具有良好的生物相容性，注射到肿瘤部位后能在特定波长照射下产生明显的治疗效果

PU-1506
卵泡膜细胞-纤维瘤伴腹水的临床及 MR 特征相关因素研究

李芸菲[1],张思斯[2],刘浩[2],王媚媚[2],孟凡华[1],华广美[1],赵小虎[1]
1.复旦大学附属上海市第五人民医院
2.同济大学附属同济医院放射科

目的 分析卵泡膜细胞-纤维瘤组肿瘤 MR 影像特征，探讨腹水产生与肿瘤的影像特征及临床有关指标相关性，提高对本病认识及诊断水平。**方法** 回顾性分析经病理证实的 38 例卵泡膜细胞-纤维瘤的 MR 影像特征，与病理结果对照，分析肿瘤大小、囊实性、病理类型、是否绝经以及血清 CA125 水平等因素与腹水相关性。**结果** 共收集 38 例卵泡膜细胞-纤维瘤组肿瘤。患者年龄 22~92 岁，平均年龄（51.53±14.7）岁，绝经患者 22 例（57.89%），未绝经 16 例（42.11%）。病例中纤维瘤 14 例，卵泡膜细胞瘤 15 例，卵泡膜纤维瘤 9 例。MRI 表现为实性肿块 21 例，囊性肿块 7 例，囊实性肿块 10 例。肿瘤最长径为 1.0~21.3cm，均值为（6.65±4.70）cm。29 例病灶合并有腹水，占总病例的 76.3%，其中 27 例为少量腹水，仅 2 例伴有大量腹水，9 例病灶无腹水。本研究发现，腹水产生与肿瘤的大小、囊实性及 CA125 水平相关（$P<0.05$），与病理组织学类型及是否绝经无关（$P>0.05$）。**结论** 卵泡膜细胞-纤维瘤 MRI 表现具有一定特征，大部分病例常伴有少量腹水。腹水产生与肿瘤大小、囊性变及 CA125 水平有关。评估有无腹水及腹水程度对诊断及鉴别诊断具有一定价值。

Intratracheal Delivery of Theranostic Fe3O4 Nanoclusters for Lung Cancer Radiosensitization Based on Chemodynamic Therapy

Yingbo Li[1,2],Jie Yang[1,2],Lina Wu[1,2],Xilin Sun[1,2]
1.TOF-PET/CT/MR Center, The Fourth Hospital of Harbin Medical University, Harbin, Heilongjiang , China
2.Molecular Imaging Research Center (MIRC), Harbin Medical University, Harbin, Heilongjiang , China

Lung cancer is the most frequently diagnosed malignancy and the primary reason of cancer death both in male and female. Nanoparticle-based integrate platforms represent a novel strategy to cancer theranostic. However, the diagnostic sensitivity, treatment efficacy as well as targeted tissue concentration pose huge challenges for clinical translation. Herein, a tumor pH-sensitive superparamagnetic iron oxide nanoclusters (SPIONC) were synthesized, used as a novel magnetic resonance imaging (MRI) molecular probe and a sensitizer for radiation therapy (RT) on rodent models. The SPIONC maintain the superparamagnetism of the single nanoparticles, meanwhile display sufficiently T2 relaxation enhancement offered by nanoclusters under the action of external magnetic field by self-assembling. By intratracheal delivery, the SPIONC significantly enhance the MRI signal of lung cancer in situ as a T2-MRI probe acquire by Bruker 9.4T MR scanner, demonstrating early stage diagnosis of lung cancer without targeting agents. In tumor microenvironment (TME), SPIONC disintegrate into smaller nanoparticles, resulting a greater specific surface area and tissue penetration in TME weak acid condition (pH=6.5), leading more iron ions released from larger parental nanoparticles. Under a single-dose X-ray irradiation, the hydrogen peroxide generated from mitochondria converted to ROS through Fenton reaction catalyzed by iron ions, making numerous of hydroxyl radicals accumulated inside the tumor, enhanced the intratumor permeability and radiation therapy efficacy, eventually inducing damage to DNA and obstructing tumor growth. In short, SPIONC can be used as a radiotherapy sensitizer to achieve lung cancer theranostic by intratracheal delivery, providing experimental foundation for clinical translate of novel theranostic nanoprobes.

Low-Intensity Focused Ultrasound(LIFU) Triggered Tumor Oxygenation and Drug Release with Nanotheranostics for Combination Therapy in Lung Cancer

Jie Yang[1,2],Haoxiang Li[1,2],Yingbo Li[1,2],Lina Wu[1,2],Xilin Sun[1,2]
1.The Fourth Hospital of Harbin Medical University
2.Molecular Imaging Research Center (MIRC)

Lung cancer is the most commonly diagnosed cancer and the leading cause of cancer death. In recent years, ^{19}F magnetic resonance imaging (MRI) has attracted significant attention owing to the high sensitivity comparable to that of ^{1}H and negligible background signals. ^{19}F MRI contrast agents are suitable for real-time dynamic tracking specific biological makers. Herein, we synthesized perfluorocarbon (PFC) nanoparticles loaded with the EGFR inhibitor AZD9291 which has been shown to be effective against both EGFR tyrosine kinase inhibitor–sensitizing and T790M resistance mutations. Taking advantages of the great biocompatibility and high oxygen dissolving ability of perfluorocarbon (PFC), we develop an innovative strategy to modulate the tumor hypoxic microenvironment using nano-PFC as an oxygen shuttle and a drug carrier for low-intensity focused ultrasound (LIFU) triggered tumor-specific delivery of oxygen and drug.

In this experiment, nanodroplets of AZD9291-PFC are intravenously injected into tumor-bearing mice under hyperoxic breathing. This drug delivery system facilitated the monitoring of the biodistribution of the drug carrier by ^{19}F MRI.

As expected, an increase of more than 2- to 3-fold in the release rates of AZD9291 was observed after LIFU irradiation in vitro, demonstrating that LIFU could enhance the release of drugs from the nanoparticles. With the LIFU transducer applied on their tumor, PFC nanodroplets that adsorb oxygen in the lung would rapidly release oxygen in the tumor under ultrasound stimulation, and then circulate back into the lung for reoxygenation. Such repeated cycles would result in dramatically enhanced tumor oxygenation and thus remarkably improved therapeutic outcomes in chemotherapy of tumors.

Hence, this work presents a simple strategy to promote tumor oxygenation with great efficiency using agents and instruments readily available in the clinic, so as to overcome the hypoxia-associated resistance in cancer treatment.Combined treatment with AZD9291-PFC and LIFU showed excellent inhibition of cell proliferation in vitro, as well as a remarkable therapeutic effect in vivo. In conclusion, third generation EGFR TKI AZD9291 and nano-PFC combined with LIFU exhibited great promise for ^{19}F MRI and effective synergistic antitumor therapy.

Bladder PEComa: a case report and literature review

chuan tian
The 3rd Affiliated Hospital of Kunming Medical University/Yunnan Cancer Hospital

In 1992, Bonetti et al. first defined PEComa (perivascular epithelioid cell tumor) as a tumor composed of cells with similar morphological and immune phenotypes, such as CCST, AML and LAM.The location of PEComa is rare in bladder, and the misdiagnosis rate is very high before operation.the characteristic of the bladder PEComa is that the CT is a round, elliptical or irregular cystic mass with a large volume, more than 5 cm or more, and the edge is clear. The solid part of the scanning tumor is obviously enhanced, and the rich blood supply artery and the drainage vein can be seen.

转移性前列腺癌靶向治疗后如何影像学定量评估？

胡晓云[1],Manish Sharma[1,2],Sajeev Kuma PS[3],Peter Steiger[3]
1.无锡市人民医院
2.Department of Medical Imaging， Parexel International Pvt Ltd， Hyderabad， Telangana， India
3.Department of Medical Imaging， Parexel International Corporation， Billerica， Massachusetts，USA

目的 探讨晚期复发性/转移性前列腺癌靶向治疗后的影像学评估方法、要点及标准报告的 QC。
方法 基于联合雄激素 ADT 与比卡鲁他胺联合 ADT 治疗转移性激素敏感性高肿瘤负荷前列腺癌的多中心、随机、开放、三期临床研究，共 980 病例（13720 访视点）纳入 28 个多中心研究对象中，第三方独立影像中心使用精通评估标准（mPCWG3+RECIST1.1）且有 5 年以上的实际评阅经验者进行双盲一致性独立阅片（FDA 要求不一致性<10%为合格），不一致时采用第三者（资质同前）裁判阅片，此作为金标准组。在实验前，先采用每人 20 个测试病例。对照组采用各中心影像诊断医师进行非盲现场评阅，培训前、后分别采用每人相同的 20 个测试病例，观察现场评阅者前后评估与中心影像评估结果的一致率的差异，并分析其中评估要点。
结果 中心影像金标准组 2 组评阅一致率达 100%，无需裁判阅片。对照组培训前、后现场评阅者与 28 个多中心的现场影像评估结果平均一致率分别为 25.7%、92.8%。2 个多中心中仅 2 家单位（2/28）有过前列腺靶向治疗后影像学评估标准（mPCWG3+RECIST1.1）的 2 专业培训，有 9 家（9/28）仅知晓并经过 RECIST1.1 培训，余 17 家（17/28）为不精通或仅了解而无实践经验。不一致性主要在于靶病灶的测量、非靶病灶的定性以及新病灶的正确认识。
结论 转移性前列腺癌治疗后的影像学评估标准及报告规范的推广亟待提高、任重道远；影像科重视前列腺癌疗效评估标准的掌握及诊断报告的规范，有利于影像科与其它学科在 MDT 时的良性互动与协作，推动临床诊断的规范性、统一性与标准性。

PU-1512
金纳米棒表面配体置换及用于 CT、OCT 的研究

周春宇,孙涛,刘云,龚明福， 张冬
陆军军医大学附属新桥医院放射科

目的 金纳米棒因其独特的光学活性(纵向和横向两个等离子体共振吸收峰，可调范围从可见光区到近红外区)、长径比可调，使得其在纳米生物学和生物医学等领域具有广泛的应用前景。但其表面配体十六烷基三甲基溴化铵（CTAB）分子能与细胞膜和线粒体膜中的磷脂质作用，具有很强的细胞毒性，因此表面由 CTAB 稳定的金纳米棒不能直接用于生物和医学。本研究通过表面配体交换，降低金纳米棒生物毒性，提高生物相容性，并将其作为对比剂应用于 CT 以及 OCT。
方法 不同于以往研究，本研究通过一种间接手段将金纳米棒表面配体 CTAB 进行去除。通过外延生长法，在金纳米棒表面包覆一层金属氧化物，金属氧化物在外延生长过程中与具有双分子层的 CTAB 存在竞争关系，将 CTAB 从金纳米棒表面移除。在去除金属氧化物壳层恢复金纳米棒原有形貌过程中添加不同表面配体，金纳米棒表面配体 CTAB 即被新添加表面配体所替换。

结果 采用紫外-可见分光光度计，透射电镜，红外光谱，离子色谱等多种手段证明该方法有效可行。将配体置换前后金纳米棒分别与人非小细胞肺癌细胞（A549）以及人肝癌细胞（HepG2）进行共孵育培养，流式细胞仪检测表明置换表面配体后金纳米棒的细胞毒性明显降低。即使与 200 ug/mL 金纳米棒溶液共培养，细胞生存率依然可达 92.5%和 86.8%。CT 和 OCT 检测表明置换配体后的金纳米棒具有更好的对比增强效果。

结论 本研究为常用于生物传感、生物成像等多种医学应用的金纳米棒提供了很好的配体置换方法，扩展了金纳米棒在 CT 以及 OCT 等医学影像学中的应用。

Improving Longitudinal Transversal Relaxation of Gadolinium Chelate Using Silica Coating Magnetite Nanoparticles

Kai Xu[1], Zhenghuan Zhao[2], Weiguo Zhang[1]
1.Department of Radiology, Daping Hospital, Army Medical Center of PLA, Army Medical University
2.College of Pharmaceutical Sciences, Southwest University

Introduction and objective: Precisely and sensitively diagnosing diseases especially early and accurate tumor diagnosis in clinical magnetic resonance scanner is a high demanding but challenging task. Gadolinium (Gd) chelate is the most common T_1 MRI contrast agent and has been widely used in different diseases at present. However, traditional Gd-chelates are suffer from relatively low relaxivity, which hampers its further application on clinical diagnosis. Currently, development of nano-sized Gd based T_1 contrast agent, such as incorporating gadolinium chelate into nanocarriers, is an attractive and feasible strategy to enhance the T_1 contrast capacity of Gd chelate. The objective of this study was to improve the T_1 contrast ability of Gd-chelate by synthesizing nanoparticles (NPs) for accurate and early diagnosis in clinical diseases.

Methods: Iron oxide (IO) NPs were synthesized in a typical experiment as aforementioned and reverse microemulsion method was used to coat IO NPs with tunable silica shell and form NPs IO@SiO_2-NH_2 at step one, then Gd-chelate was loaded on the surface of silica coated iron oxide NPs by reacting the IO@SiO_2-NH_2 with p-SCN-DTPA with the molar ratio of 1:3. Finally, Gd-based silica coating magnetite NPs IO@SiO2-DTPA -Gd was developed and characterized by transmission electron microscopy (TEM) image, high-resolution TEM (HRTEM) image, X-ray powder diffraction pattern analysis (XRD), inductively coupled plasma atomic emission spectroscopy (ICP-AES) and superconducting quantum interference device magnetometer. The T_1 relaxivity of NPs was detected by MRI scanner and the cytotoxicity of IO@SiO_2-DTPA-Gd was detected via the 3-(4, 5-dimethylthiazol-2-yl)-2, 5-diphenyltetrazolium bromide (MTT) assay. Then the ability of detecting tumor cells was implemented on cellular level.

Results: The new synthetic MRI contrast agent IO@SiO2-DTPA-Gd NPs showed remarkable performance and the r1 values of IO@SiO2-DTPA-Gd increase with the increase of shell thickness (IO@SiO_2-DTPA-Gd with the thickness of 0, 5, and 12 nm are 9.6, 14.8, and 33.6 $mM^{-1}s^{-1}$ respectively), which was approximate 6 times higher than Gd-DTPA (5.5 $mM^{-1}s^{-1}$) when the silica shell thickness of 12 nm. Interestingly, it appears that SiO_2-DTPA-Gd (22.1 $mM^{-1}s^{-1}$) show notable higher T_1 relaxation than DTPA-Gd, which could be attributed

to the increase of molecular tumbling time. And based on its high T_1 contrast ability, IO@SiO_2-DTPA-Gd can effectively detect tumor cells on cellular level without any obvious cytotoxicity.

Conclusion: A high performance nano-sized T_1 contrast agent IO@SiO_2-DTPA-Gd was developed by loading the Gd-chelate on the surface of silica coated iron oxide NPs. The synthesized NPs IO@SiO_2-DTPA-Gd showed high r_1 value, which is approximate 6 times higher than Gd-DTPA when the silica shell thickness of ~ 12 nm. In addition to reveal the underlying mechanism, IO@SiO_2, SiO_2-DTPA-Gd and IO@SiO_2-DTPA-Gd were synthesized respectively and compared to each other. These results clearly indicate that the improved T_1 relaxation of IO@SiO_2-DTPA-Gd is not only caused by the increased molecular tumbling time, but also caused by the magnetite core of IO@SiO_2. Additionally, the increase of distance between magnetite and DTPA-Gd could reduce the quench effect and show the enhancement effect of magnetite to DTPA-Gd. Moreover, the remarkable bright signal in T_1-weighted imaging of IO@SiO_2-DTPA-Gd incubated cells indicated that IO@SiO_2-DTPA-Gd could be a potential MRI contrast agent for the future clinical application.

Metabolite Profiling of Serum and Tissue Extracts from Patients with Esophageal Cancer based on 1H-NMR Spectroscopy and Pattern Recognition

Yangting Ou
Second Affiliated Hospital, Shantou University Medical College

Introduction Esophageal Cancer (EC) is one of the most prevalent types of cancer death worldwide. The treatment outcome of EC is far from satisfactory because it was often diagnosed at a late, incurable stage by the poor and inefficient detecting strategy. Searching the more efficient detecting technology to identify reliable cancer biomarkers is essential for its early diagnosis and therapeutic approaches. Proton Magnetic resonance Spectroscopy (1H-NMR) has been shown to be particularly useful for identifying metabolic profiles of serum specimens, and may reveal potential biomarkers of EC. In this study, 1H NMR spectroscopy-based metabolomics and pattern recognition approach was applied to identify distinguishing metabolites in serum for routine screening of EC patients, and to search the relativity with changed metabolites in tissue samples, and also to reveal the causation of altered metabolites in mechanisms involved in EC progression.

Methods Serum samples were collected from 46 EC patients and 46 healthy controls (HC), tissue samples were obtained from 29 EC patient and their corresponding adjacent noncancerous tissues (ANT, ~5 cm away from the tumor margin). All samples were detected by 1H-NMR spectroscopy and then spectras were analyzed to pattern recognition with orthogonal partial least-squares discriminant analysis (OPLS-DA) using the SIMCA-P+ program (version 14.1). Those variables with variable importance in the projection (VIP) > 1 and $p < 0.05$ from Mann-Whitney U test were considered as potential biomarker candidates for group discrimination. The area under the ROC curve (AUROC), specificity and sensitivity of the metabolites were calculated, where AUROC > 0.8 indicated

excellent diagnostic ability. Heatmap was used to illustrate correlation of altered metabolites between EC tissue samples and urine samples.
Results 1. Metabolomics analysis detected changes in metabolite levels in ECT relative to their corresponding DNT, which included elevated levels of isoleucine, valine, lysine, arginine, glutamate, glutamine, aspartic acid, choline, phosphoric acid, glycine, tyrosine, histidine, hypoxanthine, as well as depleted levels of lactate, alanine, pyruvic acid, creatine, taurine, inositol, glucose.
2. A total of 16 serum metabolites were found to be significantly changed in EC patients as compared to healthy controls, including elevated glutamate, glutamine, methanol, glycerol, inositol, glucose, histidine, methyl histidine, and reduced isoleucine, leucine, lactate, lipid, lysine, creatine, glycine, tyrosine.
3.The Spearman correlation analysis revealed that serum metabolites of EC such as lysine, glutamine, creatine, glucose were correlated to tissues metabolites, suggesting that serum metabolites of EC can reflect the metabolic changes of tissues.
4. lysine and creatine were selected as the serum biomarkers for the screening of EC through the method of the Spearman correlation analysis and Metabolic Pathway Analysis, with sensitivity, specificity and AUC values 95.65%, 93.48%, 0.979, respectively. The cross-validation methods showed good diagnostic power.
Conclusions 1.The changes of these metabolites in EC may be involved in the disruption to the pathway of glycolysis, gluconeogenesis, TCA cycle, amino acid metabolism, SCFA metabolism, glutaminolysis, choline metabolism, energy metabolism.
2.The metabolic correlation between serum and tissue of EC suggests that serum metabolism can reflect the metabolic changes of cancer tissues, and provide the potential of serum metabolomic strategy as an effective method for screening EC.

腰骶脊神经根损伤 18F-FDG PET-CT 影像学表现

董志坚
西安高新医院

目的 探讨腰椎间盘突出致腰骶脊神经根损伤后 ^{18}F-FDG PET-CT 的影像学表现。**方法** 将明显腰椎间盘突出致腰腿痛患者 30 例作为观察组，正常志愿使用 ^{18}F-FDG PET-CT 体检者 30 例作为对照组，行腰骶脊神经根 ^{18}F-FDG PET-CT 检查，所有图像均经冠状位、矢状位重建和同层面 PET、CT 图像融合后处理，观察腰骶脊神经根走行，总结损伤神经根的 ^{18}F-FDG PET-CT 影像学特点及神经根与突出椎间盘、邻近组织的关系。然后采用 SPSS 19. 0 软件，利用配对 t-test 检验比较对照组 L_4、L_5 左右两侧神经根及观察组 L_4、L_5健侧与患侧神经根的 FDG 核素代谢 SUVmax 差异显著性。以 $P<0.05$ 为差异有统计学意义。**结果** 观察组 30 例患者存在不同程度的腰椎间盘突出，由此造成 30 根腰骶神经根受压损伤。其中，患侧神经根均呈 FDG 核素代谢增高（SUVmax4.30±0.16），且与健侧神经根核素代谢（SUVmax1.13±0.16）相比具有显著性差异（配对 t 检验，$P<0.05$）。此外，观察组健侧神经根和对照组双侧腰骶脊神经根（SUVmax1.13±0.09）FDG 核素代谢无增高，两者无显著统计学差异（配对 t 检验，$P>0.05$）。**结论** ^{18}F-FDG PET-CT 成像技术不但能观察腰骶脊神经根的形态学表现，而且能直观地判断腰骶脊神经根损伤与否，及受损神经根与责任椎间盘的关系。本研究为腰椎间盘突出致神经根损伤的诊断及治疗方案的确定提供了可靠依据。

Multifunctional Nanoparticles for the Detection and Treatment of Atherosclerotic Vulnerable Plaques

Man Ye[1], Jun Zhou[2], Yixin Zhong[2], Zhigang Wang[3], Dajing Duo[2], Yunfei Zha[1]
1. Renmin Hospital of Wuhan University
2. The Second Affiliated Hospital of Chongqing Medical University
3. Institute of Ultrasound Imaging, Department of Ultrasound, the Second Affiliated Hospital of Chongqing Medical University

Objective: Atherosclerosis is an important pathological basis for the occurrence and development of cardiovascular diseases. Vulnerable atherosclerotic plaques are prone to sudden rupture, leading to fatal events. In this study, we prepare a highly efficient, sensitive and specific multi-modal nanoparticle integrating diagnosis and treatment, for realizing the in vivo and non-invasive early identification of atherosclerotic vulnerable plaque, and early treatment of atherosclerotic vulnerable plaque at the molecular level.

Methods: Multifunctional Fe-PFH-PLGA/CS-DS NPs were constructed by improved double emulsification method and electrostatic adsorption method. The physicochemical properties of the NPs were characterized by dynamic light scattering detector, transmission electron microscopy, atomic absorption spectrometer, fourier transform infrared spectroscopy, confocal laser scanning microscope and flow cytometry analysis. Ultrasound and magnetic resonance imaging were performed to analyze the imaging properties of the NPs. RAW264.7 was extracted and cultured from mouse macrophages. The targeting ability of NPs to macrophages in vitro was preliminarily evaluated. The cytotoxicity of RAW264.7 was analyzed by CCK-8 method. To establish apolipoprotein E (ApoE) knockout (KO) (apoE-/-) mice model of atherosclerotic vulnerable plaque, the expression of SR-A receptor in vulnerable plaque was analyzed by pathological and immunohistochemical methods, and to explore the feasibility and accuracy of targeting diagnosis of atherosclerotic vulnerable plaque. To investigate the potential of NPs combined with low intensity focused ultrasound (LIFU) for phase change ablation of plaque in vitro and in vivo.

Results: The Fe-PFH-PLGA/CS-DS NPs were fabricated successfully, with the ability to undergo phase transition by LIFU irradiation to achieve US imaging; a high carrier rate of Fe_3O_4had a good negative enhancement effect on magnetic resonance imaging. The NPs had a high binding affinity for activated macrophages and could be endocytosed by the macrophages and notably induced apoptosis under LIFU irradiation by an acoustic droplet vaporization (ADV) effect in vitro. Furthermore, in an ex vivo atherosclerotic plaque model of apoE -/- mice induced by high cholesterol, the NPs selectively accumulated at the sites of SR-A expressed on the activated macrophages of the aortic region. This result was also confirmed by MRI in vivo, where the NPs could be targeted to the aortic plaque and reduced the T_2* signal. The LIFU-induced phase transition could lead to the apoptosis of macrophages on plaques in vivo.

Conclusion: The Fe-PFH-PLGA/CS-DS NPs may be applied as multimodal and multifunctional probes and are expected to enable the specific diagnosis and targeted therapy of vulnerable plaques.

应激相关内质网蛋白 1（SERP 1）在糖尿病大鼠颈动脉损伤后再狭窄中的 N-糖基化水平及其作用

冯丽帅
上海交通大学附属第六人民医院

目的 胰高血糖素样肽 1（GLP-1R）的活性是预防血管损伤后再狭窄的重要因素，但 GLP-1R 糖基化功能失调的机制和提高糖尿病患者血管表面 GLP-1R 活性的途径尚不清楚。本研究旨在探讨应激相关内质网蛋白 1（SERP 1）在糖尿病大鼠颈动脉损伤后再狭窄中的 N-糖基化水平及其作用。

方法 葡萄糖处理后大鼠主动脉内皮细胞（RAOECs）和大鼠血管平滑肌细胞（VSMC）的 N-糖基化水平以浓度依赖性的方式逐渐降低。此外，共免疫沉淀（CO-IP）分析表明，SERP 1 在 RAOECs 和 VSMC 中可能与 GLP1R 相互作用。此外，SERP 1 增强了 GLP1R N-糖基化，并增加了磷酸化内皮型一氧化氮合酶（eNOS）的产生以及 RAOECs 的增殖。

结果 Serp1 还增加磷酸化腺苷一磷酸活化蛋白激酶（AMPK），并降低血管平滑肌细胞的迁移。重要的是，在球囊损伤后，SPLP1 注射的糖尿病大鼠颈动脉内膜中层厚度（IMT）和内膜增生明显减轻。我们还发现增加内皮再内皮化和减少血管平滑肌细胞增殖在糖尿病大鼠颈动脉注射 SERP 1。

结论 SERP 1 在减轻血管损伤后再狭窄方面的显著作用可能有助于治疗糖尿病血管并发症的未来进展。

PU-1518
AMD 3100 联合 SDF-1 治疗对大鼠颈动脉内膜损伤模型的治疗作用及其相关机制探讨

蒋春雨
上海交通大学附属第六人民医院

本研究中我们评估了 AMD3100 及 SDF-1 对于血管损伤再内皮化以及抑制内膜过度增生的作用。并进一步评估了 CXCR4 和 CXCR7 受体在内膜修复过程中的作用。

方法 分别通过 CCK-8 以及 transwell 法评估了 AMD 3100 以及 SDF-1 治疗对于内皮干细胞的功能活性的影响。通过免疫荧光、western blot 以及流式细胞术分析了 AMD 3100 以及 SDF-1 治疗对于 EPC 细胞 CXCR4、CXCR7 表达以及胞内外蛋白表达的影响。在活体实验方面，我们评估了 AMD3100、SDF-1、AMD 3100 联合 SDF-1 治疗对于大鼠血管损伤模型的治疗效果，包括不同组之间内皮干细胞动员、归巢的情况，以及不同组之间对再内皮化以及抑制内膜过度增生的作用。

结果 AMD 3100 联合 SDF-1 治疗可以快速的动员内皮干细胞进入外周血中(108.5±2.1 VS 81±7.1, p=0.021)，促进内皮干细胞归巢至损伤部位(15.3±5.9 vs 9.0±3.9 cells/field, p=0.031)，从而有效的促进损伤血管的再内皮化(7 days: 54±5% vs 88±6%, p<0.001; 14 days: 89±6% vs 97±3%, p=0.01)，抑制内膜过度增生(7 days: 55±4% vs 21±7%, p<0.001; 14 days: 62±6% vs 26±5%, p<0.001)。

结论 AMD 3100 联合 SDF-1 治疗可以有效的动员、募集内皮干细胞进入损伤血管，并促进损伤血管内膜修复，抑制血管内膜的过度增生。

PU-1519
糖尿病（DM）诱导的内皮细胞 14-3-3β 与 DM 大鼠颈动脉内膜增生关系的研究

冯丽帅

上海交通大学附属第六人民医院

目的

本研究的目的是确定糖尿病（DM）诱导的内皮细胞 14-3-3β 上调（YWHAB）是否增加 DM 大鼠颈动脉内膜增生。

方法

用细胞计数 KIT-8（CCK-8）、定量逆转录 PCR（QRT-PCR）和 Western blot 分析在不同葡萄糖浓度（5.6、10, 15, 25、或 35 毫米）处理的细胞中检测 YWHAB 表达和大鼠主动脉内皮细胞（RAOEC）活力。在体内实验中，通过尾静脉将 YHAAB 小干扰（SI）RNA 重组慢病毒载体（YWHAB-LV）或模拟 siRNA 重组慢病毒载体（模拟 LV）注射到链脲佐菌素诱导的 DM SD 大鼠中。用免疫荧光法（IF）和 hematoxylin eosin（HE）染色对损伤后 7 天的 YWHAB 表达和颈动脉形态学进行评估。用细胞划痕试验和流式细胞术检测了 25 mm 葡萄糖处理的模拟 LV 和 YHAAB LV 感染的 RAOECs 的增殖和迁移。用 IF 染色和 Western blot 分析检测用 25 mM 葡萄糖处理的 RAOECs 中 BCL2 相关的 X（Bax）分布。

结果

Western blot、qRT-PCR 和 CCK-8 分析表明，随着葡萄糖浓度的增加，YWAB 表达和细胞活力均增加（P＜0.05）。YWAB 与正常对照组相比，DM 大鼠染色增强（P＜0.05）。HE 染色显示 YWHAB 沉默 DM 大鼠内膜增生减轻（P＜0.05）。YWAB 沉默抑制 25 mM 葡萄糖对 RAOECs 增殖和迁移的影响（P＜0.05）。Western blot 和 IF 染色结果显示，YWAB 沉默可使 25 毫米葡萄糖处理的 RAOECs 细胞中 Bax 从胞浆向线粒体迁移（P＜0.05）。

结论

结果表明，高血糖诱导内皮细胞上调 YWHAB，可促进颈动脉损伤后内膜增生，促进内皮细胞增殖和迁移。YWHAB 抑制在高血糖患者中可能通过预防再狭窄成为治疗干预的潜在靶点。

PU-1520
基于超小锰掺杂氧化铁纳米粒的 T1/T2 双相 MR 成像研究

肖仕林,张冬
陆军军医大学第二附属医院（重庆新桥医院）

目的 MRI 以其高软组织分辨率和高安全性的优势，在影像诊断中占据重要地位。有研究表明，传统的单一 T_1 或者 T_2 成像都具有一定的局限性，而 T_1/T_2 双相成像则能弥补这些缺陷并获得优异的诊断图像，为临床诊断提供更充足的信息。虽然当下一些研究者发现并构造了一些双相成像的对比剂，但这些对比剂通常只是一个简单的杂合，并且只有一种成像模式效果理想，而另外一种则差强人意。因此，我们实验室想寻找一种更好的 T_1/T_2 双相对比剂。 锰掺杂氧化铁纳米粒（Mn-IONPs）具有高组织相容性和比氧化铁纳米粒更高的饱和磁化强度，有研究还明确表示其粒径很小时（<5nm）会表现出很强的 T_1 增强效应。于此同时，有研究表明表面修饰也是一个可以改善纳米粒成像性能的重要途径。基于此，我们实验室对 Mn-IONPs 表面修饰进行探索研究，希冀构造出一种优异的双相对比剂。**方法** 我们根据 Huan Zhang 团队的研究，运用高温热解法合成 Mn-IONPs。在此基础上，我们用二硬脂酰基磷脂酰乙醇胺-聚乙二醇（DSPE-PEG）包覆 Mn-IONPs，并通过控制 DSPE-PEG 与 Mn-IONPs 的用量构造出了一系列的对比剂。然后，我们进行了体外和体内的 MRI 扫描，进行了细胞毒性验证。**结果** TEM 检测发现，粒径均一，平均为 3nm，形态规整，呈球形；XRD 检测图像符合标准卡片；MRI 扫描发现，用不同量的 DSPE-PEG 与 Mn-IONPs 构造出的对比剂具有不同的成像性能，随着 DSPE-PEG 用量的增加，其 T_1 效能增强，T_2 效能会减弱，其中质量比 DSPE-PEG:Mn-IONPs = 20:1 的对比剂是比较理想的双相对比剂，具有良好的驰豫效能（r_1 = 7.1 mM^{-1} S^{-1}, r_2 = 120.9 mM^{-1} S^{-1}）。**结论** 我们以超小的 Mn-IONPs 作为核心，通过合适的表面修饰，构造出了性能比较理想的双相对比剂。

高分辨率显微线圈磁共振成像及动态增强定量参数在皮肤占位性病变中的诊断与鉴别诊断价值

唐梦晓
苏州大学附属第一医院

【摘要】目的 探讨术前高分辨显微线圈动态增强磁共振成像（DCE-HRMRI）在皮肤占位性病变中的诊断与鉴别诊断价值。**方法** 前瞻性收集 2018 年 6 月至 2019 年 7 月苏州大学附属第一医院临床怀疑皮肤占位性病变的患者 40 例，均于术前 1-3 天内运用直径约 70mm 的显微线圈行 HR-MRI 平扫及动态增强扫描，最终经手术病理证实且临床及影像学资料完整的患者有 32 例，纳入本次研究样本，其中良性皮肤肿瘤 13 例，恶性皮肤肿瘤 19 例。应用 Tofts 模型获得每位患者病灶的灌注参数，包括容积转移常数（K^{trans}），运动速率常数（K_{ep}），血管外细胞外容积分数（V_e），对比皮肤良恶性占位的 K^{trans}、K_{ep}、V_e，并计算界值、敏感性以及特异性，另分析二者时间信号强度曲线（TIC）类型。**结果** 皮肤恶性占位的 K^{trans} 及 V_e 均显著高于良性占位（$P<0.05$）。K^{trans} 界值为 $0.707min^{-1}$，敏感性 93.8%，特异性 76.9%；V_e 界值为 $0.479min^{-1}$，敏感性 75.7%，特异性 58.9%。恶性肿瘤以 III 型曲线为主（17/19）；良性肿瘤以 I 型曲线（10/13）为主，两者差异具有统计学差异（$P<0.05$）。**结论** 高分辨显微线圈动态增强磁共振成像在皮肤占位性病变中具有较高的诊断与鉴别诊断价值，值得在临床进一步推广应用。

PU-1522

Emerging Delivery Strategies of Carbon Monoxide for Therapeutic Applications: From CO Gas to CO Releasing Nanomaterials

Haili Yan,Hui Zhang
The First Hospital of Shanxi Medical University

Carbon Monoxide (CO), a colorless and odorless gas, has been mainly considered as an environmental pollutant or a ‘silent killer’ owing to its high affinity for haemoglobin for a long time.[1-3] Until 1968, Tenhunen et al. identified haem oxygenase (HO) as the enzyme responsible for haem catalysis, which leads to the production of intracellular CO.[4] CO is now reconsidered as a versatile signaling molecule in the mammalian system sharing similar biological activities with nitric oxide (NO) and hydrogen sulfide(H_2S).[5] Currently, CO has been demonstrated to orchestrate significant biological effects including vasorelaxation, anti-thrombotic, anti-inflammatory, anti-microbial, anti-apoptotic, and anti-proliferative effects.[3, 6] These intriguing biological activities from CO presented in numerous pre-clinical studies in animals have spurred tremendous research interests of developing CO-based therapy for various diseases, such as ischemia/reperfusion injury, organ transplantation, inflammation, sepsis, microbial infection, and cancer.[3, 5-12] Compared to those clinical viable gas therapeutics such as NO, CO process many advantages 1) unlike NO that interact indiscriminately with several intracellular targets, CO reacts preferentially and almost exclusively with metal-containing targets 2) CO is more stable than those of NO and H_2S due to its inherent chemical reactivity 3) It is more flexible and versatile for the development of CO-based pharmaceuticals

because CO primarily targets metals with a specific redox state such as Fe, Ru, Mn, Re and Mo.[3, 13-14] However, despite of these merits of CO, its *in vivo* application is still highly challenging because of the difficulties in handling and delivering CO gas.[3] For instance, inhalation of a gas mixture containing CO is the most direct and simplest source of exogenous CO. Nevertheless, owing to the strong affinity of CO for haemoglobin, highly concentrated CO gas may cause severe side effects.[1] In addition, this approach suffers from a lack of target selectivity and dosage control, which may cause undesirable toxic effects. Thus, the development of CO delivery system for avoiding the above-mentioned shortcomings is highly desirable. For this purpose, transition-metal carbonyl complexes or boranocarbonate compounds as CO releasing molecules (CORMs) represent a promising alternative for the safe and controlled delivery of CO.[14-17] These compounds could release CO in a spontaneous way or triggered by exogenous/endogenous stimuli, such as light, heat, H_2O_2, enzyme, pH or other factors.[5, 18-20] However, the utilization of low-molecular-weight CORMs as therapy agents remains several problems. That is, low solubility in water, short CO-releasing half-life, potential toxicity derived from metal ions, poor accumulation in the target tissue and the lack of on-demand CO release in deep tissue.[5, 18]

Advanced nanomaterials hold the great attention in the field of drug delivery because of their unique characteristics, such as enhanced solubility and stability of the drug, high drug payload, low toxicity, pronounced biocompatibility and specific drug delivery via passive (enhanced permeability and retention, EPR) or active targeting effect.[21-25] Therefore, the innovative integration of nanomaterials with various types of CORMs has emerged as a promising strategy to conquer the aforementioned drawbacks and simultaneously realize the therapeutic application of CO. On the one hand, nanomaterials allow for the loading of hydrophobic CORMs through covalent bond or noncovalent adhesion, thus resolving typical solubility issue and efficiently enhancing the pharmacokinetic properties.[26-28] Particularly, the use of porous nanomaterials and macromolecular scaffolds can not only enhance the payload of water insoluble CORMs, but also efficiently trap the potentially toxic metal fragments, which prevents possible side effects occurring.[26, 29-31] On the other hand, nanomaterials can be used as targeted CORMs delivery and controllable CO release.[5, 18, 22] The EPR effect and active targeting effect of nanomaterials are feasible for the enrichment of low-molecular-weight CORMs at disease site.[27, 32-33] This can greatly improve the bio-distribution and bio-availability of bare CORMs, and minimize their side-effects in healthy tissue. Additionally, many nanomaterials frequently show unique optical, electronic, and magnetic field responsive properties, which allow them to response to special stimuli to induce gas release.[34-40] For example, to avoid phototoxicity and the limited penetrability of UV, the NIR-sensitive nanoparticles with the capacity of transferring NIR light energy into chemical or thermal energy are used as carriers of photo-activated CORMs (termed photoCORMs) to mediate the controlled release of CO within the ideal wavelength range.[35-36, 38, 41] Therefore, nanomaterial-based CORMs are attractive candidates for the precise delivery and controllable release of CO. Within this context, there has been an enormous effort in designing and developing CO-releasing platform based on versatile nanomaterials, and significant progress has also been achieved in some biomedical applications.[18-19, 42]

Herein, we briefly introduce the main therapeutic roles and underlying functional mechanisms of CO as a viable medicinal agent in some disease models. Then, we address

several kinds of low-molecular-weight CORMs based on transition-metal or boron, which have been widely used for investigating physiological functions and therapeutic application of CO but still suffer from some inevitable drawbacks. Furthermore, we concentrate our discussion mainly on recent advancement in the synthesis of versatile CO-releasing nanomaterials which have been applied to overcome the drawbacks associated with CORMs. And we also emphasize the potential therapeutic effects of CO-releasing nanoplatforms in several diseases. Finally, the possible strategies for the development of CO releasing nanomaterials, and potential future directions for therapeutic applications of this important technology are discussed.

PU-1523

1H-NMR Spectroscopy and Pattern Recognition to Identify the Serum and Tissue Metabolic Biomarkers for Colorectal Cancer

Huanian Zhang, Jiayun Zhao, Wan Tang, Ting Ouyang, Yan Lin
Second Affiliated Hospital, Shantou University Medical College

Introduction Colorectal cancer (CRC) is the third most common cause of cancer death worldwide[1]. CRC is often diagnosed at its later stage due to its inconspicuous symptoms. Currently, the most commonly screening method for CRC is serum tumor biomarkers, fecal occult blood test (FOBT), colonoscopy etc[2].Because of the limited sensitivity and specificity of serum tumor markers and FOBT and the invasive colonoscopy combined with histopathological examination,it' s essential to find a non-invasive and convenient method for early diagnose in CRC.In this experiment, metabolomics based on 1H-NMR spectroscopy and pattern recognition was used to profile the paralleled metabolites of CRC tissues and adjacent non-cancerous tissues alongside pre-operative serum samples from the same patients, to investigate how serum metabolomic phenotypes correlate with those of the tumor tissue, as well as to trace specific disturbed metabolic pathways across colonic tissues and serum.

Methods Colorectal cancer tissue (CCT), adjacent noncancerous tissue (ANT, ~5 cm away from the tumor), as well as preoperative serum samples were collected from 55 CRC patients. Serum samples from 50 healthy controls(HCs) were also collected. All the CRC tissues and serum samples were detected by 400MHz NMR, and the OPLS-DA model was used for pattern recognition analysis to identify the characteristic biomarkers of CRC tissues and serum. The Spearman correlation analysis was further employed to assess the associations of biomarker candidates between tissue and serum, so as to find the best biomarkers in serum that can reflect the metabolic changes of tissues. To further evaluate the diagnostic power of the potential biomarkers, receiver operating characteristic (ROC) analysis and cross-validation methods were carried out.

Results Compare with healthy controls, serum samples in CRC showed higher levels of acetate, glutamate, glutamine, succinate, citrate, glucose ($p<0.05$), as well as lower levels of leucine, isoleucine, valine, lactate, alanine, creatine, my-inositol, lysine ($p<0.05$). Compared with ANT, CCT exhibited higher levels of lactate, alanine, valine, leucine, isoleucine, glutamate, choline, taurine, succinate ($p<0.05$), and lower levels of glutamine, creatine, glucose, my-inositol ($p<0.05$).Pearson correlation

analysis showed that lactate, glutamate and succinate in CRC serum were correlated with creatine and my-inositol in CCT. Combination of the above three serum metabolites showed good diagnostic efficiency for distinguishing CRC from HCs, with the sensitivity, specificity and area under the peak of ROC curve (AUC) of 78.95%, 92.11% and 0.870, respectively.

Conclusions The serum and tissue metabolite levels of CRC were changed compared with their respective controls, suggesting that the rapid proliferation of CRC cells may lead to perturbations of metabolic pathways, including but not limited to, the disruptions of carbohydrate metabolism, TCA cycle and fatty acid metabolism.The correlation between CRC serum and tissue candidate metabolites suggests that the serum metabolic phenotype of CRC can reflect the changes of metabolites in CRC tissues, which provides valuable metabolic information for early screening of CRC.

PU-1524

双模活体示踪内皮祖细胞移植治疗缺血性脑卒中的实验研究

丁洁
东南大学附属中大医院

研究目标：本项目拟以带有荧光素酶-增强型绿色荧光蛋白的慢病毒载体和超顺磁性氧化铁双标记内皮祖细胞，标记细胞移植治疗缺血性脑卒中的小鼠模型。在活体内通过生物发光和高场强的 7.0T 的磁共振双模成像示踪移植治疗后内皮祖细胞的时空分布、增殖分化、转归等生物学行为，为细胞移植治疗缺血性脑卒中方案的优化、条件选择提供实验依据。

研究**方法** 用携带双报告基因的慢病毒粒子感染新生儿脐带血中分离培养出 hEPCs 得到单标记的细胞（V-hEPCs），将 10^6 个 V-hEPCs 分别经左心室和经尾静脉途径移植到小鼠卒中模型中， BLI 监测不同时间点移植细胞的归巢情况。用携带双报告基因的慢病毒粒子和 SPIONs 先后标记 hEPCs 得到双标记的细胞（D-hEPCs），在卒中小鼠中通过经左心室途径输注 D-hEPCs 后进行 BLI 和 MRI 的活体示踪监测。在细胞移植前以及细胞移植后不同时间进行神经功能评分；并采用 MR T2WI 扫描评价病灶大小；组织学染色检测 MBP 新生、神经发生等变化。

研究**结果** BLI 显示经尾静脉途径与经左心室途径输注 V-hEPCs，均能够归巢到卒中小鼠的缺血脑组织，但经左心室途径输注细胞的归巢能力明显强于经尾静脉途径的移植方式。通过 BLI 和 MRI 可活体示踪 D-hEPCs 经左心室途径在卒中小鼠中的转归，脑组织病理切片染色可见梗死灶周边有普鲁士蓝染色阳性、GFP 染色阳性细胞，说明 D-hEPCs 的归巢于缺血组织。神经功能评分和 T2 扫描测定梗死灶的大小提示 D-hEPCs 移植能够减少卒中小鼠的行为学缺陷并且减少脑梗死灶的大小。在 D-hEPCs 移植组，脑组织梗死灶大小、神经新生、髓鞘新生等明显强于 PBS 对照组（$p < 0.05$）。

结论 EPCs 可作为缺血性 nao 卒中移植治疗的潜在备选细胞。

PU-1525

Mn02 coated Biodegradable Stent as pH/H202 Responsive Scaffold to Modulate Hypoxia for Effective Photodynamic Therapy

Junyuan Xiao
Shanghai Jiao Tong University Affiliated Sixth People's Hospital

Objective: Construction a kind of MnO2 coated Ce6 PCL fiber with the ability of inhibiting tumor, further, the capability of this biodegradable stent in terms of technical feasibility and treatment effect was investigated through subcutaneous tumor model of the nude mice in situ.

Methods: In the present study, small molecule chlorine e6(Ce6) was embedded in PCL fibers by Electrospinning method with or without MnO2 coating on the surface of the fiber 1. MTT assay was carried out to explore cell killing efficacy on ECA-109 cell line after incubated with the fibers and confocal imaging was used to reveal the ROS generation. Live/dead staining was performed for the aim of investigating the cell-killing ability of photosensitizer embedded PCL fiber. In nude mice tumor model, Ce6 embedded stent with or without MnO2 coating was implanted below the tumor side and both tumor volume and weight of nude mice was recorded for up to two weeks. In order to further investigate the hypoxia ameliorating ability of MnO2 coated Ce6 stent, hypoxyprobe immunofluorescence assay was employed on tumor slices. Apoptosis of the tumor was determined by TUNEL staining2.

Results: MTT assay and confocal imaging exhibited that MnO2 coated Ce6 fiber is superior to other groups in cell killing efficacy and ROS generation. Furthermore, live/dead staining showed that MnO2 coated Ce6 fiber group has better cell killing ability in comparison with other groups. In vivo results revealed that the tumor growth on nude mice was significantly inhibited after MnO2 coated Ce6 fiber implantation and 660 nm3 laser irradiation, indicating remarkably improved therapeutic efficacy compared to various control groups. According to the result of Hypoxyprobe immunofluorescence assay, we observed obviously reduced green fluorescence (pimonidazolestained hypoxia) in the tumor slices of mice treated with MnO2 coated Ce6 stent in comparison with that of the control groups, which indicates that the tumor hypoxia was successfully relieved. TUNEL staining also showed that tumor slices from mice treated with MnO2 coated Ce6 stent has a greater proportion of apoptosis dyeing.

Conclusion: The MnO2 coated Ce6 stent was feasible for treatment of esophageal cancer because of its ability to relieve hypoxia environment of tumor for enhanced photodynamic therapy.

PU-1526
基于 SPIO 的间充质干细胞在脊髓损伤与修复中应用的 MR 实验研究

麦筱莉,邹俊婷
南京大学医学院附属鼓楼医院

目的： 探讨瑞存标记脐带间充质干细胞的可行性和安全性；探讨标记干细胞移植应用于比格犬脊髓损伤模型、MR *示踪的可行性。*

方法： 以不同浓度的瑞存-PLL(SPIO)标记间充质干细胞，普鲁士蓝染色、电子显微镜观察细胞内铁，四氮噻唑蓝(MTr)比色试验比较未标记、标记细胞间生长曲线的差异，流式细胞分析检测标记、未标记细胞的细胞周期变化、细胞凋亡、表面标记物表达情况，ICP *定量细胞内铁；模型制作当时将标记细胞局部移植，模型比格犬（ｎ ＝ 6）及对照组（ｎ ＝1）体内，移植后第 3、７ 、14、21、28 天应用ＭＲ 观察脊髓信号改变情况。行* HE、普鲁士蓝、ＣＤ90、CD68 *免疫组织化学检查，并将ＭＲ 所见与病理切片行对照分析。实验所得数据，计量资料多组比较采用方差分析，两组间比较采用两样本* t *检验。*

结果： SPIO 对细胞的标记率接近 100％，铁颗粒位于细胞质内，瑞存标记不影响间充质干细胞的生物学特性，200ug/mL 是最佳的标记浓度，其生长曲线、细胞周期、细胞凋亡、表面蛋白表达等与未标记细胞相比，差异无统计学意义（P 值均>0．05）；比格犬脊髓损伤模型可稳定制作，移植标记的间充质干细胞至损伤局部后，细胞迁移至损伤部位上下段，以下段为主，MR 多参数成像可示踪移植的标记细胞，低信号呈点状、条带状，梯度回波序列最敏感。随着观察时间延长，信号改变程度减低，DTI *可半定量脊髓损伤后白质纤维束的修复情况，病理证实标记细胞归巢至损伤部位周围，沿脊髓中央管旁分布。对照组比格犬ＭＲ 成像未见明显低信号改变。*

结论： 200ug/mL 对脐带间充质干细胞的标记率接近 100％，并且对细胞的生物学特性无明显影响，可用于进一步 MRl 的研究。标记细胞可归巢至损伤脊髓上/下缘，临床应用型 3.0T *ＭＲ 可对其进行动态观察。*

颅内动脉瘤介入术后不同显影方式 对密网支架显影效果对比分析

黄瑛,徐剑峰,刘阳,欧宁,陈善琴,刘藻滨,曹辉,何兴,王童,田义
绵阳市第三人民医院/四川省精神卫生中心

目的 探讨不同显影方式对动脉瘤治疗后密网支架显影的质量。**方法** 回顾分析我院 2018 年 5 月至 2019 年 6 月期间 5 例以密网支架（Tubrige 及 Pipeline）治疗的动脉瘤患者资料。在西门子 Artis Zeego 机器辅助下进行，患者支架释放后以三种不同造影方式进行影像扫描及重建评估。一、双容积重建组：参数设置及流程：选用 5S DSA Head 程序扫描靶血管，采用碘克沙醇造影，在 Syngo 工作站内使用 Dual Volume with Moco 模式进行双容积重建后处理，得到双容积成像图像。二、1:3 造影剂组：参数设置及流程：选用 20S DSA Head 扫描靶血管，配置并抽取 1:3 稀释比例的造影剂，颈内动脉设置为流速 3ml/s,液量 60ml，压力限制 150psi，X-ray 延迟设置为 1.5s 后进行扫描，在 Syngo 工作站内使用 Auto 3D 模式成像，调整窗宽窗值至支架显示的最佳状态。三、1:5 造影剂组：造影剂选用 1:5 稀释比例的造影剂，扫描流程同 1：3 稀释浓度。评价指标：密网支架及血管显示均较好评为 1 级；支架显示好，血管显示差评为 2 级；支架显示较差、血管显示好评为 3 级。**结果:在** 1:5 浓度组中，对 4 例患者密网支架显示评级为 1 级，1 例 Tubridge 显示评级为 2 级；在 1:3 组中，对 2 例 Pipeline 患者密网支架显示评级为 1 级，对 3 例 Tubridge 患者密网支架显示评级为 2 级；在双容积重建组中，对 1 例 Pipeline 患者密网支架显示评级为 2 级，其余 4 例患者密网支架显示评级为 3 级。**结论** 密网支架越来越多在临床得到使用，经过初步试验我们发现 20S DynaCT Head 较双容积重建技术能更好的显示密网支架影像，其中以 1:5 造影剂浓度能取得更优显影效果，能更好的了解密网支架在载瘤动脉中的位置及贴壁情况，值得推广。

PU-1528
颈动脉支架成形术规范化操作流程

周林
重庆市陆军军医大学大坪医院

目的 分析探讨颈动脉支架成形术的规范化操作对治疗颈动脉狭窄的安全性。**方法** 分析 24 例颈动脉狭窄支架治疗并发症的发生情况。**结果** 颈动脉支架释放成功术后症状恢复满意，无 1 例患者出现脑梗塞、脑出血等严重并发症 。**结论** 颈动脉支架成形术的规范化操作在治疗颈动脉狭窄时能有效防止相应并发症的发生。

PU-1529
颅内脑膜瘤复合介入手术一期治疗临床分析

徐剑峰,刘阳,曾令勇,张波,刘藻滨,曹辉,何兴,王童
绵阳市第三人民医院/四川省精神卫生中心

目的 探讨脑膜瘤一期复合介入手术治疗技术及临床疗效。**方法** 回顾分析我院 2016 年 3 月至 2018 年 9 月收治的 6 例一期行供瘤血管介入栓塞术及开颅手术切除术的颅内脑膜瘤患者资料。患

者均术前行头颅 CT 及头颅增强磁共振检查确诊为颅内脑膜瘤。6 例病例中，最大径大于 7cm 的巨大脑膜瘤有 2 例，根据部位不同有额部凸面脑膜瘤 1 例，颞部凸面脑膜瘤 1 例，额颞部凸面脑膜瘤 3 例，额颞部蝶骨嵴脑膜瘤 1 例，均在复合手术间实施一期治疗。治疗时均采用气管插管全麻，右侧股动脉穿刺置鞘，首先行全脑血管造影（DSA）检查评估肿瘤供血动脉情况，确认颈外动脉参与肿瘤供血，无危险吻合血管。后置入 6F 导引导管，路图模式引导下，微导丝导引，2.7F 微导管超选择性到达脑膜中动脉参与肿瘤供血各分支血管，再次选择性造影评估，后注射混合有造影剂的 300-500um 或 500-700um 栓塞微粒球，观察有无造影剂停滞或者反流现象。术中造影评估栓塞满意后即刻开颅肿瘤切除手术。**结果** 6 例患者均成功一期实施肿瘤供血动脉的颈外动脉供血支栓塞治疗及肿瘤切除手术。术中造影 6 例患者中根据 Manelfe 分型有Ⅰ型 1 例，Ⅱ型患者 4 例，Ⅲ型患者 1 例。其中 1 例Ⅲ型患者仅选择性栓塞一支较小颈外动脉的肿瘤供血动脉，给予输血治疗，其余患者均未输血治疗。手术中切除肿瘤程度按照 Simpson 分级有 1 级者 3 例，2 级者 2 例，3 级者 1 例，4 级者 1 例。术后其中 1 例巨大脑膜瘤患者发生术区再次出血脑疝形成，再次行开颅减压手术，康复治疗后病情好转，6 月随访 GOS 达 3 分，其余 5 例患者随访 3 个月～1 年恢复良好，GOS 评分均达 5 分，未见明确复发征象。 **结论** 颅内脑膜瘤术前造影评估并实施颈外动脉供血分支介入栓塞术，降低了手术风险，传统方式往往分两期实施。复合手术间的出现为一期实施肿瘤供血动脉介入栓塞术及开颅脑膜瘤切除术提供了条件，降低患者手术出血风险的同时提高治疗的有效性及安全性。

PU-1530
脑血管支架介入手术过程中测量参数设置的探讨

王亚勋,周素军
武汉大学中南医院

目的 探讨脑血管支架介入手术过程中以造影导管及导引导管的实际尺寸设置测量参数，测量靶血管的误差，修正后精确设置导管尺寸，为经后术中精确选取支架尺寸提供可靠依据；**方法** 回顾性分析我院神经内科 2018 年 6 月-2019 年 5 月 53 台在飞利浦 FD20 设备上脑血管支架介入手术的影像资料，分别以 5Fr 造影导管，6Fr 或 8Fr 导引导管造影剂出现在屏幕之前的导管头端外径为依据，设置测量参数，测量造影剂充盈后靶血管狭窄部位近远端尺寸,在放入球囊扩张导管或支架导管后进行设置测量，根据球囊扩张导管或在支架打开之前支架的 MARK 点之间的距离，重新测得造影导管的直径，根据所得导管直径重新测量造影剂充盈后靶血管狭窄部位尺寸，将两次测量所得数据进行比较，并对支架置入术后造影结果进行评价。**结果** 以造影导管为设置参数和以球囊扩张导管或支架的 MARK 点间距离为设置参数所得到的造影导管的直径尺寸不一致，以 MARK 点间距离为设置参数，所得的支架尺寸更准确，靶血管贴合更好。**结论** 在脑血管介入手术过程中，经过进行校准后的测量参数设置更精确，有利于脑血管支架患者获得最大受益。

PU-1531
老年脑梗塞患者实施康复护理的认知及预后的影响分析

郭喜玲
河南省人民医院

【摘要】目的 探讨对老年脑梗塞患者采取康复护理干预对于认知以及预后的临床影响。**方法** 抽取我院在 2018 年 1 月~2018 年 12 月收治的 104 例老年脑梗塞患者进行对比研究，根据数字随机表

法将其分为康复组和常规组，各为 52 例患者。康复组应用康复护理方案，常规组应用常规护理方案，观察两组患者的临床资料，并且对比康复组和常规组各项功能的改善情况以及护理满意度。**结果** 康复组的肢体功能、神经功能以及日常生活能力等指标均优于常规组，康复组的护理满意度（90.25±4.12）分显著高于常规组（82.31±5.37）分，且对照均存在 P＜0.05，有统计学上的意义。**结论** 对老年脑梗塞患者采取康复护理干预，对于改善患者日常生活能力、肢体功能以及语言功能的效果十分显著。

PU-1532
不同年资护士在护患纠纷中的心理应激比较分析

刘紫姗,刘真亚
河南省人民医院

摘要 目的 探究不同年资护士在护患纠纷中的心理应激。**方法** 此次研究选取的研究对象为发生护患纠纷护士共 80 例，根据护龄进行分组分为 A 组与 B 组，每组各 40 例，A 组由低于 10 年护龄护士组成，B 组由超过 10 年护龄护士组成，使用心理应激调查问卷进行调查，分析心理应激情况。**结果** 比对两组护士的负面情绪，A 组均高于 B 组，组间差异呈 P<0.05。**结论** 在护患纠纷中，低护龄护士缺乏社会经验与工作经验，极易产生负性情绪，表现为愤怒、恐惧、委屈、抑郁、焦虑等。在护患纠纷发生以后，护士需加强心理应激对策的构建，及时调整个人不良情绪，预防护患纠纷。

PU-1533
脑动静脉畸形的护理

王媛媛,冯英璞
河南省人民医院

总结介入栓塞手术治疗 92 例脑动静脉畸形的护理经验。护理要点:术前了解有无癫痫发作史、有无出血倾向、有无手术禁忌症，心理护理及术前准备，术后预防并发症：脑出血、伤口出血及血肿，进行术后心理护理。患者均治愈出院。

PU-1534
对侧颈动脉闭塞患者颈动脉支架成形术围手术期护理分析

郭晓慧,冯英璞
河南省人民医院

目的 探讨对侧颈动脉闭塞颈动脉支架成形术围手术期护理分析。**方法** 对颈动脉支架成形术治疗的同侧颈动脉狭窄、对侧颈动脉闭塞的 11 例患者的临床资料进行回顾性分析。11 例患者，男性 9 例，女性 2 例，年龄 45～73 岁，使用 7 或 8F 导管鞘配合 0.035 泥鳅导丝（Terumo,Somerest,NJ）及 5F 造影导管，将长鞘放置于狭窄侧颈动脉近心端；小心通过狭窄段血管，将脑保护伞放置于病变远端颈内动脉颅外段平直处，选择较小规格球囊进行快速扩张，球囊选取标准是（狭窄远端血管直径+狭窄近端血管直径）/2×0.75；如狭窄节段较长，则分段多次扩张；在路途及透视引导下将支架系统放置于病变部位，根据狭窄局部改善情况选择是否进行后扩张。回收保护伞，并撤出导管，术后常规局部加压包扎，围手术期护理配合。**结果** 11 例患者经手术和护理配合，手术均获

成功，术后残余狭窄 0～30%，平均残余狭窄 15%±8%。术后 10 例患者自诉症状减轻，1 例加重。术后加重患者经磁共振证实为新发梗死，经药物治疗后好转出院。**结论** 支架成形术治疗对侧颈动脉闭塞患者的颈动脉狭窄患者是安全的，围手术期护理观察极为重要。

PU-1535
颈内动脉支架术后再闭塞后急诊再通过程中支架变形一例病例报道

郝泽宇
吉林大学第一医院

背景：支架内再闭塞为 CAS 术后并发症之一，且可能引起急性缺血性卒中。
方法 详细报道我中心一例 CAS 术后再闭塞急诊再通过程中支架变形的病例。病例资料：患者 CAS 术后 9 天后因支架内再闭塞引起急性缺血性卒中，行急诊再通术过程中由于负压抽吸力度较大发生支架严重变形，解除负压后支架形态恢复。支架内再通后行同侧大脑中动脉取栓术后完全再通。
结果 支架变形恢复后血管再通成功。
结论 CAS 术后支架内再闭塞可为急性缺血性卒中的原因之一；对于 CAS 再闭塞手术过程中，支架内的负压抽吸避免力度过大，从而降低支架变形的风险。

PU-1536
颅内动脉瘤介入术后不同显影方式 对密网支架显影效果分析

黄瑛,徐剑峰,刘阳,欧宁,陈善琴,刘藻滨,曹辉,何兴,王童,田义
绵阳市第三人民医院/四川省精神卫生中心

目的 探讨不同显影方式对动脉瘤治疗后密网支架显影质量的对比，评估密网支架的位置及贴壁情况。**方法** 回顾分析我院神经外科 2018 年 5 月至 2019 年 6 月 5 例以密网支架治疗的动脉瘤患者资料。全部患者均在术前确诊为颅内动脉瘤，并行密网支架置入术。每例患者支架释放后以三种方式进行影像扫描及重建评估。一、双容积重建组：选用 5S DSA Head 扫描，使用 Dual Volume 模式进行双容积重建。二、1:3 造影剂浓度 20sDynaCT Head 扫描组：选用 20sDynaCT 扫描，配置并抽取 1:3 稀释比例的造影剂，使用 Auto 3D 模式成像，调整窗宽窗值至支架显示的最佳状态。三、1:5 造影剂浓度 20s DynaCT Head 扫描组：选用 1:5 稀释造影剂，余同上。评价指标：两名副主任医师以上共同阅片，密网支架及血管显示均较好评为 1 级；支架显示好，血管显示差评为 2 级；支架显示较差、血管显示好评为 3 级。**结果**:5 例动脉瘤密网支架治疗术中，用 1:5 造影剂扫描后，4 例患者密网支架显示评级为 1 级，1 例显示评级为 2 级；用 1:3 浓度扫描后，对 2 例密网支架显示评级为 1 级，对 3 例密网支架显示评级为 2 级；在双容积重建组中，对 1 例密网支架显示评级为 2 级，其余 4 例患者密网支架显示评级为 3 级。对三种方式进行对比分析，20S DynaCT Head 扫描较双容积重建成像对密网支架显示较好，1:5 浓组度较 1:3 浓度组对密网支架及血管显示效果更好。**结论** 动脉瘤微创介入治疗已成为大多数患者的首选治疗方法，密网支架越来越多在临床得到使用，支架的释放位置、是否充分释放及贴壁性是评估密网支架治疗效果的重要方面。经过初步试验我们发现 20S DynaCT Head 较双容积重建技术能更好的显示密网支架影像，其中以 1:5 造影剂浓度能取得更优显影效果，能更好的了解密网支架在载瘤动脉中的位置及贴壁情况，值得在临床推广。

3D-DSA 和 Dyna CT 双容积重建影像对血管内支架的显示价值

张祥海,王晓峰,李君,周林
陆军军医大学大坪医院

目的　比较三维旋转造影（3D-DSA）和 20s-DR Dyna CT 重建影像对血管内支架显示的差异。

方法　2015 年 5 月—2018.12 月期间，回顾性随机收集介入手术中植入颅内支架后分别作了 3D-DSA 或 20s-DR Dyna CT 的病人各 15 例，其中男 16 例，女 14 例，年龄 41-66 岁。3D-DSA 造影时，造影管超选到颈内动脉，造影剂速率 4 ml/s, 剂量 24ml, 压力 150 psi，曝光延时 1 秒，采集的 3D-DSA 数据作双容积透明影像重建。20s-DR Dyna CT 扫描时，造影管超选到颈内动脉，造影剂速率 2 ml/s，剂量 50ml（造影剂经生理盐水 1:7 剂量稀释），压力 150 psi，曝光延迟 5 秒，采集数据先作双容积重建后再选择 MIP 重建。对比两组重建图像支架标记点显示数目和血管内支架显示的完整程度。当支架 100%完整显示时，我们评价为 1，如果图像上支架的显示不完整，由两名手术医师共同评估支架能显示出的比例，用百分数表示。

结果　3D-DSA 和 20s-DR Dyna CT 重建影像上显示的支架标记点分别是 105 和 96，SPSS 17.0 统计学软件进行统计学分析，结果存在统计学差异（T=4.89，P<0.05）。支架的完整性比较，两者分别是 38±5%和 82±4%，结果存在统计学差异(T=9.20，P<0.05)。

结论　3D-DSA 和 20s-DR Dyna CT 数据进行不同模式的重建，对血管内支架具有不同的显示优势。在支架两端的精确定位上，3D-DSA 透明模式显示更清晰准确；而在支架整体显示上，20s-DR Dyna CT 双容积重建 MIP 影像能更加完整的显示出支架，了解支架贴壁情况和走行。介入技师可以根据手术需要，合理选择运用不同的重建方法，为手术提供更好的影像显示。

PU-1542
经皮椎体成形术治疗成骨性脊柱转移癌的临床应用

田庆华
上海交通大学附属第六人民医院

目的 探讨 DSA 引导下经皮椎体成形术（Pecutaneous Vertebroplasty，PVP）治疗成骨性脊柱转移癌的可行性及短期临床疗效。资料与方法 2012 年 1 月---2017 年 9 月对 94 例（158 个病灶）成骨性脊柱转移癌实施 PVP 术，其中合并成骨性病理性骨折 27 例。通过 WHO 标准、视觉模拟评分（Visual Analog Scale，VAS）、体力状况评分（Karnofsky-KPS）的变化情况来评价临床效果。 结果 所有手术均获得手术成功，技术成功率 100%。术后随访至少 3 个月。资料完整的 90 例患者中 19 例完全缓解（CR），56 例部分缓解（PR），10 例轻微缓解（MR），5 例无效（NR），总有效率（CR+PR）达 83.3%。术后 24 小时 VAS 评分由术前 7.2±2.2 分降至 2.3±1.9 分，术后 1 月、3 月分别降至 2.1±1.8 分、2.1±2.1 分。术后 24 小时、1 个月、3 个月 KPS 评分由术前 78.5±11.4 分分别升至 87.5±10.8 分、88.0±11.0 分、89.2±10.8 分。17 例发生少量骨水泥渗漏，但无明显临床症状(18.9%)。 结论 DSA 引导下对成骨性脊柱转移癌患者行 PVP 术是可行、有效的，能有效缓解疼痛、稳定脊柱，改善其生活质量，并能降低截瘫发生率。

PU-1543
支架精显技术对术中 Pipeline 支架与血管壁贴合效果的评估

胡桃
重庆医科大学附属第三医院

颅内动脉瘤常是导致蛛网膜下腔出血（subarachnoid Hemorrhage,SAH）的主要原因之一，SAH 发生时，未经治疗的致死率高达 50%[1]。当前动脉瘤的治疗方法主要有开颅动脉瘤夹闭术及血管内介入栓塞术术等。随着介入治疗方法的日趋成熟及介入材料的不断改进，血管内介入治疗已逐渐成为动脉瘤治疗的首选[参考文献]。对于宽颈动脉瘤及梭形动脉瘤，常需要支架进行辅助弹簧圈栓塞以防止弹簧圈脱入载瘤动脉造成血管闭塞[2]，但常规支架网孔率高?，术中依靠传统数字减影血管造影（Digital Subtraction Angiography,DSA）技术不能显示支架与血管壁的贴合情况及与弹簧圈的关系。血流导向装置（Pipeline-Flex 支架）是一种低网孔率和高金属覆盖率的密网支架，它能改变血流动力学从而使动脉瘤内血栓形成，同时促进支架内的内皮细胞和新生内膜组织增生，因而依靠瘤颈的内膜化起到修复载瘤结构的完整性[3]，能达到不使用弹簧圈而栓塞动脉瘤的效果。支架精显技术是一种通过后处理技术来达到显示术中 Pipeline 支架与血管壁的贴合情况从而评估动脉瘤的栓塞程度。现将支架精显技术对术中 Pipeline 支架与血管壁的贴合效果的案例报道如下。

胸腹主假性动脉瘤的腔内手术治疗

李少军
烟台毓璜顶医院

摘要:目的　介绍血管内支架技术治疗胸腹主动脉夹层动脉瘤的手术方法，对 2019 年 6 月 1 例胸腹主动脉夹层动脉瘤的手术过程进行回顾性分析。**结果**　1 例男性，年龄 82 岁。IV 型胸腹主动脉假性动脉瘤 1 例。**结论**　腔内人工血管治疗主动脉夹层动脉瘤简化了手术操作，减小了手术风险。腹主动脉夹层开窗手术是治疗主动脉夹层的辅助手段。

关键词：动脉；夹层；主动脉瘤；支架；人工血管。

1 临床资料

患者郝某某，性别男，年龄 82，双侧腰部肋弓下疼痛 40 天，于 2019 年 6 月 10 日入院。既往双肺气肿并肺大泡形成、肝多发囊肿、前列腺增生。术前诊断胸腹主动脉假性动脉瘤

2 治疗方法

患者平卧位，全麻麻醉成功后常规消毒、铺巾。分别于双侧腹股沟处及双侧肘关节处做纵行切口，显露双侧股总动脉及双侧肱动脉。探查见双侧股动脉搏动良好，可扪及硬化斑块。

根据术前 CTA 影像，左侧髂动脉条件相对较好，决定经左侧股动脉入路植入支架。直视下穿刺左侧股动脉，置入鞘管，送入导丝，撤出导丝，经导丝送入 20F 血管扩张器评估入路情况，扩张器在髂总动脉处上行困难。撤出扩张器，依次送入 8mm，10mm 球囊将左侧髂总、髂外动脉上段予以扩张。扩张后送入 22F 血管扩张器，可顺利通过左侧髂动脉进入腹主动脉。

3 结果

患者康复出院，无并发症

4 讨论

胸腹主动脉假性动脉瘤，传统的腔内隔绝术无法解决。开放手术和杂交手术虽然是潜在的治疗方法，但却有着先天的缺陷。传统手术需要开胸开腹进行主动脉阻断＋内脏重建，解剖和手术难度都

较大，出血和术后ＤＩＣ的风险高，创伤大。因此，完全腔内技术处理是该患者的理想治疗方法之一。该患者胸腹主动脉隔绝，术中及术后发生截瘫风险高

PU-1545
基于多层螺旋 CT 全肝灌注成像 部分性脾动脉栓塞术后肝脏血流状态变化研究

高雨佳[1],陈勇[2],孙文杰[1],邱海静[1],邓林[1],杨冠华[1],任涛[1],高知玲[3]
1.宁夏医科大学
2.宁夏医科大学总医院放射介入科
3.宁夏医科大学总医院放射科

目的 应用多层螺旋 CT 全肝灌注模式，探讨肝硬化脾亢患者部分性脾动脉栓塞术（PSE）后肝脏血流动力学变化情况。**方法** 本组共收集行部分性脾动脉栓塞术的肝硬化脾功能亢进患者 26 例(Child-Pugh A 级 11 例，B 级 11 例，C 级 4 例)，均在术前 3 天及术后 1 月行多层螺旋 CT 全肝灌注成像及彩色多普勒超声检查；（1）分别测定 PSE 术前后基于 Couinaud 分段肝脏五叶相关灌注参数值:肝动脉灌注量(HAP)，门静脉灌注量(PVP)，总肝灌注量(TLP) 和肝动脉灌注指数(HPI)，比较术后肝脏五叶血流灌注变化；（2）测量并比较 PSE 术前后脾静脉与门静脉内径、平均血流速度及血流量的变化；（3）观察术后相关不良反应及处理措施。所有计量资料用均数±标准差（$\bar{x} \pm s$）表示，采用配对 t 检验分析 PSE 术前及术后相关参数变化。**结果** （1）术后 1 月肝左外叶、左内叶、右前叶、右后叶 HAP 较术前明显增加，差异有统计学意义($P<0.05$)；肝左外叶、右前叶、右后叶 HPI 均高于术前，差异有统计学差异（$P<0.05$）；尾状叶 HAP、HPI 术前术后比较无明显差异（$P>0.05$）；全肝叶 PVP、TLP 差异无统计学意义($P>0.05$)；（2）术后 1 月与术前相比脾静脉内径较术前明显缩小（$P<0.01$），脾静脉血流量较术前显著减少（$P<0.05$），但平均血流速度较术前差异不明显（$P>0.05$）；门静脉血流量较术前明显减少（$P<0.05$），但门静脉内径及平均血流速度差异无统计学意义（$P>0.05$）（3）术后大部分患者出现不同程度不良反应，包括发热、腹痛、腹胀、恶心、呕吐、胸水、腹水，经对症治疗均好转，所有患者均无严重并发症。**结论** 肝硬化脾亢患者部分性脾动脉栓塞术后肝动脉血流灌注量增加，门脉血流量减少，肝脏灌注 CT 成像可用于评价 PSE 术后肝脏血流动力学变化并为临床治疗方案的选择提供帮助。

PU-1546
颈部创伤性动脉瘤间异物双介入治疗初步动物实验研究

杨秀军,文颖
上海交通大学附属儿童医院

目的 探讨双介入治疗颈部创伤性动脉瘤间异物的技术可行性和效果。**方法** 取 2 岁龄健康比格犬 5 只，采用右侧颈静脉片移植同侧颈动脉壁上后断针贯穿、留置其间的方法，构建颈部创伤性动脉瘤间异物模型；左侧颈部采用直接断针刺入、留置方法构建颈动脉旁软组织异物模型作对照。然后在直接经 7F 血管鞘颈动脉内置入可降解覆膜支架封堵瘤口的同时，透视导向经皮经软组织钳取动脉瘤间异物；对照组在左侧颈动脉内导丝定位透视导向下经皮经软组织钳取异物。**结果** 直接经鞘法颈动脉内支架置入技术成功率 100%，双介入同时异物取出和动脉瘤解剖治愈率 100%，异物取出后颈动脉瘤出血率及覆膜支架释放后有效止血率为 100%；术后 3 月内未见动脉瘤复发，但均见局部颈动脉轻-中度狭窄。对照组介入异物取出成功率 100%，未见颈动脉出血、狭窄。**结论** 可降解

覆膜支架辅助的双介入技术可一站式同时微创取出异物和封闭创伤性动脉瘤颈口，直接经鞘法不失为一种可选择的血管支架置入实验方法。

动脉球囊封堵术与子宫动脉栓塞术治疗对前置胎盘产后出血不良反应及生活质量的影响

刘文英
山西医科大第一医院

前置胎盘属于晚期妊娠并发症,极易因病情加重导致产后大出血[1],进而威胁到母婴安全。国外前置胎盘的患病率在 0.3%～0.9%[2],而我国发病率 0.2%～1.6%。受近些年多孕多产、流产次数增加等原因的影响,造成患者子宫内膜受到损伤[1],进而增加了胎盘前置的患病率。现就我院在 2015 年 9 月至 2017 年 9 月收治的 100 例前置胎盘患者采取子宫动脉栓塞术、动脉球囊封堵术治疗的临床价值进行探析,

PU-1548
IVIM-DWI 在肝细胞癌 TACE 术疗效预测及评估中的应用价

彭娟[1],杨林[1]
1.川北医学院附属医院
2.成都市金牛区人民医院

目的 探讨 IVIM-DWI 技术在 TACE 后疗效的预测及评估中的应用价值。
材料与**方法** 收集首次行 TACE 治疗的肝细胞癌患者 20 例，共 31 个病灶。所有病例在术前 1~3 天及首次术后 30~40 天行常规 MRI 平扫、IVIM-DWI 扫描（b=0,20,40,80,100,200,400,800,1000）及动态增强扫描。获得以下定量指标：（ADC）、（Dslow）、（Dfast）、(f)。根据 mRECIST 标准，将病例分为疗效好组和疗效差组。患者 TACE 治疗前后的 IVIM 相关参数采用配对 t 检验；肿瘤区及非瘤区（瘤周正常肝实质）组间 IVIM 相关参数使用独立样本 t 检验；疗效好组和疗效差组间相关参数比较使用独立样本 t 检验；并运用 ROC 曲线确定各参数预测 TACE 术疗效反应的效能阈值。
结果 （1）治疗前、后肿瘤区 ADC、Dslow、Dfast 值有统计学差异；治疗前、后非瘤区 Dfast 值有统计学差异。（2）治疗前，瘤区与非瘤区间 ADC、Dslow、Dfast、f 值差异均有统计学意义；治疗后，瘤区与非瘤区间 Dslow、Dfast、f 值差异有统计学意义。（3）TACE 治疗前，疗效好组和疗效差组间 ADC、Dslow、Dfast 值均有统计学差异；治疗后，疗效好组和疗效差组间的 ADC、Dfast 值有统计学差异。(4) 当 ADC、Dslow、Dfast 的阈值分别是 0.91×10-3mm2/s、0.81×10-3mm2/s、33.54×10-3mm2/s，其预测患者 TACE 术疗效反应感度分别为 100%、96.00%、100%，特异性分别为 60.00%、50.00%、80.00%，ROC 曲线下面积分别是 0.817、0.733、0.847。
结论 IVIM-DWI 成像能够作为定量指标预测及评价肝细胞癌 TACE 治疗的短期疗效，对临床医生在治疗方案的制定及后期疗效的判定有一定的指导意义

PU-1549
产后大出血介入治疗的围术期护理

王嵘
山西医科大学第一医院

目的]探讨介入治疗产后大出血围术期护理的方法。[方法]回顾性分析 30 例产后大出血病人经产科保守治疗无效后行子宫动脉栓塞治疗的围术期护理资料。[结果]通过有效的治疗以及积极的护理配合,全部病人止血效果良好,无一例出现再次大出血和其他并发症,月经均恢复正常。[结论]充分做好介入治疗产后大出血的围术期护理,对手术顺利进行、提高介入治疗成功率、减少并发症发生具有重要意义。

PU-1550

探讨子宫动脉化疗栓塞术在中晚期宫颈癌治疗中的疗效和对根治手术的影响。

杨敏玲
山西医科大学第一医院

目的 探讨子宫动脉化疗栓塞术在中晚期宫颈癌治疗中的疗效和对根治手术的影响。
方法 回顾性分析 4 年间我院收治的 26 例 IB1 期以上宫颈癌患者行子宫动脉灌注化疗栓塞术（介入组）临床资料,并与同期 26 例行放射治疗（放疗组）患者进行比较（对照组）。根据 FIGO 制定的标准,将每组病例分为:IB1 期、IB2 期、IIA 期、IIB 期，根据肿瘤病理类型每组分为鳞癌组、腺癌组。比较两组患者的临床近期有效率，近期临床症状缓解状况；治疗反应和合并症。
结果 介入组有 26 例共计行 30 次介入治疗，25 例阴道流血患者，行介入治疗后 24 例出血于 24 小时内完全消失，1 例患者于 72 小时后阴道出血完全消失；所有患者 1 周内下腹坠痛症状即可明显缓解。治疗 1 次后有 22 例临床分期逆转，其中 IB1 期逆转为 IA2 期 4 例；IB2 期逆转为 IB1 期 6 例；IIA 期逆转为 IB2 期 4 例,逆转为 IB1 期 2 例；IIB 期逆转为 IIA 期 6 例，其余 4 例行 2 次介入治疗后皆逆转为 IIA 期，全组共有 26 例（26/26）发生临床分期逆转
结论 子宫动脉化疗栓塞术治疗中晚期宫颈癌，止血效果明确，缓解临床症状迅速，临床并发症少；子宫动脉化疗栓塞术逆转肿瘤临床分期，可使 IIB 期患者临床分期逆转至 IIA 期，为无法手术的的患者创造了手术条件；子宫动脉化疗栓塞术＋根治手术临床疗效确切，大部分患者手术后无明显并发症，显著提高患者生存质量，是治疗中晚期宫颈癌的有效方法。

PU-1551

动脉栓塞治疗子宫腺肌症一例

杨敏玲
山西医科大学第一医院

子宫腺肌症是子宫内膜腺体和间质侵入子宫肌层形成弥漫或局限性的病变，多发生于 30～50 岁左右的经产妇。因经量多、经期长合并逐渐加重的进行性痛经而影响患者的生活质量。子宫腺肌症病因至今不明。目前的共识是因为子宫缺乏黏膜下层，因此子宫内膜的基底层细胞增生、侵袭到子宫肌层，并伴以周围的肌层细胞代偿性肥大增生而形成了病变。而引起内膜基底层细胞增生侵袭的因素现有五种理论：①与遗传有关；②子宫损伤，如刮宫和剖宫产均会增加子宫腺肌症的发生；③高雌激素血症和高泌乳素血症；④病毒感染；⑤生殖道梗阻，使月经时宫腔压力增大，导致子宫内膜异位到子宫的肌层。根据典型病史及症状即可作出初步诊断，结合相关化验及影像学检查，如盆腔或阴道超声、MRI，CA125 等可诊断，确诊需通过手术取得病变组织行病理学检查。

本病的治疗手段较多，临床决策需结合患者的年龄、症状及生育要求进行个体化选择，各种治疗疗效不尽人意。近年来，随着介入治疗技术的不断进步，选择性子宫动脉栓塞术作为治疗子宫腺肌症的方案之一，由于安全、微创、疗效满意，受到临床医生和患者青睐。本例患者栓塞后子宫体积明显缩小，压迫症状缓解，疗效确切，无明显副作用。

PU-1552
难治性产后出血介入治疗疗效及其相关危险因素分析

赵超
山西医科大学第一医院

目的
探讨介入子宫动脉栓塞术治疗难治性产后出血的疗效及影响其术后再出血的危险因素。
方法
回顾性分析 2012 年 1 月~2014 年 9 月山西医科大学第一医院收治的 64 例难治性产后出血行子宫动脉栓塞术患者的临床资料。按照术后是否再出血分为止血成功组及失败组，对两组患者的一般临床资料、术中血管造影表现及栓塞情况、术后情况进行分析，并对止血失败的相关危险因素行非条件多因素 Logistic 回归分析。
结果
1、64 例患者中介入治疗成功 57 例，失败 7 例，成功率为 89%。失败病例中，4 例直接行次全子宫切除术；3 例二次介入，其中 2 例成功，1 例失败后行次全子宫切除术。5 例 B-lynch 缝合止血失败患者行介入治疗成功 4 例；两例子宫动脉假性动脉瘤栓塞后未见出血；6 例 DIC 患者介入治疗效果好，术后未见明显出血。所有患者无严重并发症，术后 3 个月及半年随访，均无异常出血，月经恢复正常；
2、术中造影示：双侧子宫动脉从髂总动脉近端、臀下动脉远端各发出一例；子宫动脉主干明显收缩 5 例；双侧髂内动脉分支参与供血 8 例；髂外动脉分支参与供血 2 例；
3、单因素分析结果显示：失败组各因素（瘢痕子宫史、宫缩剂的联合使用、宫缩乏力及胎盘因素）比例明显高于成功组， χ^2 值分别为 6.560、4.761、4.409、5.906，均 $P<0.05$；多因素 logistics 回归分析显示瘢痕子宫史、宫缩剂的联合使用是难治性产后出血介入失败的危险因素，OR 值分别为 11.23、12.83。
结论
1、介入子宫动脉栓塞术治疗难治性产后出血成功率高,并发症少,且能保留子宫及生育功能,为难治性产后出血切实、有效的止血方法；
2、瘢痕子宫史及宫缩剂的联合使用是难治性产后出血介入失败的危险因素。临床中还应注意胎盘因素及子宫出血动脉的解剖变异对介入疗效的影响，积极总结经验教训，进一步提高介入治疗的成功率。
关键词： 难治性产后出血；子宫动脉栓塞； 危险因素； 疗效

PU-1553
主-髂动脉与下肢动脉闭塞行 PVI 治疗并发症的早期预防及护理

秦丽娜,薛四倩,马海静,樊文婷,王珂,周晓霞,黄雪芳,张渭红,陈洁
兰州大学第一医院

目的 探讨主-髂动脉与下肢动脉闭塞行外周血管介入（PVI）治疗术中和术后产生并发症的早期预防及护理。**方法** 观察并护理 2014 年 9 月－2019 年 2 月在兰州大学第一医院介入医学科行 PVI 治疗的主-髂动脉与下肢动脉闭塞患者 401 例，其中有 43 例发生并发症，对临床资料和并发症进行回顾和分析，总结并发症的早期预防和护理。**结果** 术中 4 例出现动脉夹层、2 例血管破裂出血；术后 2 例下肢深静脉血栓形成，4 例急性动脉血栓形成，3 例血栓复发、2 例动脉远端栓塞；5 例穿刺部位渗血、7 例出现血肿、6 例组织器官出血；2 例假性动脉瘤，3 例下肢再灌注损伤，1 例骨筋膜室综合征，2 例发生感染。**结论** 详细评估患者状况，提前进行充分的物品准备；医护合作，严格遵从医嘱；仔细交接班，按时巡回，密切监护并详细观察病情变化，发现异常及时报告医师，早发现、早治疗是预防并减少并发症发生的有效方式。

PU-1554
非支气管性体动脉在肺结核大咯血介入治疗中的作用

庞宁东
山西医科大学第一医院

目的探讨非支气管性体动脉(nonbronchial systemic arteries,NBSA)在肺结核大咯血介入治疗中的临床价值。方法对 24 例行支气管动脉栓塞术(bronchial artery embolization,BAE)的肺结核大咯血患者进行为期 2 年的随访观察。根据患者是否咯血复发,将 24 例患者分为未复发组和复发组,比较两组之间的临床资料并进行统计学分析。结果 24 例患者经 6 个月-2 年的随访观察,共有 11 例患者复发咯血。复发组中行主动脉造影者 6 例(54.5%),明显低于未复发组(92.3%),比较具有统计学意义(P<0.05);复发组中发现有 NBSA 参与供血的患者 10 例(90.9%),显著高于未复发组(61.5%,P<0.05);复发组患者供血 NBSA 平均数(2.87±2.70)与未复发组(1.05±1.12)比较具有统计学意义(P<0.05);复发组完全栓塞例数 5 例(45.4%)明显低于未复发组(92.3%)(P<0.05)。结论责任 NBSA 的发现和完全栓塞对于介入治疗肺结核大咯血起着重要作用,可以提高咯血的治疗效果,减少咯血复发率。

PU-1555
急性外周动脉出血的数字减影血管造影诊断及介入治疗

王栋
山西医科大学第一医院

：目的探讨急性外周动脉出血的 DSA 诊断及介入治疗的临床价值。方法回顾性分析 2008~2013 年我科 79 例已行介入诊疗的急性外周动脉出血患者的 DSA 表现和介入疗效。结果 79 例急性外周动脉出血患者均行 DSA 检查,75 例行动脉栓塞术,余 4 例下消化道出血患者未行栓塞术。75 例介入治疗后 66 例出血立即停止,即刻止血率 88%(66/75)。56 例平均随访 30 d 未再出血,且未出现相关严重并发症,失访 10 例;余 9 例动脉栓塞治疗效果不理想。结论对于大多数急性外周动脉出血的患者,DSA 能明确出血部位及责任动脉,介入治疗具有定位准、创伤小、疗效高等优点,有重要的临床应用价值。

PU-1556

经导管前列腺动脉栓塞治疗良性前列腺增生的疗效观察

崔存玮
山西医科大学第一医院

目的
评价药物治疗效果不明显且不可耐受或不愿意接受外科手术的良性前列腺增生患者，行前列腺动脉栓塞术的安全性及有效性。
方法
2016 年 10 月-2018 年 7 月，对 15 例药物治疗无效的伴有中重度下尿路梗阻症状的良性前列腺增生患者，统计其术前下尿路梗阻症状相关指标评分、影像学检查及尿动力学检查，术前国际前列腺症状评分为 21.80±3.36 分，生活质量评分为 4.6±0.62 分，后行经导管前列腺动脉栓塞术，术后 1，3，6，12 个月随访，观察比较手术过程、并发症及术后疗效。
结果
15 例患者均手术成功，其中双侧栓塞 14 例（93.3%），单侧栓塞 1 例（6.7%），除个别患者出现尿道烧灼感、暂时性尿潴留或低热等术后正常反应外，均未出现严重并发症，术后 1 个月、3 个月、6 个月、12 个月的 IPSS 变化分别为－4.13±1.64 分、－5.33±2.31 分、－5.44±2.96 分、－5.60±1.52 分（P＜0.001），Qol 变化分别为－1.20±0.56 分、－1.50±0.52 分、－1.44±0.88 分、－2.00±0.71 分（P＜0.001）。
结论
对于药物治疗效果不明显且不可耐受或不愿意接受外科手术的良性前列腺增生患者，经导管前列腺动脉栓塞术适应症广、成功率高、近期疗效明确、手术并发症少，是一种安全有效的治疗手段，值得被进一步推广。

PU-1557
单中心肺癌氩氦刀冷冻治疗 13 年临床疗效分析

史东宏
东部战区医院

目的：对 65 例 NSCLC 资料完整患者术后进行 13 年临床随访分析，以期提高 NSCLC 患者氩氦刀冷冻治疗及综合的临床疗效。
材料和方法：收集我院肺癌氩氦刀冷冻治疗 90 例患者临床资料，其中腺癌 48 例，鳞癌患者 39 例，未分化癌 2 例，小细胞肺癌 5 例。对其中 65 例 NSCLC 资料完整患者进一步综合分析。男 48 例（73.84%），女 17 例（28.26.26%），年龄范围 57～ 86 岁，平均 64.8 岁。按照临床 NCCN 指南分期，Ⅰ期 16 例，Ⅱ15 例，Ⅲ17 例，Ⅳ17 例。
采用肺内病灶进行单刀或多刀组合进行氩氦刀冷冻治疗，术中取活检送病理分析和基因分型，术后进一步按照 NCCN 指南进行综合治疗，对氩氦刀术中、术后并发症进行临床随访，对 OS、PFS 进行统计分析。分别采用 Kaplan-Meier 法进行累积生存率、Binary logistic 和 Pearson’s Chi-Square test or Likelihood Ratio’s test 进行临床分期、病因与复发的相关性、复发率分析，P ＜ 0.05 认为有统计学意义。
结果：平均每个患者氩氦刀使用 1.61 把，技术成功率 100% (65/65)，冰球覆盖率达 97%。65 例患者中，术后气胸 9 例，胸腔出血 1 例，胸水 7 例，胸痛 2 例，干咳 1 例，发热 1 例。9 年生存率为 (Kaplan-Meier estimate) 按照分期 OS 分别为Ⅰ期 51 个月，Ⅱ期 24 个月，Ⅲ期 12 个月，Ⅳ期 17 个月，PFS 分别为Ⅰ期 19 个月，Ⅱ期 10 个月，Ⅲ期 5 个月，Ⅳ期 8 个月。统计学分析表明Ⅰ期 51 个月，Ⅱ期 24 个月，Ⅲ期 12 个月，Ⅳ期 17 个月。Chi-Squre 检验表明Ⅰ期与Ⅱ期、Ⅲ期、Ⅳ期 PFS、OS 有明显统计学差异<0.05，Ⅱ、Ⅲ、Ⅳ期之间无明显统计学差异>0.05.

结论:早期 NSCLC(包括Ⅰ、Ⅱ期）效果明显，达到文献同期手术治疗效果；Ⅲ、Ⅳ患者可以明显提高生活质量和生存期，值得进一步研究和推广。

子宫动脉化疗栓塞治疗瘢痕妊娠 25 例分析

袁贵斌,温勇坚,汪永平,刘灿,叶云
云南省第三人民医院

目的 探讨子宫动脉介入栓塞在子宫瘢痕妊娠先兆出血治疗中的作用。**方法** 对 25 例子宫瘢痕妊娠先兆出血患者行子宫动脉灌注甲氨蝶呤(MTX)和明胶海绵颗粒栓塞治疗(UAE)，24~72 h 后行清宫术。**结果** 25 例化疗栓塞成功，成功率 100%，一次清宫干净术中出血量≤50mL，所有患者监测血清β-HCG 值至术后 30d 内降至正常。**结论** 子宫动脉化疗栓塞对子宫瘢痕妊娠先兆出血患者清宫术前治疗，可有效减少术前、术中出血，是一种安全可行，值得推广的方法。

肝外门静脉闭塞的介入治疗

王迎亮,梁惠民
华中科技大学同济医学院附属协和医院

目的 探讨肝外门静脉闭塞的介入治疗疗效及再通策略。
方法 回顾性分析 2016 年 1 月至 2019 年 4 月在我院行介入治疗的 10 位肝外门静脉闭塞患者的临床资料，其中男性 3 人，女性 7 人，原发性门静脉闭塞 3 人，肝移植术后闭塞 2 人，恶性肿瘤术后闭塞 2 人，肝硬化闭塞 3 人。所有患者均行介入再通手术，其中，经皮经门静脉穿刺引入导丝通过狭窄段置入支架 9 例，经皮经脾静脉穿刺引入导管作为靶导管定位，然后经皮经门静脉穿刺靶导管建立轨道置入支架 1 例，两例肝硬化患者同时加行经颈内静脉肝内门体静脉分流术；术后，采用超声或门静脉 CTV 定期随访观察患者的支架通畅情况及症状缓解情况。
结果 所有患者均一次置入支架成功，技术成功率 100%，围手术期未发生严重并发症；平均随访 14.5 个月，两例支架内血栓形成，支架通畅率为 80%，所有患者均未发生消化道出血等严重门脉高压症状。
结论 经皮介入治疗肝外门静脉闭塞安全、有效，靶导管定位技术可作为门静脉闭塞介入再通困难的重要方法。

多种设备引导下动脉临时球囊阻断技术在凶险性前置胎盘剖宫产术中的应用

李骏,王世平,袁骏,杨勤飞
云南昆钢医院

【摘要】多种设备引导下动脉临时球囊阻断技术在凶险性前置胎盘剖宫产术中疗效评定及特点。方法收集我科自 2016 年 7 月-2018 年 8 月配合产科、超声科开展不同设备引导下临时球囊阻断患者

共 26 例。26 例患者均经超声和（或）MRI 诊断凶险性前置胎盘，在不同的引导设备下行双侧髂内或髂总动脉预埋临时球囊，待胎儿取出时立即充盈球囊阻断髂动脉血流，根据产科手术进度及出血情况适时撤出球囊。结果本组 26 例患者动脉临时球囊预埋阻断均获得成功，其中 1 例患者因发现右侧子宫动脉假性动脉瘤形成，行栓塞治疗。26 例患者阻断时间 3-15 分钟，术中出血量 400-1000ml。本组病例无子宫切除及术后输血，所有新生儿均存活。结论针对凶险性前置胎盘患者在剖宫产术中行动脉临时球囊阻断，能够减少剖宫产术中出血量及相关并发症的发生率。动脉临时球囊阻断技术具有创伤小、安全性高、疗效确切等特点，近年来已在临床推广应用。

巴曲酶联合阿司匹林预防糖尿病下肢缺血病变介入术后再狭窄的疗效分析

李菁
上海交通大学附属第六人民医院

目的 常规应用阿司匹林可以减少血管成形术后再狭窄的发生。巴曲酶已被证明可以通过降低纤维蛋白原浓度有效防止血管成形术后血栓形成。本项随机临床试验假设巴曲酶联合阿司匹林相比单纯运用阿司匹林可以更有效地降低糖尿病下肢缺血病变介入成形术后再狭窄或再闭塞的发生率。
材料和方法: 110 例症状性血管闭塞的糖尿病患者随机分为实验组(n=50)和对照组(n=60)。实验组患者接受阿司匹林（100mg/d）联合巴曲酶治疗(5 IU/d* 6 次，隔天应用)，对照组单独应用阿司匹林。以 12 个月为随访终点，通过下肢血管磁共振成像(MRA)或者血管超声来评估血管再狭窄或者再闭塞的情况。统计踝以上截肢、死亡人数，以及截肢或死亡累积发生率，运用 Kaplan-Meier 生存曲线来评估保肢率和存活率。
结果 12 个月后，实验组再狭窄发生率为 28.9%，对照组为 42.8%（*P*=0.002）。MRA 及血管超声显示膝下动脉（P=0.001）和长度>10cm（P=0.010）者再狭窄发生率高。实验组较对照组再狭窄率、症状减轻程度、截肢率明显改善。Kaplan-Meier 生存曲线显示血管成形术 12 个月后，对照组和实验组保肢/存活率分别为 78.2% and 93.5% (log-rank 检验, *P*=0.0324)。
结论 巴曲酶联合阿司匹林可以有效减少血管成形术后再狭窄发生率，尤其针对膝下病变>10cm 者，有着更好的临床疗效，并且可以提高患者肢体挽救率。

Transjugular intrahepatic portosystemic shunt for repeated bleeding of hemorrhoids caused by severe portal hypertension with ectopic varices: report of a case

Bin Xiong,Qin Shi
union hospital, Tongji medical college, Huazhong university of science and technology

Background: Severe portal hypertension is life-threatening and can bring adverse complications such as ascites, gastroesophageal varices, edema, etc., even cause variceal hemorrhage, which may lead to a high risk of death. There is a rare incidence in bleeding of hemorrhoids caused by severe ectopic varices.
Case presentation: We report a case concerning a female patient with 20-year history of hepatitis B virus (HBV) infection, repeated bleeding of hemorrhoids caused by

severe portal hypertension with ectopic varices of the connection between superior mesenteric vein and rectal venous plexus. Laboratory results revealed a hemoglobin level of 74 g/L in our hospital. Finally, the patient had been successfully treated with transjugular intrahepatic portosystemic shunt placement without variceal embolization after a multidisciplinary comprehensive opinion. In the two-month follow-up period, the patient hadn't developed hepatic encephalopathy or hematochezia, and a computed tomography venography indicated that the stent was unobstructed and ascites disappeared.

Conclusions: The treatment of transjugular intrahepatic portosystemic shunt (TIPS) is effective, and we hope this case can help clinicians improve the awareness of hemorrhoidal bleeding with severe portal hypertension in the diagnosis and treatment, rather than simply considering hemorrhoidal bleeding. And abdominal computed tomography venography is recommended as an effective imaging examination method to determine the stent status after the operation.

PU-1563

Nanoparticle embedded Biodegradable Stent as pH/H2O2 Responsive Scaffold to Modulate Hypoxia for Effective Photodynamic Therapy

Junyuan Xiao
Shanghai Jiao Tong University Affiliated Sixth People's Hospital

Objective: Construction a kind of photosensitizer nanoparticles embedded PCL fiber with the ability of inhibiting tumor, further, the capability of this biodegradable stent in terms of technical feasibility and treatment effect was investigated through subcutaneous tumor model of the nude mice in situ.

Methods: In the present study, small molecule chlorine e6(Ce6), BSA-Ce6 nanoparticles(BC), BSA-Ce6-MnO2 nanoparticles(BCM) was respectively embedded in PCL fibers by Electrospinning method. MTT assay was carried out to explore cell killing efficacy on ECA-109 cell line after incubated with the photosensitizer and confocal imaging was used to reveal the ROS generation and cellular uptake ability of free ce6, BC and BCM. Live/dead staining was performed for the aim of investigating the cell-killing ability of photosensitizer embedded PCL fiber. In nude mice tumor model, stent containing photosensitizer Ce6, BC and BCM was implanted below the tumor side and both tumor volume and weight of nude mice was recorded for up to two weeks. In order to further investigate the hypoxia ameliorating ability of BCM nanoparticles, hypoxyprobe immunofluorescence assay was employed on tumor slices. Apoptosis of the tumor was determined by TUNEL staining.

Results: MTT assay and confocal imaging exhibited that BCM is superior to other groups in cell killing efficacy, ROS generation and cellular uptake ability. Furthermore, live/dead staining showed that BCM embedded fibers group has better cell killing ability in comparison with other groups. In vivo results revealed that the tumor growth on nude mice was significantly inhibited after BCM embedded stent implantation and 660 nm3 laser irradiation, indicating remarkably improved therapeutic efficacy compared to various control groups. According to the result of Hypoxyprobe immunofluorescence assay, we observed obviously reduced green fluorescence (pimonidazolestained hypoxia) in the tumor slices of mice treated with BCM embedded stent in comparison with that of the control groups, which indicates that the tumor hypoxia was successfully relieved. TUNEL staining also showed that tumor slices from mice treated with BCM embedded stent have a greater proportion of apoptosis dyeing.

Conclusion: The BCM embedded stent was feasible for treatment of esophageal cancer because of its ability to relieve hypoxia environment of tumor for enhanced photodynamic therapy.

PU-1564

31 例糖尿病足患者下肢血管 CTA 成像效果的研究

周佳
上海交通大学附属第六人民医院

目的:本研究着重对糖尿病足下肢血管病变的 CTA 成像效果进行研究，探究 CTA 的成像效果。 材料与**方法** 对 31 例临床确诊糖尿病足患者的下肢血管行 CTA、DSA 检查，以 DSA 为金标准，分析 CTA 对糖尿病足患者下肢血管病变的成像效果。**结果** CTA 对于糖尿病足下肢血管病变成像的总体准确性、敏感性及特异性分别为 96.4%、94.8%、98.8%。膝上动脉组，CTA 的准确性、敏感性、特异性分别为 97.6%、98.2%、97.3%。膝下动脉组，CTA 的准确性、敏感性、特异性为 94.6%、83.2%、98.9%。**结论** CTA 为有效的糖尿病足下肢血管病变无创影像学检查方法，但 CTA 对于膝下动脉的成像效果较差。

PU-1565

经足背-足底或足底-足背动脉环逆行腔内成形术与常规顺行血管成形术治疗膝下动脉闭塞性病变的临床对照研究

魏黎明[1],魏黎明[1]
1.上海交通大学附属第六人民医院
2.上海交通大学附属第六人民医院

目的 对照研究经足背-足底（transdorsal-to-plantar，TDP）或足底-足背（transplantar-to-dorsal，TPD）动脉环逆行腔内成形术与常规顺行血管成形术治疗膝下动脉闭塞性病变的临床疗效。
方法 回顾性从 2009 年 10 月到 2011 年 7 月 96 例膝下（below-the-knee，BTK）动脉闭塞性病变患者，共计 112 条患肢计划接受常规顺行 BTK 血管成形术，其中 27 条手术失败患肢接受经 TDP 或 TPD 动脉环逆行腔内成形术，22 条患者取得手术成功。手术前后踝--肱指数（ABI）、基于 TIMI 的病变段血流分级评分及足背或足底动脉搏动评分在常规顺行血管腔内成形术成功患者组（常规组，71 例患者共计 85 条患肢）及经 TDP 或 TPD 动脉环逆行腔内成形术成功患者组（逆行组，20 例患者共计 22 条患肢）之间进行比较研究，随访两组术后肢体挽救率及靶血管再狭窄情况。
结果 常规组和逆行组手术技术成功率分别为 74.0%和 75.9%（P>0.05）；逆行组 ABI 从术前 0.55±0.21 升至 0.93±0.19（vs 常规组 0.56±0.14 升至 0.89±0.18，P>0.05）；TIMI 评分增加情况显示逆行组患者远侧足部组织获得更好血流灌注（逆行组 2.3±0.8 vs 常规组 1.0±0.8，p<0.05）。逆行组和常规组在 12 和 24 个月靶血管通畅率分别 63.6% (14/22)、45.5% (10/22)和 52.9% (45/85)、37.6% (32/85)（P>0.05）。24 个月后 Kaplan－Meier 评分显示逆行组和常规组肢体挽救率分别为 93.8%和 96.5%（P>0.05）。
结论 TDP 或 TPD 动脉环逆行腔内成形术治疗膝下动脉闭塞性病变较常规顺行血管成形术相比可以获得更好的即刻血流改善情况，以及相似的 ABI 改善情况、一期通畅率及肢体挽救率，其可作为顺行血管成形术失败后的有效替补技术方法。

Embolization for Hemorrhage and Pseudoaneurysm of Secondary to Pancreaticoduodenectomy Procedure

Hao Xu

Department of Interventional Radiology Affiliated Hospital of North Sichuan Medical College

[Abstract] Objective: To analyze the factors of hemorrhage and pseudoaneurysm post pancreaticoduodenectomy and evaluate the clinical efficacy and safety of digital subtraction angiography (DSA) and embolization.
Methods: 17 patients with hemorrhage post pancreaticoduodenectomy were collected because of pancreatic head cancer, choledochal carcinoma and duodenial adenocarcinoma. The definition and severity of bleeding are referred to the International Pancreatic surgery Research Group (ISGPS) standard. Abdominal aorta, celiac trunk, common hepatic artery, spleen artery, gastroduodenal artery, superior mesenteric artery and inferior mesenteric artery were performed to determine the location of bleeding, the size of pseudoaneurysm, parent artery and collateral branches. After the bleeding and pseudoaneurysm were identified, the coils were used for embolization immediately . The definition and evaluation criteria of the efficacy, technical success and clinical success of embolization refer to Society of Interventional Radiology (SIR). Signs of successful embolization include technical and clinical success. Technical success was defined as complete embolization of the target with the chosen material and an effective hemostasis at the end of the procedure. Clinical success was defined as the absence of repeat bleeding that required surgery or endoscopy and survival through the 30 days following hemorrhage.
Results: Among the 17 patients, 1 patient was active bleeding. Contrast medium overflowed in the open intestine, spasm. Irregular shape and rigidity in the common hepatic artery-proper hepatic artery junction area. 16 cases of pseudoaneurysm, including 14 cases located in the trunk and branch of gastroduodenal artery, 1 case in the stump of GDA and 1 case in the trunk of spleen artery. The angiographic findings were saccular shadow, quasi-round or irregular shape, and the boundary was clear. 1 patient showed capsule-like changes in the stump of gastroduodenum on DSA. Considering that the patient was sentinel bleeding, the stump of GDA was embolized. After embolization, the radiography showed the mark of technical success, and then the catheter was pulled out to end the operation. However, during extubation, the patient complained of abdominal pain. Blood pressure decreased rapidly, and emergency re-angiography was performed. The embolization of proper hepatic artery and common hepatic artery was performed immediately. Blood transfusion and dilatation were carried out after the operation, and symptomatic treatment was actively carried out. However, one week later, the patient died of insufficient blood volume and liver failure. The other patients achieved technical and clinical success, and no serious complications were found.
Conclusion: The causes of postoperative hemorrhage and pseudoaneurysm after pancreaticoduodenectomy are various. Pseudoaneurysm or parent artery embolization is safe and effective.

PU-1567
仰卧位逆行动脉穿刺在下肢动脉长段闭塞病变成形术中的应用体会

潘升权,殷世武
合肥市第二人民医院

【摘要】 **目的** 通过 11 例下肢动脉慢性闭塞病例采用仰卧位下患肢腘动脉 P3 段或小腿动脉逆穿技术行下肢动脉成形术的回顾性分析，总结在顺行开通闭塞段动脉失败的情况下，选择仰卧位下逆行穿刺腘动脉 P3 段或小腿动脉双通道开通闭塞动脉的可行性和安全性。**方法** 回顾性分析我科自 2017 年 1 月至 2019 年 3 月收治的 11 例行下肢动脉逆行穿刺辅助动脉成形的患者。11 例下肢动脉闭塞患者中，7 例为长段股浅动脉闭塞，4 例为股浅动脉闭塞合并腘动脉闭塞。11 例患者均经对侧股总动脉逆行穿刺“翻山”后顺行开通闭塞段动脉失败，通过翻山鞘造影了解闭塞段动脉远端流出道情况后，根据造影结果选择合适的逆穿入路。7 例患者选择穿刺腘动脉 P3 段，通过经小腿外侧胫腓骨之间间隙穿刺郭冬梅 P3 段逆行通过股浅动脉闭塞段，以穿针技术将导丝插入对侧动脉鞘中并引出体外，形成工作导丝环；再经对侧动脉鞘沿导丝依次行球囊扩张、支架释放、后扩张，完成股浅动脉开通。4 例患者合并腘动脉闭塞，选择小腿动脉逆行穿刺成功后顺利开通闭塞段动脉。**结果** 11 例患者均采用透视路途下穿刺成功，穿刺成功率 100%，治疗有效率为 100%，术中术后均未发生相关并发症。术后患者间歇性跛行症状消失或明显改善，静息痛消失，3 例伴发足趾坏疽患者术后 3 个月复查见坏死足趾均已自行脱落，创面愈合良好。 **结论** 经腘动脉 P3 段或小腿动脉逆行穿刺辅助开通股浅动脉闭塞是有效且可行的，而 P3 段血管直径较粗，穿刺成功率更高，且患者均可在仰卧位进行，不需要术中改变体位。但穿刺成功与否是对手术者手术经验和技术也是一种考验和挑战。

多层螺旋 CT 血管成像及全脑灌注成像对超早期脑梗死前期诊断中的的临床应用价值

李彬[1],汤素琼[2],邓全成[1]
1.湖北省孝感市中心医院 CT 室
2.湖北省孝感市中心医院肛肠科
3.湖北省孝感市中心医院 CT 室

摘要 目的 探讨多层螺旋 CT 全脑血管灌注成像在超急性脑梗死缺血半暗带及部位的判断中临床应用价值。**方法** 对 60 例超急性脑梗塞疑似患者，在患者发病后 6 小时行缺血部位的多层螺旋 CT 平扫和灌注成像与 CTA 成像诊断造影观察，并分析灌注图像与 CTA 的重建后处理图像，所有患者在发病 1 周后再次行多层螺旋 CT 复查。**结果** 其中 15 例患者经普通 CT 扫描发现可疑脑缺血区，其中 45 例患者未发现明显异常；所有疑似病例患者均继续行多层螺旋 CT 全脑血管灌注成像，通过将采集到的脑血管灌注图进行分析，被发现脑组织缺血的部位与患者的临床症状相对应；并通过多层螺旋 CTA 检查，发现患者大脑中动脉闭塞 13 例，7 例大脑中动脉狭窄，4 例颈内动脉狭窄。**结论** 多层螺旋 CT 全脑血管灌注成像对临床诊断超急性脑梗塞具有良好的特异性和敏感性，可以早期发现患者脑组织中存在的缺血半暗带并为患者预后情况的评估起着极其重要的作用价值；多层螺旋 CTA 检查可以较及时的发现缺血性病变的原因，为进一步临床治疗方案的制定提供了有力的理论依据。

在颅内小型血管动脉瘤的临床诊疗中旋转 3D-DSA 成像技术的临床应用价值与展望

汤素琼[1],李彬[2]

1.湖北省孝感市中心医院肛肠科
2.湖北省孝感市中心医院 CT 室

摘要：目前颅内血管动脉瘤是临床上比较常见的临床疾病之一，其中特别是针对于略小于直径 3 毫米以内的细小血管动脉瘤，其在临床的诊断和治疗评估中有一定的技术性难度。随着科技时代的到来，各种全新的诊疗技术问世，特别是近几年来随着大型三维数字减影血管造影技术（3D-DSA）的迅猛发展，在很大程度上提升了显示细小颅内血管动脉瘤的临床检出性，在很大程度上为临床增加了其诊断的准确性和敏感性，大大减少了由于受到传统影像的成像技术上普通影像学检查与常规 DSA 检查技术的局限性限制，极大的降低了其漏诊率、误诊率，当前已成为临床上颅内血管动脉瘤的最新诊疗的金标准诊断。通过在本文中叙述了，目前最新的三维数字减影血管造影技术（3D-DSA 成像技术）与以往的常规影像学检查技术的对比相关性，其在颅内血管细小动脉瘤的诊断和治疗以及预后评估中的临床应用价值。

多层螺旋 CT 肺动脉血管造影检查在诊断肺动脉血管栓塞中的临床应用价值及进展展望

李彬[1],汤素琼[2]
1.湖北省孝感市中心医院 CT 室
2.湖北省孝感市中心医院肛肠科

摘要：目前临床上肺动脉血管栓塞（肺栓塞）的发病率日益增加，近年来随着医学技术的飞速发展，特别新的诊疗方法的普及，临床诊断与影像放射学诊断能力都得到很大的提高，肺动脉血管栓塞的临床确诊病例增加非常明显，也为临床制定及时有效的救治方法，提供了有力的依据。目前肺动脉血管栓塞已成为医学影像学科和相关临床学科的重点研究课题之一，但由于多数患者都缺乏敏感性和特异性的临床表现和实验室检查数据，故当前临床诊断确诊这种疾病，主要依赖于医学影像学检查。本文就多层螺旋 CT 肺动脉血管造影应用诊断及其进展展望做一系统综述。

1.南充市中心医院
2.川北医学院

目的　探讨医用臭氧对兔 VX_2 肝癌治疗作用。**方法**　选择 18 只健康新西兰大白兔，采用开腹直接种植法制作 VX_2 肝癌模型。介入治疗：建模 2 周后行上腹部增强 CT 扫描，建模成功后，将 18 只实验兔随机分为两组进行介入治疗：生理盐水组（灌注 50ml 生理盐水，n=10），臭氧水组（灌注 50ml100ug/ml 臭氧水,n=8）。治疗后观察：一般情况的观察；术前及术后检测 ALT、AST、Cr、TNF-α、IL-6、IL-1β 水平的动态变化；术前 1 天及术后 7 天、14 天分别行上腹部增强 CT 扫描，计算肿瘤体积增长率及坏死率。术后 14 天处死实验兔，取肿瘤组织，做病理切片，HE 染色观察肝癌术后镜下表现。**结果**　（1）一般情况：术后实验兔均出现不同程度的精神萎靡、活动减低、反应迟钝、纳差等症状，术后 5-7 天症状逐渐缓解。（2）肝肾功能：臭氧水组实验兔术后 ALT、AST 水平较术前均升高，差异无统计学意义（P>0.05）；生理盐水组实验兔术后 ALT、AST 水平较术前无明显变化，差异无统计学意义（P>0.05）；两组实验兔术后 Cr 水平均较术前无明显变化，差异无统计学意义（P>0.05）。（3）炎症因子：两组实验兔的 TNF-α、IL-6、IL-1β 在术前无明显差异，术后臭氧水组实验兔的 TNF-α、IL-6、IL-1β 较生理盐水组均不同程度增高，差异有统计学意义（P<0.05）。（4）影像学表现：在 CT 平扫时病灶呈低密度，增强扫描动脉期边缘明显强化，静脉期强化程度明显增加。介入治疗后，臭氧水组肿瘤的生长率低于生理盐水组，肿瘤内部坏死率明显高于生理盐水组，差异有统计学意义（P<0.05）。（5）病理学表现：HE 染色镜下观察可见肿瘤细胞核增大、异型明显、排列紊乱，瘤组织中央大片变性、坏死；臭氧水组肿瘤细胞的坏死范围明显大于生理盐水组。**结论**　本研究发现臭氧水能抑制肿瘤的生长速度，促进细胞炎症因子的表达，诱导肿瘤细胞的坏死。

肝血管瘤介入治疗的疗效分析

齐超彦
皖南医学院弋矶山医院

目的　探讨博来霉素碘化油乳剂加明胶海绵颗粒在肝血管瘤介入栓塞治疗中的疗效和安全性。　方法　收集并分析 2014 年 6 月-2018 年 8 月我院经动脉栓塞治疗的 62 例肝血管瘤患者，其中对照组 31 例，观察组 31 例。　对照组使用博来霉素碘化油乳剂行瘤体供血动脉栓塞，观察组在使用与对照组相同栓塞剂基础上加明胶海绵颗粒加强栓塞，比较两组患者临床疗效以及不良反应发生情况。　结果　观察组有效率（100%）明显高于对照组（74.1%），差异有统计学意义（P 〈

0.05）。 观察组患者治疗前总胆汁酸水平为（13.12±4.18）μmol/L，对照组为（14.17±4.13）μmol/L，两组差异无统计学意义（P ＞ 0.05）；治疗后，观察组为（5.55±1.74）μmol/L，较对照组的（12.13±3.22）μmol/L 明显降低，差异有统计学意义（P ＜ 0.05）。观察组不良反应的发生率为 37.5%，低于对照组的 40.0%，但差异无统计学意义（P ＞ 0.05）。结论 博来霉素碘化油乳剂加明胶海绵颗粒在介入治疗肝血管瘤中疗效显著，安全性高，值得临床推广应用。

PU-1578

介入栓塞对于子宫腺肌症疗效与价值

郭亚飞,赵鑫
郑州大学第三附属医院

目的 探讨介入栓塞对于子宫腺肌症疗效与价值。 **方法** 回顾性分析我院 16 例子宫腺肌症患者介入治疗的临床及影像资料，测量病变处最大子宫肌层厚度，对术前术后肌层厚度行配对 t 检验。**结果** 子宫腺肌症患者经介入栓塞治疗后临床症状改善，子宫肌层厚度有所减小（t<0.05）。 **结论** 子宫腺肌症采用介入栓塞治疗，创伤小、安全性高，疗效显著，值得推广。

PU-1579

经皮肝穿刺胃曲张静脉栓塞术联合或不联合部分脾动脉栓塞术治疗急性食管胃底曲张静脉破裂出血临床观察

周国锋,潘峰
华中科技大学同济医学院附属协和医院

目的 观察比较经皮肝穿刺胃曲张静脉栓塞术（PTVE）联合或不联合部分脾动脉栓塞术（PSE）治疗急性食管胃底曲张静脉破裂出血的临床效果及预后。

方法：回顾性分析 2010 年 1 月至 2017 年 1 月采用单纯 PTVE 或 PTVE＋PSE 治疗的 56 例急性活动性食管胃底曲张静脉破裂出血患者临床资料，其中 PTVE 组 22 例、PTVE＋PSE 组 34 例。

结果：术后所有患者活动性上消化道出血完全停止。PTVE＋PSE 组白细胞、血小板水平升高显著高于 PTVE 组（P=0.002，P=0.032）。Log 蛳 Rank 分析表明两组无事件生存时间（EFS）差异无统计学意义（χ2=1.571，P=0.210），Cox 回归分析表明 Child 蛳 Pugh 评分与再发出血显著相关（HR=1.296，95%CI：1.130～1.488，P＜0.001）。

结论：PTVE 及 PTVE＋PSE 两种介入手术均可有效地治疗食管胃底曲张静脉破裂活动性出血，两者远期出血率无显著性差异，但 PTVE＋PSE 可显著改善患者脾亢表现。Child 蛳 Pugh 评分增高是术后再发出血的危险因素。

儿童肺隔离症行 DSA 下责任血管栓塞术的治疗及术中体会

张文哲,赵鑫
郑州大学第三附属医院

目的 探讨儿童肺隔离症介入栓塞治疗的安全性及有效性，以及栓塞术中体会。
方法 自 2016 年 2 月至 2019 年 2 月收治 3 例因反复肺部感染入院的儿童肺隔离症患儿，其中 2 例明确诊断为左下肺叶内型肺隔离症，1 例高度怀疑肺隔离症。全麻下对 3 例患儿行 DSA 下隔离肺责任血管栓塞术，观察患儿术后反应及相关并发症，并对患儿的症状改善情况进行随访。
结果 3 例患儿均成功行 DSA 下介入栓塞治疗，责任血管均栓塞完全，手术成功率 100%；其中 1 例患儿术前高度怀疑肺隔离症，术中 DSA 下造影明确诊断为此病，并发现责任血管与肺动脉存在瘘口。术中均应用弹簧圈栓塞责任血管，未出现弹簧圈阻塞末梢血管及进入肺动脉内等相关并发症。术后 3 例患儿均出现发热症状，予以抗生素及退热药物应用后，均在术后 5 天内缓解。3 例患儿出院后均未再出现反复肺部感染症状，术后 6 个月复查 CTA 均未再见原责任血管显影。随访 1 年，3 例患儿随访均未复发。
结论 DSA 下血管造影对 CT 无法明确诊断的肺隔离症有确诊的作用。儿童肺隔离症患者行 DSA 下责任血管栓塞术安全性高，效果良好，复发率低。

PU-1581
不同长度鞘管在腹主动脉球囊阻断联合剖宫产术中的对比分析

张文哲,赵鑫
郑州大学第三附属医院

目的 对比不同长度鞘管在凶险性前置胎盘行腹主动脉球囊阻断联合剖宫产术中的应用及相关并发症分析
方法 回顾性分析了 2017 年 4 月至 2017 年 12 月期间收治于我院的 159 例凶险性前置胎盘患者的临床资料。患者均行腹主动脉球囊阻断联合剖宫产术，83 例患者应用长鞘置入球囊（A 组），76 例患者应用短鞘置入球囊（B 组）。
结果 两组病例母婴情况（年龄、孕周、孕次、产次、新生儿 Apgar 评分）的差异无统计学意义（P＞0.05）。两组产妇术中出血量、输血比例、手术时间、球囊阻断时间、胎儿接收透视时间及放射剂量、术后行动脉栓塞率、子宫切除率上差异无统计学意义（P＞0.05）。A 组术后发现 2 例穿刺点血肿，1 例发生股总动脉血栓；B 组术后发现 1 例穿刺点血肿，6 例穿刺侧动脉血栓。形成动脉血栓上的差异有统计学意义（P＜0.05）。
结论 在凶险性前置胎盘的治疗中，应用长鞘行腹主动脉球囊阻断联合剖宫产术可有效减少球囊对血管的损伤，并降低穿刺侧下肢动脉血栓风险。

PU-1582
Dual compression is not an uncommon type of iliac vein compression syndrome

Wanyin Shi

The First Affiliated Hospital of Anhui Medical University

Abstract Typical iliac vein compression syndrome (IVCS) is characterized by compression of left common iliac vein (LCIV) by the overlying right common iliac artery (RCIA). We described an underestimated type of IVCS with dual compression by right and left common iliac arteries (LCIA) simultaneously. Thirty-one patients with IVCS were retrospectively included. All patients received trans-catheter venography and computed tomography (CT) examinations for diagnosing and evaluating IVCS. Late venography and reconstructed CT were used for evaluating the anatomical relationship among LCIV, RCIA and LCIA. Imaging manifestations as well as demographic data were collected and evaluated by two experienced radiologists. Sole and dual compression were found in 32.3% (n=10) and 67.7% (n=21) of 31 patients respectively. No statistical differences existed between them in terms of age, gender, LCIV diameter at the maximum compression point, pressure gradient across stenosis, and the percentage of compression level. On CT and venography, sole compression was commonly presented with a longitudinal compression at the orifice of LCIV while dual compression was usually presented as two types: one had a lengthy stenosis along the upper side of LCIV and the other was manifested by a longitudinal compression near to the orifice of external iliac vein. The presence of dual compression seemed significantly correlated with the tortuous LCIA (p=0.006). Left common iliac vein can be presented by dual compression. This type of compression has typical manifestations on late venography and CT.

PU-1583

Atrophic inferior vena cava is a marker of chronicity of intra-filter and inferior vena cava thrombosis: based on CT findings

Wanyin Shi
The First Affiliated Hospital of Anhui Medical University

Abstract
Background: A permanently indwelling filter in the inferior vena cava (IVC) may induce caval thrombosis, which could develop and evolve from an acute to a chronic phase. The differential diagnosis of acute and chronic thromboses determines the treatment strategy. The role of computed tomography (CT) in diagnosing acute and chronic intra-filter and IVC thromboses has not been well established. This retrospective study summarizes the CT signs that indicate acute and chronic phases of intra-filter and IVC thromboses.
Methods: This study included eight patients who developed a lower-extremity deep venous thrombosis (DVT) and were treated with intracaval filter placement as an alternative to anticoagulation and thrombolysis. During the follow-up, all patients developed an intra-filter thrombosis in the IVC confirmed by CT and/or CT venography (CTV). Demographic and CT data of all patients during the follow-up period were collected for analysis.

Results: All patients had normal-appearing IVCs prior to filter placement, as shown on trans-femoral venography. Eight filters (five TrapEase, three OptEase) were placed in the eight IVCs, respectively. Subsequently, IVC-CT or CTV revealed acute intra-filter or IVC thrombosis in all eight patients, manifesting as an intracaval filling defect and thickened IVC wall. Filter protrusion and secondary caval atrophy seen on CT indicated a chronically occluded IVC.
Conclusions: IVC thrombosis may result from filter placement. The chronicity of caval thrombotic occlusion is likely to be associated with filter protrusion and secondary IVC atrophy revealed on CT scans.

PU-1584
介入栓塞治疗于骨盆骨折后失血性休克中价值

许斯鼎,郑潜新,时昭胤
漳州正兴医院

介入栓塞治疗于骨盆骨折后失血性休克中价值
许斯鼎　郑潜新　时昭胤（漳州正兴医院 放射介入科 ）
目的　探讨髂内动脉栓塞治疗骨盆骨折合并失血性休克的临床价值。**方法**　对 12 例骨盆骨折合并失血性休克行髂内动脉栓塞的病例进行回顾分析，12 例患者根据造影结果分别实施了选择性动脉栓塞；　对栓塞前和栓塞后 4 h 血流动力学指标进行比较。**结果**　造影剂自损伤血管外溢 9 例，行选择性动脉栓塞；双侧多部位有造影剂弥漫性外溢 2 例，右侧髂内动脉主干不显影 1 例，左侧多部位造影剂外溢，行双侧髂内动脉栓塞；实施动脉栓塞后 4 h，心率从(148.50±9.76) 次/min 降到(109.42±13.51) 次/min，收缩压从(90.42±11.61) mmHg 升到(124.08±8.62) mmHg，舒张压从(53.83±6.70) mmHg 升到(75.00±14.83) mmHg，同时尿量增加，从(0.31±0.06) mL/(kg·h) 升到(0.83±0.31) mL/(kg·h)，差异均具有统计学意义；去甲肾上腺素用量明显下降，从(11.04±2.79) μg/min 减到(8.17±2.19) μg/min；中心静脉压有所上升，从(3.25±1.68) mmHg 升到(3.67±1.07) mmHg，差异无统计学意义。2 例因多脏器功能衰竭死亡，其余均康复出院。**结论**　髂内动脉栓塞术是抢救骨盆骨折大出血的首选治疗方式，具有创伤小、安全有效的优点。

PU-1585
基于增强 CT 三维血管重建的急诊挽救性 TIPS 术前相关影像学个体化评估

何苹,闫建华
天津市第三中心医院

目的　探讨多层螺旋 CT 扫描成像及多层螺旋 CT 门静脉血管成像在急诊挽救性 TIPS 联合 GCVE 术前相关影像学个体化评估的应用价值。
方法　随机收集 2016 年 1 月至 2019 年 4 月的 45 例肝硬化门静脉高压合并上消化道出血急诊行 TIPS 联合 GCVE 患者，术前行 MSCT 增强检查。 采用最大密度投影（MIP）、多平面重建（MPR）、容积再现 （VR）等后处理技术全面了解肝脏情况，包括门静脉与腔静脉情况、侧枝循环及静脉曲张情况、肿瘤情况，并结合胃镜对主要出血责任血管进行评估，对重要分流道进行评估。

结果 MSCT 及 MSCTP 能清晰显示肝硬化肝脏形态变化、肝静脉与门静脉空间位置关系、门静脉侧支循环开放程度和范围以及腹水等情况，侧枝循环及静脉曲张情况、肿瘤情况、分流道情况，为 TIPS 联合 GCVE 术前评估提供了重要的解剖信息及对术前情况的预判。MSCT 能够检 出 100%胃底静脉曲张、72．5%胃冠状静脉曲张、81．3%胃短静脉曲张、100% 脾肾分流，对门静脉高压侧支循环的显示具有很好的优势。术前 MSCT 充分显示了门静脉系统侧支引流静脉全貌，明确了曲张静脉开口位置、直径大小、曲张程度和走行情 况等。本研究 45 例急诊成功实施 TIPS 联合 GCVE 术的 患者，术中直接门静脉造影与术前 MSCTP 相比胃冠 状静脉和脾肾分流显影符合率分别为 100%、94%， 术前 MSCTP 能提供准确的门静脉系统 曲张侧枝静脉信息，保证了 GCVE 术时导管的超选、栓塞材料的选择，避免漏栓或误栓。

结论 MSCT 强化具有无创性、操作简单、可重复性强等优势，是显示肝静脉、门静脉、腔静脉及其侧支循环的有效检查手段， 特别是为 TIPS 联合 GCVE 术前禁忌证的筛查和侧枝静脉曲张程度的评价提供了重要的解剖信息，对准确引导门静脉穿刺及曲张静脉栓塞具有重要的指导意义，提高了 TIPS 手术的实施效率，节省了手术时间，预防静脉曲张漏栓剂误栓，并在一定程度上减少了手术并发症。

PU-1586

经动脉栓塞术治疗子宫动静脉畸形的临床应用

姜永能
昆明医科大学第一附属医院

【摘要】 **目的** 探讨经动脉栓塞术治疗子宫动静脉畸形（AVM）临床应用的安全性与有效性。**方法** 回顾性分析昆明医科大学第一附属医院 2013 年 6 月至 2017 年 9 月因子宫 AVM 行经动脉栓塞术治疗患者的临床资料，共有 8 例患者入本研究。分析患者介入治疗的止血效果、并发症及治疗后妊娠情况。**结果** 8 例患者接受了 10 次经动脉栓塞治疗，其中 2 例患者妊娠分娩后因再发出血而行再次栓塞治疗。治疗后 8 患者均得到有效止血，2 例患者栓塞后成功妊娠，并顺产婴儿。8 例患者均出现了不同程度的栓塞后综合征表现，无严重并发症发生。 **结论** 经动脉栓塞治疗子宫 AVM 安全可行，同时为患者保留了生育能力。

PU-1587

医源性肾血管损伤的介入栓塞治疗

古明高,赵玺,罗勇
黔南州医院

目的 评价用介入栓塞技术治疗医源性肾血管损伤的安全性和疗效。**方法** 对 10 例（次）医源性肾血管损伤患者进行超选择性肾动脉栓塞治疗，损伤原因：经皮肾造瘘 1 例，肾切开取石术后 2 例，经皮肾镜取石术后 7（次）例；临床表现患侧腰痛、血尿；有失血性休克 8 例。栓塞材料：单纯明胶海绵 5 例，弹簧圈 5 例，其中一例一枚，2 例 2 枚，一例 3 枚，一例 4 枚；有一例栓塞两次。结果 6 例选择性肾动脉造影均显示血管破裂对比剂外溢，肾实质内动静脉 瘘 1 例、假性动脉瘤 3 例，一例造影剂外溢征象不明显。 本组病例均栓塞成功;治疗结束时复查造影显示异常血管消失，正常分支保留。7 例失血症状明显者，栓塞后经给予补充血容量，失血症状迅速改善；血尿 8 例，术后 2 ~ 7d 消失:除一例作第二次栓塞外，其他 8 例未再针对肾脏血管损伤进行外科或介入治疗，术后未再发生出血，血肌酐、尿素测定属正常范围。**结论** 经皮超选择性肾动脉分支栓塞术是治疗医源性肾脏血管损伤的安全、有效方法。

PU-1588

急性消化道大出血介入治疗的护理体会

罗芙蓉,古明高,赵玺,罗勇
贵州省黔南州人民医院

目的 探讨急性消化道出血介入治疗的护理体会。 **方法** 对 2014 年 2 月--2018 年 5 月就诊于我科经介入治疗方法治疗的 58 例急性消化道出血患者临床资料进行回顾性分析。**结果** 58 例病人中，经介入治疗及护理后出血停止，其中 55 例一次栓塞成功，3 例经二次栓塞后出血停止，所有患者经有效治疗及护理后出院。**结论** 介入治疗消化道出血时术前术中及术后的观察和护理在患者康复过程中具有重要作用。

PU-1589

经皮肾镜术后肾出血行肾动脉造影及栓塞治疗的疗效分析

罗勇,古明高,赵玺
黔南布依族苗族自治州医院

目的 探讨肾动脉造影及栓塞治疗对微创经皮肾镜取石术(MPCNL)术后肾出血的疗效，总结介入栓塞止血治疗的方法及经验。**方法** 回顾性分析 2016 年 1 月～2019 年 1 月我院 20 例肾结石患者实施了微创经皮肾镜取石术(MPCNL)术后出现大出血，我科进行超选择肾动脉造影及栓塞止血治疗，栓塞材料用明胶海绵和弹簧圈。**结果** 经超选择性肾动脉造影及栓塞止血治疗，17 例肾出血患者栓塞后出血完全停止，并保留了患肾的大部分组织和功能；1 例行介入栓塞后仍继续出血，经再次行介入治疗，疗效良好；2 例患者经介入栓塞止血治疗后，疗效不佳，术后无明显改善。**结论** 选择性肾动脉造影及栓塞治疗是 MPCNL 术后肾出血可靠的诊断方法，也是安全、有效的止血手段，并对保留肾功能有重要意义。

增强 CT 在检测急诊腹盆部创伤患者出血中的应用

刘涛[1],鄢龙[1],吴光耀[1],明建中[2],相呈县[2],尚许彬[2]
1.深圳大学总医院
2.深圳市南山区人民医院

目的 通过与数字减影（DSA）造影对比，评价增强 CT 在急诊腹部及盆腔创伤中检测活动性出血的应用价值。**方法** 回顾性分析 2016 年 1 月至 2019 年 2 月间急诊收治的腹盆部创伤患者，所有患者入院后均行腹盆部增强 CT，并于受伤 24h 内行 DSA 造影或栓塞治疗，将 CT 与 DSA 图像（金标准）对比，得出 CT 诊断活动性出血灵敏度、特异度、阳性预测值、阴性预测值等指标。**结果** 期间共有 33 名患者同时行增强 CT 及 DSA 造影，其中 10 名患者增强 CT 与 DSA 均未发现出血，其中 20 名患者增强 CT 和 DSA 均阳性，有 1 例增强 CT 阳性而随后 DSA 未发现出血，2 例增强 CT 阴性而随后 DSA 证实有出血。与 DSA 对比，增强 CT 诊断出血的灵敏度（SE）、特异度（SP）、阳性预测值（PPV）、阴性预测值（NPV）分别为：90.9%、90.9%、95.2%和 83.3%。**结论** 增强 CT 对诊断腹盆部创伤患者活动性出血有较高灵敏性及阳性预测值，为患者后续治疗提供较好的引导作用。

情景模拟教学对影响护生护患关系因素的观察

丁虹
武汉大学人民医院

目的 教学医院护理实习生是医院护理工作者的一部分。护理实习生与患者的关系也是护患关系的重要组成部分，对护患关系的影响很大。通过分析护生与患者关系的影响因素可以明确改进的方向，从而提升患者满意
度。 **方法** 通过 2018~2019 年在我科情景模拟教学中对实习护生与患者的互动模式的观察。
结果 学生天生的性格气质及对自身的认同感以及其知识储备和带教老师的知识储备及与他人相处的行为模式是护生实习期间护患关系的主要影响因素。**结论** 善于表达、有丰富知识储备的护生容易得到患者的亲耐，能争取到更多的动手机会；带教老师良好的人际关系可以对学生产生积极的模范效应。

PU-1593
严重扭曲入路腹主动脉瘤腔内隔绝术

王国树
重庆医科大学附属第一医院

主诉：老年男性，因左下肢进行性肿胀、行走困难 1 月入院。外院发现左下肢深静脉血栓治疗，但治疗效果不佳。查体：腹部可扪及搏动性包块，搏动范围约 10*12cm，双侧股动脉可扪及，左下肢

明显肿胀，左足背动脉不能扪及，左腘，右侧腘及足背胫后可扪及。外院 CT 示腹主动脉瘤，双髂动脉瘤，瘤壁钙化严重，双侧髂动脉严重扭曲。
诊断：腹主动脉瘤伴血栓形成；双侧髂动脉瘤伴血栓形成；左侧髂股静脉血栓形成。治疗方案：拟滤器保护下动脉瘤腔内隔绝。
手术过程：右侧股动脉穿刺，路图示右侧股动脉入路扭曲。超滑导丝配合送入黄金标记猪尾导管行腹主动脉造影示：腹主动脉瘤，腹主动脉瘤右侧壁尖端突出，有较大破裂风险，双侧髂动脉扭曲变形。切开部分腹股沟韧带及部分腹内斜肌及横肌暴露右侧股动脉至髂外远段全程。左侧同样切开。栓塞双侧髂内动脉。C2 送入右侧入路腹主动脉段，Cook 超硬导丝难以进入扭曲血管，再尝试波科、绿宝石均不能通过。送入 6F 通用鞘，同时牵拉髂外动脉，矫正第一道弯。通用鞘做支撑，第一个弯折被牵拉矫型，波科硬导丝送入成功跨过两道关，至此扭曲入路的导丝支撑成功建立。
波科导丝送入支撑下，右侧股动脉送入美敦力覆膜分叉主体支架 Endurant 1 代 28-16-145mm。猪尾导管定位标记、路图下定位调整精准定位后，主体支架释放近端倒钩锚定。注意避免后续摆动影响释放主体支架左侧腿。左侧三超配合 C2 导管选入腿支架内。考虑血管扭曲，超硬导丝送入仍可能困难，尝试三超导丝植入支撑。支架送入中导丝支撑不住，髂扭曲，尾端袖套，阻力极大，支架难以送入。果断退出支架，再次使用鞘管通道。三超支撑下，送入 90cm 长鞘至腹主动脉上段，本次选择支撑性强的绿宝石导丝做支撑。导丝送入中，同样需要牵拉髂外动脉远端。直接于双侧超硬导丝支撑下分别续接美敦力 Endurant 二代 16-16-93（右）、16-13-93（左）腿支架。

UC-MSC paracrine, mainly due to exosomes, alleviates renal fibrosis in diabetic nephropathy by reducing myofibroblast transdifferentiation and cell proliferation and enhancing expression of MMPs

Hongde Li
1.The third Xiang Ya hospital, Central South University
2.Postdoctoral Research Station of Special Medicine, The Third Xiangya Hospital of Central South University

Administration of umbilical cord mesenchymal stem cells (UC-MSCs) improves renal fibrosis from diabetic nephropathy (DN). However, the potential therapeutic mechanism is not well understood. In this study, we investigated the role of mouse UC-MSC (mUC-MSCs) paracrine in renal fibrosis in DN. We found that the repeated administration of mUC-MSCs prevent albuminuria, glomerulus injury and glomerular fibrosis in STZ-induced diabetic mice. In vitro, the coculture of high glucose-induced mesangial cells with mUC-MSCs decreased the expression of extracellular matrix (ECM), including collagen I and fibronectin. Furthermore, results from immunofluorescence assay, wound healing assay and cell proliferation test showed that mUC-MSC-conditioned medium inhibited TGF-β1/Smad2/3 signaling mediated myofibroblast transdifferentiation (MFT) and cell proliferation induced by PI3K/Akt and MAPK signal transduction in glucose-induced mesangial cells. Meanwhile, the expression of matrix metalloproteinases (MMPs) was increased. After treatment with GW4869, an exosome inhibitor, the regulatory effects of mUC-MSC paracrine on MFT, cell proliferation and MMP expression were significantly blocked by antagonizing the above three mechanisms. This study demonstrates the comprehensive mechanisms by which mUC-MSC paracrine alleviates renal fibrosis in DN

involve reducing ECM production and promoting their degradation, and provides the proof that the anti-fibrosis effect might be mainly due to the secreted exosomes.

子宫动脉栓塞术在治疗高险子宫瘢痕妊娠中的应用

袁骏,王世平,李骏,杨勤飞
云南昆钢医院

[摘要] **目的** 探索子宫动脉栓塞术(UAE)在治疗高风险子宫切口瘢痕妊娠(CSP)中的作用和安全性。方法:回顾分析 2016 年 1 月-2018 年 12 月 35 例采用子宫动脉栓塞术(UAE)治疗的瘢痕妊娠患者资料。27 例患者均为超声证实孕囊供血丰富 、原始胚胎生长活性高、预计药物治疗难以成功者 ，其中有 5 例患者出现阴道流血。27 例患者行子宫动脉氨甲蝶呤(MTX)及明胶海绵颗粒 (条) 栓塞 ，术后立即复查超声，术后第二天复查 HCG 和孕酮，观察患者腹痛和出血情况。术后第第 3 天行清宫术。随访 3 个月以上，观察并发症和月经恢复时间 。**结果** 27 例患者 UAE 治疗均 1 次成功 ，均成功保留子宫 ，术后复查超声孕囊未见血流信号，孕囊塌陷 ，术后复查 HCG 和孕酮迅速下降。术后第三天清宫出无明显出血，出血量均在 5ml 左右。1 个月后月经恢复。**结论** 在治疗高风险 CSP 时，采用 UAE 的治疗效果好 、安全性高 ，不良反应少 ，可作为重要治疗方法 。

PU-1598
简易负压引流瓶联合猪尾巴引流导管治疗巨大淋巴管畸形的效果观察

刘浪
广州市妇女儿童医疗中心

目的 观察简易负压引流瓶联合猪尾巴引流导管治疗巨大淋巴管畸形的临床效果。**方法** 25 例巨大淋巴管瘤患儿使用 6.3F 或 7F 猪尾巴引流管在超声引导下置入淋巴管囊腔内后通过三通旋塞连接简易负压引流瓶行负压引流，观察其临床效果。**结果** 25 例巨大淋巴管瘤患者共置管 28 例次，均一次穿刺、置管成功，保留时间 2～5d。本组患者于置管后未出现引流不畅或堵管，1 例患者出现脱管现象，重新置管后正常引流。在负压引流过程中可通过三通旋塞给予平阳霉素 8mg+0.9%生理盐水混合液囊腔内冲洗；未出现感染等相关并发症。**结论** 简易负压引流瓶联合猪尾巴引流导管治疗巨大淋巴管畸形具有操作简便、安全可靠、引流效果确切等特点，值得临床推广应用。

PU-1599
彩超引导下 5F 一次性使用引流套管针在淋巴管畸形伴出血介入治疗中的应用

刘浪
广州市妇女儿童医疗中心

目的:观察彩超引导下经 5F 一次性引流套管针注射平阳霉素治疗颈部巨囊性淋巴管瘤疗效.方法:颈部巨囊型囊性淋巴管瘤患者 22 例,B 超动态了解瘤体内情况,B 超引导下将 5F 引流套管针穿入囊腔内，尽量将 1 个或多个囊腔内液体抽出,将配好的药液缓慢注射入瘤体,囊内最多注射 0.5～1ml 药液,完毕压迫瘤体周围针孔,直至无出血为止,注射 1～5 次,每次注射间隔时间为 7～10d,所有注射疗程结束时平阳霉素总量≤40mg.定期观察瘤体的大小变化、硬度变化或通过 B 超了解多房性瘤体内部囊腔愈合情况.注射治疗 5 次后仍未完全愈合者/无效者改行为手术治疗.结果:所有患者随访时间均≥1.5 年,B 超显示瘤体完全消失 20 例,经随访无复发.瘤体明显缩小至 50％以上的患者 17 例,B 超检查显示仅少量分隔存在,后加行局部注射治疗,达到了将淋巴管瘤基本消失.所有患者均未出现瘤体表面皮肤破溃、发热、恶心呕吐、肺纤维化、骨髓造血功能抑制等并发症.结论:B 超引导下经 5F 一次性引流套管针注射平阳霉素治疗颈部囊状淋巴管瘤安全、有效,费用低廉,易为患者接受,无明显的副作用及并发症.

PU-1600
介入溶栓治疗在急性肠系膜上动脉栓塞症的临床效果分析

李亚亭,李刚,祝青
四川省三台县人民医院、川北医学院附属三台医院

目的 探讨急性肠系膜上动脉栓塞症的诊断，分析介入溶栓治疗的效果。方法 对我院 2016 年 3 月至 2018 年 1 月收治的 6 例急性肠系膜上动脉栓塞症患者进行回顾性分析。10 例均急诊行肠系膜上动脉造影及溶栓治疗，采用 Seldinger 与同轴导管技术，动脉灌注尿激酶溶栓。结果 6 例患者溶栓成功，症状明显缓解，术后随访 5 例无复发，一例再次栓塞于外院行肠切除手术。结论 早期进行肠系膜动脉造影诊断及介入溶栓是提高肠系膜上动脉栓塞症疗效的关键，急性肠系膜上动脉血栓形成后介入溶栓治疗效果确切。

PU-1601
肝动脉化疗栓塞术的护理策略及效果观察

杨瑛
昆明市延安医院

目的 目前，关于肝癌的治疗手段较多，其中肝动脉化疗栓塞术 Hepatic artery chemoembolization,TACE）作为一个较为成熟、疗效确切的方法，在临床中的应用日趋广泛，已成为中晚期肝癌（hepatocellular carcinoma，HCC）
患者治疗的首选但患者术后会伴有各种并发症，降低了患者术后的生活品质，因此，给予患者合理的护理干预尤为重要。我们通过对行经皮肝动脉化疗栓塞术治疗的肝癌患者进行护理干预，分析综合护理和传统护理在该治疗术式中的应用价值，及对肝癌患者的影响。分析探讨肝癌动脉化疗栓塞术的护理策略及效果观察。**方法** 回顾分析在我科接受肝动脉化疗栓塞术治疗的 40 例肝癌患者用随机数字表法分成 2 组，试验组采用整体护理模式护理病人，对照组采用常规护理模式护理病人。比较两组患者满意度、并发症发生情况、生活质量的情况。**结果** 实验组满意度高于对照组且 P＜0.05，试验组在住院期间并发症发生率远低于对照组且 P＜0.05，实验组生活质量评分优于对照组 P＜0.05。**结论** 对肝癌行肝动脉化疗栓塞术治疗，配合有效的护理策略，能够提高护理满意度、有效的降低并发症、提高生活质量，在原发性肝癌行肝动脉栓塞化疗术中，通过引入心理护理干预辅助治疗的方式，已经成为了当前临床领域肝癌非切除手术患者的首选方案，通过这种以预防为主的护理治疗，是配合 TACE 治疗成功的重要环节，起到着关键的作用，值得在医学临床领域大力推广。

PU-1602
评估“哨兵出血”在胰十二指肠术后出血急诊介入治疗中的意义

王梓,王南
华中科技大学同济医学院附属同济医院

目的 评估“哨兵出血”在胰十二指肠术后出血中的意义，为提高胰十二指肠术后出血患者的预后情况提供参考依据。
材料和**方法** 回顾性收集本院 2015 年 7 月至 2019 年 7 月间胰十二指肠术后大出血行急诊介入患者 56 名，共 89 次介入治疗，对每位患者有无哨兵出血的情况、出血时间及出血量进行记录，比较有无哨兵出血患者之间发生大出血的患者的比例。
结果 所有发生 PPH 的患者术后 1 年生存率为 74%，发生哨兵出血的患者发生大出血的比例为 85.7%（18/21），介入止血成功比例为 66.7%（14/21），未发生哨兵出血的患者发生大出血的比例为 48.6%（17/35），介入止血成功比例为 80.0%（28/35）

结论 当胰十二指肠术后术后发生“哨兵出血”的患者具有发生急危重大出血的风险，应积极寻找出血位置对提高患者预后情况。

PU-1603
介子栓塞术在预防疤痕妊娠清宫术大出血的有效性及安全性

梅世伟,叶志球
广东省妇幼保健院

【摘要】 目的 探讨介入子宫动脉栓塞术在预防疤痕妊娠清宫术大出血中的有效性及安全性。**方法** 总结 2016 年 1 月至 2019 年 5 月以在我院妇科病房住院的 326 例患者，其中孕 8 周的为 297 例，大于 8-12 周的为 29 例，术前均经超声和 MR 诊断为瘢痕子宫合并瘢痕妊娠，患者子宫前壁最薄弱处厚约 1.25±0.75mm，排除禁忌后用明胶海绵颗粒（1000-1400um）超选至双侧子宫动脉远端予以栓塞，栓塞程度以造影后子宫动脉仅主干显影为标准。介入栓塞术后 72h 后妇科予以清宫术，记录术中出血量，随访术后 1 月清宫效果，血 HCG 水平，术后 1-3 月的月经、排卵情况。
结果 326 例患者均成功行双侧子宫动脉超选后予以栓塞，介入栓塞术中出血 5±3ml，术后有 3 例患者有穿刺点部位血肿，经压迫止血后好转，1 例患者清宫后出血量较多予以急诊行子宫动脉 2 次栓塞治疗；清宫产术中出血量为 30±25ml，术中一次性清宫完毕，术后 1 个月随访，阴超检查未见宫腔内胎膜、胎盘残留，孕妇血 HCG 基本降至正常水平，术后 1-3 月患者月经正常，超声提示卵泡正常。
结论 双侧子宫动脉栓塞术在预防疤痕妊娠清宫中大出血具有创伤小、疗效好、并发症少、安全性高，可避免因大出血导致子宫切除而影响今后生育的优点，是疤痕妊娠预防大出血的理想选择。

中线导管在介入科的临床应用及 堵后的原因分析

李爱真
郑州大学第一附属医院

目的 探讨中线导管堵管的发生率及原因。**方法** 分析介入科 2018 年 1 月－2018 年 8 月成功置入中线导管患者 39 例，收集其住院治疗期间的临床资料，对出现堵管的患者进行原因分析。**结果** 39 例置入中线导管患者发生堵管共 2 例，堵管率 5%；堵管的原因有冲封管方法不正确，导管接头松动、患者因素、护士因素。**结论** 中线导管可以保护患者血管，减少反复穿刺；降低静脉炎；无需 X 射线，减少了确定尖端定位的费用，更经济；提高了护理工作效率，更保证了患者治疗的有效进行。

PU-1605
介入治疗下肢深静脉血栓形成患者的护理

刘珍麟
兰州大学第一医院

目的:探讨介入治疗下肢深静脉血栓形成(DVT)的护理措施。方法 45 例 DVT 患者均行深静脉置管接触性溶栓，其中 21 例行下腔静脉滤器置入术，17 例联合血管球囊扩张及血管内支架置入术;对所有介入术后患者实施针对性护理。
结果:45 例患者均介入操作成功，治疗中无严重并发症发生，患者症状与体征均有不同程度的好转。
结论:介入治疗 DVT 操作简便，安全有效，术前、术后实施合理的护理是保证治疗成功的重要环节。

PU-1606

下肢深静脉血栓的护理体会

范晓璐
郑州大学第一附属医院

总结介入溶栓治疗下肢深静脉血栓的护理方法。护理措施有心理护理、饮食及生活指导、溶栓期间的护理、并发症的预
防及护理。总结出护士应做好心理护理、生活护理及健康宣教，关注患者病情，警惕肺栓塞的发生，对提高治疗效果至为重要。

PU-1607

介入法动脉灌注化疗结合放疗治疗中、晚期食管癌

张新异
忻州市人民医院

目的 探究介入法动脉灌注化疗结合放疗治疗中、晚期食管癌的临床效果。**方法** 对我院 2015 年 1 月到 2018 年 12 月间接收的 80 例中、晚期食管癌患者进行治疗，按照随机序号法将患者分为对照组和观察组，对照组采用单纯放疗治疗，观察组采用介入法动脉灌注化疗结合放疗治疗，观察两组效果并进行比较。**结果** 观察组总有效率 94.5%高于对照组总有效率 82.0%，两组比较存在明显差异，P<0.05，差异具有统计学意义。观察组患者的并发症发生率 15.0%低于对照组并发症发生率 17.5%，但两组比较不存在明显差异，P＞0.05，差异不具有统计学意义。**结论** 介入法动脉灌注化疗和放疗联合治疗中晚期食管癌，临床效果良好，因而值得临床借鉴使用。关键词：介入法动脉灌注化疗；放疗；中、晚期食管癌；临床效果 食管癌是临床中常见的一类恶性肿瘤，当患者病情发展到中晚期时，正常的吞咽会受到严重影响，此时对于患者的正常生活产生较大威胁，因此必须进行有效的治疗；目前临床最常用的治疗方法就是对患者进行放射性干预，即放疗，但是单纯的放疗多数情况下很难对患者起到良好的效果，相关研究指出，介入法动脉灌注化疗结合放疗治疗中、晚期食管癌的临床效果良好，因而我们对我院 2013 年 1 月到 2015 年 12 月间接收的 80 例中、晚期食管癌患者进行分组，对照组采用单纯放疗治疗，观察组采用介入法动脉灌注化疗结合放疗治疗，旨在提高其临床治疗效果。

以胸腹主动脉夹层为中心的介入手术术前、术中、术后护理的应用及效果研究

李宗琼[1],桂晓芳[1]
1.弥勒第一医院
2.弥勒第一医院
3.弥勒第一医院
4.弥勒第一医院

云南省红河州弥勒第一医院介入科，云南 弥勒 652399

［摘要］目的:探讨血管腔内隔绝术治疗胸、腹主动脉夹层患者的临床护理要点。

方法:我科 2015 年 12 月至 2019 年 7 月收治 52 例胸、腹主动脉夹层患者行血管腔内隔绝术治疗,手术时间选择在发病 1 周以后,对患者实施精细化术前、术中、 术后护理,包括心理护理、基础护理、专科护理及健康宣教等。

结果:51 例患者成功植入覆膜支架,病情均得到控制,恢复良好,随访 1 年生存率 100%。

结论:对胸、腹主动脉夹层支架植入的必要性及术前、术中、术后护理的重要性,做好心理护理、基础护理和专科护理,是保证手术顺利进行和患者康复的有力保障。

PU-1609
自发性脾动静脉瘘致消化道出血成功介入栓塞一例

陈仁彪,刘陈汉,钱力可,胡红杰
浙江大学医学院附属邵逸夫医院

目的 分享一例自发性脾动静脉瘘致消化道出血的影像学及介入栓塞方法。**方法** 一例不明原因消化道出血的患者行腹部增强 CT 检查拟诊脾动静瘘致门静脉高压，后急诊行脾动脉造影确诊为脾动静脉瘘，并成功经动脉栓塞治疗止血。**结果** 介入栓塞后出血停止，后续复查腹部增强 CT 见动静脉瘘消失，脾脏未见大面积梗死。**结论** 脾动静脉瘘（splenic arteriovenous fistula SAVF）是临床中十分罕见的疾病之一，且多发生在创伤或者手术后，自发性脾动静脉瘘更属罕见，术前仔细研读腹部增强 CT 影像学资料并分析血流动力学有利于理解疾病成因，介入栓塞为治疗脾动静脉瘘的一种微创而有效的方法。

PU-1610
介入高压注射器的检测方法的探讨

张世龙
首都医科大学附属北京朝阳医院

目的 探讨高压注射器的检测方法，为介入手术保驾护航。**方法** 1 材料：MARKERV 高压注射器、150ML 高压注射针筒 1 支、高压连接管 1 条、压力三通 1 个、20ML 注射器 1 只、50ML 注射器 1 只、压力泵 1 个、500ML 盐水 1 瓶、秒表 1 块。2 连接**方法** 安装 150ML 高压注射针筒，抽取 150ML 盐水，接上高压连接管，接上压力三通，排气后备用。3 注射总量和注射时间检测:将 20ML 注射器接在排好器三通一端，排气后，调整三通开关，使高压注射针筒与 20ML 注射器相通。设置高压注射器参数，流速（ML/S）、总量(ML)、时间(S)参数，分为(3、6、2）；（3、9、3)；（4、8、2）；（5、10、2）；(6、18、3）五组，分别测试，同时记录 20ML 注射器盐水的变化值（即实际注射总量）和秒表时间。更换为 50ML 注射器，将参数设置成（10、20、2）；（15、30、2）二组，分别测试。4 注射压力测试：将压力泵接在排好气三通一端，排气，调整三通开关，使高压注射器与压力泵相通。设置高压注射器参数，（2、20、10），注射压力分别设置为 200PSI、

300PSI、400PSI。分别记录压力泵的压力值。**结果** 1 在五组注射总量和注射时间检测中，记录为(6、2)；（9、3）；（8、2）；（10、2）；（18、3）。在二组注射总量和注射时间检测中，记录为（20、2）；（30、2）。**结论** 1 这台高压注射器设置值与输出值一致，符合使用要求。2 这种检测方法适用于高压注射器的日常检测，能够为检测提供准确数据。3 这种检测方法简单易行，零成本，易于推广实施。4 这种检测方法在对高压注射器检测的同时，也同时对高压注射针筒及高压连接管进行了监测。

介入高压注射器输出值的精确性，影响到造影图像质量和介入手术的安全，加强日常定期检测尤为重要。这种检测方法为高压注射器的检测提供了依据，成本低，利于推广实施。

PU-1611
全面护理在下肢动脉硬化闭塞老年患者围术期应用

董丽
中国科学技术大学附属第一医院（安徽省立医院）

目的 探讨下肢动脉硬化闭塞症老年患者行血管腔内介入治疗的围术期全面护理方法。**方法** 回顾分析我科 2018 年 1 月~12 月 20 例下肢动脉硬化闭塞症老年患者的治疗及护理经过。**结果** 其中 15 例为下肢动脉球囊扩张联合支架植入术，5 例为下肢动脉造影联合置管溶栓术。患者入院后护士采取全面护理，18 例手术患者病情较前改善，2 例置管溶栓患者出现穿刺部位皮下出血并发症。**结论** 老年下肢动脉闭塞患者行介入手术相对安全，采取全面护理干预，降低术后并发症，对于加速患者康复、降低致残率具有重要意义。

PU-1621
动脉栓塞化疗对骨肉瘤中血管内皮因子影响及预后的关系

龙清云,刘骏方,丁勋,周军
武汉大学中南医院

目的 探讨动脉栓塞化疗联合静脉新辅助化疗对骨肉瘤组织中血管内皮因子（VEGF）影响及与预后的关系。
方法 通过对 38 例骨肉瘤患者进行回顾性分析，12 例骨肉瘤患者采用超选择动脉栓塞化疗加静脉新辅助化疗，20 例骨肉瘤患者只采用静脉新辅助化疗，6 例术前未采用超选择动脉栓塞化疗及新辅助化疗。比较动脉栓塞化疗加新辅助化疗组与单纯静脉新辅助化疗组、非化疗组患者的生存率和肺转移率，并利用组织学观察和免疫组织化学染色(SP 法)，检测骨肉瘤组织中 VEGF 表达。
结果 采用动脉栓塞化疗加新辅助化疗的 12 例患者中，保肢率为 （11/12）91.7%，新辅助化疗的 20 例患者中，保肢率为（16/20）80.0%，非化疗的 6 例患者中，保肢率为（2/6）33.3%；1～3 年生存率，化疗组（32/32） 100%，非化疗组（4/6）66.7%；4 年生存率，动脉栓塞化疗及静脉新辅助化疗组（10/12）83.3%，单纯静脉新辅助化疗 （15/20）75.0%，非化疗组（2/6）33.3%；5 年生存率，动脉栓塞化疗及静脉新辅助化疗组（7/12）58.3%，单纯静脉新辅助化疗（11/20）55.0%，非化疗组（1/6）16.7%。化疗组 3 年和 5 年生存率显著高于非化疗组 (P <0.05)，而肺转移率显著低于非化疗组 (P <0.05)，化疗组间无显著性差异（P>0.05）；化疗组 VEGF 表达率显著低于非化疗组 (P <0.0 5)，化疗组细胞凋亡率显著高于非化疗组 (P <0.01)；骨肉瘤组织中，细胞凋亡率与 3 年和 5 年生存率显著正相关。
结论 化疗可明显提高骨肉瘤患者的生存率,其作用主要是通过诱导细胞凋亡来实现，并可抑制内皮细胞增殖；肿瘤细胞凋亡率是影响骨肉瘤患者预后的重要因素，动脉栓塞化疗可增加保肢手术成功率，提高患者的生存质量。

下肢静脉注射 MSCT 造影诊断髂静脉血栓形成

姜胜东
杭州市第三人民医院

目的 探讨经患侧下肢静脉注入对比剂多排螺旋 CT 检查诊断髂静脉血栓形成的价值。**方法** 对 100 例直接由患侧下肢静脉注入对比剂多排螺旋 CT 扫描的资料进行回顾性分析。 **结果** 正常 24 例；髂静脉血栓形成 76 例。正常髂静脉 CT 造影显示为：静脉管壁光整清晰、管腔内密度均匀无明显充盈缺损及管腔狭窄、无明显侧支循环。髂静脉血栓形成 CT 影像表现为：血栓形成处出现充盈缺损，管腔变细，对比剂截然中断，在血栓近侧再显影并可见两者之间较多的侧支循环，或静脉主干完全不显影，侧支循环开放，腰升静脉、盆腔内静脉及腹壁静脉迂曲扩张。 **结论** 经疑似髂静脉病变侧的下肢静脉注入对比剂行多层螺旋 CT 髂静脉造影，能够清晰显示髂静脉血栓性病变，为临床诊断和手术提供重要依据。

PU-1623
复杂性 PCNL 术后肾出血介入治疗认识及临床应用

刘春生
北大医疗株洲恺德心血管病医院

【摘要】 目的 提高对 PCNL 术后复杂性肾损伤出血的认识。方法 回顾性分析 2003.3—2018.3 在我院手术发生严重肾出血和由外院手术转来进行肾动脉栓塞止血患者 685 例，其中复杂性肾损伤出血患者 61 例，均使用明胶海绵粒（条）、PVA、丝线或弹簧圈进行栓塞；超选择性肾动脉栓塞止血 50 例， 全肾动脉栓塞止血 11 例。结果 DSA 显示多支或多处肾动脉损伤出血 23 例，肾动、静脉损伤出血（肾 A-V 瘘）11 例，肾动脉损伤出血+肾 A-V 瘘 16 例，肾静脉损伤出血 6 例，弥漫性肾动、静脉损伤出血 5 例，一次性肾动脉栓塞止血痊愈出院 58 例，2 例进行了两次以上栓塞止血。结论 对 PCNL 术后复杂性肾血管损伤出血进行个体化肾动脉栓塞治疗达到微创止血目的。

多层螺旋 CT 多平面重建下髂静脉压迫特征和分型的研究

李嘉颖[1,2],孙志超[1,2]
1.浙江中医药大学附属第一医院
2.浙江中医药大学第一临床医学院

【摘要】 目的 通过多层螺旋 CT(MSCT)的多平面重建技术（MPR）研究正常人群的髂静脉压迫特征和分型。**方法** 采用回顾性横断面研究方法，收集 2018 年 6 月-10 月于我院行 MSCT 增强扫描的病例，筛选符合纳入标准者 180 例。分别观察每例左、右侧髂静脉压迫情况，统计压迫类型、压迫点个数、最大压迫部位及发生率，进而对其分型；测量最大压迫部位髂静脉短径、面积、近远端髂静脉面积、压迫范围、髂总静脉汇入下腔静脉的角度，计算最大压迫部位髂静脉狭窄率。比较左、右侧髂总静脉压迫的面积、狭窄率与年龄、性别之间的关系及左、右侧髂总静脉狭窄程度与性别之间的关系。在 SPSS 25.0 软件上采用 t 检验、方差分析、秩和检验和卡方检验对数据进行统计分析。**结果** 髂静脉压迫类型可归纳为四型：Ⅰ型左髂总静脉单一压迫、Ⅱ型左髂总静脉双重压迫、Ⅲ型左右髂总静脉双侧压迫、Ⅳ型其他压迫类型，比例分别为 37 例、66 例、42 例、35 例，其最大压迫部位类型有左髂总静脉 162 例、右髂总静脉 50 例、下腔静脉分叉处 9 例、左髂外静脉 6 例、左髂总静脉分叉处 3 例和右髂外静脉 1 例。基于最大压迫部位，左髂总静脉受压发生率较右髂总静脉高，差异有显著统计学意义（P<0.01）；相比于男性，女性的左、右侧髂总静脉面积均较小，差异有统计学意义（P<0.05），左、右侧髂总静脉狭窄率男性、女性之间差异均无统计学意义（P>0.05）；162 例左髂总静脉、50 例右髂总静脉中，压缩程≥25%分别有 72 例（44.4%）、20 例

（40.0%），压缩程度≥50%分别有 14 例（8.6%）、3 例（6.0%），男性、女性构成比差异均无统计学意义（*P*>0.05）。**结论** 在 MSCT 的 MPR 重建下，髂静脉受压的正常人群可分为四种类型，其中以 II 型左髂总静脉双重压迫最为常见。

外周动脉疾病患者下肢动脉钙化与下肢缺血程度的相关分析

颜汉坤,刘兆玉,畅智慧
中国医科大学附属盛京医院

目的 探讨外周动脉疾病（PAD）患者下肢动脉钙化（LEAC）对下肢缺血程度的影响。**方法** 回顾性收集 2017 年 9 月-2018 年 3 月在我院接受下肢 CTA 扫描检查并符合纳入排除标准的 103 例 PAD 患者，根据患者的 Rutherford 分级分为跛行组（n=56）和严重肢体缺血（CLI）组（n=47），记录患者年龄、性别、吸烟史、饮酒史、糖尿病、高血压、高脂血症、CKD 等基线资料，并且在 CT 平扫图像上测量得到下肢动脉钙化积分（LEACS）。用单因素及多因素 Logistic 回归来确定下肢缺血程度的危险因素。**结果** CLI 组的 LEACS 均高于跛行组。在单因素 Logistic 回归分析中，LRACS（OR：3.227；95%CI：1.514-6.877）是下肢缺血程度增加的危险因素，多因素分析显示 LEACS（OR：3.252；95%CI：1.405-7.523）是下肢缺血程度增加的独立危险因素。**结论** LEACS 是 PAD 患者下肢缺血程度增加的独立危险因素，但 LEAC 在下肢缺血的具体作用还需要进一步研究。

PU-1626
Study on the features and classifications of the iliac vein compression by multi-planar reconstruction imaging with multi-slice spiral CT

Jiaying Li[1,2],Zhichao Sun[1,2]
1.The First Affiliated Hospital of Zhejiang Chinese Medical University， Hangzhou， China
2.First College of Clinical Medicine， Zhejiang Chinese Medical University， Hangzhou， China

【Abstract】**Objective** To study the features and classifications of iliac vein compression among normal population using multi-planner reconstruction (MPR) and multi-slice spiral CT (MSCT). **Methods** Retrospective cross-sectional study. The imaging data of 180 normal individuals who underwent enhanced MSCT examination in our hospital from June to October 2018 were collected. Following data was observed and measured : collecting the type of iliac vein compression, the number of compression point, the site of maximum compression point and then the classification was performed; measured the short diameter and area of the maximum compression of the iliac vein at the point where the iliac artery crossed, the average of the area of the iliac vein proximal and that distal to the maximum compression point, the range of compression, the angle between the common iliac vein and the inferior vena cava extension line bilaterally, and get stenosis rate of the iliac vein. Compare the incidence of the site of maximum compression point, the relationship between the area and stenosis rate of the left common and right common iliac vein compression, the relationship between left and right common stenosis degree and age, gender. Statistical significance was

tested by using Student’s t-test, One-Way ANOVA, Rank sum test, Chi-square test on the SPSS 25.0 software. **Results** The type of iliac vein compressioncould be classified into four classifications: type I the left common iliac veinsingle compression, type II the left common iliac vein double compression, type III the both left and right common iliac vein compression, type IV the other compression type, the proportion was 37/180, 66/180, 42/180, 35/180; the site of maximum compression point includesthe left common iliac vein(LCIV, 162), the right common iliac vein (RCIV, 50), the bifurcation of theinferior vena cava (IVC, 9), the left external iliac vein (LEIV, 6), the bifurcation of the left common iliac vein (LCIV, 3), the right external iliac vein (REIV, 1).The incidence of LCIV compression was higher than the RCIV(P <0.01). The mean area of the bilateralcommon iliac vein in female was less than that in the male (P <0.05), the difference of the bilateral common iliac vein stenosis rate was not statistically significant in females and males (P>0.05). The left and right common iliac vein stenosis rate was greater than25% accounted for 44.4% and 40.0%, respectively; greater than 50% compression accounted for 8.6% and 6.0%, respectively. The difference of proportion was not statistically significant in the males and females (P>0.05).**Conclusions** This study put forward the type of iliac vein compression according to the iliac vein compression in normal population by MPR method of MSCT, among which type II the left common iliac vein double compression accounted for the highest proportion, which can provide important potential evidence for clinical diagnosis and treatment of IVCS.

PU-1627
下肢动脉硬化闭塞症患者动脉钙化的危险因素及其与动脉狭窄的相关关系

颜汉坤,刘兆玉,畅智慧
中国医科大学附属盛京医院

目的 探讨下肢动脉硬化闭塞症（LEASO）患者全下肢动脉钙化（LEAC）及各区段动脉钙化的危险因素，并分析其与相应区段动脉闭塞程度的相关性关系。方法 回顾性收集 2017 年 9 月到 2018 年 3 月接受下肢 CTA 扫描检查的 LEASO 患者，记录患者的基线资料，分别在 CT 平扫图像及增强图像上测量得到下肢动脉钙化积分（LEACS）及代表下肢动脉闭塞程度的下肢动脉指数（LEAI）。以钙化积分（CS）的中位数作为截止水平将患者分为高钙化积分组和低钙化积分组。将使用单因素及多因素线性回归分析总 LEACS 及各区段 CS 的危险因素；采用 Pearson 方法分析全下肢及各区段的 CS 与管腔闭塞程度的相关性，并分析总 LEACS 与下肢各区段 CS 的相关性。结果 在校正危险因素后，空腹血糖是总 LEACS（PRC：0.038，95%CI：0.002-0.073，P=0.037）及膝下动脉段 CS（PRC：0.071，95%CI：0.010-0.133，P=0.024）的独立危险因素，吸烟史（PRC：0.571，95%CI：0.142-0.999，P=0.010）及糖尿病（PRC：0.606，95%CI：0.119-1.094，P=0.015）分别是主髂动脉段 CS 和股腘动脉段 CS 的独立危险因素。总 LEACS 与总 LEAI 之间存在弱相关性（r=0.29，P=0.003），而在下肢各区段的分析中，主髂动脉段 CS 与主髂动脉段 LEAI 不存在相关性（P＞0.05），股腘动脉段（r=0.44，P＜0.001）和膝下动脉段（r=0.46，P＜0.001）的 CS 与对应区段 LEAI 间均存在中等相关性。总 LEACS 与下肢各区段动脉 CS 之间均存在显著相关性（P＜0.001）。结论 下肢动脉不同区段钙化的危险因素不尽相同，仅腹股沟韧带以下的动脉钙化与管腔狭窄程度具有相关性，提示下肢不同区段动脉钙化的病理机制及临床意义可能存在差异。

栓塞其他异位供血子宫动脉在各种难治性子宫出血子宫栓塞术中的临床价值

骆伟杰[1],麻东辉[1],林琳[2],毕雪华[1],陈桂城[1],黄敏丹[1],杨妙琴[1]
1.广州市花都区人民医院
2.广州市第八人民医院

目的
探讨栓塞其他异位供血子宫动脉对各种子宫出血子宫动脉栓塞术的临床意义。
实验材料与方法
收集本院收治的 119 例难治性子宫出血并施行了介入止血治疗患者的病历及影像学资料，其中终止妊娠 10 例，产后出血 96 例，疤痕妊娠 13 例。将病人分为仅仅栓塞子宫动脉组及除栓塞子宫动脉同时栓塞其他异位供应子宫血管（双侧卵巢动脉，双侧髂外动脉分支等），并根据出血量、血流动力学是否稳定、是否并发弥散性血管内凝血及术后是否需要切除子宫及产后月经情况等结果分析。所有统计学分析均用 SPSS 22.0 处理，出血量用两独立样本 T 检验，血流动力学是否稳定、是否并发弥散性血管内凝血及术后是否需要切除子宫采用卡方检验。
结果
收集患者的平均年龄 32 岁，年龄范围 21-47 岁。仅栓塞子宫动脉出血量较栓塞子宫动脉及其他供血动脉统计学上有差异（P＜0.05）。仅栓塞子宫动脉较栓塞子宫动脉及其他供血动脉在产后月经情况、血流动力学是否稳定、是否并发弥散性血管内凝血及术后是否需要切除子宫的发生率上无统计学差异（P＞0.05）。
结论
子宫动脉栓塞术对各种难治性子宫出血效果明显，减少出血量及并发症发生，降低切除子宫的发生率。栓塞其他异位供血子宫动脉止血效果较单纯栓塞子宫动脉效果显著。

螺旋 CT 静脉造影成像评价下肢静脉曲张交通静脉显影价值

王鹏
江南大学附属医院（原无锡三院）

目的　评估螺旋 CT 静脉造影成像在下肢静脉曲张微创治疗交通静脉评价中的价值。方法　对 112 例(168 条患肢)下肢静脉曲张患者行静脉腔内激光闭塞联合泡沫硬化杂交微创治疗,术前检查及术后 3 个月复查应用 256 排螺旋 CT 静脉造影成像和静脉顺行造影,回顾性对比分析 2 种检查方法显示交通静脉的资料。2 名放射科医师双盲法分别对图像进行分析,采用 5 分制评价曲张交通静脉显影情况,Kappa 检验比较诊断结果的一致性;行受试者工作特征　(ROC)曲线,计算 CT 下肢静脉造影成像和下肢静脉顺行造影评价交通静脉的敏感度、特异度和准确度。结果 CT 下肢静脉造影和下肢静脉顺行造影图像质量分级中,1~2 分分别占 77.38　(260/336)、58.33　(196/336),5 分分别占　1.78　(6/336)、6.84　(23/336)。2 名阅片者 CT 下肢静脉造影成像和下肢静脉顺行造影评分的 Kappa 值分别为 0.935 和 0.821,一致性好;CT 下肢静脉造影诊断评价交通支 ROC 曲线下面积(AUC)分别为 0.962、0.948(P=0.019),下肢静脉顺行造影分别为 0.658、0.672(P= 0.021),差异均有统计学意义;3 个月后评价下肢静脉曲张残存复发交通静脉敏感度、特异度和准确度的平均值分别是 CT 下肢静脉造影成像 100 (72/72)、97.72　(258/264)、94.94　(319/336),下肢静脉顺行造影 66.67(48/72)、61.74 (163/264)、61.90 (208/336);2 种方法诊断下肢曲张静脉残存

复发的 ROC 曲线分别为 0.985、0.963(P= 0.013)和 0.684、0.587(P= 0.026),差异均有统计学意义。结论 螺旋 CT 静脉造影成像在下肢静脉曲张交通静脉检出及诊断的准确性方面都优于静脉顺行造影,能够满足临床微创介入手术需要。

PU-1630

Strategies for the diagnosis and treatment of the iliac vein compression syndrome

Yanglin Ou,Xinjian Peng,Shuibin Chen
Department of Imaging, 909th Hospital of the Joint Logistics Support Force of PLA (Institute of medical imaging of medical colloge, Xiamen University)

Aim: To evaluate the diagnosis and treatment strategies for the iliac vein compression syndrome (IVCS) and the factors that affect the treatment outcome. **Methods:** In total, 69 patients with IVCS were enrolled in our hospital. The patients underwent computed tomography (CT) venography before treatment. CT observations included assessment of the iliac venous channel sagittal diameter (IVCSD) ahead of the lower lumbar vertebra, causes of oppression, thrombus density, and embolization range. The patients with IVCS were divided into the simple IVCS (sIVCS, n = 22), lumbar degeneration-related type IVCS (dIVCS, n = 33), and IVCS of other causes (oIVCS, n = 14) including lumbar fracture, hematoma of infection, and abscess wraps around and compressing the iliac vein, groups. The treatment methods included target venous catheter thrombolysis, a mechanical breaking and sucking treatment for the thrombus, followed by balloon dilatation and iliac vein stent implantation. The factors that may possibly affect the treatment outcomes included IVCS type, duration of disease, thrombus density, embolization length, and treatment regimen. Logistic regression was used to analyze the factors that affected the therapeutic efficacy. **Results:** Simple iliac vein catheterization thrombolysis was only effective in 15 cases (5 cases of dIVCS and 10 cases of oIVCS) and was ineffective in the remaining 54 cases, which required further mechanical breaking and sucking of the thrombi and intravenous balloon dilatation. In 26 cases, simple iliac vein catheter thrombolysis was effective at the early stage (6 cases of sIVCS, 16 cases of dIVCS, and 4 cases of oIVCS). During follow-up, treatment was considered futile for 9 recurrent cases (3 cases of sIVCS and 6 cases of dIVCS). In 28 cases wherein the primary treatment was futile and 9 cases of relapse, iliac vein stent implantation was performed. All cases were treated effectively and satisfactory iliac vein patency was achieved; these patients were followed-up for 12 months without recurrence. Logistic regression analysis showed that IVCS type (β = 4.14; Wald test, $P < 0.01$), duration of illness (β = -5.33; Wald test, $P = 0.02$), thrombus density (β = -6.46; Wald test, $P = 0.01$), embolization length (β = 2.741; Wald test, $P = 0.03$), and treatment regimens (β = 11.92; Wald test, $P = 0.01$) all had a significant effect on the treatment outcomes. **Conclusion:** The selection of a suitable intervention treatment regimen for different types of IVCS may aid in improving the curative effect.

PU-1631
血流动力不稳型骨盆骨折几种损伤控制性应急处置策略比较

欧阳林,郁毅刚,夏挺
中国人民解放军联勤保障部队第九〇九医院（厦门大学附属东南医院）

目的 探讨血流动力不稳型骨盆骨折（unstable pelvic fractures, HUPF）合适的损伤控制急救方案。
方法 横截面回顾性分析我院 77 例 HUPF 患者采用不同损伤控制措施的效果。A 组为损伤现场未进行骨盆外固定、入院急诊 CT 确定骨盆不稳定骨折后立即行支架外固定，12 例；B 组为损伤现场骨盆下肢联合木板外固定，急诊 CT 后更换为骨盆支架外固定，18 例；C 组为现场骨盆下肢联合木板外固定，急诊 CT 后进行介入栓塞术，术中卸除木板，术后更换为骨盆支架外固定，17 例；D 组为现场骨盆带外固定，急诊 CT 后行介入栓塞术，术中维持骨盆带，术后更换为支架外固定，15 例；E 组为现场骨盆带外固定，急诊 CT 后行介入栓塞术，术中维持骨盆带，术后保留骨盆带并支架外固定，15 例。各组经急诊损伤控制性术后进一步分流专科救治。选择患者平均输血量、休克指数恢复时间和存活率为观察指标，评价各指标的组间差异。
结果 A-E 组输血量依次减少，A 组 4720.00±1996.00（ml），E 组 1287.00±112.50（ml）（F=38.74，p<0.001）；A-E 组休克指数恢复时间依次缩短，A 组 21.70±18.38（h），E 组 4.73±1.10（h）（F=10.23，p<0.001）；A-E 组存活率依次为 42%，55%，59%，73%，87%。
结论 HUPF 患者合适的损伤控制急救措施是现场骨盆外固定优于未固定、急诊介入栓塞优于不栓塞、术中维持固定优于卸除固定、术后保留原固定基础上的骨盆外支架固定优于去除原固定的骨盆外支架固定。

PU-1632
经导管动脉化疗栓塞术联合微波消融治疗肝癌的临床效果及护理措施

吴梅
天津市第一中心医院

目的 为了分析经导管动脉化疗栓塞术联合微波消融治疗肝癌的临床效果。**方法** 选取我院 2017 年 6 月至 2018 年 12 月期间收治的 34 例肝癌患者作为研究对象，基于奇偶顺序将其分为两组，对照组 17 例患者采用经导管动脉化疗栓塞术进行治疗，试验组患者 17 例采用经导管动脉化疗栓塞术联合微波消融进行治疗，观察两组患者 2 个月后的肿瘤完全坏死率和部分坏死率，1 年以及 2 年生存率。**结果** 试验组患者 2 个月后的肿瘤完全坏死率为 88.24%（15/17），显著高于对照组患者的 17.65%（3/17），差异具有统计学意义（P<0.05）；试验组患者 1 年和 2 年的生存率分别为 82.35%（14/17）和 41.18%（7/17），均高于对照组患者的 41.18%（7/17）和 11.76%（2/17），差异具有统计学意义（P<0.05）。**结论** 对于肝癌患者采用经导管动脉化疗栓塞术联合微波消融进行治疗可以有效提高近期肿瘤完全坏死率以及远期生存率，效果显著。

PU-1633
TACE 联合微波消融治疗中晚期肝癌的临床疗效及护理措施

吴梅

天津市第一中心医院

目的 为了分析肝动脉化疗栓塞（transarterial chemoembolization，TACE）联合微波消融治疗中晚期肝癌的临床疗效。**方法** 选取我院 2017 年 1 月至 2018 年 12 月期间收治的 38 例中晚期肝癌患者作为研究对象，将其基于不同治疗方式分为两组，对照组患者 19 例采用 TACE 进行治疗，试验组患者采用 TACE 联合微波消融进行治疗，观察两组患者的治疗有效率以及治疗前后的肝功能评价指标以及血清甲胎蛋白指标。**结果** 试验组患者中治疗显效患者 7 例、治疗有效患者 8 例，总治疗有效率为 78.95%，对照组患者中治疗显效患者 4 例、治疗有效患者 7 例，总治疗有效率为 57.89%，差异具有统计学意义（P<0.05）。治疗前两组患者的肝功能评价指标以及血清甲胎蛋白指标差异无统计学意义（P>0.05），治疗后试验组患者的血清总胆红素、血清结合胆红素、谷丙氨酸酶、谷草转氨酶以及血清甲胎蛋白分别为（18.01±3.45）umol/L、（5.68±1.74）umol/L、（45.32±4.20）U/L、（49.26±4.58）U/L 和（572.68±54.41）ng/L，均优于对照组患者的（21.74±3.27）umol/L、（6.81±1.87）umol/L、（52.01±4.94）U/L、（57.51±4.47）U/L 和（795.12±54.28）ng/L，差异具有统计学意义（P<0.05）。**结论** 对于中晚期肝癌患者采用 TACE 联合微波治疗可以有效提高患者治疗有效率，保护肝功能。

PU-1634
左髂总静脉受压与左下肢静脉血栓形成的相关性研究

赵鲁平
济宁医学院附属医院

目的 探讨 MSCT 血管成像在左髂总静脉受压与左下肢静脉血栓形成的相关性研究中的价值。**方法** 回顾性分析了 64 例左髂总静脉受压患者的 CT 影像和临床资料，测量左髂总静脉受压最窄处的矢状径、右髂总静脉及左髂总静脉远心端矢状径，分别计算受压程度（狭窄率），以左髂总静脉及其属支有无血栓为标准，绘制受试者工作特征（ROC）曲线，得出诊断左髂总静脉受压狭窄率的最佳测量方法。统计分析以最佳测量方法所得的左髂总静脉受压狭窄率与左下肢静脉血栓有无相关关系。**结果** 左髂总静脉受压最窄处矢状径约（3.79±1.56）mm，取髂总静脉分叉处以下（2-3cm）同一水平分别测量右髂总静脉矢状径约（13.10±1.92）mm、左髂总静脉远心端矢状径约（10.80±2.86）mm，分别计算左髂总静脉受压最窄处矢状径与右髂总静脉矢状径、左髂总静脉远心端矢状径的狭窄率为 0.29±0.12、0.36±0.12；以有无血栓为标准，构建 ROC 曲线，计算得出两者的 AUC 分别为 0.630、0.516；前者狭窄率的 AUC 大于后者狭窄率的 AUC，*P*＞0.05，差异无统计学意义，因此以左髂总静脉受压最窄处矢状径与右髂总静脉矢状径的比值作为判断左髂总静脉受压狭窄率的最佳测量方法；用 Spearman 相关分析，P 值＜0.05，该相关系数有统计学意义，左髂总静脉受压狭窄率与左下肢静脉血栓的形成有一定相关性。**结论** MSCT 血管成像对分析左髂总静脉受压与左下肢静脉血栓形成的相关性研究中有重要价值。

PU-1635
腹主动脉瘤介入术中导管校准法和标记导管校准法比较

张祥海,周林,闫红野,周兵
陆军军医大学大坪医院

研究目的
比较导管校准法和标记点校准法在腹主动脉瘤介入诊疗中测量值的差异。

资料和方法
收集 2015 年 3 月-2019 年 5 月期间，采用血管腔内支架成形术治疗腹主动脉瘤的 32 例病人。其中，男 22 例，女 10 例，年龄 35-68 岁，均确诊为腹主动脉瘤。将直径为 5F 的标记导管送到腹主动脉作正位造影，能清晰显示腹主动脉瘤的解剖结构。在图像中心区域，选择靠近腹主动脉瘤的导管平直段作为校准标尺，分别采用导管校准法（导管两侧壁间校准为为 5F 距离）和标记点距离校准法（两个标记点间距离校准为 10mm），分别以两种校准法校准后测量正常腹主动脉近心端血管直径和瘤颈部宽度。由两名介入技师各自测量三次取平均值，结果以均值±标准差(x±s)表示。以病人术前 CTA 图像上近心端血管直径和瘤颈长度作为标准值，将 DSA 影像获得的两组数据与 CTA 测量数值进行对比。

结果
近心端血管直径测量，导管校准法和标记点校准法测量值与 CTA 测量值分别为 25.93±4.18mm、26.07±4.24mm 和 26.04±5.42mm，未存在统计学差异（F=1.35，P>0.05）；瘤颈部位测量值分别是 28.62±5.18mm、28.98±3.96mm 和 29.17±6.63mm，测量值也未出现统计学差异（F=2.06，P>0.05）。在 DSA 影像上，应用两种校准测量方法的测量值都与标准值接近。

结论
在腹主动脉瘤的 DSA 造影图像中，分别运用导管直径校准法和标记点校准法均可以准确测量出血管直径、瘤颈长度等数据，为支架、球囊的选择提供依据。影像技师在进行介入测量时，可以灵活运用不同的测量方法，完成手术中的精准化测量。

PU-1636
41 例糖尿病足患者下肢血管 MRA 与 CTA 诊断效果的对比研究

蒋春雨
上海交通大学附属第六人民医院

目的 文章着重对糖尿病足下肢血管病变的 MRA 及 CTA 诊断效果进行对比研究。

方法 对 41 例临床确诊糖尿病足患者的下肢血管行 MRA、CTA、DSA 检查，以 DSA 为金标准，分析 MRA、CTA 对糖尿病足患者下肢血管病变的诊断效果。

结果 MRA 对于糖尿病足下肢血管病变成像的总体准确性、敏感性及特异性分别为 97.8%、98%、97.7%，CTA 对于糖尿病足下肢血管病变成像的总体准确性、敏感性及特异性分别为 96.7%、94.9%、98.1%。膝上动脉组，MRA 的成像准确性、敏感性、特异性均为 98.4%、98.4%、98.4%，CTA 的准确性、敏感性、特异性分别为 97.8%、98%、97.6%。膝下动脉组，MRA 的准确性、敏感性、特异性分别为 96.7%、97%、96.6%，CTA 的准确性、敏感性、特异性为 94.7%、83.3%、98.9%。

结论 MRA 及 CTA 均为有效的糖尿病足下肢血管病变影像学检查方法，且 MRA 及 CTA 对于糖尿病足下肢血管病变的整体诊断效果无明显差异，但 MRA 对糖尿病足膝下动脉病变的诊断结果优于 CTA。

PU-1637
AMD3100 及 SDF-1 联合治疗促进糖尿病大鼠血管再内皮化的作用

蒋春雨
上海交通大学附属第六人民医院

评估了 AMD3100 联合 SDF-1 治疗对于大鼠糖尿病颈动脉损伤模型的治疗意义。

方法 分别通过 CCK-8 以及 transwell 法评估了 AMD 3100 以及 SDF-1 治疗对于糖尿病大鼠来源的内皮干细胞的功能活性的影响，包括增殖及粘附能力。在活体实验方面，我们评估了 SDF-1 局部注射治疗、AMD 3100 联合 SDF-1 治疗对于大鼠血管损伤模型的治疗效果，包括不同组之间内皮干细胞动员、归巢的情况，以及不同组之间对再内皮化以及抑制内膜过度增生的作用。

结果 不论是 SDF-1 单独治疗还是 AMD 3100 联合 SDF-1 治疗均可以有效的提高内皮干细胞的生物学功能，包括增殖及粘附能力。AMD 3100 联合 SDF-1 治疗可以快速的动员内皮干细胞进入外周血中(76.1±14.6 VS 37.4±12.5,P<0.001)，促进内皮干细胞归巢至损伤部位(8.7±2.4 VS 3.1±1.2，p=0.006)，从而有效的促进损伤血管的再内皮化(7 days :60.3±14.9 % VS 33.5%±3.4%, P<0.001, 14 days： 92.0 ±15.2% VS 88.6±13.1%， P=0.517)，抑制内膜过度增生(7 days: 0.46 ± 0.02 VS 0.67±0.03, P=0.016, 14 days： 0.51±0.03 VS 0.78±0.04， P<0.001)。但是单独使用 SDF-1 并不能有效的募集更多内皮干细胞(4.1±2.3 VS 3.1±1.2，p=0.287)参与到血管修复过程中，故而再内皮化过程与对照组基本相仿(7 days :49.3±5.7% VS 33.5±3.4%, P=0.473, 14 days： 89.8±14.7% VS 88.6±13.1%， P=0.639)。

结论 AMD 3100 联合 SDF-1 治疗可以有效的动员、募集内皮干细胞进入损伤血管，并促进损伤血管内膜修复，抑制血管内膜的过度增生

PU-1638
介入治疗在糖尿病外周血管病中治疗效果研究

蒋春雨
上海交通大学附属第六人民医院

目的 分析介入治疗糖尿病外周血管病变的临床治疗效果。

方法 将我院收治的 96 例糖尿病外周血管病变患者分为观察组和对照组,两组患者均采用常规方法进行治疗,观察组患者在此基础上采用介入治疗,比较两组患者的临床治疗效果。

结果 治疗后,观察组疼痛麻木症状缓解、紫绀症状消失、皮肤低温改善、踝肱指数(ABI)均明显优于对照组;观察组患者治疗满意度为 83.33%,明显高于对照组的 56.25%;观察组并发症发生率为 8.33%,明显低于对照组的 18.75%,差异均具有统计学意义(P<0.05)。

结论 糖尿病外周血管病变患者采用介入治疗后,能够对病情的发展进行控制,改善患者病情。

PU-1639
单不饱和脂肪酸（FAAS）可作为介入治疗后血管再狭窄的预测指标机制的研究

冯丽帅
上海交通大学附属第六人民医院

目的 单不饱和脂肪酸（FAAS）可作为介入治疗后血管再狭窄的预测指标，特别是在高脂饮食诱导的 2 型糖尿病患者中。然而，其致病机制有待进一步阐明。

方法 本研究用反转录定量法检测了不同浓度油酸（OA）对血管平滑肌细胞（VSMC）酪氨酸 3 单加氧酶/色氨酸 5 单加氧酶激活蛋白 β（14-3-3β）的水平。RT-PCR 和 Western blot 分析。采用创伤愈合和细胞迁移实验检测 VSMCs 的迁移情况。应用免疫荧光和 Western blot 技术检测 OA 治疗的 VSMC 中 B 细胞淋巴瘤 2（Bcl 2）相关死亡启动子（BAD）的蛋白分布。在体内实验中，在无损伤的超声显像后 14 天评估各组大鼠颈动脉形态，并通过组织学染色证实。

结果 在 VSMCs 中，OHAB 的表达以浓度依赖性方式上调。在体内实验中，高 FFA 糖尿病大鼠颈动脉狭窄更为严重。然而，YHAWB 的沉默显著降低了糖尿病大鼠颈动脉内膜增生的 FFA 水平升高。此外，YHAB 沉默减轻了 OA 处理过的 VSMC 的迁移，并使坏蛋白从细胞质转运到线粒体。

结论 结果表明，FFA 诱导的 YHAWB 的上调参与了颈动脉损伤后血管平滑肌细胞的迁移。YHAWB 的抑制可作为预防高 FFA 水平糖尿病患者介入治疗后血管再狭窄的新的潜在药物靶点。

Management of Isolated dissection of the abdominal aorta: single-center experience

Yingliang Wang,Huimin Liang

Department of Radiology, Union Hospital, Tongji Medical College, Huazhong University of Science and Technology, Wuhan, 430022, China

Objective: The purpose of this article is to introduce our experience in the diagnosis and treatment of isolated abdominal aortic dissection (IAAD).
Method: A cohort of 45 consecutive patients with IAAD were treated in our hospital between January 2010 to December 2018. We reviewed the clinical features, risk factors, perioperative, procedure-specific and imaging data. Follow-up included clinical and imaging examinations.
Results: There were 33 patients performed endovascular treatment and 12 patients received conservative treatment initially. In the endovascular treatment group, the primary technical success rate was 100% and no complications occurred in the perioperative period. During a follow-up of 1-84 months (average 16.6 months), 2 of the patients (6.1%) in the endovascular treatment group had slight type II leakage at 1.5 months and 6 months respectively after operation, and neither of them need re-intervention; And in the conservative group, three patients were lost to follow-up, 1 patient died 2 months later because of other disease. In the rest patients, 2 of them (25%) had small new breach in the double barrel aorta at 21months and 40months respectively but neither of them need intervention, and 1 patient (12.5%) performed endovascular treatment because of aortic rupture and others showed stable.
Conclusion: Endovascular treatment of IAAD is an effective method with a high technical success and low complications rate. For patients with conservative therapy, close surveillance is necessary.

PU-1641
128 层螺旋 CT 血管成像在周围动脉闭塞性疾病诊断中的临床应用价值研究

宋留存
郑州市第六人民医院

目的 评价 128 层螺旋 CT 血管成像在周围动脉闭塞性疾病诊断中的临床应用价值。**方法** 前瞻性获取 21 例下肢动脉闭塞性疾病患者（42 侧肢体），平均年龄 71±12.7 岁，获得知情同意后在东芝 Aquilion One 128 层螺旋 CT 上进行下肢动脉 CTA 检查(造影剂：碘帕醇 370mgI/mL（Iopamidol，BRACCO)，双相注射，造影剂剂量按体重分组），原始图像经过 VR、MIP、CPR 后处理后获得重建图像。其中有 12 例共 12 侧下肢在 CTA 检查后 1 周内行 DSA 检查。由两位有经验的放射科医生共同分析评价 CTA 显示双下肢各支动脉段图像质量情况及各段狭窄程度，并与 DSA 比较。**结果** 21 例患者均顺利完成双下肢动脉 CTA 检查,图像显示度评分为 2.86±0.351 分，CTA 静脉重叠评分为 0.14±0.467 分，共有 38 侧下肢 CTA 未发生静脉污染，占 90.48%(38/42)；4 侧下肢 CTA 发生不同程度的静脉强化，占 9.53%(4/42)。以 DSA 为金标准，CTA 显示动脉正常及轻度狭窄的敏感性 96.30%，特异性 98.04%，阳性预测值 98.73%，阴性预测值 94.33%；显示明显狭窄的敏感性 94.44%，特异性 95.83%，阳性预测值 89.47%，阴性预测值 97.87%；显示闭塞的敏感性 86.67%，特异性 98.29%，阳性预测值 86.67%，阴性预测值 98.29%。以 DSA 为金标准，CTA 显示少许侧枝的敏感性 92.86%，特异性 99.15%，阳性预测值 92.86%，阴性预测值 99.15%，显示丰富侧枝血管的敏感性 93.75%，特异性 100%，阳性预测值 100%，阴性预测值 99.16%。 **结论** 128 层螺旋 CT 能够全面清晰显示双下肢动脉病变，为疾病诊断提供快速、有效且可靠的诊断手段，对临床诊断和治疗具有重要指导意义。

孤立性肠系膜上动脉夹层的治疗策略

卢浩浩
华中科技大学同济医学院附属协和医院

【目的】探讨孤立性肠系膜上动脉夹层的诊断与治疗策略。【资料与方法】分析 2010 年 7 月至 2014 年 7 月收治于武汉协和医院的 19 例 ISMAD 患者资料；12 例患者行介入治疗，其中 1 例因术中因无法成功置入支架而转行保守治疗，余 11 例成功完成介入手术（手术方式各异）；7 例患者行药物保守治疗。【结果】所有患者均未出现肠坏死等严重并发症；行支架置入术患者，支架内血流通畅，假腔闭合满意。【结论】孤立性肠系膜上动脉夹层治疗方案与分型关系密切，Yun I 型、IIb 型通过抗凝、抗血小板、扩管等保守治疗通常效果较好；IIa 型宜选择介入治疗；III 型患者如果没有肠坏死征象可以置管溶栓治疗并密切观察，必要时行外科手术。

PU-1643

腔内血栓清除技术的最新进展及临床应用

刘强
上海交通大学附属第六人民医院

急性下肢深静脉血栓形成是临床常见病，常导致肺栓塞及血栓后综合征，在抗凝治疗的基础上快速有效地清除血栓是当前临床主要治疗方案，而腔内血栓清除技术是目前清除血栓的主流方法，常用的有：经导管直接溶栓术、超声辅助溶栓术、药物机械联合血栓清除术、机械性血栓清除术。本文综述了腔内血栓清除技术的最新进展及临床应用。

PU-1644

中药华蟾素在部分性脾栓塞中的临床应用

耿坚,姚明荣
上海中医药大学附属曙光医院

目的 探讨中药华蟾素在部分性脾栓塞介入治疗中的临床应用价值。
方法 22 例乙肝后肝硬化、脾功能亢进患者，接受部分性脾动脉栓塞介入治疗，选择性插管后经脾动脉灌注华蟾素 10—15ml，超选择性插管，以华蟾素 5ml 与生理盐水、对比剂、利多卡因混合后加入明胶海绵条（1×1×10mm）或明胶海绵颗粒（1×1×1mm），脾脏栓塞范围 30—70%。
结果 22 例患者中 18 例栓塞 1 次，4 例栓塞 2 次。患者脾动脉栓塞后 5-10 天，复查血常规，白细胞、血小板明显升高；随访 2-30 个月白细胞较术前上升 1.3 倍，血小板上升 3.8 倍。所有患者介入术后常规抗感染治疗，以新癀片、消炎痛栓等对症处理，患者均有体温上升（37.5—39.0℃），平均发烧 3.5 天；均出现左上腹疼痛，平均 4 天；7 例患者腹水增多。
结论 华蟾素可用于治疗慢性乙型肝炎，具有清热解毒、消肿止痛的功效。该药灌注及配合明胶海绵条、明胶海绵颗粒进行部分性脾栓塞，临床疗效较好，不良反应较轻。

PU-1645

大出血的急诊介入治疗——附 14 例资料分析

耿坚,姚明荣
上海中医药大学附属曙光医院

目的 探讨急诊介入治疗大出血的临床价值。
方法 14 例大出血患者，男性 6 例，女性 8 例，年龄 25-70 岁。接受急诊介入治疗，经股动脉穿刺，超选择插管，以明胶海绵栓塞和/或垂体后叶素灌注相关动脉血管。其中消化道出血 3 例，肾脏破裂 3 例，瘢痕妊娠出血 2 例，宫颈癌出血 1 例，黄体破裂 1 例，外阴出血 1 例，产后出血 1 例，胆管出血 1 例，腹腔出血 1 例。
结果 所有患者经介入治疗后，短时间内均达到了出血停止或出血减少的治疗目的。1 例消化道出血患者介入治疗后 48 小时死于 DIC 和肝功能衰竭，1 例胆管出血患者 6 个月后死于胆管癌，其余患者目前健在。
结论 急诊介入治疗，责任血管的栓塞和/或药物灌注，对于大出血有确切的疗效，同时也为后续的治疗赢得了时间。

孤立性肠系膜动脉夹层的分型与治疗进展

贾中芝
常州市第二人民医院

孤立性肠系膜动脉夹层（IMAD）临床上并非罕见，现有的分型方法均以影像学表现为基础，存在一定局限性。我们根据患者的症状、体征和影像学表现，将 IMAD 分为急诊型和非急诊型，并根据该分型制定 IMAD 的治疗流程图。急诊型 IMAD 患者予急诊外科手术或血管腔内治疗；非急诊型 IMAD 患者给予内科保守治疗。绝大多数非急诊型 IMAD 患者经内科保守治疗后病情稳定，少数出现疾病进展需行有创干预，腔内支架置入是首选的有创干预措施。

PU-1647
一例儿童先天性肺动静脉瘘行介入术的围手术期护理

张昊
吉林大学白求恩第一医院

总结 1 例肺动静脉畸形患儿介入治疗的护理。术前分别做好患儿及家长的心理干预，训练患儿有效咳嗽；术后做好咯血的预防护理. 穿刺侧肢体制动期护理，重视并发症的观察及护理，治愈出院。肺动静脉畸形(Pulmonary arteriovenous malformation，PAVM)又被称为肺动静脉瘘，指肺动脉和肺静脉之间的异常沟通，是一种先天性肺血管畸，肺动脉血管瘤[1]。其发生机制为：内脏血管丛的血管间隔形成出现障碍，使毛细血管发育不全，造成动静脉短路，并可因血管瓣的出现而形成毛细血管瘤。主要临床表现为咯血，咯血量大时易引起窒息而危及生命，需紧急抢救。支气管动脉栓塞术已经成为治疗 PAVM 的首选疗法[2]。2018 年 10 月我科对 1 例 PAVM 患儿行支气管动脉栓塞术，取得满意效果，现将护理报告如下一。

PU-1648

微创介入治疗低辐射剂量的下肢临床应用

张炜
华中科技大学同济医学院附属协和医院

【摘要】**目的** 采用西门子自带 CARE 软件包功能评价患者在 DSA 透视检查和采集过程中放射曝光接受的辐射剂量。**资料与方法** 搜集我院西院近 3 年 43 例下肢栓塞治疗术患者的检查数据，其中下肢溶栓 28 例、旋切术 3 例、支架 18 例，应用 CARE 功能分析患者累计接受的辐射剂量与图像质量和临床的应用价值。**结果** CARE vision 改变脉冲速率的透视模式可显著降低病人辐射剂量；CARE filter 改变铜滤波片，过滤构建图像所不需要的 X 射线低能部分；CARE profilter 无辐射准直；CARE position 无辐射定位；CARE monitor 功能显示当前放射病人皮肤区域的累计皮肤入射剂量（mGy），基于病人体重身高和辐射皮肤方形的内部模型提供专门的空气比释动能。综合评估下肢栓塞治疗术 DSA 接受射线剂量同比减少 32%。**结论** CARE 功能可以显著降低介入治疗病人和检查者放射曝光时接受的射线剂量。

PU-1649
一站式复合手术在脊柱肿瘤外科切除中的应用

李扬,熊坤林
陆军军医大学大坪医院

目的 探讨一站式复合手术在脊柱肿瘤外科切除方面的临床应用。
方法 回顾性分析 2015 年 3 月至 2019 年 2 月在我院复合手术室实施一站式复合手术的脊柱肿瘤病人 16 例（观察组）及单独行外科手术切除的病人 20 例（对照组）。观察组患者术前均先行血管造影，明确肿瘤病灶供血动脉，根据外科医生要求放置球囊阻断或栓塞肿瘤供血血管，再手术切除病灶，对照组患者在常规手术室行外科切除。比较两组患者手术创伤情况、手术后并发症和术后恢复情况。
结果 本组病例中供血动脉临时阻断 3 例，栓塞 12 例，同时行动脉主干阻断及分支栓塞 1 例。观察组患者术中出血量 412.5 ± 227.9ml 、术中输血量 150.0 ± 297.6ml 、术后并发症发生率 12.5%、术后住院时间 13.3 ± 3.1 d 均明显低于对照组，组间差异有统计学意义(P<0.05)。手术用时 198.3± 65.4 min，与对照组相比无明显统计学差异（P=0.25）。
结论 对于脊柱肿瘤特别是富血供肿瘤，采用一站式复合手术可减少手术转运时间，减少术中出血，减少术后出血，并发症的发生，有利于患者术后早期恢复。

Imaging performance and clinical significance of corona mortis CTA

shenglin Li,Junlin Zhou
Second Hospital of Lanzhou University

Abstract **Purpose:** to improve the radiologist' comprehension of the corona mortis, so as to better guide the clinicians to choose appropriate surgical methods and avoid the occurrence of accidental massive hemorrhage in pelvic or lower abdominal surgery. **Materials and methods:** The CTA manifestations and clinical data of 109 patients with lower limb angiography from October 2017 to July 2018 were retrospectively analyzed. 24 patients had corona mortis, including 19 males and 5 females, aged 14-73 years, with an average age of (49.63±13.04) years. **Results:** all patients had arterial corona mortis, of which 9 on the left, 10 on the right and 5 on both sides. The diameter was 2.15mm-4.27mm, with an average (2.77± 0.43) mm. The distance between the corona mortis and the pubic symphysis was 41mm-67mm, with an average (55.69±5.91) mm. There was no statistically significant difference in the incidence of corona mortis between the left and right sides. **Conclusion:** lower extremity angiography is of certain clinical value in the detection and diagnosis of corona mortis, so as to guide surgeons to select appropriate surgical methods.

PU-1651

肝癌介入术中奥沙利铂致过敏性休克抢救体会

杨丽芹
华中科技大学同济医学院附属协和医院

[摘要] 目的 探讨奥沙利铂过敏性休克的预防策略、抢救方法，为临床用药安全提供参考。方法 报道 1 例奥沙利铂过敏性休克，结合奥沙利铂的药物应用说明及注意事项，针对该患者个体特点对病例进行分析。 结果 一例肝细胞癌患在 TACE 术中灌注奥沙利铂后出现严重的过敏性休克（呼吸困难、血压心率下降、意识丧失等）及心律失常。立即给予补液、抗过敏、抗休克、扩容及抗心律失常治疗，患者生命体征逐渐平稳，后续监护中未出现不良反应。结论 对于在 TACE 手术计划使用奥沙利铂的患者，医务人员应提高警惕，须了解药品注意事项及不良反应，首次应用该药的患者应预防性的应用抗过敏药物。患者因使用奥沙利铂出现过敏性休克时，及时的发现、快速精准的判断是取得救治成功的关键所在。

Iatrogenic arteriovenous fistula of the iliac artery after lumbar discectomy surgery: A system review during the last eighteen years

Gaowu Yan,Guoqing Yang,Yong Li,Quanshui Fu,Linwei Zhao,Hong Chen,Jing Yan,Wei Wang
Department of Radiology, Suining Central Hospital

Objective: Patients with iatrogenic iliac arteriovenous fistula (IAVF) after lumbar discectomy from our hospital and published literature were evaluated, hoping for a deeper understanding of this entity. **Methods:** Literature form the main databases in China and abroad about iatrogenic IAVF after lumbar discectomy were retrieved while one patient from our hospital was retrospectively reviewed with emphasis on the patient's clinical data. **Results:** From thirty-one Chinese and English publications,

study of forty-four individuals' data revealed L4-L5 and/or L5-S1 intervertebral space levels were mostly involved (62%). Most of the patients underwent CTA and/or DSA examinations to confirm the potential diagnosis and rule out other differential diagnosis (86.4%). Most of the patients (63.6%) may develop symptoms and signs of high output heart failure from months to years after the surgery, and majority of them (88.6%) can be treated with endovascular stent-graft placement. **Conclusion:** Iatrogenic IAVF after lumbar discectomy is rare, however, more attention should be paid, for obtaining accurate diagnosis and proper treatment.

PU-1653
经颈静脉肝内门体分流术治疗吡咯生物碱相关肝窦阻塞综合征的单中心回顾性研究

周春泽,成德雷,朱义江,吕维富
中国科学技术大学附属第一医院/安徽省立医院

目的:评价经颈静脉肝内门体分流术（TIPS）治疗经内科保守处理无效的吡咯生物碱相关肝窦阻塞综合征（PA-HSOS）的预后。
方法 回顾性分析 2015 年 3 月至 2019 年 1 月在中国科学技术大学附属第一医院就诊的 PA-HSOS 患者，按照治疗方式不同分为 TIPS 治疗组和保守治疗组，观察两组患者肝功能、腹水量、影像学及病理学变化，比较两组生存时间。
结果 本研究共纳入 54 例患者，其中男 39 例，女 15 例，按治疗方式不同分为 TIPS 组 37 例，保守治疗组 17 例，两组基线资料比较无差异。经过上述治疗，TIPS 组腹水改善明显优于保守治疗组，至随访终点，随访时间为 3-48 个月，9 例患者死亡，其中 TIPS 组 2 例，保守治疗组 7 例，TIPS 组和保守治疗组 3、6、12、24 个月生存率分别为 94.6%、94.6%、94.6%、94.6%和 70.6%、57.8%、57.8%、57.8%，两组生存时间比较有明显差异（P=0.001）。增强 CT 随访及手术前后病理学变化提示 TIPS 组预后较好。
结论 与常规的保肝对症抗凝治疗相比，TIPS 可能会提高 PA-HSOS 患者的临床治愈率和生存时间，改善远期肝功能情况。

PU-1654
双侧髂内动脉球囊阻断在凶险性前置胎盘剖宫产中的应用

周春泽,陈玲,成德雷,吕维富
中国科学技术大学附属第一医院/安徽省立医院

目的:凶险性前置胎盘及胎盘植入是导致产妇术中大出血及子宫切除的最主要原因，本研究评价双侧髂内动脉球囊阻断辅助剖宫产减少术中出血及降低子宫切除率的可行性。
方法 回顾性分析 2015 年 1 月至 2019 年 6 月在中国科学技术大学附属第一医院就诊的凶险性前置胎盘患者，将接受双侧髂内动脉球囊阻断辅助剖宫产患者纳入介入组，将同期接受传统治疗方式的患者纳入对照组，观察两组患者术中出血量、子宫切除率及相关并发症（DIC、失血性休克、产褥期感染）的发生率。
结果 本研究共纳入 184 例患者，其中介入组 121 例，对照组 63 例，两组基线资料比较无差异。经过上述治疗，两组出血量（1075.76±782.08 VS 1094.59±865.04，P=0.90 ）及子宫切除率比

较均无显著差异（20.66% VS 26.98%），但在合并胎盘植入的患者中，两组术中出血量（1341.54±816.79
VS 2083.33±874.73，P＜0.01 ）存在显著差异，子宫切除率仍无明显差异（29.63% VS 34.21%），而在不合并胎盘植入患者中，两组术中出血量（610.71±211.41 VS 552.94±189.47，P=0.26）和子宫切除率均无显著差异。介入组介入相关并发症包括急性髂外动脉闭塞 2 例，穿刺点假性动脉瘤 2 例，栓塞后臀部疼痛 4 例。

结论 与传统剖宫产相比，双侧髂内动脉球囊阻断辅助剖宫产可能会减少合并胎盘植入患者术中出血量，但可能并不减少子宫切除率。

PU-1655

TIPS 术中腹腔内出血并支架移位 1 例

郑晖,杨维竹,黄宁
福建医科大附属协和医院

患者男，61 岁。因“反复呕血、黑便 18 个月。”入院。诊断：乙型病毒性肝炎肝硬化失代偿期：门静脉高压症，食管胃底静脉曲张出血。入院后完善检查，肝胆脾 CT 增强示：1.肝硬化、脾肿大、门脉高压伴食管下段及胃底静脉曲张（图 1A、1B）；2. 少量腹腔积液；总胆红素 28.1umol/L，血白蛋白 36.6g/L，凝血酶原时间 15.8s，血色素 91g/L。同时予止血、制酸、降门脉压及输血等处理后出血控制。鉴于患者反复发作食管胃底静脉曲张出血，决定行经颈静脉肝内门体分流术（TIPS）+胃冠状静脉栓塞术。

TIPS 术中成功穿刺门静脉，交换 Cobra 导管造影示曲张的胃冠状静脉和胃后静脉及扩张的门静脉（图 2A），先后予 13 枚弹簧圈+聚桂醇空气混悬液 4ml+无水酒精 8ml 栓塞。应用 1 枚 7mm*60mm Rival 球囊扩张分流道，随后拟置入 1 枚 8mm*40mm E-Luminexx 裸支架，支架释放前经鞘管手推造影剂发现门静脉显影并造影剂外渗，患者血压由 120/74mmHg 迅速降至 65/42mmHg，立即行扩容补液及提升血压等处理，同时迅速释放 E-Luminexx 裸支架，发现支架移位并完全进入门静脉主干，而后迅速置入 1 枚 8*80mm Fluency 覆膜支架。支架置入后造影示分流道通畅，未见造影剂外渗，但肝内门静脉分支灌注消失（图 2B～F）。患者血压恢复，结束手术。术中测血色素降至 39g/L。术后继续予补液升压及输注血制品等处理，术后第 11 天患者恢复出院，长期口服华法林抗凝治疗，出院后发生肝功能损害，胆红素曾升至 288.1umol/L，考虑与门静脉分支灌注消失致肝细胞缺血有关，遂于 TIPS 术后 5 个月行 TIPS 分流道限流术。限流术后肝功能好转，胆红素逐渐稳定于 50umol/L 左右，亦未出现消化道出血，TIPS 术后 22 个月复查门静脉 CT 造影示分流道通畅（图 3）。

PU-1656

覆膜支架 TIPS 治疗食管胃底静脉曲张破裂出血的疗效总结

郑晖,杨维竹,黄宁
福建医科大附属协和医院

目的 评价采用覆膜支架行经颈静脉肝内门体静脉分流术（transjugular intrahepatic portosystemic shunt，TIPS）治疗食管胃底静脉曲张破裂出血的疗效。

方法 回顾性分析 2010 年 12 月至 2015 年 2 月共 68 例接受 TIPS 治疗的肝硬化食管胃底静脉曲张破裂出血患者的临床资料，其中男 50 例，女 18 例，年龄 26~76 岁，平均（55±12）岁，肝功能 Child-Pugh 评分 5.0~11.0 分，平均（6.7±1.4）分。患者均采用覆膜支架行 TIPS 术。手术前后门静脉压力的比较采用 t 检验。应用 Kaplan-Meier 法绘制术后无消化道再出血率、分流道通畅率和生存率曲线。

结果 所有 TIPS 手术操作均在局部麻醉下成功完成，共置入支架 115 枚。其中覆膜支架 68 枚，裸支架 47 枚。覆膜支架直径 7~8mm，平均（7.6±0.5）mm。裸支架直径 7~8mm，平均（7.6±0.5）mm。门静脉压力从术前的（42.4±7.5）cm$H_2$0 下降为术后的（30.9±5.0）cm$H_2$0，差异有统计学意义（t=15.4，P<0.01）。术后随访 0.1~52.3 个月，平均(19.1±16.0)个月。TIPS 术后 3、6、12 及 24 个月累积无消化道再出血率为 89.6%、83.0%、78.8%及 73.0%，随访期间共有 15 例患者出现消化道再出血，发生率为 22.1%。术后 3、6、12 及 24 个月分流道累积通畅率为 95.6%、93.1%、76.9%及 72.4%。11 例出现死亡，病死率为 16.2%，术后 3、6、12、24、36 及 48 个月累积生存率为 95.6%、92.5%、90.7%、82.2%、77.9%及 69.2%。术后共发生肝性脑病 15 例，发生率为 22.1%。

结论 采用覆膜支架行 TIPS 治疗食管胃底静脉曲张破裂出血是安全、有效的。

PU-1657
经导管动脉硬化栓塞术在卡波西型血管内皮细胞瘤患儿中的应用

蒋贻洲
广州市妇女儿童医疗中心

目的：探讨经导管动脉硬化栓塞术在卡波西型血管内皮细胞瘤患儿中的应用价值。**方法**：2011 年 8 月 — 2017 年 6 月，共 15 例卡波西型血管内皮细胞瘤患儿行经导管动脉硬化栓塞术。观察围手术期并发症及患儿血小板变化。**结果**：手术成功率为 100% 。所有病人未发生严重并发症。术前患儿血小板为 8×10^9/L -23×10^9/L，平均 16×10^9/L，术后血小板升为 86×10^9/L -256×10^9/L，差异均有统计学意义(t 值为 22.510，P 值＜0.01)。不良反应为一过性发热及皮肤紫癜。**结论**：经导管动脉硬化栓塞术治疗卡波西型血管内皮细胞瘤安全有效。

PU-1658
经导管眼动脉灌注化疗在眼内晚期视网膜母细胞瘤患者中的应用

蒋贻洲
广州市妇女儿童医疗中心

探讨经导管眼动脉灌注化疗(TOAC)治疗眼内晚期视网膜母细胞瘤(RB)的价值。**方法** 对 42 例（60 眼）国际眼内视网膜母细胞瘤分级为 D 期或 E 期的 RB 患儿行 TOAC 治疗。造影确认微导管在眼动脉内且脉络膜显影清晰后，行眼动脉灌注化疗。术中化疗方案采用美法仑 5 mg 及卡铂 20 mg。每隔 4 周重复一次 TOAC 术，方法同前。每次 TOAC 术后均观察患儿一般情况及术后不良反应。每次 TOAC 术后 4 周行超声检查测量瘤体最大径(即眼球赤道平面的最长径)以及厚度(即瘤体前后径)的变化，瘤体最大径及厚度的比较采用配对样本 t 检验。**结果** 对 42 例（60 眼）术中尝试行眼动脉插管 135 次，平均(2.4±0.3)次/眼，其中 135 次操作成功。患儿 TOAC 术后随访 5～30 个月，中位随访时间为 15 个月。42 例（60 眼）RB 瘤体术前瘤体最大径和厚度分别为(10.7±2.2)和(6.1±1.5) mm，第 1 次 TOAC 术后分别为(6.4±1.4)和(3.2±1.2) mm，差异均有统计学意义(t 值分别为 22.640 和 25.421，P 值均＜0.01)。42 例（60 眼）中 44 眼瘤体完全消失，局部形成钙化斑块;其余 16 眼行眼球摘除术，其中肿瘤复发 5 眼、广泛玻璃体种植 4 眼、视网膜下种植 4 眼、玻璃体出血 3 眼。术

后不良反应包括一过性的眼周不适及轻度骨髓抑制。**结论** TOAC 术治疗眼内晚期化疗失败的 RB 患儿安全有效。

PU-1659
经导管眼动脉灌注化疗在新生儿视网膜母细胞瘤患者中的应用

蒋贻洲
广州市妇女儿童医疗中心

目的 探讨经导管眼动脉灌注化疗(TOAC)治疗新生儿视网膜母细胞瘤(RB)的价值。**方法** 对 6 例（7 眼）国际眼内视网膜母细胞瘤分级为 C 期或 D 期的新生儿 RB 患儿行 TOAC 治疗。术中化疗方案采用美法仑 3 mg 及拓扑替康 1 mg。每隔 4 周重复一次 TOAC 术，方法同前。每次 TOAC 术后均观察患儿一般情况及术后不良反应。每次 TOAC 术后 4 周行超声检查测量瘤体最大径(即眼球赤道平面的最长径)以及厚度(即瘤体前后径)的变化，瘤体最大径及厚度的比较采用配对样本 t 检验。**结果** 6 例患儿均为新生儿，出生时行眼底检查确诊，手术时体重 1.7Kg-3.5Kg，平均(2.2±0.2)Kg。对 6 例（7 眼）术中尝试行眼动脉插管 7 次，成功率 100%。患儿 TOAC 术后随访 2～4 个月，中位随访时间为 2.6 个月。6 例（7 眼）RB 瘤体术前瘤体最大径和厚度分别为(6.8±2.2)和(3.6±1.2) mm，TOAC 术后分别为(3.6±1.3)和(2.2±1.2) mm，差异均有统计学意义(t 值分别为 16.21 和 11.51，P 值均＜0.01)。6 例（7 眼）瘤体均钙化良好。术后不良反应包括一过性的眼周不适及轻度骨髓抑制。**结论** 新生儿视网膜母细胞瘤行 TOAC 治疗应用合适的导管安全可行，疗效显著。

PU-1660
经导管动脉化疗栓塞术在儿童肝母血管瘤中的应用

蒋贻洲
广州市妇女儿童医疗中心

目的 探讨经导管动脉化疗栓塞术(TACE)在儿童肝母血管瘤中的应用价值。方法 回顾性分析 2008 年 6 月-2016 年 12 月在我院的 26 例肝母细胞瘤患儿性 TACE 术的临床资料。 结果 患儿 26 例，男 19 例，女 7 例。发病中位年龄 8.4 个月（2 月-8 岁）。26 例患儿首诊后共行 TACE 术 58 次（1-3 次/例）。TACE 术后瘤体较术前明显缩小（34.1-86.6%，平均 64.5%），AFP 值下降显著（26.3-92.4%，平均 74.6%）。术后不良反应包括不同程度的发热、呕吐，一过性的肝功能损害以及轻度的骨髓移植。术后随访 5～30 个月,中位随访时间为 15 个月。20 例患儿 TACE 术后成功行外科手术切除，无瘤生存至随访，6 例患儿因疾病进展死亡。 结论 TACE 术可作为肝母细胞瘤外科手术切除前的重要辅助治疗方式，安全有效。

PU-1661
Parkes Weber 综合征的介入综合治疗

蒋贻洲
广州市妇女儿童医疗中心

目的 探讨 Parkes Weber 综合征的介入综合治疗的疗效及其安全性。**方法** 回顾性分析 2010 年 5 月至 2015 年 9 月我科 25 例 Parkes Weber 综合征患儿的临床资料。其中累及左下肢 11 例，

累及右下肢 10 例，累及左上肢 2 例，累及右上肢 1 例，同时累及右上肢及右下肢 1 例。患侧肢体同时行经导管动脉硬化栓塞术及影像引导经皮硬化术，动脉栓塞药物为平阳霉素+碘化油+地塞米松+造影剂，经皮硬化药物为聚多卡醇泡沫硬化剂、无水酒精、组织胶及弹簧圈，如仅有患肢动脉增粗增多现象只行经导管动脉硬化栓塞术。患者初诊时每隔 1 个月行介入治疗 1 次，共 3 次。以后定期复查，每半年至 1 年再行介入治疗。介入术后观察患肢运动情况、肤温度变化及与对侧肢体长度、周长等差异变化。 **结果** 25 例患儿共行介入治疗 112 次，其中经导管动脉硬化栓塞术 112 次，经皮硬化术 89 次。介入术后随访 17～80 个月。随访至今，25 例患儿病情均有不同程度缓解，肢体皮肤温度下降 0.6℃～1.4℃。术后不良反应：患肢肿胀 47 例（47/112，41.96%），一过性运动障碍 22 例（22/112，19.64%），局部皮肤破溃 6 例次（6/112，5.36%）。未发生患肢畸形及心肺脑疾病等严重并发症。**结论** Pakes Weber 综合征行介入综合治疗安全可靠、疗效确切。

PU-1662
一种可调节介入手术桡动脉穿刺专用搁手板

王亚勋,周素军,丁勋,任金霞
武汉大学中南医院

目的 发明一种可调节的介入手术桡动脉穿刺专用搁手板。**背景知识：**随着心脏介入手术的广泛普及及手术器材和手术水平的不断升级提高，穿刺部位已由常规的平卧位股动脉穿刺渐渐改变为平卧位桡动脉穿刺，但现有设备常规的搁手板并未实现更新换代，在使用过程中存在以下缺陷：（1）医院现有的 DSA 机型厂家配备的搁手板仅具有放置和约束患者上肢的功能，但偏瘦或偏瘫的患者双手位置很低，给手术穿刺带来不便；(2)使用 DSA 配套搁手板固定穿刺桡动脉时，穿刺点下方需要无菌敷料垫起来，以方便穿刺，造成了资源浪费，同时增加了就医成本；（3）若术中桡动脉穿刺不成功就需要改为肱动脉穿刺，病人位置就要重新调整，原有搁手板位置和患者上肢的高度就要重新调节，浪费手术时间。**实施方法** 一种桡动脉穿刺专用搁手板，包括带有调节槽的底板、高度调节杆和上肢搁手板。所述高度调节杆包括栓体和螺母，栓体与螺母螺旋连接，栓体头部卡入调节槽中通过螺母固定，栓体上端还设置另外一个螺母，该螺母与上肢搁手板的一侧固定连接。上肢搁手板包括长型的主板和弧形的侧板，侧板与主板呈“L”型连接。上肢搁手板底面上设置有束缚带和垫子，调节槽设置于底板外侧，呈十字形。**实施效果：**（1）调节槽的设置可根据患者体型调节搁手板与患者的位置，增加病人舒适度；（2）高度调节杆可调节高度，可根据手术需要调整高度，提高穿刺效率；（3）上肢搁手板束缚带的设置具有保护作用，对肥胖、偏瘫病人的保护尤佳。

PU-1663
CT 血管成像在介入咯血治疗中的临床应用价值

周绍权,李康
中国科学院大学重度医院（重庆市人民医院）

目的 探讨 CT 血管成像在介入栓塞治疗咯血中的临床意义。
方法 选取 2018 年 9 月至 2019 年 8 月因咯血在我科行介入栓塞治疗的 40 例患者为研究对象。随机分为 2 组，术前进行咯血责任动脉 CT 血管成像为 实验组，共 20 例，未行咯血血管重建为对照组，共 20 例。
结果 介入术中动脉造影共找到责任血管共 52 支，其中支气管动脉 46 支（90.1%），非支气管动脉 6 支（9.9%）。所有患者均成功完成介入治疗，手术操作成功率 100%，即刻止血成功率 100%。实验组中，CTA 检查共找到责任动脉 22 支，术中行 DSA 共找到责任动脉 26 支，以 DSA 检

查为标准，介入术前行咯血责任动脉 CTA 诊断敏感度为 84.6%。实验组介入术中更容易选择至出血责任动脉，超选入靶血管透视时间、总透视时间、总手术时间及对比剂用量方面，实验室组与对照组相比，结果差异均有统计学意义（P＜0.05）。CTA 对隐源性咯血无优势。
结论 咯血介入术前行血管 CTA 检查，可较全面显示明显咯血病变区责任血管开口、走行，发现部分明显非支气管动脉供血责任血管，能缩短介入手术时间、减少辐射，降低对比剂用量，减少并发症的发生率，CTA 血管重建对介入咯血治疗具有重要的临床应用价值。

PU-1664
丛状血管瘤动脉造影特征分析及介入栓塞价值探讨

刘珍银,谭小云,张靖
广州市妇女儿童医疗中心

目的： 分析儿童丛状血管瘤与普通婴幼血管瘤动脉造影特征并探讨其介入栓塞价值。**方法：** 回顾性分析 2015 年 6 月至 2017 年 10 月间在我科临床及临床诊断为丛状血管瘤患儿的临床资料共 26 例，其中 23 例接受过介入栓塞治疗，介入术后继续口服糖皮质激素或西罗莫司。随访 6-18 个月，评估其治疗效果，总结丛状血管瘤患儿接受介入栓塞治疗次数及每次介入术后病灶大小、皮温、疼痛变化情况。对比分析行介入治疗的丛状血管瘤患儿与 30 例普通婴幼儿血管瘤血管造影结果。**结果：** 丛状血管瘤患儿血管造影通常表现为肿瘤样染色、染色不均或均匀，边界模糊不清，染色灶包绕正常动脉，瘤体的供血动脉自正常动脉主干发出多条，数量多且较细，供血动脉管径与肿瘤大小不成比例；普通婴幼儿血管瘤造影表现为瘤体肿瘤样染色且较深，通常为类圆形或椭圆形，境界清晰，染色较均匀，常分布于正常动脉主干的一侧或两侧，供血动脉由正常动脉主干发出，数量多为 1-5 支供血动脉，其管径与肿瘤大小多呈正比例相关。丛状血管瘤患儿接受经导管动脉栓塞术 1～3 次/例，26 例患儿共计 34 次。患儿介入术后继续口服强的松或西罗莫司 5-12 个月。26 例患儿丛状血管瘤瘤体缩小大于 75%以上 26 例，病灶颜色较前明显改善 23 例，另 3 例颜色无明显改善。瘤体均不同程度变软，其中 12 例病灶在治疗后明显出汗，治疗后出汗基本消失。2 例患儿介入术后病灶出现破溃。随访 6 个月至 18 个月，26 例患儿术后继续联合口服糖皮质激素或西罗莫司等其他综合治疗，24 例治愈，2 例好转。 **结论：** 丛状血管瘤患儿血管造影特征不同于普通婴幼儿血管瘤，瘤体的供血动脉较后者明显增多，且管径较后者纤细，瘤体染色不明显，介入术行超选择动脉栓塞难度较后者增大。丛状血管瘤经动脉介入栓塞联合口服强的松或西罗莫司疗效切确，并发症较少，但儿童口服西罗莫司仍存在血酯增高、免疫降低等并发症，临床工作中需密切关注患儿状况，及时处理。

PU-1665
门静脉海绵样变 Rex 术后血管吻合口狭窄球囊扩张术 1 例

刘珍银,温哲,张靖
广州市妇女儿童医疗中心

目的： 探讨儿童门静脉海绵样变 Rex 术后桥静脉与肝内门静脉吻合口狭窄球囊扩张术介入操作的可行性。**方法：** 患儿 4 年余前因“反复呕血 5 年余”就诊我院，诊断为“门静脉海绵样变性”，于 2014 年 11 月 11 日在我院行“Rex 术”，术后恢复可，定期门诊随访，2018.2.6 返院行“间接门静脉造影术+经皮肝脏穿刺门静脉造影术”，术中见门静脉主干及其属支显影尚清晰，使用导丝多次反复仍无法通过 Rex 吻合口狭窄段，现为行狭窄段扩张术再次入院。 血液检查显示，血小板 31X10^9/L，凝血四项正常，脏器功能血液检查正常。CT 显示肝脏异常灌注，肝内动脉右支局部扩

张，脾大。超声显示桥静脉门静脉吻合口变窄，血液流速增大。 2018-12-17 腹部超声：门静脉海绵样变、肠系膜上静脉-门静脉左支分流术后：桥静脉门静脉左支吻合口 3.0mm，最大血流速度（Vmax：138cm/s）。**结果：** 气管插管全麻后，常规消毒右下胸侧壁及周围皮肤，在 DSA 引导下将肝穿针置入肝门静脉右支，引入导管鞘，置入导管至肝门静脉左支矢状部，造影示肝门静脉左支矢状部呈囊状扩大，置入导丝，经吻合口狭窄处插至肠系膜上静脉，造影示桥静脉门静脉汇合处狭窄，测量狭窄处直径约 3mm；测肠系膜上静脉平均压为 19mmHg。经导丝送入 6mm×40mm 血管球囊扩张导管 1 枚扩张 2 次，造影示狭窄较前好转，测肠系膜上静脉平均压为 15mm；经导丝送入 8mm×40mm 血管球囊扩张导管 1 枚扩张 2 次，造影示狭窄较前好转，测肠系膜上静脉平均压为 8mm，造影示桥静脉吻合狭窄处明显改善，测量狭窄处直径约 6mm，血流通畅。拔导管，退导管鞘途中置入肝脏实质内多条明胶海绵细条止血。加压包扎。术中顺利，出血量少，安返复苏室。**结论：** 通过肝穿刺门静脉进行 Rex 术后桥静脉与肝内门静脉吻合口狭窄球囊扩张术创作少、疗效显著。

PU-1666
介入法联合中医治疗输卵管阻塞性不孕的疗效观察

刘灿
云南省第三人民医院

目的 观察介入法联合中医治疗输卵管阻塞性不孕的疗效。**材料、方法** 80 例患者,132 条输卵管，术前均经过子宫输卵管碘油或复方泛影葡胺造影检查，提示输卵管梗阻，均为单纯性输卵管阻塞所致的不孕。132 条输卵管均采用介入法行输卵管再通术并结合中药滴肛治疗。**结果** 80 例患者，132 条输卵管，介入法再通 121 条，8 条粘连严重无法再通，3 条输卵管远端阻塞无法再通，术后 3 月－2 年妊娠 54 例。**讨论** 单纯性输卵管阻塞所致的不孕症，采用介入法输卵管再通结合中医治疗的优点：介入法结合中医治疗输卵管阻塞性不孕，可使疗程缩短，疗效提高，减少药物副作用，减轻病人痛苦及医疗负担。

DSA 与超声双引导下行经皮穿刺置管引流术治疗细菌性肝脓肿疗效分析

常鸿志
山西医科大学第一医院

摘要：〈正〉细菌性肝脓肿是临床上常见的由常见致病菌引起的感染性疾病,由于其较高的发病率和致死率仍危害着公共安全,死亡率约 15%[1]。传统的治疗方法包括抗生素保守治疗和外科切开引流。前者治疗时间长,疗效差,后者创伤大、恢复时间长,影像设备引导下的经皮穿刺置管引流术目前已成为治疗细菌性肝脓肿的主要方法。本研究回顾性分析在我科接受 DSA 与超声双引导下行经皮穿刺置管引流术治疗的细菌性肝脓肿患者 39 例的疗效。

PU-1668
恶性梗阻性黄疸 PTCD 术后常见并发症及护理对策分析

高星梅
山西医科大学第一医院

[目的]观察恶性梗阻性黄疸病人行经皮肝穿刺胆管引流术(PTCD)治疗的常见并发症,并分析其护理对策。[方法]回顾性分析 2015 年 8 月—2016 年 12 月至我院就诊的恶性梗阻性黄疸病人 56 例,均行 PTCD,随访观察病人术后并发症及采取的护理对策。[结果]在 6 个月～21 个月随访期内,引流管移位 11 例(包括移位 8 例,脱出 3 例),胆道出血 2 例,胆道感染 2 例(其中 1 例合并引流管移位),窦道感染 1 例(合并引流管脱出),无严重胆汁漏、胆汁性腹膜炎出现。[结论]PTCD 是治疗恶性梗阻性黄疸的有效方法,正确的护理方法能有效地减少术后并发症的发生。

经皮纵膈穿刺心脏原始神经外胚层肿瘤报告一例讨论

薛晓东,肖越勇,张肖,杨杰,张啸波,魏颖恬
中国人民解放军总医院第一医学中心

原始神经外胚层肿瘤（primitive neurotodermal tumour，PNET）是一种高度恶性的神经系统肿瘤，极为罕见。由 Hart 等在 1973 年首次报道，PNET 在组织形态学属于恶性小圆细胞肿瘤，好发于儿童及青少年，可发生于神经系统及全身软组织。起源于外周神经系统的被称之为外周性 PNET，以躯干、四肢和中轴软组织多见，起源于心脏的 PNET 更为罕见。PNET 主要由原始神经上皮产生，为神经嵴衍生的较原始的肿瘤，具有多向分化的潜能，预后极差，大部分需通过病理诊断才能确诊，现将 2019 年 3 月我院经皮穿刺活检病理证实心脏原始神经外胚层肿瘤一例，讨论如下。

PU-1673
经皮骶正中入路骶骨成形术治疗多节段骶骨体转移瘤的临床应用

田庆华,吴春根
上海市第六人民医院东院

目的 探讨经皮骶正中入路骶骨成形术治疗多节段骶骨体转移瘤的初步临床价值。
材料与方法 回顾性分析 2017 年 3 月到 2018 年 12 月入住我院介入科的 11 例经皮骶正中入路骶骨成形术治疗多节段骶骨体转移瘤的患者，共实施 11 个节段骶骨体成形术。其中男 7 例，女 5 例，年龄 31~75 岁，平均 60.45±13.66，共累及 11 个骶骨体节段，其中 S1-2 骶骨体节段 9 例，S2-3 骶骨体节段 2 例。通过比较患者术前及术后视觉模拟评分（VAS）、止痛药用量和 Oswesty 功能障碍指数（ODI）评分的变化来评价疼痛、日常运动功能状况的改善情况。同时，记录手术成功率、骨水泥注入量、住院时间和并发症情况。统计学数值以平均值±标准差表示。统计学软件采用 SPSS16.0 统计分析软件包（Chicago IL, USA），术前与术后 VAS、ODI 的变化采用配对 t 检验，规定 P<0.05 为差异有统计学意义。
结果 所有患者获得手术成功，手术时间为 45~55min，平均(48.45±2.81)min，注入骨水泥量 5~12ml，平均(7.82±2.32)ml，骨水泥几乎充填全部病灶，技术成功率 100%。住院天数为 3~7 天，平均(4.64±1.63)天。3 例(27.27%)发生骨水泥渗漏到邻近软组织，但患者无明显不适反应，未作特殊处理，其余患者无明显并发症。随访时间为 3~13 个月，评价随访（4.72±2.90）个月,10 例患者骶部疼痛有所缓解，1 例疼痛缓解不明显，缓解率约为 90.91%。VAS 由术前平均 7.09±1.30 分降至术后 2.82±1.33 分；ODI 指数由术前 74.91±5.47 分，术后降为 29.27±13.86 分。
结论 经皮骶正中入路骶骨成形术治疗多节段骶骨体转移瘤是一种微创、安全、有效的方法。

浅谈食道腐蚀伤的介入干预时机及综合治疗体会

袁洪新,赵辉
南通大学附属医院

食管腐蚀伤是误食或者有意吞服腐蚀剂引起的食管损害性和碱性两类。强酸类如硫酸、盐酸、硝酸等；碱性类如氢氧化钠(火碱、灰水)、氢氧化钾、碳酸氢钠(食用或清洁用碱)。病变程度与腐蚀剂的性质、浓度、剂量和停留时间有关。碱性腐蚀剂有强烈的吸水性，并有脂肪皂化、蛋白质溶解作用，引起组织液化坏死，病变易向深层发展，穿透力强。酸性腐蚀剂易引起局部粘膜干性坏死，穿透力较弱，但高浓度的强酸腐蚀剂，也可引起严重损伤。急性期应在受伤后立即服用中和剂，尽早给予足量广谱抗生素以防止感染，糖皮质激素的应用可减少创伤反应，有抗休克、消除水肿、抑制成纤维肉芽组织的形成、防止瘢痕狭窄的作用，但应严格掌握适应证及用药剂量，用量过大，可使感染扩散，并有可能并发食管穿孔。3～4 周后由于局部结缔组织增生，继之瘢痕收缩而致食管狭窄，再度出现吞咽困难，逐渐加重，严重影响患者进食，目前食管扩张术在瘢痕狭窄形成早期的应用时机仍存在争议，但其总体治疗效果已得到广泛认可，一般认为急性期（一周内）扩张并发穿孔、出血可能较大，而 3～4 周后瘢痕形成后扩张效果较差，2 周左右可采用探条或球囊逐级扩张，前者近期效果较好，但远期效果两者相仿，有学者认为采用激素序贯球囊扩张术，效果比单独应用激素或球囊扩张更佳。

PU-1675
重症胰腺炎并发症穿刺引流治疗的临床应用

徐霖,杜恩辅
湖北省十堰市太和医院/湖北医药学院附属医院

目的 探讨在重症胰腺炎合并假性囊肿和感染性脓肿时经皮穿刺引流技术的技术方法和临床治疗价值。
材料与**方法** 对 2017-1 至 2019 年 6 月对重症胰腺炎合并假性囊肿和脓肿 65 例采用了经皮穿刺引流治疗。所有病例临床病史和相关化验检查均明确诊断急性胰腺炎并经医学影像学检查（CT 或 MRI）检查证实，并明确显示并发症的类型、部位和范围。经常规内科处理后多学科会诊并经患者同意行局部经皮穿刺引流处理。所有穿刺均在 CT 扫描引导下进行，部分病例借助超声辅助定位。患者仰卧位扫描定位，穿刺部位消毒铺巾局部麻醉后按设计途径穿刺，进入穿刺部位后再次扫描确认，然后固定引流管连接引流袋。常规观察引流情况并对症处理。
结果 所有病例均一次性穿刺成功，未出现肠管及血管损伤等并发症，穿刺引流后 24 小时、72 小时及一周患者自觉症状及并发症状态均不同程度好转。
结论 经皮穿刺引流是重症胰腺炎并发症的有效治疗手段之一，可以有效缓解病情、缩短病程。精确地穿刺定位和适当的穿刺途径设计是保障手术成功和避免并发症的关节环节。

CT 引导下经皮穿刺 125I 粒子植入治疗脊柱转移瘤

陈志瑾
上海交通大学医学院附属瑞金医院卢湾分院

目的 探讨 CT 引导下经皮穿刺 ^{125}I 粒子植入治疗椎体转移瘤的有效性及安全性。**方法** 对 20 例（23 个病变椎体）有严重腰背部疼痛的椎体转移瘤伴脊髓压迫患者，行 CT 引导下经皮穿刺 ^{125}I 粒子植入治疗。术后随访 2 年。评价术前及术后患者顽固性疼痛情况、神经功能，计算术后累计局部肿瘤控制率、患者生存率。**结果** 20 例患者中位随访时间 15.3 个月，随访期间无失访，未出现严重并发症。术后 1 个月患者顽固性疼痛较术前明显缓解（P<0.05）。12 例术前存在神经功能损伤的患者术后 3 个月神经功能保留率 75.00%（9/12），神经功能恢复率 50.00%（6/12）。术后 3、6、12 个月累计局部肿瘤控制率分别为 100%、95%、60%，术后 6 个月和 12 个月累计生存率分别为 100%和 78.81%。**结论** CT 引导下经皮穿刺 ^{125}I 粒子植入治疗脊柱转移瘤安全、可行，可有效缓解疼痛、改善患者神经功能。

MRI 三维重建在肝转移微波消融术中的应用

杨楠楠
上海交通大学医学院附属瑞金医院卢湾院区

目的 探讨计算机辅助 MRI 三维重建在肝转移瘤微波消融术前计划及术后随访中的作用。**方法** 2015 年 8 月至 2016 年 5 月我院收治符合肝微波消融适应症的肝转移瘤患者 16 例（21 个病灶）。术前采用 MRI 及后处理站进行多维度、多序列（T1WI 增强、T2WI 及 DWI）3D 重建观察目的病灶及周围环境，综合多方面因素考虑制定术前穿刺及消融计划；术中实时利用 3D 重建技术，以垂直于穿刺针平面进行实时追踪并评估穿刺途径及消融范围，术后采用同一平面利用 T2WI、T1WI 增强及 DWI 成像评估术后消融范围及效果。**结果** 手术均顺利完成，无明显并发症，随访至术后 1-3 个月未见明显复发征象。其中 14 例术前行肝脏 CTA 检查（检出病灶 17 个），与 CTA 相比，T1WI-MRI 3D 重建显示病灶周边血管（三级及三级以上分支）为 29/30，显示率为 99%；所有病例未见明显胆管扩张,术前 T2WI 显示病灶邻近 1cm 内二级胆管分支共 12 例。根据术前规划、模拟穿刺途径，与实际穿刺途径符合 100%，术后 3D 重建显示消融范围完全覆盖肿瘤边界。**结论** 计算机辅助 MRI 评价体系可有效评价目标病灶的大小及周边环境，为术前拟定手术方案提供依据；术中可有效引导穿刺并实施多维度展现术区变化，评估消融范围；术后及随访可有效多序列展示消融边界及信号变化，提供多方位信息。

CT 定位下肺穿刺活检临床应用

杨健
中国科学院大学重庆医院（重庆市人民医院）

目的 探讨 CT 定位下肺穿刺活检临床应用价值。
方法 根据穿刺前 CT 图像，尽量选取病变最大层面及舒适体位，避开内乳动脉、肋间动脉、肺大泡及叶间裂，短金属丝 3~4 根行病变体表定位，螺旋 CT 机关闭容积成像，提高成像速度，患者平静呼吸，部分患者术前用可待因等强止咳药、术中吸氧，16、18G 活检枪，行 2~3 次穿刺，取材组织送病检。
结果 2013 年 5 月至 2019 年 5 月经皮穿刺活检 245 例，成功 245 例，一般在 30 分钟内完成操作。病检结果肺癌 230 例，术后行化疗；基因、免疫治疗及手术治疗；炎性病变 10 例，结核 5 例，行相应治疗后好转。术后少量气胸 15 例，自行吸收；3 例肺组织压缩 40%以上，行胸腔闭式引流后消失；12 例患者术后少量痰血，未行治疗，短期消失。

结论 CT 定位下肺穿刺活检成功率高，并发症少，操作时间短，极大提高临床诊断准确率并指导治疗。

PU-1679
介入透视引导下腹膜透析导管导丝复位术的临床评价

王海瑞
中国医科大学附属盛京医院

目的 评价经介入透视引导下导丝复位法治疗腹膜透析导管移位的有效性和安全性。**方法** 筛选 2018 年 8 月-2019 年 8 月于我院介入科的腹膜透析导管（简称导管）位置调整术患者，腹膜透析导管均使用百特公司 Tenckhoff 直管，腹膜透析患者，出现腹透液单向引流障碍（透析液进液通畅、出液缓慢、甚至出现阻塞），并经腹部正侧位 X 线片检查证实导管移位，经患者站立位跳跃活动后，复查腹部正侧位 X 线片证明导管仍移位，术前及术后沿导管造影证实导管通畅性，介入导管室行透视下导丝法调整导管位置
结果 共入选 12 例符合标准的患者，男性 8 例（66.67%），女性 4 例（33.33%），平均年龄 56.13±16.18 岁，置管方式均为外科切开法，导管移位时间发生在置管术后 10～288 天（中位时间 120 天），经介入透视引导下腹膜透析导管导丝复位术后，9 例（0.75%）复位成功，3 例（0.25%）复位失败，后者经再次外科手术再次置管，术中证实 3 例患者导管末端均有网膜包裹，所有经导丝进行复位的患者，术中患者自述腹部疼痛，停止操作后疼痛缓解，术后均无出血、脏器损伤及腹膜炎发生。
结论 介入透视引导下腹膜透析导管导丝复位术是腹膜透析患者导管移位的一种安全、方便、经济的治疗方法。

采用微信护理平台进行优质健康宣教 在携带 PTCD 管患者院外延续性护理中的应用

喻星逸,关梦旭,陆桂娟
云南省文山壮族自治州人民医院

[摘要]**目的** 目前,电话随访的健康宣教患者虽可满足常规护理,但因患者难以取得充足的、完整的及有效的健康支持,导致治疗依从性，并发症的发生受到不同程度的影响。而采用微信护理平台进行优质健康宣教的延续性护理模式是以患者居家治疗现状为前提构建的健康信息支撑型护理模式,探究微信护理平台进行优质健康宣教对携带 PTCD 管患者院外延续性护理干预的实施效果。**方法** 方便选取该院在 2017 年 1 月—2019 年 1 月间收治携带 PTCD 管出院患者 60 例,根据不同的情况随机分为观察组与对照组,每组均为 30 例,其中对照组对院外患者采用电话随访,观察组对院外患者采用微信护理平台进行优质健康宣教延续护理模式。比较两组患者经过干预后的情况。**结果** 观察组患者的知识掌握率及健康宣教满意度均明显优于对照组,组间比较差异有统计学意义(χ^2=12.682;P<0.05)。观察组患者的 GQLT-74 的各项指标评分明显比对照组在 GQLT-74 的各项指标评分都要高;比较两组差异有统计学意义(t=7.423,4.893,10.312,4.014;P<0.05)。**结论** 采用移动平台进行优质健康宣教的随访操作简单、便捷,通过图片与视频等方式可呈现的内容更加直观,能够有效的对患者进行针对性的自我护理的指导。提高患者的知识掌握率及健康宣教满意度，从而提升患者的生活质量和自我管理能力,够降低携带 PTCD 管院外患者并发症的发生率。

PTCD 术的介入护理

张璇
武汉大学人民医院

目的 探讨梗阻性黄疸患者 PTCD 术的护理方法和疗效。
方法 通过研究观察 50 例梗阻性黄疸患者进行经皮肝穿刺胆道引流术的介入护理，归纳总结术前、术中和术后护理方法，观察记录疗效。
结果 对经皮肝穿刺胆道引流术患者在护理过程中，按照规范化护理要求对患者实施护理，50 例患者均成功引流，黄疸逐渐消退，肝功能逐渐恢复，生活质量得到改善。
结论 对行 PTCD 的患者，通过术前的心理护理稳定患者情绪，给予地佐辛联合右美托咪定镇静止痛；术中密切注意患者基本情况及术中并发症情况；术后完善引流管固定，观察引流情况，使引流成功，做好创口的护理工作，并预防逆行引流导致的感染。通过科学谨慎的护理，使患者病情好转。

CT 引导乳腺单钩穿刺定位针在肺结节胸腔镜切除术中的应用

王洪剑,谢军,时启良,刘臣臣,杜海涛,郭长东
安徽阜阳市人民医院

目的 分析应用 CT 引导乳腺单钩穿刺定位针行肺结节定位，以利于胸腔镜手术中肺结节切除的效率与安全性。方 法：收集自 2017 年 7 月至 2019 年 6 月阜阳市人民医院医院住院 60 例患者，随机分为实验组和对照组（每组 30 人）：实验组术前使用 CT 引导下乳腺单钩穿刺定位针定位肺部结节，定位完成后直接行胸腔镜下肺部病变锥形切除，再根据快速冰冻病理结果决定下一步术式；对照组直接行胸腔镜下肺部病变锥形切除，再根据快速冰冻病理结果决定下一步术式。**结果** 采用 CT 引导下乳腺单钩穿刺定位针定位成功率 100%，中位定位时间 30min。实验组与对照组对比**结果** 胸腔镜手术时间实验组优于对照组，对比 P<0.01；结节完全切除率实验组优于对照组，对比 P<0.01；进一步开胸手术实验组优于对照组，对比 P<0.01。**结论** 术前使用 CT 引导下带钩钢丝定位肺部病变的方法准确、安全性高，能够提高胸腔镜手术中肺部结节切除的准确率和安全性。

“互联网+” 智慧型延续护理模式在 PTCD 带管患者中的应用

杨海霞,范本芳,何伯圣
南通市第一人民医院（南通大学医学院第二附属医院）

【摘要】 **目的** 探讨基于“互联网+”理念的智慧型延续性护理模式在经皮肝穿刺胆道引流（percutaneous transhepatic cholangial drainage，PTCD）带管患者中的应用价值。**方法** 采用前瞻性对照研究，将南通市第一人民医院介入科 2018 年 3 月至 12 月收治的 45 例恶性梗阻性黄疸行 PTCD 治疗留置管道的患者作为实验对象，2017 年 1 月至 10 月收治的 45 例恶性梗阻性黄疸 PTCD 治疗留置管道的患者作为对照组。对照组采用常规护理模式。实验组采用“互联网+” 智慧型延续护理模式，开展线下线上护理活动。分别于入组时、出院后 3 个月门诊复诊时对两组患者进行问卷调查，评估患者 PTCD 管相关知识知晓率、患者生活质量及患者居家护理管道并发症（管道脱落、堵塞、伤口周围皮肤损伤、胆道感染）的发生率。**结果** 实验组患者 PTCD 管道护理知晓率、引流液量色观察知晓率、并发症识别知晓率分别为 97.8%、100%、93.3%，明显高于对照组，差异具有统计学意义（P<0.05）；实验组患者居家护理管道并发症发生率（其中管道堵塞 4.4%、管道脱落或移位 2.2%、胆道感染 4.4%、伤口周围皮肤损伤 4.4%）明显低于对照组，差异具有统计学意义（P<0.05）；实验组患者躯体功能、角色功能、情绪功能、认知功能、社会功能评分依次为（75.19±6.35）、（74.22±5.14）、（73.83±4.25）、（74.36±6.22）、（72.05±5.17）高于对照组，差异具有统计学意义（P<0.05）。**结论** “互联网+” 智慧型延续护理模式解决了 PTCD 带管患者从院内到院外服务链断裂问题，明显提高了患者 PTCD 相关知识的知晓率，有效降低 PTCD 带管患者出院后居家管道并发症的发生率，保障患者安全，并提高患者的生活质量。

双肾造瘘联合输尿管阻断支架治疗宫颈癌 放射治疗致膀胱阴道瘘的疗效

李凤尧,段旭华,韩新巍
郑州大学第一附属医院

目的 ：探讨双肾造瘘联合输尿管尿流阻断支架治疗宫颈癌放射治疗致膀胱阴道瘘 （VVF）的疗效。

方法 前瞻性收集 2016 年 6 月至 2019 年 1 月郑州大学第一附属医院经妇科检查、膀 胱镜及影像检查确诊的宫颈癌放射治疗致 VVF 患者 20 例。均行双肾造瘘联合输尿管尿流阻断支架 植入术。观察患者症状改善情况和术后并发症。采用双侧 t 检验比较术前和术后 1 周尿白细胞数、肌 酐、尿素氮、使用尿不湿数、阴道及尿道口渗液、疼痛评分、美国东部肿瘤协作组体力状况（ECOG）评分和 Karnofsky 功能状态（KPS）评分的差异。

结果 20 例患者均一次性肾造瘘成功后植入输尿 管尿流阻断支架。术后所有患者尿瘘即刻消失。术后 1 周，8 例双肾积水消失，8 例肾功能恢复正常。 术后 1 周与术前比较，尿白细胞数、使用尿不湿数、阴道及尿道口渗液、疼痛评分、ECOG 评分和 KPS 评 分差异均有统计学意义（P 均<0.05），肌酐和尿素氮差异无统计学意义（P 均>0.05）。术后未发生严重 并发症。

结论 双肾造瘘联合输尿管阻断支架能够治疗宫颈癌放射治疗致 VVF 安全、有效，能够降低 VVF 患者疼痛，改善生活质量。

不同胃注气方式对 CT 引导下胃造瘘术影响的研究

赵庆,杨婷 ,田才智
焦作市第二人民医院

目的 研究胃管及千叶针两种胃注气方式对 CT 引导下胃造瘘术的影响。**方法** 分析在我院行 CT 引导下胃造瘘术患者 16 例，其中 7 例由千叶针向胃内注气，9 例由胃管向胃内注气。观察患者的手术时间、辐射剂量及术中并发症。**结果** 15 例患者成功实施 CT 引导下胃造瘘术，1 例患者经千叶针注气后胃壁气肿严重，未能继续实施 CT 引导下胃造瘘术。两种胃注气方式下的手术时间存在明显差异（P<0.05），辐射剂量也存在明显差异（P<0.05），术中并发症主要为胃壁气肿，发生 3 例，均为千叶针胃注气。**结论** 经胃管胃注气的 CT 引导下胃造瘘术可提高手术成功率，有效减短手术时间，减小辐射剂量及术中并发症。

PU-1688

CT-guided 125Iradioactive seeds implantation in treatment of spinal metastatic tumors

Zhijin Chen
Ruijin Hospital Luwan Branch, Shanghai Jiao Tong University School of Medicine

Objective: The purpose of this study was to examine the safety and clinical efficacy of CT-guided radioactive ^{125}I radioactive seed implantation treatment in spinal metastatic tumors with spinal compression. **Methods:** We retrospectively analyzed 20 cases of spinal metastatic tumors. All the patients suffered severe pain, 12 of them accompanied with nerve function impairment .All patients were planned using treating planning system (TPS). Twenty-four spinal metastatic tumors were treated by CT -guided radioactive ^{125}I seed implantation. A median of 19 ^{125}I seeds were implanted. Numerical rating scale was used to evaluate pain relief. ASIA criteria was used to evaluate nerve function. WHO efficacy evaluation criteria was used to evaluate efficacy for treating spinal metastatic tumors. **Results:** Twenty cases were followed for a median of

15.3 months. The rate of pain relief was 95%. The median survival time for all of the patients was 16 months. The cumulative 6- and 12-month survival rates were 100% and 78.81%, respectively. The median control time for all of the patients was 12.5 months. The 3-, 6-, and 12-month cumulative local control rates were 100%, 95%, and 60%, respec-tively. The neural function recovery rate was 50% (6/12) three months after ^{125}I seeds implantation. No major complications were observed. No ^{125}I seeds were lost or migrated to other tissues or organs. **Conclusions:** CT-guided radioactive ^{125}I seed implantation is a safe, effective, and minimally invasive method for the treatment of patients with spinal metastatic tumors with spinal compression. It is a possible alternative therapy for the treatment of spinal metastases.

Transitional Care Interventions for Patients with Cirrhosis: a Multidisciplinary Care Model for the Prevention of Complications Post-Transjugular Intrahepatic Portosystemic Shunt

Qungang Dan
Ruijin Hospital Luwan Branch, Shanghai Jiao Tong University School of Medicine

AIMS
TIPS is an effective method for resolving the symptoms of portal hypertension. However, an increase in symptom recurrence rate and the incidence of hepatic encephalopathy after TIPS, which may adversely affect quality of life and accelerate hepatic function deterioration, is the main cause of death. New models of specialized caregiving support are necessary to optimize its management. The aim of the randomized controlled trial study was to evaluate the efficacy of transitional care interventions of multidisciplinary team for patients with cirrhosis post-TIPS.
METHODS
68 cirrhotic patients admitted to hospital underwent TIPS were allocated, after discharge, randomized to the control group, or to the intervention group, and followed prospectively as outpatients up to death or for at least 3 months.The conventional care was performed for the patients of control group. The conventional care combined with transitional care interventions were performed for intervention group. Transitional care through telephone follow-up, family visits, and WeChat guided patients to prevent gastrointestinal bleeding, infection and constipation , quality low-protein diet intake, recognize minimal encephalopathy, monitor blood ammonia, return visit regularly, deal with adverse drug reactions of anticoagulant. The compliance behavior, incidence of adverse events, Child-Pugh scores and ammonia of two groups were compared at baseline as well as 1 and 3 months post-TIPS.
RESULTS
The compliance behavior scores of patients in the intervention group were significantly higher than the control group 1(t=-2.8, P=0.007) and 3 months (t=-5.57, $P<0.001$) post-TIPS. The incidence of hemorrhage, hepatic encephalopathy, leg swelling and death of the intervention group were significantly lower than the control

group 3 months after TIPS, =5.581, P <0.05.Repeated measures analysis of variance showed significant time effects from baseline to 3 months about Child-Pugh scores of two groups, F=3.46, P=0.042, and group*time interaction, F=10.72, P< 0.001.While, the time effects and group*time interaction of the repeated measures analysis of variance showed no significant difference in blood ammonia levels between the two groups, P>0.05.

CONCLUSIONS

Transitional care interventions post-TIPS can increase the accessibility of patients to scientific nursing, significantly improve patients' compliance behaviors and health, improve postoperative hepatic function, decrease the incidence of adverse events post-TIPS.

A Systematic Review and Meta-Analysis of the Safety and Efficacy of Uterine Artery Embolization vs. Surgery for Symptomatic Uterine Fibroids Abstract

Qungang Dan
Ruijin Hospital Luwan Branch, Shanghai Jiao Tong University School of Medicine

Objective: The aim of this study was to systematically review the safety and efficacy of UAE vs. surgery for symptomatic uterine fibroids.

Methods: A search was conducted in the Cochrane Library, PubMed, EMbase and Web of Science databases from their inception to July of 2014 to collect randomized controlled trials (RCTs) that assessed UAE versus surgery for the treatment of symptomatic uterine fibroids; the references of the included studies were also retrieved. Two reviewers independently screened the studies according to the inclusion and exclusion criteria, extracted data and assessed the methodological quality. The meta-analysis was conducted using RevMan 5.2 software.

Results: A total of 7 RCTs involving 859 patients were used. The results of the meta-analysis showed a reduced length of stay and recovery time for UAE when compared with surgery. There was no reported that surgry was better on improving health-related quality of life in the included studies. There were no significant differences in patient satisfaction (1-2 and 5 year), intra-procedural complications or major complications (1 year). However, the rates of minor complications (1 year) and further interventions (2 and 5 year) were significantly higher in patients who underwent UAE rather than surgery. The rates of pregnancy and live births were significantly lower among patients who underwent UAE than surgery.

Conclusions: Generally speaking UAE is safe and effective and UAE has the advantages of the shorter hospital stay and recovery time compared with surgery. However, UAE has the risk of re-intervention and lower pregnancy and live births rates.

PU-1691

Uterine Artery Embolization vs. Myomectomy for Symptomatic Uterine Fibroids: A Systematic Review and Meta-Analysis

Qungang Dan
Ruijin Hospital Luwan Branch, Shanghai Jiao Tong University School of Medicine

Objective

Uterine fibroids are the most common benign gynecologic tumors. Uterine artery embolization (UAE) has become an important method of non-surgical treatment for symptomatic uterine fibroids.

Methods

A search was conducted in the Cochrane Library, PubMed, Embase and Web of Science databases to collect studies that compared UAE with MY for the treatment of symptomatic uterine fibroids, with publication dates from database inception to April 2015. Two reviewers independently screened the studies and extracted the data. The meta-analysis was conducted using RevMan 5.3 software.

Results

A total of 12 studies involving 1339 patients were included. The results of the meta-analysis showed that recovery time and length of stay were reduced for UAE compared with MY. In contrast, there were no significant differences in minor post-procedural complications within 1 year, major post-procedural complications within 1 year, patient satisfaction after 1-2 years of follow-up, the recurrence of fibroids, or the need for further interventions within 2 years of follow-up or in health-related quality of life (HR-QOL). However, for patients undergoing UAE, the serum levels of follicle-stimulating hormone (FSH) after the procedure were significantly higher. Both UAE and MY could preserve potential fertility, but MY was better than UAE in this respect.

Conclusions

Generally speaking, compared with MY, UAE is a safe and effective method for treating uterine fibroids. And UAE has the advantages of the shorter hospital stay and recovery time compared with surgery. However, UAE has a lower chance of success in women who plan to get pregnant.

PU-1692

The biological effect of pancreatic carcinoma cells in vitro with 125I seeds low dose rate irradiation

Qungang Dan
Ruijin Hospital Luwan Branch, Shanghai Jiao Tong University School of Medicine

AIM: To determine whether ^{125}I seeds continuous low dose rate irradiation caused radiation-induced biological effect of pancreatic carcinoma cells in vitro and the mechanism by which this occurred.
METHODS: In vitro, SW1990 and Panc-1 cells in exponential growth were exposed to the dose of 0, 2, 4, 6, and 8Gy with ^{125}I seeds (initial dose rate of 12.13cGy/h), respectively. After irradiation, survival fraction (SF2) were calculated and compared between the two cell lines. The ratio of apoptosis and cell cycle were assessed with the tritiated thymidine (^{3}H-TDR) incorporation experiments, and were compared between different groups of cell lines and radiation dosages.
RESULTS: No significant difference was found for the SF2 between SW1990 (0.766±0.063) and Panc-1 (0.729±0.045). The rate of apoptosis increased with radiation dosage. As the doses increased, the percentage of G2/M cell cycle arrest increased while the DNA incorporation rate decreased in both cell lines, with the peak and valley point at 6Gy.
CONCLUSION: For the continuous low dose rate irradiation in vitro with ^{125}I seed, there are no significant differences of cellular radiosensitivity between SW1990 and Panc-1 cell lines with the dosage ranging from 0Gy to 8Gy, and 6Gy is an efficient dosage. The major mechanisms of cell-killing effects for ^{125}I radioactive seeds are the apoptosis and the G2/M cell cycle arrest.

Clinical application of mammography -guided hook wire-localized surgical biopsy in diagnosing impalpable breast lesions

Chaojie Li
Ruijin Hospital Luwan Branch, Shanghai Jiao Tong University School of Medicine

Objective: To assess the efficacy and safety of imaging- guided hook wire-localized surgical biopsy in diagnosing impalpable breast lesions. Methods: A total of 78 female patients, who had micro-lesions on mammography but had negative mammary palpation, were enrolled in this study. Gross localization was performed in 35 cases(group A), mammography -guided hook wire localization was carried out in 43 cases(group B),guide the surgical excision biopsy. Results: In group A, one trial complete resection rate was 77.1%(27/35). In group B, one trial complete resection rate was 93.0%(40/43). The one trial complete resection rate of group B was significantly higher than group A(χ^2 =4.017,P <0. 05). The satisfaction of localization of group B was 90.7%. The mean time for puncturing localization was 14.8 minutes. No major complications such as break of guide wire, pneumothorax, massive hemorrhage, etc. Vagal response occurred in 4 cases. Symptom relieve after they had a break, and complete surgery successfully. Conclusion: mammography -guided hook wire-localized surgical biopsy has good location accuracy. It is a safe and effect method for the diagnosis of impalpable breast lesions.

恶性梗阻性黄疸患者 PTCD 术后延续性护理需求调查

吉琳,王嵘
山西医科大学第一医院

目的 了解恶性梗阻性黄疸患者 PTCD 术后的延续性护理需求现状及其影响因素。**方法** 以自制问卷为调查工具，采用便利采样法于 2017 年 7 月-2019 年 5 月对入住我科行 PTCD 术的恶性梗阻性黄疸患者进行现状调查。**结果** 恶性梗阻性黄疸患者 PTCD 术后的延续性护理需求总分为：3.77±0.47，单因素方差分析结果显示：性别、年龄、婚姻状况、文化程度、职业、工作状况、家庭月收入、医疗付费方式、患病时间、合并其它疾病情况、日常生活能力是其影响因素，将单因素方差分析有意义的变量引入多元线性回归，结果显示：年龄、婚姻状况、日常生活能力是其主要影响因素。**结论** 恶性梗阻性黄疸患者 PTCD 术后延续性护理需求主要受年龄、婚姻状况及日常生活能力的影响，我们在对患者提供延续性护理时，需重点注意这些因素的影响。

比较超声造影引导与增强 CT 引导经皮穿刺含坏死胸部病变

董亮,庞闽厦,纪永利,杨新国
胜利油田中心医院

【摘要】 **目的** 比较超声造影引导下与增强 CT 引导下经皮穿刺活检在含坏死胸部病变定性诊断中的价值。**方法** 收集 2015 年 1 月至 2018 年 6 月我院增强 CT 显示含坏死胸部病变 162 例，病变内含有无增强区，且病变与皮肤之间无骨无肺气遮挡，具有良好的透声窗，将病变分为超声造影组 76 例（超声实时造影引导下穿刺）和增强 CT 组 86 例（结合术前增强 CT 并在 CT 引导下穿刺），比较两组穿刺命中率、病理诊断符合率及并发症发生率。**结果** 超声造影组穿刺命中率[97.37%（74/76）]、病理诊断符合率[94.74%（72/76）]高于增强 CT 组[87.21%（75/86）、79.07%（68/86）]，并发症发生率[2.63%（2/76）]低于增强 CT 组[16.28%（14/86）]，差异均有统计学意义（P均＜0.05）。**结论** 超声造影引导下经皮穿刺活检定性诊断含坏死胸部病变较增强 CT 引导下更加安全、有效。

低剂量介入诊疗技术在子宫输卵管造影中的应用价值研究

郝以秀
广州市第一人民医院南沙医院

目的 探讨低剂量介入诊疗技术在子宫输卵管造影中的应用价值。**方法** 选取我院 2018 年 1 月 1 日—2019 年 1 月 1 日期间接收的子宫输卵管造影患者 57 例，随机分为两组,分别对其实施常规剂量介入诊疗和低剂量介入诊疗，比较其检查结果。**结果** 在子宫输卵管造影患者中宫腔及输卵管显影的检查中，常规剂量介入诊疗与低剂量介入诊疗的检出率差异有统计学意义（P ＜ 0.05）。**结论** 低剂量介入诊疗在子宫输卵管造影患者中能够在完成检查、保证诊断准确性的情况下，降低辐射剂量，使患者更容易接受，在临床上具有很大的诊断价值。

PU-1698
冷循环微波消融术治疗肺恶性肿瘤的临床疗效分析

宋军伟
淄博矿业集团有限责任公司中心医院

目的 探讨 CT 引导下经皮穿刺冷循环微波消融术治疗肺恶性肿瘤的疗效。
方法 收集 24 例行经皮穿刺微波消融术治疗的肺恶性肿瘤患者的病历资料，按 RECIST1.1 版标准对其疗效进行评估。所有患者消融术后 3d 内 CT 增强扫描复查 ，以观察瘤体坏死情况，周围组织及并发症情况。随后在第 1、3、6 个月行 CT 增强扫描复查判定肿瘤治疗效果。本研究采用改良的实体瘤疗效评价标准(RECIST)1.1 版评价疗效 。该标准分为 4 级：疾病进展 (PD;)、完全缓解 (CR)、部分缓解(VR;)、疾病稳定 (SD;)。总缓解率=CR+VR；临床获益率=CR+VR+SD。
结果 24 例共 29 个病灶成功进行了微波消融治疗，患者术后 6 个月有效缓解率为 70.8%，总体获益率为 83.3%。消融术后 3d 内出现气胸 9 例（37.5%），胸腔积液 7 例（29.2%），咯血 3 例（12.5%），肺部感染 1 例（4.2%），消融后综合征 9 例（37.5%）。
结论 CT 引导下经皮穿刺微波消融术治疗肺恶性肿瘤安全有效，有利于提高患者的生存质量。

PU-1699
X 线引导下结肠癌支架置入术的精细化操作

宋军伟
淄博矿业集团有限责任公司中心医院

目的 探讨结肠癌并发肠梗阻经内镜置入术后的临床应用，通过精细化操作，提高置入成功率，减少并发症。
方法 收集整理 2016 年 1 月-2017 年 8 月期间在我院诊治的结肠癌并发梗阻患者 26 例，均在 X 线透视下经内镜植入支架，成功解除梗阻后进行后续治疗。
结果 26 例患者中 25 例成功植入支架，成功率 96.2% ，患者肠梗阻症状明显得到改善，术后 48h 复查，肠管积气扩张程度明显减轻，液气平减少或消失，进食后无不适症状出现。5 例患者放入支架后出现肛门刺激症状，给予对症治疗后，症状好转。1 例支架放入失败患者给予急诊造瘘手术。19 例患者在放入支架 7-10d 后行腹腔镜下大肠癌根治切除术，手术切除完整，标本边缘无肿瘤浸

润或残留，患者在术后 3-5d 内肠道功能基本恢复，出现切口感染 1 例，经治疗后痊愈，未发生吻合口瘘。6 例无法手术患者，姑息性放入支架后，均有效缓解了患者的肠梗阻症状，支架未取出。随访 90d 后，未发生支架移位、出血、肠穿孔等并发症，1 例患者因肿瘤过度生长出现再梗阻，二次放入支架。

结论 通过内镜支架置入术的术前精细准备及术中细致化操作，可以有效避免并发症，为外科进一步手术治疗创造条件，提高患者术后生存率及生活质量。

PU-1700
兔肺 VX2 肿瘤微波消融术后即刻 MRI 信号变化的实验研究

缪仙花[1],林征宇[2],林晓南[3],陈杰[4]
1.宁德市闽东医院
2.福建医科大学附属第一医院
3.福建省人民医院
4.永安市立医院

目的 研究兔肺 VX2 肿瘤微波消融前后 MRI 信号变化与病理表现的相关性，通过定量分析对比微波消融前后瘤灶、消融灶及周围正常肺组织水含量，研究 VX2 肿瘤微波消融前后 MRI 的信号变化机制。

方法 总计 23 只新西兰雄性大白兔，建立兔肺 VX2 肿瘤模型。随机分成 A、B 及 C 共 3 组，在全麻及无菌条件下对 A 组及 B 组行 CT 引导下微波消融，消融完全后处死，A 组消融灶行组织病理学检查，研究 MRI 图像上表现与病理间联系。B 组分别于原瘤灶消融区、被消融肺组织区、水肿肺组织区及正常肺组织取材，测定各部分水含量。C 组不行微波消融，直接处死瘤兔并于瘤灶及正常肺组织取材并测定其水含量。分析对照肿瘤消融前后各部分组织水含量与 MR 信号变化的关系。

结果 肺内成功种植孤立性 VX2 肿瘤，其 CT 表现为：肺内单发结节状高密度影，边缘清晰；MRI 表现为：3DT1-VIBE:呈圆形或类圆形等信号，部分病灶中央可见斑点状坏死低信号区； fs-T2WI：呈圆形或类圆形稍高信号影，部分病灶中央可见斑片状高信号影。DWI（b＝800s/mm^2）：呈圆形或类圆形高信号。

A 组及 B 组瘤兔，行 CT 引导下行微波消融术，术后原瘤灶密度较前稍减低，并可见稍高密度磨玻璃影覆盖原瘤灶；MRI 表现为：3DT1-VIBE：消融灶中央呈高信号，周围包绕环形低信号影，边缘模糊；fs-T2WI: 消融灶中央呈低信号，周围包绕高信号影，边缘模糊;DWI（b＝800s/mm^2）：DWI 上信号较术前明显减低。B 组瘤兔微波消融后取消融灶、被消融肺组织、水肿肺组织及正常肺组织，C 组瘤兔不行微波消融术，直接取未消融瘤灶及正常肺组织行水含量测定并统计分析得出，MRI 成像方法能较好的评价肿瘤微波消融治疗的即时疗效，各部分组织病理表现及水含量的变化与 MRI 影像学表现有一定相关性。微波消融术后原瘤灶区水含量较术前减少，导致消融术后瘤灶 T1WI 信号增高、T2WI 信号减低。

PU-1701
椎体强化术治疗骨质疏松性椎体骨折前后肺功能变化及相关因素分析

宋戈
上海交通大学附属第六人民医院

目的　探讨经皮椎体强化术治疗老年骨质疏松性椎体压缩骨折前后患者的肺功能变化，并探求引起其变化的相关因素。

方法　对 45 例经皮椎体强化术患者于术前和术后 3d 进行 VAS 评分、活动能力评分，测量胸椎后凸角、局部后凸角、肺功能（VC、FEV1.0、FVC、MVV、ERV、通气储备百分比），分析肺功能的变化、探求引起其变化的相关因素及相关性。

结果　经皮椎体强化术后 3d 时患者受损的 VC、FVC、FEV1.0、MVV、ERV、通气储备百分比显著改善，胸椎后凸角在术后得到明显改善，骨折椎体局部后凸角术后明显改善，VAS 评分明显降低，术后活动能力明显增加。胸椎后凸角与 FVC、MVV 呈明显负相关性，骨折椎体局部后凸角与肺功能各指标没有明显相关性，术后 3d 胸椎后凸角改善值与 FVC、FEV1.0、MVV 提高值呈显著正相关性，局部后凸角改善值与肺功能改善值无显著统计学相关。疼痛评分在术前与 VC 呈显著负相关，在术后 3d 与 VC、FVC、FEV1.0 呈显著负相关，术后 3d VAS 改善值与 FVC、FEV1.0、MVV 提高值呈显著正相关。

结论　经皮椎体强化术后 3d 时患者疼痛显著缓解，脊柱矢状面排列改善，活动能力增加，同时受损的 VC、FVC、FEV1.0、MVV、ERV、通气储备百分比得到改善。

PU-1702
双针双平面法和单针法治疗伴有致密带形成的骨质疏松性椎体压缩骨折疗效比较

宋戈
上海交通大学附属第六人民医院

目的　对比研究双针双平面法和单针法经皮椎体成形术（PVP）治疗伴有致密带形成的骨质疏松性椎体压缩骨折的临床疗效。

方法　回顾性分析 2011 年 1 月-2016 年 1 月采用 PVP 治疗伴有致密带形成的骨质疏松性椎体压缩骨折患者共 43 例，所有患者均只伴有单节椎体致密带形成。在透视引导下，采用双针法或单针法 PVP 向病椎内穿刺并注入骨水泥聚甲基丙烯酸甲酯（PMMA）。术后 X 线片和 CT 观察，对比分析手术时间、X 线暴露时间、X 线透视次数、骨水泥注入量、骨水泥分布情况及并发症的发生，并且采用视觉模拟疼痛评分（VAS）、及 ODI 指数、椎体前壁高度、椎体后凸 Cobb 角进行手术疗效比较。

结果　使用双针法在手术时间、X 线暴露时间、X 线透视次数、骨水泥用量及分布情况方面均显著多于单针法（P＜0.05），骨水泥渗漏率少于单针法（P＜0.05）。术后 3d、6 周及 1 年时，两组 VAS 评分及 ODI 指数较术前均有改善（P＜0.05），椎体高度恢复率、椎体后凸 Cobb 角较术前虽有改善，但差异无统计学意义（P＞0.05）。组间比较，术后 3d 两组 VAS 评分、ODI 指数有显著差异（P＜0.05），而术后 6 周及 1 年时，两组间 VAS 评分、ODI 指数均无显著差异（P＞0.05）。随访 1 年时，两组再发及邻近椎体新发骨折率差异无统计学意义（P＞0.05），均未发生脊髓神经损伤、肺栓塞等严重并发症。

结论　采用不同入路 PVP 治疗伴有致密带形成的骨质疏松性椎体压缩骨折中，尽管双针法较单针法手术时间更长，X 线暴露时间和透视次数也更多，但却能取得更理想的骨水泥分布、更好的早期疗效以及更少的近期并发症，而在中远期 VAS 评分、ODI 指数、椎体前壁高度和椎体后凸 Cobb 角恢复及长期并发症发生率方面两种方法疗效相近。

PU-1703
单侧弯角穿刺法经皮椎体成形术治疗 Kümmell 病的临床疗效分析

宋戈
上海交通大学附属第六人民医院

目的　探讨单侧弯角穿刺法经皮椎体成形术（PVP）治疗 Kümmell 病的临床疗效。

方法　收集上海市第六人民医院东院 2015 年 1 月-2016 年 1 月采用单侧弯角穿刺法穿刺 PVP 治疗的 25 例 Kümmell 病患者的临床资料。记录所有患者术前、术后 2d、末次随访时手术透视次数、骨水泥用量，采用疼痛视觉模拟量表（VAS）评分、Oswestry 功能障碍指数（ODI）评估手术前后腰痛程度及腰椎功能；计算伤椎术前术后相对高度，并观察局部后凸 Cobb 角恢复情况；观察术中骨水泥渗漏及其他并发症发生情况。

结果　所有患者均顺利完成手术，随访（6.7±1.5）个月，术中透视（14.7±4.3）次，骨水泥用量（6.2±1.0）mL。术后 2d、末次随访时 VAS 评分及 ODI 均较术前明显改善，差异有统计学意义（P<0.05）；术后 2d 及末次随访时伤椎相对高度及局部后凸 Cobb 角较术前均明显恢复，差异有统计学意义(P<0.05)；5 例患者术中出现椎体周围骨水泥渗漏，未出现静脉渗漏、椎管内渗漏、肺栓塞及其他并发症，骨水泥渗漏率为 20.0%。

结论　采用弯角装置单侧穿刺 PVP 治疗 Kümmell 病安全、有效。

PU-1704

TACE 治疗骨与软组织恶性肿瘤的疗效研究

蒋春雨
上海交通大学附属第六人民医院

目的 评估 TACE 在治疗恶性骨与软组织肿瘤患者的有效性，并评估影响恶性骨与软组织肿瘤病人的独立预后因素。

材料与**方法** 在 2010 年至 2014 年，共有 39 位恶性骨与软组织肿瘤病人在我院行 TACE 治疗。该研究收集了患者的相关临床资料，并对病人进行了系列随访，将患者的死亡作为随访的终点时间。利用 Kaplan-Meier 检验评估了该群病人的 3 年生存率，利用了多因素分析评估了影响患者生存的独立预后因素。

结果 病人的平均生存周期为 24 个月，其中 1 年、2 年及 3 年生存率分别为 71.5%, 45.8%, 及 32.5%。 肿瘤的病灶个数以及肿瘤分期是最主要的影响患者生存周期的因素。TACE 不能有效的提高患者的生存周期，但是对于减轻患者的癌痛，延长患者肿瘤无进展生存期具有重要的作用。而 TACE 所使用的 PVA（polyvinyl alcohol）颗粒的直径(p=0.03)，以及术后的影像学的变化(p=0.044)与肿瘤患者的无进展生存相关。

结论 研究表明 TACE 是一种有效的治疗恶性骨与软组织肿瘤的方法，治疗后的 3 年生存率为 32.5%。TACE 不仅可以有效的减轻患者的癌痛，并且可以延长患者的无进展生存期。此外，研究表明较小直径的 PVA 颗粒具有更好的治疗效果。

PU-1705
经皮骨水泥成形术联合介入内固定术治疗即将发生病理性骨折的股骨上段骨肿瘤的临床价值

田庆华
上海交通大学附属第六人民医院

目的 探讨经皮骨水泥成形术联合介入内固定术治疗即将发生病理性骨折的股骨上段骨肿瘤的临床价值。

方法回顾性分析本院 2010 年 5 月至 2014 年 2 月 Mirels 评分≥8 分的 43 例即将发生病理性骨折的股骨上段骨肿瘤患者，根据治疗方法的不同分为 2 组，经皮骨水泥成形术（PCP）联合介入内固定术（IIF）组 22 例，PCP 组 21 例，分别行 PCP 联合 IIF、单独 PCP 治疗。PCP 联合 IIF 组手术的实施：骨穿针沿股骨颈方向和股骨干方向穿入病灶内后，采用同轴交换技术，将事先制作好的去尾骨穿针芯使用骨穿针芯通过针鞘术推入病灶内，按照病灶体积可植入多枚去尾骨穿针芯，随后调整骨穿针方向，调和骨水泥并在透视下完成骨水泥的注射；PC 手术的实施：仅有穿刺和骨水泥注射两步。通过观察 2 组患者术后视觉模拟评分（VAS）、卡氏生活质量评分（KPS）及四肢肌骨肿瘤术后功能状态评分（EFES）来评价患者疼痛缓解、生活质量改善、股骨稳固性、骨水泥渗漏和生存率情况。结果所有患者均顺利完成手术。PCP 联合 IIF 组较单独 PCP 组有较好的疼痛缓解率(89% v.s.57%P = 0.034)和术后股骨上段的稳固性（P 均<0.05）。PCP 联合 IIF 组 19 例疼痛缓解，6 例骨水泥渗漏，无发生骨折者，随访 6～18 个月 16 例存活；PCP 组 13 例疼痛缓解，10 例骨水泥渗漏，5 例发生骨折者，随访 3～18 个月 13 例存活。2 组间疼痛缓解和发生骨折率的差异有统计学意义（P 均<0.05），骨水泥渗漏和生存率差异无统计学意义（P 均＞0.05）。2 组患者术后 1 周 VAS、KPS 及 EFES 评分差异无统计学意义（P 均＞0.05），术后 1 个月、3 个月、6 个月和 1 年评分差异有统计学意义（P 均<0.05）。

结论 经皮骨成形术联合介入内固定术治疗即将发生病理性骨折的股骨上段骨肿瘤安全、有效，能更好地缓解疼痛、降低骨折发生率、改善患者生活质量。

PU-1706
椎体压缩性骨折 PVP 术后再发骨折危险因素的研究进展

刘鹤飞
上海交通大学附属第六人民医院

随着我国人口老年化的情况日益严重，骨质疏松性疾病的患者也越来越多，骨质疏松性椎体压缩性骨折（OVCFs）成为目前的主要问题之一。越来越多的患者首选 PVP 治疗，随之术后椎体再发骨折的病例也逐渐增多，椎体压缩性骨折 PVP 术后再发骨折被越来越多的人所重视。为了降低椎体再发骨折的发生率，需要对椎体再发骨折的危险因素深入研究及探索。本文将对椎体压缩性骨折 PVP 术后再发骨折的危险因素作一综述。

PU-1707
腰椎小关节积液 MRI 影像对退行性腰椎不稳诊断价值的研究

刘鹤飞
上海交通大学附属第六人民医院

目的 主要探讨腰椎 MRI 影像小关节积液与退行性腰椎不稳之间的关系，同时观察小关节积液量与小关节对称性及小关节方向的关系。

方法 纳入 312 例退行性腰椎疾疾病患者，并分为隐性腰椎不稳组（N=168）和腰椎不稳组（N=144），45 例无明显临床症状者为对照组，均行腰椎 X 线及 MRI 检查。分析小关节积液与退行性腰椎不稳是否有相关性，并分析小关节积液量与小关节对称性及小关节方向的关系。

结果 1.L4-5、L5-S1 节段小关节积液比例及积液量较高者均为腰椎不稳组，其次为隐性不稳组，均高于对照组（P＜0.05）；2. L4-5、L5-S1 节段，三组间小关节不对称者较对称者积液量多（P＜0.05），积液比例则无差异（P＞0.05）；3.不稳组 L4-L5 节段 I 型小关节积液量最高，其次为 III 型（P＜0.05）；L4-L5、L5-S1 节段 I 型和 III 小关节发生腰椎不稳的风险均高于 II 型。

结论 1.腰椎小关节积液量有助于对腰椎不稳的临床诊断及评估，且有助于评估隐性腰椎不稳潜在的风险；2.腰椎小关节不对称与小关节积液量有关，小关节不对称在一定程度上促进腰椎不稳的发生；3.矢状面的小关节更易发生积液，且与腰椎不稳有关。

经皮胃造瘘术和自膨式金属支架置入在吞咽困难的老年食管癌患者治疗中的效果比较

王谭,黎海亮
郑州大学附属肿瘤医院/河南省肿瘤医院

【摘要】 **目的** 分析和比较经皮胃造瘘术（percutaneous gastrostomy，PG）和自膨式金属支架（self-expandable metal stent，SEMS）置入两种营养提供方式在吞咽困难的老年食管癌患者应用中的优劣。**方法** 回顾性分析郑州大学附属肿瘤医院 2014 年 2 月至 2018 年 12 月收治的 156 例伴有吞咽困难评分≥2 分的老年食管癌(≥70 岁)患者的临床资料，按照接受 SEMS 置入或者 PG 分为 PG 组和 SEMS 组，比较两组患者术后早期死亡、并发症与额外治疗情况，以及术后 2 个月时的体重质量指数、血清白蛋白、前白蛋白、血红蛋白和淋巴细胞计数的差异。**结果** 术后 PG 组的局部严重疼痛发生率明显低于 SEMS 组，差异有统计学意义（P <0.001）。两组在局部感染、消化道出血、吸入性肺炎、术后早期死亡、与额外治疗率的差异无统计学意义（P>0.05）。两组患者治疗 2 个月后，PG 组的血清白蛋白、前白蛋白和血红蛋白计数明显高于 SEMS 组，差异有统计学意义（P <0.05）。两组的体重质量指数和淋巴细胞计数的差异无统计学意义（P >0.05）。**结论** 相比 SEMS 置入，PG 术后安全性和营养状态具有优势，在伴有吞咽困难的老年食管癌患者的治疗中可以考虑优先使用。

PU-1709
吞咽困难的食管癌患者行 X 线引导下经皮胃造瘘术的疗效观察

王谭,黎海亮,胡鸿涛
郑州大学附属肿瘤医院/河南省肿瘤医院

目的 探讨 X 线引导下经皮胃造瘘术（percutaneous radiologic gastrostomy，PRG）治疗吞咽困难的食管癌患者的安全性和临床疗效。**方法** 回顾性分析本院 2016 年 3 月至 2018 年 11 月收治的 203 例伴有吞咽困难评分 2 分以上的食管癌患者的临床资料，按照是否接受 PRG 分为 PRG 组（经 PRG 管行肠内营养支持）和非 PRG 组（经口进食），比较两组患者治疗 1 个月后的体重质量指数、血清白蛋白、前白蛋白、血红蛋白值及并发症发生率。**结果** 1 个月后， PRG 组的血清白蛋白、前白蛋白及血红蛋白值明显高于非 PRG 组，差异有统计学意义(P<0.05)；PRG 组吸入性肺炎及食管气管瘘或纵隔瘘发生率明显低于非 PRG 组，差异有统计学意义(P<0.05)；PRG 组的体重质量指数高于非 PRG 组，但差异无统计学意义(P>0.05)；两组的消化道出血、便秘及腹泻发生率差异无统计学意义(P>0.05)。**结论** 吞咽困难的食管癌患者施行 PRG 能够显著改善患者的营养状态，预防营养不良的发生，且能够显著降低吸入性肺炎、食管气管瘘、纵隔瘘的发生率，本方法临床疗效肯定，安全性高，值得临床推广应用。

PU-1710
老年与非老年食管癌患者经影像学引导下经皮胃造瘘术的临床预后分析

王谭,黎海亮,胡鸿涛,郑琳,陈呈世
郑州大学附属肿瘤医院/河南省肿瘤医院

摘要：目的 比较分析经影像学引导下经皮胃造瘘术（percutaneous radiologic gastrostomy，PRG）治疗老年及非老年食管癌患者的临床预后。**方法** 回顾性分析 2014 年 7 月至 2018 年 7 月间于郑州大学附属肿瘤医院行 PRG 治疗的食管癌患者 150 例，其中年龄<70 岁者 84 例为 A 组，年龄≥70 岁 66 例为 B 组。比较分析两组的的术后生存时间、手术成功率、手术并发症发生率、手术相关死亡率及术后体重、营养指标及细胞免疫指标的变化。**结果** A 组中位生存期 180 天，B 组中位生存期 170 天。Kaplan-Meier 曲线显示，不管是Ⅱ、Ⅲ期还是Ⅳ期，两组生存率差异均无统计学意义(P=0.633，P=0.908)。两组手术成功率均为 100%，两组患者均无胃造瘘术相关死亡。术后 30 天内死亡 6 例，A 组 3 例， B 组 3 例。术后发生造瘘口感染 3 例，A 组 1 例，B 组 2 例。术后消化道出血 5 例，A 组 2 例，B 组 3 例。造瘘管移位 11 例，A 组 5 例，B 组 6 例。术后吸入性肺炎共 22 例，A 组 16 例，B 组 6 例。共有 14 例需要额外治疗，A 组 7 例， B 组 7 例。术后 1-2 月血清白蛋白变化值 A 组为-2.4±8.2 g/l，B 组为-2.7±5.5 g/l，体重变化值 A 组为-0.41±1.32kg，B 组为-0.45±2.14kg，淋巴细胞变化值 A 组为-0.47±3.610^9/l，B 组为-0.45±2.910^9/l。两组的手术成功率、术后 30 天内死亡率、并发症发生率、附加治疗次数，以及术后 1~2 个月血清白蛋白、体重和淋巴细胞计数的变化均无统计学差异（P>0.05）。**结论** PRG 治疗老年与非老年食管癌人群的临床预后相仿。

PU-1711
A comparison of percutaneous gastrostomy and self-expandable metal stent insertion in the treatment of

older patients with esophageal cancer and eating disorders

Tan Wang,Hai-Liang Li,Hong-Tao Hu
The Affiliated Cancer Hospital of Zhengzhou University， Henan Cancer Hospital

Objective In order to compare the efficacies of SEMS (self-expandable metal stent) placement with percutaneous PG (percutaneous gastrostomy) to treat older esophageal cancer patients with eating disorders. **Methods** Data of 113 cases of older esophageal cancer (≥70 years) who underwent SEMS (n=47) placement or PG (n=66) was studied from June 2014 to June 2018 in our hospital. Clinical outcomes, including overall survival (OS), procedural complications, postprocedural nutritional status and needs for additional intervention were compared between the two groups.
Results Baseline characteristics showed that the PG group had more cases of postoperative radiotherapy patients (28.8% vs. 6.4%, p=0.003) and more cases locating in the cervical esophagus (6.1% vs.2.1%, p<0.001) than the SEMS group. The Kaplan-Meier curves showed that OS of the PG group was significantly higher than that of the SEMS group, regardless of stage II+III or stage IV (p=0.034, p=0.001). Multivariate analysis showed that tumor stage, esophageal tracheal/mediastinal fistula, postoperative chemotherapy, and procedures were independent prognostic factors of survival (p<0.001, p=0.042, p=0.046, p=0.001). Besides, PG group decrease less in serum albumin levels and weight than the stent group after procedure (p=0.039, p=0.041). In addition, the incidence of local severe pain in the PG group was significantly lower than that in the SEMS group (0% vs21.3%, p<0.001).
Conclusions The results indicate that PG is a good choice in solving malnutrition caused by dysphagia resulted from esophageal stricture in older esophageal cancer patients. Compared with SEMS placement, it is related to a better survival and is not bad in terms of safety.

宫颈癌引起膀胱阴道瘘的 个体化介入治疗

张建好,杨锦建,韩新巍
郑州大学第一附属医院

目的 宫颈癌的手术、放疗、复发是引起女性患者膀胱阴道瘘的主要因素，手术修补是主要治疗方法，但肿瘤复发、转移、放疗、长期慢性炎症引起的膀胱阴道瘘容易修补失败，加上手术需要全麻下操作，部分患者难以耐受或修补困难而无法治疗，给患者造成极大的痛苦，生活质量明显下降。随着介入技术的改进、设备的更新及手术的多样化，为这类患者的治疗提供了可能。本研究通过多种介入微创方法治疗难治性膀胱阴道瘘，探讨介入治疗的优势及临床应用价值。**方法** 16 例宫颈癌合并膀胱阴道瘘患者，治疗方法如下：6 例合并双肾积水，均为输尿管末端入膀胱处不同程度狭窄，其中 1 例肿瘤未做任何治疗，其余 5 例为宫颈癌术后放化疗后肿瘤复发，患者行双肾穿刺造瘘外引流尿液，均未再漏尿；8 例宫颈癌膀胱阴道瘘患者不合并双肾积水，膀胱阴道瘘发生于放疗一年后，采用双肾穿刺造瘘外引流、单子弹头覆膜支架封堵输尿管，不自主漏尿症状完全纠正；2 例宫颈癌手术损伤，一周后发生膀胱阴道瘘，近期不考虑修补，给予双肾穿刺造瘘及双侧输尿管球囊封堵，未再漏尿，15 天后 1 例瘘口自愈，另 1 例 30 天后手术修补成功。**结果** 宫颈癌患者输尿管

球囊阻断下双肾造瘘及输尿管覆膜支架封堵，长期泌尿系炎症患者经双肾造瘘及输尿管球囊封堵，阴道不自主漏尿症状完全纠正。**结论** 宫颈癌患者发生膀胱阴道瘘，如无法修补或近期不能修补，可考虑应用双肾造瘘、双肾造瘘+输尿管支架封堵、双肾造瘘+输尿管球囊封堵等介入方法彻底纠正不自主漏尿症状。根据患者不同的病情，采用不同的治疗方法，提高患者的生存质量。

PU-1713
如何降低经皮肝穿胆道引流术后引流管的护理并发症

陈芳
郑州大学第一附属医院

【摘要】 **目的** 探讨如何降低经皮肝穿引流术后引流管的护理并发症。**方法** 选取 2018 年 8 月到 2019 年 6 月我科收住需行治疗的病人共 85 例，均给予全面性护理：引流管的观察、置管护理、并发症护理。结果 85 例患者术后出现 2 例胆道出血，1 例胆道感染，并发热寒战，体温最高 39.5，未发生引流管脱落、均顺利出院。具体**方法** (1)妥善固定及明确标识;标明外露长度，班班床头交接(2)保持有效引流;是否通畅(3)观察并记录引流液的颜色、量和性状;(4)严格无菌操作;(5)（1）触：触摸引流管周围有无肿胀疼痛，皮下血肿等。（2）看：引流管周围辅料是否干燥，引流液的颜色；量、性状、标识、引流袋更换的日期（3）挤捏，检查引流管是否通畅等。

梗阻性黄疸患者可采用介入手术治疗，即经皮肝穿刺胆道引流（PTCD），在梗阻扩张的胆管内置管以作外引流或者内引流胆汁；在进行短期或者临时胆道引流时，可置入引流管以防止胆管进一步扩张。鉴于引流管的重要性，本文将探讨如何降低经皮肝穿刺胆道引流术后引流管的护理并发症。

结果 85 例患者术后出现 2 例胆道出血，1 例胆道感染，1 例堵管，未发生胆道脱管的现象，经过治疗都顺利出院。

结论 经皮肝穿胆道引流术后，引流管的护理及妥善固定，定时检查标注，是预防术后并发症发生的有效手段，正确的、全面的引流管护理使术后引流管并发症明显降低。

DSA 低剂量技术在经皮肝穿刺胆道引流术中的应用

马金强,曾军,郑传胜
华中科技大学同济医学院附属协和医院

目的 探讨低剂量 DSA 技术以及荧光透视在经皮肝穿刺胆道引流术(PTCD)的临床应用的可行性。**方法** 收集本院住院患者共 86 例，随机分为标准模式剂量采集组（A 组，n=43）及低剂量模式采集组（B 组，n=43），由本科室同一医师完成 PTCD 手术。对两组患者手术平均指标对比分析并进行 t 检验。由两位放射科影像专家采取双盲法对所有图像进行评分。 **结果** 两组患者均顺利完成 PTCD 手术，应用 t 检验方法，平均曝光时间[（251±16）s、（249±20）s]、图像质量评分[（3.60±0.5）s、（3.56±0.5）s]，身高体重指数 BMI[（53.3）kg/m²、（58.6）kg/m²]数值比较，p 大于或等于 0.05，无统计学差异；累积剂量[（87.1±6.1）mGy、（54.4±7.7）mGy]、辐射剂量面积乘积[（2935.2±353）μGy• cm2、（1566.3±200）μGy• cm2]方面分析，p 小于 0.05 有显著统计学意义。**结论** 采取低剂量 DSA 采集技术在 PTCD 手术患者有效可行，并且可以显著减低患者所受辐射剂量。

PU-1715

儿童骨样骨瘤冷冻消融治疗的优势探讨

张肖,肖越勇
中国人民解放军总医院第一医学中心

目的 评估影像导向下冷冻消融术治疗儿童骨样骨瘤的安全性及有效性。方法 2007 年 1 月至 2019 年 6 月期间， 对 18 例病理证实的骨样骨瘤儿童患者行影像导向下冷冻消融治疗。患者男 12 例、女 6 例，年龄 8.0～15.0 岁，平均(12.0±1.6)岁，手术在局部麻醉下进行，术前均行经皮穿刺活检获得病理诊断。手术使用大孔径多层螺旋 CT（层厚 2 mm，120 kV，250 mAs）。于 CT 导向下应用 8G 或 13G 骨穿针穿刺病灶中央，拔出针芯、经外套针置入 17 G 冷冻探针，冷冻模式采用 2 次冷-热循环，术中间隔 5 min 扫描冷冻区域，了解冰球大小和形状。术后以 VAS 疼痛评分评估疗效。手术前后 VAS 评分比较采用 Kruskal- Wallis 秩和检验。结果 18 例患者手术均成功；术后疼痛均明显缓解，VAS 评分术前评分（8 分 3 例，7 分 6 例，6 分 6 例，5 分 3 例）与术后 1 个月（1 分 10 例,0 分 8 例）比较，差异有统计学意义（H=32.838,P＜0.01）。本组患者术前因长期疼痛刺激导致不同程度跛行，伴发脊柱侧弯，术后 3d 疼痛均明显减轻，无肢体功能障碍。3 例患者术后 1d 轻度发热(37.8℃)，对症处理 2d 后缓解，无其他并发症发生。随访期内所有患者疼痛无复发。结论 CT 导向下冷冻消融术治疗骨样骨瘤是一种安全、有效的微创手段，值得推广应用。

NHERF1 是结直肠腺癌临床预后的预测因子

卢文秀
山西医科大学第一医院

目的 寻找与结直肠腺癌侵袭和迁移相关的因子。
方法 收集 TCGA 及 GEO 数据库中结直肠腺癌相关数据进行 SAM 差异表达基因分析，将得到的差异基因过 DAVID 进行聚类分析，寻找与侵袭迁移相关的基因，并对 TCGA 数据库中的患者临床信息进行回顾性分析及生存预后分析。同时收集 50 例具有详细临床及预后信息的结直肠腺癌组织及配对癌旁组织进行免疫组化染色来验证上述结果并绘制 ROC 线（receiver reporting characteristic curves）进行评估。
结果 DAVID 聚类分析发现 6 个与迁移相关的基因集（P<0.05），其中下调的基因有 DLC1、EPB41L3、KIT、PARVA、SLC9A3R1 和 TPM1。其中 SLC9A3R1 编码的蛋白 NHERF1 是一种能与细胞骨架及多种信号蛋白相互作用的多功能连接蛋白。TCGA 数据分析显示，结直肠腺癌中 NHERF1 的 mRNA 水平较正常结直肠组织降低。独立临床队列数据的免疫组化结果显示在高级别及发生淋巴结转移的组织中 NHERF1 表达降低。
结论 NHERF1 表达降低是影响结直肠腺癌患者生存期的一个独立影响因子，可能与其促进肿瘤转移有关。NHERF1 表达降低是一个潜在的诊断和预测结直肠腺癌不良预后的良好指标。

肝动脉化疗栓塞联合 CT 引导下微波消融对于早期原发性肝癌治疗的疗效评价

张帆
山西医科大学第一医院

目的 评价单独经导管动脉化疗栓塞（TACE Transcatheter arterial chemoembolization）与 TACE 联合微波消融对于早期(早期肝癌治疗的适应症及指南如何说)原发性肝癌治疗的有效性及安全性。
方法 收集 2016 年 2 月-2017 年 8 月 41 例早期原发性肝癌患者的临床治疗资料，其中单纯 TACE 24 例，TACE 联合微波消融 17 例。分析两种手术术前、术后（术前后的时间）肝功能变化，淋巴细胞亚群等改变，（早期肝癌肝功能变化和淋巴细胞亚群改变是主要疗效吗）并随访 12 个月（早期肝癌十二个月大部分存活吧 如何比较生存期），比较无进展生存期。
结果 两组患者术前、术后肝功能变化无统计学意义（P＞0.05），两组术后 CD4+均高于术前，差异具有统计学意义（P＜0.05），联合组肿瘤无进展生存期明显高于单纯组（P＜0.05）。
结论 TACE 联合微波消融能有效的控制原发性肝癌患者早期肝内肿瘤的进展，并且能提高患者免疫功能。
关键词：原发性肝癌；经导管动脉化疗栓塞；微波消融；免疫功能

护理干预在肝癌介入治疗疼痛的应用

陈玲带
广西医科大学第二附属医院

目的 研究护理干预在肝癌介入治疗中产生疼痛的减轻效果。方法 选取本院 2018 年 1 月到 12 月收的肝癌患者 82 例肝癌患者 ，随机分为常规组与对照组。常规组在肝癌介入治疗前后进行常规护理，对照组在肝癌介入治疗前后除了日常的护理外还将得到健康教育、饮食指导、心理干预、用药护理以及疼痛护理等一系列护理干预。结果 得到护理干预的对照组肝癌患者与得到常规护理的常规组患者对比，在接受肝癌介人治疗时的依从性更高 ，负面情绪相对较少 ，肝癌患者的疼痛感明显减轻 ，肝癌并发症的发生率也明显降低 ，治疗后的恢复速度也有很大的提高。结论 护理干预在肝癌介入治疗疼痛中的应用效果显著，值得临床治疗推广。

PU-1719
超选择性肝动脉栓塞(TAE)治疗症状性多囊肝的临床疗效

南志宇
山西省肿瘤医院

探讨超选择性肝动脉栓塞(TAE)治疗症状性多囊肝(PLD)的临床疗效，为临床治疗多囊肝提供新的方法。
方法
回顾性分析 2009 年 7 月至 2014 年 6 月山医大一院介入科采用 TAE 治疗症状性多囊肝患者 19 例，其中 18 例同时伴有多囊肾。临床症状多表现为腹胀（17 例）、腹痛（13 例）、纳差（15 例）、呼吸困难（7 例）、肝肿大（19 例）等。19 例在 TAE 前及术后 12 个月行上腹部 CT（包括平扫、动

脉期、门静脉期），并测量肝内囊肿总体积的大小，对比分析 TAE 治疗前及后 12 个月肝内囊肿总体积变化、术后肝功能（ALT、AST、TBIL、ALB）的改变及不良反应。统计学分析采用配对 t 检验。同时术后每隔 3 个月随访患者临床症状改善情况以及体力状况评分（采用 Karnofsky 评分法）。

结果

TAE 手术成功率为 100%，术后 1-5 天出现不同程度的栓塞后不良反应（包括发热、肝区疼痛等），给予积极对症治疗后好转。T

结论

1.随着微创治疗的发展，多囊肝由传统的外科手术逐渐转向微创手术， 特别是 TAE 作为治疗症状性 PLD 一种新尝试, 具有安全、有效，疗效可靠，并发症少等优点。它能够明显降低术后复发率，减轻病人痛苦，提高疗效，因此，具有较高的临床推广应用价值。

2.本课题证实多囊肝囊壁供血动脉主要为肝动脉分支参与供血，且囊肿越大近期生长越快，说明血供越丰富。

3.TAE 治疗方法主要是通过阻断囊壁供血动脉，使囊壁缺血坏死，囊液吸收，囊肿逐渐缩小或消失。

4.TAE 是治疗多囊肝一种有效、可以缓解症状、使囊肿缩小或消失的一种可靠的治疗手段。

CT 血管成像在动脉栓塞治疗咯血中的临床应用价值

杨敏玲
山西医科大学第一医院

摘要：目的探讨 CT 血管成像在动脉栓塞治疗咯血中的临床应用价值。方法选取 2013 年 5 月至 2014 年 12 月因咯血在我科行介入栓塞治疗的 45 例患者为研究对象。分为 2 组,介入术前患者进行咯血责任动脉 CT 血管成像为 A 组、否则为 B 组。结果 2 组患者动脉造影共找到相关责任动脉 56 支,包括支气管动脉 45 支,肺外体循环动脉 11 支。所有患者均成功完成介入治疗,手术操作成功率 100%,短期止血成功率(术后连续随访 3 个月)98%(44/45)。A 组中,术前行 CTA 检查共找到责任动脉 32 支,术中行 DSA 共找到责任动脉 34 支,以 DSA 检查为标准,介入术前行咯血责任动脉 CTA 诊断敏感度为 94%。与 B 组相比,A 组介入术中更容易选择至出血责任动脉,而且在首次成功超选择至靶支气管动脉的透视时间、总透视时间、总手术时间及对比剂用量方面,2 组结果差异有统计学意义(P<0.05),A 组优势明显。结论支气管动脉栓塞术治疗咯血起效迅速,介入术前进行无创性的支气管动脉 CTA 检查,可较全面显示咯血病变区责任动脉的开口、走行、主要分支等特征,发现是否有肺外体循环相关动脉参与病变供血,缩短介入手术时间、辐射时间,减少对比剂用量,减少并发症的发生率,有效提高咯血介入治疗的效果,具有重要的临床应用价值。

PU-1721

动脉化疗栓塞治疗晚期膀胱癌伴血尿患者的临床疗效

杨文泽
山西医科大学第一医院

摘要：目的:评价动脉化疗栓塞治疗晚期膀胱癌伴血尿患者的临床疗效。方法:回顾分析在 2015 年 3 月至 2016 年 12 月期间,行膀胱动脉或选择性髂内动脉化疗栓塞治疗的 31 例晚期膀胱癌伴血尿患者。所有患者均经病理证实为尿路上皮癌。肿瘤 TNM 分期为 T3-T4,其中 T3 期 12 例,T4 期 19 例。

31 例患者中男 23 例,女 8 例,平均年龄 72.0 岁。临床症状:全部患者均有不同程度肉眼血尿;6 例尿路阻塞,其中 4 例因血凝块致排尿困难,均需导尿及持续膀胱冲洗,2 例由肿瘤阻塞输尿管口致尿路积水,1 例经皮肾穿刺造瘘术;膀胱刺激征 5 例,表现为排尿时尿道针刺感或烧灼感。介入手术均采用双侧膀胱动脉或选择性髂内动脉化疗栓塞。使用的动脉灌注化疗药物为氟尿嘧啶(500mg~750mg)、吉西他滨(500mg~1000mg)或/和奥沙利铂(50mg~150mg)。使用的栓塞剂为明胶海绵颗粒、明胶海绵条、个别患者结合使用弹簧圈。在患者经首次化疗栓塞 4 周后,观察近期临床症状改善情况及疾病控制率。结果:动脉化疗栓塞技术成功率 100%,31 例患者在 5 日内血尿均得到有效控制,血尿消失者为 90.3%(28/31),剩余 3 例患者术后尿色变淡,病情稳定,未再行进一步治疗,4 周后无复发或病情加重病例;6 例尿路阻塞患者中,4 例因血凝血块致排尿困难者均得到缓解;2 例尿路积水患者症状未见消失,但其中 1 例经治疗膀胱肿瘤体积明显缩小。5 例膀胱刺激征患者,术后均得到缓解。根据实体瘤治疗疗效评价标准:部分缓解 13 例,稳定 11 例,进展 7 例,治疗有效率为 41.9%(13/31),疾病控制率为 77.4%(24/31)。结论:动脉化疗栓塞可有效改善晚期膀胱癌伴血尿患者的临床症状,提高生活质量,并控制肿瘤生长,患者可耐受度强,近期疗效良好。

制备靶向载阿霉素/印度墨水多动能分子探针级体内超声/光声显像及疗效一体化评估

王晓燕,肖继伟,白圣昕,宋莹莹,李韶明,唐宗美
武汉市第六医院

目的　制备郝赛酊靶向载阿霉素/印度墨水多功能纳米造影剂，评估其物理特性、体内靶向能力、体内超声和光声显像效果及抑制移植瘤生长的效果。
方法　通过薄膜水化、碳二亚胺法制备郝赛酊靶向载阿霉素/印度墨水多功能纳米造影剂，通过马尔文粒径电位仪测量纳米造影剂粒径及电位，通过激光共聚焦显微镜观察分子探针在肿瘤组织中的靶向聚集，通过超声仪及光声仪观察分子探针在体内的多模态显像，以乳腺癌裸鼠移植瘤观察分子探针的抗移植瘤治疗效果。
结果　郝赛酊靶向载阿霉素/印度墨水多功能纳米造影剂粒径约 nm，电位约 mV，激光共聚焦显微镜显示靶向分子探针大量聚集在肿瘤组织细胞核周围，具有很好的体内超声、光声显像效果，对裸鼠移植瘤的生长起到了明显抑制的效果。
结论　这种造影剂具有靶向性、超声及光声多模态成像一体化的多功能分子探针，能成为乳腺癌早期精准显像诊断及精准治疗的理想显像治疗剂。

肝静脉系统栓堵术（LVD）在二阶段根治性肝癌切除术中的应用

刘畅,张晓赟,卢强,文天夫,卢武胜
四川大学华西医院

目的 肝切除术是治疗肝癌首选的治疗手段，而剩余肝体积(future liver remnant，FLR)不足是造成患者切除术后肝功能衰竭等严重并发症的重要原因。FLR 一般需占肝脏估计总体积(total estimated liver volume，TELV)的 25％以上，而伴有纤维化背景肝脏的 FLR 需达 40％以上才能保证患者的安全。LVD 术诱导结直肠癌肝转移、肝门胆管癌和丙肝肝硬化背景的肿瘤患者 FLR 增生都取得了满意效果，本病例首次探讨和验证 LVD 诱导乙肝肝硬化背景的肝癌患者 FLR 增生以二阶段根治性肝切除的可行性。**方法** 1 例术前诊断为中央型肝癌（V、VIII 段交界处）的 53 岁男性患者因剩余肝脏体积（future liver remnant， FLR）不足无法行标准右半肝切除术，患者在局麻下接受 LVD 术，即同时完成经皮右肝门静脉栓塞术和经颈内静脉右肝静脉封堵术，以诱导 FLR 增生。LVD 术后 1、2、3 周评估患者一般情况并复查腹部 CT 评估 FLR 体积和剩余肝脏/体重比。**结果** 患者术前 FLR24.2%。剩余肝脏/体重比 0.459%。LVD 术后第 1、2、3 周复查 FLR 别为 29.5%、38.3%和 44.4%，剩余肝脏/体重比分别为 0.545%，0.707%和 0.820%（图 1）。连续监测患者 LVD 术后肝功能示轻度异常（表 1）。患者 LVD 术后第 4 周顺利施行标准右半肝切除术（图 2），术后安全康复出院。**结论** LVD 可使剩余肝脏体积快速增大，可让预计 FLR 不足的肝癌患者有接受二阶段根治性手术治疗的机会，是一项有效诱导 FLR 增生的新技术。

内脏危象 HER2 阳性晚期乳腺癌介入治疗病例 1 例分享

郑里
北京京东中美医院

乳腺癌是威胁女性健康的常见恶性肿瘤之一，乳腺癌是我国女性发病率最高的肿瘤，随着医学的进步，尤其Ⅰ、Ⅱ期乳腺癌，5 年生存率已经十分可观。但 HER2 阳性乳腺癌具有高度的侵袭性，易导致复发转移，缩短患者的生存时间。本次介绍 1 例未治疗 HER2 阳性晚期内脏危象乳腺癌，肝功能明显异常，通过给予介入动脉灌注化疗+栓塞、联合曲妥珠单抗 HER2 治疗、序贯氟维斯群内分泌治疗临床获益的病例。

Diagnostic value of CT-guided percutaneous core needle biopsy in anterior mediastinal masses

Tiegong Wang[1],Xianglan Jin[2],Qian Zhan[1],Fang Liu[1],Yinghao Meng[1],Chengwei Shao[1]
1.First Affiliated Hospital of Naval Military Medical University (Shanghai Changhai Hospital)
2.The Tenth People's Hospital affiliated to Tongji University

Objective: The aim of this study is to explore the diagnostic value and safety of CT-guided percutaneous core needle biopsy (CT-PCNB) in anterior mediastinal masses.
Methods: 136 CT-PCNB procedures in 128 patients with anterior mediastinal masses were performed from January 2012 to March 2019 in Changhai Hospital. The patients were men in 79 cases and women in 49 cases, aged 11 to 81 years.
Results: The size of anterior mediastinal masses ranged from 2.50 to 19.50 cm, with mean size 8.94 cm. 58 cases had pleural effusion, 39 cases had pericardial effusion. Needle depth ranged from 2.00 to 7.70 cm, with mean depth 4.29 cm. Technical success was 100%. Based on the histopathological diagnosis, diagnostic accuracy of biopsy was 97.66%, sensitivity was 97.56%, specificity was 100%, positive predictive value was 100%, negative predictive value was 62.50%. After the biopsy procedure, 2 cases had mediastinal hematoma, 1case had pulmonary bleeding, 1 case had a small amount of pneumothorax.
Conclusion: CT-guided percutaneous core needle biopsy has a high accuracy in the diagnosis of anterior mediastinal masses, and it has small trauma and high safety.

CT 引导下经皮热消融治疗肾上腺转移瘤

吕宁[1],李少龙[1,2],穆鲁文[3],邓海静[1,2],赵明[1,2]
1.中山大学肿瘤防治中心/中山大学附属肿瘤医院
2.中国华南肿瘤学国家重点实验室
3.中山大学第三附属医院 血管外科

目的 评价 CT 引导下经皮热消融术（PTA）治疗肝癌肾上腺转移瘤的临床疗效和安全性。
方法 从 2004 年 1 月至 2015 年 12 月，CT 引导下对 27 例男性肝细胞肝癌患者（平均年龄 50 岁，34-77 岁）位于肾上腺的转移瘤（29 个转移病灶）进行经皮热消融术。术后记录手术的成功率、疗效以及消融相关的不良反应。使用 Kaplan-Meier 方法进行生存曲线分析,并通过 log-rank test 方法对肾上腺寡转移和多发转移的患者进行比较。采用 Cox 比例风险回归模型预测生存相关的因素。
结果 27 名患者进行了 33 次热消融手术治疗。未出现手术相关的死亡事件，但总体手术相关的并发症高达 87.9%。3 级高血压是最常见并发症,发生率为 24.2%（8/33）。消融成功率高达 93.1%（27/29），且消融有效率接近 92.6%（25/27）。所有患者的中位无进展生存率和中位总生存率(OS)分别为 6.9 个月和 16.8 个月。肾上腺寡转移患者的中位 OS(21.8 个月)长于多发转移患者的中位 OS(12.8 个月) (P=0.037)。肾上腺寡转移是 Cox 模型中影响总体生存的唯一因素(P=0.043)。
结论 经皮 CT 引导下热消融术治疗肝细胞肝癌肾上腺转移瘤是一种有效且安全的治疗手段。肾上腺寡转移的患者生存获益可能更大。

基于多层螺旋 CT 及磁共振成像探讨原发性肝癌经肝动脉化疗栓塞术后早期复发相关危险因素研究

邓林[1],任涛[1],杨冠华[1],陈勇[1,2]
1.宁夏医科大学

2.宁夏医科大学总医院

【摘要】 **目的** 基于多层螺旋 CT 动态增强及磁共振成像，探讨经皮选择性肝动脉化疗栓塞术（TACE）治疗中晚期肝癌后复发的危险因素。**方法** 选取 2014 年 6 月至 2018 年 12 月在我院接受 TACE 治疗的中晚期肝癌患者 42 例，术前均行磁共振（MRI）多期增强扫描+弥散（DWI）检查，明确肿瘤大小、数量、强化方式、门脉癌栓、肿瘤平均表关弥散系数（ADC）值；常规完善血常规、生化常规及凝血全套，测量天门冬氨酸氨基转氨酶（AST）、谷氨酰基转移酶(ALT)、丙氨酸氨基转氨酶(GGT)、甲胎蛋白(AFP)、白蛋白、总胆红素、凝血酶原时间(PT)值；术后一个月复查 CT 或 MRI,以后每两月复查半年，再每三个月复查一年，直至肿瘤复发或进行下一次 TACE 为随访终点；根据复发时间，≤6 个月定义为早期复发组（23 例），≥6 个月定义为晚期复发组（19 例）。采用独立样本 *t* 检验和卡方检验比较两组的临床资料(如年龄、性别、病因、Child-Pugh 分级、门脉癌栓、肿瘤数量、肿瘤最大直径、AST、ALT、GGT、AFP、白蛋白、总胆红素、凝血酶原时间(PT)、平均 ADC 值)等；采用多因素 *logistic* 回归分析患者复发的独立危险因素。**结果** 早期复发组的 AFP 水平、肿瘤数量、ALT 水平均高于晚期复发组，差异有统计学意义（$P<0.05$）。早期复发组的白蛋白水平、平均 ADC 值均低于晚期复发组，差异有统计学意义（$P<0.05$）。多因素 logistic 回归分析结果示肿瘤数量、ALT、AFP 水平（$OR1=1.452$，$P=0.038$；$OR2=1.107$，$P=0.049$；$OR3=0.038$，$P=0.023$）是肝癌早期复发的独立危险因素。**结论** 肿瘤数量、ALT、AFP 水平是 TACE 治疗中晚期肝癌早期复发的独立危险因素，TACE 术前评估肝癌术后复发相关危险因素有利于治疗方法的选择及判断预后。

电视胸腔镜手术中难以探及肺内小结节术前 CT 引导下 Hook-wire 定位的临床应用探讨

高德培
1.云南省肿瘤医院
2.昆明医科大学第三附属医院

目的 本研究探讨电视胸腔镜手术中难以探及的肺内小结节（≤10mm）术前 CT 引导下 Hook-wire 定位的临床应用价值，并初步探讨积极微创手术对微小结节的必要性和可行性。
方法与材料：2017 年 12 月-2018 年 6 月共 45 例患者行术前 CT 引导下 Hook-wire（Accura ™ BLN 21ga×10cm）定位，并在电视胸腔镜下手术。
结果 共 45 例患者 45 个微小结节，男性 22 例，女性 23 例。病灶位于左肺上叶前段 3 个，尖后段 3 例，外侧基底段 3 个，后基底段 5 个；右肺上叶前段 8 个，尖段 2 个，后段 6 个，中叶外侧段 3 个，下叶背段 4 个，外侧基底段 2 个，前基底段 2 个，后基底段 4 个。实性结节 13 个，纯磨玻璃结节 22 个，混合磨玻璃结节 10 个。5mm-10mm 17 个，5mm 以下 28 个。CT 引导下 Hook-wire 定位成功率为 95.56%，电视胸腔镜下切除率 100%。术后组织学**结果** 原位腺癌 25 例，炎性病变 8 例，良性肿瘤及肿瘤样病变 12 例。
结论 CT 引导下 Hook-wire 肺微小结节术前定位准确率高，并发症轻微，有助于临床在术中及时发现、切除病灶，减少手术时间，有利于患者的早日康复，值得临床推广。

PU-1730

论“舍近求远”特殊穿刺路径的选择对胸膜下结节的诊断价值及安全性分析

李宏伟[1],杜勇[2],卓丽华[1]
1.绵阳市第三人民医院
2.川北医学院

目的 探讨两种不同穿刺路径对胸膜下结节的诊断价值及安全性分析。**方法** 回顾性分析 2015 年 8 月-2018 年 6 月行 CT 引导下经皮肺穿刺活检 147 例胸膜下结节(≤30 mm) 患者临床及病理资料。根据穿刺针与胸膜角度（≤50°，＞50°）对患者进行分组（即长路径组，短路径组），比较两组间年龄、性别、准确率、单次成功率；然后根据结节直径大小（≤10 mm，10~20 mm，≥20 mm）对上述两组患者进一步分组，再进一步计算各亚组间调针次数、穿刺时间、气胸及出血的发生率，并采用 Fisher’s 确切概率法比较各组间的差异。**结果** 147 例结节中，长路径组 83 例，短路径组 64 例，两组的准确率分别为 90.36%、92.19%，单次成功率为 97.59%、 92.19%，差异均无统计学意义（P＞0.05）；对于结节＜20mm 时，长路径组的穿刺时间、调针次数均小于短路径组，差异具有统计学差异（P＜0.05），而气胸及出血无统计学差异（P＞0.05）；对于结节≥20mm 时，两组间穿刺时间、调针次数、气胸及出血均无统计学意义（P＞0.05）；**结论** CT 引导下经皮肺穿刺活检术对胸膜下结节具有较高的准确率，且对于＜20mm 的胸膜下结节建议长路径穿刺（即穿刺针与胸膜角度＜50°斜行穿刺），以便减少穿刺次数、穿刺时间、提高穿刺有效率。

mPEG-PLGA 新型可降解载药微球在 VX2 肝肿瘤治疗中阿霉素缓释功能的实验研究

毛景松,孙阳
厦门大学附属翔安医院

目的 利用兔 VX2 肝肿瘤模型，验证 mPEG-PLGA 新型载药微球的阿霉素缓释功能及疗效。**方法** 选取 24 只瘤兔，肿瘤大小直径在 1.2cm-1.5cm，随机分成 4 组。A 组：不给任何治疗，B 组：游离阿霉素组，C 组：碘油+阿霉素，D 组：新型载药微球，每组 6 只。（1）术后 12h，3d，6d，9d 抽取耳缘静脉血，比较各组不同时间点的外周血中阿霉素药物浓度。（2）术后 3d、6d，9d 各组分别处死一只瘤兔，行冰冻切片检查，比较不同时间点阿霉素在肿瘤组织内荧光，并用 Image J 软件进行半定量分析。（3）、术后 6d，9d 行 MR 扫描，评价肿瘤治疗的疗效。取肿瘤组织，心肺肾脾组织，进行组织学 HE 检测(4)利用 HE 染色观察心肌组织的改变，说明材料对心肌组织的毒性作用。**结果** （1）术后 12h，B 组血浆中阿霉素含量最高，与其它组比较有统计学差异（P<0.05）；术后 3 天，C 组阿霉素的含量最高，与其它组有统计学差异（P<0.05）；B、C 两组血浆中阿霉素的含量呈反抛物线型，D 组阿霉素的含量较低，呈直线型。（2）3d 肿瘤组织内，B 组内未见阿霉素荧光，C 组 D 组可见少量阿霉素荧光，两组之间无统计学差异；6 天、9 天 B、C 组内未见阿霉素荧光，D 组内可见大量阿霉素荧光，与其它两组比较有统计学差异。（3）术后 6 天，C 组 D 组肿瘤体积与其它两组比较有统计学差异（P<0.05），两组之间无统计学差异（p>0.05）；术后 9 天，D 组与其它三组之间有统计学差异（p<0.05）；HE 染色 D 组内可见大量坏死的肿瘤细胞，周边可见少量肿瘤细胞。C 组内中心区可见坏死的肿瘤细胞，周边区可见大量肿瘤细胞，A 组及 B 组内可见大量的肿瘤细胞（4）治疗 3d，6d，9d 后 HE 染色，D 组心肌组织未见异常改变。**结论** 新型载药微球具有阿霉素缓释、肿瘤毒性而避免了阿霉素的心脏毒性的作用。

经皮氩氦刀冷冻消融治疗早期原发性肺癌的临床应用

张永远[1],周志刚[2],赵鑫[1]
1.郑州大学第三附属医院
2.郑州大学第一附属医院

目的 探讨氩氦刀冷冻消融治疗早期肺癌的临床疗效及并发症。**方法** 回顾性分析在 2015 年 6 月-2017 年 6 月期间在我院行 AHC 治疗的早期肺癌患者，最终收集 22 例。对患者的年龄、性别、肿瘤大小、病理类型等基本资料进行均衡性分析。对术后近期疗效、肿瘤局部控制率、无疾病进展期，生存率、并发症发生率进行研究。**结果** 对 22 例肺癌患者行 AHC 治疗，手术成功率 100%。术后随访时间为 3-52 个月，分析患者的基本资料，均无统计学差异。近期疗效方面，术后 3 个月 CR、PR、SD、PD 分别为 11 例 、5 例、3 例、3 例，ORR 为 72.72%，DCR 为 86.36%；术后 6 个月 CR、PR、SD、PD 分别为 11 例、4 例、4 例、3 例，ORR 为 68.18%，DCR 为 86.36%。远期疗效方面，AHC 组术后 1 年、2 年、3 年局部控制率分别为 86.05%、41.87%、16.28%。 PFS 为 27.20±1.92 个月，中位 PFS 为 23.00±1.89 个月，术后 OS 为 30.97±1.76 个月，中位 OS 为 30.00±2.86 个月。术后并发症主要有气胸，其次是肺内出血、胸膜反应。**结论** 氩氦刀冷消融治疗早期肺癌近期及远期疗效确切，并发症少，值得临床进一步推广。

PU-1733
外周血 CTCs 检测在肝细胞癌 诊断与介入治疗疗效评估中的研究

郑琳,黎海亮,郭晨阳,赵妍,罗素霞
河南省肿瘤医院

目的 评估患者外周血 CTCs 计数是否可作为辅助 HCC 诊断的有效生物学标记物。相比 AFP，CTCs 对 HCC 患者介入治疗疗效评估及预后判断的价值如何。
方法 入组 84 例 HCC 患者及对照组的 24 例肝血管瘤患者，检测治疗前外周血 AFP、CTCs 计数及 CTCs 亚型分析。84 例患者介入治疗后每 2 个月随访一次，检测外周血 AFP、CTCs 计数及 CTCs 亚型分析，根据影像学结果评价是否再行介入治疗。共随访 18 个月，记录疾病进展时间。
结果 HCC 患者外周血 AFP、CTC 计数的阳性检出率分别为 51.2%、73.8%。AFP 的 HCC 诊断敏感度为 51.2%，特异度为 100%，准确度为 62.04%。CTCs 计数的 HCC 诊断敏感度为 73.8%，特异度为 91.7%，准确度为 77.78%。CTCs 在 AFP 阴性组 HCC 的阳性率为 65.85%。 早期 HCC 患者 AFP 的阳性率为 55.56%, CTC 为 29.63%。外周血 CTC 计数与肿瘤数目、肿瘤大小、有无血管侵犯、肝癌临床分期差异均有统计学意义，且有正相关性。CTC 分型与肿瘤数目、有无血管侵犯、肝癌临床分期差异均有统计学意义，与肿瘤大小差异无统计学意义。外周血 AFP 与 CTC 计数有正相关性关系。HCC 介入后外周血 CTC 差异无统计学意义。外周血 AFP、CTC 计数在治疗后有效组的数值均明显低于治疗后无效组。CTC 上皮型亚型治疗前阳性率低于治疗后阳性率。介入前 CTC 阳性的 HCC 患者，较阴性的患者更易出现疾病进展，差异有统计学意义。
结论 外周血 CTCs 计数可作为辅助 HCC 诊断的有效生物学标记物。CTC 在肿瘤数目、肿瘤大小、有无血管侵犯、肝癌临床分期各组间有显著性差异。CTC 亚型在肿瘤数目、有无血管侵犯、肝癌临床分期各组有显著性差异。术前外周血 CTC 阳性的 HCC 更容易出现术后肿瘤进展。

PU-1734

CT 引导下氩氦刀冷冻消融治疗软组织肉瘤

王猛,周志刚,潘元威,杜可朴,李帅,李亚丹
郑州大学第一附属医院

目的 评估 CT 引导氩氦刀冷冻消融治疗术后复发软组织肉瘤的临床疗效及安全性。**方法** 回顾分析郑州大学第一附属医院 2012 年 1 月至 2017 年 1 月接受 CT 引导氩氦刀冷冻消融治疗的 60 例术后复发或转移的软组织肉瘤（recurrent soft-tissue sarcomas，RSs)患者临床资料。男性 37 例，女性 23 例，平均年龄 47.0±15.6 岁（8 岁-79 岁）。根据 2010 年修改后实体瘤疗效评价标准（modified Response Evaluation Criteria in Solid Tumors ，mRECIST）标准评价局部疗效，随访无进展生存时间（progression-free survival，PFS），1、2、3 年生存率，分析影响局部疗效及 PFS 因素。观察并发症发生情况。**结果** 以氩氦刀冷冻消融术为起点，中位随访时间 17.5 个月，平均随访时间（19.15±10.14）个月。术后 1 个月、3 个月、6 个月 CR 分别为 51.7%,51.7%,43.3%，PR 分别为 43.3%,30%,26.7%。平均 PFS 为（10.53±9.12）个月，1 年、2 年、3 年生存率分别为 80.13%、36%、17.63%。平均 OS 为（20.4±10.52）个月。单因素、多因素分析显示肿瘤大小、与危险脏器距离是 PFS 的影响因素。术后并发症有发热 19 例、周围组织脏器损伤 16 例、胸腔积液 4 例、肌红蛋白尿 2 例、血小板减少 2 例，均为 1-2 级。**结论** CT 引导下经皮氩氦刀冷冻消融是一有效、安全的治疗软组织肉瘤的方法。

PU-1735

The Mechanism of Action and Efficiency of Relaxin Infusion Combined with Transcatheter Chemoembolization Through Hepatic Artery: a Rabbit VX2 Liver Cancer Model

Yanyan Cao,Fu Xiong,Xiaopeng Guo,Hongsen Zhang,Jihua Wang,Bin Liang,Bin Xiong,Chuansheng Zheng
Department of Radiology， Union Hospital， Tongji Medical college， Huazhong University of Science and Technology

Purpose: To evaluate the adriamycin (ADM) pervasion distance within tumor stroma after relaxin (RLX) infusion through tumor feeding artery and further investigate the therapeutic effects of RLX infusion combined with transcatheter chemoembolization (TACE) on the rabbit VX2 liver cancer.

Materials and Methods: In the first part, rabbits received normal saline (NS), RLX or combined with TACE, and the penetration distance of ADM was measured by immunofluorescence and the matrix metalloproteinases (MMPs) was evaluated by gelatin substrate zymography in each group. In the second part, the tumor growth rates, necrosis rates and intrahepatic metastasis were measured, hematoxylin-eosin (HE), transferase-mediated dUTP-biotin nick end labelling (TUNEL) and Ki67 staining were conducted in each group.

Results: The expression of MMP-9 was increased in groups treated by RLX compared with NS group, especially three days after RLX infusion ($p=0.001$). The ADM penetration distance was significantly increased in groups treated by RLX compared with NS group ($p<0.05$), and it was farthest three days after RLX infusion. Compared with the NS and TACE groups, the tumor growth rates, the positive staining rates of Ki67 and the tumor growth rates were significantly decreased in RLX+TACE group ($p<0.05$). However, the positive staining rates of TUNEL and the tumor necrosis rates were significantly

increased (p<0.05), HE staining also revealed higher necrosis rates. The intrahepatic metastasis was no difference between the three groups (p=0.273).
Conclusions: An increased penetration distance was obtained by RLX infusion through tumor feeding artery, and better therapeutic effects were achieved by RLX combined with TACE.

罕见男性肝细胞腺瘤的诊治经过及体会（一例报导并文献综述）

袁洪新,施荣峰,赵辉
南通大学附属医院

非外伤性肝破裂出血是肝脏肿瘤的严重并发症之一，严重时可导致患者休克甚至危及生命。常规治疗可内科保守止血或急诊外科肿瘤切除，但内科治疗往往效果不确切，而急诊手术风险巨大，围手术期死亡率较高。急诊行肝动脉栓塞治疗肝脏肿瘤破裂出血具有止血效果确切，手术创伤小等优势。此类患者以肝癌最常见，也有少数为良性肿瘤，例如肝细胞腺瘤（Hepatocellular Adenoma，HCA）。本文报告一例 HCA 伴瘤内破裂出血病例诊疗经过并进行文献资料综述。

PU-1737
Original Article miR-455-3p functions as a tumor suppressor in colorectal cancer and inhibits cell proliferation by targeting TPT1

Haipeng Yu,Zhi Guo,Chengli Wang,Xueling Yang,长富 Liu
TianJin Medical University Cancer Institute and Hospital

Increasing studies have revealed the importance of microRNAs (miRNAs) in tumorigenesis and tumor
progression. miR-455-3p is a newly identified tumor suppressive RNA in various human cancers. However, the ex-
pression pattern and clinical significance of miR-455-3p in colorectal cancer (CRC) remains unclear. We found that
expression of miR-455-3p was significantly reduced in CRC tissues and cell lines. In addition, we show that low miR-
455-3p expression is associated with larger tumor size, advanced tumor stage, and poorer overall survival of CRC
patients. Furthermore, in vitro experiments revealed that overexpression of miR-455-3p represses cell proliferation.
Importantly, we show that the tumor protein translationally controlled 1 (TPT1) is a direct target of miR-455-3p.
Moreover, expression of TPT1 was inversely correlated with the expression of miR-455-3p. Loss-of-function of TPT1
had a similar effect on CRC cell proliferation in vitro as gain-of-function of miR-455-3p. Taken together, these data

suggest that miR-455-3p functions as tumor suppressive RNA by targeting TPT1 in CRC, and it might be a potential
therapeutic target for CRC patients.

PU-1738

Multifactorial analysis of biliary infection after percutaneous transhepatic biliary drainage treatment of malignant biliary obstruction

Haipeng Yu,Chengli Wang,Zhi Guo,Wenge Xing,Xueling Yang,Tongguo Si
TianJin Medical University Cancer Institute and Hospital

Background: The symptoms of patients with malignant biliary obstruction (MBO) could be effectively alleviated with percutaneous
transhepatic biliary drainage (PTBD). Postoperative infections were considered as challenging issues for clinicians. In this study, the
risk factors of biliary infection in patients after PTBD were analyzed.
Methods: From July 2003 to September 2010, 694 patients with MBO received PTBD treatment. Bile specimens were also collected
during PTBD. All relevant information and results were collected, including gender, age, obstruction time, types of primary tumor,
sites of obstruction, drainage style, tumor stage, hemoglobin, phenotype of peripheral blood monocyte (Treg), total bilirubin, direct
bilirubin, albumin, Child-Pugh score, and results of bile bacterial culture.
Results: For the 694 patients involved in this study, 485 were male and 209 were female, with a mean age of 62 years (ranged
38-78 years). For the bile culture, 57.1% patients (396/649) were negative and 42.9% patients showed positive (298/694), and
then 342 strains of microorganism were identified. The risk factors of biliary system infection after PTBD included: age ($\chi 2 = 4.621$,
$P = 0.032$), site of obstruction ($\chi 2 = 17.450$, $P < 0.001$), drainage style ($\chi 2 = 14.452$, $P < 0.001$), tumor stage ($\chi 2 = 4.741$,
$P = 0.029$), hemoglobin ($\chi 2 = 3.914$, $P = 0.048$), Child-Pugh score ($\chi 2 = 5.491$, $P = 0.019$), phenotype of peripheral blood
monocyte (Treg) ($\chi 2 = 5.015$, $P = 0.025$), and results of bile bacterial culture ($\chi 2 = 65.381$, $P < 0.001$). Multivariate analysis
suggested that high- risk factors were drainage style, Child-Pugh score, and results of bile culture.
Conclusions: The risk factors of biliary infection after PTBD included: age, site of obstruction, drainage style, tumor stage, hemoglobin,
Child-Pugh score, phenotype of peripheral blood monocyte (Treg), and results of bile culture. It was further concluded that drainage
style, Child-Pugh score, and results of bile culture were independent risk factors.

去势抵抗性前列腺癌患者冷冻消融治疗后 中性粒细胞与淋巴细胞比值变化的意义

于海鹏,王成丽,郭志,司同国,杨雪玲
天津医科大学肿瘤医院

目的探讨去势抵抗性前列腺癌（CRPC）患者氩氦冷冻消融术前外周血中性粒细胞与淋巴细胞比值（NLR）变化的意义。 方法收集并分析天津医科大学肿瘤医院 33 例行氩氦冷冻消融术的 CRPC 患者的临床病理资料。 将可能影响术后总生存期（OS）的因素：年龄、基线前列腺特异抗原（PSA）水平、血红蛋白、白细胞计数、血小板计数、白蛋白、碱性磷酸酶、NLR、血小板与淋巴细胞比值（PLR）、激素敏感时间、是否化疗、有无骨转移、Gleason 评分、ECOG 评分、PSA 有效率进行单因素和多因素分析。 结果本研究共 33 例患者，平均年龄为 69 岁（50~82 岁），中位生存期为 28 个月（6~55 个月），单因素分析显示：基线 PSA 水平、碱性磷酸酶、NLR、激素敏感时间、是否化疗、有无骨转移、Gleason 评分、PSA 有效率是影响 CRPC 患者冷冻消融术后 OS 的相关因素（P＜0.05）。 多因素分析显示：基线 PSA 水平（（P=0.003）、NLR（P=0.009）、Gleason 评分（P＜0.001）是 CRPC 患者冷冻消融术后 OS 的独立预测因子。 结论 NLR 可作为 CRPC 患者行氩氦冷冻消融术的预后指标，NLR 升高提示患者预后不良。

PU-1740
原发性肝癌 DEB-TACE 术后并发碘油肺脑栓塞 1 例及文献复习

刘庆先,范国华
苏州大学附属第二医院

患者男，56 岁，肝 HCC 伴下腔静脉、肝静脉、右心房癌栓，行 DEB-TACE 术，术中患者无明显诱因下昏迷，急查头颅 MRI 示脑内弥漫性散在分布新发腔隙性梗死。
TACE 术碘油异位栓塞所致并发症报道逐渐增多[2]，主要有肺、胆囊、胰腺、肠道的异位栓塞，碘油异位脑栓塞罕见，碘油异位脑栓塞在行 TACE 术患者中发病率<0.01％。
TACE 术后并发脑栓塞或肺栓塞目前发生机制尚不十分清楚 ，肝癌由于肿瘤侵蚀及解剖关系等原因，易产生肝动静脉瘘，碘油通过肝血窦和肺毛细血管进入体循环，进而进入脑内，引起脑组织损伤。本例患者瘤体较大、存在肝静脉、下腔静脉、右心房癌栓，在术中已经发现部分造影剂经肝静脉进入下腔静脉，存在动静脉瘘，术后 CT 检查显示下腔静脉、右心房内均有碘油存在。 膈下动脉（inferiorphrenic artery ，IPA ）是最常见的肝脏侧枝供血动脉，如 IPA 成为肿瘤供血 ，通过 IPA 灌注碘油 ，更易进入肺循环 ，进一步进入体循环。
由于这类并发症较罕见，治疗尚无统一意见。TACE 术中或术后 ，若患者出现急性脑缺血症状，应考虑到 CLE 可能，CT 或 MRI 可明确诊断。对 TACE 治疗中造成碘油异位脑栓塞相关因素推测并未得到循证医学的证实， 但针对以上因素的处理应该能降低碘油异位脑栓塞风险。预防**方法** (1)控制 TACE 术中碘油用量， 一次碘油用量不超过 20 ml。(2)对肝动-静脉瘘者，尽量少用或不用碘油栓塞。（3）对巨大、血管丰富的肿瘤，栓塞后加用明胶海绵条栓塞肝动脉主干，避免血流冲刷使碘油漂移。（4）对于高风险患者，用栓塞微球等固体栓塞剂替代碘油。(5)有先心病如房缺、室缺等使用碘油要慎重， 一旦怀疑碘油异位脑栓塞发生，应及时对症处理。
对于 CLE 处理 ，多主张防止脑水肿、调血压 、改善脑循环 、营养支持，由于不是血栓引起的脑栓塞，不建议溶栓治疗。

联合运用 CT 和超声实时在胸膜或胸膜下结节经皮穿刺活检中的应用

刘君,赵艳军,张雷,刘妍,李薇
无锡市第二人民医院（南京医科大学附属无锡第二医院）

［**摘要**］ **目的** 探讨 CT 精确定位联合超声实时引导经皮穿刺胸膜及胸膜下结节活组织检查技术的价值。**方法** 17 例 SPPN 采用 CT 联合超声引导的方式进行经皮穿刺活检，另以 21 例单纯 CT 引导的胸膜及胸膜下小病灶活检作为对照。比较两组穿刺活检的手术时间、占机时间、CT 引导次数、患者吸收剂量、穿刺相关并发症。**结果** 与常规 CT 引导穿刺相比，CT 联合超声组的手术时间（11.7±4.9 min 与 26.3±9.0 min，t = 5.991，*P*<0.01）、占机时间（32.4±5.5 min 与 48.7±13.5 min，t = 4.673，*P*<0.01）明显缩短，CT 引导次数减少了（1.6±0.9 次与 3.8±1.3 次，t = 5.754，*P*<0.01），及患者平均总有效辐射剂量也显著降低（7.4±1.2 mSv 与 10.1±1.6mSv，t = 5.576，*P*<0.01）。**结论** CT 联合超声实时引导经皮穿刺胸膜及胸膜下结节有助于降低穿刺的技术难度，缩短手术时间和减少患者电离辐射剂量。

PU-1742

三明治介入方法治疗肺结核大咯血的探讨

侯鲁强
解放军第九七〇医院

方法 肺结核患者 12 例，男 5 例，女 7 例，年龄 36 岁-73 岁，平均 49 岁，肺结核病史 3-5 年，急诊入院，咯血量 200ml-500ml。术前胸部 CT 检查，肺结核单个病灶 3 例，其余病例均为 2-3 个病灶；含有空洞 4 例，无开放性病灶。

采用 Seldinger 技术，在美国 GE LVC 数字血管减影机监视下，分别将导管鞘、导丝和导管送入血管内，选用胃左动脉导管，将导管头端置入出血动脉开口处行动脉造影，确定出血血管后，将 2.7F 微导管超选至出血动脉 2、3 级分支，再次造影证实出血血管，采用直径 300ｕｍ 明胶海绵颗粒与直径 2mm 弹簧圈栓塞材料，用夹心面包法栓塞，直至出血血管闭塞。分别寻找寄生营养血管：血管肋间动脉、支气管动脉、胸主动脉、腹主动脉、内乳动脉、甲状腺下动脉、腋动脉和膈动脉。根据肺结核分布部位、病灶数量，部分病例术前行 CTA 检查，寻找出血血管。对于术后再次咯血量较大者，仔细寻找遗漏的出血血管，再次选用夹心面包法栓塞，直至出血血管完全闭塞。术后给予垂体后叶素静脉滴注。

结果 显效 8 例，占 66%；无效 4 例，占 33%。无效 4 例，均未行 CTA 血管成像，导致术中遗漏部分出血血管。显效 8 例中，4 例术前行 CTA 血管成像，均一次手术成功止血。另外 4 例术前未行 CTA 血管成像，术后再次出血量 20ml-30ml。

3 例支气管动脉供血，1 例多支血管供血，分别是支气管动脉、膈动脉、内乳动脉、甲状腺下动脉、肋间动脉参与供血血管；4 例支气管动脉、肋间动脉、胸主动脉供血；4 例支气管动脉、肋间动脉和腹主动脉供血。

讨论：肺结核继发大咯血是结核分枝杆菌侵犯肺组织，形成干酪样坏死，气管内膜糜烂，侵蚀毛细血管壁，形成溃疡和假性动脉瘤破裂，引起大咯血。肺组织基本单位是肺小叶，内部包括肺动脉、支气管动脉，而肺动脉很少参与供血。

CT 引导下碘 125 放射性粒子植入治疗转移性肺癌的动态剂量验证研究

刘登尧,李建邦,黄伍奎,王海林,樊喜文,杨树法
新疆医科大学附属肿瘤医院

目的 观察 CT 引导下碘 125 放射性粒子植入治疗转移性肺癌患者的剂量动态变化情况。**方法** 回顾性分析我科 2018 年 9 月至 2018 年 11 月接受 CT 引导下碘 125 放射性粒子植入治疗的 21 例转移性肺癌患者，分别于术后 0 月，2 月，4 月行 CT 扫描并输入三维治疗计划系统（brachytherapy treatment planning system，B-TPS）行动态剂量验证，记录靶病灶体积变化，若病灶体积缩小速度小于 20%，则视为存在剂量冷点再次行粒子植入。**结果** 21 例患者分为徒手穿刺植入组 12 例，3D 打印模板（3D-print template）辅助组 9 例。共进行粒子植入 26 次，其中徒手穿刺植入组有 2 例患者在术后 2 月再次行粒子植入 16.7%（2/12），有 3 例患者在术后 4 月再次行粒子植入 25.0%（3/12），3D 打印模板辅助组有 1 例患者在术后 2 月再次行粒子植入 11.1%（1/9），该组无患者在术后 4 个月再次粒子植入 0%（0/9）。**结论** 3D 模板辅助 CT 引导下碘 125 放射性粒子植入治疗转移性肺癌安全可行，在动态剂量验证随访 2 个半衰期后，模板辅助组较徒手植入组具有一定优势。

纳米刀在恶性肿瘤治疗中的研究进展

王红
川北医学院附属医院

射频、微波和冷冻消融技术已被越来越多的应用于恶性肿瘤的治疗，并且获得良好的效果。每一种消融方式都有其独特的原理，纳米刀（NanoKnife）作为一门新型微创消融技术，主要是非热能细胞杀伤机制，其基本原理是不可逆电穿孔，细胞膜上形成纳米级小孔导致细胞渗透性增加，细胞内环境平衡被打破，最终发生凋亡。本文对纳米刀的原理进行简单介绍，重点阐述其在治疗恶性肿瘤中的临床应用，为临床治疗提供参考。

术前区域动脉灌注 5-Fu 联合奥沙利铂对于结肠癌细胞增殖和凋亡的影响及其机制研究

刘德华,魏宏,王少雷
辽宁省肿瘤医院

目的：研究术前区域动脉灌注 5-Fu 和奥沙利铂对于结肠癌细胞增殖和凋亡的影响。
方法：选择在本院确诊为结肠癌的 60 例患者，随机分为 5-Fu 联合奥沙利铂组（A 组）、5-Fu 组（B 组）、奥沙利铂组（C 组）、对照组（D 组），每组 15 例。分别于术前区域动脉灌注相应的药物。检测各组肿瘤组织中 Ki 标记指数（Ki67LI）、凋亡细胞数目、凋亡指数（AL）、凋亡基因含量。

结果： A 组肿瘤组织中 Ki 标记指数明显低于 B 组、C 组以及 D 组；A 组肿瘤组织中的凋亡细胞数目和凋亡指数明显低于 B 组、C 组以及 D 组；A 组肿瘤组织中凋亡基因 Caspase-3、Caspase-9、Fas、FasL 的蛋白质表达量均高于 B 组、C 组以及 D 组。以上差异均具有统计学意义。
结论： 术前区域动脉灌注 5-Fu 和奥沙利铂能够显著性抑制结肠癌肿瘤细胞的增殖，促进肿瘤细胞的凋亡，这种作用的可能机制是上调 Caspase-3、Caspase-9、Fas、FasL 的蛋白质表达量。

PU-1746
胃左动脉介入灌注化疗治疗晚期贲门癌的临床观察

刘德华,富韬,罗娅红
辽宁省肿瘤医院

目的： 探讨经胃左动脉介入灌注化疗治疗晚期贲门癌的近期疗效和 2 年生存率。
方法： 将 2008 年 10 月至 2010 年 4 月间收治的 88 例晚期贲门癌患者随机单盲分为观察组(45 例)和对照组(43 例),观察组患者采用胃左动脉介入灌注 DCF 化疗方案,对照组患者采用常规静脉输注 DCF 化疗方案,两组均用药 3 个周期,记录化疗期间两组患者的不良反应,化疗结束后 1 个月内对比两组患者的近期疗效,并进行为期 2 年的随访观察,记录 2 年生存率。
结果： (1)化疗结束后 1 个月时,观察组患者完全缓解(CR)2 例,部分缓解(PR)25 例,总有效率为 60.0%(27/45);对照组完全缓解 0 例,部分缓解(PR)17 例,总有效率为 39.5%(17/43),差异有统计学意义(P0.05)。(2)观察组患者Ⅱ度以上骨髓抑制、肝功能损害、末梢神经损害和胃肠道反应比例低于对照组(28.9%和 51.2%、17.8%和 39.5%、15.6%和 34.9%、42.2%和 67.4%),差异均有统计学意义(均 P0.05);(3)观察组患者 2 年随访期内死亡者平均存活时间为(15.1±2.9)个月,长于对照组的(13.3±2.4)个月,差异有统计学意义(P0.05)。
结论： 结论经胃左动脉介入灌注化疗药物较全身化疗能有效提高近期疗效,降低不良反应,并延长患者生存时间。

PU-1747
结直肠癌根治术前应用肝动脉联合区域动脉灌注化疗对患者预后的影响

刘德华,魏宏,王少雷,马思平,赵国华
辽宁省肿瘤医院

目的： 观察Ⅲ期结直肠癌根治术患者术前行肝动脉联合区域动脉灌注化疗(HRAIC)对癌细胞复发、转移及患者生存时间的影响。
方法： 选择 2010 年 1 月—2012 年 12 月中国医科大学肿瘤医院医学影像科介入病区收治的行结直肠癌根治术患者 157 例作为研究对象,经随机数字表法分为研究组 77 例和对照组 80 例。研究组术前行 HRAIC 新辅助化疗,7 d 后行根治术,术后行 FOLFOX4-6 全身化疗;对照组直接进行根治术及化疗;比较 2 组治疗结束后肿瘤标志物、术后随访期间癌细胞转移或复发时间、转移率、复发率及患者生存率。
结果： 研究组治疗结束后 6 个月 CEA、CA19-9 水平均低于对照组[(13.4±5.5) μg/L vs.(20.7±7.2) μg/L,(30.5±9.5)U/ml vs.(37.2±12.1)U/ml,t=7.155,P0.01;t=3.867,P0.01]。研究组随访期内肿瘤转移或复发时间长于对照组[(29.1±6.5)月 vs.(24.4±6.1)月,t=2.169,P=0.041],肝转移发生率和总转移率低于对照组(9.1%vs.21.3%,11.7%vs.23.8%,x~2=4.479、3.895,P=0.034)。研究组治疗结束后 3 年、4 年生存

率均高于对照组(87.0%vs.78.8%,83.1%vs.73.8%,x~2=1.881、2.029,P=0.170、0.154);研究组累积无瘤生存率与累积生存率均显著高于对照组(86.5%vs.64.1%,82.4%vs.66.3%,x~2=159.130、84.336,P 均 0.01)。

结论： III期结直肠癌根治术前采用 HRAIC 治疗可显著降低术后肿瘤载荷与肝转移发生率,延长转移或复发时间,并表现出改善术后生存率的趋势。

Evaluation of interventional therapy effect of liver cancer by Twist vibe and T1-mapping technique

Huimin Lu,Qing Yang
Anqing city hospital

Objective： this study by applying multiphase dynamic enhanced liver (Twist-vibe) joint T1mapping technology of interventional therapy of liver cancer before and after the lesions of interventional treatment ,and multiple artery before and after strengthening way and enhance T1 values were analyzed, and the quantitative analysis of the effects of hepatocellular carcinoma after interventional therapy, and in quantitative way to assess the curative effect of interventional treatment in patients with liver cancer and prognosis.**Methods：** select 20 cases of patients diagnosed with hepatocellular carcinoma, Dynamic enhanced liver scan was performed before and after each interventional therapy, arterial used in dynamic enhanced scan of Twist vibe technology, T1mapping scanning before and after enhancement was performed at the same time , take interest in the lesions of 30, for every lesions before and after strengthening methods and arterial enhancement in the T1 values were analyzed.**Results：** 1、There were differences in the enhancement methods and T1 values of the 30 interested lesions before and after interventional therapy. 2、The arterial enhancement rate after interventional therapy was significantly lower than that before treatment, and the T1 value after treatment was lower than that before treatment, showing a significant positive correlation, with a correlation coefficient of 0.76, which was statistically significant ($P < 0.05$).3、There was significant difference in T1 value before and after enhancement of the same lesion, and the increase rate of T1 value after treatment was significantly reduced compared with that before treatment.**Conclusion：** liver multi-phase dynamic enhancement technique (Twist vibe) combined with T1-mapping technique can quantitatively determine the activity of liver lesions before and after interventional therapy for liver cancer, and effectively evaluate the efficacy and prognosis of liver cancer interventional therapy.

PU-1749

乳果糖联合凝结芽孢杆菌活菌片治疗肝癌化疗栓塞术后便秘的疗效观察

蔡玲,肖书萍
华中科技大学同济医学院附属协和医院

目的 探究乳果糖联合凝结芽孢杆菌活菌片治疗肝癌化疗栓塞术后便秘的疗效。**方法** 将 80 例肝癌化疗栓塞术后患者分组研究组、对照组。各 40 例，对照组给予单纯乳果糖；研究组给予乳果糖联合凝结芽孢杆菌活菌片，均治疗两周时间，观察治疗前后大便次数、大便性状，有无排便不尽、排便费力感觉、腹部不适等等。**结果** 研究组和对照组相比，总有效率、大便频率明显高于对照组，P＜0.05，差异具有统计学意义。并且研究组患者在治疗后未有排便不尽、腹胀或不适等新症状，优于对照组。**结论** 乳果糖联合凝结芽孢杆菌活菌片治疗肝癌化疗栓塞术后便秘效果明显，值得在临床上推广运用。

PU-1750
含钽纳米粒子的海藻酸钙自显影载药微球的实验研究

王继华[1],周国锋[1],杜青[2],杨祥良[2]
1.华中科技大学同济医学院附属协和医院
2.华中科技大学生命科学与技术学院

目的：载药微球化疗栓塞术是肝癌介入治疗的一大进展，为解决栓塞过程中常规载药微球无法实时监控，术后复查不可见的问题，我们与华中科技大学生命科学与技术学院的研究团队前期研究中，研制出了一种负载钽纳米粒子的海藻酸钙微球（Ta@CaAlg），该微球具有实时显影的优点，集化疗、栓塞、显影三种功能于一身。此部分研究为探究 Ta@CaAlg 微球的安全性、体内药物释放特性及疗效。
方法：体外表征实验研究载多柔比星（Doxorubicin，Dox）前后的粒径、显影性；以 BEL-7402 肝癌细胞行细胞毒性实验，以小鼠红细胞行溶血性实验，以探究 Ta@CaAlg 微球的生物学相容性；然后，每 1ml 微球载 50mg Dox，在新西兰大白兔 VX2 肝癌模型中研究 DEB-TACE 后肿瘤局部与外周血中的浓度变化，以确定 Ta@CaAlg 的药物释放特性；最后，在前述动物模型中，分为 A 组（Ta@CaAlg 微球栓塞组）、B 组（Ta&Dox@CaAlg 微球栓塞组），C 组（生理盐水假栓塞组） 三组以比较 7 天的肿瘤生长率，以研究该微球的疗效。
结果：表征实验证实 Ta@CaAlg 微球载药前后的粒径分别为 259±5μm 与 257±4μm，CT 值分别为 3070.0±0.6HU 与 3070.8±0.5HU ；体外细胞实验显示该微球良好生物相容性——细胞毒性与溶血性均在安全范围内；明确 Ta@CaAlg 微球在动物体内的药物释放特征——该微球可载 Dox 在肿瘤组织内缓释至少 3 天时间，外周血内 Dox 5 分钟以后不可测；此外， A、B 两组 7 天肿瘤生长率明显小于生理盐水组，且 A 组对肿瘤抑制效果优于 B 组(P<0.05)；HE 染色结果显示 A、B 两组可见大片凝固性坏死区，且 B 相较于 A 组的残存肿瘤细胞更少。
结论：表征实验、细胞实验及动物实验证实 Ta@CaAlg 微球可自显影、粒径均一、安全、有效、可实现选择性肿瘤内高浓度缓释。

PU-1751
肝动脉内化疗栓塞术联合射频消融术治疗中期原发性肝癌的疗效观察

高松学
皖北煤电集团总医院

目的探讨肝动脉化疗栓塞术（transcatheter arterial chemoembolization，TACE）联合射频消融术（radiofrequency ablation，RFA）治疗原发性肝癌患者的安全性及疗效。**方法** 回顾分析 46

例原发性肝癌患者临床资料，观察联合治疗前后甲胎蛋白水平变化、治疗前后肿瘤体积变化及患者生存期。**结果** TACE 联合 RFA 治疗患者肿瘤的完全坏死率为 84.8%。联合治疗术前、术后 12 月甲胎蛋白前后比较差异有统计学意义（Z = -4.197，P <0.001）。术前瘤体体积 6.81±3.73cm³，术后瘤体体积 5.52±2.93cm³，治疗前后比较差异有统计学意义（t = -4.142，P <0.001）。患者 1 年生存率为 95.65%。不良反应多为术后短时间内发热、局部疼痛及肝功能一过性异常，总体安全性高，患者可耐受。**结论** 采取 TACE 联合 RFA 治疗原发性肝癌患者安全、有效，联合治疗的近期疗效影响患者总体生存时间。

1 例肺隔离症介入栓塞治疗心得体会

罗勇,古明高,赵玺
黔南布依族苗族自治州医院

目的 探讨肺隔离症介入治疗疗效差的原因分析。**方法** 1 例肺隔离症患者采用 Seldinger 技术行选择性动脉栓塞术。**结果** 治疗后复查进行疗效差。**结论** 超选择性动脉栓塞介入治疗是治疗肺隔离症的一种新的、 有效的方法，但治疗效果差的原因较多，对疗效差的原因进行分析。

PU-1753

介入护理在脑血管介入治疗患者中的应用效果及对并发症的影响探析

李红杰
河南省肿瘤医院

摘要：目的 研究脑血管介入治疗护理干预措施及对并发症的影响。**方法** 抽取入医院行脑血管介入治疗患者 80 例作为研究对象，采用抽签法将患者分为两组，对照组行常规护理，观察组在对照组基础上予以介入治疗围手术期护理干预，观察两组患者的手术状况，并记录并发症发生率。**结果** 观察组手术成功率 97.5%较对照组 85.0%高，对比差异显著（P<0.05）；观察组术后脑血管痉挛 1 例，穿刺部位出血 2 例，并发症发生率 7.5%，对照组术后脑血管痉挛 3 例，脑灌注综合征 1 例，下肢静脉血栓 2 例，穿刺部位出血 4 例，并发症发生率 25.0%，两组对比差异显著，有统计学意义（P<0.05）。**结论** 加强对脑血管介入治疗的护理，可提高手术成功率，改善预后。

PU-1754

恶性梗阻性黄疸介入治疗并发症的临床研究

罗罡
昆明医科大学第一附属医院

回顾对比研究不同的介入引流方式治疗恶性梗阻性黄疸并发症发生的原因和处理措施。**方法** 收集研究恶性梗阻性黄疸病例 182 例，男性 106 例，女性 76 例，年龄 23~90 岁，平均 63.6 岁。其中胆管癌 68 例，胰头癌 46 例，壶腹部肿瘤 27 例，转移癌 21 例，胆囊癌 13 例，原发性肝癌 7 例。所有患者均有 B 超、CT、MRI（2 种以上检查）及肿瘤标志物检查结合临床确诊。对 182 例恶性梗

阻性黄疸患者分为 3 组：PTCD 组（123 例）、支架组（21 例）和 PTCD+支架组（38 例）术中、术后近期并发症的发生率、发生原因、预防及处理进行分析。**结果** 采用经皮经肝穿刺行 PTCD 或胆道支架置入术，均一次置入成功，成功率 100%，共置入胆道支架 61 枚，胆道引流管 172 根。本组术中、术后近期发生并发症 33 例，发生率 18.1%，3 组中 PTCD 组并发症较高，有 23 例，发生率 12.6%，其中引流管移位 5 例；阻塞 2 例；脱出 3 例；逆行感染 2 例；出血 3 例；胆漏 2 例；肝肾功能衰竭 4 例。支架组及 PTCD+支架组近期并发症各 5 例，发生率均为 2.7%。支架组近期严重的并发症有 3 例：1 例消化道出血，1 例腹腔内出血，1 例支架完全闭塞再次出现梗阻性黄疸。而 PTCD+支架组无严重的并发症发生。**结论** 恶性梗阻性黄疸的介入姑息性减黄减压治疗，是一种安全、有效的方法。3 组引流方式中 PTCD+支架引流方式并发症发生率最低，且无严重的并发症发生，是较理想的引流方式。同时正确选择适应症、规范操作技术可以减少并发症的发生。

PU-1755
原发性肝癌伴动静脉瘘的介入治疗策略及疗效评价

罗罡
昆明医科大学第一附属医院

[摘要] 目的 探讨原发性肝癌合并动静脉瘘的介入栓塞方法及疗效。 方法 回顾性分析 36 例经数字血管造影检查明确合并动静脉瘘患者的临床资料及血管造影表现，根据瘘口类型、位置、分流情况采取相应的栓塞方法，观察其疗效。 结果 36 例中 AVS 周围、肝段型 25 例，中央型 8 例，AHVF3 例，低、中等流量 30 例，高流量 6 例；第一次栓塞有 26 例一次性栓塞成功，9 例栓塞不完全，1 例失败，二次治疗有 15 例瘘口开通，8 例栓塞完全，7 例栓塞不完全；CT 复查示肿瘤内碘油沉积大于 50%的 28 例，小于 50%的 7 例，无碘油一例；肿瘤缩小 22 例，缩小不明显 9 例，增大 5 例，肿瘤治疗有效率 86.1%；无严重并发症发生。 结论 对于合并肝动静脉瘘的原发性肝癌患者，对瘘口栓塞是安全有效的，同时保证药物在肿瘤组织中的有效灌注和碘油在肿瘤组织内的良好沉积。

PU-1756
IQon 光谱 CT 多参数成像在肝细胞癌肝动脉化疗栓塞（TACE）术后疗效评估的初步研究

侯小明,李家开
中国人民解放军总医院海南医院

目的 探讨 IQon 光谱 CT 评估肝细胞癌 TACE 术后疗效的临床应用价值。**方法** 回顾分析 2018 年 11 月至 2019 年 6 月在我院就诊的肝细胞癌病人的资料，所有病例均符合《原发性肝细胞癌经导管肝动脉化疗栓塞治疗技术操作规范专家共识》并接受 TACE 治疗，治疗后 1-3 个月复查 IQon 光谱 CT 双期增强检查。以混合能量图像代替常规 CT 检查，以光谱不同单能级 60-120Kev 每间隔 10Kev 选取图像，通过统计学分析软件采用 t 检验分析混合能量图像与不同单能级图像对比噪声比（CNR），当 P＜0.05 认为有统计学意义。通过 IQon 光谱 CT 双期增强扫描与常规 CT 增强图像对比，判断栓塞后的肿瘤的复发及残余。以 DSA 作为金标准，比较常规 CT 与光谱 CT 多参数诊断的准确性、敏感性、特异性、阳性预测值及阴性预测值，采用 SPSS21 软件 X^2 检验统计分析，P＜0.05 具有统计学意义。**结果** 混合能量图像（QC）CNR 2.06±1.68，单能级 60Kev，70 Kev，80 Kev，90 Kev，100 Kev，110 Kev，120Kev 图像 CNR 分别为 3.74±2.38，2.53±1.81，1.75±1.72，1.51±1.44，1.42±1.11，1.42±1.02，QC 与单能级采用配对 t 检验，60Kev（P=0.00），70 Kev

（P=0.01），90 Kev（P=0.04），其余无统计学差异。QC 诊断准确性 60%，敏感性 60%，特异性 60%，预测阳性率 75%，预测阴性率 42.9%。光谱多参数成像诊断病灶准确性 86.7%，敏感性 90%，特异性 80%，预测阳性率 90%，预测阴性率 80%。 **结论** 肝癌 TACE 术后，IQone 光谱 CT 单能级 60Kev 图像能够清晰显示病灶及碘油沉积情况，边缘清晰，对比度较高，提高病灶检出率。多参数光谱 CT 可提高肝癌 TACE 术后病灶残余及复发的准确诊断能力，具有较高的应用价值。

PU-1757
CalliSpheres 治疗巨块型肝癌短期的有效性及安全性

胡继红
昆明医科大学第一附属医院

【摘要】目的 探讨 Callispheres 经导管动脉化疗栓塞（DEB-TACE）治疗巨块型肝癌的疗效及安全性。**方法** 本研究共纳入巨块型肝癌患者 16 例，均使用 CalliSpheres 载药微球单次或多次进行治疗，根据改良实体肿瘤评价标准评估临床疗效，并回顾性分析白蛋白、总胆红素等实验室指标及相关术后并发症。**结果** 16 例患者的中位随访时间为 4 个月，术后 1 个月的客观缓解率（ORR）为 93.75%，完全缓解率（CR）为 6.25%，部分缓解率（PR）为 87.5%，疾病进展（PD）为 6.25%，其中 8 例患者多次接受 DEB-TACE 治疗，完全缓解率（CR）为 50%，部分缓解率（PR）均为 50%，疗效优于单次 DEB-TACE 治疗患者，差异有统计学意义（P<0.05）。术后 3 天、7 天总胆红素、ALT、AST 水平升高，白蛋白水平、γ-谷氨酰氨基转移酶下降，术后 1 个月肝功能可恢复至术前水平。术后无严重不良反应事件发生，并发症以腹痛、发热为主。**结论** CalliSpheres 载药微球为巨块型肝癌患者提供了一种短期的安全有效的治疗方法，但仍需大样本、多中心的长期随访进一步验证其获益。

PU-1758
CalliSpheres 联合阿帕替尼治疗肝癌的安全性与有效性

翟越
昆明医科大学第一附属医院

目的 探讨 Callispheres 载药微球联合阿帕替尼治疗肝癌的安全性与有效性。**方法** 回顾性分析昆明医科大学第一附属医院 2017 年 7 月至 2018 年 10 月采用 DEB-TACE 联合阿帕替尼治疗的 37 名肝癌患者，临床疗效根据改良实体肿瘤评价标准进行评价，并采用不良事件通用术语标准评估 DEB-TACE 术后并发症与口服阿帕替尼的副反应。**结果** 患者接受治疗后 1 个月及 3 个月的总体有效率（ORR）分别为 83.7%、80.8%。其中位无进展生存期（mPFS）为 6.1 个月，中位的总体生存期（mOS）为 13.8 个月。DEB-TACE 术后不良反应主要有发热、腹痛、肝功能受损等；阿帕替尼的副作用主要为手足综合征、皮肤色素沉着症、继发性高血压等。所有不良反应均未超过 3 级且可通过对症支持治疗或减少阿帕替尼的服药剂量进行控制。**结论** CalliSpheres 载药微球联合阿帕替尼为肝癌患者提供一种效益较高的治疗方案，且不良反应轻，易耐受，值得临床进一步推广应用。

PU-1759
正常通气肺组织射频与微波消融术后早期 CT 与病理的对应性研究

李金鹏
河北医科大学第四医院

目的 正常通气猪肺模型射频及微波消融术后，观察病理与 CT 表现的对应关系,以指导临床应用。**方法** 6 只健康家猪，每侧肺各布置两个消融区，在 CT 引导下左侧行经皮射频消融，右侧行经皮微波消融。消融 10 分钟后采集消融灶 1mm 层厚 CT 图像，5mm 重建。将肺组织平行 CT 扫描层面 5mm 层厚切片。观察并比较消融灶在 CT 与大体病理的范围及细节表现。**结果** CT 图像与大体病理上射频消融灶最大纵径 L 分别为（4.23±0.35）cm，（4.19±0.47）cm；最大横径 D 分别为（3.08±0.19）cm，（2.97±0.30）cm。CT 图像与大体病理上微波消融区域最大纵径 L 分别为（5.34±0.39）cm，（5.11±0.38）cm；最大横径 D 分别为（3.83±0.44）cm，（3.39±0.56）cm。均无显著差异（$P>0.05$）。**结论** 射频及微波消融灶在大体病理和 CT 图像上具有较好的对应性。应用 CT 可以对消融效果进行早期疗效评估。

食管支架置入术介入护理的效果分析

王月[1],王月[1]
1.四川省肿瘤医院
2.四川省肿瘤医院

【摘要】 **目的** 探究讨论在临床上开展食管支架置入术介入护理可获得的实际效果。方法:选取 52 例在 2016 年 1 月——2018 年 1 月被本院接收并展开相关手术治疗的食管癌患者。通过完全随机方式将其平均分为观察组与对照组，护理人员对对照组提供常规的护理措施，在对照组的基础上对观察组增加整体性护理服务内容，最后比较两组患者中出现不良反应的整体情况以及对护理工作人员服务的满意水平。结果:展开护理后，观察组患者中发生不良反应情况的例数占总数的 7.7%，显著低于对照组患者中发生不良反应情况的例数占总数的 34.6%，差异具有统计学意义(P<0.05);观察组患者对护理人员工作的满意程度达到 100.0%，显著高于对照组患者对护理工作的满意程度 76.9%，差异有统计学意义 (P<0.05)。**结论** 在临床上对接受过食管癌食管支架植入术的患者来说，通过进行整体性介入护理可有效帮助提高其治疗效果，减少不良反应发生的可能性，同时还可提高患者对护理人员工作的满意水平，具有临床广泛应用价值。

短时间隔 TACE-RFA 序贯治疗方案治疗中晚期肝癌的疗效及安全性研究

方世记,郑丽云,吴发宗,宋晶晶,赵中伟,范晓希,毛剑婷,纪建松
丽水市中心医院

探索短时间隔 TACE-RFA 序贯治疗中晚期肝癌的疗效、安全性及其危险因素。**方法** 回顾性分析 2010 年 3 月至 2019 年 1 月期间在我院就诊 117 例中晚期肝癌患者的临床资料。所有入组患者均行 TACE-RFA 序贯治疗，根据 TACE 与 RFA 治疗时间间隔的长短，分为短时间隔（≤7 天）组（S 组，61 例）和长时间隔（＞7 天）组（L 组，56 例）2 组。比较两组的肿瘤局部控制率、并发症发生率的差异，Kaplan-Meier 生存曲线计算中位生存时间（OS）、中位无进展时间（PFS）和生存率，并分析影响中晚期肝癌预后的危险因素。**结果** S 组的总有效率为 72.13%（44/61），L 组总有效率

为 41.07%（23/56），S 组的总有效率显著高于 L 组（χ^2=11.50，*P*=0.00）；S 组的 PFS 中位值为 14.9 个月，L 组的 PFS 中位值为 9.1 个月，S 组的 PFS 显著长于 L 组（χ^2=5.96，*P*=0.01）；S 组的 OS 中位值为 34.7 个月，L 组 OS 中位值为 20.3 个月，S 组的 OS 显著长于 L 组（χ^2=6.66，*P*=0.01），Cox 多因素分析显示肿瘤大小（HR=2.42，95%*CI*：1.26-3.69，*P*=0.001）、肝硬化（HR=2.04，95%*CI*：1.27-3.26，*P*=0.003）、时间间隔（HR=0.44，95%*CI*：0.27-0.71，*P*=0.001）、AST（HR=1.71，95%*CI*：1.05-2.77，*P*=0.029）是影响 TACE-RFA 序贯治疗方案治疗中晚期肝癌疗效的独立危险因素。两组患者术后并发症发生率均无显著差异（*P*>0.05）。**结论** 短时间隔显著提高 TACE-RFA 序贯治疗中晚期肝癌的疗效，是中晚期肝癌患者预后的保护因素；短时间隔 TACE-RFA 序贯治疗是一种安全、有效的中晚期肝癌治疗方案。

PU-1762
基于多模态影像精准引导的肝门胆管癌性梗阻射频消融联合内外引流术

但汉雷[1],丁雷[1],田伏洲[1,2]
1.解放军 63820 部队医院（原解放军第 520 医院）
2.解放军西部战区总医院（原成都军区总医院）

目的 为提高肝门胆管癌介入穿刺和引流术的安全性和有效性，应用新的多模态 3D+CT 和超声影像精准引导技术，实施肝门胆管恶性梗阻腔内射频消融联合内外引流。**方法** 1.应用专门计算机影像软件（YORKTAL，深圳旭东数字医学影像技术有限公司），将中上腹部 CT 平扫+增强 DCOM 序列图像进行 3D+多维重建，制定精细的穿刺路径和综合介入治疗计划；2.结合术中高清晰彩色超声和多普勒显示技术，避开重要血管等解剖结构精准定位，应用 PTCD 细针(22G) Seldinger 法安全穿刺目标胆管，然后逐渐扩张穿刺通道，置入适当工作鞘管、射频消融电极以及引流导管，完成经皮经肝胆道微创手术（Percutaneous transhepatic cholangio-minimally invasive surgery，PTCMIS）；3.在超声、X 线透视或 CT 等观察下，进行射频消融和胆道造影等诊疗操作。**结果** 术前 3D+CT 三维重建能够精确显示肝门胆管癌原发病变及周围淋巴结情况，显示肝门胆管与门静脉、左右肝动脉、下腔静脉以及胆囊、胃十二指肠、胰腺等重要解剖结构及其相互关系，显示肿瘤三维形态和重要解剖变异，便于制定精准的介入穿刺路径和射频消融计划。术中通过超声实时显像结合多普勒等模式，精确引导穿刺和介入手术操作，实时观察消融前后病变回声变化和胆管引流冲洗情况。术中定位精准，操作顺利，无明显出血和重要解剖损伤。**结论** 采取多模态影像精准引导并将 Seldinger 血管介入穿刺技术应用于胆管微创穿刺和介入手术，明显提高了肝门胆管恶性梗阻射频消融和内外引流术的安全性和有效性。

一例宫颈癌介入术后并发会阴部破溃的护理体会

许丽红
贵州省人民医院

目的 宫颈癌患者介入手术后，出现相关并发症的病例并不少见，但本例患者宫颈癌介入手术治疗术后出现栓塞所致会阴皮肤部坏死破溃，因会阴部位置特殊且患者为开放性创面易受到排便的感染，靠近阴道内侧壁的伤口无法用药，易造成泌尿系及全身感染，影响创面肉芽生长，或因感染而造成患者创面形成假性愈合从而影响患者疾病恢复甚至危及患者生命。**方法** 通过评估创面情况根据患者体质的特殊性选择卫生棉条将敷料及药物填充至患者阴道，改善患者阴道内创面肉芽生长环

境，减轻分泌物，促进创面愈合。配合全身抗感染治疗及病人的常规护理，使患者伤口得以愈合，**结果** 在此方法下解决患者阴道内伤口护理问题，减轻了患者疼痛感受，使患者水肿程度改善、分泌物量减少、创面愈合时间缩短，患者痛苦减轻，提高了患者的生活质量。

导管肝动脉灌注化疗栓塞在肝癌介入术后的护理

朱跃
贵州省人民医院

【摘要】肝癌作为危害人类健康最严重的疾病之一，他给人类社会带来极大的痛苦和危害。肝癌导管肝动脉关注化疗栓塞治疗是目前减少中晚期肝癌发病率的重要治疗手段，对肝癌介入术后采取综合护理干预，可有效减少患者对癌症的恐惧，重拾生命自信心，并且能减少术后并发症，提高患者的生存质量，提高介入护理质量，对完善肝癌介入术有着重要意义。

原发性肝癌 TACE 术后并发症的观察与护理

李卓倩
郑州大学第一附属医院

【目的】探讨肝动脉化疗栓塞治疗原发性肝癌术后并发症。 【方法】笔者收集整理 60 例肝动脉化疗栓塞（TACE）治疗原发性肝癌患者资料， 分析患者术后并发症发生情况。【结果】60 例患者在术后共有 22 例患者出现相关并发症。【结论】原发性肝癌患者 TACE 术治疗患者需进行护理干预，可降低患者并发症，提升自我护理能力，有临床应用价值。

PU-1766

原发性肝癌肝行 TACE 术后严重并发症的观察与护理

谢妃
贵州省人民医院

【摘要】**目的** 总结原发性肝癌行经导管肝动脉化疗栓塞术（transcatheter arterial chemoembolization，TACE）严重并发症的观察与护理。**方法** 从 2016 年 6 月至 2018 年 6 月两年时间内，总结在两年的时间内行 TACE 的 182 例肝癌患者中在介入手术后发生严重并发症的原因，认真分析，最后制定相应的护理对策。**结果** 在统计的手术患者中，有 7 例患者发生严重并发症，发生的几率约 3.85%（7/182），其中急性肝功能衰竭 2 例、肺栓塞 1 例、急性上消化道出血 2 例、 肝脓肿 1 例、肺栓塞 1 例。**结论** TACE 术是非手术治疗中首选方法的治疗方法，也是一种微创、安全的治疗方法，同时也存在一定的风险，围手术期的密切观察与预见性的护理可降低术后严重并发症的发生率，促进患者康复。

放射性粒子植入在恶性肿瘤中的临床应用总结

袁骏
云南昆钢医院

云南昆钢医院 袁骏 王世平 杨勤飞 于凌

目的 探讨放射性粒子 ^{125}I 植入在治疗恶性肿瘤的疗效。**方法** 23 无法接受手术、化疗的恶性肿瘤中晚期患者。17 例患者过粒子植入计系统制定治疗方案，计算出有效等计量区域应植入的粒子数量，在 CT 引导下经皮穿刺永久性植入放射性粒子 ^{125}I 在肿瘤内，6 例患者通过粒子支架置入治疗恶性肿瘤。应用 VAS 评分评价治疗前后患者疼痛情况，运用 CT 影像检查评价治疗前后肿瘤大小变化，KPS 评分评价患者治疗前后身体功能状态。**结果** 经 I125 粒子植入治疗的患者术后 1 周，局部疼痛明显减轻，减少或停用镇静药、止痛药。经 I125 粒子植入患者术后 1 月 KPS 评分明显升高，患者生活质量得到有效改善。经 I125 粒子植入患者术后 1 月复查肿瘤部位 CT，肿瘤大小有缩小改变。

肝癌 TACE 后肠道微生态改变的实验观察

吕维富,刘开才
中国科学技术大学附属第一医院（安徽省立医院）

目的 利用 VX2 肝癌模型兔，分析经动脉化疗栓塞术（TACE）后肝功能，血清内毒素、TOLL 样受体 4 及肠道通透性的改变。方法 新西兰兔 28 只，随机分为假手术组、TACE 术后 1 d 组、5 d 组、10 d 组。 分别于 TACE 术前 1d、术后 1 d、术后 5 d，术后 10 d 采集外周血，通过 ELISA 法定量测定血清 ALT、二胺氧化酶（diamine oxidase，DAO），D 乳酸（D-lactate，D-LA ），TOLL 样受体 4 (Toll-like receptor 4，TLR4),内毒素（lipopolysaccharides, LPS）变化情况以及其相关性分析，并于相应时间窗对动物处死，采集病理标本。结果 与正常对照组比较,VX2 肝癌模型兔血 ALT、DAO、D-LA、LPS，TLR4 均显著性增高(P ＜0.05),并且术后 1 d 相对于术前增加，术后 5 d 与术后 10 d 降低，术后 10 d 组低于术前 (P＜0.05);对 ALT 与 DAO，DAO 与 LPS，ALT 与 LPS 进行相关性分析，r 分别为 0.43,0.83,0.64，（P＜0.05）。结论 VX2 肝癌模型兔在行 TACE 治疗后，随着肿瘤的控制，肝肠循环的改善，能改善肠道屏障功能，能降低血 LPS 含量，下调 TLR4 水平，改善肿瘤治疗的预后。

PU-1769

肝动脉化疗栓塞治疗原发性肝癌合并门脉癌栓的疗效及影响因素分析

吕维富,刘开才
中国科学技术大学附属第一医院（安徽省立医院）

目的 探讨肝动脉化疗栓塞治疗肝细胞肝癌合并门脉癌栓的疗效及影响疗效的因素；材料和方法 回顾性分析 2009 年 1 月-2015 年 12 月在我院初诊为肝细胞肝癌合并门脉癌栓患者的临床资料，其中 475 例接受 Transarterial Chemoembolization（TACE）治疗，210 例接受支持治疗，观察比较两组患者生存时间，采用 COX 模型回归分析影响其生存的因素。结果 本研究纳入 685 例患者中位生存时间为 6.0 m（1.3-58.6 m），其中 TACE 组患者的中位生存时间为 7.0 m，支持治疗

组患者的中位生存时间为 5.2 m，TACE 组和支持治疗组患者 6 个月、12 个月及 24 个月的累计生存率分别为 57%、27%、12%和 38%、13%、3%；TACE 组患者生存时间长于支持治疗组（P=0.002）。单因素分析显示 Child-Pugh 分级、肿瘤大小、GGT 水平、癌栓分级可能是影响疗效的因素，经过多元 COX 风险比例模型分析出 Child-pugh 分级和癌栓分级是影响该组患者的独立预后因素；进一步分析发现 I-II 级癌栓患者接受 TACE 术治疗后生存时间优于支持治疗（7.8 m vs 5.4 m，P=0.001）,但 III-IV 级癌栓患者是否接受 TACE 治疗的生存时间并无明显差异（5.2 m vs 4.6 m，P=0.662）、结论　肝癌伴门静脉癌栓行 TACE 术是有效的，影响其主要因素是 Child-pugh 分级和癌栓分级， 但对于 III、IV 级癌栓患者行 TACE 治疗的疗效还需进一步证实。

PU-1770
原发性肝癌患者 TACE 后生存时间影响因素分析

吕维富,余子牛
中国科学技术大学附属第一医院（安徽省立医院）

目的 探讨不能手术切除中晚期原发性肝癌患者行经皮肝动脉化疗栓塞术（transcatheter hepatic arterial chemoembolization，TACE）为主要手段的综合介入治疗后生存时间影响因素。方法 回顾自 2007 年 1 月至 2013 年 12 月在我科接受 TACE 治疗中晚期肝癌患者，有较完整病历资料和随访记录者 382 例，生存时间超过三年以上中晚期原发性肝患者共 89 例，对其一般病史情况及介入治疗情况进行回顾性分析，遴选相关变量进行单因素和多因素回归分析，从而得出介入治疗后患者生存时间影响因素。结果 所有患者中生存时间超过 3 年 89 例（23.3%），其中四年以上 73 例（19.1%），五年以上 31 例(8.1%)，7 年以上 14 例(3.66%)，10 年以上 1 例（0.26%）。年龄、乙肝肝硬化背景、肿瘤分期、分型、大小、个数、肝功能分级、AFP 值、门静脉有无癌栓、有无合并其他疾病、及有无远处转移对原发性肝癌行介入治疗患者生存时间有一定影响。结论 原发性肝癌患者行介入治疗效果是肯定的，其术后生存时间受乙肝肝硬化背景、肿瘤分期、年龄等多种因素影响，合理把握适应证，根据患者不同情况制定个体化的治疗方案，定期复查，及时处理并发症等可有效延长患者生存时间。

PU-1771
个性化护理模式在老年肿瘤患者放射治疗护理中应用的效果评价

樊晓美
中国医科大学附属盛京医院滑翔分院

摘要：**目的**　探讨个性化护理模式在老年肿瘤患者放射治疗护理中的应用效果。**方法**　在我院 2016 年 2 月-2019 年 2 月间收治的接受放射治疗的老年肿瘤患者中选取 84 例作为研究对象，按照患者的入院编号奇偶性对患者进行治疗分组，其中编号为奇数的 42 例划入参照组，编号为偶数 42 例则划入研究组，参照组患者接受常规护理，研究组患者则接受个性化护理，比较两种护理模式对患者心理状态及护理满意度的影响。**结果**　对两组患者护理前后的 SDS、SAS 评分进行对比分析，可以发现护理前两组患者的 SDS、SAS 评分并不存在显著差异(P＞0.05)，护理后均有所改善，且研究组患者的各项评分均明显优于参照组(P＜0.05)；对两组患者展开护理满意度评价，发现研究组患者的护理满意度高达 97.62%，与参照组患者的 76.19%相比存在显著优势(P＜0.05)。**结论**　由以上研究结果可以看出，个性化护理模式在老年肿瘤患者放射治疗护理中应用有着较为理想的效果，能够对患者的心理状态起到改善作用，且患者的护理满意度较高，能够有效改善护患之间的关系，患者在住院期间的舒适程度得到了大幅提升，是一种值得临床推广与应用的护理模式。

PU-1772

小儿肝海绵状血管瘤的介入治疗的临床探讨

叶志球,梅世伟
广东省妇幼保健院

目的 探讨经肝动脉超选介入栓塞术在治疗小儿肝海绵状血管瘤中的疗效和安全性。**方法** 选取我院 2016 年 1 月-2018 年 8 月住院经 MR 诊断明确的肝海绵状血管瘤 22 例，年龄最小 15 天，最大 3 岁，其中合并 K-M 综合征的患儿 2 例，所有患儿采用微导管进入肝动脉造影，明确血管瘤供血动脉后超选成功后注入博莱霉素-碘化油+PVA 颗粒-弹簧圈序贯栓塞治疗，术后造影以肝内血管瘤无染色为标准。在术后 1、3、12 个月随访进行 CT 检查以评价疗效。**结果** 小儿血管瘤介入手术治疗成功率 100%，1 例患儿首次介入治疗无法超选进入血管瘤供血动脉，择期后第 2 次成功行了介入栓塞治疗，在术后第 1、3、12 个月复查 CT 提示肝内瘤体缩小率在 50%以上者为 19 例，瘤体缩小 20%-30%为 2 例，效果不明显的 1 例。患者术后有轻度肝功能异常，主要表现在转氨酶升高，对症处理后恢复正常，1 例 15 天患儿在术后 3 月发现右侧皮肤温度低，彩超提示穿刺的右侧股动脉处狭窄，但右下肢远端血流未见明显异常，余患者无严重并发症。患者治疗前的临床症状得到好转或消失。**结论** 经肝动脉行小儿肝内海绵状血管瘤序贯栓塞治疗安全、有效，并发症少，绝大部分患儿可以得到治愈，有利于临床推广应用。

PU-1773

兔 VX2 肝癌 TAE 术后癌旁肝组织氧化应激及细胞凋亡的研究兔 VX2 肝癌 TAE 术后癌旁肝组织氧化应激及细胞凋亡的研究

杜伟,吴春华,余义俊,王贝然
大理大学第一附属医院

目的 探讨兔 VX2 肝癌模型经导管动脉栓塞（TAE）治疗后癌旁肝组织中氧化应激及细胞凋亡的情况，研究其在肝组织损伤中的作用及其机制。**方法** 建立兔 VX2 肝癌模型 37 只，并随机分为 3 个组，即对照组 12 只，造影组 12 只，TAE 组 13 只，其中 TAE 组行经导管肝动脉栓塞治疗，检测各组术前及 TAE 术后 3 天肝功能指标 ALT、AST、TBI、ALB、PT。术后 3 天后处死动物，分别选取各组癌旁组织制成石蜡切片，采用生化酶学法检测超氧化物歧化酶（SOD）指标、谷胱甘肽过氧化物酶（GSH-PX）、过氧化氢酶（CAT），采用 Tunel 法检测肝细胞凋亡情况，计算凋亡指数。**结果** 术后 TAE 组 ALT、AST、TBI 升高，ALB 降低、PT 延长，与对照组和造影组相比差异显著（P＜0.05）；对照组、造影组和 TAE 组中 SOD 的浓度分别为 45.48±2.04(ng/L)、46.18±2.45(ng/L)、21.81±2.14(ng/L)，CAT 的浓度分别为 3.09±0.57(ng/L)、3.02±0.48(ng/L)、1.15±0.25(ng/L)；GSH-PX 的浓度分别为 262.47±6.96 (ng/L)、256.53±5.06(ng/L)、187.68±9.67 (ng/L)；与对照组和造影组相比，TAE 组的抗氧化指标 SOD、CAT、GSH-PX 的活力明显降低，其改变有统计学意义（P＜0.05）；Tunel 法检测肝细胞凋亡情况，在对照组、造影组和 TAE 组中的凋亡指数分别是 2.20±1.897%、25.2±1.673%、64.2±2.767%，与对照组和造影组相比，TAE 组凋亡细胞数在癌旁组织中的分布有显著增加，改变有统计学意义（ P＜0.05)。**结论** TAE 术后肝功能下降，可能与癌旁肝组织抗氧化指标活性明显降低，发生氧化应激，肝细胞凋亡增多，导致肝功能受到损伤有关。

PU-1774
CalliSpheres®载药微球在介入治疗中央型肺癌的临床应用

杜伟,段文帅,卢海,周舟
大理大学第一附属医院

目的探讨 CalliSpheres®载药栓塞微球经支气管动脉化疗栓塞术中有效性和安全性。**方法** 106 例中央型肺癌患者，所有患者均经病理证实。随机分成 3 组，载药微球栓塞组、灌注化疗组和静脉化疗组，分别为 22 例、42 例和 42 例。行支气管动脉及其他供血动脉造影确认肿瘤供血动脉后，再用同轴微导管技术将微导管超选择插至肿瘤供血动脉，依血供情况分别经每一条供血动脉灌注化疗药物，载药微球组在此基础上经微导管栓塞上述每一条供血动脉；常规组通过静脉滴注化疗药物。**结果**观察组有效率为 86.4%，对照组有效率为 54.8%，常规组有效率为 28.6%，两两之间有效率均具有统计学意义（P＜0.05）。随访 2~24 个月，观察组 1 例死亡，对照组 9 例死亡，常规组 20 例死亡。**结论** CalliSpheres®载药栓塞微球在介入治疗中央型肺癌中，其近期临床疗效优于单纯支气管动脉灌注化疗和全身静脉化疗，可显著提高近期疗效，远期效果有待进一步观察。

PU-1775
PPAR-α 激动剂 WY14643 对肝癌 TAE 术后癌旁肝组织氧化应激的作用研究

杜伟,吴春华,王贝然,余义俊,周舟
大理大学第一附属医院

目的 探讨 PPAR-α 激动剂 WY14643 对癌旁肝组织氧化应激损伤的作用，研究其在肝癌 TAE 术后对肝功能的保护机制。**方法** 建立兔 VX2 肝癌模型 15 只，并随机分为 3 个组，即对照组 5 只，TAE 模型组 5 只，打药组 5 只，其中 TAE 模型组行经导管肝动脉栓塞治疗，打药组连续三天给药 WY14643 1mg/(kg·d)后行 TAE 术，对照组不做处理，检测各组 TAE 术后 3 天肝功能指标丙氨酸氨基转移酶（ALT）、天冬氨酸氨基转移酶（AST）、总胆红素（TBI）、血清白蛋白（ALB）、凝血酶原时间（PT）。术后 3 天后处死动物，分别选取各组癌旁组织，采用生化酶学法检测超氧化物歧化酶（SOD）指标、谷胱甘肽过氧化物酶（GSH-PX）、过氧化氢酶（CAT）。**结果** 术后检测肝功能，打药组 ALT、AST、TBI 降低，ALB 升高、PT 缩短，与 TAE 模型组相比差异显著（P＜0.05）；对照组、TAE 模型组和打药组中 SOD 的浓度分别为 45.48±2.04(ng/L)、21.81±2.14(ng/L)、46.18±2.45(ng/L)，GSH-PX 的浓度分别为 262.47±6.96(ng/L)、187.68±9.67(ng/L)、256.53±5.06(ng/L)，CAT 的浓度分别为 3.09±0.57(ng/L)、1.15±0.25(ng/L)、3.02±0.48(ng/L)；与 TAE 模型组相比，打药组的抗氧化指标 SOD、GSH-PX 、CAT 的活力明显升高，其改变有统计学意义（*P*＜0.05）。**结论** PPAR-α 激动剂 WY14643 减轻 TAE 术后肝功能损伤，可能与抑制癌旁肝组织氧化应激有关。

PU-1776
比较不同 MR 序列在对经载药微球治疗肝癌患者术后疗效评估中的价值

王梓,王南
华中科技大学同济医学院附属同济医院

目的 比较不同 MR 序列在对经载药微球治疗肝癌患者术后疗效评估中的价值，旨在寻求评估 D-TACE 疗效的最佳 MR 序列；
材料和**方法** 收集 2016 年 10 月-2019 年 7 月间我院经载药微球治疗的 37 名肝癌患者，通过三名 5 年以上腹部影像学专家对术前及术后不同 MR 序列图像（T2 加权成像，T2WI；弥散加权成像、DWI；增强图像，PWI）进行评估，分别判断肿瘤疗效（CR,PR,SD,PD,ORR），通过介入造影图像及相关生化指标对其进行验证及分析；
结果 不同 MR 序列对经载药微球治疗的患者疗效评估的结果分别为：（T2WI：CR 4,PR 28,SD 3,PD 1,ORR 32）、（DWI：CR 3,PR 29,SD 3,PD 1,ORR 32）及增强图像（PWI：CR 3,PR 29,SD 3,PD 1,ORR 32）,与介入术中图像进行对比，三种序列判断 OR,SD,PD 的准确性无明显差异，而 T2WI 及 DWI 判断 CR 及 PR 的准确性明显低于 PWI。
结论 T2WI 及 DWI 在评估对经载药微球治疗肝癌患者时能够判断肿瘤是否进展，但 PWI 序列是对于肿瘤活性区域的判断的最佳序列，因此，通过 MR 对经载药微球治疗肝癌患者术后疗效进行评估时，增强序列图像最能够反应肿瘤的活性区域。

肝癌栓塞术后低蛋白血症的护理

郑梦静
温州医科大学附属第一

目的:对肝癌肝动脉化疗栓塞术(Transcatheter Arterial Chemoembolization, TACE)后发生低蛋白血症风险因素及护理干预进行分析和探究。**方法**:收集本科室 2017 年 9 月-2018 年 6 月期间的 254 例肝癌行 TACE 的患者临床资料，分析引起低蛋白血症的危险因素并进行干预，观察护理结果。**结果** 本组 63 例患者发生低蛋白血症，其主要危险因素为：术后肝脏损害、放腹水治疗、大量输液、大量发热出汗、进食减少，经相应对症处理及护理干预后，57 例患者血白蛋白恢复正常，6 例患者出现病情恶化。

PU-1779

癌症患者疼痛治疗认知

沈小叶
温州医科大学附属第一

癌痛是恶性肿瘤患者最常见的症状之一，全世界每天至少有 300 万～350 万癌症患者在遭受疼痛的折磨。国外研究发现，疾病诊断初期有 20%-25%的患者出现中、重度疼痛，中期，30%～50%的患者有不同程度的疼痛，在晚期癌症患者中，70%～90%的患者承受疼痛的折磨[1-2]。癌痛可从生理、心理、社会和精神等多个方面影响癌症病人的日常生活，减低患者对工作和爱好的兴趣，影响患者的心灵和社交生活，导致其整体生命质量下降[2]。世界卫生组织的四个重点综合计划之一就是有效控制癌症疼痛，按照 WHO 推荐的“三阶梯”治疗原则，按时、个体化口服止痛药物，80%～90%的癌症疼痛是可以得到缓解[3]

PU-1780

延续护理干预对肝癌介入术后患者营养状况的影响研究

陈瑜
温州医科大学附属第一医院

目的 探讨微信随访干预对肝癌介入术后患者营养状况的影响 **方法** 采用自身对照的方法，建立研究对象微信群，并进行微信随访干预，在随访干预前、干预后 3 个月、干预后 6 个月分别采用健康管理知识调查问卷、自我管理能力评估量表、NRS2002 营养评估量表对研究对象进行评估。**结果** 1、微信随访干预后患者对健康管理知识掌握情况较干预前有提高，患者在自我管理能力以及 NRS2002 营养状况评分较前有提高，其中随访后 6 个月最高，其次为 3 个月，随访前最低。且任意两个不同时间点的评分差异均有统计学意义(P<0.05)。**结论** 微信随访能提高患者对疾病的认知水平，提高患者的自我管理能力和改善患者的营养状况。

PU-1781

肝癌栓塞术后低钾血症的风险评估

陈瑜
温州医科大学附属第一医院

评估肝癌肝动脉化疗栓塞术(Transcatheter Arterial Chemoembolization, TACE)后发生低钾血症的风险因素，并根据危险因素制定相应的护理对策。**方法**:回顾 2014 年 8 月-2015 年 2 月期间本科室 214 例肝癌行 TACE 的患者临床资料，分析引起低钾血症的危险因素。**结果** 本组 23 例患者发生低钾血症，引起低钾血症主要危险因素为：厌食、水化、呕吐、放腹水、出汗，经积极对症处理后，22 例血钾恢复正常，1 例出现肝性脑病昏迷、肝肾综合征，家属放弃治疗自动出院。**结论**:厌食、呕吐、水化、放腹水、出汗是 TACE 术后低钾血症的危险因素。低钾风险量表有利于制定护理对策。

CT 引导下肺穿刺活检术并发肺出血、咯血相关因素分析

陈延帆,任心畅,朱佩佩,吴海
温州市人民医院

【摘要】目的探讨 CT 定位下经皮肺穿刺活检术并发肺出血、咯血的影响因素。 方法 CT 引导下应用国产 GMT 半自动活检针对 383 例患者行经皮肺穿刺活检术，将患者的年龄、性别、病灶大小、穿刺时间、病灶深度、切割组织的次数、病灶是否实性、穿刺体位、慢性肺部病变等相关因素分为不同等级资料，卡方分析不同等级资料之间并发症发生率有无差异性，Logistic 回归分析并发症发生的独立危险因素。 结果 383 例患者术后出现出血 68 例(占 25.5%)，咯血 17 例(占 24.5%)，卡方分析显示术后出血在病灶大小、病灶深度、穿刺时间、切割组织的次数及病灶是否实性之不同组别之间存在差异性(P < 0.05)；术后咯血除以上因素外，还跟穿刺体位、患者年龄大小不同存在差异，差异有统计学意义(P < 0.05)。多因素 Logistic 回归分析显示病灶大小、病灶深度、病灶是否实性在出血并发症中具独立危险因素。结论 肺出血、咯血是肺穿刺活检术常见且严重的并发症，熟悉相关影响因素，可以帮助我们尽量避免该并发症的发生。

TACE 术中应用三氧化二砷（ATO）载药微球与 ATO 碘化油乳液治疗肝细胞癌的安全性和有效性分析

琚书光,段旭华
郑州大学第一附属医院

目的 评价 TACE 术中应用伽俐生载药栓塞微球（CB）加载三氧化二砷（ATO）与 ATO 碘化油乳液治疗肝细胞癌的安全性和有效性。**方法** 选择 2017 年 1 月至 2018 年 9 月于我科行 TACE 治疗的 86 例肝细胞癌患者，根据术中应用栓塞材料，分为 ATO 载药微球栓塞组（CBATO 组，n=38）和 ATO 碘化油乳液组（cTACE 组，n=48）。对比两组在首次 TACE 术后的不良反应程度，比较两组术前、术后 7 天、3 月、6 月血常规、肝肾功能，分析 CBATO 的安全性；记录两组患者首次治疗前、治疗后 3 月及 6 月的 CT 或 MR 结果，评估 CBATO 的有效性，比较两组总生存期和无进展生存期。**结果** 两组患者首次 TACE 术后不良反应主要表现为发热、疼痛及恶心呕吐，CBATO 组恶心呕吐程度较 cTACE 组轻（*P*=0.017）。两组患者肝功能水平在术后 7 天较术前升高，术后 3 月逐渐恢复至基线水平。两组患者术后均未出现骨髓抑制及肾功能损害。CBATO 组和 cTACE 组术后 3 月疾病缓解率（ORR）分别为 78.9%和 52.1%（*P*=0.01）；术后 6 月 ORR 分别为 60.5%和 33.3%（*P*=0.012）。CBATO 组和 cTACE 组术后 3 月疾病控制率(DCR) 分别为 78.9%和 68.8%（*P*=0.289）；术后 6 月 DCR 分别为 71.1%和 33.3%,差异具有统计学意义（*P*=0.001）。CBATO 组的中位总生存期（OS）为 548 天，cTACE 组的中位总生存期为 404 天，两组间差异具有统计学意义（*P*=0.021）；CBATO 组的中位无进展生存期（PFS）为 308 天，cTACE 组的中位无进展生存期为 148 天，两组间差异具有统计学意义（*P*=0.044）。多项 logistic 回归分析结果显示：组别、ECOG 评分及术前甲胎蛋白等因素对术后 6 月肿瘤控制水平影响较大。**结论** TACE 术中应用 CBATO 治疗肝细胞癌具备安全性且近期疗效好。

CT 引导下激光消融肺组织相关参数的研究

李萌
河北医科大学第四医院

【目的】在 CT 引导下利用不同参数进行激光消融，探索激光消融肺组织的最佳参数。【方法】取健康成年家兔 15 只，体重范围 4.09-5.21Kg，平均体重（4.23±0.65）Kg，将所有家兔完全随机分为 3 组，A 组平均体重（4.07±0.23）Kg，B 组平均体重（4.34±0.25）Kg ，C 组平均体重（4.15±0.65）Kg，将 3 组家兔分别以 CT 引导下肺穿刺的方式，对目标肺组织进行激光消融，其中，A 组参数 10W/10min，B 组参数 5W/20min，C 组参数 10W/20min。每只家兔均取仰卧位，经耳缘静脉静推水合氯荃全麻，左右入组家兔均取左侧胸壁局部脱毛备皮，采用我科自行设计的 18G 穿刺空心套管针，在 CT 引导下经皮肺穿刺，均穿刺至左肺下叶肺组织，由穿刺针空心针管置入激光光纤，采用预定参数进行激光消融。消融后处死，解剖肺组织并对消融灶进行测量。所有家兔肺组织目标区域均形成以穿刺针尖为中心的类圆形消融灶，由内向外分为空洞区、碳化区、凝固带及渗出带。对 3 组消融灶相关数据进行两两对比。【结果】A 组空洞区 6.2±0.7；碳化区 3.0±0.4；凝固坏死区 5.3±1.1；炎性渗出区 2.1±0.2，B 组四层区域直径分别为 7.1±0.8；3.2±0.3；5.7±0.5；2.6±0.1，C 组四层区域分别为 7.2±0.6；3.5±0.4；6.0±0.2；2.8±0.3【结论】使用激光消融的方法可快速、安全、有效，为激光消融肺组织提供依据。

CalliSpheres 载药微球 TACE 治疗中晚期肝癌的安全性及有效性分析

谢璇丞,赵卫
昆明医学院第一附属医院

[摘 要] 目的 探讨 CalliSpheres 载药微球动脉化疗栓塞术（Drug-eluting beads transarterial chemoembolization，DEB-TACE）治疗中晚期肝癌的安全性及有效性。 **方法** 回顾性分析我院 2016 年 7 月至 2018 年 7 月采取 DEB -TACE 及传统碘化油栓塞（cTACE）治疗的 79 例中晚期肝癌患者临床资料，比较两组患者术后 1 月肿瘤缓解率、术后不良反应及肝功能指标变化。**结果** 两组患者的基线数据差异无统计学意义（$P>0.05$）。术后 1 月 DEB-TACE 肿瘤缓解率高于 cTACE 组（$P<0.05$）。术后 3 天，cTACE 组谷丙转氨酶（ALT）和谷草转氨酶（AST）较 DEB-TACE 组明显升高；术后 5 天，DEB-TACE 组 ALT 较 cTACE 组明显下降；术后 1 月，两组患者各项肝功能指标均恢复正常，DEB-TACE 组间接胆红素（IBIL）及白蛋白（ALB）较 cTACE 组低，差异均有统计学意义（P均 <0.05）。DEB-TACE 组患者呕吐反应较 cTACE 组发生率低、程度更轻（$P<0.05$）。两组患者术后均无严重并发症。**结论** CalliSpheres 载药微球 TACE 治疗中晚期肝癌患者不良反应少、肝损伤小、短期疗效好，值得临床推广。

子宫肌瘤介入治疗的现状及研究进展

王飞,赵卫

昆明医学院第一附属医院

子宫肌瘤是妇科常见良性肿瘤。部分患者有月经增多、子宫异常出血、压迫等临床症状，严重影响健康相关生活质量和生育能力，而需进一步治疗。新兴的介入治疗方式具有低侵袭性、住院时间短、并发症少等特点，并且可以在保证疗效的前提下保留女性的生殖功能，得到了越来越广泛的应用。目前，常用的介入治疗方法包括子宫动脉栓塞术（Uterine Artery Embolization, UAE）、高强度聚焦超声（High-Intensity Focused Ultrasound, HIFU）和子宫肌瘤射频/微波消融术（Radiofrequency/Microwave Ablation, RFA/MWA）。本文主要就这三种介入治疗方式的临床应用及研究进展加以综述，以期为临床提供参考。

循证护理在肝癌化疗栓塞术患者中的疗效观察

张盼
中国科学技术大学附属第一医院（安徽省立医院）

目的 观察循证护理对原发性肝癌介入术后并发症的干预效果；**方法** 选取 2017 年 6 月至 2018 年 6 月我科 80 例肝癌肝动脉化疗栓塞手术患者，随机分为循证组（40 例），常规组（40 例）。循证组患者采用循证护理，常规组患者采用常规护理，对两组患者的护理效果进行比较；**结果** 循证组非常满意率 85.0%(34/40)、较为满意率 15.0%(6/40),护理满意度为 100.0%(40/40)；常规组非常满意率 55.0%(22/40)、较为满意率 32.5%(13/40),不满意度为 12.5%(5/40)，护理满意度为 87.5%(35/40)；两组护理满意度组间比较差异具有统计学意义（χ^2=7.67,P<0.05） 循证组患者肝动脉化疗栓塞术后出现并发症的概率为 17.5%，常规组为 72.5%，两组比较差异有统计学意义（p<0.05），循证组患者护理后生活质量等指标得分高于对照组（p<0.05）；**结论** 循证护理可以有效的降低肝癌患者肝动脉化疗栓塞术后并发症的发生率，提高患者生存质量并另患者的满意度增加，临床值得倡导。

CT 引导下碘 125 放射性粒子植入治疗肺癌并发症的回顾性临床观察

刘登尧,黄伍奎,李建邦,王海林,樊喜文,杨树法
新疆医科大学附属肿瘤医院

目的 观察 CT 引导下碘 125 放射性粒子植入治疗肺癌患者的并发症。**方法** 回顾性分析我科 2018 年 9 月至 2018 年 10 月接受 CT 引导下碘 125 放射性粒子植入治疗的 17 例肺癌患者，分别于术后 0 月，2 月，4 月行 CT 扫描并剂量验证，观察气胸、咯血、粒子脱落、发热、放射性肺炎等并发症。**结果** 17 例患者共进行粒子植入 23 次，粒子植入治疗过程中发生气胸 5 例次（21.7%），其中 3 例经观察或抽气治疗，2 例放置胸腔闭式引流管，气胸患者中 1 例出现皮下气肿；咯血 6 例次（26.1%）；3 例患者在术后 2 个月随访时发现粒子脱落至胸腔（13.0%）；发热 1 例次（4.3%），所有并发症经针对性治疗后均治愈出院，未发生放射性肺炎、空气栓塞、手术相关死亡等严重并发症。**结论** CT 引导下碘 125 放射性粒子植入治疗肺癌常见并发症为气胸、咯血，少数病例发生粒子脱落，针对性的治疗可以有效减少并发症产生的严重后果。

TACE 联合微波消融术治疗中晚期肺癌的效果分析

喻瑜,杜希剑,郑小宁,陈斌
咸宁市中心医院

摘要：目的 分析经皮动脉灌注栓塞（TACE）联合微波消融术治疗中晚期肺癌的效果。

方法 选取 2010 年 9 月 1 日-2018 年 9 月 31 日我院介入科收治 142 例中晚期肺癌患者，根据治疗方法的不同，分为研究组及对照组两组，其中研究组患者接受肿瘤供血动脉 TACE 治疗术(化疗方案：吉西他滨 0.2g+洛铂 50mg；栓塞材料：碘油及部分明胶海绵)，术后第 7 天接受微波消融治疗肿瘤，对照组患者单纯 TACE 治疗，2 组患者术后均使用增强 CT 进行随访观察肿瘤变化，观察并记录患者临床症状变化，肿块的影像学改，术后并发症的情况。

结果 研究组患者治疗后的临床总有效率高于对照组的患者。患者术后 1、3、6 个月的客观有效率（ORP）高于对照组，研究组治疗后 12 个月的 QOL 高于对照组。发生术后并发症，包括腹痛、恶心、呕吐反应，无统计学意义（P＜0.05），均于 1 周内好转。

结论 TACE 联合微波消融术对中晚期肺癌的治疗优于单纯使用 TACE 治疗，且安全性较高。

关键词 肺动脉化疗栓塞术；微波消融；肺癌

子宫动脉栓塞治疗子宫肌瘤的研究现状

张学贤,赵卫
昆明医科大学第一附属医院

子宫肌瘤是女性生殖系统常见的良性肿瘤，35 岁左右的发病人数达到了 40% 左右，常表现为经期延长、月经量增加、贫血甚至不孕等症状。子宫肌瘤的治疗方法有药物治疗、子宫切除术、肌瘤剔除术、超声消融术（High-Intensity Focused Ultrasound,HIFU）及子宫动脉栓塞术（Uterine Artery Embolization，UAE）等。但传统的外科手术治疗给患者机体造成的创伤较大，单纯肌瘤剔除术及药物治疗子宫肌瘤复发率高，子宫切除术不适用于有生育要求或者希望保留子宫的患者;HIFU 对于富血供的肌瘤疗效较差。UAE 治疗子宫肌瘤, 具有微创、有效,并发症少,可以保留子宫及其功能,可重复治疗,是临床治疗子宫肌瘤的又一重要选择,有着广泛的应用前景。

Simultaneous Gemcitabine and Irreversible Electroporation Treatment for Unresectable Pancreatic

Cancer: Preliminary Experience in a Prospective Randomized Controlled Trial

Lizhi Niu, Yangyang Ma, Jianyng Zeng, Shupeng Liu, Zilin Qin, Jibin Chen
Fuda Cancer Hospital

Purpose: To evaluate the safety and effectiveness of simultaneous gemcitabine administration and irreversible electroporation (IRE) for treating unresectable pancreatic cancer (UPC).
Methods: A prospective, randomized controlled trial including 60 patients with UPC and no prior chemotherapy or radiotherapy was conducted between October 2016 and January 2018. Patients with locally advanced pancreatic cancer (LAPC; n=23) and metastatic pancreatic cancer (MPC; n=37) were divided into two groups. The GEM–IRE group received gemcitabine and IRE simultaneously; whereas, the IRE–GEM group received IRE followed by gemcitabine.
Results: Median follow-up was 8.2 months (2.7–15.4 months). Technical success rates were 90.0% and 86.6% in the GEM–IRE and IRE–GEM groups, respectively. The median progression free survival (PFS) of LAPC patients in the GEM–IRE group was significantly higher than that of LAPC patients in the IRE–GEM group (12.5 versus 10.9 months; hazard ratio [HR], 0.32; P = 0.0186). There was no statistically significant difference in the median PFS for MPC patients between the two groups (6.2 versus 5.4 months; hazard ratio [HR], 0.48; P = 0.1033). The objective response rate (ORR) was higher for the GEM–IRE group than the IRE–GEM group at 3 and 6 months (83.3% versus 65.5% and 70.0% versus 53.8%, respectively). Three major adverse reactions were seen; all resolved after symptomatic treatment. There were no operative mortalities within 30 days.
Conclusion: The simultaneous use of gemcitabine and IRE is effective and well-tolerated. Therefore, this combination therapy may be a better choice for the treatment of LAPC.

肝糖原累积症Ⅰ型合并肝腺瘤的介入治疗

周慷
中国医学科学院北京协和医院

目的 评估经动脉化疗栓塞术联合微波消融治疗肝糖原累积症 I 型合并肝腺瘤的安全性和有效性。**方法** 2012 年 1 月-2016 年 1 月，肝糖原累积症 1 型合并肝腺瘤患者 23 例（平均年龄 14 岁±8 岁，男 18 例，女 5 例），共有肝腺瘤 36 个，平均直径（4.2±2.2cm），均采用经动脉化疗栓塞术联合微波消融术治疗。术后 6 个月随访腹部动态增强 MRI，测量其肿瘤直径变化。同时，评估经动脉化疗栓塞术联合微波消融的并发症。**结果** 所有患者均成功接受了经动脉化疗栓塞术联合微波消融治疗，其中 5 例患者接受了 2 次经动脉化疗栓塞术。6 个月随访腹部动态增强 MRI 肿瘤直径平均减少 93.2%。1 例患者术后 24 小时内发生严重的代谢性酸中毒；1 例患者发生穿刺部位皮下脓肿。**结论** 经动脉化疗栓塞术联合微波消融治疗肝糖原累积症 I 型合并肝腺瘤能有效抑制腺瘤的生长，减少恶变几率，是安全有效的。

护理干预在宫颈癌患者介入治疗围术期中的应用

吴迪,李敏

吉林大学第一医院

目的 探讨护理干预在宫颈癌患者介入治疗围术期中的应用。**方法** 选取我院 2018 年 3 月至 2019 年 3 月收治的 48 例宫颈癌介入治疗的患者随机分为两组。对照组患者 40 例，采用常规护理，包括严格遵医嘱给予护理干预和药物使用，并适当讲解疾病相关知识。观察组在对照组常规护理的基础上给予舒适护理模式，包括介入手术前、手术中和手术后的舒适护理，具体方法如下：（1）术前：为患者提供整洁、安静的病房环境，并给予适当的安慰和心理疏导。针对患者的文化程度、接受能力和年龄等因素讲解宫颈癌相关知识，告知患者及家属宫颈癌介入术后可能出现的并发症、手术目的及术后预期效果。（2）术中：调节手术室的温度湿度，术中随时监测生命体征变化，尽可能减少患者隐私部位暴露。（3）术后：病房环境适宜严密监测患者的生命体征，加压包扎期间及留置动脉导管期间，严格绝对卧床，双下肢平卧制动，告知陪护人员对双下肢进行有效按摩。关注用药副作用。预防术后感染。观察患者有无恶心呕吐情况。如若患者留置动脉和鞘管，则导管标示应清晰醒目，妥善固定。正确的饮食指导。准确评估患者发生疼痛的部位、疼痛程度及疼痛性质，遵医嘱应用止痛的药物缓解患者疼痛情况。患者术后吸收热，应多摄入水分。保持床单元清洁干燥。患者发生如若发生呕吐，则患者头部偏向一侧，及时清除口鼻腔分泌物，关注口腔清洁情况，必要时给予口腔护理。化疗栓塞后肿瘤组织会坏死并且脱落，阴道有较多血性粘液流出体外，观察分泌物的性质和量，出血及排液情况，保持外阴清洁干燥。由于髂内动脉被栓塞，会导致臀部肌肉皮肤血液供应受阻，指导患者术后勤翻身，必要时给予气垫床护理及减压贴保护，预防压疮发生。对两组患者介入术后生活质量进行对比。**结果** 观察组患者的焦虑情况、抑郁情况及满意度情况优于对照组（P<0.05）。**结论** 对宫颈癌介入治疗患者进行护理干预，给予舒适护理模式可提高护理质量及患者满意度，值得临床推广。

肝癌载药微球栓塞后肝脓肿形成处理对策及原因分析

陈柱
中南大学湘雅二医院

目的 鉴于肝癌载药微球栓塞术后肝脓肿形成的发生率低、死亡率高，为了引起介入医生对此类并发症的重视，从而提高治疗效果，本文通过对一例治疗成功的 D-TACE 术后肝脓肿患者的治疗情况进行总结分析，并结合既往文献报道，探讨载药微球栓塞术后肝脓肿形成的危险因素及处理策略。
材料与方法 男性患者，54 岁，肝癌切除术后半年复发。发现复发病变后 3 个月内先后行 2 次 C-TACE（超乳化碘油栓塞，奈达铂+吡柔比星+雷替曲塞灌注化疗）和 1 次 D-TACE（100-300μm 的载药微球加载吡柔比星 80mg 栓塞）。D-TACE 术后 2 周出现 40℃的高热，术后 3 周确诊手术区域肝脓肿形成。予以抗感染、穿刺置管引流及其他对症支持治疗。
结果 该肝癌患者载药微球栓塞术后肝脓肿形成，经过治疗病情得到控制，但反复发作，脓肿出现 8 个月后才基本消失。治疗过程大致分为 3 个阶段。第 1 阶段为脓肿出现后 1 个月，经过抗生素治疗及穿刺置管引流，脓肿部分控制，体温恢复正常。此阶段治疗后体温持续正常 1 个月。第 2 阶段为脓肿出现后 3-4 个月，患者再次发热，脓肿仍有脓液，出现菌血症，右侧胸水及右下肺不张，治疗后好转，体温再次正常。此阶段治疗后体温持续正常 2 个月。第 3 阶段为脓肿出现后 7-8 月，患者咳嗽咳痰伴发热，无菌血症，脓肿较前缩小，右侧胸水及右下肺不张较前加重，并出现右肺感染，痰培养阳性，对症支持治疗后脓肿基本消失后拔除引流管，右侧胸水减少并包裹，右下肺复张，右肺感染得到控制，体温正常。
结论 1、D-TACE 术后肝脓肿形成发生率低但死亡率高，对于有危险因素（如肝脏或胆道外科术后、Oddi 括约肌功能异常、糖尿病等）的患者需提高警惕。2、D-TACE 术后肝脓肿出现后应予以积极治疗，如置管引流、抗生素等，但治疗效果可能不佳，容易反复，需做好长期治疗的准备。3、肝脓肿可并发右侧胸水，进而出现右肺不张及感染，需引起重视。

Factors influencing MR changes associated with the pelvic fascia after high-intensity focused ultrasound ablation of uterine fibroids

Yajiao Zhang,Zhibo Xiao,Furong Lv,Bo Sheng,Jia Li,Jinyun Chen
the First Affiliated Hospital of Chongqing Medical University

Purpose: To investigate the factors influencing MR changes associated with the pelvic fascia after high-intensity focused ultrasound ablation of uterine fibroids.
Methods: Pelvic MRI and clinical data from 134 patients with uterine fibroids who were treated with high intensity focused ultrasound (HIFU) were analyzed retrospectively. The patients were divided into a swelling group and a nonswelling group according to MRI findings before and after HIFU treatment. The relationship between uterine fibroid characteristics and treatment parameters and pelvic fascial swelling were analyzed using univariate and binary logistic regression analyses.

Results: Pelvic fascial swelling was observed in 91 (67.91%) patients. Univariate analysis revealed that fibroid location, the distance from the fibroid ventral side to the skin, the distance from the posterior edge of the fibroid to the sacrum, sonication time, treatment time, treatment intensity, treatment dose, and EEF all affected pelvic fascial swelling ($p<0.05$). Subsequently, binary logistic regression analysis revealed that distance from the posterior edge of the fibroid to the sacrum ($p=0.000$, OR=1.092, 95% CI 1.0541-1.131) and sonication time ($p=0.012$, OR=0.993, 95% CI 0.988-0.999) were significantly correlated with fascial swelling.
Conclusion: The distance from the fibroid to the sacrum, treatment dose and sonication time all play important roles in the development of pelvic fascial swelling.

减少微波消融治疗特殊部位肝肿瘤并发症的方法研究

宋军伟
淄博矿业集团有限责任公司中心医院

目的 探讨特殊部位肝肿瘤在经皮超声下微波消融治疗中并发症的原因及防治措施，以期降低其发生率。
方法 回顾性分析 2016 年 2 月—2018 年 3 月收治的特殊部位肝肿瘤患者 74 例，其中原发性肝癌 45 例，肝血管瘤 13 例，肝转移癌 16 例。其中近肝门部 5 个，近结肠旁 6 个，近膈肌 18 个，近心包旁 5 个，近胃小弯 9 个，下腔静脉旁 8 个，胆囊旁 11 个，尾状叶结节 5 个，肝脏边缘 25 个。采用经皮超声下微波消融进行治疗，观察其并发症发生情况并分析其原因。

结果 本组病例出现结肠穿孔并严重腹膜炎 1 例，开腹清洗腹腔后置管引流，并行结肠造瘘术，7 个月后将造瘘结肠回纳，患者最终治愈；胸腹腔积液 4 例，经保守治疗或穿刺抽液后好转；膈疝 1 例，因疝口较小未做特殊处理；胆漏 2 例，1 例保守治疗后好转，1 例并发胆汁性腹膜炎，手术开腹放置引流管 3 周后好转；肝被膜下出血 7 例，经保守治疗后均慢慢吸收；1 例患者消融过程中出现心率减慢至 30 次/min，对症治疗后恢复正常。

结论 特殊部位肝肿瘤经皮超声下微波消融难度大，并发症发生率高，需提前做好预防及处理。灵活运用多种手段规避风险，减少并发症。

Perforation of the duodenum because of thermal injury after microwave ablation for liver metastasis: a case for caution

Wenli Huo,Hongyuan Liang,Hongzan Sun,Zaiming Lu
Shengjing Hospital of China Medical University

Objective: Several complications related to microwave ablation (MWA) for liver tumors causing thermal damage of adjacent organs have been reported. We report a case of duodenal perforation caused by thermal injury during MWA.

Materials and Methods: A 61-year-old man underwent radical resection of sigmoid carcinoma of the abdomen. After half a year of follow-up, imaging examination showed metastasis located in segment 6 of the liver. After treatment with liver protection and acid inhibition, percutaneous MWA of the liver tumors was performed. On the 4th day after MWA, S6 metastasis, plate-shaped abdomen, tenderness, and rebound tenderness was observed. The patient underwent contrast-enhanced computed tomography (CT) of the upper abdomen which resulted in duodenal perforation and peritonitis.

Results: At the emergency department, the patient underwent laparotomy and duodenal perforation repair. After 2 weeks of treatment with anti-inflammatories, acid-suppression, and symptomatic nutritional support, the patient was in a good general condition with stable vital signs. Three months later, enhanced CT of the upper abdomen showed a healed duodenal perforation, absorption of the upper abdominal exudate, and no evidence of metastatic recurrence.

Conclusion: Caution should be exercised when patients with a history of intraperitoneal inflammation or abdominal surgery undergo thermal ablation, as there is a risk of accidental thermal damage to organs.

miR-23b 通过 IL-11 对 SMMC-7721 细胞增殖的影响

王黎洲,周石
贵州医科大学附属医院

目的:探讨 HCC 组织中 miR-23b 表达与癌症进展之间的关系，以及 miR-23b 是否通过靶向白细胞介素（Interleukin，IL）-11，从而影响肝癌细胞的增殖。**方法** 通过免疫组织化学分析和用逆转

录-定量聚合酶链反应（Reverse transcription-quantitative polymerase chain reaction，RT-qPCR）检查 HCC 和相邻正常肝组织中 IL-11 和 IL-11Rα 的表达水平。使用 RT-qPCR 及蛋白印迹法检测不同 HCC 细胞株 SMMC-7721、LM3 和 Hep3B 中 miR-23b 的相对表达水平，随后检测转染了 miR-23b 激动剂、拮抗剂和对照组 SMMC-7721 细胞中 miR-23b，IL-11 和 IL-11Rα 的表达水平。通过集落形成测定及细胞凋亡分析检测转染 miR-23b 激动剂和拮抗剂的 SMMC-7721 细胞增殖和凋亡情况。使用荧光素酶测定系统了解 IL- 11 是否为 miR-23b 的直接作用靶标。最后使用集落形成和流式细胞仪测定用 pcDNA-IL-11 转染的 miR-23b 激动剂和用 siDNA 转染的 miR-23b 拮抗剂对 SMMC-7721 细胞增殖和凋亡的影响。**结果** HCC 组织中 miR-23b 表达与癌症进展之间呈负相关，与邻近正常肝组织相比，miR-23b 的表达在 HCC 组织中明显下调，而 IL-11 和 IL-11Rα 的表达明显上调，miR-23b 表达与 IL-11 和 IL-11Rα 的表达也呈负相关。IL-11 是 miR-23b 调节 HCC 进展的直接靶标，miR-23b 能够通过靶向 IL-11 来抑制 SMMC-7721 细胞的增殖并促进其凋亡。**结论** 我们的研究表明 miR-23b 能够通过调节 IL- 11 和 IL-11Rα 的表达来抑制肝癌的进展，其可能通过直接下调 IL-11 表达而在 HCC 进展中充当抑癌剂的作用，将来可能是肝癌治疗的一个潜在靶点。

探讨 DSA 联合彩超引导穿刺行 PTCD 治疗恶性梗阻性黄疸的临床应用价值

刘强
上海交通大学附属第六人民医院

目的 探讨 DSA 联合彩超引导穿刺行 PTCD 治疗恶性梗阻性黄疸的临床应用价值，提升 PTCD 的穿刺成功率及内外引流率，减少并发症。方法 36 例恶性梗阻性黄疸患者在彩超引导下穿刺进针，随后在 DSA 下推送导丝导管至目标区域，行内外引流。结果 36 例患者，一次穿刺成功率 89%，两次穿刺成功率 100%；置内外引流管一次成功率 81%，总内外引流成功率 94%；病人临床症状均明显改善，未发生严重并发症。结论 DSA 联合彩超引导穿刺行 PTCD，穿刺时安全简便、成功率高，置管时准确可靠、内外引流率高，是较为理想的姑息性治疗恶性梗阻性黄疸的方法。

非小细胞肺癌 EGFR-TKI 耐药后再次活检 T790M 阳性的预测因素分析

王阳阳,周志刚
郑州大学第一附属医院

目的:探索非小细胞肺癌 EGFR-TKI 耐药后再次穿刺活检 T790M 阳性的预测因素。**方法** 回顾性研究 2016-2018 年郑州大学第一附属医院进行的 151 例 CT 引导下非小细胞肺癌经过 EGFR-TKI 和（或）化疗治疗后再次活检患者临床特征，治疗方案及活检信息，分为 T790M 阳性组和阴性组，探索 T790M 阳性预测因素。**结果** 151 例患者平均年龄 57.7±10.7 岁，女性 103 (68.2%)例；腺癌 146（96.7%）例；TKI 单药，TKI 联合化疗分别为 73 (48.3%)例，78 (51.7%) 例；治疗平均时间 18.3±12.1 月；原发灶取材 108 (71.5%)例。T790M 突变率为 56.3%（85/151），EGFR 基因突变不一致率为 58.3%。T790M 阳性率单因素分析显示与 EGFR 突变状态（P=0.08）、治疗时间（P=0.02），活检病灶（P=0.08）有关；Logistic 多因素分析结果显示治疗时间是 T790M 阳性的独立风险因素（OR=1.06; 95%CI：1.01,1.11; P = 0.029）。**结论** EGFR 突变状态和活检病灶组间 T790M 阳性率有差异；治疗时间是 T70M 阳性的独立风险因素。

TACE 联合索拉菲尼对比索拉菲尼在合并微血管侵犯的肝癌术后疗效分析

田震,朱能,李宏,蒋孙路,高建龙,李子林,张新华,陈永忠
湖北省肿瘤医院

目的 对比肝动脉化疗栓塞（TACE）联合索拉菲尼对比索拉菲尼单药在合并微血管侵犯的肝癌术后的临床疗效和安全性分析

方法 回顾性分析华中科技大学同济医学院附属湖北肿瘤医院微创介入中心自 2013 年-2018 年期间收治的 179 例首次确诊后行肝切除术的有微血管侵犯肝癌患者，随机分配到联合治疗组（TACE 术后 1 周服用索拉菲尼 400mg 每天两次，出现不良反应难以耐受时剂量减半）（n＝92）和索拉菲尼治疗组（400mg 每天两次）（n＝87），主要研究终点为总生存期（OS），次要研究终点为无复发存活率（RFS）、疾病无进展生存期（PFS）和肝外转移率

结果 联合治疗组的 1 年、3 年和 5 年 OS 率显著高于索拉菲尼治疗组（93.4%VS78.5%，72.2%VS56.2%和 57.2%VS38.5%，P＜0.05）；联合治疗组的 1 年、3 年和 5 年 RFS 率显著高于索拉菲尼治疗组（71.8%VS56.1%，49.1%VS32.9%和 37.7%VS29.2%，P＜0.05）

联合治疗组 VS 索拉菲尼治疗组的中位 OS 分别为（23.9 个月 VS13.4 个月，P＜0.05）；中位 PFS（19.4 个月 VS13.8 个月，P＜0.05）

随访至 2018 年 12 月联合治疗组 VS 索拉菲尼治疗组的肝外转移率分别为（8.5%VS20.6%）7 例（肺转移 4 例，胃肠道转移 1 例，骨转移 2 例）VS19 例（肺转移 14 例，骨转移 3 例，腹腔转移 2 例）

结论 TACE 联合索拉菲尼在治疗合并微血管侵犯的肝癌术后患者具有显著的叠加效应，联合治疗可有效延长术后患者生存期，提高无进展生存时间，增加无复发存活率，降低远处转移率，使肝癌术后患者获益。

PU-1804
多模式联合治疗对比 TACE 治疗在 BCLC B 期肝癌中的临床疗效

田震,朱能,李宏,高建龙,蒋孙路,张新华,陈永忠,李子林
湖北省肿瘤医院

目的 多模式联合治疗[肝动脉化疗栓塞术(transcatheter arterial chemoembolization，TACE)序贯射频消融术（radiofrequency ablation，RFA）治疗]对比单一 TACE 治疗在巴塞罗那临床肝癌分期（Barcelona Clinic Liver Cancer, BCLC）B 期肝癌的疗效、安全性及复发率

方法 回顾性分析华中科技大学同济医学院附属湖北肿瘤医院微创介入中心自 2014-2016 年期间收治的 139 例 BCLC B 期肝癌（平均直径 5.7cm，4.6-8.7cm；多个肿瘤 2-5 个，每个直径≤3cm）。患者被随机分配到联合治疗组（n＝72）和单一 TACE 治疗组（n＝67），主要研究终点为总生存期（OS），次要研究终点为客观缓解率（ORR）、疾病进展时间（TTP）和肿瘤复发率（TR）。

结果 联合治疗组 VS 单一 TACE 治疗组的中位 OS 分别为 38.2 个月和 27.6 个月。

联合治疗组 VS 单一 TACE 治疗组 1 年、3 年和 5 年的总生存率分别为 87.4%VS67.2%、68.7%VS35.5%、30.8%VS16.9%。

联合治疗组 VS 单一 TACE 治疗组 1 年、3 年和 5 年的 ORR 分别为 56.25%VS44.4%、39.7%VS24.5%、16.8%VS8.9%。

联合治疗组 VS 单一 TACE 治疗组的 TTP 分别为 15.7 个月 VS11.5 个月。

联合治疗组 VS 单一 TACE 治疗组 1 年、3 年和 5 年的 TR 率分别为 19.5%VS32.4%、37%VS56.1 %、55.4%VS87.6%。

安全性：两组患者并发症发生率及死亡率比较无统计学差异（P＜0.05）。

结论 TACE 联合 RFA 可有效治疗 BCLC B 期肝癌患者。TACE 联合射频消融能明显增强 TACE 的疗效，延长 BCLC B 期肝癌患者的总生存期，减少术后复发率并提高生存率，降低疾病进展时间，其效果优于单纯 TACE 治疗。

PU-1805
射频热疗协同增效单纯疱疹病毒胸苷激酶/更昔洛韦基因治疗大鼠肝癌的实验研究

熊付,郑传胜
华中科技大学同济医学院附属协和医院

目的 探索一种利用光学/超声成像监测大鼠原位癌的 RF 热疗（RFH）增强单纯疱疹病毒胸苷激酶/更昔洛韦自杀基因治疗的新方法。
材料与方法 用慢病毒/萤光素酶基因转导大鼠肝癌细胞。 （i）HSV-TK / GCV-介导的基因治疗联合 RFH 的不同处理分为四组：（1）HSV-TK / GCV 介导的基因治疗联合 RFH; （2）单独的基因治疗; （3）仅 RFH 和磷酸盐缓冲盐水（PBS）。通过 Western 印迹验证细胞和肿瘤中的 HSV-tk 基因表达，采用共聚焦显微镜和 MTS 评估细胞活力。生物发光光学成像和超声成像被用于不同时间点监测每个动物组中的肿瘤的光子信号和瘤体大小变化。
结果 在体外实验中，与单纯的基因治疗或 RFH 和 PBS 相比，MTS 结果显示联合治疗组中的细胞增殖最弱（26.1±3.2%比 50.4±4.6%比 82.9±6.3%比 100% ，p <0.01）。在体内实验中，与对照组相比，超声成像结果显示联合治疗组中肿瘤体积最小（0.28±0.11,1.28±0.23 比 4.64±0.35 比 6.37±0.36，p <0.05）。与三个对照组（0.57±0.09,1.06±0.10 比 3.43±0.27 对 3.85±0.12，p <0.05）相比，联合治疗组的生物发光光学成像进一步显示生物发光信号强度显着降低。
结论 在体外实验中， MTS 结果显示联合治疗组中的细胞增殖最弱该结果与共焦显微镜所计算的活细胞数量和光学成像所获取的光密度结果相一致。在体内实验中，超声成像结果显示联合治疗组中肿瘤体积最小与三个对照组，联合治疗组的生物发光光学成像进一步显示生物发光信号强度显着降低。这些成像结果进一步证实了联合治疗组中显着增加的凋亡细胞。

PU-1806
医-技-护联合模式在肝癌多次介入术后患者症状管理的影响

唐丽
华中科技大学同济医学院附属协和医院

摘要：[目的]探讨在医-技-护联合模式下，采用合理的症状管理，在肝癌多次介入患者术后不适症状的应用效果。[方法]选取 2018 年 10 月-2018 年 12 月于我院介入科行肝癌介入术（>3 次）的患者 60 例作为干预组。对照组给予常规护理，干预组在医-技-护联合模式下，实施症状管理干预。比较 2 组术后患者恶心、呕吐、发热、疼痛、疲乏、焦虑、便秘的发生率，比较有统计学意义（P<0.05）.[结论]通过医-技-护联合，在各个环节加强症状管理，可明显改善患者术后不适症状，有效帮助患者减轻症状困扰。促进患者早日康复，加强患者对疾病的治疗信心。

聚乙烯醇栓塞微球联合碘油介入治疗中晚期肝癌的近期疗效及对不良反应的影响

吴钢飞,李超平,李卫锋,范明华
丰城市人民医院

目的 研究聚乙烯醇栓塞微球联合碘油介入治疗中晚期肝癌的近期疗效及对不良反应的影响。**方法** 选择 2017 年 1 月至 2019 年 1 月本院收治的 80 例中晚期肝癌患者，根据随机双盲法分为两组，每组各 40 例。对照组应用碘油介入治疗，观察组行聚乙烯醇栓塞微球联合碘油介入治疗。观察两组治疗 1 个月后近期疗效及不良反应。**结果** 治疗 1 个月后，观察组的疾病控制率（95.00%）高于对照组（80.00%），差异具有统计学意义（$P<0.05$）；治疗后，两组不良反应发生率相比，差异无统计学意义（$P>0.05$）。**结论** 聚乙烯醇栓塞微球联合碘油介入治疗中晚期肝癌，可提高近期疗效，减少患者不良反应，值得应用推广。

PU-1808
基于时机理论对肝癌 D-TACE 患者不同阶段疾病体验的质性研究

张华珍
华中科技大学同济医学院附属协和医院

【摘要】目的 以时机理论为框架，探讨肝癌 DEB-TACE（Drug-eluting bead transarterial chemoembolization）患者在疾病不同阶段的疾病体验。方法 采用质性研究中的现象学研究法，对 43 例行肝癌 DEB-TACE 术的患者进行非结构性访谈，并以 Colaizzi 现象学研究方法进行资料分析。结果 基于时机理论提炼出 5 个关于肝癌 DEB-TACE 患者不同阶段疾病体验的主题，分别是：(术前准备期：应激反应强烈；(手术期：应对态度与术中反应不一；(术后恢复期：信息与心理支持不足；④出院准备期：失助感与经济支持；⑤出院调整期：延续性支持需求。结论 肝癌 DEB-TACE 患者在疾病不同阶段的疾病体验是动态变化的，护理人员应有针对性地实施有效的动态护理干预，尽最大努力满足患者的需求，使患者获得较好疗效和提高治疗的满意度。

PU-1809
化疗栓塞联合阿帕替尼治疗进展期肝细胞癌：生存及影响因素分析

刘子怡,梁斌,郑传胜,冯敢生
华中科技大学同济医学院附属协和医院放射科

摘要：目的 评价经动脉化疗栓塞（transarterial chemoembolization, TACE）联合阿帕替尼治疗进展期肝细胞癌（hepatocellular carcinoma, HCC）患者的生存时间，并分析影响患者生存的相关因素。**方法** 连续性收集 2015 年 6 月至 2017 年 5 月在我院确诊为 HCC 并接受 TACE 联合阿帕替尼治疗的 51 例患者。采用 Kaplan-Meier 法计算患者总生存期（overall survival, OS）和无进展生存期（progression-free survival, PFS）。采用 Log-rank 检验和 Cox 回归模型确定影响患者 OS 的因素。**结果** 本组患者中位 OS 为 15 个月（95%CI：12.380～17.620），1、2、3 年生存率分别为 64.7%，23.5%和 1.8%。中位 PFS 为 10 个月（95% CI：8.388～11.612）。单变量分析，Child-Pugh A（$P=0.006$）、无腹水（$P=0.01$）、出现手足反应（$P=0.005$）、高血压（$P=$

0.05）及肝固有动脉变化率值大（*P*＝0.016）的患者具有更好的 OS。多变量分析，有手足反应（*P*＝0.004）、有高血压（*P*＝0.038）、肝固有动脉变化率值大（*P*＝0.020）是更长 OS 的独立预测因子。**结论** TACE 联合阿帕替尼治疗进展期 HCC 具有较好的长期疗效和安全性。手足综合征、继发性高血压及肝固有动脉变化率与患者 OS 有关。

PU-1810
多功能栓塞微球联合微波消融在兔 VX2 肝肿瘤治疗作用的实验研究

毛景松
厦门大学附属翔安医院

目的 探讨肝动脉注入具有阿霉素缓释、微波增敏功能的多功能栓塞微球在 VX2 肝肿瘤模型中的治疗作用。**方法** 选取 24 只瘤兔，随机分成 4 组，A 组：不给予任何治疗；B 组：单独微波消融；C 组：经肝动脉给予 mPEG-PLGA@ZrO2@(DOX+ILS)微球；D 组：经动脉给予微球合并微波消融。对 B 组及 D 组瘤兔进行微波消融，红外成像仪实时记录消融区域的温度变化。利用 CT 及 MRI DWI 序列测量术前及术后肿瘤体积大小及残留肿瘤的体积大小，肿瘤疗效的评估，利用 HE 染色，观察肿瘤组织病理改变。**结果:**（1）D 组与 B 组消融中心区域温度达到 60℃所需要的时间（5.4±0.89℃，10.4±1.14℃），两组相比较有统计学差异（P<0.001）。两组的平均温度(111.75± 17.16 ° C, 84.58 ± 17.41 ° C, P<0.01)，两组比较有统计学差异。红外成像显示 D 组的消融面积大于 B 组；(2)治疗前先对 4 组动物的基线肿瘤体积进行比较（P>0.05）,四组之间无统计学差异。治疗后 CT 图像扫描:A 组肿瘤体积明显增大，B 组及 C 组体积略增大，D 组无明显变化。D 组与其它三组比较，术后 3d、6d、9d 肿瘤体积差异均有统计学意义（P<0.01）；B 组与 C 组与 A 组之间在治疗后 3d，6d，9d 的肿块体积大小差异均有统计学意义（P<0.05)(3)术后 D 组与其它三组活性肿瘤体积大小有统计学差异（P<0.001）；B 组和 C 组与 A 组之间活性肿瘤体积有统计学差异（P<0.001）(4)HE 染色 D 组肿瘤组织内可见满视野的坏死细胞，未见明显肿瘤细胞，B 组及 C 组内可见肿瘤细胞染色，其内可见坏死区，A 组内可见大量的肿瘤细胞，坏死不明显。**结论** mPEG-PLGA@ZrO2@(DOX+ILS)多功能微球能够起到微波增敏作用，增加消融面积；联合微波消融，栓塞、化疗、消融三位一体的治疗作用，大大的提高了肿瘤的治疗疗效。

PU-1811
TACE 联合阿帕替尼治疗肝细胞癌疗效的观察研究

苏国庆
厦门大学附属翔安医院

目的
通过对比研究 TACE 联合阿帕替尼治疗肝细胞癌的疗效是否优于单纯 TACE,并观察血清中 VEGF-2α及 HIF-2α的变化,研究 TACE 联合阿帕替尼治疗肝细胞癌的疗效,探索适合 TACE 联合阿帕替尼治疗的患者类型.
材料与方法
第一部分:对比研究 TACE 联合阿帕替尼治疗肝细胞癌的患者临床疗效是否优于单纯行 TACE
回顾性分析行 TACE 治疗的 HCC 患者共 86 例,根据其是否口服阿帕替尼将患者分为 A、B 两组：A 组：单纯行 TACE 治疗组（64 例）；B 组 TACE 联合阿帕替尼治疗组（22 例）

第二部分:观察血清中 VEGF-2α 及 HIF-2α 的变化,探索适合 TACE 联合阿帕替尼治疗肝细胞癌的患者.
对比研究 A、B 两组患者治疗前后血清 VEGFR-2α HIF-2α 的变化情况,将 B 组血清 VEGFR-2α 、HIF-2α 初始水平高于基线或血清 VEGFR-2α 、HIF-2α 水平在联合使用阿帕替尼后明显降低的患者定为 B1 组.

结果

A、B 两组之间客观有效率（OR）无统计学差异（P＞0.05）,在肝功能（ALT、AST、总胆红素、直接胆红素）、AFP、白蛋白的变化水平上无统计学差异（P＞0.05）,术后并发症等情况也未见统计学差异（P＞0.05），但在平均手术次数方面 A 组患者高于 B 组患者，手足综合征，高血压，蛋白尿等不良反应发生率 B 组患者则高于 A 组患者（P＜0.05），且 A 组与 B1 之间客观有效率（OR）存在统计学差异（P＜0.05）

结论

TACE 联合阿帕替尼对部分 HCC 患者疗效优于单纯 TACE，主要体 现在延长其再次行介入手术的时间、减少平均手术次数.
2、当检测患者血清 VEGFR-2α 、HIF-2α 水平高于基线时（5224.3pg/ml、524.9pg/ml）或血清 VEGFR-2α 、HIF-2α 水平在联合使用阿帕替尼后明显降低的患者建议联合使用阿帕替尼，

PU-1812
化疗栓塞在恶性黑色素瘤肝转移、软组织肉瘤及骨肉瘤中的应用

郭小朋
华中科技大学同济医学院附属协和医院

经导管动脉内治疗技术 1）经导管动脉栓塞（TAE）； 2）经导管动脉灌注化疗（TAI）； 3）经导管动脉化疗栓塞（包括常规 TACE、载药微球 TACE）； 4）经导管动脉放射栓塞（TARE）。

TACE 治疗原理 1）直接动脉内给药，提高肿瘤内药物浓度，减少全身毒副反应。 2）栓塞肿瘤血管，既可直接诱导肿瘤缺血缺氧性坏死，又能通过减少药物流失、延长药物与肿瘤细胞作用时间、改善肿瘤内药物渗透，增强化疗药物细胞毒效应。 3）载药微球 TACE，微球装载更大剂量化疗药，栓塞后持续释放化疗药，肿瘤内药物浓度更高，全身副作用更低；肿瘤周边动脉栓塞释药，可能对预防肿瘤浸润/转移有效。

恶性黑色素瘤肝转移患者平均生存时间 2-9 个月，化疗栓塞可有效延长患者总生存期且创伤小、恢复快。

TACE 是晚期软组织肉瘤的有效治疗方法，3 年 OS 率为 32.5%，与仅仅化疗相比，导致癌症疼痛 VAS 降低，复发间隔时间延长，DEB-TACE 可被视为对常规全身化疗难以治愈的无法切除的软组织肉瘤的替代治疗选择。

32 例患者进行术前 TACE 在肿瘤标本中发现了广泛的坏死，并且在 5 名 TACE 患者中获得了良好的组织学反应（坏死 90-99%），平均坏死率为 85.5%（81-93%）。治疗后未发现严重并发症。在成功随访 86 个月期间，TACE 治疗 1 年，2 年和 5 年后的存活率分别为 95.5%，72%和 42%。

PU-1813
术前经导管化疗栓塞治疗儿童中晚期肾母细胞瘤效果评估

马晓辉,赖灿
浙江大学医学院附属儿童医院

摘要
目的 探讨术前经导管动脉化疗栓塞治疗儿童中晚期肾母细胞瘤的效果。
方法 收集 2009 年 1 月至 2016 年 12 月收治 50 例儿童中晚期肾母细胞瘤，根据治疗方式分为两组，介入化疗组 30 例，行经导管肾动脉化疗栓塞治疗，静脉化疗组 20 例，经静脉全身化疗，疗程结束后行根治性肿瘤切除，并随访治疗效果。
结果 化疗后肿瘤体积均有所缩小，介入化疗组平均缩小约 32%，静脉化疗组平均缩小约 20%，化疗结束后手术，介入化疗组瘤体完整切除率为 87%，静脉化疗组瘤体完整切除率为 70%，手术后随访时间平均为 48 个月，介入化疗组 4 年生存率约 85%，静脉化疗组 4 年生存率约 56%。
结论 术前经动脉化疗栓塞治疗儿童中晚期肾母细胞瘤是有效的，其疗效优于经静脉全身化疗。

PU-1814
双侧视网膜母细胞瘤伴脑发育落后患儿经眼动脉灌注化疗一例报道并文献复习

贾绚
浙江大学医学院附属儿童医院

【摘要】目的 讨论视网膜母细胞瘤的 IAC 治疗方法，对经眼动脉灌注化疗的疗效进行评估分析。方法 分析一例双侧视网膜母细胞瘤患儿的 IAC 治疗经过，并结合相关文献进行复习分析。结果 经眼动脉介入灌注美法仑联合卡铂治疗眼内视网膜母细胞瘤可以取得一定的效果，且治疗基本安全，但如何减少并发症及提高保眼球几率等方面还需要大样本量、多中心及长期随访研究，以达到标准化、规范化治疗 RB 的目的，临床医师仍需要不断提高介入技术，为患儿提供更好的服务。

PU-1815
TACE 术前 HBV-DNA 载量水平与术后肝功能恢复的关系分析

史中兴
哈尔滨医科大学附属第二医院

目的探讨 TACE 术前 HBV-DNA 载量水平与术后肝功能恢复的关系。方法选取我院介入科 2016 年 1 月至 2017 年 1 月收治的 60 例乙肝相关性肝癌患者，依据术前病毒载量水平分为高载量组与低载量组，比较两组术前 2 天及术后 1、3、5 天肝功能及术前 2 天及术后 5 天病毒载量，分析术前病毒载量与术后肝功能变化的关系。结果两组患者术后 1 天 ALT、AST 指标显著升高达到峰值，之后成下降趋势，术后 5 天基本恢复到术前水平。术后 3 天 TBIL 达到峰值，之后逐渐下降。而术后 ALB 指标成逐渐下降趋势，且较术前显著降低。术后肝功能变化与术前病毒载有一定关系，但两组间差异无统计学意义。两组患者术后 5 天病毒载量较术前 2 天相比稍有下降，但差异不具有统计学意义。结论 TACE 术前高 HBV-DNA 载量，会导致术后肝功能更严重的损伤；病毒载量的高低并未延长术后肝功能的恢复时间；高病毒载量并未增加术后不良反应的发生率；TACE 术不会诱发 HBV-DNA 复制活跃。

PU-1816
动态血管模型在 SonoVue 增效 HIFU 消融富血供子宫肌瘤的作用研究

赵卫,寸江平
昆明医科大学第一附属医院

【目的】
探讨动态血管模型(DVP)在 SonoVue 联合 HIFU 消融富血供子宫肌瘤的增效时机、增效作用、有效性及安全性。
【方法】
回顾性收集 36 例患者为对照组（I 组）；随机将前瞻性收集行 HIFU 治疗的 60 例富血供子宫肌瘤患者分为非 DVP 增效组（II 组）和 DVP 组（III 组），将三组患者的超声辐照时间、手术时间、超声灰度变化时间、消融率、能效因子（EEF）、治疗效率、治疗剂量、NPV 等治疗参数进行单因素方差分析和两两比较，以评估 DVP 在 SonoVue 联合 HIFU 消融富血供肌瘤中的增效作用及增效时机。根据 SIR 分类，统计三组患者 HIFU 治疗后的不良事件，采用行×列表 x2 检验进行组间比较，评价 DVP 在 SonoVue 联合 HIFU 治疗富血供肌瘤的安全性。随访 6 个月的肌瘤体积缩小率、症状评分、生活质量评分、月经评分，评估 DVP 指导下 SonoVue 联合 HIFU 治疗富血供肌瘤的临床疗效。
【结果】
（1）三组患者的年龄、靶皮距离、肌瘤体积、肌瘤个数、子宫位置、肌瘤位置、肌瘤类型、MRI-T2WI 均无差异。
（2）治疗参数：II 组的 NPV 高于 I 组，EEF 低于 I 组；I 组与 III 组比较：III 组的消融率、治疗效率、治疗剂量和 NPV 均高于 I 组， EEF 低于 I 组；II 组与 III 组比较：III 组的消融率和治疗效率高于 II 组、EEF 低于 II 组。
（3）不良事件三组间无差异。
（4）临床疗效：治疗前症状评分、生活质量评分、月经量评分等三组无差异；治疗后 6 个月三组间的症状评分、生活质量评分、月经评分有差异。
【结论】
DVP 指导下 SonoVue 联合 HIFU 治疗富血供肌瘤具有增效作用，没有增加不良反应的发生。
在肌瘤内浓聚并在周围组织中廓清时为最佳 HIFU 消融时机。

PU-1817
TACE 联合阿帕替尼治疗中晚期肝细胞癌的回顾性临床研究

赵卫,陆阳
昆明医科大学第一附属医院

【目的】
分析 TACE 联合阿帕替尼治疗中晚期 HCC 的近期疗效、远期预后及安全性，并对可能影响联合组患者预后的因素进行分析。
【方法】
回顾性分析 62 例中晚期 HCC 治疗患者，一组 32 例接受 TACE 联合阿帕替尼治疗，另一组 30 例仅接受 TACE 治疗。所有患者治疗后每个月均复查随访，拟随访时间为 36 个月，比较两组患者的治疗后 AFP、ORR、不良反应、PFS、OS 和生存率，并对所有可能影响联合组患者 PFS 的因素进行分析。
【结果】

治疗后 3 和 6 个月，联合组的 ORR 为 62.5%和 53.1%，TACE 组为 33.3%和 23.3%；治疗 3 个月后两组的 AFP 均明显低于治疗前；联合组 mPFS 为 14 个月，TACE 组为 7 个月；联合组 mOS 为 20 个月，TACE 组为 11 个月； 1、2 和 3 年生存率联合组为 75.0%、40.6%和 25.0%，TACE 组为 46.7%、16.7%和 3.3%；联合组中 BCLC B 期的患者， mPFS 为 18 个月， BCLC C 期的患者为 8 个月；mPFS 治疗前 AFP<400 ng/ml 的患者为 16 个月，AFP≥400 ng/ml 的患者为 11 个月。均有统计学差异。两组栓塞后综合征的发生率无差异，联合组的阿帕替尼副反应均可控。三项副反应 mPFS 对比均有统计学差异：继发性高血压阳性者为 18 个月，阴性者为 10 个月；继发性蛋白尿阳性者为 19 个月，阴性者为 12 个月；手足综合征阳性者为 16 个月，阴性者为 9 个月。

【结论】

1. TACE 联合阿帕替尼治疗中晚期 HCC 可提升患者的客观缓解率、生存率，延长无进展生存时间、总生存时间；

2. TACE 联合阿帕替尼治疗中晚期肝细胞癌具有较高的安全性；

3. BCLC 分期和 AFP 水平是影响 TACE 联合阿帕替尼治疗患者无进展生存时间的因素，BCLC C 期患者和治疗前 AFP≥400ng/ml 患者的预后较差；

4. 继发性高血压、继发性蛋白尿或手足综合征阳性患者的预后较好。

PU-1818
姑息护理在肝癌晚期介入治疗术后患者生命质量的研究

范钰晨
吉林大学第一医院

目的 探讨姑息护理在肝癌晚期介入治疗术后患者生活质量中的应用效果。**方法** 随机选取 2019 年 1 月至 2019 年 6 月，我科收治的 98 例行介入治疗的晚期肝癌患者，分为观察组和对照组，观察组给予术后姑息护理方案，对照组则为常规术后基础护理。采用肝癌患者生命测定量表进行问卷调查，比较两组患者生命质量和护理满意度。**结果** 观察组心理功能、躯体功能、症状/副作用、社会功能等总体生命质量评分高于对照组。同时医院环境、护理态度、护理技术水平等总体满意度评价优于对照组，差异有统计学意义（P<0.05）。**结论** 姑息护理方案能够有效提高肝癌介入术后患者生命质量，提高护理质量，同时增加患者满意度。

介入栓塞在妊娠滋养细胞肿瘤继发子宫动静脉瘘治疗中的应用价值

赵维敬,张晓峰,梁宇霆,王克扬,王新莲
首都医科大学附属北京妇产医院

目的 探讨介入栓塞在妊娠滋养细胞肿瘤（GTN）继发子宫动静脉瘘（AVF）治疗中的应用价值。方法 回顾性收集 2014 年 1 月～2018 年 12 月 GTN 继发子宫 AVF 患者 35 例，侵袭性葡萄胎 28 例，绒毛膜癌 7 例。根据不同治疗方案分组：子宫介入栓塞或动脉灌注化疗栓塞联合多药静脉化疗（介化组）16 例，多药静脉化疗（化疗组）19 例，比较两组疗效。结果 两组在年龄、临床分期、肺转移、预后评分、血β-HCG、初始化疗方案无显著性差异（*P*>0.05）。两组血清学缓解率分别为 100%、63.2%，介化组明显好于化疗组（*P*=0.009）。当血β-HCG 降至正常水平，两组患者所用的疗程数有显著性差异（*P*=0.010），接受 3 个以上疗程的患者在介化组占比 6.2%，在化疗组占比 47.4%。两组初次化疗后血β-HCG 下降速度无显著性差异（*P*=0.109）。结论 子宫介入栓塞

或动脉灌注化疗栓塞能够提高 GTN 继发子宫 AVF 患者的化疗效果，减少静脉化疗疗程，是值得考虑的辅助治疗手段。

PU-1820
载药微球 CalliSpheres 在膀胱癌 介入栓塞治疗中的应用初探

张建好,杨锦建,韩新巍
郑州大学第一附属医院

摘要 目的 载药微球又称药物洗脱微球 (drug-eluting bead，DEB)作为新型栓塞剂是近年来研究的热点之一，同时具有栓塞和载药的特性，是一种潜在的可以应用于临床的优良化疗栓塞材料，CalliSpheres 是可载药栓塞微球中的一种，在国内栓塞治疗肝癌领域已取得显著疗效，并取得了较高水平的科研成果，而 CalliSpheres 应用于膀胱癌的栓塞治疗，国内外未见相关报道，本研究通过 CalliSpheres 栓塞膀胱癌供血血管，观察膀胱癌出血及病灶控制情况、术后反应等，探索该方法治疗膀胱癌的可行性、可靠性及临床治疗效果，有望形成新的学术生长点，为膀胱癌的治疗提供一种新的方法和理论依据，推动膀胱癌的基础和临床研究。**方法** 选取无法行外科手术切除的肌层浸润性膀胱癌患者 22 例，均为尿路上皮癌，均为多发病灶，年龄大于 70 岁，随机分为观察组及对照组各 11 例，局麻下 DSA 下行双髂内动脉造影，观察髂内动脉-膀胱动脉参与肿瘤供血的情况，微导管超选至肿瘤供血血管，灌注化疗药物顺铂 40mg/m^2，观察组应用加载 THP40mg 的 CalliSpheres, 直径 300-500um，栓塞膀胱动脉及其他肿瘤血管，对照组应用 PVA 颗粒，直径 300-500um，均栓塞至血流完全阻断。术后 1 周观察血尿控制情况及术后反应，术后 2 月观察膀胱肿瘤体积变化。**结果** 所有患者介入手术顺利，均成功栓塞肿瘤供血血管。所有患者 3-5 天内血尿逐渐停止。栓塞反应：下腹疼痛、发热、恶心呕吐两组患者无明显差别。术后 2 月复查，观察组 10 例患者均未出现血尿，均未出现肿瘤增大或新发病灶；对照组 3 例出现血尿，2 例肿瘤进展，1 例出现新发病灶。**结论** CalliSpheres 可应用于膀胱癌的栓塞治疗，近期效果优于 PVA 颗粒，远期效果及安全性仍需扩大样本量及长时间的随访得出结论。

PU-1821
胰腺血管瘤合并卡-梅综合征经动脉介入栓塞治疗 1 例

刘珍银,申刚,张靖
广州市妇女儿童医疗中心

目的： 探讨胰腺血管瘤合并卡-梅综合征经动脉介入栓塞治疗的可行性及疗效分析。**方法：** 患儿，女，3 个月，3 周前无明显诱因出现呕吐，呕吐为胃内容物，就诊当地医院，血常规提示血小板减少 13*10^9/L，入院后予完善相关检查：D-二聚体>20ug/ml，粪便隐血阳性，予输注血小板、红细胞、新鲜冰冻血浆，甲强龙抗血小板抗体、丙球减少血小板破坏，止血等治疗，因血培养出表皮葡萄球菌，遂予万古霉素抗感染治疗，2018-12-03 复查纤维蛋白原 0.61g/L，D-二聚体>20ug/ml，血小板 48*10^9/L,患儿病情稍好转，未再排血便。出院后 2 天再次出现排黑便，转诊上级医院，上腹部 CT 增强提示：1、门静脉海绵样变 2、肝内、外胆管扩张 3、胰腺炎 4、肠壁多发水肿增厚 5、大量腹水。急诊以“门脉海绵样变”转入我肝胆外科。入院后给予输血小板、激素、营养等对症治疗。经医院 MDT 会诊后考虑胰腺血管瘤并卡-梅综合征，拟行动脉介入栓塞治疗。 **结果：** 插 4FCobra 导管选择性插管至腹腔干造影，示胰腺病灶实质期明显染色，将微导管超选择性依次插至胰十二指肠前上动脉、胰十二指肠后上动脉、脾动脉胰上动脉分支造影显示病灶实质期明显染色，经微导管共注入平阳霉素 3 毫克+碘化油 2 毫升+地塞米松 2 毫克+造影剂 3 毫升混

合液及 300uPVA 进行硬化栓塞治疗；完成后再行动脉造影，病灶染色基本消失。拔管及鞘后压迫止血 15 分钟，加压包扎。术中顺利，出血量少，安返复苏室。术后 2019.01.05 血常规五分类+CRP+手工法 血红蛋白 127g/L, 血小板 217×10^9/L。 2019.01.07 粪便分析+潜血 隐血试验阴性。出院后继续口服西罗莫司治疗。**结论：** 该例胰腺血管瘤合并卡-梅综合征经动脉栓塞治疗疗效显著，未见胰腺炎并发症。

PU-1822

桡动脉入路 CBCT 三维血管重建辅助的精准 TACE

熊宇
厦门大学附属中山医院

目的 探索桡动脉入路及 CBCT 三维血管重建在精细 TACE 中的作用
方法 在肝癌 TACE 治疗中采用桡动脉入路，评估其安全性、有效性、舒适性。TACE 术中使用 CBCT 三维血管重建来精准定位肿瘤供血动脉，以达到精细 TACE 的目的。
结果 桡动脉入路特别适合于腹主动脉以下有严重血管病变、服用抗凝药物、不能长时间平卧或者肥胖的患者。相较于传统的股动脉入路，桡动脉入路的创伤更小，局部并发症较少，出血风险低，患者术后活动不受限制，即刻就可以下床行走，舒适度高，也大大减少了护理量。各项研究也都表明桡动脉入路的 TACE 安全性和舒适性是有充分保证的。CBCT 三维血管重建弥补了传统二维 DSA 造影图像的缺陷，能够清晰显示前后重叠和扭曲的肿瘤供血动脉，明显提高肿瘤供血动脉判断的准确性，从而更高效地指导精准 TACE。三维血管重建技术不仅能为血供复杂的大肝癌治疗提供指引，在小肝癌的治疗中也能起到精确定位的作用。
结论 经桡动脉入路 TACE 操作简单、安全可靠，是 TACE 入路的很好选择；同时 CBCT 三维血管重建技术能为 TACE 治疗提供精确的指引。两者很好体现了介入治疗更加微创和精准的发展方向，能够在精细 TACE 中得到更加广阔的应用。

CT 引导下经皮肺穿刺活检在亚厘米结节中的临床应用

张永远[1],周志刚[2],赵鑫[1]
1.郑州大学第三附属医院
2.郑州大学第一附属医院

目的 探讨 CT 引导下经皮穿刺活检在肺亚厘米结节中的穿刺技巧、诊断价值、安全性，并分析其影响因素。**方法** 收集从 2018 年-1 月-2019 年 6 月就诊于我院及郑州大学第一附属医院 158 例行 CT 引导下经皮肺穿刺活检的亚厘米结节。分别根据亚厘米结节位置、距离胸膜距离分组，分析准确率、敏感度、特异度及并发症发生率，并进行相关因素分析。**结果** 所有 158 例患者均一次性取得足够组织标本进行病理学检查，成功率为 100%，其中真阳性病变 76 例，所占比例约为 48.1%，包括腺癌 42 例，细支气管肺泡癌 22 例，不典型腺瘤样增生 12 例；真阴性病变 70 例，所占比例约为 44.3%，包括炎症 29 例，结核 16 例，机化性肺炎 15 例，错构瘤 7 例，肺出血 3 例；假阴性病变 16 例，最终均证实为腺癌。其诊断的准确率 89.9%。敏感性 85.7%，特异性 100%。整体并发症的发生率为 49.4%，11 例（7.0%）患者术中或术后给予处理，未发生严重并发症。距离胸膜＞1cm（n=85）准确率 90.7%，敏感度 85.7%，并发症发生率 52.6%；距离胸膜≦1cm（n=73），准确率 89.5%，敏感度 91.3%,并发症发生率 48.4%。**结论** CT 引导下经皮肺穿刺活检术诊断亚厘米结节具

有高的准确性，并发症发生率较高，而严重并发症很少，且需要一定的技巧，是一种安全可行的诊断技术。

PU-1824
替拉扎明靶向肝癌介入栓塞后缺氧肿瘤细胞的实验研究

刘一鸣,梁斌,郑传胜
华中科技大学同济医学院附属协和医院

目的 本项目采用替拉扎明作为缺氧细胞毒剂，开展介入栓塞联合替拉扎明靶向缺氧细胞治疗肝癌的综合疗法提供理论及实践依据，为肝癌介入治疗提供新的治疗策略。
方法 在动物肿瘤细胞中研究替拉扎明对缺氧肿瘤细胞的毒性效应及其与药物浓度、缺氧程度和药物作用时间的关系；并制备替拉扎明栓塞微球，采用不同的联合治疗方案，在动物肝癌模型 VX2 中评价介入栓塞与替拉扎明联合治疗肝癌的疗效，优选联合治疗方案，分析其潜在的协同抗肿瘤机制
结果 (1)替拉扎明对 HepG2 肝癌细胞的细胞毒性作用随药物浓度增加和氧浓度降低呈现增加趋势 ；(2)替拉扎明对 HepG2 肝癌细胞的 DNA 损伤作用随药物浓度增加和氧浓度降低呈现增加趋势，替拉扎明诱导的 DNA 损伤可用来评价药物的细胞毒性；(3)替拉扎明/Hepasphere 栓塞微球制备过程简便，载药及传送性能良好；(4)替拉扎明/Hepasphere 栓塞微球在兔 VX2 肝癌内缓释，肿瘤内药物浓度及作用时间明显优于瘤周肝实质及血浆；(5)介入栓塞可降低肿瘤内氧合状态和血液灌注，诱导缺血缺氧性肿瘤细胞死亡；替拉扎明可诱导兔 VX2 肝肿瘤内缺氧细胞 DNA 损伤，当联合应用于介入栓塞可增强治疗效果，替拉扎明/Hepasphere 微球栓塞是优选的联合治疗方案；(6)介入栓塞与替拉扎明联合治疗以及单纯栓塞治疗可有效抑制肿瘤生长，替拉扎明药物对肝功能无明显损害作用。
结论 替拉扎明可靶向治疗缺氧肝癌细胞，介入栓塞联合替拉扎明可提高肝癌介入治疗效果，替拉扎明微球栓塞是优选的联合治疗方案。

冠心病介入治疗的护理

寇亚芳
盘锦市中心医院

冠心病是一种严重危害人类健康的常见心脏病，经过多年的发展，经皮冠状动脉介入(PCI)已经成为治疗冠心病过程中不可缺少的有效手段。 随着心血管介入新技术的临床应用，也面临许多新的护理问题。 主要涉及心理护理、术前、术中、术后护理及康复。

PU-1826
旋压式与弹力加压式桡动脉压迫器在冠脉介入术患者中的 应用效果比较

刘华芬
武汉大学人民医院

目的 比较新型旋压式压迫器与弹力加压式压迫器在冠状动脉介入术后患者桡动脉压迫止血中的应用效果。
方法 依照纳排标准，选取 2018 年 1 月至 2019 年 6 月接受冠状动脉介入治疗的 213 例患者，其中 111 例患者使用新型旋压式压迫器，102 例患者使用弹力加压式压迫器。比较两组患者冠状动脉介入术后术肢血管并发症——出血（纱布称重法）、疼痛（VAS 疼痛评分）、肿胀（测量术侧掌围）的发生情况，及术后患者舒适度状况（Kotcabal 简化的舒适度量表， *CVI*=0.86，*Cronbach's α* 值为 0.92）。
结果 冠状动脉介入术后使用旋压式压迫器的患者术肢肿胀程度(P＜0.01)、VAS 疼痛评分(P＜0.01)、手术伤口出血情况（P＜0.05）均低于使用弹力加压式压迫器患者，且差异存在统计学意义；比较两组患者术后舒适状况，使用旋压式压迫器的患者术后舒适度量表总得分（84.27±10.56）高于使用弹力加压式压迫器的患者总得分（76.91±11.96），且差异存在统计学意义（P＜0.05）。
结论 冠状动脉介入术后使用旋压式桡动脉压迫器的患者在血管并发症（肿胀、疼痛、出血）及舒适度方面均优于使用弹力加压式压迫器的患者。因此，新型旋压式桡动脉压迫器在冠状动脉介入治疗术后患者中的应用效果要优于弹力加压式压迫器。

双源 CT 三维成像在动脉导管未闭介入治疗的指导价值

简能日,周轩
四川大学华西医院

目的 探讨 CT 三维成像对动脉导管未闭介入治疗的临床价值。**方法** 选取我院 2018-2019 年 50 例动脉导管未闭患者，进行介入封堵术，研究组采取 CT 三维成像引导治疗，对照组采取术中 DSA 造影引导。比较两组治疗效果，手术时间。**结果** 在治疗效果，差异无统计学意义，研究组手术时间短于对照组，差异有统计学意义。**结论** CT 三维成像对动脉导管未闭介入治疗有显著的指导价值，优于术中 DSA 造影

PU-1828
人文关怀对行三维房颤射频消融术患者焦虑及疼痛的影响

何玉腊,杨华
空军军医大学第一附属医院

摘要：目的 探讨人文关怀对行三维房颤射频消融术患者焦虑及疼痛的影响。**方法** 选取我科 2016 年 12 月—2017 年 11 月需进行择期三维射频消融手术的房颤患者 61 例，按照随机数字表法分为观察组和对照组，观察组 30 例，对照组 31 例。对照组采用常规护理，观察组在对照组基础上给予手术全程人文关怀，分别于入院当日和手术后比较两组患者焦虑状态评分，并评估术中患者疼痛程度评分。**结果** 两组患者入院当日焦虑评分无统计学差异，而术后观察组明显低于对照组（P＜0.05），差异有统计学意义，并且观察组实施人文关怀护理干预后，焦虑评分显著下降（P＜0.01）。两组患者术中疼痛比较，观察组评分明显低于对照组，差异有统计学意义（P＜0.05）。**结论** 将人文关怀运用到三维房颤射频消融手术护理工作中，有利于减轻患者焦虑、紧张情绪，值得向临床推广。

螺旋 CT 扫描 CTA 检查和 DSA 检查在诊断冠心病的应用价值分析

简能日,周轩
四川大学华西医院

目的 探究分析 CTA 检查和介入 DSA 检查在诊断冠状动脉粥样硬化性心脏病的应用价值分析。**方法** 选取我院 2018-2019 年到本院的 50 例疑似冠心病患者作为分析对象，对他们进行 CTA 检查和 DSA 检查，对结果进行分析。**结果** 50 例患者的检查结果进行对比，以常规冠状动脉造影作为标准，128 排螺旋 CT 在诊断冠心病的敏感度和特异度分别达到 97.6%，95.4%。**结论** 螺旋 CT 对冠心病检查效果优于 DSA 检测，具有较高的临床诊断价值

PU-1830
凝胶体位垫的使用在冠心病患者介入治疗中的应用分析

李梦思,田小荣,魏臻
山西医科大学第二医院（山西红十字医院）

[目的]探讨凝胶体位垫的使用在冠心病患者介入治疗中的应用效果。[方法]将 2018 年 2～10 月在介入手术室行冠心病介入治疗的 80 例肥胖患者作为研究对象，随机均分为两组（n=40），对照组常规使用盐水袋作为衬垫，实验组使用凝胶体位垫作为衬垫，均采用右手常规摆放体位，由同一术者在局麻下行右桡动脉穿刺术，回顾性分析比较两组效果。[结果]比较两组应用效果，差异具有统计学意义（p<0.05）。[结论]冠心病患者介入治疗中使用凝胶体位垫，能够有效的提高桡动脉穿刺率，增加患者肢体舒适度，缩短穿刺时间，可以在临床中推广使用。

PU-1831
1 例经导管主动脉瓣置换术术中心搏骤停的护理体会

钟雯,李颐,周亮,王任红
南昌大学第二附属医院

经导管主动脉瓣置换术（Transcatheter Aortic Valve Implantation，TAVI）是通过患者的动、静 脉系统或左心室心尖，利用介入导管将人工心脏瓣膜输送至主动脉瓣区后打开，替代原有主动脉瓣，实现瓣膜的正常生理功能。但 TAVI 术中易出现不良事件,甚至发生心搏骤停，处理不及时将导致患者死亡。本文通过回顾性分析 1 例 TAVR 手术患者术中发生心搏骤停成功抢救，总结 TAVR 手术术中护理经验。

PU-1832
医护一体医院感染预防与控制模式在老年介入治疗患者中的应用

李颐,钟雯,王任红,谭辜钰
南昌大学第二附属医院

目的 探讨医护一体医院感染预防与控制模式在老年介入治疗患者中的应用价值。**方法** 选取行介入治疗的老年患者 1100 例进行研究；按照随机数字表法进行分组，对照组 550 例，以常规方式进行护理干预；观察组 550 例，以医护一体院感防控方式进行干预，比较两组患者的干预效果。**结果** 观察组患者医院感染发生率明显低于对照组（$p<0.05$），且两组患者感染部位均以呼吸道感染为主；观察组患者对护理管理各项满意度评分均明显高于对照组（$p<0.05$）；观察组患者住院时间（6.6±0.8）d 明显短于对照组的（8.3±1.2）d（$p<0.05$）。**结论** 医护一体医院感染预防与控制模式的应用可显著减少医院感染发生，并有利于缩短患者住院时间、提高患者满意度，可推广应用。

PU-1833

药物球囊治疗冠心病的护理策略

刘聪聪
空军军医大学西京医院

摘 要 **目的** 探讨药物球囊治疗冠心病的护理策略。**方法** 选取 2015 年 3 月至 2018 年 6 月因冠心病在西京医院心内导管室接受药物球囊治疗的 1131 例患者，围术期给予积极的心理护理、术前准备、术中护理、术后交接和病情观察。**结果** 1131 例患者均顺利完成手术，围术期无明显并发症发生，患者心身感受满意。**结论** 围术期护士充分的心理护理、术前准备、熟练的术中配合及细致的术后护理是药物球囊治疗冠脉病变成功的重要保证。

PU-1834

探讨影响冠状动脉造影图像质量的因素

刘旭东
定西市第一人民医院

目的 通过对比分析质量较差的冠状动脉 DSA 图像，找出影响 DSA 图像质量的因素并进行改善，提高图像的质量。
方法 使用 GE 公司 innova3100IQ 数字减影血管造影机对 2018 年 1000 例冠脉 DSA 造影图像进行回顾性分析，通过造影剂的种类剂量、温度、注射速度、浓度、总量、体位的选择、DSA 设备技术参数的设置、术中操作的熟练程度及患者配合程度等几方面来分析影响 DSA 图像质量的因素。
结果 优等图像 950 例占 95%，良好图像 40 例占 4%，较清楚图像 10 例占 1%，
结论 造影剂的种类剂量、温度、注射速度、浓度、总量、体位的选择、DSA 设备技术参数的设置、术中操作的熟练程度及患者配合程度均对 DSA 图像质量产生影响。因此，在采集冠状动脉 DSA 图像时应避免这些因素的影响，

PU-1835

多功能起搏器植入术用压迫固定带的设计

魏臻,田小荣,王香莉,区宁,闫慧霞
山西医科大学第二医院

目的 解决起搏器植入术后因压迫止血不当引起囊袋感染、术侧肢体过度活动引发起搏电极脱位、去除临时起搏器后股静脉穿刺点出血等问题。 **方法** 设计囊袋压迫固定带、上肢制动带、股静脉穿刺点压迫固定带三合一的简化使用工具。 **结果** 多功能起搏器植入术用压迫固定带使用肩带、腹部固定带、下肢固定带三个位置连结，有效保证囊袋压迫袋位置固定；同时可制动上肢，使外展及上肢活动度在可控范围内，有效防止起搏电极脱位；去除临时起搏器后股静脉压迫盐袋妥善固定于下肢固定带，避免穿刺点血肿及整体固定带位置上移。**结论** 专利产品（一种起搏器植入术压迫袋固定带）是针对起搏器植入术后即刻的三个护理重点研发，可提高患者舒适度改善患者焦虑，设计合理，功能全面，使用方法简单，性价比高，具有良好的市场应用前景和社会经济效益。

PU-1836
右冠状动脉不同体位造影图像测量准确性比较

张祥海,李君,王晓峰,闫红野
陆军军医大学大坪医院

1.目的
比较右冠状动脉在左斜位 45° 和左斜位 30° + 头位 30° 造影时，影像中心区域测量值的差异。

2.材料和方法
2.1 一般资料 回顾性随机收集 2018.6-2019.3 期间行右侧冠状动脉介入手术治疗的 30 例病人，术中采用 GE Innova3100 IQ DSA 机，JR4.0 右冠指引导管，Runthrough NS 指引导丝，导丝标记段长度为 30mm。
2.2 手术操作方法 右冠状动脉进行介入治疗时，投照角度分别为左斜位 45° 和左斜位 30° + 头位 30° ，FOV 为 16X16cm，增强器尽量贴近病人，球管尽量远离检查床，射线中心线对准心脏中心，影像传至 adw4.6 后处理工作站。
2.3 介入测量 将图像平均分为九个区域，选取指引导管位于中上区域，指引导丝标记段走行平直，无反折、卷曲且位于图像中心区域的图像，应用二维定量测量软件测量指引导丝标记段长度。
2.4 统计分析 使用 SPSS 21.0 统计分析软件，采用单因素方差分析比较在两种投照体位下指引导丝标记段在中心区测量值与实际值的差异。
3. 结果
左斜位 45° 、左斜位 30° + 头位 30° 投照时中心区测量值为（30.89±3.12mm）、（27.12±4.26mm）与实际值（30±0mm）存在统计学差异（F=6.82，P<0.05），组内两两比较，左斜位 45° 与实际值无差异（P>0.05），而与左斜位 30° + 头位 30° 测量值有统计学差异（P<0.05）。

4 结论
在右冠状动脉的左斜位 45° 、左斜位 30° + 头位 30° 两个造影角度上，左斜位 45° 造影图像的中心区域的测量值更准确，接近实际值，在右冠状动脉病变的测量准确性上优于左斜位 30° + 头位 30° 造影体位。

PU-1837
支架精显技术 StentViz 在冠状动脉支架植入术中的应用

刘伟丽
青岛大学附属医院

目的探讨冠状动脉造影定量分析(QCA)、支架精显技术(StentViz)和血管内超声(IVUS)三种技术，在冠状动脉支架植入术中评价支架可视性和膨胀性中的应用。**方法**收集 2016 年 05 月至 2018 年 11 月同时接受 StentViz 和 IVUS 检查的经皮冠状动脉介入术患者 30 例。分别在 QCA、StentViz 和 IVUS 图像中，对植入的 33 枚支架测量其最小支架直径、最大支架直径，计算支架偏心指数，并进行不同方法之间的比较分析。同时对 30 例患者共 143 幅 StentViz 图像进行支架可视性分级评价。**结果** QCA 测量的最小支架直径、最大支架直径明显大于 StentViz 和 IVUS（P 均<0.05），支架偏心指数明显小于 StentViz 和 IVUS（P 均<0.05）；StentViz 测量的上述指标与 IVUS 比较无显著性差异。StentViz 与 IVUS 测量的最小支架直径的相关性优于 QCA 与 IVUS 的相关性（r 分别 0.956 和 0.776）。StentViz 测量的最小支架直径和 QCA 相比，与 IVUS 具有更好的一致性。143 幅 StentViz 图像支架可视化评价：82.1%的支架显示优，评分 4 分；15.3%支架显示良，评分 2-3 分；2.6%支架显示差，评分 0-1 分。**结论** StentViz 可显著提高冠状动脉内支架的可视性，与 QCA 相比在测量支架直径方面与 IVUS 具有更好的相关性和一致性。

近 5 年我国介入护理研究热点的可视化分析

王嵘
山西医科大学第一医院

[目的]了解我国介入护理的研究现状和发展趋势,为提升介入护理质量提供参考。[方法]检索中国期刊全文数据库(CNKI)和万方数据库收录的 2012 年—2016 年有关介入护理相关文献,应用 CiteSpace 信息可视化软件及文献计量学方法进行分析。[结果]共筛选出 3 766 篇文献,文献量呈逐年递增趋势,热门关键词集中在心血管介入护理、脑血管介入护理、围术期专科护理、介入护理干预等方面。[结论]介入护理受到临床护理人员的关注,逐渐向专科化、规范化方向发展。

PU-1839

超声科乳腺癌穿刺绿色通道的建立及效果评价

兰琳
四川大学华西医院

【摘要】 **目的** 探讨我院超声科开展超声引导下乳腺癌穿刺活检就诊绿色通道的必要性，提高乳腺癌患者就诊效率和患者满意度，缩短乳腺癌患者等待穿刺的时间，从而得到有效的治疗。**方法** 对我院超声科从 2018 年 1 月到 2019 年 1 月行乳腺超声检查后需要做穿刺的患者共 1160 例，将超声检查 BI-RADS 分级 4c 类及以上的 580 例患者纳入绿色通道，其中女性患者占 578 人，男性占 2 人分成实验组，另外 580 人分成对照组，对比两组患者从门诊就医流程，预约乳腺超声专科检查的时间以及患者和家属对开展乳腺癌绿色通道的整体满意度调查。**结果** 实验组 580 例绿色通道患者穿刺结果为癌的 447 例，良性为 133 例，超声引导乳腺穿刺等待时间缩短至 3 天（对照组等待穿刺的时间为 60 天左右），两组对比差异有显著统计学意义（P＜0.01），实验组患者门诊挂号时间≤ 3 天，对照组患者门诊挂号时间待定，平均≥ 30 天，两组对比差异有显著统计学意义（P＜ 0.01），预约乳腺超声专科检查的时间实验组患者为≤ 2 天，对照组患者为 21 天左右，各关键环节时间点所用时间均减少(P＜0.01),而开展绿色通道后的患者整体满意度明显高于对照组（实验组患者满意度为 99.9%，对照组为 35%），两组患者间差异具有显著统计学意义（P＜0.001）。**结论** 随着社会的进步，大家对乳腺癌知识的普及发现乳腺癌现在的发病率日趋上升，而乳腺癌的准确分

型是临床治疗的依据，能让患者得到最适合的治疗方案，而我院因就诊患者人数较多，等待时间过长，从而导致日后的手术时间延长，这不仅造成了患者心理和身体上的痛苦，也给她以后的治疗增加了难度，并且给家庭带来严重的经济负担。因此，我院超声科医护人员克服种种困难，开辟了乳腺癌诊治的绿色通道，大大缩短其就医时间，从而保障其治疗效果，避免乳腺癌患者在等待穿刺活检的期间到处奔波；绿色通道的建立值得在超声介入工作中进行推广使用。

经导管动脉栓塞联合普萘洛尔治疗婴儿胸壁血管瘤

陈昆山
广州市妇女儿童医疗中心

目的评价婴儿胸壁血管瘤，行经导管动脉栓塞联合普萘洛尔治疗的疗效及安全性。**方法** 选择我院 2016 年至 2018 年 36 例婴儿胸壁血管瘤病例，行经股动脉插管血管瘤硬化栓塞联合普萘洛尔治疗，血管瘤供血动脉插管依次使用碘油博来霉素乳剂及聚乙烯醇泡沫颗粒栓塞，术后予口服普萘洛尔治疗。**结果** 36 例共行 TASE 术 42 次，每例行 1～3 次，平均 I. 1 次。平均住院 2.2d(2～3d)。36 例中达治愈标准 33 例(91.6%)，达显效标准 3 例(8.4%)，无效 0 例，显效率 100%，治疗结束后平均随访 13 个月，最长 18 个月，最短 6 个月，无复发病例。本组未出现肺栓塞、脑栓塞等严重并发症。**结论**婴儿血管瘤经导管动脉硬化栓塞联合普萘洛尔治疗具有创伤小、安全、住院时间短、疗效显著、大多数病例术后不留瘢痕等优点。

平阳霉素局部注射治疗胸壁大囊型淋巴管畸形

陈昆山
广州市妇女儿童医疗中心

目的观察平阳霉素局部注射对胸壁大囊型淋巴管畸形的临床疗效。**方法**选择我院 2017 年至 2018 年 52 例胸壁大囊型淋巴管畸形患者，行平阳霉素局部瘤体硬化注射治疗。**结果** 52 例共行硬化治疗

132 次，每例行 1～3 次，平均 2.6 次。平均住院 1.3d(1～3d)。52 例中达治愈标准 49 例(94.2%)，达显效标准 3 例(5.8%)，无效 0 例，显效率 100%，治疗结束后平均随访 10 个月，最长 16 个月，最短 4 个月，无复发病例，不良反应发生率低且轻，主要为轻度全身反应。**结论**平阳霉素局部注射对胸壁大囊型淋巴管畸形简便有效，避免了手术切除淋巴管畸形所造成的瘢痕及手术风险。

【关键词】 平阳霉素；胸壁；大囊型淋巴管畸形

盆腔淤血综合征的介入治疗分析

董祥军
华中科技大学同济医学院附属协和医院

目的 探讨盆腔淤血综合征（PCS）介入治疗的应用价值。**方法** 回顾性分析 2016 年 5 月至 2018 年 12 月在本院就诊并行介入治疗的 10 例盆腔淤血综合征患者的临床资料，分析总结其临床表现及卵巢静脉介入栓塞治疗的方法与疗效。**结果** 10 例患者经影像学检查结合临床症状诊断为盆腔淤血综合征，全部患者均经影像学检查提示盆腔静脉迂曲扩张，卵巢静脉曲张，其中 6 例患者左侧卵巢静脉曲张，4 例患者双侧卵巢静脉曲张。所有患者均成功行卵巢静脉栓塞治疗，其中 7 例患者临床症状逐渐好转，3 例患者症状得到缓解，所有患者介入卵巢静脉栓塞治疗成功率 100%，术后均未发生严重并发症。**结论** 采用介入栓塞卵巢静脉治疗盆腔淤血综合征是一种安全有效的治疗手段，有着较高的成功率和令人满意的临床疗效。

超声科乳腺癌穿刺的绿色通道建立及效果评价

兰琳
四川大学华西医院

【摘要】 **目的** 探讨我院超声科开展超声引导下乳腺癌穿刺活检就诊绿色通道的必要性，提高乳腺癌患者就诊效率和患者满意度，缩短乳腺癌患者等待穿刺的时间，从而得到有效的治疗。**方法** 对我院超声科从 2018 年 1 月到 2019 年 1 月行乳腺超声检查后需要做穿刺的患者共 1160 例，将超声检查 BI-RADS 分级 4c 类及以上的 580 例患者纳入绿色通道，其中女性患者占 578 人，男性占 2 人分成实验组，另外 580 人分成对照组，对比两组患者从门诊就医流程，预约乳腺超声专科检查的时间以及患者和家属对开展乳腺癌绿色通道的整体满意度调查。**结果** 实验组 580 例绿色通道患者穿刺结果为癌的 447 例，良性为 133 例，超声引导乳腺穿刺等待时间缩短至 3 天（对照组等待穿刺的时间为 60 天左右），两组对比差异有显著统计学意义（P＜0.01），实验组患者门诊挂号时间≤ 3 天，对照组患者门诊挂号时间待定，平均≥ 30 天，两组对比差异有显著统计学意义（P＜0.01），预约乳腺超声专科检查的时间实验组患者为≤ 2 天，对照组患者为 21 天左右，各关键环节时间点所用时间均减少(P＜0.01),而开展绿色通道后的患者整体满意度明显高于对照组（实验组患者满意度为 99.9%，对照组为 35%），两组患者间差异具有显著统计学意义（P＜0.001）。**结论** 随着社会的进步，大家对乳腺癌知识的普及发现乳腺癌现在的发病率日趋上升，而乳腺癌的准确分型是临床治疗的依据，能让患者得到最适合的治疗方案，而我院因就诊患者人数较多，等待时间过长，从而导致日后的手术时间延长，这不仅造成了患者心理和身体上的痛苦，也给她以后的治疗增加了难度，并且给家庭带来严重的经济负担。因此，我院超声科医护人员克服种种困难，开辟了乳腺癌诊治的绿色通道，大大缩短其就医时间，从而保障其治疗效果，避免乳腺癌患者在等待穿刺活检的期间到处奔波；绿色通道的建立值得在超声介入工作中进行推广使用。

DSA 技师在介入诊疗中的重要性

焦河
四川大学华西医院

介入诊疗现被并为现代临床医学三大学科之一，是以医学影像为导向，介入器材为手段，集影像诊断与微创治疗为一体的高端科学技术，目前伴随越来越多的 DSA 新设备、新技术、新功能应用于介入放射学领域，图像采集、网络传输、软件处理以及复杂手术的技术支持等日益专业化，DSA 单一机器操作逐步发展为与 CT、MRI 融合，全数字化现代医学影像的发展，介入技师的工作相应地变得更为重要；技师在不断提高理论水平、实际操作技能、影像质量控制分析，提升业务能力的同时，理论与经验并重，将介入新技术、新功能及时、准确、规范的应用于临床，以帮助医生提高治疗的精准性，减少并发症，力求从单元化向多元化发展，成为复合型介入技师，成为介入影像设备的直接管理者、影像新技术的实践者、介入新技术的直接参与者。

主动脉弓减影路径图在脑血管造影中的临床应用

李庆福
昆明医科大学第一附属医院

摘要：1.**目的** 探索 DSA 脑血管造影应用主动脉弓减影路径图的临床应用价值。2.**方法** 回顾性分析 2017 年 5 月-2019 年 3 月内我科血管条件不好的 20 例行脑血管造影的病人在同时应用主动脉弓减影路径图与没有应用主动脉弓减影路径图所需要的透视时间及 X 线的辐射剂量。3.**结果** 应用主动脉弓减影路径图相较于没有应用主动脉弓减影路径图时节省手术透视时间为（7±2min）,平均透视剂量减少 40%。**结论** 在实际工作中，对于血管条件不好的病人行脑血管造影时应用主动脉弓减影路径图可指引图像清晰、操作简便，可以提高手术医师操作信心和效率，从而提高手术安全性、缩短手术时间、减少患者和医生的 X 线辐射，具有很高的临床应用价值。

KLIPPLE-TRENAUNAY 综合征的综合治疗。

牛传强
广州市妇女儿童医疗中心

目的 加强了解 KT 综合征，提出综合整治策略。
材料及**方法** 分析我科 KT 综合征共 201 例，根据不同类型分别行激光消融，硬化栓塞，西罗莫司等不同方法，分析其疗效及并发症。
结果 边缘静脉腔内消融经济可行，硬化栓塞可针对不同类型 LM ，西罗莫司对红斑，出血等有效。所有治疗未出现严重并发症。
结论 KT 综合征需要多学科综合治疗，根据不同类型及病灶的主要类型采用联合的治疗策略。

CT 引导下肺穿刺活检对于孤立性肺结节的诊断价值与咯血影响因素分析

丁楠
华中阜外医院

背景和目的
由于早期肺癌缺乏特异性临床症状，往往确诊时已到了疾病的中晚期，而且中晚期 5 年生存率较低，所以人们越来越重视肺癌的早期发现和早期确诊。CT 引导下肺穿刺活检是一种创伤性小、穿刺成功率高、阳性率高的检查方式，已成为临床早期诊断肿瘤的一种重要的影像学检查方法，并获得了广泛的认可和应用。有研究认为，直径在 10~30mm 的 SPN 具有较高的恶性风险，所以应该早期诊断，确定治疗方案，但 CT 引导下肺穿刺活检作为一种有创的检查方式，各种并发症不可避免，既往文献已对常见的穿刺并发症及其影响因素做了大量研究，但对咯血的相关报道尚少。
本文主要研究 CT 引导下肺穿刺活检对直径范围在 10~30mm 的 SPN 的诊断价值,并分析咯血的发生情况,从而提高穿刺诊断效率，避免咯血的发生。
资料和方法
收集 2013 年 1 月至 2018 年 3 月在双源 CT 室进行 CT 引导下经皮肺活检的 289 例孤立性肺结节（SPN）患者的临床、影像学及病理资料。其中，男性 154 例，女性 135 例；患者年龄范围 11-87 岁，平均年龄 58.7 岁，中位年龄 59 岁。并按肺结节直径分成 A 组（20mm＜直径≤30mm）和 B 组（10mm≤直径≤20mm）。分别从以下三方面进行对比分析：1、对 A、B 两组的穿刺成功率、阳性率、恶性率及各种并发症（气胸、出血、咯血）进行对比分析。2、统计直径在 10~30mm 范围内 SPN 的各种病理类型。3、分别从单因素和多因素方面分析，求出影响咯血的独立影响因素。
结果
咯血的单因素分析，卡方检验结果显示：不同病灶大小、穿刺深度、穿刺针型号大小比较，差异有统计学意义（P＜0.05），将以上影响因子作为因变量进行多因素 logistic 回归分析结果显示病灶大小(P=0.03,OR=0.312)、进针深度(P=0.02,OR=3.622)是咯血发生的独立危险因素。
结论
可选择适宜的穿刺路径减少咯血的发生。

PU-1850

低剂量 CT 引导下经皮胃肠道占位穿刺活检的临床应用价值分析

练延帮,董军强,卢振威,李祥周
郑州大学第一附属医院

目的 探讨低剂量 CT 引导下经皮胃肠道占位穿刺活检的临床应用价值及安全性。
方法 收集 2016 年 05 月至 2019 年 08 月郑州大学第一附属医院 34 例胃肠道占位患者，其中男 16 例，女 18 例，年龄 27-83 岁，平均 57.4 岁。34 例患者中胃占位 10 例，小肠占位 16 例，结肠占位 8 例。其中胃及结肠患者均已行消化内镜检查并内镜下活检阴性。所有患者均行全程低剂量 CT 引导下穿刺活检，CT 机器采用 GE Lightspeed 大孔径 CT，管电压为 100KV，管电流为智能毫安秒（Auto mAs），设置层厚为 2.5mm，扫描范围为 2cm。采用全自动一次性使用活检针（17G，BioPince, ARGON MEDICAL）依情况取组织 2-4 条。统计其扫描次数、辐射剂量、手术时间及病理类型、并发症情况。
结果 所有患者均完成全程低剂量 CT 引导下经皮胃肠道占位穿刺活检。10 例胃占位患者中相比内镜均有，贲门胃底 3 例，胃体部 4 例、胃窦幽门部 3 例，病理结果为 6 例腺癌，2 例胃肠道间质瘤，1 例梭形细胞肿瘤，1 例为高级别上皮内瘤变（手术标本为腺癌）。16 例小肠患者中，空肠 10 例，回肠 6 例。病理结果为 3 例胃肠道间质瘤，5 例为弥漫大 B 淋巴瘤，2 例为平滑肌肉瘤，2 例为腺癌，4 例子为炎性肉芽肿病变，考虑为克罗恩病可能。8 例子结肠占位患者中，6 例为腺癌，1 例为炎性肌纤维母细胞瘤，1 例为粘膜相关淋巴组织结外边缘区淋巴瘤。穿刺病理阳性率为 97.1%，所有患者无严重并发症如胃肠道穿孔、腹膜炎及大出血发生。所有患者平均操作时间为 16min，平均扫描 3-4 次，平均 DLP 为 74.4mGy*cm，平均辐射剂量为 1.12mSv。
结论 低剂量 CT 引导下胃肠道穿刺活检阳性率高，辐射剂量低，安全有效，可作为小肠占位明确病理性质的主要手段，胃及结肠内镜活检失败后的重要补充手段，具有重要的临床应用价值。

CT 引导经皮肺穿刺在肺部占位性病变诊断中的应用

龙成娟,史恒峰,胡汉金
安庆市立医院

目的 探讨 CT 引导经皮肺穿刺在肺部疾病诊断中的诊断成功率、并发症发生率及相关影响因素，了解其临床应用价值。**方法** 回顾分析我院 66 例肺占位性病变患者，均经 CT 引导经皮肺穿刺活检

术，按结节在肺内位置分为肺周围性病变组（52 例）和中央型病变组（14 例），再按结节最大径分为≥5cm（28 例）和＜5cm（38 例）两组，分别统计比较其诊断成功率、并发症发生率，并分析其相关影响因素。**结果** 诊断成功 58 例，诊断成功率 87.9%；肺周围性病变组中 46 例诊断成功，诊断成功率 88.5%，并发症发生率 48.1%；肺中央型病变组中 12 例穿刺成功，诊断成功率 85.7%，并发症发生率 28.6%，两组在诊断成功率和并发症发生率比较无统计学意义（P=0.725，P=0.192）。结节最大径≥5cm 组中诊断成功率 85.7%，并发症发生率 28.6%；小于 5cm 组中诊断成功率 89.5%，并发症发生率 55.3%，二者在诊断成功率比较无统计学意义（P=0.644），二者在并发症发生率比较有统计学意义（P=0.031）。**结论** 1、CT 引导经皮肺穿刺活检术具有诊断成功率高、安全、并发症少及创伤小等优点，在肺部占位性病变诊断中具有重要的临床应用价值；2、CT 引导下穿刺在≥5cm 结节较＜5cm 结节的安全性更高。

科主任督导制度在介入手术安全中的影响

郭锦
武威市人民医院

随着现代医疗技术水平的提高介入手术诊疗技术也不断进步，由于介入手术创口小、恢复快、疗效好等优点介入手术已成为现代医学的主流学科之一。本文在详细阐述介入手术特点的同时结合我院

介入手术室相关运转情况，统计分析科主任现场督导制度实行前后我院综合性介入手术室术中纠纷发生率，结果表明科主任督导制度在保障介入手术安全进行具有重要作用，这为完善我国医院相关管理制度提供参考，为病人得到更安全的医疗服务奠定基础。

PU-1859

介入科实习护生综合教学模式的实践与探

张延藏
郑州大学第一附属医院

目的 探讨综合教学对介入科实习护生介入放射学认知及理解的影响。方法 对在我科实习的护生进行分组教学，分为对照组（传统教学方法）、观察组（综合教学法）。采取调查问卷、技能考核和笔试对两组的教学结果进行评价。**结果** 观察组与对照组相比患者、医师及带教老师满意度较高（c^2值分别为 34.259、42.523、21.333；P<0.05）；操作技能成绩两组无统计学差异（t=1.13；P>0.05），笔试成绩观察组与对照组相比较高（t=10.17；P<0.05）。观察组护生在专科疾病护理、病情观察、患者安全管理、危重症患者抢救配合、突发事件处理和护患关系处理等能力显著高于对照组（t 值分别为 4.855、6.417、5.673、5.602、3.284、2.471；P<0.05）。观察组 SDLINS 总分高于对照组（t=5.089；P<0.05）。**结论** 观察组学生在通过综合性教学后，对介入理论知识和理念的认识更加深入，不仅可以加强护生对介入治疗知识的学习，而且有助于累积临床经验，同时提高对介入放射学的认可度，推进介入放射学学科发展，值得临床推广。

DSA 技师在介入手术中的术中配合

曾贤宽,孙建明
新乡医学院第一附属医院

随着现代医学的发展，科技的不断进步，再到 x 线之父伦琴先生发现 x 线，促成了临床医学与影像学的完美结合。诊疗技术也应运而生，近年来被各个医院重视起来，成为医院的重要学科之一。数字减影血管造影（DSA）是其中一项重要技术，把影像和治疗融为一体。介入医学是三大学科之一，介入医学当然离不开 DSA 大型医疗设备，所以 DSA 成了介入手术室中的主体，DSA 技师成了不可或缺的一部分，介入手术中配术中 DSA 技师的配合也至关重要。现通过多年的工作经验，DSA 技师在手术过程中的合。总结如下

PU-1861

放射介入治疗对产后及异常妊娠子宫出血患者的临床研究

许彪
柳州市中医医院

目的；采用放射介入疗法治疗产后及异常妊娠子宫出血，在治疗中探讨分析其临床改善疗效。方法；选择我院筛选出 66 例产后及异常妊娠子宫出血患者，均经临床诊断并确定，经随机数字分为治疗组及对照组，各组 33 例；对照组年龄在 24-32 岁之间，平均（27.4±2.6）岁；治疗组年龄均在 23-32 岁间，平均为（28.3±3.0）岁。纳入者均经伦理委员会审批通过并同时在知情同意书签

字。对组间病人性别、年龄、病情等基本相关信息相互比较，其 *P* 值大于 0.05 无显著差异，组间具有一定可比性。对对照组组在过程中采用宫腔水囊压迫疗法；给对照组患者实施放射介入治疗：手术步骤：在鼓动静脉部进行麻醉，采用穿刺技术和造影术，血管鞘和 5Fcobra 导管置入双侧髂内动脉，并同时行盆腔动脉血管造影，确定盆腔动脉的走形和子宫动脉开口使导管插入子宫动脉 ，采用直径 1~3 mm 的明胶海绵颗粒予以栓塞。术后注意观察记录穿刺部位渗血、血肿现象，并预防感染，留置导尿管。评价标准以按照 WHO 参照标准进行评价，对改善情况可分为显效、有效、无效进行统计。**结果** 从数据可知治疗组显效人数 18 例，有效为 13 例，治疗有效率为 93.9%；对照组中显效病人 11 例，有效人数为 8 例，经计算改善总有效率仅为 57.6%，与对照组相比有效率明显提升。经对结果进行分析可知治疗组较对照组改善程度明显。治疗组患者术后手术时间为（50.2±18.3）min、住院时间(7.1±2.0)d。与对照组相比，治疗组治疗中病人的手术时间、住院天数均较优，组间差异显著（P＜0.05）。结论；从结果可知，对产后及异常妊娠子宫出血患者进行疗效评价，治疗组中相关指标改善明显且均无死亡病例的出现。因此，采取放射介入治疗具有一定的优越性，及时把握患者的治疗时机，对控制疾病更有帮助，可合理有效的治疗产后及异常妊娠子宫出血，快速达到治愈的目的。

介入栓塞治疗 Graves 病与桥本氏甲状腺炎免疫指标的对比研究

易根发
昆明医科大学第一附属医院

[研究背景与目的] 我院自 2002-2005 年开展介入栓塞治疗 Graves 病以来，共治疗 51 例，经过早期从临床到基础（病理、凋亡、免疫、血管生成因子等）再到临床的系列深入研究，发现 Graves 病栓塞治疗不同时期的 TGAb、TMAb 滴度和阳性率均高于正常，且未见明显下降，而临床若以 TGAb、TMAb 尤其是 TMAb 增高为主时，则应首先考虑桥本甲状腺炎（Hashimotos thyroiditis, HT）的诊断。因此我们将栓塞治疗 Graves 患者不同时期的 TGAb、TMAb 与 HT 的相应指标做一对比研究。

[方法] 通过对行介入栓塞治疗的 51 例患者追踪随访术前术后不同时间段甲状腺功能、TGAb、TMAb 指标与 30 例 HT 患者内科治疗前后相应时间段的相同指标进行对比研究。

[结果] 1、甲状腺功能： Graves 病甲亢栓塞治疗组，术后都能获得减量或停用抗甲状腺药，甲状腺功能逐渐控制在正常范围，无明显甲减出现，而 HT 患者随着时间的推移，甲减的出现逐渐增多；2、TGAb、TMAb：介入栓塞治疗 Graves 病与 HT 患者在治疗前后无明显统计学差异。
[结论] 甲状腺动脉栓塞治疗 Graves 病与 HT 患者 TGAb、TMAb 指标对比无明显统计学差异，但甲减发生率远低于 HT 组；甲状腺动脉栓塞术后甲状腺自身抗体与 HT 自身抗体的产生机理是否相似，有待扩大样本量进一步病理对照研究。

PU-1864

综合治疗凶险性前置胎盘伴膀胱植入一例

张建好,段鸿鉴,韩新巍,冯志鹏
郑州大学第一附属医院

本文报道一例的凶险性前置胎盘伴膀胱植入，患者以无诱因突发大量血尿为主诉急诊入院，入院后完善超声及ＭＲＩ检查，初步诊断为急诊行“腹主动脉球囊暂时封堵术+剖宫取胎术+子宫整形术+双侧输卵管结扎术”，术中证实为凶险性前置胎盘伴膀胱植入，术后再次发生血尿，急诊行“经尿道膀胱镜检+膀胱血块冲洗+电凝止血”，术中证实为膀胱植入血管活动性出血，电凝止血效果欠佳，遂急诊行“双侧髂内及髂外动脉造影并栓塞术”，术后患者出血得到有效控制，后康复出院。本病例危急，通过采用多学科综合治疗，取得了良好的临床结局。

PU-1865

浅谈介入手术室实行 KPI 管理模式的实践与体会

刘倩
陆军军医大学大坪医院

目的 介入手术室通过对 8 个项目进行监控记录,并提出改进方法进行持续性改进，更好的为临床科室服务。
方法 通过数据采集、数据记录，专人专项负责，对以下 8 项内容进行检测：
一：手术医生满意度：每周发放手术医生满意度调查表，进行回收统计，手术医生对服务质量满意度进行评价，查找不满意的原因。
二、急诊手术到位的及时性：建立急诊手术登记表，记录急诊电话通知时间、通知临床医生时间、手术开始时间。全年保证急诊手术 30 分钟内可以开始手术，查找急诊手术未及时到位的原因。
三、手术预约变更率：建立手术变更登记表，记录每日手术变更的信息。查找手术变更率的原因，让手术安排更加合理和有计划性。
四、介入手术接台准时率：建立每日手术安排表，记录未按预约时间进行的手术。指通知手术医生后未及时到位，造成手术间空置 30 分钟以上的情况（除外急诊、病人特殊原因等），减少等待造成的时间浪费。
五、设备完好率/使用率：每日填写设备使用登记本，记录好设备故障的时间及填好相应的维修工单，（每月天数-每月设备故障天数）/每月天数*100%；保证大大型设备及急救设备处于完好备用状态，保证急救需要。
六、收费准确率：建立错误、漏收费登记表，记录每一例错收、漏收项目。通过分析错误、漏收的原因、提高收费准确率。
七、无菌操作合格率：每日抽查手术医生及医务人员无菌操作是否合格，并记录。医务人员在医疗护理操作过程中，保持无菌物品、无菌区域不被污染，减少感染的发生率。

八、临床沟通率：建立与临床科室沟通记录表，沟通后记录。临床医生开具手术申请单后，若对手术申请单有疑问，应及时与临床医生进行沟通解决。

结果 每月月底专人对自己负责的 KPI 项目进行 KPI 结果总结，提出存在问题、原因分析及改进方法，并与上月数据进行对比。

结论 KPI 管理模式对介入手术室有很好的改进作用，应持续有效的实施下去。

放射介入手术室医院感染的原因与对策分析

吴梅
天津市第一中心医院

为了分析放射介入手术室医院感染的原因，进而探讨相应的感染防控对策。**方法** 选取我院 2016 年 1 月至 2016 年 12 月期间收治的 350 例放射介入手术室治疗的患者为对照组，未采用感染防控对策；选取 2017 年 1 月至 2017 年 12 月期间收治的 350 例放射介入手术室治疗的患者为试验组，采用感染防控对策。观察感染发生的主要原因以及两组患者的感染发生率。**结果** 感染发生的原因主要包括三个方面，一是工作人员对感染认识不足，占比为 61.11%（22/36），二是放射介入室布局不科学，占比为 33.33%（12/36），三是医院感染监测制度不完善，占比为 5.56%（2/36）；试验组患者的感染发生率为 3.14%（11/350），对照组患者的感染发生率为 10.29%（36/350），差异具有统计学意义（P<0.05）。**结论** 通过采取积极有效的感染防控措施可以有效降低放射介入手术室医院感染发生率，效果显著。

PU-1867

老年人植入式静脉输液港体外露的临床分析

邓梨平,程瑞文
湖南中医药大学第一附属医院

目的 探讨老年人使用植入式静脉输液港发生港体外露的临床特点。方法 回顾性分析总结我院 2015 年 1 月至 2017 年 12 月完成的植入式静脉输液港 60 例老年患者的临床资料和随访资料，寻找发生港体外露的病例并对其临床资料进行总结和分析。结果 发生晚期港体外露 2 例，均男性，年龄分别为 75 和 90 岁，脑梗塞后和气管切开后各 1 例，分别发生在输液港术后第 8 月和 14 月，港体上方皮肤厚度由＞8㎜ 变薄为≤2㎜，患者体重下降大于 10%，外露港体上方皮肤呈干性坏疽过程。结论 港体上方皮肤变薄并发生干性坏疽可能是老年人晚期静脉输液港港体外露的重要病理过程。

PU-1868

正常及糖尿病大鼠内皮干细胞分离、鉴定及功能试验

蒋春雨
上海交通大学附属第六人民医院

介入治疗引起的血管内皮损伤在术后血管不良事件的发生及进展过程中起到关键性作用。而快速内皮化可以有效的恢复血管内皮的完整性，从而抑制内膜的过度增生，但是糖尿病患者血管内皮损伤修复能力明显受损。内皮干细胞的血管内皮损伤修复的过程中发挥着关键性的作用，故而我们评估了糖尿病大鼠来源的内皮干细胞与正常大鼠来源的内皮干细胞生物学功能方面的不同。

方法 通过梯度离心法分离，培养了糖尿病大鼠来源及正常大鼠来源的内皮干细胞，分别通过 CCK-8 法以及 transwell 法评估了两种不同来源的内皮干细胞的增殖、迁移能力的不同，进一步通过粘附实验，评估了两种不同来源的内皮干细胞对纤维连接蛋白及内皮细胞的粘附功能的不同。

结果 增殖实验显示糖尿病大鼠来源的内皮干细胞增殖能力较正常大鼠来源的内皮干细胞明显减弱 。Transwell 实验结果显示，相较于正常大鼠来源的内皮干细胞，Ⅰ型糖尿病大鼠来源的内皮干细胞的迁移能力明显减弱（116.9±17.1 VS 97.1±15.4 cells/field,p=0.044）。Ⅰ型糖尿病大鼠来源的内皮干细胞不论是对内皮细胞 （37.4±11.2 VS 21.3±10.4 cells/field， P=0.031）还是对纤维黏连蛋白的粘附能力均明显减弱 （150.2±37.1 VS 113.9±32.4 cells/field， P=0.016）。

结论 研究表明相较于正常大鼠的内皮干细胞，Ⅰ型糖尿病大鼠来源的内皮干细胞的生物学活性明显的减弱，包括增殖、迁移及粘附能力。

PU-1869
博来霉素在子宫动脉栓塞治疗子宫腺肌症中的作用分析

牛荣仿,王艳丽,韩新巍,张建好
郑州大学第一附属医院

目的 探讨博来霉素在子宫动脉栓塞（UAE）治疗子宫腺肌症（AM）中的作用，分析其临床疗效及并发症的发生情况。
方法 回顾性分析 2012 年 1 月-2019 年 1 月在郑州大学第一附属医院介入科接受 UAE 治疗的诉有痛经、月经过多等症状的 AM 患者 82 例的临床资料，术前根据 B 超及磁共振检查诊断为弥漫型 AM（n=33）,局限性 AM（n=49）。治疗方式为博来霉素灌注联合 UAE 及单纯 UAE 治疗，分别比较每组病例中不同治疗方式患者的年龄、初潮年龄、术后有效率，及术后并发症的差异及同一治疗方式两组间是否存在差异。
结果 博来霉素联合 UAE 治疗 AM，无化疗药物相关不良反应，两组病例中不同治疗方式的术后有效率差异均具有统计学意义（P<0.05），同一种治疗方案在不同组患者的术后有效率均具有统计学意义（P<0.05）。
结论 博来霉素联合 UAE 治疗 AM 疗效安全可靠，且弥漫型 AM 疗效更好。

PU-1870
Angiography Findings and Endovascular Management of Acute Nonvariceal Gastrointestinal Bleeding: A Pictorial Essay

Zhongzhi Jia
Changzhou Second People’s Hospital

Although most cases of acute nonvariceal gastrointestinal (GI) hemorrhage either spontaneously resolve or respond to medical management or endoscopic treatment, there are still a significant number of patients who require emergency angiography and endovascular management. The most common angiography finding is contrast extravasation. If a hemorrhage source is identified, endovascular treatments including intra-arterial infusion of vasopressin, embolization, covered stent-graft, or combined of them, are usually effective means of successfully controlling hemorrhage while minimizing potential complications.
Diagnostic angiography and endovascular management are excellent options for evaluating and managing acute nonvariceal GI bleeding that is refractory to medical and endoscopic therapy.The most common angiography finding is contrast extravasation.

Endovascular management including intra-arterial infusion of vasopressin, embolization, covered stent-graft, or combined of them, is minimally invasive treatment with a high successful rate.

PU-1871
DWI 评估高强度聚焦超声治疗子宫腺肌症早期疗效的价值

赵卫,刘敏
昆明医科大学第一附属医院

【目的】：探讨 DWI 及 ADC 值在评价高强度聚焦超声（HIFU）治疗子宫腺肌症早期疗效的价值。
【方法】：回顾性分析行 HIFU 治疗的 37 例子宫腺肌症患者的年龄、身高、体重、病变类型及治疗前后病灶在 DWI 图像上的表现，在 ADC 图像上测量消融灶术前正中、术后正中、消融区边、残留区 ADC 值。术前正中与术后正中、术前正中与消融区边、术后正中与消融区边、残留区与术前正中、残留区与消融区边的 ADC 值分别进行配对 t 检验。同时手动勾画计算出术后 CE-MRI 轴位上最大消融层面无强化区面积，与相应层面 DWI 图像上高信号区面积和高信号内相对低信号区面积分别进行秩和检验。
【结果】：
1.术前子宫腺肌症病灶在 DWI 图像上较盆底肌相比，呈现出均匀或局部稍高的信号。术后 DWI 图像上显示消融区病灶信号与术前相比呈高信号表现，而消融区内呈现出周边信号高于中心信号的分布，呈现靶环样改变。
2.术前正中 ADC 值高于术后正中 ADC 值。
3.术前正中 ADC 值高于消融区边 ADC 值。
4.术前正中 ADC 值低于残留区 ADC 值。
5.术后正中 ADC 值高于消融区边 ADC 值。
6.残留区 ADC 值高于消融区边 ADC 值。
7.手动勾画系统自动测量术后 CE-MRI 上无灌注区面积低于消融后 DWI 上高信号区面积。
8.无灌注区面积与 DWI 上高信号区内相对低信号区所测量面积进行比较。
【结论】：
1、DWI 上信号差异及 ADC 值变化可以反应子宫腺肌症 HIFU 术后消融病灶的病理及生理学改变，可对病灶的范围、消融程度等进行定量评价，为治疗效果的评价提供客观依据。
2、DWI 和 CE-MRI 在早期评价 HIFU 治疗子宫腺肌症术后疗效方面无差异，DWI 可对子宫腺肌症 HIFU 治疗后早期疗效进行评价。

PU-1872
CT 引导下经皮肺穿刺活检诊断肺部占位病变的敏感性及准确率分析

李超平,吴钢飞,范明华,李卫锋,徐吉莉
丰城市人民医院

目的 探讨 CT 引导下经皮肺穿刺活检诊断肺部占位病变的敏感性及准确率。**方法** 选取 2016 年 6 月至 2018 年 5 月我院收治的肺部占位病变患者 90 例，所有患者均经手术病理组织活检确诊，患者入院后经行 CT 引导下经皮肺穿刺活检，并以病理组织活检结果为金标准，评估 CT 引导下经皮肺穿刺活检诊断肺部占位病变的敏感性及准确率。**结果** 本组 90 例患者经病理组织学活检确诊，64 例为

恶性病变，26 例良性病变。本组 90 例患者均顺利完成 CT 引导下经皮肺穿刺活检，经皮肺穿刺活检敏感性为 96.88%，特异度为 76.92%，准确率为 91.11%。本组 90 例患者中有 10 例发生并发症，发生率为 11.11%，经对症治疗后症状消失。

PU-1873
脾切除术与部分脾动脉栓塞术治疗脾功能亢进的疗效观察

吴钢飞,李超平,罗飞兵,熊志刚
丰城市人民医院

目的 观察对比脾切除术与部分脾动脉栓塞术治疗脾功能亢进的临床效果。**方法** 选取 2017 年 5 月至 2019 年 2 月在我院收治 80 例脾功能亢进患者，按随机双盲法分为对照组（40 例）与实验组（40 例）。对照组给予传统脾切除手术治疗，实验组给予部分脾动脉栓塞术治疗。对比两组术中出血量、手术时间、术后住院时间及并发症发生率等方面的差异。**结果** 实验组在术中出血量、手术时间、术后住院时间及并发症发生率等方面优于对照组，差异有统计学意义（$P<0.05$）。**结论** 脾功能亢进患者采用部分脾动脉栓塞术治疗，可以减少术中出血量、手术时间，缩短术后住院时间，促进患者术后恢复，降低并发症发生率，可在临床医疗中推广应用。

PU-1874
埋入式输注系统在儿童恶性肿瘤患者中的应用

蒋贻洲
广州市妇女儿童医疗中心

目的：探讨埋入式输注系统作为儿童恶性肿瘤患者长期静脉输液通路的可行性。方法：2009 年 8 月 — 2017 年 6 月，共 68 例儿童恶性肿瘤患者行埋入式输注系统置入术，其中肝母细胞瘤 14 例，视网膜母细胞瘤 54 例。全麻下行锁骨下静脉或颈内静脉穿刺术，DSA 监视下采用经导丝植入技术置入导管。观察围手术期和置入术后的并发症。结果：手术成功率为 99% 。所有病人未发生严重并发症。3 例患儿因皮肤感染将埋入式输注系统取出，有 45 例因治疗结束按计划取出输注系统。结论：埋入式输注系统是儿童恶性肿瘤患者有效和安全的输液途径。DSA 监视下采用经导丝植入技术和置管深度计算公式可以保证手术的安全性并达到预期的效果。

PU-1875
术前经导管动脉化疗栓塞术在肝母细胞瘤的临床应用

陈昆山
广州市妇女儿童医疗中心

目的 探讨术前经导管动脉化疗栓塞术（TACE）在肝母细胞瘤治疗中的疗效。**方法** 对常规估计不能切除的 20 例肝母细胞瘤患者采用经导管动脉化疗栓塞术，然后再进行外科手术切除，观察患儿的术中情况、临床疗效，并对远期效果进行随访。**结果** 术前导管动脉化疗栓塞术后 1-4 个月内复查，患儿肿瘤体积明显缩小，甲胎蛋白降低明显，且经过动脉化疗栓塞后，20 例患儿均可以接受外科切除手术，手术切除标本的病理改变显示肿瘤明显坏死。远期随访发现，动脉化疗栓塞术后 2 年死于肺转移者 7 例，2 例复发，11 例患者无瘤存活平均时间 23.6 月，随访时间 30 个月。**结**

论 经导管动脉化疗栓塞可以有效杀死肿瘤细胞，并能使患儿获得外科手术的机会，明显改善预后，延长患儿无瘤生存时间，在肝母细胞瘤的治疗中是一种安全、有效的治疗措施。

PU-1876
泡沫硬化治疗儿童淋巴管-静脉畸形的临床疗效观察

陈昆山
广州市妇女儿童医疗中心

目的 探讨泡沫硬化治疗儿童淋巴管-静脉畸形的临床疗效。**方法** 回顾性分析 2017 年 9 月至 2018 年 12 月，16 例淋巴管-静脉畸形患儿行泡沫硬化治疗的临床资料。所有患儿术前均行彩色超声及 MRI 扫描诊断为淋巴管-静脉畸形。全麻后经股动脉插管造影，未发现动脉供血来源者在影像引导下穿刺病灶，使用平阳霉素白蛋白泡沫硬化剂进行硬化治疗，治疗后 4 周后评估，未达到治愈标准继续接受硬化治疗，术后随访 9~36 月。**结果** 本组病例动脉造影均未发现动脉供血来源，共行硬化治疗 49 次，平均 3.1±1 次/例。治疗后采用影像学检查评估疗效，13 例患儿治疗后达到治愈标准，随访无复发，3 例患儿达好转标准，建议继续随访。总体治愈率 81.3%，有效率达 100%。术后 3 例次出现轻度胃肠道反应，4 例次一过性低热，6 例次局部肿胀，无继发感染、药物过敏、肺纤维化等严重不良反应。 **结论** 儿童淋巴管-静脉畸形行泡沫硬化治疗，具有安全有效、疗效确切的特点，值得临床推广应用。

PU-1877
引流导管在各类型淋巴管畸形硬化治疗中的应用及疗效分析

陈昆山
广州市妇女儿童医疗中心

探讨引流导管在各类型淋巴管畸形硬化治疗中的应用及疗效。**方法** 回顾性分析 2018 年 1 月至 2019 年 1 月我院确诊的各类型淋巴管畸形引流导管置入治疗的 16 例患儿的临床资料。所有患儿术前均行彩色多普勒超声、CT 或 MRI 扫描诊断为淋巴管畸形，结合临床特征及术中穿刺液进一步确诊。全麻下在彩超或 CT 引导下穿刺淋巴管畸形并置入引流导管，术后予多西环素溶液冲洗及硬化治疗，拔管后 4 周后未达到治愈标准，行多西环素局部注射治疗，4 周后再评估是否继续注射，术后随访 6~18 月。**结果** 本组 12 例患儿治疗后，影像学检查未瘤体或仅有少量残余硬化病灶，随访无复发，达到治愈标准，本组其余 4 例瘤体缩小 50%以上，影像学检查仍有少量囊性病灶残余，达好转标准，建议继续随访。总体有效率达 100%。 **结论** 引流导管可应用于各类型淋巴管畸形硬化治疗，并具有安全有效、创伤小、治疗周期短及复发率低的特点，值得临床推广应用。

PU-1878
多西环素硬化治疗舌部微囊型淋巴管畸形的疗效与安全性

陈昆山
广州市妇女儿童医疗中心

目的 探讨多西环素硬化治疗舌部微囊型淋巴管畸形的疗效与安全性。**方法** 回顾性分析 2017 年 7 月至 2018 年 12 月我院以多西环素硬化治疗的 12 例舌部微囊型淋巴管畸形患儿的临床资料。所

有患儿术前结合临床症状及影像学检查诊断为舌部微囊型淋巴管畸形，部分病例结合术中穿刺液进一步确诊。全麻后在影像引导下穿刺病灶，成功后用多西环素进行硬化治疗，4 周后未达到治愈标准可重复硬化治疗，术后随访 3~15 月。**结果** 12 例患儿共行硬化治疗 28 次，平均 2±0.3 次/例。9 例患儿治疗后临床症状消除，瘤体基本消失，影像学检查未见瘤体或仅有少量残余硬化病灶，随访无复发，达到治愈标准；3 例患儿治疗后瘤体缩小 50%以上，影像学检查仍有少量囊性病灶残余，达好转标准，建议继续随访，必要时再次硬化治疗。术后 3 例次出现轻至中度发热，5 例次局部肿胀，2 例次出现舌粘膜浅表破溃，经对症治疗后可恢复正常。本组患儿均无继发感染、药物过敏等严重不良反应。 **结论** 多西环素硬化治疗舌部微囊型淋巴管畸形疗效确切，创伤小，安全可靠，值得临床推广应用。

Intra-arterial chemotherapy for treatment of very low birthweight infants with retinoblastoma: two case reports and review of literature

Hua Jiang
Guangzhou Women and Children's Medical Center

Intra-arterial chemotherapy (IAC) has come to the forefront in the treatment of retinoblastoma (RB). However, reports of IAC treatment of very low birthweight (VLBW) infants with RB were rare. In the present report, we demonstrated our two cases and summarized the principal experiences of IAC treatment with literature review.We reported two VLBW infants with RB who received IAC treatment. The birth weight of the two female patients were 1.1Kg and 1.2 Kg, respectively. At about 1 month old, the two patients from different provinces were diagnosed unilateral RB of Group B (International Intraocular Retinoblastoma Classification, IIRC) at the local hospital when newborn fundus screening. There was no leucocoria, strabismus or other clinical presentation. The ophthalmologists of local hospitals refused to give patients intravenous chemotherapy (IVC), considering the risk of IVC because of low body weight

(both less than 2Kg). Then the parents of patients chose IAC treatment. Two sessions of IAC were operated respectively on two patients and the tumors were inactivation due to calcification. The average irradiation time of each patient was 6.65 min and 3.75 min and the average irradiation dose was 60.5 mGy and 22.5 mGy, respectively.These two case reports were the first report in the literature exhibiting the experience of IAC treatment of very low birthweight infants with RB. The clinical and technology experiences of operator were very important for the IAC treatment of RB. IAC treatment for RB is a possibility to replace systemic chemotherapy (and eliminate those systemic side effects including the need for a vascular port) because of the higher drug concentration attained in the eye, especially for children with low birth weight. But further more research is needed.

PU-1881

儿童先天性肝动静脉瘘的介入栓塞治疗

李海波
广州市妇女儿童医疗中心

目的 探讨介入栓塞治疗儿童先天性肝脏动静脉瘘的方法及其临床疗效。**方法** 2011 年 5 月至 2016 年 7 月，对 5 例我科收治的小儿先天性肝脏动静脉瘘进行全麻下介入栓塞治疗，其中 3 例为肝动脉-门静脉瘘,2 例为肝动静脉-肝静脉瘘，5 例患儿均成功采用经股动脉穿刺插管肝动脉 DSA 造影，确诊为先天性肝脏动静脉瘘后使用弹簧圈栓塞瘘口。**结果** 5 例先天性肝脏动静脉瘘均成功行介入栓塞治疗，存活并随访至今，术后均无肝脏功能异常及出血。**结论**介入栓塞治疗儿童先天性肝动静脉瘘是安全、微创有效的治疗方法，可以作为首选治疗方案。

PU-1882

经导管动脉化疗栓塞术治疗儿童肝母细胞瘤临床疗效分析

李海波
广州市妇女儿童医疗中心

目的:探讨动脉化疗栓塞术(Transcatheter Arterial Chemoembolization,TACE)对不能切除的小儿肝母细胞瘤治疗的临床疗效及其在综合治疗中的作用.方法:常规估计不能切除的肝母细胞瘤 35 例经动脉化疗栓塞治疗 68 次,再行Ⅱ期外科手术切除,比较分析治疗前后临床症状、体征和血 AFP 的变化、术中情况及随访远期疗效.结果:TACE 术后数天至 1 月复查,和术前相比,肿瘤体积平均缩小 62.6%(配对 t 检验,t=3.11,P=0.006),血 AFP 平均降低 52.4%(配对 t 检验,t=1.784,P=0.096),无明显的化疗毒性反应,肿瘤手术完整切除 31 例,术后病理显示肿瘤明显坏死,平均坏死区域面积为 63.1%.随访 6-30 mo,1 a 生存率为 93.3%(14/15),2 a 生存率为 66.6%(10/15),3 a 生存率为 40.0%(6/15).结论:TACE 治疗肝母细胞瘤安全有效,无严重并发症,能使部分不能Ⅰ期手术的患儿重新获得手术机会,并对减少术中肿瘤细胞的扩散和术中出血、改善预后有较大作用.

PU-1883

CTA 联合 CTA 对急性脑梗死患者再灌注治疗预后的价值

刘超
沧州市人民医院

目的 探讨全脑 CT 灌注成像(CTP)联合 CT 血管造影(CTA)对急性脑梗死患者再灌注治疗后 3 个月预后的价值。
材料与方法 选择我院 2016 年 12 月-2019 年 3 月我院收治的 51 例急性脑梗死患者的临床资料。所有患者治疗前均行全脑 CTP 和 CTA 检查，再灌注治疗后 3 月复查 CT 或磁共振影像检查。使用后处理软件于灌注参数图上选取感兴趣区 ROI，比较梗死区与对侧镜像区脑灌注参数[脑血流量(CBF)、局部血容量(CBV)、平均通过时间(MTT)、达峰时间(TTP)、通透性表面积乘积（PS）],记录头颈部动脉狭窄和闭塞情况。结局评定指标采用发病 3 个月后的 mRS 评分,不良预后定义为生活依赖(mRS 评分:3-5 分)或在 3 个月内死亡(mRS 评分:6 分)；预后良好者 mRS 评分:0-2 分。使用二元逻辑回归分析预后不良的独立预测因素。使用受试者工作曲线(receiver operating characteristics curve,ROC)分析评价指标的预测能力。
结果 51 名患者 5 例接受血管内治疗，33 例静脉静脉溶栓治疗，13 例接受静脉溶栓桥接血管内治疗；治疗后 3 月复查，24(47.06%)例患者出现预后不良。CTA 检查发现 51 例患者存在血管病变 56 处,其中轻度狭窄 11 处(19.64%),中度狭窄 21 处(37.50%),重度狭窄 18 处(32.14%),完全闭塞 6 处(10.71%)。二元逻辑回归分析表明,责任血管重度狭窄及低灌注镜像区 rPS 分别为预后不良独立预测因素。
结论 全脑 CTP 联合 CTA 检查可准确判断脑梗死区域和对应的血流动力学改变,明确血管狭窄部位和程度,对急性脑梗死有较高的临床诊断价值。责任血管重度狭窄及低灌注镜像区血脑屏障通透性高可能预示着预后不良。

PU-1884
基于 MRI 的急性缺血性脑卒中与脑白质高信号的纵向研究

陈尧,曹海安,王瑞琳,张建军
浙江医院

目的 建立基于 MRI-FLAIR 影像特征参数评估脑白质高信号在预测急性缺血性脑卒中的作用。
方法 回顾性分析 2011 年 1 月至 2019 年 3 月于浙江医院放射科行 MRI-FLAIR 检查的脑白质高信号患者再发急性缺血性脑卒中患者的临床资料，收集脑卒中发生前 MRI 图像中存在脑白质高信号影像表现（所有数据 MRI 随访间隔≥2 年）。脑白质高信号分级方法是用 Fazekas 评分系统。分析脑卒中与脑白质高信号的关系，同时对两组 MRI 影像特征进行单因素分析及多因素 Logistics 回归分析，获得独立预测因子并建立预测模型。
结果 收集 102 例脑白质高信号患者，其中 80 例在随访 2 年后中发生急性缺血性脑卒中，占 78.4%。男性患者占总数比例 65.7%，平均年龄为 76±12 岁，高血压 75.5%，糖尿病 34.3%，高血脂 26.5%，吸烟占 29.4%，饮酒占 18.6%，颈动脉粥样斑块占 66.7%。脑白质高信号均为多发，根据 Fazekas 评分分为轻重度脑白质高信号患者。轻度占 40.2%，重度占 59.8%。脑白质高信号发生部位与脑卒中一致占 36.2%。单因素分析结果显示，两组间的高血压、饮酒及 Fazekas 评分重度者进行比较差异具有统计学意义（$p<0.05$）。多因素 Logistics 回归分析结果显示，高血压、饮酒及 Fazekas 评分重度者为独立预测因子。
结论 基于 MRI 影像特征的模型对预测脑白质高信号患者发生急性缺血性脑卒中具有潜在价值。

缺血性脑卒中患者豆纹动脉改变的初步探究

周钊光,雷益,林帆
深圳市第二人民医院

目的 大脑中动脉分支豆纹动脉供血区域是缺血性脑卒中的多发区域，本研究对单侧发病的基底节区和（或）放射冠区亚急性缺血性脑卒中患者的病变侧豆纹动脉的数量及宽度、形态进行了初步探究。

方法 ：(1)本研究共纳入单侧发病的亚急性缺血性脑卒中患者 13 例，记为实验组；双侧大脑实质无梗塞灶病例 7 例，记为对照组； (2)对实验组及对照组病例均进行了高分辨血管壁扫描，本研究采用序列为 T1WI-SPACE 序列，并所采集图像进行最小密度成像后处理，显示双侧豆纹动脉； (3)测量并记录双侧动脉动脉数量，并记录双侧豆纹动脉数量差值的绝对值，其中实验组记为 A1，对照组记为 A2； (4)测量并记录双侧动脉动脉管径最宽宽度的绝对值，并记录双侧豆纹动脉最宽宽度差值，其中实验组记为 B1，对照组记为 B2； (5)实验组与对照组的双侧豆纹动脉数量差值 A1 与 A2 及双侧豆纹动脉最宽宽度差值 B1 与 B2 的比较均采用独立样本 t 检验。

结果 （1）A1 为 0.54±0.5，A2 为 0.5±0.5，两组数据经统计学计算 P 值＞0.05，差异无统计学意义；（2）B1 为 0.05±0.01（mm），B2 为 0.02±0.01（mm），两组数据经统计学计算 P 值＜0.05，差异有统计学意义；（3）本研究发现 6 例患者病变侧豆纹动脉宽度较正常侧豆纹动脉宽度大，7 例患者病变侧豆纹动脉宽度较正常侧豆纹动脉宽度小，这前 6 例患者梗塞灶范围均较后 7 例患者大。

结论 （1）在亚急性脑卒中患者中，病变侧豆纹动脉数量没有明显变化；（2）单侧发病的基底节区亚急性患者如果其梗塞灶范围较大，其病变侧豆纹动脉宽度较正常侧增宽，提示程度较重的基底节区亚急性脑卒中患者会通过豆纹动脉的扩张代偿其血供较差区域；（3）单侧发病的基底节区亚急性患者如果其梗塞灶范围较小，其病变侧豆纹动脉宽度较正常侧较窄，提示范围较小的亚急性梗塞灶为豆纹动脉因动脉粥样硬化等原因造成管腔变窄、远端血供较差所致。

PU-1886
基于形态学分析颅内镜面后交通动脉瘤破裂的相关参数

杨明光
重庆市急救医疗中心

背景和目的 颅内镜面动脉瘤被认为是颅内多发动脉瘤的一种类型，其定义为双侧并对称地发生在同名血管上的动脉瘤。以往对颅内动脉瘤的几何参数和形态参数的研究是为了确定破裂风险，但由于患者的特殊危险因素，如性别、高血压和年龄存在差异，破裂风险仍未完全确定。为此，本文的目的是确定颅内镜面后交通动脉瘤破裂的相关形态学参数。

方法 收集 2012 年 1 月至 2019 年 6 月经脑血管造影确诊的 24 例镜面后交通动脉瘤患者，我们将这 24 例患者分成破裂组与未破裂组。镜面后交通动脉瘤的形态特征包括分叉、形状、颈宽、宽度、深度、最大尺寸、血流流入角、母血管直径、纵横比(Ar)、深度/宽度比、瓶颈因子、大小比(Sr)，动脉瘤倾斜角、动脉瘤圆顶指向(内侧、外侧、上、下、后)，动脉瘤子囊形成，PCoA 是否为胚胎型。进行单因素和多因素统计分析，确定破裂的独立危险因素。

结果 单因素分析显示，破裂组与未破裂组的动脉瘤大小、纵横比(Ar)、大小比(Sr)、不规则瘤壁、最大尺寸、动脉瘤倾斜角不同（P<0.05）。多因素分析表明，纵横比(Ar)＞1.3，大小比(Sr)＞1.4，不规则形状是动脉瘤破裂的重要预测因素。

结论 镜面后交通动脉动脉瘤破裂是研究颅内动脉瘤破裂风险的有效模型。纵横比(Ar)＞1.3，大小比(Sr)＞1.4，不规则瘤壁是预测破裂的较好指标，这些动脉瘤的形态学参数在评估、预测、预防动脉瘤破裂风险中具有一定的价值。

PU-1887
基底动脉粥样粥样斑块分布与脑桥梗死灶的高分辨血管壁 MR 成像相关性研究

钟丽玲,宋建勋
深圳市宝安区人民医院

目的
基底动脉（basilar artery，BA）粥样硬化斑块导致其穿支开口堵塞是造成脑桥卒中的重要原因，因此获取基底动脉斑块分布对于更好的了解脑桥卒中病因非常重要。本研究旨在通过高分辨血管壁磁共振成像（vessel wall magnetia resonance imaging, VW-MRI）综合评估基底动粥样硬化斑块的分布特征。
方法
回顾性分析 31 例患有症状性孤立性脑桥梗死患者，根据常规 MRI 检查中 DWI 序列将这些患者分为旁正中脑桥梗死类(paramediaan pontine inarction，PPI)和腔隙性脑桥梗死类(Lacunar pontine infarct，LPI)，这些患者并且接受 VW-MRI 检查。根据 VW-MRI 把基底动脉管壁分为背侧壁、腹侧壁、左侧壁和右侧壁象限，并对 BA 粥样硬化斑块进行四个壁象限分类。BA 的责任斑块定义为斑块位于梗死的相同切面或相邻切面并且能起到因果作用的斑块。分析 PPI 和 LPI 与斑块之间的关系，并且分析 PPI 和 LPI 的 BA 斑块分布特点，计数资料采用 X^2 检验或 Fisher 确切概率法。
结果
在 31 例有症状孤立性脑桥梗死中，PPI 患者 15 例（ 48.4%）及 LPI 患者 16 例（ 51.6 %）。在有症状脑桥卒中患者中，24 例（77.4%）有症状脑桥梗死中观察到斑块，7 例（22.6%）患者无斑块。一共检测到 36 个斑块，24 个（66.7%）责任斑块，12 个（33.3%）非责任斑块；所有斑块中 14 个斑块（30.4 %）涉及一个象限，32 个斑块（69.6%）涉及两个或更多象限。PPI 的 BA 责任斑块在四个象限壁中的患病率双侧壁 87.5% 最多，其次背侧壁 12.5%，$P<0.05$。LPI 中检测 BA 斑块高达 75%，BA 斑块更常位于双侧壁 45.8%、背侧 41.7%，背侧 12.5%，$P<0.05$。
结论
PPI 和 LPI 病因与 BA 斑块形成有关，PPI 和 LPI 的基底动脉斑块分布在双侧壁最多。

PU-1888
PWI 联合 MRA 评价椎基底动脉狭窄所致后循环远端隐匿性缺血

张永刚,苗重昌
连云港市第一人民医院

目的 探讨利用 PWI 联合 MRA 技术评价椎基底动脉狭窄所致后循环远端的隐匿性缺血情况。 **方法** 本研究设立三组研究对象。A 组：无症状组；B 组：症状组；C 组：健康对照组。分析三组 PWI 和 MRA 检查资料，观察后循环血管狭窄程度，侧支血管分级的显示，局部脑血流量（rCBF ）、局部脑血容量（rCBV)、平均通过时间(rMTT)指标。 **结果** 三组研究对象前后循环血管的 MRA 图像均取得满意效果；A、B、C 三组后交通动脉开放的比率分别为 15（68.1%）、17（77.2%）、15（50%），软脑膜动脉生成的比率分别为 7（31.8%）、13（59.0%）、7（23.3%）；A 组与 C 组比较，rCBF、MTT 存在差异，rBCV 无明显差异；A 组与 B 比较，B 组的 rCBF、rBCV 下降，MTT 延长，存在统计学差异。 **结论** PWI 联合 MRA，能够评价隐匿性后循环缺血的范围及侧支循环血流，可以尽早地为临床提示后循环血液动力学状况，为治疗及评价预后提供帮助。

Trousseau 综合征的影像学特征及临床认识

唐业欢
广西医科大学第一附属医院

目的 Trousseau 综合征是指癌症患者在其发病过程中因凝血和纤维蛋白溶解机制异常而出现的所有临床表现，本文探讨以急性多发性脑梗死为主要表现的 Trousseau 综合征相关性神经系统病变，总结其临床表现、实验室检查及影像学特点，旨在提高临床工作中对该病的重视和认识。
方法 回顾性分析本院 5 例以急性多发性脑梗死为主要表现的 Trousseau 综合征患者的资料，总结其临床表现、实验室检查及影像学特征。在常规图像上观察脑梗死病灶分布部位、信号/密度特点，在 CTA 图像上观察颅内血管有无狭窄或闭塞改变（包括大脑前、中、后动脉及颈内动脉颅内段），在 DWI 图像上发现超急性期或急性期脑梗死灶，在增强图像上观察梗死灶强化特点。实验室检查以 D-二聚体定性和定量检测为主、此外包括纤维蛋白降解产物、肿瘤相关标志物检测等。
结果 本组 5 例患者男性 4 例，女性 1 例，年龄为 51-81 岁，平均年龄 62 岁；原发肿瘤为肝癌 4 例，肺癌 1 例；临床多表现为意识嗜睡、乏力、言语不清、寡语、神情淡漠。肿瘤相关标志物均呈阳性；D-二聚体均显著升高，血液呈高凝状态。CT 及 MRI 影像学显示脑梗死灶呈多灶性分布，累及多个动脉供血区，多分布于两侧半卵圆中心、放射冠及基底节区、脑白质区域，以前循环为主；其中一例同时累及前后循环，病灶广泛分布于两侧大脑、小脑半球及脑干，CTA 血管成像显示颅内血管走行良好，未见明确异常；DWI 上病灶均表现为弥散受限高信号，增强扫描无强化。
结论 恶性肿瘤易激活患者凝血系统，造成系统性血栓和继发脑梗死，即肿瘤相关性多发脑梗死，是 Trousseau 综合征一种特殊表现，其特征表现为累及多个动脉供血区的多发性急性脑梗死并伴有血 D-二聚体显著升高。认识和准确诊断该疾病有助于临床选择最合理的治疗方式，稳定病情和提高生存质量。

FLAIR 高信号血管征对急性脑梗死患者治疗时间窗的诊断价值

陈秋雁,余燕武
福建医科大学附属宁德市医院

目的 研究 FLAIR 高信号血管征（FVH）对急性脑梗死患者治疗时间窗的诊断价值。方法:回顾性分析 2018 年 1 月 1 日-2019 年 3 月 1 日在我院行颅脑 MRI 检查的急性脑梗死患者的临床资料及影像资料，按照一定的入选标准和排除标准纳入研究对象。按照有无血管狭窄、有无 FVH 征、FVH 的评分高低、FVH 与 DWI 匹配与否及匹配的程度等因素将病例进行相应的分组，亚组之间比较的指标包括 CBF/DWI 不匹配区、T2WI/DWI 不匹配区、T2 信号值、DWI 信号值、ADC 值、病灶大小等。**结果** 365 例符合标准的患者纳入研究。FVH 多出现在具有大动脉狭窄的病例，在大动脉狭窄或闭塞的患者，FVH 若对 DWI 具有勾边效应，则提示存在 T2WI/DWI 不匹配区域；FVH 出现的范围若明显大于 DWI，则提示存在 CBF/DWI 不匹配区域。
结论 FVH 对急性脑梗死患者治疗时间窗存在与否具有一定的诊断价值。

“三低”技术联合全模型迭代重建算法在头颈部 CT 血管成像中的可行性研究

杨尚文
南京大学医学院附属鼓楼医院

目的 探讨 80 kV 低管电压，低对比剂注射速率和低对比剂用量的“三低”技术，联合全模型迭代重建（IMR）算法在头颈部 CT 血管成像（CTA）检查的可行性。**方法** 前瞻性连续收集 2015 年 7～11 月，行头颈部 CTA 检查的患者 60 例，采用随机数字表法将其分为 A、B 两组，每组各 30 例。A 组为常规剂量组，管电压 120 kV，滤过反投影（FBP）重建。对比剂注射速率 4.5～5.5 ml/s，注射时间 10 s。B 组为 80 kV 低管电压组，分别使用 FBP 和 IMR 进行图像重建得到 B1 和 B2 两组图像。对比剂注射速率 3.5～4.0 ml/s，注射时间 10 s。测量并计算 A 组、B1 组、B2 组图像动脉血管 CT 值、图像噪声、信噪比（SNR）和对比噪声比（CNR），并由两名放射诊断医师对图像质量按照 5 分法进行评价。3 组图像间动脉血管 CT 值、图像噪声、SNR 和 CNR 采用单因素方差分析，图像质量主观评价采用 Kruskal-Wallis 检验，两组检查的容积 CT 剂量指数($CTDI_{vol}$)和剂量长度乘积(DLP)比较采用两个独立样本 t 检验。**结果** A、B1 和 B2 组 3 组图像质量主观评分范围分别为（3～5）分、（2～4）分和（3～5）分， B1 组有 12 例患者图像评分≤2 分，图像无法诊断。A 和 B1、 A 和 B2、B1 和 B2 图像评分均有统计学差异(P<0.05)。B2 组与 A 组的图像客观指标 SNR 和 CNR 比较差异无统计学意义（P>0.05），但 B2 和 A 组图像的 SNR、CNR 均优于 B1 组，差异均有统计学意义(P<0.05)。B 组 $CTDI_{vol}$ 比 A 组降低了 80.9%, DLP 比 A 组降低了 81.3%，B 组对比剂注射速率比 A 组降低了 22.0%，B 组对比剂总量比 A 组减少 22.1%，差异有统计学意义(P<0.05)。**结论** 使用 80 kV 管电压，低对比剂注射速率和用量，并使用 IMR 算法进行图像重建，进行头颈部 CTA 扫描是可行的,使患者辐射剂量降低 81.3%。

PU-1892
不同时间间隔对 CT 颅脑灌注结果的影响研究

邓洋,刘衡
陆军军医大学大坪医院

【摘要】 **目的** 分析 CT 灌注扫描时间间隔与灌注参数之间的关系，探讨合适的扫描时间间隔得到满足诊断需求同时能够降低患者的辐射剂量。**方法** 对 30 例 CT 灌注成像阳性患者进行回顾性分析，患者均采用 Philips Brilliance ICT 扫描，采用头颅轴层扫描，扫描参数 80KV，150mAs，时间间隔 2s，注入造影剂后 5s 开始扫描，扫描次数共 30 次。将采集到的原始数据导入 Philips potal4.5 后处理软件，由一名高年资技师分别选取扫描时间间隔为 2s、4s、6s 的原始数据进行图像后处理，并根据间隔时间的不同将其对应分为 A、B、C 三组。由两名高年资医师对三组所得灌注伪彩图进行主观评分，将得分取平均值后进行统计。分别记录三组灌注图像感兴趣区的血流量值（CBF）、血容量值（CBV）、平均通过时间（MTT）及达峰时间（TTP），对所得的三组数据进行单因素方差分析。记录 A、B、C 三组扫描方式患者所接受的辐射剂量。**结果** B 组与 A 组相比，各项参数值及主观评价均无明显统计学差异；C 组与 A 组、B 组两两比较，具有统计学差异，且随着时间间隔的增加，灌注伪彩图图像质量呈逐渐下降趋势。A 组的辐射剂量为 705mGy*cm，B 组的辐射剂量为 A 组时的 1/2，C 组的辐射剂量为 A 组时的 1/3。**结论** CT 颅脑灌注扫描时间间隔为 4s 时，能得到满足诊断需求的图像，同时也降低患者的辐射剂量。

PU-1893
脑静脉窦血栓的影像学表现分析及临床脑实质危害预测

樊红光,李海婷,李子园
河南省人民医院

【摘要】目的 通过研究脑静脉窦血栓形成（CVST）患者的临床和神经影像学特征，探讨其在脑实质病变中的预测性应用价值。方法 回顾性分析 57 例 CVST 患者的神经影像及临床资料。结果 57 例患者临床表现以头痛（47.51%）最常见，其次为癫痫发作（24.31%）； 静脉窦血栓形成部位以横窦（TS）(77.9%）最多见， 脑实质病变以出血性静脉梗死最多见（37.57%）。 脑实质病变部位以额区（25.4%）最多见，其次为额顶区（21.9%）。 女性更容易发生脑实质病变（P＜ 0.05）。 头痛是无脑实质病变、癫痫发作伴脑实质病变患者最常见的临床表现。 直窦血栓形成与脑实质病变相关（P ＜ 0.05）。结论 通过 CVST 患者的临床和神经影像学，可及时诊断和治疗 ，防止潜在严重脑实质损害。

PU-1894
ESWAN 评估脑梗死患者脑微出血及抗血小板药物影响的临床对照研究

鲁煜
上海交通大学医学院附属第九人民医院

目的 分析脑梗死患者脑微出血灶的磁共振成像（MRI ） 表现,评价增强梯度回波重度 T2 加权血管 （(ESWAN ）序列对脑梗死患者脑微出血灶的诊断价值, 探 讨临床抗血小板药物治疗对脑梗死患者脑微出血 （CMBs ）的影响及其临床意义。 **方法** 收集 MRI 确诊脑梗死患者 86 例:男性 51 例，女性 35 例，平均年龄 67.16±9.26 岁，均接受头颅 MRI 常规检查 T1 加权成像（（T1WI ））、T2 加权成像（T2WI ）、液体抑制反转恢复（T2FLAIR ）、弥散加权成像（DWI ） 序列及 ESWAN 序列检查，并收集有关临床资料，根据是否使用抗血小板药物分组， 将 86 例患者分为用药组（n=38）及不用药（n=48），分析 CMBs 的影像学特征， 并根据脑梗死患者是否伴有 CMBs 分组，将 86 例患者分成有 CMBs 组（CMBs （+） 组）（n=58）及无 CMBs 组（CMBs （-）组）（n=28），分析 CMBs 临床相关危险 因素。**结论** ESWAN 可以清晰、准确地显示 CMBs 病灶。使用抗血小板药物的脑梗死患者伴 CMBs 明显增加，尤其是在脑干和小脑区域发生率更高。本研究表明多种因素是 CMBs 的危险因素，其中高龄和卒中史是其独立危险因素。

PU-1895
CTP 在急性脑梗塞与非急性脑梗塞性烟雾病的研究

郭虹
陆军军医大学大坪医院

目的 分析急性脑梗塞与非急性脑梗塞性烟雾病(MMD)患者脑血流动力学差异。材料与**方法** 回顾性分析 32 例 MMD 患者颅脑 CTP 图像，根据 DWI 图像或临床症状，分为急性脑梗塞组及非急性脑梗塞组，测量 2 组半卵圆中心及相同侧小脑半球 CBV、CBF、MTT、TTP，再通过计算患者半卵圆中心与同侧小脑半球的比值获得各参数相对值(rCBV、rCBF、rMTT、rTTP)，通过两样本 t 检验比较急性脑梗塞组及非急性脑梗塞组各参数相对值差异，再行 ROC 曲线分析各参数相对值在鉴别两组的最佳诊断阈值。**结果** 急性脑梗组 7 例，非急性脑梗组 25 例，两组 rCBV 分别为 1.38±0.71 及 1.29±1.12（P = 0.85），rCBF 分别为 0.42±0.35 及 0.79±0.50（P = 0.08），rMTT 分别为

1.78±0.10 及 4.49±1.17（*P* = 0.00）、rTTP 分别为 1.12±0.12 及 1.47±0.31（*P* = 0.00），梗塞组 rMTT 及 rTTP 较非梗塞组延长，并达统计学差异，虽然 rCBF 较非梗素组小，但两组无差异，而 rCBV 在两组中无明显差异。通过 ROC 曲线分析，当 rMTT 及 rTTP 分别为 3.64、1.28，鉴别梗塞与非梗塞的 AUC 为 0.880、0.886。**结论** CTP 能够直观、定量地评价 MMS 患者中发生急性脑梗塞与非急性脑梗塞脑血流动力学差异，为临床提供重要的脑组织灌注信息。

PU-1896
大脑中动脉狭窄的 TCD 和 CTP 比较研究

朱慧
苏州市立医院北区

目的 探讨和比较经颅多普勒（TCD）和 CT 灌注成像（CTP）在诊断大脑中动脉（MCA）狭窄及血供变化中的价值。**方法** 回顾性分析 43 例行 TCD 和 CTP 检查的病例，以 CTA 诊断 MCA 狭窄为参考，将检查结果分为正常组和异常组，比较 TCD 和 CTP 诊断 MCA 狭窄的准确性，并探讨与 CTA 结果的一致性。**结果** TCD、CTP、TCD 联合 CTP 诊断 MCA 狭窄的准确率为 91%、88%、93%；TCD、CTP、TCD 联合 CTP 诊断 MCA 狭窄和 CTA 结果的一致性为 0.780、0.730、0.849。**结论** TCD 和 CTP 能较好的诊断 MCA 狭窄，将两者联合起来可提高检测的准确度。

PU-1897
高分辨率磁共振颈动脉粥样斑块形态与脂质核心相关性研究

王瑞琳,陈尧,张建军
浙江医院

目的 本研究旨在通过高分辨率磁共振成像技术探究颈动脉粥样斑块形态在脂质核心形成中的作用，为预测脂质核心形成提供影像依据。
方法 本研究共纳入 10 例颈动脉粥样硬化斑块患者，运用高分辨率磁共振对颈动脉进行成像，图像由 MRI-PlaqueView 软件处理，根据所得图像及处理结果获得颈动脉粥样斑块形态以及斑块脂质核心特征。评估颈动脉粥样斑块形态的标准值有：斑块近心端斜率（$K_{proximal}$）、远心端斜率（K_{distal}）及近心端和远心端斜率的比值（$K_{proximal}/K_{distal}$）。评估脂质核心特征的标准值有：脂质核心总体积（V_{total}）、所占斑块总体积的百分比（P_{volume}）及斑块最大层面所占总面积百分比（P_{square}）。斑块斜率由人工测量，脂质核心特征由 MRI-PlaqueView 自动分析。运用 SPSS 21 进行相关性分析，$p<0.05$ 有统计学差异。
结果 在 10 例患者中（年龄：72.5±10.6 岁，男：女=6：4），8 例双侧颈动脉斑块含脂质核心，2 例单侧颈动脉含脂质核心，共计 16 例颈动脉被纳入研究。所有斑块进行分析结果是：$K_{proximal}$ 与 V_{total}(r=0.931)、P_{volume}(r=0.894)及 P_{square}(r=0.879)呈正相关，K_{distal} 与 V_{total}(r=0.601)、P_{volume}(r=0.587)及 P_{square}(r=0.769)呈正相关，$K_{proximal}/K_{distal}$ 与 V1(r=0.756)、P_{volume}(r=0.708)及 P_{square}(r=0.645)呈正相关，p 值均小于 0.05。
结论 颈动脉斑块斜率与脂质核心总体积、所占斑块总体积的百分比及斑块最大层面所占总面积百分比呈正相关，推测斑块近心端及远心端斜率在斑块脂质核心的形成过程中产生作用。

双源 CT 前瞻性心电门控 3D-CTA 成像对颅内动脉瘤的检测与观察

李延静,郭力琼,高慧
延安大学医学院附属东关医院

目的 心电门控 3D-CTA 对颅内动脉瘤进行检测通常为回顾式心电门控 R-R 全周期采集。本文采用部分 R-R 周期扫描采集方式，尝试在不影响对病灶显示，测量，观察的前提下进一步降低辐射剂量的可能性。
方法 24 例未破裂动脉瘤随机分为两组，每组 12 例，分别完成 R-R 全周期采集和 R-R 部分周期（20%-70%）采集。使用二代双源 CT（Somatom Definition Flash; Siemens, Erlangen, Germany），管电压 100KV，准直为 64×0.6,旋转时间 0.5s,螺距为 0.7，层间距 1mm，扫描视野为 233mm。心率均控制在 80 以下。重建后数据传至 Syago.via 工作站，动态结合逐帧观察。第一组数据为 R-R 全时相数据，采用不同重建方式，一为全时相间隔重建，共获得 20 个期相，二为选取 20%-70%区间间隔重建，共获得 11 个期相。两次数据进行组内对比；第二组部分周期采集图像间隔重建后与第一组全周期采集重建图像进行组间比较，比较内容包括动脉瘤大小形态及异常搏动点观察。
结果 组内比较，全周期采集全时相间隔重建的 12 例中，检出动脉瘤 14 个，发现异常搏动点有 5 个（连续三帧以上动态观察）；部分周期采集间隔重建的 12 例中，检出动脉瘤 13 个，发现异常搏动点 6 个。分别位于颈内动脉颅内段，前交通动脉，大脑前动脉末端，大脑中动脉,后交通动脉等部位。组内比较，两种重建方法在动脉瘤检出数量，瘤体颈测量等方面无明显差异。两组动脉瘤组间比较，动脉瘤显示，及图像质量均无明显差异，异常搏动点均于重建时相的 25%到 65%区间观察最优。两组采集平均 DLP 分别为，260.4mGY *cm,479.8mGY*cm 。部分周期采集相当于全周期采集的 54.3%。
结论 前瞻性心电门控部分 R-R 周期 3D-CTA 检测动脉瘤及异位搏动点观察可以进一步降低辐射剂量，同时也能达到诊断要求。

醒后卒中的多模态 CT 影像学表现及临床特点

於帆,宋双双
首都医科大学宣武医院

目的 探讨醒后卒中的多模态 CT 影像学表现及临床特点。方法 回顾性分析 2019 年 1 月至 2019 年 7 月首都医科大学宣武医院急诊绿色通道接诊的 179 例急性缺血性卒中患者，根据发病时间是否明确分为醒后卒中组与起病时间＜6h 组，所有患者均于就诊时行多模态 CT 检查。收集患者人口学、基线临床资料及影像学表现，包括年龄、性别、起病 NIHSS 评分、TOAST 卒中病因分型；ASPECT 评分、血栓负荷评分、侧枝循环评分、梗死核心及半暗带体积，住院患者收集再灌注治疗后出血转化、院内死亡及去骨瓣减压情况，并以 DEFFUSE-3、EXTEND 入组标准评估醒后卒中患者存在再灌注治疗机会的比例。采用单因素分析比较醒后卒中组与起病＜6h 组患者在临床资料、影像学表现的差异。结果 179 例急性缺血性卒中患者中，醒后卒中 26 例，起病时间＜6h 者 17 例。单因素分析显示，醒后卒中与起病＜6h 卒中患者的危险因素、起病 NIHSS 评分、TOAST 病因分型、ASPECT 评分、大血管闭塞位置、侧枝循环评分、半暗带及梗死核心体积、出血转化率差异均无统计学意义（均 P＞0.05）。醒后卒中患者与起病＜6h 患者再通治疗率差异具有统计学意义（41.6%，88.2%，P＜0.05），但离院 NIHSS 评分在两组间差异无统计学意义（P＞0.05）。醒后卒中患者前循环血栓负荷评分低于起病＜6h 卒中，差异具有统计学意义（4.89，6.42，P＜0.05）。14 例（53.8%）醒后卒中患者符合 DEFFUSE-3 入组标准，11 例（42.3%）符合 EXTEND 标准。结论 醒后卒中与非醒后卒中具有相似的危险因素、早期缺血征象、血管闭塞情况及半暗带体积。虽然醒后卒中组具有较高的血栓负荷及较低的再通治疗率，但两组出院 NIHSS 评分无差异，提示再通治疗在进一步改善醒后

卒中患者预后中的重要意义。应用多模态 CT 检查可以为醒后卒中患者再灌注治疗提供组织学证据。

CT 灌注成像在颈内动脉和大脑中动脉重度狭窄或闭塞患者侧支循环评价中的应用

顾腾辉
开封市中心医院

目的
应用 CT 灌注成像对大脑中动脉及颈内动脉重度狭窄或闭塞患者进行多层面脑血流动力学参数评价，比较不同方式以及不同程度的侧支代偿与脑灌注结果的相关性，探讨一级与二级侧支循环所对应的 CTPI 改变，确定侧支循环分级的量化指标，为 CTPI 用于评价侧支循环提供影像学依据。
材料与**方法**
收集 2014 年 1 月至 2017 年 3 月住院的缺血性脑血管病患者，分为单侧颈内动脉及单侧大脑中动脉重度狭窄或闭塞两组。采用 Revolution CT 机，行全脑动态容积扫描。对所有入组病例进行 ASPECTS 评分，比较侧支循环良好组与不良组 CTPI-ASPECTS 的区别，计算 CTPI-ASPECTS 预测侧支循环良好的 ROC 曲线。寻找 CTPI 有效评估侧支循环的影像学指标。
结果
1. 颈内动脉重度狭窄或闭塞组，侧支循环良好组 CBF-ASPECTS 优于侧支循环不良组。CBF-ASPECTS 预测颈内动脉侧支循环良好的 ROC 最佳分割点为 5.5，敏感度为 75.0%，特异度为 66.2%。
2. 大脑中动脉重度狭窄或闭塞组，侧支循环良好组 TTP-ASPECTS、MTT-ASPECTS 优于侧支循环不良组。TTP-ASPECTS 预测大脑中动脉侧支循环良好的 ROC 最佳分割点为 2.5，敏感度为 80.6%，特异度为 79.4%。
结论
CTPI-ASPECTS 评分既能够全面反应脑组织灌注情况，又能简化评估难易程度，有望成为目测评估侧支循环的半量化指标。

脑梗死出血转化的 CT 及磁共振诊断

洪志友
宁国市人民医院

【摘要】目的 探讨 CT 及磁共振检查诊断脑梗死出血转化。**方法** 回顾分析我院 2014 年 6 月至 2017 年 9 月期间 10 例脑梗死出血转化患者的 CT、MRI 表现。**结果** 10 例脑梗死出血转化中，表现为梗死区斑点状或点片状出血有 5 例，梗死区内血肿形成有 5 例，（其中出血面积 2cmX2cm 以上伴明显占位效应有 3 例）。**结论** CT、MRI 均为诊断脑梗死出血转化的可靠方法，MRI 更为优越。

PU-1902

3D-ASL MRI 评估 AIS 梗死后侧枝血管的临床价值研究

李晶龙
天津市人民医院

目的 探讨不同反转时间（inversion time，TI）的动脉自旋标记（arterial spin labeling，ASL）灌注成像对急性缺血性脑卒中（acute ischemic stroke，AIS）梗死后侧枝血管评价的临床意义。**方法** 连续纳入单侧大脑中动脉供血区 AIS 患者 61 例，于症状发作 24 小时内,采用 Siemens Skyra 3.0T MR 扫描仪行 T_1WI、T_2WI、DWI、3D-TOF MRA 及 3D－ASL MRI 检查。根据梗死灶于 3D－ASL 脑血流图是否存在 “动脉到达伪影（Aarterial transit artifact，ATA）”，将患者分为 ASL_{ATA}组与 non-ASL_{ATA}组。于患者入院第一天行美国国立卫生院卒中量表(NIHSS)评分评估其神经受损功能，并于出院 90 天行 Rankin 修订量表（mRS）评分评估其近期预后情况。采用统计分析软件 SPSS 24.0 比较 ASL_{ATA}组与 non-ASL_{ATA}组一般临床资料、各影像参数差异。 **结果** 61 例患者中，ASL_{ATA}组 41 例，non-ASL_{ATA}组 20 例。两组间性别差异具有统计学意义（X^2=12.113， P=0.000）。ASL_{ATA}组较 non-ASL_{ATA}组入院第一天 NIHSS 评分（Z=3.239，P=0.000）、出院 90 天 mRS 评分（Z=5.119，P=0.000）、梗死体积（t=5.438，P=0.049）低。**结论** 3D-ASL MRI 出现梗死后 ATA 的 AIS 患者梗死灶体积小、神经功能受损轻、近期预后良好，这一征象有潜力成为临床评估预后的重要指标。

PU-1903
经颅直流电刺激治疗缺血性脑卒中患者肢体运动功能障碍脑功能恢复改变特征的初步研究

谷何一,廖文娟,何波*,丁桃,李宗芳,孙学进
昆明医科大学第一附属医院

【摘要】目的 利用静息态功能磁共振成像（Rs-fMRI），研究经颅直流电刺激（transcranial direct current stimulation,tDCS））结合常规康复方法治疗缺血性脑卒中肢体运动功能障碍患者，治疗前后的自发脑功能恢复的改变特征及意义，探讨 tDCS 是否对患者脑功能的恢复有显著的促进作用。**方法** （采用单盲实验）对 10 例 tDCS 组患者（采用阳极 tDCS 刺激结合常规康复治疗）及 11 例对照组（接受同疗程的常规康复治疗）行颅脑静息态功能磁共振扫描，所有研究对象治疗前后均采用 Fugl-Meyer 运动功能评分、Barthel 指数评估患者上肢功能障碍情况，采用低频振幅（fALFF）方法分析治疗前后患者静息态下脑内 M1 区局部活动激活情况同对照组的比较，研究 tDCS 治疗前后患者脑功能恢复的情况。Rs-fMRI 数据组间比较采用双样本 t 检验，以 $P<0.05$ 为具有显著性差异，数据差异采用国际通用的统计参数图表示。**结果** 治疗两组患者初级运动区及运动前区皮质 fALFF 值较治疗前有所增高，但两组的组间差异无统计学意义。阳极 tDCS 组及对照组患者在 3 周的治疗干预后，FMA 评分、BI 指数均较治疗前有不同程度的改善，而阳极 tDCS 组较对照组在 FMA 评分的改善程度明显优于对照组。**结论** 部分运动功能恢复较好的患者大脑激活区主要在患侧大脑半球，而少数运动功能恢复稍差的患者脑区功能主要表现为健侧的激活与代偿。阳极 tDCS 兴奋性刺激患侧大脑运动皮质区对卒中后患者肢体运动功能的改善具有促进作用，但其对脑功能恢复的作用机制需再扩大样本量后深入研究，对受试者进行脑功能恢复的 Rs-fMRI 纵向观察及采用多模态功能磁共振方法，进一步探讨其脑功能恢复机制。

PU-1904
双能量 CT 电子云密度/等效原子序数（Rho/Z）在急性中风取栓术后应用

朱凤英
河北省人民医院

摘要：**目的** 探讨双能量 CT 电子云密度/等效原子序数（Rho/Z）在急性缺血性脑卒中机械取栓术后出血性转化中的检出价值。**方法** 回顾性收集 2017 年 11 月 - 2019 年 7 月急性缺血性脑卒中机械取栓术后经双能量 CT 扫描患者 42 例，经术后随访证实为造影剂渗出 24 例，出血性转化 18 例。两名神经系统诊断经验丰富的诊断医师使用双盲法对渗出患者选取密度最高区域、出血患者根据随访图像选取出血区域勾画并记录 Rho 值和 Z 值，分别比较 Z 值和 Rho 值在两组间的差异。运用临床受试者工作特征曲线分析两参数的鉴别诊断效能。**结果** 出血性转化患者的平均 Rho 值（31.20±11.99）高于渗出患者的平均 Rho 值（25.06±4.49）（P＞0.05）。出血性转化患者的平均 Z 值（9.43±1。01）高于渗出患者的平均 Z 值（8.58±0.63）（P＜0.05）。在临床受试者工作特性曲线中，Z 值的曲线下面积为 0.76，最佳诊断阈值为 10.6，敏感度为 65%，特异度为 97%。**结论** 在急性中风病人取栓术后，双能量 CT Rho/Z 值的运用有助于术后出血性转化的早期检出。

PU-1905
深部穿支动脉供血区梗死与皮层及皮层下区梗死病人颅内动脉斑块情况的对比研究

范然,卜玮艺,杨筠,包翠萍
天津市人民医院

目的 应用颅内高分辨 MRI（HRMRI）技术比较分析颅内深部穿支动脉供血区梗死和皮层及皮层下区梗死病人的颅内动脉管壁特征，以阐述其潜在的发病机制。**方法** 回顾性分析 25 例[男 16 例，女 9 例；平均年龄（64.8±9.78）岁]急性期深部穿支动脉供血区梗死和皮层及皮层下区梗死并行颅内 HRMRI 检查的病人，HRMRI 采用 3D 可变翻转角度快速自旋回波 T1 加权（3D T1 SPACE）序列。分析梗死供血区血管动脉粥样硬化斑块的存在情况，分别测量斑块最狭窄层面的狭窄程度、斑块最大截面积、斑块负荷及重构指数； 计量资料的组间比较采用 t 检验，计数资料的组间比较采用 x 2 检验或 Fisher 确切概率法，*P*<0.05 为差异有统计学意义。**结果** 25 例病人中，深部穿支动脉供血区梗死病人 17 例（68.0%），皮层及皮层下区梗死病人 8 例（32.0%）。其中，深部穿支动脉供血区梗死病人颅内动脉粥样硬化斑块的斑块负荷小于皮层及皮层下区梗死病人（*P*=0.040）；两组间斑块最狭窄层面狭窄程度、斑块最大截面积、和重构指数无统计学差异（*P*>0.05）。**结论** 深部穿支动脉供血区梗死相比皮层及皮层下区梗死病人斑块体积更小，其梗死机制可能与斑块直接阻塞穿支动脉开口有关。

磁共振血管壁成像技术对急性缺血性脑卒中颅内血管病变的评估价值

周飞,李雪平,张冰
南京大学医学院附属鼓楼医院

目的：高分辨磁共振血管壁成像技术（VW-MRI）作为一项新的血管疾病诊断方法，它具有自己独特的优势和特点。本文旨在探索 VW-MRI 在疑诊急性期缺血性脑卒中患者颅内血管病变评估中的价值，为其在临床诊断与疾病研究中的应用奠定理论基础。
方法：回顾性收集了 2014 年 2 月至 2015 年 10 月怀疑急性缺血性脑卒中的患者 235 例，排除图像质量不佳，临床资料不全以及未做 DSA 或 CTA 检查的患者，入组？例。将患者按检查类型分为两组，其中 A 组为同时进行了 DSA 检查和 VW-MRI 检查，共 49 例，B 组为同时进行了 CTA 和 VW-MRI 检查，共 99 例。分析比较 VW-MRI 与传统管腔成像方法检查结果的一致性，观察其对颅内血管病变的评估能力。
结果：颅内血管病变主要分布在两侧大脑中动脉，？？。以管腔成像技术为金标准时，与 DSA 比较，VW-MRI 的敏感性为 88%，特异性 87.9%。与 CTA 比较，VW-MRI 敏感性 82.4%，特异性 91.7%。以 2 名影像科医生一致性为金标准时， VW-MRI 对管腔和管壁病变的检出率高于 DSA(22.08% vs 12.80%)及 CTA(16.34% vs 8.26%)。
结论：传统管腔成像技术（DSA 和 CTA）为金标准时，**VW-MRI 有较高的敏感性和特异性。与** DSA 和 CTA 比较，**VW-MRI 提高了管壁病变的检出率高，**可以作为颅内血管病变是有效的检查手段，为急性期缺血性脑卒中的病因分型提供诊断依据。

内侧丘脑背侧萎缩介导无症状颈动脉狭窄对认知障碍的影响

张冰,张雯,乔彤
南京大学医学院附属鼓楼医院

目的：无症状颈动脉狭窄（ACS）增加了脑萎缩和痴呆的风险。我们的目的是结合体积和形状分析来评估皮质下核异常及其与认知缺陷的关系。
方法：本研究共纳入 29 例单侧颈内动脉严重急性冠脉综合征患者，以及 31 名年龄、性别和文化程度相匹配的对照受试者。所有参与者都接受了一个综合的神经心理学认知评估、生化测量和结构磁共振成像（MRI）。对 11 例颈动脉内膜切除术后 6 个月的患者进行了纵向认知评估和 MRI 扫描。
结果：与对照组相比，患者在所有认知领域的表现均较差，载脂蛋白 b/载脂蛋白 a1（apob/apoa1）比率较高。我们还观察到，急性冠脉综合征患者的丘脑形态和体积萎缩更多，尤其是内侧丘脑背侧，但经多次比较，其他皮质下核无明显差异。两组间白质高信号的 fazekas 评分无差异。这些生化和脑结构的变化与认知能力的下降显著相关。值得注意的是，基线时的中介分析显示，颈动脉内膜中层厚度与执行功能和处理速度之间的关系分别由内侧丘脑背侧容积和 APOB/APOA1 比值介导。颈动脉内膜切除术后，有利于认知恢复和右内侧丘脑背侧体积的增加。
结论：我们的研究首次确定了与 ACS 患者认知能力下降相关的皮质下核改变的明显萎缩。丘脑可能是脑缺血再灌注早期敏感的生物标志物。

PU-1908
探讨磁共振零回波 ZTE 技术评价支架术后脑血管的应用价值

李金锋[1],李萌[1],曲建勋[2],娄昕[1],马林[1]
1.解放军总医院第一医学中心放射诊断科
2.GE

目的　传统无创评价脑血管支架术后疗效的磁共振评估技术为时间飞跃法-TOF 成像或有创性注射对比剂的 DSA 成像及注射对比剂的 CTA 成像，TOF 序列在复杂流速的血管部位,比如颅内的大多数血管会导致自旋散相。而自旋散相会造成 MRA 图像中真实血管的丢失,从而阻碍 TOFMRA 的广泛应用。而 DSA 作为有创且辐射剂量较高的成像方式，多用于临床手术的开展，在术后评估中应用受限，本研究应用无需注射对比剂且无辐射的磁共振零回波 ZTE 技术评价支架术后的脑动脉，旨在得到更加准确性的支架术后脑血管评价指标。材料与方法　本研究分析动脉狭窄及动脉瘤术后患者共 20 例，其中 6 例为椎动脉孤立性夹层动脉，4 例为双侧椎动脉狭窄伴夹层动脉瘤，3 例为基底动脉夹层动脉瘤，2 例为颈内动脉海绵窦段动脉瘤，2 例颈内动脉前交通动脉瘤，1 例双侧大脑中动脉狭窄，1 例基底动脉末端小动脉瘤，1 例基底动脉夹层动脉瘤。患者术前术后分别行三种扫描：磁共振零回波时间 ZTE 技术，传统时间飞跃法的 TOF，及有创注射对比剂的 DSA 成像，对于横轴位 TOF 成像及矢状位 ZTE 成像，后处理时血管行最大密度投影，对病变管腔直径及走形行对比研究，并应用 DSA 作为金标准评估两种图像对管腔直径和走形的显示是否有统计学意义。结果　8 例患者因病变处血管走形迂曲及狭窄严重导致局部血流在激励层面内长时间停留，多次被激励后血液信号降低，但 ZTE 技术的成像原理是采用连续式标记动脉血液，无需担忧由于流速，血管走形方向或激励时间而引起的信号丢失。12 例动脉瘤患者 ZTE 技术与时间飞跃 TOF 技术显示效果相仿，对病变显示无显著统计学差异。DSA 目前作为脑血管病诊断的金标准，分别与 ZTE 技术及时间飞跃 TOF 技术比较，与 ZTE 技术一致性更好。结论　零回波时间 ZTE 技术血管成像为动脉标记成像，无需外源性标记物，能客观反映动脉血流状态及血管走形，而不受动脉血流及静脉血流干扰。

PU-1909

Peri-thrombus vascular hyperintensity sign: detection of intracranial thrombus location and length in acute ischemic stroke

Qian Chen
Nanjing First Hospital

Purpose The identification of intra-arterial thrombus is valuable for planning endovascular therapy in acute ischemic stroke (AIS) patients. The aim of the study was to investigate the diagnostic accuracy of peri-thrombus vascular hyperintensity sign (PVHS) on three-dimensional (3D) black-blood (BB) contrast-enhanced MRI for the detection of intracranial thrombus and its value in predicting thrombus location and length in AIS patients.

Methods Consecutive AIS patients who underwent MRI including 3D BB contrast-enhanced MRI sequence within 8 h of clinical onset were prospectively evaluated. Two readers independently reviewed the 3D BB contrast-enhanced MRI data to assess the presence and location of PVHS. Findings were compared with those of contrast-enhanced MR angiography (CE-MRA) as the reference standard. The follow-up 3D BB contrast-enhanced MRI data were also reviewed to assess the PVHS changes after treatment.

Results The PVHS was identified in 49% (63/129) of AIS patients with good agreement. The PVHS had 100% specificity, 88% negative predictive value, 89% sensitivity, and 100% positive predictive value for detection of acute arterial occlusions. Eight patients showed discordant thrombus locations between 3D BB contrast-enhanced MRI and CE-MRA. Median thrombus length in patients with complete occlusion was 9.61 mm. Twenty-two patients had follow-up 3D BB contrast-enhanced MRI. Eighteen out of 22

patients had successful vascular recanalization and PVHS disappeared on 3D BB contrast-enhanced MRI.
Conclusion The PVHS on 3D BB contrast-enhanced MRI is a highly specific tool for diagnosing occlusive arterial thrombus. It could provide precise information about the location and length of a thrombus in AIS patients.

PU-1910
多层螺旋 CT 一站式 CTP-CTA 检查对血管狭窄性缺血性脑血管病的诊断价值

慕鉴,陆善金,尹华
广西南宁市第二人民医院

目的通过比较 MSCT 一站式 CTP-CTA 重组的 CTA 图像与 DSA 图像，以 DSA 图像为标准，检验 CTA 图像对脑血管狭窄与责任血管区域侧枝循环血管显示能力，探讨一站式 CTP-CTA 检查对血管狭窄性缺血性脑血管病诊断的临床价值。**方法**搜集 16 例发病 6 小时内先行 MSCT 全脑容积灌注成像，再行头颅 DSA 检查的患者资料；CTP 数据使用 Ge AW 工作站 Perfusion 4D 软件处理，自动计算出时间-密度曲线，选取动脉曲线峰值期像重建 CTA 图像用以观察动脉狭窄病变，选取动脉峰值-静脉峰值期多期图像重建 CTA 图像用以观察责任血管区域侧枝循环；由两位高年资放射科医师共同对图像进行判读，观察 CTP 扫描范围内的两侧颈内动脉虹吸段、大脑前、中、后动脉及基底动脉，分别记录 CTA 及对应 DSA 图像上是否显示狭窄及位置，若存在狭窄、责任血管区域是否显示侧枝循环。以 DSA 图像标准，检验 CTA 显示血管狭窄及侧枝循环的能力，两者对病变显示能力采用 Kappa 一致性检验和配对 χ^2 检验，$P<0.05$ 认为差异有统计学意义。**结果**本组病例共观察 144 处血管，CTA 见狭窄 35 处
，DSA 见狭窄 30 处，两者均为正常 106 处。有血管狭窄 30 处病变中，CTA 见责任血管区侧枝循环 4 处、DSA 见 6 处，24 处两者均未显示；CTA 与 DSA 对血管狭窄(Kappa=0.782，P<0.001)、责任血管区侧枝循环(Kappa=0.762，P<0.001)显示一致性较好，两者显示率虽有差别，但差别不具有统计学意义(P=0.227)。**结论** MSCT 一站式 CTP-CTA 检查不但能提供急性缺血性脑血管病的血液动力学信息，还能获得血管解剖学资料，对比 DSA，其对血管狭窄及侧枝循环显示的一致性较高，基本达到诊断要求。应用多层螺旋 CT 一站式 CTP-CTA 检查，有望省去单独头颅 CTA 检查，进一步减少患者的检查及等待时间、对比剂用量和所受辐射剂量。

PU-1911
Evaluation of hemodynamics before and after revascularization in hemorrhagic moyamoya disease: A CT perfusion imaging case study

Zhen Chong,Yue-qin Chen,Xiao-qiang Wang

the Affiliated Hospital of Jining Medical University

Objective: To explore the feasibility of CT perfusion imaging (CTP) for evaluating hemodynamics in hemorrhagic moyamoya disease.
Methods: The retrospective analysis included patients with hemorrhagic moyamoya disease (n=25) who underwent brain CTP examination. Two experienced radiologists manually delineated regions of interest (ROIs) in the bilateral frontal lobe, temporal lobe, brain tissue adjacent to the hemorrhagic foci, and the brainstem as a control region. The perfusion values for all ROIs were extracted, including cerebral blood flow (CBF), cerebral blood volume (CBV), mean transit time (MTT), and time to peak (TTP). Subsequently, the differences in perfusion values for different brain tissues were compared between the hemorrhagic side and the non-hemorrhagic side. For patients who underwent revascularization surgery, differences in perfusion values from before to after surgery were determined in brain tissues on the ipsilateral side.
Results: The CBF in the area around the hematoma and the lateral temporal lobe on the hemorrhage hemisphere were lower than those on the contralateral side, while the TTP and MTT were higher. Among the 14 patients who underwent revascularization, the CBF and CBV in the postoperative temporal lobes were higher than those before operation, while the TTP and MTT were lower. The CBF and CBV in the frontal lobe were higher after operation.
Conclusion: Hemorrhagic moyamoya disease results in cerebral ischemia, and CTP could be used to localize such ischemic brain tissue and to objectively evaluate the changes in cerebral hemodynamics with revascularization.

Multiple Anatomic features for Predicting Transverse Sinus Dominance Laterality on non-contrast CT

Yang Liu,Dan Tong,Tiefeng Ji,Wenjing Lan,Yuzhu Yan,Zhongping Chen
the first hospital of Jilin University

Background & objective: the physiological asymmetry of bilateral transverse sinus is very common in the population, and may lead to misjudgment of magnetic resonance venography (MRV). The purpose of this study was to evaluate the ability of predicting congenital dominant transverse sinus by evaluating the various anatomical features of axial CT in the posterior fossa of the brain.

Methods: 94 cases of continuous brain plain scan CT-MRV study were reviewed and analyzed. On the non-contrast enhanced axial CT images, each reviewer measured (1) the groove inclination of the superior sagittal sinus (SSS), (2) the posterior cerebral falx angle, and (3) the inclination of the inferior occipital lobe. The cross section area of TS is measured on 3D phase contrast MRV image as a reference standard.

Results: the bony groove of superior sagittal sinus tilted to the right in 61 patients, and the right dominant transverse sinus was correctly predicted in 59 of 61 patients (the positive predictive value was 96%). The bony groove superior sagittal sinus

tilted to the left in 22 patients, and the left dominant transverse sinus was correctly predicted in 20 of 22 patients (91%). The positive predictive values of the inclination of the inferior occipital lobe and the angle of the posterior cerebral falx were 81% and 73%, respectively.

Conclusion: multiple anatomical features seen on non-contrast CT can be used to predict the laterality of congenital dominant transverse sinus.

PU-1913
多模型自适应统计迭代重建算法（ASiR-V）结合低管电流技术在头颅能谱 CTA 扫描中的临床应用

宋婷妮,李真林
四川大学华西医院

目的 分析不同管电流及 ASiR-V 对头颅能谱 CTA 图像质量与辐射剂量的影响，探讨低管电流联合 ASiR-V 技术在头部能谱 CTA 的可行性及临床应用价值，以降低辐射剂量。**方法** （1）体模：对置入模拟脑血管的头颅仿真体模进行能谱扫描，管电流分别为 280、320、365、405、445 mA，并每组行 FBP、ASiR-V 20%、40%、60% 和 80%重建。测量各组图像模拟脑血管 CT 值及背景噪声，计算信噪比（SNR），对比噪声比(CNR)及噪声降低率，记录各组扫描的 CTDI。（2）临床：前瞻性纳入 2018 年 1 月至 6 月于我院行头颅能谱 CTA 检查的患者 40 例，随机分为 A、B 两组，每组 20 例。A 组为试验组（低管电流），其参数根据体模研究结果设定；B 组为对照组，管电流为 445 mA，采用 FBP 算法。采用 5 分法对图像进行主观评分。**结果** （1）体模：①迭代重建比例一定时，随着管电流的增加，模拟脑血管 CT 图像噪声降低（P<0.05），SNR 及 CNR 呈上升趋势；②相同管电流条件下，随着 ASiR-V 比例增加，各组图像的噪声降低，SNR 及 CNR 升高，差异均有统计学意义（P<0.05），噪声降低率在 ASiR-V 80%时可达到（46.73±4.27）%；③各组图像的 CTDI 随着管电流的提升而提高，相关分析显示两者呈显著正相关（P<0.001）。（2）临床：A 、B 两组图像主观评分无明显差异（3.76±0.44 vs. 4.05±0.51 分；Z=1.843，P=0.065）。 与 B 组相比，A 组辐射剂量降低了 39%（t=23.974，P<0.05）。**结论** 在头颅能谱 CTA 扫描中，采用低管电流（280 mA）联合 ASiR-V 80%可在有效降低辐射剂量的同时，获得满足诊断需求的图像质量。

PU-1914
探讨能谱 CT 评估颈动脉分叉处粥样斑块稳定性与急性期脑梗死的相关性

解福友[1],吴志军[1],邱晓晖[1],章辉庆[1],刘斌[2]
1.安徽省亳州市人民医院
2.安徽医科大学第一附属医院放射科

目的 探讨颈动脉分叉处粥样斑块的稳定性与急性脑梗死（ACI）的相关性，指导临床制定个体化治疗方案 **方法** 回顾性分析本院 111 例临床具有脑缺血的临床资料，分为脑梗死组 50 例（颈内动脉供血区、单侧 ACI）和对照组 61 例（无 ACI，包括正常或陈旧性脑梗死灶），分析两组颈部血管的能谱 CT 资料，分别统计两组颈动脉分叉处粥样斑块的检出例数，并观察两组的颈动脉粥样斑块的形态和通过斑块的能谱成分分析，评估两组斑块的稳定性。**结果** 脑梗死组同侧颈动脉分叉处粥样

斑块检出率为 98.00%（49/50），对照组斑块检出率 50.82%（31/61），（P＜0.05）；49 例脑梗死组合并同侧颈动脉粥样斑块与 31 例对照组颈动脉斑块进行比较，脑梗死组颈动脉斑块不稳定性特征检出率高于对照组、脑梗死组斑块的稳定性特征低于对照组，其中，脑梗死组斑块内膜溃疡、内膜钙化检出率均高于对照组（P＜0.05）；脑梗死组斑块含纤维成分检出率低于对照组（P＜0.05），脂质成分、出血成分的检出率均高于对照组（P＜0.05）。**结论** ACI 与同侧颈动脉分叉处粥样斑块的发生及其斑块的稳定性具有相关性；能谱 CT 能够评估颈动脉粥样斑块的稳定性，对颈动脉粥样斑块患者的治疗方案具有临床指导意义。

3.0T 3D-TOF-MRA 对颅内破裂动脉瘤诊断效能及治疗方案的优化

孙贞魁
上海交通大学附属第六人民医院

目的 评价 3.0T 3D-TOF-MRA 对蛛网膜下腔出血患者颅内破裂动脉瘤诊断效能及对治疗方案指导价值。
方法 165 例已被证实为蛛网膜下腔出血（subarachnoid hemorrhage, SAH）患者(GCS 评分 15 分)，疑似因颅内动脉瘤破裂所致而行 MRA 检查。以 VR-DSA 作为诊断的金标准，检测 3D-TOF-MRA 检出颅内动脉瘤准确性、敏感性、特异性、阳性预测值、阴性预测值。由 3D-TOF-MRA 来决定每枚动脉瘤是否适合弹簧圈栓塞、球囊或支架辅助弹簧圈栓塞、外科手术夹闭或保守治疗，并与由 DSA 确定的实际的治疗方案进行对比。
结果 VR-DSA 诊断了 136 例患者，共计 166 枚颅内动脉瘤：29 例患者无动脉瘤，诊断动脉瘤的准确性为 96.9%、敏感性为 97.6%、特异性为 93.1%、阳性预测值为 98.8%、阴性预测值为 87.1%。由 VR 3D-TOF-MRA 依据动脉瘤部位和工作位作出的治疗方案，准确性为 94.9%、敏感性为 94.0%、特异性为 100%、阳性预测值为 100%、阴性预测值为 74.4%。
结论 3.0T VR 3D-TOF-MRA 诊断颅内动脉瘤具有良好的敏感性和准确性，能够准确的识别颅内动脉瘤的存在，可以作为传统 DSA 的一种有效的替代工具，同时，能为蛛网膜下腔出血患者的手术方案的制定提供帮助。

PU-1916
t-DCS 联合常规康复干预手段在脑卒中后上肢运动功能康复中作用的 fMRI 研究

屈巧俊
山西医科大学第一医院

近年来，脑卒中发病率日益升高，患者常遗留不同程度运动功能缺陷，严重地影响正常生活和工作。现代康复理论的发展和实践证明，有效的干预能够促进脑卒中患者运动功能的恢复。经颅直流电刺激（transcranial direct current stimulation，t-DCS）作为一种新型的康复治疗手段，已被证实其对于促进神经康复有巨大潜力[1,2]，但临床疗效及促进恢复的神经机制尚未明确。研究发现脑卒中后运动功能的恢复与双侧大脑半球初级运动皮层（M1 区）间的解剖连接和功能连接的改变有关[3-5]。目前，MR 技术已被广泛应用于脑卒中患者的神经机制的研究，其中扩散张量成像（DTI）可测量皮质脊髓束的结构连接性，即解剖连接，各向异性分数 FA 值可对其行定量分析[6-8]；静息态功能磁共振（resting-state functional magnetic resonance imaging，rs-fMRI）成

像技术的静息态功能连接（resting-state functional connectivity，rs-FC）可评估脑区之间的相关性，即功能连接[9-11]。
基于此，我们采用 t-DCS 联合常规康复干预手段对脑卒中后上肢运动功能障碍患者进行康复干预，并配合 DTI 联合 rs-FC 的磁共振方法观察双侧大脑半球 M1 区间解剖连接和功能连接的变化，以期为该手段的临床疗效和机制研究提供一些有益的探索。

PU-1917
全脑灌注联合多时相 CTA 在预测缺血性卒中出血转化中的价值

李翔,曾文兵,熊秋霞,刘兴华,温云,杨染,熊静娴
重庆三峡中心医院

目的 探讨全脑灌注联合多时相 CTA 检查在预测缺血性脑卒中出血转化中的价值。
方法 回顾性分析本院 2017 年 8 月至 2019 年 6 月治疗前行 CT 平扫、全脑 CT 灌注及 CT 血管成像检查的缺血性卒中患者 64 例，并通过 CT 灌注原始数据重组成多时相 CT 血管成像对侧支循环评分，利用后处理软件（AW 4.7）测量患侧与健侧灌注参数（CBV、CBF、TTP、MTT、Tmax 和 PS），并计算得到其比值（rCBV、rCBF、rTTP、rMTT、rTmax 和 rPS），根据 CT 复查结果分为出血组与未出血组。比较两组间各灌注参数值的差异，绘制受试者操作特征（ROC）曲线，分析有价值参数的诊断效能及与 HT 之间的相关性。多时相 CTA 评分采用卡方检验分析比较侧支不良组与侧支良好组之间的 HT 几率。
结果 出血组 CBV 值小于未出血组（p <0.05），出血组 TTP、MTT、Tmax、PS、rTTP、rMTT、rPS 值大于非出血组（p <0.05），两组之间 CBF、rCBF、rCBV、rTmax 之间差异无统计学意义（p >0.05）。PS（r=0.628）、rPS（r=0.516）与 HT 显著相关，当 PS>0.94 ml·100g^{-1}·min^{-1}或 rPS>2.128 时，对 HT 具有较好的诊断效能（PS 曲线下面积：0.881，rPS 曲线下面积：0.814）。侧支循环不良组出血几率（18/28，64.29%）大于侧支循环良好组出血几率（4/36，11.11%）。灌注参数联合多时相 CTA 评分能一定程度提高诊断效能（AUC=0.891）。
结论 PS、rPS 和多时相 CTA 评分对治疗前评估缺血性卒中患者 HT 风险具有重要的应用价值。

基于 CT 图像纹理分析结合机器学习随机森林模型对急性脑梗死的辅助诊断价值

刘畅
苏北人民医院/扬州大学医学院附属医院/扬州市红十字中心医院

目的 探讨基于头颅 CT 平扫图像的纹理分析结合机器学习随机森林模型对急性脑梗死早期检出的辅助诊断价值。**材料与方法** 回顾性分析 109 例经磁共振弥散加权成像 DWI 证实为急性脑梗死病例的 CT 资料，每例患者选择急性梗死灶纳入实验组，对侧相应部位正常脑组织纳入对照组。对 CT 图像进行标准化后，使用 A.K.软件对 CT 轴位图像进行预处理及特征的提取，按照 7：3 的比例分为训练组与验证组，通过单因素方差分析、Mann-Whitney U 检验或 t 检验及 Lasso 特征降维对 CT 轴位图像进行纹理特征筛选，训练组采用随机森林模型对筛选出的参数进行建模，最后采用验证组验证其诊断效能，并计算准确率、训练组及验证组的 ROC 曲线下面积。**结果** 特征筛选后获得 4 个参数，分别为均方根（Root mean square）、惯性矩(Inertia_angle135_offset1)、逆差矩(Inverse Difference Moment_angle135_offset1)及短游程因子(Short Run Emphasis_angle0_offset1)，最后得出训练组与验证组的 AUC 值分别为 0.99、0.87,验证组的准确率为 0.82。**结论** 机器学习随机

森林模型对脑梗死 CT 图像纹理特征进行筛选及建模，能够对急性脑梗死提供早期的辅助诊断，从而降低漏诊率。

MRI-PWI 对脑梗死前期患者微循环状态评价的研究

郝璐[1],王红[1],贾文霄[1,2]
1.新疆医科大学第二附属医院
2.新疆医科大学第一附属医院

【摘要】**目的** 脑梗死前期患者微循环状态应用 MRI 灌注成像进行评价的临床意义。**方法** 纳入于 2018 年 5 月～2019 年 1 月就诊于我院神经内科的症状性脑卒中患者 55 例,行常规 MRI 检查，对 DWI 图像为阴性的患者进一步行 MRI-PWI 成像，测量患者患侧与健侧的 rCBF、rCBV、MTT 及 TTP 参数值并进行对比分析。**结果** 本组纳入的 55 例患者中，16 例 MRI-DWI 结果为阴性，进行 MRI-PWI 成像发现其中 12 例脑内有低灌注区域，其中Ⅰ1 期 5 例、Ⅰ2 期 2 例、Ⅱ1 期 3 例、Ⅱ2 期 2 例，患侧与健侧对比，rCBV、rCBF、MTT、TTP 差异均具有统计学差异(P＜0.05)。**结论** MRI-PWI 成像与 MRI-DWI 相比,对脑梗死前期病变的检出率更高，为缺血性脑卒中患者的早期诊断提供重要依据。

多个 PLD 动脉自旋标记灌注成像对急性脑缺血的诊断研究

鹿彩銮
徐州医科大学附属医院

目的 探讨 3D 动脉自旋标记灌注成像（ASL）在评价急性脑缺血灌注方面的价值，并选取最适 PLD 时间。**方法** 前瞻性研究，分析徐州医学院附属医院 2014 年 5 月至今诊治的 13 例急性脑缺血患者的临床及影像学资料。男 9 例，女 4 例，年龄 36-70 岁，平均 53 岁，主要临床症状为肢体无力、言语不清、口角歪斜。13 例患者均行 3D ASL（PLD 分别为 1.5s、2.0s、3.0s）及 DSC 检查。**结果** 在不同 PLD 下，分别采用镜面区、白质区作为标准化区域，CBF 与 rCBF 间均无统计学差异(*P*> 0.05)。当 PLD=2.5S 时，采用镜面区、白质区作为标准化区域，CBF 与 rCBF，rCBV，MTT，Tmax 之间的相关性高，其中 CBF 与 Tmax 之间的相关性最高。当 PLD=1.5S 及 2.0S，采用镜面区、白质区作为标准化区域，CBF 与 Tmax 之间的相关性也最高。**结论** 3D ASL 可替代 DSC 反映急性脑缺血的低灌注状态；本组病例中，PLD=2.5s 可能更好的反映灌注状态。

PU-1921
脑小血管病的脑叶体积变化和脑叶形态学协同变化

刘城霞,朱文珍
华中科技大学同济医学院附属同济医院

目的 探索脑小血管病的脑叶体积变化和脑叶形态学协同变化特征。
材料与方法 本研究共收录伴轻度认知障碍的脑小血管病（cerebral small-vessel disease with mild cognitive impairment, CSVD-MCI）病例 28 例、不伴认知功能损害的脑小血管病（cerebral

small-vessel disease with no cognitive impairment, CSVD-nCI）病例 37 例和老年对照 35 例。三组受试者的年龄、性别和教育程度均匹配。对所有受试者进行高空间分辨率三维 T1 加权成像和全面的神经心理评估。使用 Accubrain 自动脑容积测量方法测量各脑叶灰质、白质的相对体积。将各脑叶灰质与白质体积之和处以该脑叶脑脊液体积得到各脑叶的脑叶萎缩指数。采用单因素方差分析对脑容积数据进行组间比较，其中使用 Bonferroni 法校正三组间的多重比较，使用 FDR 法校正多个参数的多重比较。将各脑叶的脑叶萎缩指数进行相关性分析，使用 FDR 法进行校正。
结果 与对照相比，CSVD-MCI 组的双侧额叶、顶叶的灰质体积和右侧扣带回的白质体积显著减少（Bonferroni 法和 FDR 法校正）。与对照组相比，CSVD-MCI 组在双侧颞叶、扣带回和岛叶的脑叶萎缩指数显著增高（Bonferroni 法和 FDR 法校正）。CSVD-MCI 组与 CSVD-nCI 组均存在显著的结构协同变化改变。其中，与对照组相比，CSVD-nCI 组的右侧额枕叶及左侧颞叶的脑叶萎缩指数与其它脑叶协同性显著增加（$P < 0.05$, FDR 法校正）。与对照组相比，CSVD-MCI 组的双侧颞叶和右侧扣带回的脑叶萎缩指数与其它脑叶协同性显著增加（$P < 0.05$, FDR 法校正）。
结论 脑小血管病存在脑叶水平的形态学协同变化，提示全脑水平的结构和功能调整。脑叶体积和形态学协同变化测量为探索脑小血管病的病理生理机制提供依据。

PU-1922
不同标记后延迟时间的 3D-ASL 联合 SWI 对急性缺血性脑卒中脑血流灌注的研究

胡志
安庆市立医院

目的 探讨采用不同标记后延迟时间的 3D-ASL 动脉自旋标记灌注技术联合 SWI 应用在急性缺血性脑卒中脑血流灌注量的研究。
方法 选取 2018 年 4 月-2019 年 5 月于我院治疗的 40 例急性缺血性脑卒中患者，采用不同标记后延迟时间(PLD=1525ms，2525ms) 行 3D-ASL 及 SWI 检查。在 AW 4.6 工作站上对 3D-ASL 原始图像进行数据处理，利用 Functool-ASL 软件对脑血流量(CBF)图进行预处理，将 CBF 功能图与 T_1-BRAVO 像进行融合，分别获得不同 PLD 时间点的全脑血流量（CBF）图。感兴趣区选取额叶、顶叶、颞叶、枕叶、基底节区、小脑半球以及急性缺血梗死区，取最大层面测量其 CBF 值，并做镜像测量对侧 CBF 值，采用配对 t 检验分析不同 PLD 时间各脑区 CBF 值之间的差异，P 值小于 0.05 为有统计学显著差异。同时对不同 PLD 时间的脑血流灌注 CBF 值与 SWI 图像数据进行影像学相关分析。
结果 双侧额叶、顶叶、颞叶、基底节区 CBF 值在 1525ms 组与 2525ms 组间无统计学差异（P>0.05），双侧枕叶及小脑半球在 1525ms 组与 2525ms 组间有统计学差异（P<0.05），急性脑梗死区 CBF 值在 1525ms 组与 2525ms 组间差异无统计学意义比较(P＞0.05)，但是低灌注区域范围 1525ms 组较 2525ms 组明显增大，对侧镜像区 CBF 值在 1525ms 组与 2525ms 组间差异无统计学意义比较(P＞0.05)。SWI 在显示急性梗死区侧枝循环与脑血流代偿能力的敏感度和不同 PLD 时间的低灌注区域范围具有相关性（P<0.05）。
结论 不同标记后延迟时间的 3D-ASL 联合 SWI 检测能准确判断脑梗死的位置和 CBF 值，能够更好评估缺血半暗带范围、侧支循环代偿建立状态、责任血管等相关信息，对于了解急性脑卒中患者缺血梗死现状及近期预后评估提供客观依据。

PU-1923
CTP 灌注成像技术在早期脑卒中治疗中的价值

乔国庆
中国人民解放军南部战区总医院

目的 探讨 CTP 灌注成像技术在分析急性脑卒中缺血半暗带中的价值，为早期脑卒中的治疗提供诊断依据。
材料与**方法** 回顾性研究 2018 年 10 月至 2019 年 1 月，怀疑脑卒中行 CTP 成像扫描的患者 28 例，男性 25 例，女性 3 例，所有病例均行 CTP 灌注成像扫描。使用飞利浦 256 层 iCT，患者仰卧于检查床头部托架内，头部用绑带固定，先行 CT 平扫，然后，经患者肘静脉注射对比剂（碘帕醇 370mgI），流速=4-5ml/s，剂量=50ml，利用灌注扫描程序，覆盖扫描范围 16cm，间隔 4S，持续扫描 60s，灌注后，立即行增强期扫描。所得原始数据传输至飞利浦后处理工作站，对各期图像、及 CTA、CTP 进行分析，设置延迟时间>3s 和 rCBF<30%分别为预测半暗带和核心梗死区体积参数阈值。
结果 28 例 CT 灌注患者中，脑梗塞 17 例，动脉瘤并出血 1 例，蛛网膜下腔出血 2 例，脑膜瘤 1 例，灌注正常 3 例，其它 4 例。CT 平扫、CT 灌注、增强扫描相结合能够对急性脑卒中进行确诊，能够区分梗死区及半暗带。
讨论：缺血半暗带仅是脑血流低灌注后神经功能受损，恢复灌注后神经功能仍可恢复的区域，长时间、严重的低灌注可致半暗带进展为不可逆梗死区。CT 平扫对于急性脑梗塞难以发现，即使增强扫描也不一定可发现急性期脑梗塞，而 CT 灌注可确诊急性脑卒中，并且，可以判断脑卒中半暗带范围。本研究有 2 个病例 CT 平扫、增强扫描均不能观察到脑梗赛，而 CT 灌注显示存在低灌注区域，经重建血管，发现对应责任血管堵塞，紧急溶栓后恢复良好。CT 灌注可预测急性脑卒中，可区分梗死区和半暗带，灌注延迟时间>3s，可较好的显示半暗带的范围，与临床手术证实范围较一致。rCBF<30%确定的梗死区体积与临床实际一致性较好。特别是灌注扫描的同时还可得到 CTA 图像，能够准确的诊断急性脑卒中，确定责任血管，为临床溶栓提供全面的指导信息。

PU-1924

3D ASL 在急性缺血性脑血管病方面的临床应用

周建国,孟云
连云港市中医院

目的 分析三维动脉自旋标记（3D-ASL）成像技术在急性缺血性脑卒中方面的临床应用价值。**方法** 收集我院 2016 年 1 月-2019 年 6 月于脑病科收治的急性缺血性脑血管病患者，均使用 GE 750W 3.0T MRI 机行头颅 T2FLAIR、DWI、MRA 及 3D-ASL 序列检查。利用 CBF 伪彩图及量化的脑血流量（CBF）值评估缺血半暗带（IP）、再灌注状态、侧支循环建立、责任血管部位及出血转化（HT）。**结果** 在急性脑梗死（AIS）缺血半暗带（IP）评估方面，利用较长 PLD（2525ms），将脑血流量（CBF）伪彩图提示的低血流灌注区与弥散加权成像（DWI）高信号区域间的不匹配提示 IP 的存在，并可定量其面积；通过测量 CBF 值评估再灌注状态，利用动脉内高信号敏感显示延迟的动脉血流到达，结合 MRA 甄别前向慢血流与逆向侧支循环；依据 CBF 伪彩图显示低灌注区范围提示大小血管病及责任血管部位；梗死核心区再灌注信号提示 HT 的高发生率。针对短暂性脑缺血发作（TIA）患者，利用较短 PLD（1525ms）导致 CBF 伪彩图显示低灌注区的放大现象，提高其检出敏感性，并反映责任血管部位。**结论** 3D-ASL 成像技术安全无创，重复性强，可敏感显示急性脑梗死 HP、侧支循环建立、再灌注状态、责任血管，并预测 HT 的发生，通过较短 PLD 提高 TIA 的检出敏感性，提示责任血管部位，这对于临床早期诊断及治疗方案精准化、个性化选择具有重要临床意义。

PU-1925

颅颈交界硬脑膜动静脉瘘

杜彦瑶
山西医科大学第一医院

背景：颅颈连接处的硬脑膜动静脉瘘（DAVFs）很少见。临床表现从急性或慢性脊髓病到蛛网膜下腔出血到脑干功能障碍。我们在颅颈交界处遇到 4 例伴有进行性脑干功能障碍的 DAVF，并使用 T2 加权成像，磁敏度加权成像，扩散加权成像和对比度增强成像，研究了典型的磁共振成像（MRI）特征。文献综述揭示了 10 例颅颈交界处的 DAVF 病例报告，表现为脑干功能障碍。病例描述：4 例患者在颅颈关节进行脑干功能障碍时出现 DAVF。两名患者接受了中线枕下开颅术和 C1 椎板切除术，1 名患者在全身麻醉下接受了 Onyx 18 的经动脉血管内栓塞治疗。手术后所有神经功能缺损逐渐好转。在第四种情况下，患者接受保守治疗并且未进行任何外科手术。 MRI 显示 T2 加权成像，磁共振血管造影和磁共振静脉造影的高信号强度。在磁敏感加权成像和对比度增强图像上检测到病变周围的异常扩张血管和流动标记。 2 例显示无异常，并且改善神经功能缺损的程度超过弥散加权成像。**结论** 磁共振成像患者进行脑干功能障碍的 MRI 检查中应使用磁敏感加权成像，弥散加权成像或对比增强扫描来区分 DAVFs 在其他疾病的颅颈关节，如胶质瘤或感染。使用 MRI 进行及时诊断对于产生良好的患者功能结果具有重要意义。

PU-1926
高分辨磁共振在慢性颅内动脉闭塞诊断及术前评估的应用价值

韩帅[1],王新怡[2],王心雨[1],张超[2]
1.山东第一医科大学
2.山东省千佛山医院

目的 分析慢性颅内动脉闭塞在高分辨磁共振（HR-MRI）的影像学表现和特征，探讨高分辨磁共振对该病的诊断和术前评估价值。
方法 前瞻性纳入临床怀疑为慢性颅内动脉闭塞的患者 45 例，行 HR-MRI 检查和 DSA 检查。入组标准：（1）经 MRA 或 CTA 诊断为颅内动脉闭塞，且首发症状大于＞2 周，包括大脑中动脉 M1 段、颈内动脉颅内段、椎-基底动脉；（2）存在颅内动脉粥样硬化危险因素。排除标准：非动脉硬化性闭塞，如烟雾病、动脉夹层、血管炎等。其中大脑中动脉 M1 段患者 22 例，颈内动脉颅内段患者 13 例，椎-基底动脉患者 10 例。以 DSA 为标准，使用 Kappa 检验来衡量 HR-MRI 与 DSA 在诊断结果上的一致性。
结果 45 例患者中，DSA 诊断为慢性颅内动脉闭塞 36 例，诊断为非慢性颅内动脉闭塞 9 例，HR-MRI 诊断为慢性颅内动脉闭塞 38 例，非慢性颅内动脉闭塞 7 例。以 DSA 诊断结果为标准，HR-MRI 诊断慢性颅内动脉闭塞的敏感性是 100%，特异性是 77.7%，阳性预测值是 94.7%，阴性预测值是 100%，HR-MRI 与 DSA 诊断结果的 Kappa 值=0.848，提示近乎完全一致性[1]。36 例 DSA 诊断为慢性颅内动脉闭塞的患者，在 HR-MRI 上能够清晰显示闭塞段位置、走形，闭塞段血管表现为管壁增厚，管腔闭塞，其内见条形、节段形慢性血栓，在 3D CUBE T1 上呈等或略高信号，部分血栓周围因机化纤维化呈不均匀等信号，15 例血栓呈延续性分布，3 例闭塞段近端合并新鲜血栓，呈明显高信号。在 3D CUBE T1+C 图像上，有 19 例闭塞段血管有较明显的强化，提示闭塞段血管强化可能为慢性颅内动脉闭塞的特点。
结论 高分辨磁共振在诊断慢性颅内动脉闭塞上与 DSA 具有高度的一致性，还能够显示闭塞血管的内部特征、位置及走形，为血管内介入治疗提供影像依据，减少术中导丝探查发生穿孔、夹层的风险，具有较高的临床应用价值。

源于全脑 CT 灌注数据的动态 CTA 对侧枝循环状态及梗死生长评估的应用价值

卢晓微,周智鹏
桂林医学院附属医院

摘要 目的 研究一站式全脑动态容积 CTA+CTP 成像对急性脑卒中（Acute Ischemic Stroke，AIS）患者的侧支循环及血流状态的应用价值，并预测血管内治疗后梗死生长的风险。方法 回顾性分析 30 例符合 SWIFT PRIME 试验的 AIS 患者于治疗前行一站式卒中检查（CTA+CTP），将所有容积图像导入 CT perfusion 4D 进行后处理，根据动态 CTA 影像评估侧支血流的范围、速度及总体情况，并得到患侧平均相对脑血容量（rCBV）、低灌注指数比（HIR），行血管内取栓治疗后 27 小时内再行一站式卒中检查，得到再灌注率与核心梗死体积，采用 Logistic 分析和秩线性回归模型评价动态 CTA 评价得到的侧支循环状态、rCBV、HIR 与成功再灌注的关系，以 P＜0.05 视为有统计学意义。结果 rCBV、HIR 分别与侧枝循环状态有良好的相关性（P=0.038，0.035），19 例（63.3%）患者成功再灌注，良好的侧枝循环状态、高 rCBV、低 HIR 与成功再灌注有良好的相关性（P=0.03，0.03，0.04）。结论 源于全脑 CT 灌注数据得到的动态 CTA 图像对侧支循环的评价可以预测 AIS 患者血管内取栓后的梗死生长情况，高 rCBV 及低 HIR 可以作为 AIS 患者血管内取栓前侧支循环的有效指标。

PU-1928
快速高分辨率磁共振血管壁成像技术在颅内动脉狭窄疾病中的临床应用

汪晶,刘小明,孔祥闯,刘定西
华中科技大学同济医学院附属协和医院

目的 探讨快速高分辨率磁共振血管壁成像技术在颅内动脉狭窄疾病中的临床应用价值，以期早期诊断、明确病因及指导临床治疗。

方法 经过伦理委员会批准，选择 2018 年 12 月至 2019 年 7 月在我院入院收治的颅内动脉狭窄病例 24 例，其中脑动脉粥样硬化 18 例，烟雾病 3 例，动脉夹层 1 例，动脉炎 2 例。采用 PHILIPS Ingenia CX 3.0T 设备成像。扫描序列包括：T1WI,T2WI, DWI, TOF- MRA，采用 3D 黑血磁共振成像技术 3D-VISTA 及 3D- SNAP 技术，以大脑中动脉和基底动脉为目标动脉，对经过 TOF-MRA 证实的狭窄管腔进行血管壁斑块成像。对动脉狭窄的部位、范围、程度，对管壁的厚度、斑块的体积、成份、有无合并出血等进行分析，并以 DSA 为对照。

结果 共计 53 段血管管腔狭窄。其中脑粥样硬化 18 例患者中发现斑块 26 处，合并斑块出血 2 例，狭窄程度结果与 DSA 诊断结果一致，占 94%。高分辨率磁共振血管壁成像对大脑中动脉狭窄的程度有部分高估，粥样硬化狭窄处以偏心性斑块较多见，增强后可见强化。3 例烟雾病表现为狭窄节段同心圆样管壁增厚，可见伴随的侧枝循环形成。动脉夹层 1 例位于基底动脉，可显示斑块内的出血。动脉炎 2 例，均表现为责任血管处显著、弥漫的同心圆样增厚并异常强化。

结论 磁共振黑血技术 3D-VISTA 及 3D-SNAP 序列能有效对颅内血管壁进行高分辨力成像，能有效弥补常规 TOF-MRA 在显示颅内管壁不足，提高颅内动脉狭窄疾病的诊断效率。强化特征的差异有助于鉴别颅内常见的管腔狭窄烟雾病、血管炎、动脉夹层等病变的诊断及鉴别诊断。

PU-1929
SilenZ MRA 与 3D-TOF MRA 对脑动静脉畸形诊断价值的对比研究

杨京东,宋焱,黄娟,焦昇,郭锬,陈敏
北京医院

目的 以 DSA 为金标准，对比评价 SilenZ MRA 与传统 3D-TOF MRA 对于脑动静脉畸形的诊断价值。**方法** 选取 2015 年 12 月至 2016 年 6 月于我院收治的脑动静脉畸形（AVM）患者 12 例，男 7 例，女 5 例，年龄范围 21-58 岁。患者均采用 GE 1.5T 静音磁共振进行头颅 MR 检查，并于同次检查中分别行 SilenZ MRA（零 TE 时间，ZTE）及 3D-TOF MRA 检查，所有患者于 3 日内行 DSA 检查证实为脑动静脉畸形。以 DSA 为金标准，分别评价 SilenZ MRA 及 3D-TOF MRA 对于 AVM 病灶的检出能力、瘤巢的大小（按小型直径<3cm，中型直径 3-6cm，大型直径>6cm 进行分型）及内部显示情况、供血动脉及引流静脉的显示能力。**结果** SilenZ MRA 及 3D-TOF MRA 对于 12 例患者的 AVM 病灶均全部检出。12 例 AVM 的瘤巢大小分型上 SilenZ MRA 及 3D-TOF MRA 均与 DSA 结果完全一致(100%)，而 SilenZ MRA 对于瘤巢大小显示的精确程度及内部结构显示的清晰程度优于 3D-TOF MRA。对供血动脉的显示，3D-TOF MRA 与 DSA 的符合率为 78.5%，而 SilenZ MRA 与 DSA 的符合率为 92.8%。对于引流静脉的显示 SilenZ MRA 及 3D-TOF MRA 均与 DSA 结果均有较高的符合率(分别为 100%和 93.3%)，与 3D-TOF MRA 相比，SilenZ MRA 对于引流静脉显示范围更大，结构更清晰。**结论** SilenZ MRA 及 3D-TOF MRA 对于 AVM 病灶均有良好的检出能力。SilenZ MRA 对于瘤巢细微结构、供血动脉及引流静脉的显示能力优于 3D-TOF MRA。

PU-1930
CTA 与 MRA 在颅内动脉瘤诊断及破裂出血风险预测的探讨

陈琳
陆军军医大学附属新桥医院放射科

目的 探析颅脑不同部位动脉瘤进行 CT 血管造影(CTA)与磁共振血管造影(MRA+HRMRI)检查的诊断价值，以及预测不同部位 2.0～5.0mm 的动脉瘤破裂出血及预测出血的风险评估。**方法** 回顾性收集我院 2016 年 10 月-2018 年 6 月该院 2016 年 8 月通过数位减影（DSA），C T 血管造影(CTA)及磁共振血管造影（MRA+HRMRI）。结合患者的随访资料，对已确诊颅内动脉瘤的 45 例患者（男性 33 例，女性 12 例，年龄 39-65 岁），按照动脉瘤瘤颈与邻近载瘤动脉距离，将其分为 2.0～5.0 mm 组(32 例)和≤2.0 mm 组(13 例)，分别采取 3D-CTA 及 3D-MRA+HRMRI 的方式进行检查，观察所有对象经过不同检查方式的结果。诊断结果以介入或手术结果为“金标准”，比较 MRA、CTA 及数字减影血管造影(DSA)检查方法用于不同直径颅内动脉瘤的诊断率和准确率。**结果** 所有患者均为单发肿瘤，3D-CTA 检查诊断符合 43 例(97.7%)，3D-MRA 诊断符合 39 例(71.9%)，经手术证实，动脉瘤破裂出血 38 例，3D-CTA 检查法预测动脉瘤破裂出血 34 例(87.8%)，3D-MRA 检查法预测动脉瘤破裂出血 30 例(70.0%)，两种检查方式预测动脉瘤破裂出血的准确性比较，差异有统计学意义(x2=8.54，P＜0.05)。**结论** MRA 和 CTA 检查可用于颅内动脉瘤的诊断和评估其破裂出血的风险，CTA 检查的三维形态和准确性更高，但 MRA+HRMRI 检测显示有症状颅内未破裂未来破裂的可能性较高。

PU-1931

颈总动脉双点智能追踪法头颅 CTA 的临床应用价值

朱黎淑
陆军军医大学附属新桥医院放射科

目的 探讨利用颈总动脉双点智能追踪法进行头颅 CT 血管成像（头颅 CTA）的临床应用价值。**方法** 随机选取 60 名患者进行头颅 CTA，其中 30 名采用颈总动脉双点智能追踪法进行扫描（实验组），30 名采用手动触发法进行扫描（对照组）。颈总动脉、椎动脉、基底动脉、大脑前动脉、大脑中动脉、大脑后动脉、及眼动脉作为目标动脉血管进行测量其 CT 值，上矢状窦、直窦及乙状窦作为目标静脉血管进行测量其静脉 CT 值，对两组图像质量进行主观评分，并进行统计学分析。**结果** 实验组与对照组颈总动脉、椎动脉、基底动脉、大脑前动脉、大脑中动脉、大脑后动脉、眼动脉的 CT 值分别是（458.83±80.53）vs（485.07±123.50）HU、（437.65±68.33）vs（466.19±118.31）HU、（409.30±98.21）vs（433.55±108.90）HU、（368.96±82.81）vs（365.57±124.15）HU（458.56±81.5）vs（475.65±108.80）HU（344.54±84.77）vs（387.31±134.66）HU、（204.46±63.89）vs（208.61±76.61）HU，实验组的目标血管值小于对照组，无统计学意义。实验组与对照组上矢状窦、直窦、乙状窦的 CT 值分别为（119.68±57.60）vs（154.21±63.20）HU、（148.41±65.08）vs（179.06±67.10）HU、（93.40±46.18）vs（146.38±49.72）HU，实验组目标静脉血管的 CT 值明显小于对照组，均有统计学意义。实验组与对照组的辐射剂量分别为（373.8±8.98）mGy•cm 和（365.5±8.48）mGy•cm，差异没有统计学意义。**结论** 采用颈总动脉双点智能追踪法行头颅 CTA 检查可显著降低颅内静脉污染，更加准确的凸显出目标血管，提高图像质量。

PU-1932
高血压患者脑干梗死与椎基底动脉系统斑块、狭窄的相关性研究

顾梁瑞,陈文
十堰市太和医院

［摘要］目的 探究高血压合并急性脑干梗死患者椎-基底动脉系统血管斑块、狭窄的特征及分布。方法 收集被诊断为急性脑干梗死的高血压患者及同期无脑梗塞的门诊检查者各 48 例，所有受检者均行颅脑磁共振及头颈部 CTA 检查。比较两组之间血管斑块及狭窄的差异，分析血管病变特征及病变血管分布状况与脑干不同部位梗死的相关性。结果 梗死组不稳定斑块检出率高于对照组（P＜0.05）。中脑梗死患者斑块主要位于基底动脉，延髓梗死患者斑块主要位于椎动脉（P 均＜0.05）。梗死组重度狭窄-闭塞血管段数检出率较对照组高（P＜0.05）。中脑梗死血管以重度狭窄及闭塞为主，脑桥梗死以血管轻-中度狭窄为主（P 均＜0.05）。基底动脉狭窄与脑桥梗死、椎动脉狭窄与延髓梗死具有显著相关性（P＜0.05），大脑后动脉狭窄是中脑梗死的重要因素（P＜0.01）。结论 不稳定斑块的形成及血管狭窄程度加剧与高血压患者脑干梗死的发生有关，椎基底动脉系统不同血管病变可能是脑干不同部位梗塞的重要原因。

大螺距和双低剂量 CT 血管成像在心脑一站式联合扫描中的应用研究

程燕,钟唐力,刘启榆,林华,周莹,管彬
绵阳市中心医院

目的 探讨大螺距和双低剂量 CT 血管成像在心脑一站式联合扫描中的应用研究。**材料与方法** 连续选取我院行大螺距和双低剂量 CT 血管成像心脑一站式检查的患者 60 例（BMI<27kg/m^2），做为实验组；随机选取我院行常规冠状动脉检查的患者 60 例（BMI<27kg/m^2），做为对照 A 组；随机选取我院行常规头颈部动脉检查的患者 60 例（BMI<27kg/m^2），做为对照 B 组。实验组使用管电压 100kVp，对比剂优维显 370；对照 A 组和 B 组使用管电压 120kVp，对比剂碘海醇（350mg I/ml）。检查方法实验组采用 FLASH 模式；对照 A 组和 B 组采用前瞻性模式扫描。对各组图像质量进行评分，测量双侧颈总动脉及椎动脉、颈内外动脉、冠状动脉发出起始部、皮下脂肪和肌肉的 CT 值及 SD 值，平均 SD 值计算为图像噪声。记录和计算图像头颈部动脉、冠状动脉最佳对比噪声比（CNR）、噪声值（SD）、头颈部动脉、冠状动脉各主要分支 CT 值的均值。计算各组的辐射剂量（ＥＤ）和平均碘摄入量，对各组间上述指标进行统计学分析。**结果** 实验组与对照 A 组和对照 B 组的图像质量评分、图像噪声、冠状动脉各主要分支 CT 值，差异均无统计学意义（P>0.05）。实验组图像的 CNR 高于对照 A 组和对照 B 组，差异有显著统计学意义（P＜0.001）。实验组的辐射剂量、平均碘摄入量均明显低于对照 A 组和对照 B 组，差异有显著统计学意义（P＜0.001）。**结论** 大螺距和双低剂量 CT 血管成像心脑一站式检查在保证诊断图像质量的同时大幅度降低了辐射剂量，同时减少了对比剂碘量的摄入，对于早期筛查、及时干预、降低心脑血管疾病的发生及发展有重要意义。

PU-1934
脑小血管病的白质髓鞘完整性及结构网络连接变化的联合研究

覃媛媛,刘城霞,朱文珍
华中科技大学同济医学院附属同济医院

目的 既往研究发现脑小血管病存在广泛的白质髓鞘完整性破坏和结构网络连接改变。本研究目的为联合评估非痴呆脑小血管病（Non-demented cerebral small-vessel disease, CSVD-ND）的白质微结构完整性及其相关的结构网络拓扑性变化。
材料及方法 前瞻性收录 37 例 CSVD-ND 病例及 34 例老年对照，两组病例年龄、性别和教育程度匹配。对所有受试者进行扩散加权成像和认知功能评估。使用 JHU-DTI-图谱进行脑白质区域扩散张量分析。使用 JHU-DTI-图谱和基于多图谱的 DTI 图像分割技术进行结构网络分析。
结果 CSVD-ND 组存在包括主要的联合纤维、投射纤维和联络纤维在内的广泛白质区域 FA 值显著减低和 trace 值显著增高（$P < 0.01$, FEW 校正）。拓扑结构上，两组受试者均存在小世界属性。CSVD-ND 组的全脑及局部效率减低（$P < 0.001$）。虽然存在广泛的白质髓鞘破坏，CSVD-ND 组仅在右侧枕上回和右侧舌回出现节点效率减低（$P < 0.05$, FEW 校正）。校正腔隙性梗塞灶和脑白质高信号的影响后，右侧楔前叶的节点效率和信息处理速度显著负相关（$r = -0.499$, $P = 0.0375$）。
结论 非痴呆脑小血管病存在广泛的白质髓鞘改变，但是结构网络连接受损不明显，提示白质髓鞘破坏不一定导致严重的结构网络连接改变。扩散加权成像和网络分析可能为研究脑小血管相关的认知功能改变提供依据。

PU-1935
颅内静脉血管壁高分辨率扫描 1 例

方纪成
华中科技大学同济医学院附属同济医院

目的 探究联影 United Imaging MR780 3D MATRIX（SPACE） T1WI 序列在颅内静脉血管壁高分辨率成像中的可行性。
方法 收集患者 1 例，MRV 示左侧横窦、乙状窦、颈内静脉较对侧纤细，采用联影 United Imaging MR780 3D Sag MATRIX T1WI 序列，体素大小 0.65*0.65*0.65 等体素行磁共振扫描，与常规 3D Sag MATRIX T1WI 序列相比，结合 BlackFluid 扫描因子，采用追踪法重建其大脑静脉系统。
结果 高分辨率成像发现左侧横窦、乙状窦、颈内静脉较对侧纤细，其内未发现明显信号异常，管壁形态无异常。
结论 联影 United Imaging MR780 3D MATRIX（SPACE） T1WI 序列在颅内静脉血管壁高分辨率成像存在可行性。

PU-1936

椎管内海绵状血管瘤的 MRI 征象分析

胡丽,余刚,陈学强,徐霖
十堰市太和医院

目的 分析椎管内海绵状血管瘤的 MRI 征象，以提高诊断水平。
材料与方法 回顾性分析 2014 年 1 月～2018 年 7 月经我院手术证实的 7 例椎管内海绵状血管瘤患者的临床及 MRI 资料。男 5 例，女 2 例，年龄 18～61 岁，平均 36.1 岁。2 例表现为间歇性腰腿痛，2 例表现为双下肢无力，1 例四肢麻木伴步态不稳，1 例左上肢疼痛伴麻木，1 例表现为左下肢疼痛。MRI 扫描采用 GE 公司 MR750w 3T 核磁共振机，采用 SE 序列做矢状面 T1WI、T2WI 及横断面 T2WI 扫描。所有患者均行增强扫描，对比剂为 Gd-DTPA，选择常规 SE 序列 T_1WI 行轴位、矢状位及冠状位扫描。
结果 本组 7 例中，3 例位于胸段,1 例位于胸腰段，2 例位于腰骶段,1 例位于颈段。 髓外硬膜下 3 例，其中 1 例跨硬膜内外生长呈哑铃状；髓内 2 例，1 例位于胸髓，1 例颈髓；硬膜外 2 例，沿脊椎纵轴生长，呈梭形或长椭圆形，脊髓明显受压，1 例脊髓部分被包绕。MRI 表现为 5 例呈 T_1WI 等信号,1 例呈 T_1WI 高信号,1 例呈 T_1WI 低信号,7 例均呈 T_2WI 高信号,其中 3 例信号不均匀；增强扫描 3 例呈明显均匀强化,2 例呈不均匀强化，2 例无明显强化。因海绵状血管瘤易反复出血，在出血不同时期出血成分沉积及胶质增生、血栓形成等可导致 MRI 信号表现多样。
结论 椎管内海绵状血管瘤的 MRI 征象具有一定特点，正确分析其 MRI 征象有助于椎管内海绵状血管瘤的诊断与术前定位。

PU-1937

脑动脉瘤的 CTA 和 MRA 及 DSA 对照分析研究

耿宽,普福顺
红河州第一人民医院

目的 比较 CTA、MRA、DSA 三种方法诊断动脉瘤的优缺点，探讨非侵入性 CTA 和 MRA 取代 DSA 的可行性。
方法 对收治的 25 例怀疑动脉瘤患者同时作 CTA、DSA 检查，比较其影像学结果，对收治的 22 例怀疑动脉瘤患者同时作 MRA、DSA 检查，比较其影像学结果。
结果 CTA 基本上可以发现大多数的动脉瘤。为后续的手术或者栓塞提供足够的影像学信息；MRA 对较小动脉瘤(直径≤10ram)的诊断仍然存在一定难度，容易漏诊。

结论 CTA 可作为蛛网膜下腔出血以及可疑动脉瘤患者的初选检查方法，必要时再行 DSA 进行确诊。随着更多三雏重建技术的推广，其敏感性和特异性会更加提高，在不久的将来 CTA 可能会成为动脉瘤术前检查的首选。

3D-PCASL 联合 DWI、SWI 多模态快速 MRI 成像在急性缺血性脑卒中溶栓治疗中的应用

陈忠强
湖北医药学院附属随州医院（随州市中心医院）

目的
探讨 3D-PCASL 联合 DWI、SWI 多模态快速 MRI 成像在急性缺血性脑卒中溶栓治疗中的应用价值。

方法
收集 2018 年 9 月至 2019 年 4 月我院高度怀疑为急性缺血性脑卒中患者 42 例，进行 DWI、SWI 及 3D PCASL 检查。观察是否有出血灶，DWI 病变与 3D PCASL 病变范围是否一致，测量缺血半暗带面积。按照影像学表现是否存在缺血半暗带、3D-PCASL 像高或低灌注、SWI 像是否出血，分别统计脑梗死患者例数，制定不同的治疗方案进行溶栓治疗。观察其影像学表现与溶栓治疗效果、溶栓出血和复发的关系。

结果
本组 42 例患者中，24 例患者均存在一定面积缺血性半暗带组织，3D-PCASL 为低灌注或正常患者，患者溶栓治疗后效果良好；8 例患者存在一定面积缺血性半暗带组织，但 3D-PCASL 为高灌注，溶栓治疗后出现不同程度的脑出血；7 例患者不存在缺血性半暗带组织，溶栓治疗效果较差；3 例患者不存在缺血性半暗带组织，且 3D-PCASL 为高灌注，SWI 可见出血灶，进行溶栓治疗后效果极差，最终死亡。

结论
3D-PCASL 联合 DWI、SWI 快速检查能准确判断脑梗死的位置和范围，明确是否有微出血灶，并能计算出梗死周围的缺血半暗带，为临床溶栓治疗及疗效评估提供精准的影像指导信息，降低治疗后出血和复发的风险。

PU-1939
DTI 技术在缺血性脑卒中后功能预后中的应用进展研究

胡艺伟,邱继文
天津中医药大学

摘要：**目的** 应用弥散张量技术（DTI）技术评估缺血性卒中患者功能障碍的预后。
方法 选择急性起病的缺血性脑卒中患者 15 例,其中男性 8 例,女性 7 例;年龄 47~80 岁,平均年龄 62.6 岁。平均受教育年限 9.7 年。MRI 诊断为缺血性脑卒中，于发病后 2 周、经康复治疗 3 月时分别行 DTI,测量两侧梗死灶远端的各向异性分数(FA)、再辅以 Fugl-Meyer 评分量表、BDAE、MoCA、NIHSS 等临床评分量表为缺血性脑卒中运动、言语、认知等功能障碍的预后评估功能评分进行相关分析。

结果 发病后 2 周时患侧大脑脚 FA 值较健侧降低且经康复治疗 3 月时患侧 FA 值升高，两侧 FA 值相差越小，神经传导功能越弱，缺血性脑卒中后各种功能障碍越轻，三个月后功能预后越好。
结论 DTI 技术所显示的梗死灶与相应功能区的位置关系及梗死灶的损伤程度对缺血性卒中后可能出现的功能障碍类型、障碍程度以及相应功能障碍的预后提供可视化依据为临床医师、康复医师制定合理的临床或康复治疗方案提供重要的参考依据

PU-1940
SWI 在急性脑梗死患者出血转化风险预测中的价值

刘晓虎
成都市第五人民医院

目的 探讨 SWI 对急性脑梗死患者出血转化风险的预测作用，从而为临床制定治疗策略提供重要参考依据。
方法 选取 2016.11 至 2019.6 于成都市第五人民医院放射科行 MRI 常规扫描及 SWI 扫描的 113 例急性脑梗塞患者作为研究对象，所有研究对象病程<3 天，最短时间 30min，且均未行溶栓治疗；所有研究对象在 2 周内完成常规 MRI 及 SWI 复查；依据第一次 SWI 检查结果确认的脑微出血（ cerebral microbleeds，CMBs)数量，将研究对象分为 A 组（CMBs 数量为 0-5 个）51 例，B 组（CMBs 数量为 6-10 个）32 例，C 组（CMBs 数量为>10 个）30 例；根据 SWI 复查结果，参照 ECASS Ⅱ标准进行出血性转化(hemorrhagic transformation，HT)分型，并与首次 SWI 结果作对比分析，出现新的低信号灶及定义为 HT；各组间 HT 发生率比较采用 X^2 检验，以 $P<0.05$ 显示统计学差异。
结果 A 组研究对象中有 6 例发生 HT，发生率为（6/51，11.7%），B 组研究对象中有 11 例发生 HT，发生率为（11/31，34.3%），C 组研究对象中有 22 例发生 HT，发生率为（22/30，73.3%），HT 发生率 A 组<B 组<C 组，且各组间的 HT 发生率存在统计学差异（$P<0.05$）。
结论 SWI 能够预测急性脑梗死患者发生出血转化的风险率，能为临床治疗急性脑梗死患者提供重要的参考价值。

PU-1941
基于多学科协作（MDT）关于运用多模态磁共振对脑卒中治疗前后一站式评估的临床应用研究

尹永芳,梁妍
吉林省人民医院

目的 探讨多模态 MR 检查对脑卒中患者治疗前后进行一站式评估的应用价值。**方法** 急性脑卒中患者时间窗内或未明确时间窗均可行多模态 MRI 检查进行评估，主要包括常规平扫、弥散加权成像（DWI）、血管成像（MRA）、灌注（PWI 即 ASL+DSC）+磁敏感加权成像（SWI）。**1.** ASL 灌注评估缺血半暗带、侧枝循环或脑储备能力、再灌注损伤，PLD1.5s 和 2.5s 结合能更好的反映侧枝循环建立或残存血流储备。2.PWI 灌注:评估缺血半暗带及二三级侧枝循环。3. MRA 评估一级侧枝循环。4. SWI 评估微出血、血管畸形、静脉窦血栓及先天变异。本次研究需进行合理扫描方案的探索，研究均以 DSA 作为金标准。**结果** 本次研究进行合理扫描方案的探索，以达到影像指导规范，实用靠谱，完善影像急诊服务，起到诊治枢纽的重要作用。**结论** 多模态 MRI 一站式被认为是脑卒中诊断和评估预后的有效方法，利用 MRI 多参数多序列特别是功能磁共振的临床应用，建立有效的评估体系，能够在早期缺血性改变、出血性转化、血管闭塞、侧支循环、缺血半暗带以及治疗

后效果评估等方面提供重要信息,从而快速准确的为患者提供一站式服务,指导患者筛选并制定治疗策略。

PU-1942
基于颅内大动脉 HR-MR 成像的新卒中风险评分模型对脑卒中再发风险预测的价值研究

李俊彤,王效春
山西医科大学第一医院

目的 基于颅内大动脉高分辨率(high resolution-MR, HR-MR)成像及 Essen 卒中风险评分模型(essen stroke risk score, ESRS)构建新卒中风险评分模型(new stroke risk score, NSRS)，研究其对脑卒中再发风险预测的价值。**方法** 回顾分析本院 50 例症状性脑卒中患者临床及影像资料，首发组 27 例，复发组 23 例，所有患者均行头颅 MRI 平扫及高分辨 MR 扫描。采用 t 检验对两组病人的临床资料及影像特征进行比较，运用 *Logstic* 多因素回归分析，筛出脑卒中独立危险因素，结合 ESRS 建立新卒中风险评分模型(NSRS)。分别对两组患者进行 ESRS 及 NSRS 评分，获得二者的 ROC 曲线，评估 ESRS 与 NSRS 对脑卒中再发风险预测的价值。**结果** 首发组与复发组吸烟、高血压、高血脂、斑块内出血(intra-plaque hemorrhage,IPH)、富含脂质坏死核心(lipid rich necrotic core ,LRNC)、管腔面积(lumen area, LA) 、管壁面积(wall area, WA)、管壁指数(normalized wall index, NWI)、IPH 指数、LRNC 指数和 IPC 指数及 Geometry_Rf、S(3,3) Contrast、WavEnHL_S_1 组间差异有统计学意义($P<0.05$)。吸烟、高血压、高血脂、IPH 是卒中患者再发脑卒中的独立危险因素。ROC 曲线显示，ESRS 及 NSRS 评分的 AUC 值分别为 0.897 和 0.961，ESRS 及 NSRS 预测脑卒中再发风险的敏感度及特异性分别为 0.783，0.852 及 0.913，0.889，即结合患者临床资料与影像学资料对卒中再发风险的预测更加精确。**结论** ESRS 和 NSRS 对脑卒中再发均有较好的预测价值，但 NSRS 模型对脑卒中风险分层更加详细，评分更加准确，其预测价值更大。

PU-1943
基于 Slicer 软件重建 CTA 对于颅内破裂动脉瘤临床诊疗的可靠性研究

姬将[2],王晓东[1]
1.宁夏医科大学附属医院
2.宁夏医科大学

【摘要】**目的** 对比分析传统影像工作站与 Slicer 软件两种 3D-CTA 重建方法于颅内破裂动脉瘤的诊断效能以及测量结果差异,评价基于 Slicer 三维后处理对于颅内破裂动脉诊断的可靠性以及准确性。**方法** 回顾性分析 2016-2018 年在宁夏医科大总医院收治的 57 例因蛛网膜下腔出血高度怀疑颅内动脉瘤破裂患者入院后的先后所行 CTA 和 DSA 资料。将原始 CTA 数据分别经传统工作站和 Slicer 软件后处理得到 3D-CTA 图像，DSA 资料经造影工作站后处理得到 3D-DSA。以 3D-DSA 的诊断结果为金标准，由主治以上职称放射科医师和神经外科医师各一名盲发独立判阅两种方法的诊断结果。**结果** 57 例患者中,3D-DSA 检出 51 例 60 个动脉瘤, 传统影像工作及 3D-Slicer 均检出 46 例 55 个动脉瘤,其中漏诊 7 例 7 个，误诊 1 例 1 个，二者对于颅内破裂动脉瘤的诊断具有相同的诊断效能，灵敏度为 90.1%，特异度 83.3%，阳性预测值 98.2%，阴性预测值 45.5%，准确度 91%；在动

脉瘤大小方面，3D-Slicer 与传统影像工作站两种后处理 CTA 方法对于动脉瘤最大长径和瘤口半径的判断无统计学差异；Bland-Altman 图形分析证实两种方法分别所测瘤体最大长径瘤口半径及对应的 54 个点中 52 个(96.3%)于 95%一致性界限内。**结论** 基于 slicer 软件重建 3D-CTA 对于颅内破裂动脉瘤诊断效能及瘤体大小判断准确度均较高，可以作为一种有效的颅内动脉瘤重建方法使得影像资料更好的服务于临床。

PU-1944
双能 CT 对脑卒中机械取栓术后出血与造影剂外渗的鉴别

李锦红,王晓慧,李延静
延安大学附属医院

目的 探讨双能 CT 对急性缺血性脑卒中(acute ischemic stroke, AIS)患者机械取栓术后脑出血（intracerebral hemorrhage ICH）与造影剂外渗的鉴别价值。
方法 收集 2018 年 7 月--2019 年 7 月 38 例急性缺血性脑卒中患者在我院行机械取栓术治疗，并在术后 1h 内行双能 CT 检查，术后 48h 再行双能 CT 检查进行随访的患者作为研究对象，分别获得虚拟平扫图像(virtual unenhanced non-contrast VNC)、碘覆盖图像（iodine overlay maps IOM）及单纯融合图像（mixed energy images MIX），并进行评估。将术后 48h 再使用双能 CT 检查的结果作为参考标准与之前的评估结果进行比较。

结果 38 例资料完整的患者中有 9 例患者的 MIX 图像未见明显的高密度影，余 29 例显示有高密度影的患者中首次双能 CT 图像诊断为出血者 16 例，在随访中均被证实为出血。诊断为造影剂外渗者 11 例，其中 2 例在随访中发生继发性出血转化，其余均为造影剂的外渗。诊断为出血合并造影剂外渗者 2 例，随访中均被证实。敏感度为 93%；特异性为 100%；阳性预测值为 100%；阴性预测值为 92%（P＜0.05）。

结论 双能 CT 可以准确的鉴别 AIS 患者机械取栓术后脑出血与造影剂外渗。

PU-1945
基于 CTA 评价椎动脉发育不良与临床 NIHSS 评分的相关性研究

何洮梅
宁夏医科大学总医院

摘要：目的 基于 CTA 评价椎动脉发育不良在前后循环梗死的发生率间的差异，NIHSS 评分是急性脑卒中后神经功能障碍的重要定量工具，探讨 VAH 是否是后循环梗死临床 NIHSS 评分的影响因素。方法 回顾性收集神经内科住院的脑梗死病人 274 例，按梗死部位分为前循环组和后循环组，计算 ACI 组和 PCI 组的 VAH 发生率，应用卡方检验进行对比分析。在 ACI 组和 PCI 组分别比较 VAH 阳性与阴性组 NIHSS 评分是否有差异，采用两样本均数比较的 t 检验。结果 PCI 组 VAH 发生率高于 ACI 组（P＜0.05），在后循环梗死的病例中，VAH 阳性和阴性的病例 NIHSS 评分有显著性差异（P＜0.05）。结论 VAH 是常见的椎动脉发育变异，在后循环梗死中发生率更高，并且 VAH 阳性的后循环梗死病人神经功能缺损症状更严重。

PU-1946

大脑中动脉区脑梗死后丘脑神经联系不能相关的灌注和微结构改变的研究

夏聪,居胜红
东南大学附属中大医院

目的 大脑中动脉区脑梗死后会导致同侧丘脑神经机能联系不能（ITD），即梗死同侧丘脑出现功能、灌注和代谢减低，此现象可能与脑梗死后运动功能的恢复相关。本研究应用基于 MRI 的 ASL 和 DKI 成像技术评估大脑中动脉区脑梗死后丘脑的灌注和微结构随时间的改变规律，并探索两者之间的关系及其对神经功能恢复的影响。
方法 回顾性纳入 107 例单侧新发大脑中动脉区脑梗死患者，行常规头颅 MRI、ASL 和 DKI 检查，并至少行一项头颅血管成像检查，如 DSA、CTA、MRA，排除有后循环血管病变的患者。按发病时间将患者分为三组，急性期（＞6h~3d）28 例、亚急性期(＞3d~10d）49 例及慢性期（＞10d~30d）30 例。根据 ASL 图像，将同侧丘脑不对称性低灌注程度分为 3 级；同时定量分析计算两侧丘脑 CBF、MK、MD、FA 不对称指数 AI，如 AI_{CBF}=（健侧丘脑 CBF-同侧丘脑 CBF）/健侧丘脑 CBF）；记录入院 NHISS 评分，出、入院 mRS 评分及其他相关临床指标。
结果 在大脑中动脉区脑梗死患者中，急性期及亚急性期梗死同侧丘脑 MK 值较对侧显著升高（$p<0.05$）；梗死同侧丘脑 CBF 不对称指数与 MK 不对称指数呈正相关；慢性期梗死同侧丘脑 MK、MD 与 FA 值与对侧值无明显差异。急性期、亚急性期梗死同侧丘脑的 MK、CBF 不对称指数与出院时 mRS 评分显著相关 $p<0.05$。
结论 DKI 和 ASL 成像可用于评估大脑中动脉区脑梗死后丘脑灌注和弥散改变的情况，DKI 优于 DTI 技术能检测到丘脑急性和亚急性期微结构损伤性改变；急性期及亚急性期梗死同侧丘脑低灌注与微结构改变呈正相关且与早期神经功能的恢复相关。

PU-1947

多模态磁共振在亚急性脑梗死半暗带评估的应用价值

许超,刘赟
延安大学附属医院心脑血管专科病区

目的探讨多模态磁共振（DWI/DSC）在亚急性脑梗死半暗带评估的应用价值。

方法本研究为回顾性临床和影像资料分析。搜集我院 2019 年 1 月 1 日至 2019 年 6 月 30 日 95 例发病时间 3～7 天的亚急性脑梗死患者，依 DWI 序列、DSC 灌注序列显示灌注-弥散不匹配（PDM）区域判定存在缺血半暗带（IP），并将患者分为 IP（-）组和 IP（+）组；2 名高年资神内医师评估的一致性好，统计患者从发病到 MR 检查期间病情好转、稳定、加重例数，分析两组患者病情变化差异。

结果 95 例患者，IP（+）29 例（30.52%），IP（-）66 例（69.48%）。IP（+）患者组中病情加重 17 例，稳定 9 例，好转 3 例。IP（-）患者中病变加重 9 例、稳定 37 例、好转 20 例。IP（+）vsIP（-）组患者的病情加重率为 58.62%vs13.63%，两组差异有统计学意义（P=0.001）。

结论亚急性期脑梗死也可能有 IP，IP 的存在对临床完善治疗有指导意义。

HRMR-VWI 对椎-基底动脉粥样硬化血管壁改变与急性脑梗死的关系研究

贾文霄,王云玲,石增强
新疆医科大学第一附属医院

目的 探讨高分辨率磁共振血管壁成像(high resolution magnetic resonance vessel wall imaging，HRMR-VWI)对椎-基底动脉系粥样硬化的血管重构模式、粥样硬化斑块负荷、分布特点与急性脑梗死的关系。**方法** 入组后循环急性脑梗死患者 32 例，行磁共振常规序列检查(含扩散加权成像序列)和 HRMR-VWI 检查，证实存在后循环供血区脑梗死并测量责任血管管壁，计算责任血管的重构指数(remodeling index，RI=最狭窄处血管面积/参考处血管面积)。比较正性和负性重构血管的斑块面积、负荷，观察责任斑块位置、分布及强化特点。 **结果** HRMR-VWI 发现后椎-基底动脉粥样硬化斑块患者 30 例，其中基底动脉粥样硬化斑块 18 例，椎动脉(颅内段)粥样硬化斑块 12 例，2 例脑桥旁梗死者未见明显斑块。责任血管正性重构 21 例，负性重构 7 例，无重构 2 例。正性重构组的斑块面积[(6.32±3.19)mm2]及斑块负荷[(0.51±0.13)%]均大于负性重构组的斑块面积[(2.14±1.43)mm2]及负荷[(0.28±0.19)%]。椎-基底动脉粥样硬化斑块多发生于穿支动脉分支开口周围，以背外侧多见。椎-基底动脉系粥样硬化责任斑块多呈轻度或明显强化。**结论** HRMR-VWI 能够作为后循环急性脑梗死病因诊断的重要检查方法。

高分辨磁共振血管壁成像对高血压患者豆纹动脉血管特征分析的应用研究

贾文霄[1],王云玲[1],贾琳[2]
1.新疆医科大学第一附属医院
2.新疆医科大学第二附属医院

目的 探讨高分辨磁共振血管壁成像技术对高血压患者豆纹动脉数量及深度的研究价值；**方法** 收集 70 名不同等级的高血压患者及 27 名健康志愿者，其中高血压患者分为Ⅰ、Ⅱ、Ⅲ级高血压组，27 健康志愿者为对照组，对所有受试者行高分辨磁共振血管壁成像（High Resolution Magnetic Resonance Imaging）3D-T1WI-VISTA 序列成像，受试者豆纹动脉高分辨血管成像数据传至后处理工作站，应用 Philips Intellispace portal 软件对的血管数量及深度进行统计，采用 SPSS 22.0 软件对四组受试者豆纹动脉的深度及数目进行统计学分析。**结果** 各个等级高血压组与对照组组间一般资料包括性别构成、年龄均无统计学差异，高血压Ⅱ、Ⅲ级组 51 例患者双侧豆纹动脉的深度和数目均低于对照组，差异有统计学意义（P<0.001）。Ⅰ级高血压组 25 例患者双侧豆纹动脉深度和数目与对照组比较，未见统计学差异（P〉 0.05）。**结论** Ⅱ、Ⅲ级高血压患者与正常人的豆纹动脉的数量及深度存在一定差异，高分辨磁共振血管壁成像对豆纹动脉血管特征分析具有临床价值。

PU-1950
T-ASL 灌注成像评估烟雾病颈外动脉侧枝循环的应用价值

韩帅[1],王新怡[2],王心雨[1],张超[2]
1.山东第一医科大学

2.山东省千佛山医院

目的 探讨 T-ASL（Territory arterial spin labeling）灌注成像在评估烟雾病颈外动脉侧枝循环的可行性。

方法 前瞻性纳入经 DSA 诊断并按照 Mugikura 分期[1]为 3、4 期的烟雾病患者共 16 例，所有患者均行 T-ASL 灌注成像检查。同一层面选择患者双侧颈外动脉进行分别标记，共计标记颈外动脉血管 32 支，图像经过处理后，每支颈外动脉均可得到连续独立 CBF 参数图，任意一幅 CBF 图像上存在颅内脑实质灌注阳性区，即为有侧枝循环，反之则为无侧枝循环。由 2 名经验丰富的影像科医生按照独立双盲法进行图像分析，意见不一致时协商取得一致意见。以 DSA 为诊断标准，使用 Kappa 检验来衡量 T-ASL 灌注成像结果与 DSA 在结果上的一致性。

结果 以 DSA 诊断结果为标准，32 支颈外动脉中 14 支存在颈外动脉侧枝循环，18 支未见侧枝循环。T-ASL 灌注成像显示，12 支可见颈外动脉侧枝循环，20 支未见颈外动脉侧枝循环。以 DSA 诊断结果为标准，T-ASL 灌注成像诊断颈外动脉存在侧枝循环的敏感性是 85.7%，特异性是 100%，阳性预测值是 100%，阴性预测值是 90%，T-ASL 灌注成像与 DSA 诊断结果的一致性对比上，Kappa 值=0.871，提示两种技术近乎完全一致[2]。

结论:T-ASL 作为一种新型 MR 灌注技术，可以选择特定动脉进行单独标记，有利于判定责任血管和侧枝来源，在评估烟雾病是否存在颈外动脉侧枝循环与 DSA 诊断结果具有良好的相关性，对评估烟雾病侧枝循环、分期、预后和临床治疗方案上提供客观依据，具有较高的临床应用价值。

PU-1951

脑卒中与癫痫发生的相关性探究及危险因素分析

涂梦琪
武汉大学中南医院

目的 1、评估缺血性脑卒中与出血性脑卒中患者继发癫痫的特点及危险因素。2、探究脑卒中后癫痫发作患者头颅 MRI 结构性病灶与脑电图功能异常部位的一致性。

方法 1、选择缺血性脑卒中患者 190 例，符合早发性癫痫患者 31 例、迟发性癫痫患者 37 例、无癫痫发生患者 122 例。将早发性和迟发性癫痫患者的发作类别分别与无癫痫发作组患者进行比较，探讨缺血性卒中后早发性和迟发性癫痫发作的临床特征及相关危险因素。2、选择出血性脑卒中住院患者 205 例，符合早发性癫痫患者 20 例、迟发性癫痫患者 24 例、无痫性发作组 161 例，同上进行分组比较；3、脑卒中后癫痫发生患者 112 例，比较其临床发作类型与脑电图表现以及头颅 MRI 图像的相关性，分为一致组与不一致组，探讨两组患者间脑卒中类型、部位及病变数量的差异。

结果 脑卒中后癫痫多以早发性癫痫(67.17%)、单纯部分性发作(70.34%)及复杂部分性发作(50.56%)较为常见；且卒中病灶部位（皮质病变多见）、累及范围及脑卒中类型(出血性)为诱发癫痫的主要危险因素(P<0.05)。卒中后迟发性癫痫发作患者中慢波与痫性放电的比例较高；脑电图定位与 MRI 病灶部位一致的符合率为 51.21%，其中皮层病变患者脑电图表现与头颅 MRI 的病灶一致性率较高(P<0.05)，且皮层病变患者与多部位卒中患者的脑电图表现为异常脑电图的几率较大(P<0.05)。

结论 脑卒中后癫痫多以早发性、单纯部分性发作及复杂部分性发作为主要分类，且出血性卒中、卒中累及皮质以及多部位病灶为脑卒中后癫痫发生的高危因素。其中脑卒中病变位于皮质区的患者，发生异常脑电图的几率更大，且异常脑电图定位与头颅 MRI 异常信号区域的一致性更高。

双能 CT 定量参数对急性缺血性脑卒中血管内治疗后出血并发症的预测价值研究

李玲,陈英敏,朱凤英,左天姿,王宇航,黄晓颖

河北省人民医院

目的：探讨双能 CT（DECT）定量参数对急性缺血性脑卒中（AIS）患者血管内治疗后继发性脑出血并发症的预测价值。
方法：收集我院 2017 年 11 月至 2019 年 7 月收治的 AIS 血管内治疗后立即行头颅 DECT 扫描（80 kVp,Sn150 kVp）的 85 例患者，回顾性分析所有患者 DECT 图像（混合图+VNC 图+IOM 图）。由两名放射科医师独立评估所有患者是否存在碘外渗和早期出血（术后 VNC 图中仍存在高密度区），另外一名放射科医师测定碘图（IOM）中最大碘浓度（mg/ml）和最大 CT 值（HU）（ROI=0.3 cm^2）及混合图中高密度区的体积（ml），以术后随访 CT（24-72 h）为标准观察是否发生脑出血并发症，将患者分为未出血组与继发性出血组。采用 Mann-Whitney U 检验分析 DECT 定量参数与脑出血并发症的相关性，ROC 曲线分析用于得出两组间的临界值。
结果：85 例患者中，16 例(18.82%)于术后颅内未出现高密度区，34 例(40%)于术后随访证实仅有造影剂外渗，35 例(41.18%)于术后随访中出现脑出血并发症,其中 19 例(54.29%)患者在术后 DECT 中即存在早期出血。最大碘浓度、最大 CT 值及高密度区的体积显示曲线下面积分别为 0.783，0.776，0.915 的区域（P<0.001），用于识别术后发生继发性脑出血并发症的患者。IOM 图中最大碘浓度大于 1.95 mg / mL（敏感度为 78.9%，特异性为 70.6%），最大 CT 值大于 123HU（敏感度为 78.9%，特异性为 70.6%）及混合图中高密度区的体积大于 6.24 ml（敏感度为 94.7%，特异性为 82.4%）分别作为术后继发性脑出血并发症的临界值。
结论：双能 CT 定量参数术后高密度区体积在预测 AIS 患者血管内治疗后出血并发症中具有较高的敏感性和特异性。

PU-1953
无先兆偏头痛脑灰质结构改变及认知功能下降的相关性研究

李美琴
安徽医科大学第一附属医院

摘要 目的 探讨无先兆偏头痛（MWoA）患者认知功能、灰质体积的改变及与临床表征的相关性。方法 纳入 30 例无先兆偏头痛及与之年龄、性别及教育年限匹配的 30 例健康对照组（HC），问询并记录无先兆偏头痛患者病程、发作频率、头痛程度（VAS 视觉模拟评分）及头痛的影响程度（HIT 头痛影响测评）的临床评分；测查两组总体认知功能（MoCA）、语言流畅性(VFT-动物命名)评分，两组间进行比较；分析认知功能（MoCA、VFT 评分）与临床表征间的相关性；扫描 3D T1 高分辨磁共振结构像，使用 VBM 的方法计算脑区灰质体积，作两样本 t 检验；分析感兴趣脑区灰质体积与认知功能（MoCA、VFT 评分）的相关性。结果 与 HC 组比较，MWoA 患者 MoCA、VFT 评分较低（均 $p < 0.001$），且 MoCA 评分与发作频率成显著负相关（$r = -0.465$，$p = 0.011$）；MWoA 患者右侧枕中回灰质（RMOG）体积较大（$p < 0.001$），且与 VFT 评分呈显著负相关（$r = -0.448$，$p = 0.013$）。结论 无先兆偏头痛患者认知障碍风险增加，且较低语言流畅功能与视觉皮层通路的损伤重塑有关。

PU-1954
肿块型原发性中枢神经系统血管炎一例

莫建华,黄成燕,蒋春秀,温志波
南方医科大学珠江医院

目的　原发性中枢神经系统血管炎（Primary Angiitis of The Central Nervous System, PACNS）是一种少见的累及中枢神经系统的免疫炎性疾病，表现为肿块型 PACNS 文献报道更加罕见。现将最近南方医科大学珠江医院收治的一例肿块型 PACNS 患者进行个案报导。
方法　收集患者临床及影像学表现，并与既往文献对比。
结果　患者，女，51 岁，因“无明显诱因突发右下肢稍乏力”入院。实验室检查 C 反应蛋白及血沉（ESR）升高。轻瘫实验示：右侧阳性，右下肢肌力 V-级，余体格检查无明显异常。头颅 MRI 检查：左侧顶叶见类圆形稍长 T1、稍短 T2 信号结节，其内另见点条状长 T1、长 T2 信号，病灶大小约 21 mm × 20 mm × 17 mm，边界清楚，伴周围脑组织大片水肿。Flair 像结节呈不均匀低信号，DWI 像见点条状高信号，增强扫描结节不均匀强化，矢状位可见一穿支血管影。MRS 示：Cho 峰及 NAA 峰无明显变化，Lip 峰及 Lac 峰明显升高。

患者行“立体定向下左顶叶占位性病变切除术”。术中所见：肿瘤与周围脑组织边界不清，血运丰富，质地韧。组织病理检查：脑组织间质血管壁和周围淋巴细胞浸润，部分血管纤维素性坏死，周围脑组织水肿，神经细胞蜕变坏死，未见恶变组织。免疫组织化学：血管 CD31 和 CD34(+)，血管周围淋巴细胞以 CD3 阳性 T 细胞为主，少数为 CD20 和 PAX5 的 B 淋巴细胞，组织细胞 CD68(+)，Ki-67 约 15%（+），MBP 和 NF 示血管周围脑组织脱髓鞘改变；PAS 示血管阳性。病理诊断：符合原发性中枢神经系统血管炎。
结论　肿块型 PACNS 非常罕见，当颅内单发占位性病变表现为不均匀强化，边缘见明显强化穿支血管，且 MRS 示：Cho 峰及 NAA 峰无明显变化，非坏死区域可见高耸 Lip 峰及 Lac 峰，需注意 PACNS 的可能性，亦需与脱髓鞘等非肿瘤性病变鉴别。

PU-1955
3D ASL 与 SWI 对 AIS 缺血半暗带评估的对比分析

黄荣慧,邓利猛
长沙市第四医院

摘要
目的 探讨磁敏感加权成像（SWI）与三维动脉自旋标记技术（3D ASL）对急性缺血性脑卒中（AIS）的缺血半暗带（IP）的评估差异 **方法** 通过 SWI 显示 AIS 患者的突出皮质静脉（PCV）和 3D ASL 技术显示 AIS 患者的脑血流量（CBF）减低区来评估缺血半暗带（IP），采用修改后的艾伯塔卒中计划早期 CT 评分（ASPECTS）对两种方法显示的 IP 进行计分，对两种方法显示的 IP 评分结果进行比较，并对不同程度 IP 的临床资料进行对比分析。**结果** 不同程度 IP 组间的临床资料对比，差异均无统计学差异（P＞0.05）。PCV 对 IP 的评分低于 CBF 减低区的评分,差异有统计学意义（t=2.46,P＜0.05）。**结论** SWI 的 PCV 征能间接提示 AIS 脑 IP 的存在，而 3D ASL 显示的 CBF 减低区能更直接、全面显示脑组织的缺血情况，3D ASL 在显示 IP 方面较 SWI 更具有优势。

PU-1956
基于不同 PLD 的 3D pCASL 对急性脑梗死脑血流灌注程度的评价

张育苗,王晓虎,任转勤
宝鸡市中心医院

目的　急性脑梗死在我国高发，近年来出现发病年龄逐渐年轻化，该病患者会出现运动、语言、感觉等功能障碍。本研究探索 3D pcASL（three-dimensional pseudo-continuous arterial spin-

labeled）的多个 PLD（postlabeling delay，PLD）时间所得 CBF（cerebral blood flow，CBF）值对急性脑梗死患者脑血流灌注异常程度及范围的早期预估评价。

材料与方法 收集 45 例急性脑梗死患者，均发病 6 小时内接受 GE Discovery MR750 3.0T 常规 MRI、DWI 及 3D ASL，其中男性 27 例（年龄=59.6±14.69 岁），女性 18 例（年龄=63.50±9.78 岁），将健侧对称部位所测 CBF 值作为对照组。采用 AW VolumeShore 5 工作站 Functool 9.4.05 处理软件对患者的 CBF 图像进行测量，所得数据进行一致性检验、配对样本 t 检验（p＜0.05）。

结果 患侧与健侧 CBF 值比较显示：PLD 为 1.5s、2.0s 时具有显著统计学意义（p=0.003、0.006），即患侧 CBF 值低于健侧；PLD 为 2.5s 时无统计学意义，提示脑血管微循环代偿良好。患侧 CBF 值进行两两比较，所得 P 值分别 0.003（PLD=1.5s/2.0s）、0.073（PLD=2.0s/2.5s）、＜0.001（PLD=1.5s/2.5s），急性脑梗死患者的 CBF 值随着 PLD 时间的延迟，CBF 值逐渐增大。

结论 本研究证实了不同 PLD 对急性脑梗死患者脑血流灌注的预估价值。早期患侧 CBF 值低于健侧，随着 PLD 时间的延长，患侧逐渐与健侧无明显差异；对于患侧 CBF 值的比较，PLD=1.5s 和 2.5s 有显著统计学差异，均可作为评价灌注情况的标准和依据， PLD=2.0s 可以作为灌注过程的观察，不能作为评价依据。

PU-1957

颈内动脉形态学改变对认知功能影响的研究

吕发金,龚贝贝
重庆医科大学附属第一医院

目的 探讨颈内动脉形态学改变（血管迂曲及狭窄）对认知功能的影响。

方法 收集 2017 年 10 月至 2018 年 6 月于本院就诊患者 39 例及对照组 20 例，根据头颈 CT 血管造影（CTA）、头颈 MR 血管造影(MRA)结果将病例组分为颈内动脉迂曲组 23 例、颈内动脉狭窄组 16 例。各组分别使用简易精神状态量表（MMSE）、蒙特利尔认知评估量表（MOCA）评定其认知功能。依据 Fazekas 分级对各组间脑白质病变进行分级评分，计算各组间腔隙灶数量。结果 MOCA 评分迂曲组 27(24,29)分；狭窄组 28(25,29)分；对照组 29(28,30)分;迂曲组评分低于对照组，P＜0.05。3 组间 MMSE 评分未有明显的统计学差异。迂曲组、狭窄组较对照组 Fazekas 分级评分均存在显著统计学差异，P<0.05；狭窄组腔隙灶(9 例)较对照组(2 例)及迂曲组(1 例)存在显著统计学差异，P<0.05。狭窄组在吸烟、饮酒、高血压及高脂血症等发生率明显高于其他两组，P<0.05。

结论 颈内动脉形态学改变（血管迂曲及狭窄）与脑白质病变发生相关，且造成一定程度的认知功能下降。

PU-1958

优化的自动去骨法与 VCTDSA 去骨效果的评价研究

吕发金,龙邦媛
重庆医科大学附属第一医院

目的

对比研究优化的自动去骨法(AVA)与 VCTDSA 技术在正常头颈 CTA 中去骨效果的可靠性。

材料与方法

分析 2016 年 9 月到 2017 年 7 月重医大附一院 30 名正常头颈 CTA 受检者的影像资料。同一操作者使用 AVA 软件和 VCTDSA 对原始图像后处理，记录自动去骨、手动去骨及总去骨时间，从血管完整性、图像质量、假性血管狭窄等方面对 VR 和 MIP 图像进行评价。去骨时间比较采用非参数 Mann-

Whitney U 检验；血管完整性采用配对卡方检验；图像质量和假性血管狭窄评价采用相关样本的秩和检验。

结果

VCTDSA 自动去骨、手动去骨及去骨总时间分别为 14.5（13，20.25）s、399（353.75，501.75）s 及 415.5（371.5，516）s，AVA 自动去骨、手动去骨及去骨总时间分别为 116.5（109，123.25）s、11.5（0，71.25）s 及 140（115.5，188）s，AVA 手动去骨和去骨总时间短于 VCTDSA，（P＜0.01）； M4～M5 段、大脑桥静脉、上矢状窦、横窦、乙状窦 AVA 显示率为 0，VCTDSA 相应显示率达 93.33%（140/150），（P＜0.01）；血管图像质量比较，ICA2 及 ICA6，VCTDSAⅠ级图像分别为 86.21%（25/29）及 96.55%（28/29），Ⅱ级图像分别为 13.79%（4/29）及 0.34%（1/29），AVA Ⅰ级图像为 44.83（13/29）及 58.62%（17/29），Ⅱ级图像为 55.17%（16/29）及 41.38%（12/29），VCTDSA 优于 AVA，差异有统计学意义（P＜0.01）；假性血管狭窄发生率，VCTDSA 1.41%（10/711），AVA 1.13%（8/711）无统计学意义（P＞0.01）。

结论

VCTDSA 技术进行头颈 CTA 图像去骨的可靠性高于 AVA 自动去骨，应作为 CTA 优选去骨方法。

PU-1959

基于头颈部 CTA 分析临床特征与血管狭窄程 度的相关性

白粉[1],任靖[1],孟闫凯[2],于芳民[1],刘晓红[1],陈安记[1],徐凯[2]
1.商州区人民医院
2. 徐州医科大学影像学院

目的 分析临床特征与头颈部 CTA 血管狭窄程度的相关性。 方法 回顾性分析 2018 年 10 月-2019 年 8 月在我院行头颈部 CTA 检查的 150 例患者的临床影像学资料。根据狭窄程度分为轻度狭窄组（管腔狭窄面积≤69%）及重度狭窄组（管腔狭窄面积＞69%）。对入组患者的性别、年龄、吸烟、糖尿病、高血压等临床特征进行单因素卡方检验。P 值＜0.1 的临床特征纳入多因素逻辑分析。结果 入组患者的平均年龄为 63.8 岁±9.7 岁。轻度狭窄组、重度狭窄闭塞组分别有 122（81.3%）、28（18.7%）例患者。单因素分析显示吸烟患者发生重度狭窄的比例为 50%，不吸烟患者发生重度狭窄患者的比例为 15%，有明显的统计学差异（P＝0.005）（表 1）。男性患者发生重度狭窄的比例为 23.4%，而女性患者发生重度狭窄的比例为 10.7%，P 值为 0.054。多因素逻辑分析结果显示吸烟是头颈部血管重度狭窄的危险因素，OR 值为 4.279（95% CI 1.287-14.235），P 值为 0.018（表 2）。 结论 吸烟是发生头颈部血管重度狭窄的危险因子，风险高于非吸烟患者。

PU-1960

颈内动脉夹层影像诊断与鉴别诊断进展

吕发金,龚贝贝
重庆医科大学附属第一医院

目的 以 ICAD 影像诊断与鉴别诊断的研究进展作述评。

方法 通过文献复习，对比分析 DSA、CTA、MRA 对颈内动脉夹层的诊断价值、优势 不足，并与颈动脉粥样硬化、颈动脉蹼、颈内动脉起始处血流伪影、动脉瘤进行鉴别，分析其影像征象异同。
结果 颈内动脉夹层 DSA 表现为以局部动脉不规则狭窄为特征性表现的 ICAD 最为常见，狭窄管腔多不规则，呈玫瑰花状、线珠状或呈“波纹征”，严重时呈“线样征”或管腔完全闭塞。CTA 典型 CTA 动脉夹层征象包括“双腔征”、“内膜瓣征”、“鼠尾征”、“火焰征”及偏心性动脉瘤样膨大等。MRI 表现为动脉壁内血肿表现为动脉壁增厚，增厚管壁内缘光滑，T1、T2 加权像可见动脉壁呈新月形异常信号，壁内血肿信号演变过程与血红蛋白分解产物引起的顺磁效应相关，急性期血肿在 T1、T2 加权像表现为低信号，亚急性期随着高铁血红蛋白成分增加，T1、T2 加权像上表现为新月形高信号，2 月后大部分血肿呈等信号。鉴别诊断：颈动脉粥样硬化，其一般位于颈内动脉起始处，狭窄范围较局限，且管腔内缘不光滑，同时伴钙化常见，而 ICAD 位置一般较高，接近颅底，并且 ICAD 所致动脉狭窄多为偏心性，内缘光滑可呈螺旋形沿着管腔上行，以上特征有助于鉴别。
结论 无创性血管成像技术发展迅速，CT 血管成像(CT angiography，CTA) [3]及高分辨核磁（High-resolution magnetic resonance imaging，HR-MRI）血管壁成像[4]等影像检查技术在临床上已逐步应用于颈动脉疾病的诊断。

PU-1961
16 例妊娠相关脑静脉窦血栓患者的影像特征分析

刘逸冰,卢洁
首都医科大学宣武医院

目的 静脉窦血栓是一种少见的以颅内压增高和局灶性神经功能障碍为主要症状的脑血管疾病，其中妊娠相关静脉窦血栓指发生于妊娠至产后 6 周内的脑静脉血栓，严重危及妊娠妇女及胎儿生命安全。通过总结妊娠相关脑静脉窦血栓患者的临床及影像特征，提高对妊娠相关脑静脉窦血栓的认识。
方法 回顾性分析 2016 年 5 月~2019 年 5 月 16 例妊娠相关静脉窦血栓患者的临床及影像资料。所有患者均接受常规磁共振平扫、对比增强磁共振静脉造影或磁共振黑血血栓成像检查。根据脑实质损伤与否分为脑实质损伤组与无脑实质损伤组，分别对患者年龄、妊娠状态、危险因素、临床症状、血栓相关特征及脑实质损伤特征进行评估，对血栓数量分节段计分。采用 t 检验比较不同妊娠相关静脉窦血栓组间血栓分数差异。
结果 16 例患者年龄 21~40 岁，平均（29±5）岁，其中人工流产术后 1 例，剖宫产术后 7 例，产褥期 4 例。16 例患者中 8 例（50%）患者感染累及乳突区，14 例（87.5%）患者首发症状为头痛，其他神经系统症状有抽搐 5 例，意识障碍 3 例，运动障碍 2 例，感觉异常 1 例，视物成双 1 例。磁共振成像显示血栓位于横窦、乙状窦 13 例（81.3%），上段颈内静脉 12 例（75.0%），皮质静脉 8 例（50.0%），上矢状窦 7 例（43.8%），直窦 4 例（25.0%），窦汇 4 例（25.0%），深静脉系统 3 例（18.8%），下矢状窦 2 例（12.5%）；11 例（68.8%）患者出现脑实质损伤，病灶位于颞顶叶 9 例，额叶 5 例，丘脑 1 例，其他深部白质 5 例，其中 5 例（45.4%）伴有出血，9 例（81.8%）病灶均累及皮质。脑实质损伤组血栓分数 3~16，平均 7.27±4.1，无脑实质损伤组血栓分数 1~8，平均 4.6±2.9，两组血栓分数差异无统计学意义（P＞0.05）。
结论 妊娠相关静脉窦血栓患者有一定影像特征，脑实质损伤的出现多预后较差。MRI 合并 MRV 是诊断妊娠相关静脉窦血栓血栓的主要手段。

急性缺血性脑卒中侧枝循环 CT 评价：Fast Stroke 价值

吕绍茂[1],林禹[1],蔡国祥[1],王金岸[1]
1.厦门大学附属中山医院
2.林禹

【摘要】目的　探讨 Fast Stroke 一站式模式在缺血性脑卒中侧支循环评估中应用价值。方法 回顾性分析 2018 年 12 月至 2019 年 5 月入院的 52 例缺血性脑卒中患者，均完成 CT 平扫、CT 灌注及多期 CTA 检查，启用 Fast Stroke 一站式模式，对侧枝循环进行评分，并与 CT 灌注结果作对比。结果 缺血半暗带侧枝循环良好组 BF 高于侧枝循环不良组（P=0.032），核心梗死区侧枝循环良好组 BV 高于侧枝循环不良组（P=0.013），侧枝循环良好组 MTT 及 Tmax 升高（P=0.002,0.031）。良好的侧枝循环良好的侧枝循环与 BV、MTT、Tmax 相关。**结论**　Fast Stroke 一站式模式在缺血性脑卒中侧支循环评估中敏感度和特异度较高，可以快捷评价侧枝循环，明确责任血管，在缺血性脑卒中的预防和治疗中具有一定的价值。

3.0T MR 磁敏感加权成像对脑血管淀粉样变脑出血的诊断价值

王露萍[2],贺文广[1],赵艺蕾[1]
1.浙江大学附属第一医院
2.浙江省绍兴市柯桥区妇幼保健院

目的　分析脑血管淀粉样变脑出血（Cerebral amyloid angiopath-related hemorrhage,CAAH）　的 3.0T MR 磁敏感加权成像表现及诊断价值。
方法　回顾性分析我院 2014 年 7 月 26 日至 2019 年 8 月 20 日临床确诊的 78 例脑血管淀粉样变脑出血患者的临床资料及 3.0T MR 磁敏感加权成像表现，结合国内外相关文献，总结脑血管淀粉样变脑出血的 3.0T MR 磁敏感加权成像表现及其诊断价值。
结果　78 例患者中，男 56 例，女 22 例；平均发病年龄 62.4±8.2 岁，其中≥55 岁占 78.6%；患者中有高血压史 56 例，糖尿病史 17 例，心血管病史 17 例；以头晕头痛为首发症状 17 例，脑梗死为首发症状 50 例，既往脑梗史 28 例，精神异常为首发症状 28 例；7 8 例均行 3.0T 常规 MRI 及 SWI 检查，SWI 序列上均变现为多发低信号灶，其形状各异，多呈小圆形或点状低信号，71%(56/78)的病灶直径均＜10mm，57%(45/78)的病灶位于皮层及皮层下白质，42%(33/78)位于基底节区及丘脑，74%(58/78)同时位于以上两者。
结论　脑血管淀粉样变是引起老年人的脑叶出血的常见原因，其在临床及影像学表现具有一定特点。脑血管淀粉样变脑出血主要分布于皮层及皮层下白质，呈多发性，SWI 序列呈多发低信号灶。除此之外 3.0T SWI 检查可发现更多常规 T1WI、T2WI 及 T2 FLAIR 未能发现的较为细小出血病灶，因此且诊断价值优于常规 MRI 检查，值得临床中进一步推广应用。

PU-1964
头颈部 CTA 斑块易损性与临床特征的相关性分析

王瑾瑜[1],孟闫凯[2],曹霞[1],于芳民[1],刘晓红[1],陈安记[1],徐凯[2]
1.商州区人民医院
2.徐州医科大学附属医院

目的 分析临床特征与头颈部 CTA 斑块易损性的相关性。 方法 回顾性分析 2018 年 10 月-2019 年 8 月在我院行头颈部 CTA 检查的 150 例患者的临床影像学资料。根据颈部斑块稳定性将斑块分为稳定斑块（钙化、混合斑块）及不稳定斑块（软斑块）。对入组患者的性别、年龄、吸烟、糖尿病、高

血压等临床特征进行单因素卡方检验。P 值＜0.1 的临床特征纳入多因素逻辑分析。结果 入组患者的平均年龄为 63.8 岁±9.7 岁。稳定斑块组、不稳定斑块组分别有 99（66.0%）、51（34.0%）例患者。单因素分析显示男性患者发生不稳定斑块的比例为 40.4%，女性患者发生不稳定斑块的比例为 23.2%，有明显的统计学差异（P＝0.023）（表 1）。吸烟患者发生不稳定斑块的比例为 57.1%，而不吸烟患者发生不稳定斑块的比例为 31.6%，P 值为 0.104。多因素逻辑分析结果显示性别是头颈部血管发生不稳定斑块的危险因素，OR 值为 2.226（95% CI 0.685-7.239），差异没有统计学意义，P 值为 0.062（表 2）。 结论 男性患者出现颈部不稳定斑块的可能性更高，多因素逻辑分析显示吸烟患者更有可能发生不稳定斑块。

PU-1965
磁共振 ASL 灌注成像在脑卒中支架植入前后的对比研究

荆国庆
陆军军医大学第一附属医院（西南医院）

【摘要】**目的** 磁共振 ASL 灌注成像在急性脑卒中支架植入前后的对比研究。
方法 收集 2018 年 3 月至 2019 年 3 月期间急性脑卒中患者所做的磁共振 ASL 灌注成像患者分为两组。A 组(15 例),为支架植入行前磁共振 ASL 灌注成像患者；B 组(15 例)，为 A 组支架植入后行磁共振 ASL 灌注成像患者。结果用 x2 检验方法比较术前术后脑灌注成像的变化，P0.05 有统计学意义。收集 2018 年 3 月至 2019 年 3 月期间进行的 15 例急诊脑卒中患者，需行急诊血管腔内治疗（支架植入）的患者，记录术前行磁共振 ASL 脑灌注成像的图像；记录行常规脑血管 DSA 造影，血管腔内治疗（支架植入）后一周行磁共振 ASL 脑灌注成像的图像。根据两组不同的图像(术前急诊和术后复查)，经相同图像后处理，由影像诊断医师和神经内科医师各两名(中级职称以上)，根据灌注成像后处理图像及临床查体作出合理判断。**结果** 影像科医师对两组(A 组、B 组)图像进行对比，B 组患者经血管腔内治疗（支架植入）后，脑部灌注得到明显改善；神经内科医师对 B 组患者行临床功能性查体，B 组患者相关性功能较血管腔内治疗（支架植入）前得到显著改善。**结论** 脑卒中患者，急行血管腔内治疗（支架植入），及时恢复脑部组织的正常灌注，对患者相关性功能恢复能得到及时改善，提高患者的生活质量。

PU-1966
头颈 CTA 中基于复合体重因子的对比剂剂量研究应用

李洋,潘初
华中科技大学同济医学院附属同济医院

目的 探讨基于复合体重因子的对比剂使用方法行头颈 CTA 的可行性。**方法** 对实验组 40 例和对照组 26 例患者分别采用基于体重和身高的复合体重因子法和单纯基于体重的对比剂用量计算方法，在 Toshiba Aquilion One 320 容积 CT 上行头颈 CTA 扫描。在 CTA 图像上分别测量主动脉弓、右颈总动脉、右颈内动脉、右椎动脉、基底动脉、大脑后动脉、大脑中动脉和大脑前动脉共 8 支头颈部血管的 CT 值，以及其中 6 支血管同层面颈内静脉的 CT 值，计算两者间的差值分别作为这 6 支血管的相对强化值，测量并计算各支动脉的信噪比和对比噪声比。采用独立样本 t 检验比较两组的对比剂用量、辐射剂量和各支血管的 CT 值和相对强化值。采用双盲法对图像质量进行主观评价，并采用 Mann-Whitney U检验比较两组的图像质量。**结果** 实验组和对照组中对比剂用量分别为（55.4±5.9）和（62.8±7.9）mL，两组间的差异有统计学意义（t=4.348，P<0.05）。实验组和对照组的剂量长度乘积（DLP）分别为（489.1±55.0）和（555.6±78.7）mGy•cm，两组间的差异

有统计学意义（t=4.045，P<0.05）。实验组中各支动脉的 CT 值和相对强化值均高于对照组，差异具有统计学意义（P<0.05）。实验组和对照组的图像信噪比和对比噪声比的差异无统计学意义（P>0.05）。实验组的图像质量主观评分好于对照组且差异有统计学意义（P<0.05）。**结论** 采用基于复合体重因子的对比剂使用方法结合低管电压技术在行头颅 CTA 时可以在保证图像质量、满足临床诊断需求的前提下降低对比剂用量和辐射剂量。

脑梗死后出血性转化的影像学研究进展

潘志立
中国科学技术大学附属第一医院/安徽省立医院

脑梗死是危害人类健康的常见病、多发病，具有高死亡率、高致残率及高复发率的特点，目前溶栓治疗是急性脑梗死最有效的治疗方法，但出血性转化(Hemorrhagic transformation, HT)发生的风险也会相应增加。在脑缺血早期准确地预测及检测 HT，对于指导临床选择合理的治疗方案及预后的判断都具有十分重要的意义。本文就预测脑梗死后出血性转化方面的影像学研究及进展作一综述。

一、HT 的定义及分型

HT 是指脑组织在缺血缺氧的基础上，缺血区血管重新恢复血流灌注，导致缺血区内继发性出血[1]，HT 既是影响溶栓疗效和安全性的严重并发症之一，也是脑缺血进行溶栓治疗的禁忌证。

二、HT 的病理及病理生理机制

HT 表现为红色软化灶，主要有两种病理分型，分别为：小动脉型出血及毛细血管型出血。小动脉型好发生于基底节，多表现为血肿，显微镜下表现为小动脉管壁破坏而出血，病变区有大量红细胞聚集。毛细血管型出血多见于皮质以及皮质下，呈点片状出血，显微镜下表现为以毛细血管为中心，其管壁水肿，周围环绕以红细胞，呈环状出血。

三、HT 发生的危险因素

脑缺血患者发生 HT 的危险因素有多种，包括血压、血糖、血脂、溶栓因素、心房颤动、脑梗死面积等[8]。

四、HT 的影像学检查

近年来，随着 CT、MRI 技术的广泛应用，尤其是 MRI 的普及、新序列的研发，许多学者致力于对脑缺血的超早期诊断，积极寻找早期预测 HT 的可靠方法，提高 HT 的预测及诊断能力，从而指导临床为脑缺血患者选择合理的治疗方案。

低剂量 CT 扫描在成人脑血管意外复查中的应用价值

张婕
绵阳市第三人民医院/四川省精神卫生中心

目的 探讨并分析针对成人脑梗死及脑血肿疾病复查过程中使用 CT 低剂量技术的实际使用价值与临床检查效果。方法 采用统计分析访方法。近三年来在本院接受治疗并进行二次复查的成人脑梗死及脑血肿 60 例作为研究对象，随机分为实验组和对照组各 30 例，分别采用低剂量扫描方法和常规剂量扫描方法，对比分析两组患者的检查图像质量、诊断准确度、辐射程度。结果，两组患者采用本应的检查技术最终检查差异相对明显，结果存在显著水平（P＜0.05）。结论，针对成人脑梗死及脑血肿患者产生的辐射，达到国际上对成人脑梗死及脑血肿患者复查基本标准。

脑梗死及脑血肿在临床上是一种对患者造成伤害较大的疾病之一，经过相应的抢救与治疗后还需要经过多次 CT 复查才能准确三分之一疾病康复的程度，临床医生可以通过复查结果失明今后的治疗方案，但是脑部疾病极易受到外部辐射的影响面加重，多次 CT 扫描会增加辐射量，甚至强化某些体质相对较弱患者病情的严重程度。因此，在现有技术条件下不断优化 CT 扫描的辐射参数量对于疾病的有效治疗极为重要，基于此，本文采用统计分析方法以近三年来在本院接受治疗并进行二次复查的成人脑梗死及脑血肿患者 60 例作为研究对象，探讨并分析针对成人脑梗死及脑血肿疾病复查过程中使用 CT 低剂量扫描技术的实际使用价值与临床检查效果。

PU-1969
探讨脑静脉系统血栓形成相关性脑出血患者的临床及影像学表现

曹江慧
湖北医药学院附属襄阳市第一人民医院

脑静脉系统血栓形成相关性脑出血临床及影像学研究

摘要：探讨脑静脉系统血栓形成相关脑出血影像学特征。**方法** 收集襄阳市第一人民医院 2008 年 1 月至 2018 年 10 月期间，静脉系统血栓形成相关性脑出血的住院患者。记录所有纳入患者的一般资料、临床表现、影像学特征等临床资料，然后进行系统性分析。**结果** 共纳入 17 例患者，男性 7 例，女性 10 例，平均年龄为 37.71±11.66 岁。脑静脉系统血栓组主要发病因素为妊娠、产褥期、口服避孕药，其中不明原因占 23.5%。头痛，为首发症状。17 例患者早期均接受头颅 CT 检查，10 例静脉窦内可见条状致密度。14 例行头颅 MRI 检查，7 例静脉窦内可见条状异常信号影。17 例静脉窦血栓合并脑实质出血患者中，9 例表现为多发出血灶，平均每个病人出血灶数量为 2.41±1.77 个。6 例患者双侧大脑半球同时受累。而所有非脑静脉系统血栓组患者均为 1 个血肿，均分布在一侧大脑半球，多为不规则形，早期出血量比较大。脑静脉性系统血栓组患者血肿平均最大长径为 22.47±14.94mm，最大血肿层面水肿最大长径在两组之间无明显统计学差异（P=0.16）。脑静脉系统血栓组两种不同体积测量方法所得平均血肿和水肿体积比与非脑静脉系统血栓组比较均存在明显统计学差异（P<0.05）。结论脑静脉系统血栓形成相关的脑出血患者临床表现、危险因素复杂多样，影像表现具有一定特征性，及时积极治疗预后较好。

Application of resting state functional magnetic resonance imaging in vascular cognitive impairment

Ran Wang,Lin Yang
Hospital of North Sichuan Medical College

Abstract: The prevalence of vascular cognitive impairment (VCI) has increased year by year and has become a major disabling factor in the middle-aged and elderly population. The pathogenesis of VCI is unclear, the diagnostic criteria are not uniform, and there are no effective treatments. Functional magnetic resonance imaging is a new type of magnetic resonance technology developed in recent years. Among them, resting-state functional magnetic resonance (rs-fMRI) can detect spontaneous brain function activity at rest, which is helpful to further explore the pathogenesis of VCI. Provide objective reference indicators for early clinical diagnosis and achieve the goal of

improving prognosis. This paper reviews the principles, main analytical methods and research progress of BOLD-fMRI in VCI.

PU-1971
MR-DSI 在评估高血压患者脑实质微结构改变中的初级应用

李波,谢生辉
内蒙古医科大学附属医院

目的 采用西门子 3.0T 磁共振扩散光谱(DSI)探讨高血压患者脑实质微结构改变中的可行性和临床价值。材料和**方法** 收集我院未服用过降压药的首诊高血压患者 22 例，并匹配年龄、性别相同的正常对照组 22 例。所有受检者行常规头颅 MRI 扫描均排除颅脑器质性病变后再行头颅 DSI 序列及高分辨 T1WI 扫描。DSI 序列参数如下：将 DSI 原始数据导入 MAP MRI（西门子科研部提供）软件中进行后处理。分别测量双侧红核、尾状核头、丘脑、内囊后肢、额叶白质及侧脑室后角区白质的 NG、PTOP 值，左右分别记录。所有测得双侧对称的研究值均左右相加后除以 2，得出左右两侧研究值的平均值。采用 SPSS 20.0 软件对所得数据进行统计学分析。**结果** （1）正常人左右两侧对称部分进行比较时，双侧尾状核头与双侧丘脑 RTOP 值（P<0.05）,差异有统计学意义；（2）高血压组左右两侧对称部位进行比较时，双侧丘脑、内囊后肢 NG 值（P<0.05）,差异有统计学意义；（3）两组比较尾状核头、丘脑、内囊后肢、额叶白质及侧脑室后角区白质 NG.RTOP 值（P<0.05）差异有统计学意义。**结论** DSI 序列经 MAP MRI 软件处理得到的定量参数可以发现正常成人双侧脑实质微结构的微小差异；DSI 技术或许可以早期检测出这些改变，从而为揭示高血压患者病因、发病机制及预后提供重要参考。NG、RTOP 值可能是检测脑白质改变的敏感指标。

PU-1972
多层螺旋 CT 脑血管成像低剂量扫描应用研究

李玲玲
北华大学附属医院

目的 利用 128 层螺旋 CT 行脑血管检查，通过调节管电压和管电流降低患者接受的辐射剂量，寻求最佳的扫描参数，分析低剂量的可能性。
材料与方法 对 100 例患有脑血管疾病行 CTA 检查的患者进行研究，按降低的不同条件分为对照组：管电压为 120KV，管电流为 170mA;研究组 1：120KV，管电流为 130mA; 研究组 2：管电压为 100KV，管电流为 170mA; 研究组 3：管电压为 100KV，管电流为 140mA;研究组 4：管电压为 80KV，管电流为 170mA; 研究组 5：管电压为 80KV，管电流为 140mA。先进行横断面的平扫和增强扫描，比较各组动脉强化 CT 值（SI）、噪声（SD）、信噪比（SNR）、对比噪声比(CNR)，对上述图像在工作站减影进行 MIP 和 VRT 三维重建，比较图像质量（优、良、差），记录其辐射剂量并进行比较。统计采用多样本的 t 检验。
结果 1、6 组图像的 CT 值、噪声、SNR、CNR 各指标差异均有统计学意义；研究组 1 同标准相比，除大脑中动脉的 CT 值外，各指标均无统计学差异；研究组 2、3、4、5 组的动脉 CT 值同对照组有差异，明显升高；研究组 4、5 组的背景噪声分别同标准组有差异，研究组 5 升高明显；研究组 2、3 组的 SNR、CNR 同标准组没有差异；而研究组 4、5 组的 SNR、CNR 同标准组有统计学差异。2、除研究组 5 的图像血管显示不清，管壁毛糙，图像质量差外其余各组图像质量均能达到诊断要求。3、研究组图像的有效剂量较对照组分别降低了 23%, 46%, 62%, 79%, 82%。

结论 128 层螺旋 CT 头部血管成像采用低管电压（１００ｋＶ）、自动管电流技术可以在不影响图像质量的前提下最大程度的降低辐射剂量，有效剂量降低了 62%。

PU-1973

3D-ASL 联合 IVIM 应用于 TIA 脑保护机制的研究

牛衡,吴江,张霞,杨朝慧,朱丽娜,郝晓勇,李璇,雷元秀
山西省心血管病医院

目的 初步探讨短暂性脑缺血发作（Transient Ischemic Attack TIA）对脑组织的保护机制。
材料与方法 收集首次责任血管为大脑中动脉的脑梗死患者 120 例，按照脑梗死前有无 TIA 发作分为 TIA 组和非 TIA 组，两组患者均行 NIHSS（美国国立卫生研究院卒中量表）评分、头颅磁共振平扫、3D-ASL（三维动脉自旋标记技术）以及 IVIM（体素内不相干运动成像）的扫描，比较两组患者脑梗死面积及 NIHSS 评分差异，并应用 3D-ASL 及 IVIM 分析二者差异；统计方法采用 SPSS 21.0 对数据进行统计分析，计量资料均用均数±标准差（±S）表示。组间比较均采用独立样本 t 检验。检验水准均为 P<0.05 有统计学意义。
结果 TIA 组患者脑梗死面积（8.32±2.78cm2）较非 TIA 组（10.35±4.32cm2）小，差异有统计学意义（p<0.05）；TIA 组患者 NIHSS 评分（9.46±4.21）较非 TIA 组（11.87±3.82）患者低，差异有统计学意义（p<0.05）；TIA 组患者脑梗死核心区域 CBF 值（17.79±8.99）较非 TIA 组（11.23±7.11）高，差异有统计学意义（p<0.05）；TIA 组患者脑梗死区域及周边侧支循环的数量（5.12±2.75）较非 TIA 组（3.23±3.01）多，差异有统计学意义（p<0.05）；TIA 组患者脑梗死核心区域 f 值（0.042±0.024）较非 TIA 组（0.028±0.013）高，差异有统计学意义（p<0.05）。
结论 TIA 可以使颅脑产生缺血性预适应，即诱导产生一系列内源性保护机制来减少缺血性脑卒中对脑组织的损害，3D-ASL 及 IVIM 对 TIA 脑保护机制的研究有一定帮助。

PU-1974

MRA、3D-ASL 联合 IVIM 技术在短暂性脑缺血发作中的应用价值

李璇,吴江,杨朝慧,牛衡,朱丽娜,郝晓勇,张霞,雷元秀,梁秀琴
山西省心血管病医院

目的 探讨磁共振血管成像（MRA）、三维动脉自旋标记技术（3D-ASL）及体素内不相干运动成像（IVIM）在短暂性脑缺血发作（TIA）中的应用价值。**材料与方法** 选取 60 例 TIA 患者，临床症状均符合 TIA 诊断标准，行常规 MRI、MRA、3D-ASL 及 IVIM 扫描，后处理得到 3D-ASL 的脑血流（CBF）伪彩图及 IVIM 参数图，评估不同方法对 TIA 患者低灌注的敏感性，对结果进行卡方检验分析。**结果** MRA 阳性者 25 例（41.7%，ASL（PLD=1.5）阳性者 33 例（55.0%），D*值阳性者 23 例（38.3%）,f 值阳性者 35 例（58.3%），三种技术之间无显著统计学差异；MRA、ASL 及 f 联合应用，敏感性明显升高。**结论** MRA、3D-ASL 及 IVIM 技术可以从不同方面对 TIA 患者进行评估，同时三者联合应用可以更加准确诊断 TIA，明确 TIA 的发病机制，为临床提供影像学依据。

PU-1975

3D ASL 联合 MRI、MRA 对后循环缺血的诊断价值

程艳华
吉林省一汽总医院

目的 探讨 3D ASL 联合 MRI、MRA 对后循环缺血的诊断价值。**方法** 经临床诊断为后循环缺血的 100 例患者均行 MRI、MRA 及 3D ASL 检查，3D ASL 序列扫描的标记延迟时间（PLD）分别为 1.5s、2.5s。基于 3D ASL 序列获得脑血流量（CBF）图，测量前循环（额、顶叶）、后循环（小脑半球、枕叶）的平均 CBF 值。**结果** 当 PLD 为 1.5s 和 2.5s 时，前循环 CBF（ml/100g•min）值均高于后循环，差异有统计学意义（*P*=0.023、*P*=0.000）。100 例患者 MRI 阳性者 54 例（54%），其中 DWI 阳性者 25 例（25%），MRA 阳性者 32 例（32%），3D ASL 阳性者 70 例（70%），均表现为后循环供血区低灌注。MRI+MRA 联合诊断后循环缺血的阳性率为 75%，MRI+MRA+3D ASL 联合诊断后循环缺血的阳性率为 89%。3 种影像学联合应用对后循环缺血的诊断率明显提高。**结论** 3D ASL 技术需要多个 PLD 时间判断 PCI 的有无，3D ASL 联合 MRI、MRA，提高后循环缺血性疾病的诊断率。

DWI 及 ADC 图在脑梗死不同期相中的诊断价

靳云凤
通化市中心医院

目的 分析 DWI 及 ADC 图在脑梗死不同期相中的诊断价值。**方法** 选取我院 2018 年 5 月-2019 年 5 月收治的 82 例脑梗死患者，应用 DWI 及 ADC 图进行分析，了解患者期相信息，另以金标准进行对比，了解期相信息的准确率。**结果** DWI 及 ADC 图诊断下，82 例脑梗死患者，急性期患者 41 例，占比 50.00%，亚急性期 20 例，占比为 24.39%，慢性期 21 例，占比 25.61%。金标准下，82 例脑梗死患者，急性期患者 41 例，占比 50.00%，亚急性期 21 例，占比为 25.61%，慢性期 20 例，占比 24.39%。DWI 及 ADC 图诊断准确率为 97.56%。与金标准差异无统计学意义（p>0.05，X^2=0.123、0.258、0.269、0.136）。**结论** DWI 及 ADC 图能够准确进行脑梗死不同期相的诊断，可作为疾病诊治的可靠技术。

256 层螺旋 CT 血管重建技术研究 Wills 环变异与交通动脉瘤的相关性

张武,程纪皓,廖静芸
佳木斯大学第一附属医院

【摘要】:目的 通过 256 层螺旋 CT 血管重建技术观察并研究 Willis 环的变异情况及动脉瘤的解剖数据之间的相关性。**方法** 采集 150 例出现自发性蛛网膜下腔出血患者的 CT 血管造影影像数据，经过 DSA 或者神经外科手术确诊为动脉瘤破裂共 150 例，利用后处理工作台三维血管重建技术观察 Willis 环变异的情况。**结果** 150 例动脉瘤患者中交通动脉瘤共 61 例，占主要发病比例，其中前交通动脉瘤 28 例，后交通动脉瘤 33 例，其中前交通动脉瘤存在与 Willis 环变异的统计学差异，（P＜0.05）；后交通动脉瘤与 Wills 环变异的统计学差异（P＞0.05）；结论 前交通动脉与 Willis 变异存在关系。后交通动脉瘤与 Willis 环变异无明确关系。

PU-1978
定量评估 CTP 预测急性脑梗死患者预后的价值

韦丹,赵静,谢炎钊,江利
中山大学附属第一医院

目的：定量评估急性脑梗死患者治疗前 CT 灌注成像（CTP）及治疗前后临床影像资料，确定与预后相关的临床或 CTP 影像特征。
材料和方法：前瞻性纳入临床资料完整并通过一周内 CT/MRI 随访证实的 39 例急性脑梗死（发病时间 24h 内）患者，所有患者均随访 90 天获取其 mRS 评分（平均：2.8 分）。对上述患者行 CTP 扫描，对平扫图像行 ASPECTS 评分，并获得 CTP 灌注参数图及比值。分析临床及 CTP 参数同治疗后 90 天 mRS 评分之间的相关性，并根据 90 天 mRS 评分是否≤2（预后良好），将患者分为两组，比较两组间临床及 CTP 灌注参数差异。**结果**：39 例患者中，20 例预后良好。分析发现，治疗前后 NIHSS 评分、梗死核心体积、缺血半暗带 MTT 及相应区域 delay-TTP 与随访 90 天 mRS 评分成明显正相关（$P\leqslant 0.04$）；而治疗后 ASPECTS 评分及核心梗死区 CBF 值与 90 天 mRS 评分成明显负相关（$P< 0.05$）。进一步分析发现，治疗前后 NIHSS、治疗后 ASPECTS、CTP 示梗死核心体积及梗死核心 CBF 值与患者预后明显相关并具有统计学差异（$P\leqslant 0.03$）。预后较好患者具有较低的治疗前后 NIHSS 及较低的核心梗死体积；然而预后较好患者的复查 ASPECTS 评分（7.9 vs. 3.9）及核心梗死区 CBF 值（17.9 vs. 14.3）明显高于预后较差组。ROC 分析显示治疗后 NIHSS 评分对于预测急性脑梗死患者预后有着最高的诊断效能（AUC：0.90），其中敏感度、特异度及拐点值分别为 79%，85%和 4.5；而核心梗死区 CBF 具有最佳的特异度（89%），治疗后 ASPECTS 评分在预测预后方面具有最高的敏感度（94%）。
结论：急性脑梗死患者核心梗死区体积、CBF、治疗前后 NIHSS 及治疗后 ASPECTS 评分与患者的预后密切相关。相比较 NIHSS 评分，核心梗死区 CBF 对于预测急性脑梗死预后有着更高的特异度。

2.北京协和医院
3.北京大学深圳医院

摘要：目的 探讨高血压性脑出血 24 h 内血肿是否扩大与不同 CT 征象之间的相关性。**方法** 回顾性分析 185 例高血压性脑出血患者的临床资料与 CT 图像，比较血肿扩大组及未扩大组 CT 参数间的差异，对两组差异有统计学意义的指标进行组间二元 Logistic 回归分析，明确 CT 指标与血肿扩大与否之间的相关性，再以混杂征、分叶征、黑洞征为检验变量评估其对脑出血早期血肿扩大的预测能力。**结果** 血肿扩大组及血肿未扩大组的 CT 定量资料：初始体积、最大径、最小径、最大 CT 值、平均 CT 值、最大径与最小径差值的差异均无统计学意义（P均＞0.05）；CT 定性资料：混杂征、分叶征及黑洞征间差异有统计学意义（P＜0.05），血肿破入脑室差异无统计学意义。通过二元 Logistic 回归分析显示患者入院时收缩压及 CT 征象中混杂征、分叶征、黑洞征为早期血肿扩大的独立危险因素。使用诊断试验四格表法计算出混杂征、黑洞征和/或分叶征联合征象与早期血肿扩大的相关性敏感度、特异度、阳性预测值和阴性预测值分别为 78.4%、59.0%、42.1%和

87.8%，约登指数为 0.374，其约登指数比混杂征、黑洞征和分叶征更接近 1。**结论** 平扫 CT 中混杂征、分叶征、黑洞征对 24 h 内高血压性脑出血血肿增大有较好的预测价值。

PU-1980
3D-ASL 技术在心源性脑卒中早期诊断中的临床应用价值

习羽
宝鸡市中心医院

目的 探讨三维动脉自旋标记技术（3D-ASL）脑灌注成像技术在心源性脑卒中早期临床诊疗中的应用价值。
方法 观察 207.8～2019.7 期间我院急诊科、神经内科收治的 30 例急性脑梗死患者，所有患者治疗前均进行 MRI 常规平扫（T1WI、T2WI、T2-FLAIR）、DWI 检查，其中 17 例患者同时进行 3D-ASL、MRA 检查，13 例患者住院治疗期间 3D-ASL、MRA 检查，分析所有患者影像图像资料。
结果 21 例 DWI 显示多发散在急性梗死灶、分水岭脑梗灶，9 例 DWI 显示大面积急性脑梗灶；14 例患者同时进行 3D-ASL 检查发现大面积灌注减低区，MRA 检查提示颈动脉颅内段、大脑中动脉不同程度闭塞，16 例 MRA 检查提示颈动脉颅内段、大脑中动脉不同程度闭塞，3D-ASL 检查无明显低灌注区；根据 DWI 检查提示梗死灶类型及 3D-ASL 检查结果，诊断心源性脑卒中 11 例。
结论 心源性脑卒中影像学具有一定特点，3D-ASL 技术配合 DWI 检查对心源性脑卒中的早期临床诊疗及预后指导具有一定的应用价值。

PU-1981
大脑中动脉粥样硬化斑块特征与梗死类型的相关性

焦晟,宋焱,黄娟,周诚,张晨,李伟
北京医院

目的 利用 3.0T 高分辨率磁共振成像(HRMRI)对大脑中动脉粥样硬化斑块的特征进行研究，探讨斑块特征与患者梗死类型的相关性。
资料与**方法** 选取 49 例行颅内动脉 HRMRI 的动脉粥样硬化患者，分析其双侧大脑中动脉的斑块形态、斑块分布及斑块强化程度。按斑块强化程度将患者分为明显强化组和非明显强化组，比较两组患者的临床资料，分析不稳定斑块的临床危险因素。根据扩散加权成像结果将大脑中动脉供血区急性梗死患者分为单穿支动脉阻塞（由于单根穿支动脉阻塞造成的梗死，DWI 图像上表现为最大径<20mm 的单发急性梗死灶）、多穿支动脉阻塞（可能由于多根穿支动脉阻塞造成的梗死，DWI 图像上表现为单发急性梗死病灶最大径≥20mm）及动脉栓塞（DWI 图像上发现 2 个或以上位于皮层或皮层下的急性梗死病灶，可能由于大脑中动脉主干管壁的不稳定斑块破裂栓子脱落所致），分析不同梗死类型的斑块特征。
结果 49 例患者共发现位于大脑中动脉粥样硬化斑块 65 处，其中 62 处(95.4%)为偏心性斑块，斑块最常见于腹侧壁(31 处，50.0%)。明显强化组中高密度脂蛋白胆固醇降低的患者比例(56.7%)明显高于非明显强化组(26.3%)，差异有统汁学意义(P<0.05)。动脉栓塞组中明显强化斑块的发生率(88.9%)明显高于非动脉栓寒组(单穿支动脉阻塞及多穿支动脉阻塞，36.4%)，差异有统计学意义(P<0.05)。
结论 大脑中动脉粥样硬化斑块的分布位置与缺血性卒中事件的发生密切相关，斑块强化程度能够反映斑块的稳定性。利用 HRMRI 能够在一定程度上预测缺血性卒中事件的发生，并推测其梗死类型。

PU-1982

容积 CT 数字减影血管造影与匹配蒙片去骨法在颅内动脉瘤头颈 CTA 减影效果的比较研究

吕发金,李王佳
重庆医科大学附属第一医院

目的 比较容积 CT 数字减影血管造影（VCTDSA）与匹配蒙片去骨法（MMBE）对于颅内动脉瘤患者头颈 CTA 减影图像质量的差异。 **方法** 回顾性分析 2017 年 3 月—2018 年 3 月于我院行头颈 CTA 检查且确诊颅内动脉瘤的 47 名患者资料。分别使用 GE AW4.6 后处理工作站 VCTDSA 减影技术与 SIEMENS Syngovia 后处理工作站 MMBE 减影技术对这 47 名患者头颈 CTA 的原始图像进行后处理，比较不同减影技术的自动减影时间、手动减影时间和总减影时间，并评价减影后的去骨情况，血管减影效果及动脉瘤显示情况。 **结果** VCTDSA 的自动减影时间、血管减影后的显示及动脉瘤显示明显优于 MMBE（P <0.01），尤其是颈内动脉虹吸部的动脉瘤；MMBE 的去骨效果、手动减影时间和总减影时间明显优于 VCTDSA（P <0.01），但 MMBE 常因过度去骨导致靠近骨质的血管及颈内动脉虹吸部的动脉瘤不完整，总体减影效果差，不利于诊断。**结论** VCTDSA 的自动去骨速度快，对头颈部血管、动脉瘤的显示优于 MMBE，尤其是对颈内动脉虹吸部的动脉瘤减影效果较好，有助于动脉瘤的观察和诊断；MMBE 的自动去骨较好，更节约手动减影时间，但易过度去骨导致血管假性狭窄及动脉瘤显示不完整，不利于颅内动脉瘤的诊断。

PU-1983

DWI 序列结合 SWI 序列在超急性期脑出血中的诊断价值

贺顺岭,王存强
新乡市第一人民医院

目的:评价磁共振弥散加权成像(DWI)及 SWI 序列对超急性期脑出血诊断的准确性.
方法:对卒中样起病,发病时间在 6h 以内,因怀疑出血性脑血管病急诊行头部 MRI 检查,按文献描述的超急性期脑出血 MRI 特征初步诊断脑出血,并随即行头部 CT 证实.10 例患者均进行 DWI、ADC 图、常规 MRI 扫描及 SWI 扫描，分析其各序列的信号改变,并与头部 CT 进行比较.
结果:10 例 MRI 初步诊断脑出血的患者均经 CT 确诊为脑出血,敏感性和特异性均为 100%,超急性期脑出血血肿 DWI 的特征性表现为高低混杂信号并病灶周缘可见伪影,SWI 序列呈局部低信号改变，T1WI 序列呈等低信号，T2WI 序列呈等高信号；磁共振 T2WI、DWI 和 ADC 图显示血肿体积均大于 CT,差异有显著性(P<0.01);而 T1WI 与 CT 的血肿体积无显著差异(P>0.05).
结论:DWI 序列结合 SWI 序列对超急性期脑出血诊断准确,有重要临床应用价值.

PU-1984

比较 CT 混杂密度征和岛征预测急性脑出血早期血肿扩大准确性的研究

梁奕[1],曾聃[2],凡娜[1],高阳[1],范文辉[1],杜柏林[1]
1.长江航运总医院
2.湖北中医药大学

目的 比较 CT 混杂密度征和岛征预测急性脑出血早期血肿扩大的准确性。**方法** 95 例发病在 6 小时内的急性脑出血患者纳入此项研究，分别计算 CT 混杂密度征和岛征预测早期血肿扩大的灵敏度、特异度、阳性预测值和阴性预测值，采用受试者工作特征曲线（ROC）比较两者的准确性。**结果** 95 例患者中发现混杂密度征 23 例（24.2%），岛征 13 例（13.7%）。有 29 例发生早期血肿扩大，其中混杂密度征 15 例（51.7%），岛征 10 例（34.5%）。混杂密度征预测血肿扩大的灵敏度、特异度、阳性预测值和阴性预测值分别为 51.7%、87.9%、65.2%、80.6%；而岛征预测血肿扩大的灵敏度、特异度、阳性预测值和阴性预测值分别为 34.5%、95.5%、76.9%、76.8%，两者 ROC 曲面下面积分别为 0.698、0.650。**结论** CT 混杂密度征和岛征均能预测急性脑出血早期血肿扩大，而混杂密度征有更好地预测准确性。

PU-1985
大脑中动脉 M1 段闭塞后动脉偏侧优势与动脉内高信号对比研究

周建国,孟云
连云港市中医院

目的 探讨大脑中动脉（MCA）M1 段闭塞后，三维时间飞跃法磁共振血管成像（3D-TOF MRA）提示同侧大脑前动脉（ACA）及大脑后动脉（PCA）偏侧优势与三维动脉自旋标记（3D-ASL）灌注成像技术提示动脉内高信号之间的相关性，并比较动脉偏侧优势与梗死面积之间的相关性。**方法** 收集 2016 年 1 月至 2019 年 3 月经 3D-TOF MRA 提示单侧 MCA M1 段闭塞患者 60 例。依据 3D-TOF MRA，将患侧 ACA、PCA 出现管腔增粗、延伸走行定义为大脑动脉偏侧优势，并观察 3D-ASL 脑血流量（CBF）伪彩图提示患侧 MCA 供血区是否出现皮层及皮层下迂曲走行的条状高灌注信号。将入组患者依据有无动脉偏侧优势分为偏侧优势组和对照组，对比两组动脉内高信号检出差异。选取急性脑梗死患者 38 例，依据弥散加权（DWI）序列，测量并比较偏侧优势组与对照组梗死核心面积差异。**结果** 60 例患者中，偏侧优势组出现动脉内高信号为 87.9%（29/33），对照组组患者出现动脉内高信号为 48.1%（13/27）。急性脑梗死患者 38 例，偏侧优势组脑梗死面积（226.38±56.51mm^2）亦明显小于对照组（827.26±124.27 mm^2），两组差异有统计学意义（P<0.05）。**结论** 大脑动脉偏侧优势及动脉内高信号均可提示单侧 MCA M1 段闭塞后软脑膜侧支循环的建立，但 3D-TOF MRA 成像技术应用更易推广，而 3D-ASL 对于侧支代偿建立状态的显示更为敏感和准确。缺血性脑血管病患者的临床预后与侧支循环的建立密切相关，对于患者治疗方案的个性化选择及临床预后均具有积极意义。

PU-1986
脑白质疏松患者微出血与认知功能障碍的相关性研究

周建国,符大勇
连云港市中医院

摘要：目的 分析不同程度脑白质疏松（LA）患者发生脑微出血（CMBs）的差异，并评估 CMBs 与认知功能障碍之间的相关性。**方法** 收集 2017 年 1 月-2019 年 1 月于脑病科、康复科收治的轻、中、重度 LA 患者各 20 例，均行磁共振常规序列及磁敏感加权成像（SWI）序列检查，依据 T2FLAIR 序列图像将双侧脑室旁白质区及半卵圆中心区白质高信号数目及形态，将散在斑点状局限性白质高信号定义为轻度 LA；将局限性分布、未融合或部分融合的斑片状白质高信号定义为中度 LA：将融合成片状的白质高信号定义为重度 LA。CMBs 判定依据 SWI 序列，将直径 2-5mm、边缘清楚的斑点状或圆形低信号判定为 CMBs 病灶，并排除小静脉及钙化。分别统计不同程度 LA 患者的 CMBs 病灶数量；同时依据是否合并 CMBs 病灶，将 LA 患者分为 CMBs 组与非 CMBs 组，采用蒙特利尔认知评定量表（MoCA）分别对患者进行认知功能评估，MoCA 测评内容包括：视空间执行力、抽象力、定向力、注意力、命名、语言、记忆力 7 个维度，共计 30 分，得分越高表示认知功能越好，当得分<26 分时可认为存在认知功能损害，分数越低，认知功能越差。分析 CMBs 病灶与认知功能障碍方面的相关性。**结果** 轻度 LA 患者共检出 CMRs 病灶 36 个，中度 LA 患者共检出 CMRs 病灶 137 个，重度 LA 患者共检出 CMRs 病灶 340 个，CMBs 病灶数目随 LA 程度加重而明显增多，同时检出部位以皮层及皮层下区、基底节区域最为多见；CMBs 组患者 MoCA 评分亦低于非 CMBs 组（P<0.05）。**结论** CMBs 病灶数目与 LA 程度呈正相关，且与患者认知功能障碍亦具有明显相关性，可作为 LA 程度、患者认知功能、临床预后及疗效的临床评价指标之一。临床工作中需加强 LA 患者 CMBs 的监测及评估，通过积极开展早期防治，减少 LA 患者认知功能障碍及痴呆的发生或改善其症状，提高患者的生活质量。

CT 联合 MRI 诊断颅骨骨膜窦（附 1 例报告并文献复习）

李继亮,李群英,朱剑
铜仁市人民医院

目的 探讨 CT 联合 MRI 诊断颅骨骨膜窦，提高对本病的认识及诊断水平。**方法** 回顾分析铜仁市人民医院收治并经病理证实颅骨骨膜窦 1 例患者的 CT、MRI 表现，结合国内外文献总结出颅骨骨膜窦的影像诊断要点。**结果** 颅骨骨膜窦分为先天性、获得性两种类型，本例患者已行 CT 平扫、MRI 平扫及增强检查，临床表现为额部可复性包块，触及质地软，无明显边界；CT 及 MRI 平扫示额骨内外均见软组织肿块，CT 骨窗示颅骨呈针孔样或筛孔样改变，边界清楚、锐利；MRI 平扫示病灶内出血信号，增强后病灶呈明显强化，颅骨内外病灶相连，相邻脑组织未见明显异常。**结论** 颅骨内外相连占位病变、颅骨呈针孔样或筛孔样骨质缺损以及病灶明显强化对颅骨骨膜窦诊断具有一定特征性。

PU-1988

颈内动脉先天缺如 1 例

周銮[1],王小宜[2]
1.湘雅常德医院
2.中南大学湘雅医院

颈内动脉（internal carotid artery，ICA）被认为是大脑最重要的供血动脉之一，也是人体最稳定的血管之一，很少发生先天变异，颈内动脉先天性缺如最早被国外学者 Tode 于 1787 年首先发现并报道，发病率不足 0.01%。笔者就日常工作中发现的 1 例颈内动脉先天性缺如报道如下。

临床资料

患者女，58 岁，反复头晕、摇晃 1 年，伴有恶心，无呕吐，无明显视物旋转。既往无高血压、糖尿病等病史。颈部 3D CE-MRA 显示左侧颈总动脉直接延续为颈外动脉，颈内动脉未见显示。头部 3D TOF MRA 示左侧颈内动脉颅内段未见显示，左侧大脑前动脉由右侧大脑前动脉通过前交通动脉供血，左侧大脑中动脉由椎动脉通过后交通动脉供血，椎、基底动脉延长、扩张。颅底 CT 薄扫：左侧颈动脉管未见。

讨论

先天性颈内动脉缺如是一种十分罕见的血管发育异常。其具体病因尚无定论，多数学者认为在胚胎发育过程中，体内相关调控机制或外界因素干扰使颈内动脉发育停止，此时侧支循环便随之出现。根据侧枝循环不同，国外学者 Lie 将颈内动脉先天缺如分为 6 型。本例患者，属于 Lie 分型中的 A 型。影像学上，先天性颈内动脉缺如与颈内动脉闭塞均表现为颈内动脉未显影，需要对此鉴别，可以通过 CT 颅底薄扫观察颈动脉管是否完整来明确诊断。本例病人 MRA 示左侧颈内动脉未见显示，随后 CT 颅底薄扫示左侧颈动脉管未见，进一步明确左侧颈内动脉先天性缺如。当颈内动脉缺如时，会引起继发性脑血流动力学改变，可合并多种血管发育异常（如：异常分支、代偿性迂曲扩张、动脉瘤、动静脉畸形等），易出现缺血或出血性卒中。

先天性颈内动脉缺如临床症状无特异性，临床易出现误诊或漏诊，影像学血管显影检查发现颈内动脉未显影，同时 CT 骨算法显示颈内动脉管缺如，应可明确诊断为此病。对于早期无症状或症状较轻患者，一旦确诊为先天性颈内动脉缺如，应定期随访，以排除因血流动力学改变引起的脑内代偿血管的异常变化。

PU-1989

磁共振三维动脉自旋标记技术应用于急性缺血性卒中诊断的价值研究

娄炎燚
锦州医科大学附属第一医院

目的 研究磁共振三维动脉自旋标记技术对于急性缺血性脑卒中的应用价值，探讨急性缺血性卒中患者脑血流量变化情况，并与磁共振弥散成像、磁共振动脉血管成像等技术进行对比，评估其诊断价值。

材料和方法 本次实验采用前瞻性的研究方法。选取 19 例无脑血管病、脑肿瘤及其他颅脑疾病或影响颅脑血流量疾病的志愿者作为对照组，其中男性 11 例，女性 8 例，平均年龄 66 岁；选取 19 例急性缺血性脑卒中患者作为实验对象，其中男性 11 例，女性 8 例，平均年龄 66 岁。

在对照组中，结合常规扫描序列，对后处理生成的脑血流量（cerebral blood flow，CBF）图像进行分析：在一侧脑干、背侧丘脑，豆状核，额、顶叶灰、白质区域划取直径约 10mm 圆形感兴趣区，并以脑中线为对称轴，在对侧生成镜像感兴趣区，获得脑内不同部位的局部脑血流量（regional cerebral blood flow，rCBF），重复测量三次，取平均值。分析脑内不同部位脑血流量分布差异，判断 3D ASL 可靠性。

结果 19 例急性脑梗死患者中，共 3 个缺血灶、31 个梗死灶；31 个梗死灶中，CBF 阳性者 16 个，阳性率为 51.6%，其中腔隙性梗死 CBF 阳性率为 25%，非腔隙性梗死 CBF 阳性率为 80%，得出 $P<0.05$，认为腔隙性脑梗死的 CBF 阳性检出率较低。3 个缺血灶在 DWI 图像中表现为阴性，CBF 图中表现为低灌注。

对 31 个梗死灶的 ADC 值及 rCBF 值进行 ROC 统计分析，ADC 的敏感度接近 100%，特异性为 97%，ROC 曲线下面积为 0.986；CBF 组的敏感度为 70.6%，特异性为 73.5%，ROC 曲线下面积为 0.734；P 值小于 0.05。

PU-1990

三代双源 CT 全脑灌注成像中不同图像采样间隔对急性脑梗塞区与半暗带体积评估影响

杨净松,吕梁,李治,王罡,宋巍
云南省第一人民医院

摘要
目的 探究不同时间间隔（1.5s，3.0s，1.5+3.0s）选择条件与不同的半暗带体积评估方法在三代双源 CT 对于急性脑梗死期患者缺血梗死与半暗带体积计算的影响，并分析各种种时间间隔选择时发生计算差异的原因。
方法 回顾性收集云南省第一人民医院 2019 年 4 月至 2019 年 7 月于三代双源 CT 进行神经灌注成像的急性脑梗死患者的临床信息与基础灌注图像，利用 4D 灌注中的时间排除方法，将原有的 1.5s 时间间隔的灌注图像采样间隔采用 3.0s，减少一半的采样点以模拟 3.0s 间隔扫描条件，将其定义为 2 组，同理将扫描间隔更改为 0~12s 与 27~40s 为 3.0s 间隔，第 12s~27s 为 1.5s 间隔，将此组定义为 3 组，采用三种不同的图像采样间隔分别计算梗死核心体积、缺血半暗带体积与梗死/半暗带体积比等数据并进行统计学分析，以观察相同病人上述三组数据是否存在差异。
结果 纳入本次实验研究患者 40 例，经筛选后余 23 例急性大脑中动脉供血区脑缺血患者，通过统计学分析发现 1.5s 时间间隔组的梗死体积小于 3.0s 扫描时间间隔组，经过 t 检验及秩和检验发现 1.5s 间隔组与 1.5+3.0s 混合组在梗死体积与半暗带评估上没有明显统计学差异，各组间半暗带体积没有明显差异，3.0 间隔组相对于 1.5s 间隔组，梗死体积增加，梗死/半暗带比值增加。
结论 与 1.5s 时间间隔相比，采用 3.0s 的时间间隔可能增加梗死脑组织体积的评估，对缺血半暗带体积评估没有明显影响，造成梗死/半暗带比值的增加，在临床工作中如果采用 3.0s 的时间间隔进行扫描，可能造成梗死/半暗带比值的错误估计，引起治疗与干预措施差异，甚至影响病人预后；在保证扫描峰值范围内的扫描间隔 1.5s 不变，增加峰值前后时间间隔，并不影响脑缺血梗死体积评估与半暗带体积及其相关关系的评估，在之后的低剂量扫描条件探索中有一定的指导意义。

PU-1991
静音磁共振血管成像在颅内动脉瘤诊断中的可行性研究

尚松安,叶靖,罗先富,吴晶涛
江苏省苏北人民医院

目的 对比性评估静音 MRA 技术的图像质量以及诊断效价，旨在探讨静音 MRA 在颅内动脉瘤病变诊断中的可行性。
方法 收集疑似脑血管病变病例。所有病例于 CTA 检查前同日行 3.0 T MRI 扫描。两位神经放射专家采用双盲法分别对两种 MRA 图像质量（信号均匀度、病灶显著性、静脉信号或干扰以及诊断可信度等四个方面）进行评估。定量测量脑动脉瘤瘤体径值并分组（依据动脉瘤长径，分为微小动脉瘤组≤3mm，较大动脉瘤组>3mm）。图像质量评分差异比较分别采用 Wilcoxon 秩和检验。动脉瘤测量数值与 CTA 测量数值的相关性分别采用 Pearson 相关系数评价。采用 ICC 检验分别评估两种 MRA 与 CTA 间测量结果的一致性。
结果 共发现颅内动脉瘤病灶 32 例。静音 MRA 图像的信号均匀度（3.38 ± 0.49 vs. 3.00 ± 0.62，P = 0.02）以及静脉信号/干扰（3.77 ± 0.42 vs. 2.65 ± 0.48，P = 0.01）均高于 TOF MRA 图像。两种 MRA 图像的病灶显著性（3.19 ± 0.56 vs. 3.15 ± 0.46，P = 0.85）以及诊断可信度（3.27 ± 0.44 vs. 3.12 ± 0.51，P = 0.37）无统计学差异。微小动脉瘤组内，静音 MRA 以及 TOF MRA 与 CTA 结果的相关系数分别为 0.95、0.82，静音 MRA 测量结果与 CTA 结果之间呈极高度一致（0.94），TOF MRA 测量结果与 CTA 结果之间呈高度一致（0.72）；较大动脉瘤组

内，静音 MRA 以及 TOF MRA 与 CTA 结果的相关系数分别为 0.98 和 0.95，静音 MRA、TOF MRA 测量结果与 CTA 结果之间均呈极高度一致（静音 MRA，0.98；TOF MRA，0.95）。
结论 相较 TOF MRA，静音 MRA 可以提供更高的图像质量、准确率，且与 CTA 具有更高的一致性，有望进一步常规应用于颅内动脉瘤患者的临床筛查及随访复查。

PU-1992

To explore clinical Value of High-resolution magnetic resonance vessel wall imaging in the Diagnosis of carotid web

Hanpei Zheng,Xu Haibo,Li Huan,Li Sirui
Zhongnan Hospital of Wuhan University, Wuhan University

Objective To explore the MR signal characteristics with High-resolution magnetic resonance vessel wall imaging (HR-VWI). **Methods** 16 patients with carotid web diagnosed by Computed tomography angiography (CTA), Digital Substraction Angiography (DSA) or Ultrasound (US) was collected. All of them have done cervical arteries HR-VWI near the same time with CTA or DSA, within one month. This study is aim at analyzing the carotid web's morphological structure revealed in HR-MRI and to summary its feature in MRI and to discover clinical value of High-resolution magnetic resonance vessel wall imaging in the diagnosis of carotid web. **Results** The MR morphological characteristics of carotid web: 1. Carotid web, which is an intraluminal shelf-like projection within the lumen of the carotid bifurcation, shows isointense or hyperintense in T2WI Black Blood sequence, and has obvious enhancement in T1WI contrast enhancement Black Blood sequence. 2. Carotid web sometimes looks like a venous valve in axial or coronal plane. 3.Compared to CTA, HR-VWI can demonstrate more morphological details of the web. **Conclusion** HR-VWI has advantages in showing exquisite lumen structures and it provides a more comprehensive view of the carotid web than CTA.

PU-1993

高分辨力磁共振血管壁成像在颈动脉蹼诊断应用中的价值

郑晗沛,徐海波,李欢,李思睿
武汉大学中南医院

目的 探索颈动脉蹼（Carotid web）的高分辨力磁共振血管壁成像（High-resolution magnetic resonance vessel wall imaging, HR-VWI）的信号特点。**方法** 选取 CTA、DSA、US 诊断明确的颈动脉蹼病例，共 16 例，分析患侧颈部血管的高分辨力磁共振血管壁成像的信号特点及探讨其应用价值。**结果** 颈动脉蹼磁共振信号特点具有以下特征：（1）颈动脉蹼在 T2WI 黑血序列矢状位上显示为颈动脉窦部后壁向管腔突起的条带状高信号，在 T1WI 增强序列上蹼呈明显强化；（2）水平位或冠状位颈动脉蹼形态可类似静脉瓣形态；（3）高分辨力磁共振血管壁成像相比 CTA 能显示动脉蹼的更多结构细节信息。**结论** 高分辨力磁共振血管壁成像能多参数、多维度的展现颈动脉蹼的结构信息，相较 CTA 具有优势。

PU-1994

小动脉瘤的血管内治疗

陈蓦
上海交通大学附属第六人民医院

目的 颅内小动脉瘤（最大直径≤3 mm）仍是神经放射介入学家们面临的一个巨大的挑战，它的长期稳定性是未知的。本研究报告了我们的长期随访结果，以评估破裂的小动脉瘤的血管内治疗的有效性。

方法 73 位患者的 73 个经血管内治疗的破裂的小动脉瘤在过去的 6 年中经过回顾性评估。这些患者接受了长达 1-78 个月的多血管造影和临床随访。

结果 所有的已破裂小动脉瘤经血管内治疗均治疗成功。27 个（37.0%）小动脉瘤达到最初的完全闭塞，39 个（53.4%）残存动脉瘤颈，7 个（9.6%）残存动脉瘤。4 个（5.5%）小动脉瘤发生过程中破裂，2 个小动脉瘤发生血栓事件。59 个（80.8%）已破裂小动脉瘤在最初的血管内治疗后经过至少 12 个月的血管造影随访。有 10 个（16.9%）小动脉瘤经过再治疗，其中包括 9 个（15.3%）再通的小动脉瘤。最后完全闭塞的小动脉瘤有 43 个（72.9%），残存瘤颈的有 15 个（25.4%），残留动脉瘤的有 1 个（1.7%），渐进性闭塞的有 12 个（20.3%）。没有与手术相关的死亡率或远期再出血。

结论 长期随访血管造影结果表明血管内治疗对已破裂小动脉瘤有效，且相关的手术过程中破裂和再通发生率低，渐进性闭塞率高，尤其是支架辅助弹簧圈技术。

3.0T 磁共振常规 flair 序列与 SWI 序列对脑微出血的诊断价值

马清
苏州大学附属第二医院

目的 分析并对比 3.0T 磁共振常规 flair 序列与 SWI 对脑内微出血病灶诊断中的应用价值，提高患者微量出血病灶的检出率从而提高对患者脑微出血风险评估的准确性.方法 选择本院 2017 年 1 月至 2017 年 10 月收治的 80 例脑微出血患者,对患者进行 flair 序列及 SWI 序列分组扫描,对比 flair 序列组及 SWI 序列组扫描结果.结果 80 例脑微出血患者中,FLAIR 序列提示有 45 例脑微出血，共检出 265 个病灶，SWI 提示 80 例全为脑微出血，共检出 413 个病灶. Flair 序列的脑微出血检出率为 (45/80)56.25%,低于 SWI 的(80/80)100.00%,表明 SWI 对于脑微出血的检出率显著高于 Flair 序列,差异具有统计学意义(P＜0.05).结论 磁共振中 SWI 序列比常规 flair 序列更能客观的显示脑微出血的病灶数目、 部位,病灶大小,利于脑微出血的诊断,可利于进一步临床治疗的开展,减少脑微出血的相关并发症,进而提高患者的生活质量,如有条件可作为磁共振的常规检查序列.

外流角：一种诊断顶端有血管分支的脑血管突起的简便方法

陈蓦
上海交通大学附属第六人民医院

目的 通过 5 个临床案例介绍一种名为外流角的新的方法。这种方法可以提高利用 MRA 图像诊断顶端有血管分支的脑血管突起的准确率。

方法 我们选取了 5 个患者（2 男 3 女）。首先，这 5 个患者的 7 个脑血管突起分别成像在 MRA 和 DSA 图像上。然后我们通过外流角和金标准 DSA 两种方法诊断这些突起。最后我们比较通过外流角和 DSA 两种方法得到的结果以检验外流角方法的可行性。

结果 通过 DSA 诊断结果表明，这 7 个突起中有 4 个是颅内动脉瘤，3 个是圆锥。这四个颅内动脉瘤的外流角均≥90°，平均为 119.75°，3 个圆锥的外流角均<90°，平均为 58.20°。外流角的诊断结果与 DSA 的诊断结果完全吻合。

结论 外流角为诊断顶端带血管分支的突起提供了一个简便的方法，它尤其适用于缺乏临床经验的年轻医生。它可作为鉴别顶端带有血管分支的颅内动脉瘤和圆锥的判别式。

磁共振弥散加权成像联合血管成像对急性脑卒中血管病变的评估价值

向波,杨全
重庆医科大学附属永川医院

[摘要]目的 探讨磁共振弥散加权成像（DWI）联合血管成像（MRA）对急性脑卒中血管病变的评估价值。方法 选择 2018 年 1 月至 2018 年 9 月在经我院临床确诊的急性缺血性患者作为研究对象，所有患者均行 DWI、MRA 和 CTPI 检查，观察 DWI 联合 MRA 的检出率。结果 DWI 检出缺血性脑卒中患者 84 例，检出率 89.36%。DWI 检测显示缺血病灶平均 ADC 值、CBF、CBF 均低于健侧，TTP 高于健侧，均有统计学意义（P＜0.05）。88 例 MRA 图像存在明显的异常血管，阳性率 93.62%。DWI 联合 MRA 检出率显著高于单纯 DWI、MRA 和 CTPI 检查，差异均有统计学意义（P＜0.05）。CTPI 检查显示有 85 例患者灌注异常区，主要表现为 CBF、CBF、MTT 降低和 TTP 延长（P＜0.05）。结论 DWI 联合 MRA 对超急性期缺血性脑卒中患者进行检查，可从多角度进行综合评价分析，具有理想的早期诊断效果，有利于早期为临床医师提供明确诊断。

自发性脑出血血肿扩大的 CT 征象分析研究

董飞,李倩,蒋飚,张敏鸣
浙江大学医学院附属第二医院

目的 自发性脑出血（intracerebral hemorrhage，ICH）是一种严重的神经系统疾病，血肿扩大约占 ICH 患者的三分之一，是病情恶化、预后不良的一项独立影响因素。预测 ICH 血肿扩大，有利早期进行手术等治疗干预，有助于改善患者预后。本研究主要总结 ICH 血肿扩大的 CT 征象及预测效能，分析这些征象对 ICH 血肿扩大预测的优势及局限性。**方法** 对目前国内外公开发表的关于 ICH 血肿扩大通过 CT 成像预测的文献进行综述。对斑点征、渗漏征、混合征、黑洞征和岛征等征象进行认识和评估。**结果** 这些征象简单、方便，易于评估，为部分 ICH 患者血肿扩大提供了科学的依据；但在多数医疗中心对于怀疑脑卒中（包括脑出血）的患者，CT 平扫常为首选检查，大部分患者“点征”及“渗漏征”等无法评估；上述征象出现的阳性率较低；预测性能不理想、尤其是敏感性较低，血肿扩大漏诊率高；这些征象均通过人肉眼评估，或结合简单的 CT 值测量完成，与观测者的经验密切相关，并且存在一定的主观性；这些征象没有考虑患者的凝血状态、血压等个体因素。**结论** CT 常规征象对 ICH 患者血肿扩大具有一定的价值，但通过这些征象对 ICH 血肿扩大进行预测存在较多的局限性，有待于进一步深入研究。

弥散加权成像评估无运动障碍脑卒中患者短期预后的应用研究

周佳
上海交通大学附属第六人民医院

目的 本研究旨在探讨 DWI 阳性与阴性在预测无运动障碍脑卒患者预后的意义。**方法** 从 2103 年至 2017 年，根据纳入排除标准 264 例缺血性脑卒中患者纳入到本研究中。收集患者的临床资料和 MRI 图像信息，并对所有患者进行为期 1 年的随访，并收集随访期间患者卒中复发情况、认知功能损伤情况及 mRS 评分进行相关评估。**结果** 从发病至进行 MRI 检查的平均间期为 4 天，其中接近约 1/3（76/264，29%）的无运动障碍脑卒中患者表现为 DWI 阴性，DWI 阴性率与 DWI 阳性率之间无明显差别。而在 1 年的随访过程中，76 例 DWI 阴性患者中有 11 例（14%）出现复发脑卒中或者短暂性脑缺血发作，33%患者出现认知功能障碍，40%患者 mRS 评分大于 1 分。与 DWI 阴性患者比较，DWI 阳性的患者更倾向于出现新发病灶（14% VS 2%，p=0.02）。

结论 约 1/3 无运动障碍脑卒中患者表现为 DWI 阴性。DWI 阳性患者与 DWI 阴性患者间的预后无明显差异。

PU-2000
高 b 值弥散加权成像在短暂性脑缺血发作中的应用研究

周佳
上海交通大学附属第六人民医院

目的 探讨与常规 b 值（b=1000s/mm2）弥散加权成像（diffusion weighted imaging, DWI）相比，高 b 值（b=2000 s/mm2 或 b=3000 s/mm2）DWI 是否对短暂性脑缺血发作（transient ischemic attack, TIA）的检测更敏感。**方法** 收集 2012 年 9 月至 2015 年 8 月在我院急诊神经内科就诊并住院治疗的 TIA 患者 60 例，TIA 的诊断依据第四届全国脑血管病会议制定的标准。所有患者于发病后 24h 内接受常规磁共振检查和不同 b 值的 DWI 扫描（b=1000 s/mm2、b=2000 s/mm2、b=3000 s/mm2）。比较不同 b 值检测的 TIA 责任病灶的数量、体积、信号强度和病灶差异。**结果** 当 b=1000 s/mm2 时，38 例 TIA 患者检测到与 TIA 症状相关的急性缺血性病灶。提高 b 值后，DWI 对急性缺血性病灶的敏感性并没有提高。随着 b 值的提高，检测到的缺血性病灶平均体积增加，b=1000 s/mm2 时，病灶体积为 0.17cm3（IQR：0.15cm3）；b=2000 s/mm2 时，病灶体积为 0.21cm3（IQR：0.18cm3）；b=3000 s/mm2 时，病灶体积为 0.29cm3（IQR：0.23cm3）。此外，我们发现随着 b 值的提高，正常的白质信号强度也随之增加，可能会造成急性缺血性病灶的假阳性率增加。**结论** 高 b 值 DWI 有助于显示 TIA 责任病灶的体积，但对 TIA 后检测急性缺血病灶的敏感性并没有提高。

PU-2001
颈动脉闭塞患者 Willis 环的完整性与 FLAIR 血管高信号征的相关性研究

张晓星
上海交通大学附属第六人民医院

目的 探讨颈动脉闭塞患者 Willis 动脉环的完整性与磁共振 FLAIR 血管高信号征是否存在相关性。方法颈动脉闭塞患者 50 例，入院 1 h 内完成测量 NIHSS 评分，24 h 内完成头颅磁共振 T1、T2、DWI、FLAIR 序列及头颅＋颈部的磁共振血管成像检查。采用 Stephane Olindo 法对入组患者磁共振 FVH 进行评分，分为低 FV H 评分组（FVH＜4，包括 FVH＝0）和高 FVH 评分(FVH≥4)。Willis 环形态分为四型，Ⅰ型：Willis 环完整；Ⅱ型：Willis 环前循环完整后循环不完整；Ⅲ型：Willis 环前循环不完整后循环完整；Ⅳ型：Willis 环前、后循环均不完整。结果 50 例患者中低 FV H 评分组 23 例，高 FV H 评分组 27 例。两组间 Willis 环的总体形态分布比例存在差异；两组梗死体积分别为 52. 7 和 11，NIHSS 评分则分别为 9 分和 3 分，差异均有统计学意义（P＜0.05）。一般危险因素差异无统计学意义（P＞0.05）。结论颈动脉闭塞患者 Willis 环交通支的开放与 FVH 存在显著相关性，Willis 环侧支循环开放可能是 FVH 产生的重要机制。

PU-2002
CT 评价急性大脑中动脉闭塞患者侧枝循环的方法

尚凯
上海交通大学附属第六人民医院

多项大型多中心研究证明因部分急性脑血管闭塞导致的急性缺血性脑卒中患者进行血管内治疗（机械取栓），取得血管再通后可获得良好的临床预后，这和其侧支循环情况密切相关。且侧支循环好，符合入组条件的患者可延长取栓时间窗，最长可延长至发病后 24 小时，使更多的患者获益。故对该类患者侧支循环做出正确评估至关重要，可帮助评估患者病情及临床决策。CT 成像速度快、相对无创，后处理简单，在急诊应用广泛，常用的有单相脑血管成像（CTA）、多相 CTA 及头颅灌注成像（CTP）等，评估方法也多种多样，如 Tan 评分，ASPECTS 侧枝循环评分，OIS 评分及软脑侧侧枝评分系统等。

PU-2003
毛细血管指数评估急性缺血性脑卒中患者侧枝循环

尚凯
上海交通大学附属第六人民医院

【目的】评价毛细血管指数（capillary index score，CIS）用于 CTA 评估急性大脑中动脉闭塞患者侧枝循环与 DSA 的一致性。【材料与方法】回顾性分析我院 2016-2017 年发病十二小时以内急性缺血性脑卒中患者 33 例，同时完成头颅平扫、头颅 CTA 及 DSA 检查，根据 CIS 评分标准对患者的头颅 CTA 及 DSA 进行侧枝循环评分，CIS≥2 分定义为侧枝循环良好（gCIS），CIS<2 定义为侧枝循环不良（pCIS）。以 DSA 为金标准，检验 CTA 及 DSA 用 CIS 评分评价侧枝循环的一致性。【结果】CTA 和 DSA 评分一致的患者有 22 例，分级一致的有 29 例。CTA-CIS 分级与 DSA-CIS 分级具有较高的一致性（Kappa=0.71）。【结论】CIS 评分用于 CTA 可评估急性大脑中动脉闭塞导致的缺血性脑卒中患者的侧枝循环情况，并与 DSA 一致性较高。

PU-2004
高级血管分析软件与容积 CT 数字减影血管造影提高 CTA 去骨效果的可靠性研究

龙邦媛[1],吕发金[2],李康[1],姜雪[2],兰慧[1]
1.中国科学院大学重庆医院（重庆市人民医院）
2.重庆医科大学附属第一医院

目的 评价高级血管分析软件（AVA）与容积 CT 数字减影血管造影（VCTDSA）技术在正常头颈 CTA 中去骨效果的可靠性。**方法** 分析重庆医科大学附属第一医院 30 名正常头颈 CTA 受检者的影像资料。同一操作者使用 AVA 软件和 VCTDSA 对原始图像去骨，记录自动去骨、手动去骨及总去骨时间，从血管完整性、图像质量、假性血管狭窄三方面评价 VR 和 MIP 图像。去骨时间比较用非参数 Mann-Whitney U 检验；血管完整性用配对卡方检验；图像质量和假性血管狭窄评价用相关样本的秩和检验。**结果** VCTDSA 自动去骨、手动去骨及去骨总时间分别为 14.5（13，20.25）s、399（353.75，501.75）s 及 415.5（371.5，516）s，AVA 自动去骨、手动去骨及去骨总时间分别为 116.5（109，123.25）s、11.5（0，71.25）s 及 140（115.5，188）s，AVA 手动去骨和去骨总时间短于 VCTDSA，（P<0.01）； M4～M5、大脑桥静脉、上矢状窦、横窦、乙状窦 AVA 显示率为 0，VCTDSA 显示率达 93.33%（140/150），（P<0.01）；图像质量，ICA2 及 ICA6，VCTDSAⅠ级图像分别为 86.21%（25/29）及 96.55%（28/29），AVA Ⅰ级图像为 44.83（13/29）及 58.62%（17/29），VCTDSA 优于 AVA，（P<0.01）；假性血管狭窄发生率，VCTDSA1.41%（10/711），AVA1.13%（8/711），差异无统计学意义（P>0.01）。**结论** 与 AVA 比较，VCTDSA 技术可真实可靠去除头颈 CTA 三维图像的骨质，应作为 CTA 优选去骨方法。

PU-2005
颅脑可逆性后部脑白质病 MRI 诊断分析

亓俊霞
天津市第三中心医院

目的 探讨可逆性后部脑白质病综合征（PRES）的 MRI 及临床特点。
方法 回顾性分析 15 例 PRES 患者的 MRI 表现及临床资料，所有患者均接受 MRI 平扫检查，包括常规 T2 WI 、T1 WI 、FLAIR 序列扫描、DWI ，5 例行 MRV 检查，15 例经治疗后复查 MRI 。

结果 15 例患者均有突发性血压升高病史，其中 6 例为先兆子痫或子痫，高血压病 3 例，肾功能不全 1 例。病变主要累及顶枕叶白质区，其次为额叶、基底节区，MRI 呈对称性长 T1 长 T2 信号，FLAIR 为高信号，DWI 为等信号，ADC 图呈高信号 13 例，2 例为等信号。15 例复查 MRI 脑白质病灶完全恢复。

结论 MRI 对 PRES 可作出明确诊断，其典型征象为双侧顶枕叶白质区多发对称性血管源性水肿，FLAIR 、T2WI 序列显示病灶最佳，DWI 、MRV 在鉴别诊断中具有重要意义。

不同位置近期皮层下小梗死演变结局存在差异

洪慧,张敏鸣,张睿婷,余鑫峰,耶尔凡.加尔肯,王淑玥
浙江大学医学院附属第二医院

研究背景：

近期皮层下小梗死（RSSIs）与腔隙性梗死是两个不同的概念，腔隙性梗死特指会演变为腔隙灶的 RSSIs，而 RSSIs 除了演变为腔隙灶外，还可能转变为白质高信号，甚至消失。有研究指出演变为腔隙灶的 RSSIs 意味着更为严重的脑组织损伤，然而到目前为止，与 RSSIs 转归相关的因素尚不明确。这可能是由于先前研究没有把 RSSIs 的发生位置考虑进来。RSSIs 主要累及三个部位，包括脑桥区、皮层下白质区域和基底节区域，这三个区域的血流灌注水平和白质结构病变累及程度均存在差异，因此我们推测不同区域 RSSIs 的演变模式可能存在差异，且调控其演变的因素也可能不同。

方法学：

共纳入 140 个存在随访 MRI 且随访时间大于 3 个月的 RSSIs，根据基线 DWI 将 RSSIs 划分为三个区域即脑桥区，基底节区和皮层下白质区。根据随访 T2FLAIR 和 T1 将皮层下小梗死的转归结局划分为形成腔隙灶和未形成腔隙灶两种，分别记录病灶基线临床特征和影像学特征。

结果

皮层下小梗死在各个区域的发生率分别为：比较基线状态发生于不同位置的 RSSIs 的危险因素和病灶特征，我们发现脑干区域 RSSIs 的病人相比于另外两个区域糖尿病发生率更高（P=0.020）而发生皮层下白质区域 RSSIs 的病人全脑白质高信号相对于相比于另外两个区域更严重（ P=0.006）。结合随访影像学的 T2FLAIR 和 T1，我们发现基底节区 RSSIs 相比于脑桥和皮层下白质区更容易演变为非腔隙灶（P=0.015）。在多因素回归分析中，基底节区 RSSIs 转为为腔隙灶与基线病灶有关（P=0.010），而皮层下白质 RSSIs 和周围白质高信号越密切则更容易转变为腔隙灶（P=0.005）。

结论

不同区域 RSSIs 形成腔隙灶比例不同且影响其演变进程的因素也存在差异，皮层下白质区域 RSSIs 形成腔隙灶主要受到周围白质高信号的影响，这意味着该区域梗死后可能需要不同的预后治疗方案。

PU-2007

Care kV 联合 Care Dose 4D 和 SAFIRE 迭代重建技术在头颈部 CTA 的应用研究

徐瑾[1],杨秀益[2],蔡武[1]
1.苏州大学附属第二医院
2.贵州省铜仁市松桃苗族自治县医院

目的 探讨 Care kV 联合 Care Dose 4D 和 SAFIRE 迭代重建技术在头颈部动脉 CT 血管成像（CTA）中的应用价值。

方法 收集临床怀疑头颈部动脉狭窄的 50 例患者。随机分为 2 组，各 25 例，分别行双源 CT 对照组（固定 120 kV+固定 120 mA+FBP）和实验组（Care kV+Care Dose 4D+SAFIRE）头颈部 CTA 检查。记录双侧颈总、颈内、大脑中动脉的的 CT 值、噪声值（SD）、CT 容积剂量指数（$CTDI_{vol}$）、剂量长度乘积（DLP），并计算出图像信噪比（SNR）、对比噪声比（CNR）、图像灵敏度（FOM）及有效剂量（ED）等值。由两名高年资放射科医师采用双盲法，用 5 分法对图像质量综合评分。选用 Mann-Whitney U 非参数秩和检验或独立 t 检验对两组病例的年龄、BMI、动脉 CT 值、SNR、CNR、SD、$CTDI_{vol}$、DLP、ED、FOM 和图像质量评分进行统计分析。采用 *Kappa* 检验分析观察者间评分的一致性。

结果 $CTDI_{vol}$、DLP、ED 在两组间均有显著差异（Z=-6.32、-5.972、-5.224，P 值均小于 0.001）；其中实验组 ED 较对照组下降约 43.5%。实验组 FOM 在右颈总、右颈内动脉层面明显高于对照组（Z=-4.07、-3.189，P 值均小于 0.05），余层面未见明确统计学差异（P>0.05）。两组间的年龄、BMI、动脉 CT 值、SNR、CNR、SD 均未见明确统计学意义差异（P 值均大于 0.05）。实验组及对照组图像质量主观评分分别为（4.37±0.47）、（4.30±0.45）分；两者间无统计学差异（t=0.182，P=0.675）。两名高年资放射科医师对图像质量评分一致性较高（*Kappa*=0.778，P<0.05）。

结论 Care kV 联合 Care Dose 4D 和 SAFIRE 迭代重建技术行头颈部动脉 CTA 检查，可保证图像质量的同时，明显减低辐射剂量。

PU-2008

脑梗塞与 Willis 环完整性的相关性研究

郑晔,王蕾
厦门市第二医院

目的 探讨脑梗塞患者 Willis 环完整性的相关性分析。材料与**方法** 回顾性分析 70 例脑梗塞患者，根据 Willis 环的形态分型，分析脑梗死患者的 Willis 环形态特点；按梗死部位将所有患者分为前循环梗死、后循环梗死及混合性梗死，分析 Willis 环完整性与梗死部位的关系。用 SPSS19.0 建立数据库统计分析数据。**结果** 1.前循环梗死：16 例，后循环梗死：14 例，混合性梗死：40 例。2.Willis 环各型的分布在不同梗死部位间有统计学差异。3.混合梗死比前循环梗死和后循环梗死的例数都多。**结论** 1.脑梗死患者的 Willis 环整环完整者较少见。2.Willis 环 IV 型在混合性梗死中最常见。

PU-2009

子痫/子痫前期合并可逆性后部脑病综合征的磁共振成像表现及临床分析

邓巍昆[1],张鑫[1,2]
1.陕西省商南县医院
2.南京大学医学院附属鼓楼医院

目的 探讨可逆性后部脑病综合症（PRES）的磁共振成像特征表现及临床特点。方法 回顾性分析鼓楼医院 2014 年 1 月-2017 年 8 月期间 22 例子痫-子痫前期合并可逆性后部脑病综合症患者的磁共振成像表现及临床资料。结果 MRI 检查显示病灶分布在小脑 3 例，脑干 2 例，枕叶 18 例，顶叶 15

例，岛叶 4 例，颞叶 7 例，额叶 11 例，基底节区 11 例，大部分为双侧累及。其中,累及至皮层 15 例,DWI 高信号 8 例。临床表现高血压 22 例,视物模糊 4 例,下肢浮肿 4 例,头痛 7 例,抽搐 3 例。所有患者经治疗后,症状均有明显好转或消失。结论 可逆性后部脑病综合症的影像学和临床表现具有一定的特征与联系，能够助于早期准确的鉴别、诊断。

PU-2010
烟雾病原发性脑室出血空间分布的磁共振成像研究

张鑫[1,2],邓巍昆[2],李雪平[1],张冰[1]
1.南京大学医学院附属鼓楼医院
2.陕西省商南县医院

目的 探讨烟雾病原发脑室出血点的位置及空间分布特点。
材料与**方法** 有原发性脑室内出血的烟雾病患者为入组的条件。纳入标准如下：1）在进行磁共振扫描时，无近期出血性发作至少 2 个月，并且能够独立完成日常活动（改良 Rankin 量表评分 0-2）;2）年龄<65 岁。 通过数字减影血管造影（DSA）和计算机断层扫描（CT）分别确定烟雾病和原发性脑室出血的诊断。
结果 在用初始通过 CT 扫描的 30 例患者中，通过 MRI 成像的评估了 37 个原发性脑室出血的出血位置。 仅通过 CT 的评估，评估者对于出血侧及出血位置的准确诊断的百分比分别是 33/37（89.2%）和 25/37（67.6%）。 当同时用 CT 和 3D TOF MRA-SWI 成像评估出血侧及出血位置时，评估者诊断准确的百分比分别是 37/37（100.0%）和 35/37（94.6%），评估者提供了相对准确的诊断。 两种评估方法，出血侧及出血位置的差异有统计学意义（p = 0.044，p = 0.001）。在 30 例患者的 37 处出血位置中，第四脑室及侧脑室的枕角均未发现出血，第三脑室外侧壁的室管膜下区域有 1 例（2.7%），侧脑室颞角的内侧壁 2 例（5.4%），侧脑室前角外侧壁 4 例 （10.8%），侧脑室三角部的前外侧壁 8 例（21.6%），侧脑室体部 22 例（59.5%），包括内侧壁 5 例（13.5%），外侧壁 17 例（45.9%）。 值得注意的是，与一次出血位置相比，再出血部位的患者在侧脑室后外侧壁的室管膜下区域（33.3%vs.12.0%，p = 0.183）和侧脑室三角部的前外侧壁（33.3% vs. 0.0%，p = 0.007）具有潜在的高发率。
结论 高分辨 SWI 序列可以确定出血点分析出血位置的空间分布的特点。

PU-2011
多模态磁共振成像在急性缺血性脑卒中溶栓治疗的研究

吴英,邓德峰,郭瑞,李金芳,宋法亮,马静
新疆生产建设兵团总医院

【摘要】目的:探讨多模态磁共振扫描模式对急性缺血性脑卒中患者溶栓治疗前后的临床应用价值，早期遏制病变发展、逆转损害的神经功能。**方法** 选取 56 例急性缺血性脑卒中患者，且在溶栓前、后分别进行多模态磁共振成像扫描，包括：T1WI、T2WI、液体衰减反转恢复序列（fluid attenuated inversion recovery imaging，FLAIR）、扩散加权成像（diffusion weighted imaging，DWI）、3D 动脉质子自旋标记灌注成像（3D-Arterial Spin-Labeling magnetic resonance perfusion weighted imaging，3D-ASL）及脑血管成像（magnetic resonance angiography，MRA）检查，应用自动后处理软件对 DWI、3D-ASL 图的患侧及健侧作感兴趣区（ROI）并进行统计学分析。**结果** 3D-ASL 在急性缺血性脑梗死溶栓前、后具有显著差异性（=-6.354，=0.00，<0.05）；DWI 在急性缺血性脑梗死溶栓前、后无明显差异（=-0.232，=0.824，

>0.05）；DWI 和 FLAIR 之间不匹配可评估梗死大致发病的时间窗；MRA 可以较好的评价溶栓治疗前后脑内大血管管腔狭窄、信号缺失等影像表现或闭塞血管周围侧支循环的形成情况。**结论** 对急性缺血性脑卒中者采用多模态磁共振扫描方案，预测梗塞发病时间，评估梗塞后早期侧支循环建立及缺血半暗带的形成，为临床尽早溶栓介入治疗，提高患者生活质量具有重要意义。

PU-2012

硬脑脊膜动静脉瘘 MRI 征象分析

秦江波,王效春,谭艳,张辉
山西医科大学第一医院

目的 探讨硬脑脊膜动静脉瘘的 MRI 表现，提高对该病的诊断水平，更好地指导临床治疗。
方法 收集我院 2015 年至 2017 年经 DSA 证实的硬脑脊膜动静脉瘘 9 例，年龄 49-80 岁。全部患者接受了头颅 3.0T MR 平扫、增强及 DWI 序列检查，回顾性分析其 MRI 特点。
结果 7 例硬脑膜动静脉瘘患者脑实质病灶 T2WI 高信号，并伴肿胀；DWI 序列呈等信号，增强扫描可发现病灶周围多有异常增粗、增多小血管。4 例 MRA 及 MRV 原始图可发现病灶周围增粗小血管断面。3 例 SWI 多可发现病灶周围迂曲、增粗的小静脉，2 例硬脊膜动静脉瘘可见椎管内脊髓后方增粗迂曲血管流空信号，并可见相应节段脊髓 T2WI 高信号。
结论 高场强 MRI 对硬脑脊膜动静脉瘘的诊断具有很高的敏感性及特异性，尤其增强序列对于鉴别硬脑脊膜动静脉瘘与其它脑血管病具有独特优势；同时 MRI 可清晰显示动静脉瘘继发性脑脊髓实质病变。有助于临床医生对硬脑脊膜动静脉瘘 MRI 表现及其特点有一个直观、全面的认识，对临床治疗方案的制定提供客观依据。

PU-2013

磁敏感成像在出血性脑梗死中的临床诊断价值

梁欣
山西医科大学第一医院

目的 针对出血性脑梗死患者进行磁敏感成像序列的临床扫描分析。方法选取 2018 年 1—12 月在我院就诊的脑梗死并发出血的患者进行 CT 和 MRI 常规及磁敏感成像序列(SWI)扫描,。结果在 60 例患者中,检查出脑梗死并发出血病灶数 210 个,其中,A 型的有 112 个,B 型的有 98 个。A 型主要是位于患者的基底节区、侧脑室旁,形状以圆形、卵圆形为主,并且边界清晰。B 型主要以不规则的小条片为主,多发生在梗死的病灶内部。在检出率结果上,也以 SWI 的检出率更高,而其他检查方式中,MRI 常规扫描有 42 例,CT 则有 32 例,均低于 SWI。通过卡方检测,不同的扫描序列的检测结果差异存在统计学意义(P <0.05)。结论采用磁敏感加权成像扫描能够检查出脑梗死并发出血病灶,能对该疾病的分型进行具体情况的分析,有利于疾病的治疗和后期的改善。

PU-2014

磁共振峰度成像在缺血性脑梗死分期的临床价值研究

梁欣

山西医科大学第一医院

研究目的 通过运用磁共振弥散峰度成像技术（DKI）研究临床确诊缺血性脑梗死病例不同时期（急性期、亚急性期、慢性期）的平均峰度（MK）值和 rMK 值（梗塞病灶 MK 值/对侧正常组织 MK 值）的差异，探讨缺血性脑梗死脑组织细微结构的演变过程，评估 DKI 相关参数对缺血性脑梗死的量化分期价值。

材料与方法 采用 GE 3.0 T 磁共振仪，对选取的临床诊断为缺血性脑梗死（急性期）患者 27 例行常规 MR、DKI 扫描，并于亚急性期及慢性期对上述患者再次行磁共振扫描，分别测量比较三组内病灶区的平均峰度（MK）值和 rMK 值（梗塞病灶 MK 值/对侧正常组织 MK 值）的差异，了解其变化情况。

结果

（1）脑梗死急性期损伤区域的 MK 值较对侧正常组织增高，具有统计学差异(P>0.05)。

（2）脑梗死病灶急性、亚急性、陈旧性三者 rMK 值比较为急性＞亚急性＞陈旧性。

结论 运用 DKI 技术可以检测到缺血性脑梗死患者脑组织细微结构的受累改变，表现为 MK 值和 rMK 值随梗死时间进行性减低，其中 rMK 值较敏感，提示 DKI 相关参数值具有特征性的演变规律，有望对缺血性脑梗死进行量化分析，有助于临床评判脑缺血时间，为溶栓和神经保护治疗奠定基础。

PU-2015

磁敏感加权成像在脑内海绵状血管瘤诊断中的价值

王效春,许若梅
山西医科大学第一医院

目的 探讨磁敏感加权成像(SWI)在脑内海绵状血管瘤诊断中的价值。**方法** 对 20 例海绵状血管瘤进行常规 MRI 扫描及 SWI 扫描，将 SWI 图像与常规 MR 序列对比分析。由 2 名放射科医师对 MRI 常规序列图像及 SWI 图进行独立诊断及计数，比较不同序列计数的差异性，并分析两名医师组间的一致性。**结果** 20 例海绵状血管瘤，单发 14 例，多发 6 例，SWI 检出病灶 38 个；常规扫描序列检出病灶 25 个；SWI 检出数目多于常规序列。SWI 同时检出 3 例静脉畸形，而常规 MR 序列只发现 1 例。海绵状血管瘤在常规序列上呈圆形、类圆形或不规则形，T1WI 表现为低信号或稍高的不均匀信号，T2WI 表现为中央混杂高信号，边缘低信号，呈“爆米花样”改变。SWI 序列上大多病灶为完全低信号，部分病灶中心可见斑点状略高信号（图 1）。 Wilcoxon 秩和检验：常规 MRI 序列与 SWI 发现病灶数量的差异性有显著的统计学意义（P<0.05）。ICC 评价 2 位评估者组间的一致性：两位医师应用 SWI 检出病灶的数目在组间有较高的一致性，一致性相关系数为 0.98 (95% CI 0.96 to 0.99)。

结论 SWI 对脑内海绵状血管瘤诊断的敏感性高于常规 MRI 序列，特别是对于小病灶的显示优于常规 MRI 序列。

PU-2016

CT 后处理图像增强显示系统在靠近颅底部小动脉瘤诊断中的应用

谢德轩,肖喜刚
哈尔滨医科大学附属第一医院

目的 利用 CT 后处理图像增强显示系统对近颅底部小动脉瘤患者进行研究，来充分证明此系统对于近颅底部的小动脉瘤的诊断价值。
方法 选择 42 位经外科手术证实为近颅底部小动脉瘤的患者，回顾性分析传统 CT 工作站图像及图像增强显示后的 CTA 图像，并对图像做出诊断，同时测量、记录动脉瘤的直径、动脉瘤的位置。以 DSA 结果作为诊断的金标准，将所得结果与 DSA 结果进行对比分析。
结果 在 42 例患者中，共确诊 45 个动脉瘤。传统的 CT 工作站上共发现了 47 个动脉瘤，其中假阴性 1 例、假阳性 3 例；而 CT 图像增强立体显示系统上共发现了 46 个动脉瘤，其中假阳性 1 例。
结论 增强显示系统可以提高 CTA 对靠近颅底部小动脉瘤的诊断能力。另外，增强显示系统所呈现的立体效果，还可以清楚的显示小动脉瘤与周围骨质结构的三维解剖关系，从而提高对颅内动脉瘤的术前评价能力，以帮助神经外科医生进行手术入路的选择和手术方案的制定。

PU-2017
颅内动脉粥样硬化性狭窄患者斑块三维高分辨率磁共振成像强化特征与卒中发生时间的相关性研究

赵义,金灿,王礼同,何玲,王苇
扬州大学附属医院

目的 采用三维高分辨率(3D-HR MRI)磁共振成像技术评估颅内动脉粥样硬化性狭窄患者责任斑块的强化特征，分析斑块强化特征与卒中发生时间的相关性。方法 根据卒中发生至 HR MRI 检查的时间间隔，将 61 例脑梗死患者分为早期组(<4 周)、中期组(4～12 周)和晚期组(>12 周)，行常规头颅 MRI 检查，以及三维可变翻转角快速自旋回波 (3D-SPACE) T_1WI 及增强 3D-SPACE T_1WI 序列扫描，将斑块增强前、后信号强度进行对比，定性分析斑块的强化程度，定量计算斑块的强化率，分析斑块强化特征及其与卒中发生至 HR MRI 检查时间之间的关系。结果 3D HR MRI 上责任斑块表现为管壁心增厚，增强后呈不同程度强化或者无强化。分析 61 例斑块强化特点结果显示：早期组 26 例斑块明显强化 21 例(80.8%)，轻度强化 4 例(15.4%)，无强化 1 例（3.8%），强化率为(80.49±18.64)%；中期组 20 例斑块明显强化 2 例 (10.0%)，轻度强化 14 例 (70.0%)，无强化 4 例 (20.0%)，强化率为(52.09±18.17)%；晚期组 15 例斑块轻度强化 2 例(13.3%)，无强化 13 例(86.7%)，强化率最为(12.16±10.44)%。3 组间强化程度及强化率差异有统计学意义（均 P<0.01）。进一步分析，早期组和中期组强化程度及强化率差异有统计学意义（均 P<0.01），中期组和晚期组强化程度及强化率差异有统计学意义(P<0.05;P<0.01)，早期组和晚期组强化程度及强化率差异有统计学意义（均 P<0.01）。卒中发生至 HR MRI 检查的时间与强化率呈显著负相关（r=－0.903，P<0.01）。结论 随着发病时间间隔的延长，颅内动脉粥样硬化斑块的强化逐渐减弱，为由强化程度判断斑块的易损性提供了依据，对缺血性脑卒中的二级预防具有重要的指导意义。

PU-2018
双源 CTA 与 DSA 对颅内动脉瘤诊断的比较研究

郭元星,李向东
中国人民解放军南部战区总医院

摘要 目的 应用双能量 CT 血管造影（DSCTA）与数字减影血管造影（DSA）的比较研究，探索和评价双源 CTA 在颅内动脉瘤诊断中的临床应用价值。 **方法** 收集 2016 年 1 月-2018 年 12 月我院 92 例怀疑颅内动脉瘤患者的 DSCTA 及 DSA 资料进行回顾性分析，所有患者均在我院双源 CT（Siemens Somatom Definition）行头颈部血管双能量成像。所有病例均采用 CTA 后处理技术容积再现（VR）、最大密度投影（MIP）和多平面重建（MPR）。**结果** DSA 和手术证实 92 例共 108 个动脉瘤，其中单发 82 例，多发 10 例（8 例 2 个动脉瘤，2 例 3 个动脉瘤）；DSCTA 发现 103 个动脉瘤，漏掉 5 个动脉瘤，直径均小于 2-3mm。DSCTA 对颅内动脉瘤的敏感度为 95.4%，特异度为 90.8%；DSA 敏感度为 97.9%，特异度为 95.9%。108 个动脉瘤中，103 个（95.4%）动脉瘤在 VR 图像上能清晰显示瘤体、瘤颈与载瘤动脉的三维空间关系，DSA 为 69 个（63.9%）。**结论** 双源 DSCTA 可无创、快速地诊断和评价颅内动脉瘤，也可以旋转，从多角度、多方位、立体展示瘤体及瘤颈，能清楚地显示颅内动脉瘤的位置、形态和大小，具有创伤小、费用低、检查时间短的特点，是检查颅内动脉瘤高度敏感的影像学方法，具有与 DSA 相当的价值，值得临床推广应用。

PU-2019
血液透析患者血管周围间隙扩张与超滤量的相关性研究

王昊,王振常
首都医科大学附属北京友谊医院

目的 探讨血液透析患者血管周围间隙扩大(enlarged perivascular space,EPVS)及严重程度与超滤量的相关性.
方法 前瞻性收集 2018 年 10 月至 2019 年 2 月在首都医科大学附属北京友谊医院血液净化中心常规透析治疗的终末期肾病患者 50 例和年龄性别匹配的健康志愿者 50 例.所有患者均行头颅 MRI 检查(包括 T1BRAVO 序列、T2WI 序列、动脉自旋标记（ASL）序列等),分析两组患者 EPVS 数量和解剖学分布,应用 VBM 技术检测脑白质的体积情况，应用 ASL 技术观察白质灌注情况。
结果 与对照组比较，血液透析组血管周围间隙扩张更加严重，且随着透析时间的增加，EPVS 评分有增加的趋势；与对照组比较，血液透析组在半卵圆中心区及分水岭区脑 CBF 值增加，位置大体与 EPVS 分布位置一致。与对照组比较，血液透析组在半卵圆中心区及分水岭区 WMV 减低，位置大体与 EPVS 分布位置一致；与低分组（1 分、2 分）比较，高分组（3 分、4 分）的白质体积减小有差异（P＜0.05），有统计学意义。血管周围间隙扩张程度与超滤量呈正相关。
结论 血液透析患者与健康志愿者比较，EPVS 评分较重，并与透析时间，超滤量相关；导致 EPVS 的机制可能与分水岭区域脑白质灌注减低、相应区域的脑白质体积萎缩有关。

PU-2020
256 层螺旋 CT 在头颅灌注中的临床应用价值

麦秋仪,李向东
中国人民解放军南部战区总医院

目的 探讨 256 层螺旋 CT 头颅灌注中的临床应用价值。
方法 本研究采用飞利浦 256 层螺旋 CT，临床医生针对病人的情况开单做头颅灌注，根据机器的性质，作相应的扫描参数，对 30 例患者其中正常 1 例，头晕 22 例，术后 3 例，脑卒中 4 例进行容积扫描。扫描方案：先行头颅平扫，再行灌注，灌注后行延时期。灌注（CTA）参数：

100KV,120mAs，16cm（间隔 4.1s，15 次）。注射参数：6.0ml/s，30ml（生理盐水），5.0ml/s，50ml（碘对比剂），5.0ml/s，30ml（生理盐水），先试注射盐水，确保患者满足注射要求。对灌注图像进行后处理（Brain Functional CT）,提取灌注图像中动脉血管最佳期进行 CTA 血管重建，包括容积再现(Volume rendering ,VR),多平面重建（Multi-planar veconstruction, MPR）及曲面重建（Curved-planar reconstruction,CPR）等多种后处理技术显示颅内血管，颈动脉上段。所有检查结果均经临床手术或血管介入造影证实，评价 256 层螺旋 CT 头颅血管灌注的临床诊断价值。

结果 发现灌注正常 4 例，其中 1 例脑动脉狭窄，1 例椎动脉狭窄，2 例灌注及 CTA 未见明显异常。灌注参数异常有 26 例，其中脑梗 7 例，大脑中动脉狭窄 3 例，颈动脉、椎动脉狭窄 4 例， 出血有 6 例，大脑后动脉狭窄 2 例，脑膜瘤 1 例，外伤 2 例。

结论 256 层螺旋 CT 头颅灌注方法能在急诊急救中快速，准确诊断颅内病变。为急性脑出血，脑梗塞，脑梗塞前期提供了可靠翔实的影像学资料，具有的较高的临床应用价值。

PU-2021

Pipeline 密网支架治疗颈动脉床突段大型动脉瘤的长期疗效及安全性分析

盖延廷
上海冬雷脑科医院

目的 探讨分析应用 PIPELINE 栓塞装置（PED）治疗颈动脉床突段大型颅内动脉瘤的中长期临床疗效及安全性。

方法 回顾性分析 2014.12~2018.9 冬雷脑科医生集团采用 PIPELINE 栓塞装置（PED）治疗的 38 例颈动脉床突段大型动脉瘤资料。38 例患者，38 个动脉瘤，直径平均 15.3±5.5mm，瘤颈平均 6.5±2.5mm。其中 5 个动脉瘤采用单个 PED 治疗，32 例动脉瘤采用密网支架结合弹簧圈栓塞治疗，双密网支架治疗 1 例。其中 3 例动脉瘤为支架辅助弹簧圈栓塞后复发动脉瘤。

结果 随访 8~50 个月，DSA 随访 28 例，动脉瘤完全闭塞 26 例（93%），近全闭塞 2 例（7%）。半年随访时 PED 结合弹簧圈治疗的颅内动脉瘤已完全闭塞，治愈率高达 100%；单 PED 治疗 6 个月随访完全治愈 3 例，到最后一次 DSA 随访（40 月）治愈 4 例；双 PED1 例 8 月随访可见微小动脉瘤样显影，30 个月随访动脉瘤近全闭塞。围手术期共发生无症状性斑点状脑梗塞 10 例，脑实质出血 4 例，1 例死亡，1 例 mRS1 分，另外 2 例为无症状脑出血，动脉瘤破裂出血 1 例，予以重叠密网支架治疗，患者恢复满意，mRS0 分。1 例患者 10 个月随访 DSA 发现载瘤动脉闭塞，无任何临床症状。单因素及多因素分析提示密网支架术后出血并发症的发生与瘤内填塞弹簧圈与否无显著相关性。

结论 PIPELINE 栓塞装置治疗颈动脉床突段大型动脉瘤疗效确切，并发症少，PED 结合弹簧圈治疗动脉瘤的闭塞率高于单纯 PED 治疗，动脉瘤完全闭塞时间短。PED 术后出血并发症与瘤内填塞弹簧圈与否不相关。单纯 PED（包括单个或多个）治疗需要更长的随访时间来确定其疗效。

FLAIR 血管高信号征对大脑中动脉狭窄或闭塞致急性脑梗死的临床诊断价值

宋磊,高波,沈桂权
贵州医科大学附属医院

目的：基于 FLAIR 血管高信号征（FLAIR vascular hyperintensity，FVH），预测大脑中动脉致急性脑梗死患者的临床预后价值。
方法：收集贵州医科大学附属医院急诊科和神经内科就诊急性脑梗死患者，排除不符合标准 56 例，最终存在大脑中动脉狭窄或闭塞的患者 244 例。所有患者的扫描序列均包括：T1WI、T2WI、DWI、FLAIR、MRA，对纳入的目标患者记录年龄、性别、高血压、胆固醇、高密度脂蛋白、低密度脂蛋白、吸烟、饮酒、冠心病及既往卒中史等相关临床指标;影像学指标包括 DWI 梗塞灶大小、位置，M1 段狭窄或闭塞位置，FVH 阳性率等。患者的预后采用电话随访方式记录 3 个月改良 mRS 评分（mRS≤2 提示预后良好，mRS＞2 提示预后不良）。
结果：大脑中动脉狭窄或闭塞致急性脑梗死患者中，82 例患者的预后良好（mRS≤2），162 例患者的预后不良（mRS＞2）。预后良好组 27 例（32.9%）存在 FVH 征象为，预后不良好组 FVH 征象为 8 例（32.9%），差异具有统计学意义（X^2=34.71，P＜0.01）。年龄、性别、高血压、胆固醇、高密度脂蛋白、低密度脂蛋白、吸烟、饮酒、冠心病及既往卒中史，DWI 梗塞灶大小、位置，M1 段狭窄或闭塞位置，均无统计学差异（P＞0.05）。
结论：大脑中动脉狭窄或闭塞致急性脑梗死患者中，FLAIR 序列存在 FVH，提示急性脑梗死的预后较好。

PU-2023
基于 CT 数据的颈动脉分叉模型的流体力学分析

刘丹,杨全
重庆医科大学附属永川医院

目的 结合三维 CT 成像技术和计算流体力学技术，研究局部血流动力学对粥样硬化斑块形成、发展的作用，从而探讨不同分叉角度与斑块形成分布的关系。
方法 选取 20 例具有不同分叉角度正常的颈动脉 CT 薄层数据，并获得心率、血压及血流速度曲线。基于 CT 数据采用相关软件建立颈动脉 3D 模型及网格模型。采用流固耦合的有限元方法进行数值模拟，构建流体力学模型，获得颈动脉分叉区域流场分布、压强及壁切应力。
结果 颈动脉分叉处流场分布显示低速血流区域，随着颈动脉分叉角度增大，低速区域更明显，并有涡流现象。颈动脉分叉处壁面压强分布显示：分叉脊及外侧壁附近出现高压强，并与分叉角度呈现正相关。颈动脉分叉处壁面切应力分布显示：分叉脊及外侧壁存在较低切应力区域，随着分叉角度增加，切应力下降更加明显，壁切应力与分叉角度呈负相关。
结论 通过构建实际颈动脉模型能较准确地反映人体真实的血流情况，有助于预测颈动脉粥样硬化发生及发展的风险，为临床检测和治疗提供更好的技术和理论指导。

PU-2024
单侧大脑中动脉狭窄患者 FVH 评分与 CBF 相关性研究

常佩佩,苗延巍,蒋玉涵,车艺玮
First Affiliated Hospital of Dalian Medical

目的 探讨单侧大脑中动脉（MCA）M1 段中重度狭窄后，T2FLAIR 上 FVH 评分与 CBF 之间的相关性。
材料和方法 收集单侧大脑中动脉中重度狭窄的患者 42 例（男性 28 例，女性 14 例），依据 ASPECTS 评分分别测量在 PLD=1.5 和 PLD=2.5 时血管狭窄侧大脑半球 M1-M6 区的 CBF 值。根据 FVH-

T-ASPECT 评分法分别计数 M1-M6 区的 FVH 评分，并分析 CBF 与 FVH 评分的相关性。采用 SPSS22.0 软件进行统计学处理，相关性分析采用 spearman 相关分析法，P＜0.05 有统计学意义。
结果 1.M2（PLD=1.5，r=0.38，P＜0.05; PLD=2.5, r=0.44, P＜0.05）、M4（PLD=1.5，r=0.32，P＜0.05; PLD=2.5, r=0.49, P＜0.05）、M5（PLD=1.5，r=-0.32，P＜0.05; PLD=2.5, r=-0.31, P＜0.05）区 FVH 评分与 CBF 值呈正相关；
2.M1（PLD=1.5，r=-0.32，P＜0.05）、M3（PLD=1.5，r=0.38，P＜0.05; PLD=2.5, r=0.44, P＜0.05）、M6（PLD=1.5，r=-0.39，P＜0.05）区部分 FVH 评分与 CBF 值负相关，部分没有相关性。
结论 单侧大脑中动脉（MCA）中重度狭窄后，FVH 评分与 CBF 之间存在不同程度的相关性，M2、M4、M5 区呈正相关，提示 FVH 与良好的血流灌注有关。

PU-2025
青年症状性脑梗死患者脑小血管病变及临床影响因素分析

蒋玉涵,苗延巍,常佩佩,车艺玮
大连医科大学附属第一医院

目的 探讨青年性脑梗死患者是否存在脑小血管病变（cerebral small vessel disease, CSVD），并分析其临床影响因素。**方法** 回顾性收集临床确诊的新近发生青年性脑梗死患者 54 例（男 43 例，女 11 例；平均年龄 38.4±4.7 岁）及新近发生老年性脑梗死患者 57 例（男 37 例，女 20 例；平均年龄 68.9±10.3 岁），征募 21 名年龄-性别与青年梗死组相匹配的健康人（男 17 例，女 4 例；平均年龄 39.7±4.2 岁）作为对照组。收集青年与老年脑梗死患者入院时的临床资料，并观察脑内各种 CSVD 的 MRI 表现并进行评分，包括双侧基底节区及半卵圆中心区血管周围间隙扩大（enlarged perivacular space, EPVS）、脑室周围及深部白质高信号（white matter hyperintense, WMH）、腔隙性梗死 （lacunar infarction, LI）以及微出血（cerebral microbleeds, CMBs），计算脑小血管病总体负担评分（total burden scores of CSVD, TBS）并进行分级。比较三组间 CSVD 差异，并通过多因素 logistic 回归分析其影响因素。**结果** 与健康对照组相比，青年性脑梗死患者 CSVD 发生率明显增高，但较老年性梗死低（*P*＜0.05）。多因素 logistic 有序回归分析显示高血压与青年性脑梗死基底节和半卵圆中心 EPVS 以及 TBS 具有独立相关性；LI 与年龄密切相关；吸烟是 CMBs 的影响因素（*P*＜0.05）。 **结论** 青年症状性脑梗死患者常同时合并脑小血管疾病改变。高血压、吸烟及年龄可能是青年性梗死患者脑小血管疾病的影响因素。

Carotid Web in Intravascular Ultrasound：A case report

Hanpei Zheng,Xu Haibo,Wu Xiangbo,Li Sirui,Mei Bin
Zhongnan Hospital of Wuhan University， Wuhan University

Objective: Carotid web has a high relationship with ischemic stroke. This paper is aimed to analyze the morphological characteristic of carotid web through Intravascular ultrasound (IVUS). **Methods** : A case of a 29-year-old man who suffered an ischemic stroke caused by carotid web. IVUS and digital subtraction angiography (DSA) were given to evaluate the morphological characteristics of carotid web and the status of blood flow, and to guide the carotid angioplasty and stenting(CAS).
Results: Intravascular ultrasound demonstrated that carotid web was a strip-liked

hypoechoic signal connected to lumen, separating blood flow into two part. Blood stagnation and retention of the contrast agent were observed behind the web. Virtual Histology-IVUS (IMAP-IVUS) indicated that the web was composed of fibrous tissue mostly, with partial necrotic tissue on its back. **Conclusion** : In this paper, Intravascular ultrasound gave a new insight of the morphological characteristic of carotid web and benefited stent deployment and optimization.

PU-2027
多模态磁共振成像技术在急性缺血性脑卒中溶栓时间窗内的应用价值

黄瑞岁,丁可,林彬,慕鉴,黄兴旺,韦凤川
南宁市第二人民医院

目的 探讨多模态磁共振成像技术在急性缺血性脑卒中溶栓时间窗内的应用。
方法 对发病在 6h 之内的 58 例急性脑梗死患者先行 CT 平扫，排除有明显低密度梗死灶及出血性脑梗死后行进行多模态 MRI 扫描，成像序列包括 T1WI、T2WI、MRA、DWI 和 PWI，分析所得影像的不同序列特征，根据是否有缺血半暗带存在，分为 DWI-PWI 不匹配组与 DWI-PWI 匹配组，对所有患者行静脉溶栓治疗。溶栓后 24h 复查头颅 CT 排除有无颅内出血并随访 3 个月。
结果 所有患者行 T1WI、T2WI、MRA 及 DWI 扫描后，均能明确脑梗死病灶和责任血管。DWI-PWI 不匹配组 35 例，DWI-PWI 匹配组 23 例。两组患者 3 个月后 mRS 评分 0~1 分者分别为 24 例（68.6%）和 9 例（39.1%），差异有统计学意义（P〈0.05）。两组患者 3 个月内出现脑出血的发生率分别为 14.3%和 17.4%，死亡率分别为 5.7%和 4.3%，差异无统计学意义（P〉0.05）。
结论 基于多模态磁共振成像技术的应用不但能明确诊断急性缺血性脑卒中病灶，同时在溶栓时间窗内能指导个体化静脉溶栓治疗。

PU-2028
DTI 对缺血性脑卒中患者神经功能恢复评价的临床应用

吴晓峰,张辉,王效春,谭艳,秦江波,王乐,张磊
山西医科大学第一医院

目的 分析缺血性脑卒中患者的磁共振扩散张量成像（DTI）参数特点，探讨 DTI 对脑卒中神经功能恢复的临床应用价值。
方法 搜集 2017 年 5 月到 2019 年 5 月就诊于山西医科大学第一医院并诊断为脑梗死患者 38 例，其中男 20 例，女 18 例，年龄 52-78 岁，平均年龄 63.8 岁，病灶部位包括：桥脑 3 例、丘脑 2 例、基底节区 21 例、胼胝体 5 例，额叶 6 例，颞叶 1 例；所有患者均为初次发病，临床表现均有一侧肢体不同程度运动功能障碍，部分患者有言语不利、同侧面部中枢性偏瘫、四肢肌力减退等。采用 GE Signa HDx 3.0T 超导型磁共振扫描仪，头颈联合线圈进行扫描，扫描序列包括 T1WI、T2WI、flair、DWI 和 DTI 序列，所得 DTI 数据传输到 GE AW4.4 工作中 Functool 软件对数据进行后处理，在病灶侧及健侧划定感兴趣区，测定 FA 值，并重建 DTT，经两名高级职称医师进行图像分析与评价，对比不同发病时期、不同部位脑梗死患者 FA 值的差异，并按照纤维束的损伤程度对重建后的 DTT 图像进行分级。

结果 1、不同部位梗死侧 FA 值均较健侧明显降低（P<0.05）；2、梗死时间呈一定规律性变化：在急性期患侧 FA 值较对侧可轻度升高或轻度降低，亚急性期、慢性期明显降低、慢性期持续降低的规律；3、皮质脊髓束走行自然、形态完整的 8 例；皮质脊髓束受压、推移、稀疏的 19 例；皮质脊髓束中断的 11 例。

结论 DTI 显示的梗死灶范围较常规 MRI 成像更加准确、清晰，DTT 分级探讨皮质脊髓束损伤程度与肌力恢复的关系，评价不同时期、不同部位脑梗死患者的预后和功能康复有重要的临床应用价值。

高分辨 MR 成像测量大脑中动脉狭窄率的准确性评价

王勇胜[1],张文杰[2],田燕[3]
1.烟台毓璜顶医院
2.滨州医学院
3.滨州医学院附属医院

目的 评价 3.0T 高分辨率磁共振成像（High-Resolution Magnetic Resonance Imaging ,HR-MRI）技术测量动脉粥样硬化所致大脑中动脉狭窄程度的准确性。 **材料与方法** 对 40 例经数字减影血管造影（DSA）证实的症状性大脑中动脉 M1 段动脉粥样硬化性狭窄患者行 HR-MRI 序列（包括 T1WI、T2WI、PDWI）扫描，分别用 WASID 法、面积测算法在高分辨 MR 图像上测量 MCA 狭窄率，以 DSA 为金标准评价两种测量方法的准确性。 **结果** DSA、WASID 法、面积测算法测得的 MCA 狭窄率分别为(82±17)%、(70±12)%、(81±16)%，面积测算法测得的 MCA 狭窄率与 DSA 测得的 MCA 狭窄率差异无统计学意义（P>0.005）；面积测算法测得的 MCA 狭窄率与 DSA 测得的 MCA 狭窄率相关性较好（r=0.893）；面积测算法测得的狭窄程度符合率较高（符合率为 90%）。 **结论** 高分辨 MR 成像技术在测量 MCA 狭窄程度方面准确性高，并且能够显示管壁情况，具有较高的临床应用价值。

急性脑干缺血性脑梗死患者皮层形态学改变研究

陈慧铀,施梦烨,陈宇辰,殷信道
南京市第一医院

背景：缺血性脑梗患者的脑结构发生了变化，大多数研究都使用了基于体素的脑结构形态计量学（VBM）分析，其重点是体积/密度差异。然而，脑卒中患者不同部位的皮质厚度及皮层褶皱可能也有所改变。本研究对急性单侧脑干梗死患者的皮层厚度及皮层褶皱进行研究。

方法 共纳入 21 例右侧脑干梗死患者、27 例左侧脑干梗死患者及 30 例正常对照。使用高分辨率结构磁共振成像采集 3DT1 数据，采用 CAT12 软件，对三组两侧大脑半球的皮层厚度及皮层褶皱分别进行分析比较。

结果 左侧及右侧脑干脑梗患者在两侧大脑半球与正常对照组相比均出现广泛的额颞叶及岛叶皮层厚度减低。而在皮层褶皱方面，只有右侧脑干梗死患者的患侧大脑半球的岛叶、缘回及颞横回的皮层褶皱较正常对照组减低。

结论 急性脑干梗死患者广泛的皮层厚度减低，右侧脑干梗死患者的皮层褶皱减低，皮层形态的变化可能在梗塞前就已经发生，这为预测脑梗的发生和早期干预提供可能。

PU-2031

阿尔茨海默病脑灰质结构损害模式的 MRI 初步研究

俞翔,刘筠,许亮,刘振兴
天津市人民医院

目的 探讨阿尔茨海默病(Alzheimer’s disease, AD)脑灰质结构损害模式。材料与方法 16 例 AD 病人及 16 名健康志愿者行头部常规 MRI 和 3DT1WI 扫描，采用基于体素的形态测量学(voxel based morphometry, VBM)分析方法对原始数据进行后处理，对 AD 组和健康对照组（healthy control，HC）灰质体积（grey matter volume, GMV）进行双样本 t 检验获得差异脑区，采用 Pearson 法分析各显著差异脑区 GMV 之间及其与 MMSE 评分的相关性。结果 与 HC 组比较，AD 组皮层灰质结构 GMV 减少脑区包括双侧扣带回、额上回、额中回、颞上回、舌回及左侧中央前/后回、海马旁回、颞极、眶回和右侧顶上小叶；皮层下灰质结构 GMV 减少脑区包括双侧壳核、苍白球、尾状核、杏仁核及海马，差异脑区扣带回与壳核 GMV 呈正相关(P 值均<0.05)。结论 AD 脑灰质结构损害可以累及皮层和皮层下结构，主要分布在边缘系统和基底节，扣带回与壳核可能存在一定的结构联系，本研究为 AD 临床早期诊疗和监测提供了结构影像学参考依据。

PU-2032
IgG4 相关肥厚性硬脑膜炎影像特征分析及诊断思路

赵艺蕾,贺文广,陈峰
浙江大学医学院附属第一医院

目的 总结 IgG４相关肥厚性硬脑膜炎（IgG４-related hypertrophic pachymeningitis ，IgG４-RHP）的临床、影像学特征。
方法 收集我院收治的 IgG４-RHP 患者资料，分析其临床表现、实验室检查、治疗前后影像学及病理学特点。同时，对照我院确诊的其他导致硬脑膜增厚疾病的影像学表现，包括：Rosai-Dorfman 病，低颅压综合征，结核性脑膜脑炎，不典型脑膜瘤和中枢神经系统白血病等。
结果 4 例 IgG４-RHP 患者均为男性，首发症状为慢性头痛等。所有患者血清和脑脊液 IgG４水平均升高，头颅 MRI 增强可见硬脑膜、脊膜弥漫性或局灶性强化，其病理学结果符合 IgG４-RHP 表现。Rosai-Dorfman 病的影像学表现与 IgG４-RHP 的极为相似，确诊需依靠血清学和脑脊液检查，甚至经手术病理证实。低颅压综合征患者常常有体位性头痛症状，脑脊液检查发现颅内压低于正常。结核性脑膜脑炎的患者可有肺结核病史，实验室检查亦可支持结核的诊断，同时，脑实质内亦可同时存在病灶。不典型脑膜瘤的患者不一定有头痛病史，且往往慢性起病或无明显临床症状，确诊需依靠手术病理结果。中枢神经系统白血病的患者可参考实验室检查结果确诊。
结论 IgG４-RD 损伤可见于包括肺、纵隔、肝和胰腺在内的多个器官。本病累及硬脑膜则引发 IgG４相关肥厚性硬脑膜炎。在特异性肥厚性硬脑膜炎患者中有相当一部分患者出现染色阳性，从而确诊为 IgG４-RHP。对于诊断肥厚性硬脑膜炎的患者应进一步行血清或脑脊液 IgG４水平检测，必要时行硬脑膜活检以助于早诊断。本研究以经病理证实的病例为基础，探讨 IgG４-RHP 的临床特征、影像学表现、治疗前后对照，同时，分析影像学特征相似的其他几类病变的临床资料，以期明确 IgG４-RHP 的诊断思路。

PU-2033
扩散加权成像对抗 N-甲基-D-天冬氨酸受体脑炎的研究价值

曾春,向雅芸,李咏梅,罗天友
重庆医科大学附属第一医院

目的 探讨抗 N-甲基-D 天冬氨酸（NMDA）受体脑炎脑内病灶的 DWI 特征。
材料与方法 （1）回顾性分析 66 例抗 NMDA 受体脑炎患者，均行头颅常规 MRI 和 DWI 扫描。（2）观察病灶在常规 MRI 信号、分布情况以及强化方式，同时观察其在 DWI 和表观扩散系数（ADC）图的表现；根据病灶信号特点，将其分为 T_1WI 等信号和低信号病灶、ADC 低信号和高信号病灶。（3）测量病灶和对侧脑组织的 ADC 值，比较病灶和对侧脑组织、不同 T_1WI 信号病灶及不同 ADC 图信号病灶的 ADC 值差异。（4）分析病灶 ADC 值与患者病程及改良 Rankin 量表（mRS）评分的相关性。
结果 （1）22 例常规 MRI 脑内共显示 29 个病灶，大部分病灶位于各脑叶皮层。（2）T_1WI 等信号 20 个、低信号 9 个。（3）27 例患者其病灶在 T_2WI 为稍高信号或明显高信号，对应的 DWI 为稍高或明显高信号。（4）有 7 个 T_1WI 等信号病灶在 ADC 图上为低信号，其余 22 个病灶在 ADC 图上为稍高信号或高信号；（5）7 个 ADC 图低信号病灶的 ADC 值为（0.69 ± 0.01）× 10^{-3} mm^2 / s，对侧为（0.76 ± 0.02）× 10^{-3} mm^2 / s（t = 9.62，P < 0.001）；22 个 ADC 图高信号病灶 ADC 值（（0.86 ± 0.10）× 10^{-3} mm^2 / s）高于对侧（0.74 ± 0.05）× 10^{-3} mm^2 / s）（t = 16.999，P < 0.001）；（6）20 个 T_1WI 等信号病灶的 ADC 值为（0.82 ± 0.10）× 10^{-3} mm^2 / s，9 个 T_1WI 低信号病灶为（0.95 ± 0.16）× 10^{-3} mm^2 / s（t = -5.48，P < 0.001）；（7）病灶 ADC 值与患者病程正相关（r = 0.61，P = 0.003），与 mRS 评分无相关性（r = 0.09，P = 0.68）。
结论 ADC 值有助于鉴别不同时期和不同信号抗 NMDA 受体脑炎病灶的病理改变，有助于该病的诊断。

PU-2034
T2W-FLAIR 增强扫描在颅内感染性病变的应用研究

苏梦瑶,周智鹏
桂林医学院附属医院

目的 探讨 MRI 流体衰减反转恢复序列（fluid attenuated inversion recovery，FLAIR）增强扫描在颅内孤立性环形强化结节诊断中的价值。**材料与方法** 回顾性分析 2019 年 1 月至 2019 年 12 月在桂林医学院附属医院行颅脑检查发现颅内孤立性环形强化结节的患者资料，所有患者均接受 1.5/3.0 T MR 扫描，包括矢状面和横断面 T1WI，横断面 T2WI、T2W- FLAIR，增强后矢状面和横断面 T1WI，以及横断面 T2W- FLAIR。根据病理结果及其他复查、随访结果将患者分为“感染性病变组”及“非感染性病变组”即阳性组为“感染性病变组”，阴性组为“非感染性病变组”并分析两组患者影像征象：①病灶位置、大小、形态、清晰度、周围水肿比值；②病变是否存在囊变、出血、坏死；③囊壁完整程度、厚度、内外壁光滑程度；④邻近脑膜是否有强化。使用 SPSS 统计软件进行组间差异性检测。采用单样本非参数检验计算数据是否为正态分布，符合正态分布的计量资料以 X±s 来表示，采用 t 检验；计数资料以百分数的形式表示，采用 X^2检验。非正态分布数据用 Mann-Whitne 非参数检验。分析两组患者邻近脑膜是否有强化对诊断感染性病变的灵敏度、特异度、阳性预测值、阴性预测值。**结果** 现有 10 例患者病理结果及其他复查、随访结果提示阳性,23 例患者的病理结果及其他复查、随访结果呈阴性。现因病例数量较少，无法进行数据分析。**结论** 对颅内孤立性环形强化结节观察有无脑膜强化，能够更加快速准确的对颅内感染性病变进行早期诊断，以便及时、有效地对临床合理用药进行指导。

PU-2035
原发性垂体脓肿的 MRI 表现与临床表现分析

时传迎[1,2],谢国华[1],宋培记[1],张传臣[1],李明利[2]
1.聊城市人民医院
2.中国医学科学院 北京协和医学院 北京协和医院

目的 探讨原发性垂体脓肿的 MRI 表现及临床表现，提高原发性垂体脓肿术前诊断的准确率。
方法 回顾性分析 2011 年 1 月至 2019 年 4 月北京协和医院确诊的原发性垂体脓肿患者的临床资料及 MRI 影像资料，总结其临床症状、病程、影像表现并分类。
结果 共计确诊原发性垂体脓肿 28 例。原发性垂体脓肿主要症状包括头痛或头晕（64.2%，18/28）、感染症状（78.6%，22/28）、垂体前叶功能减退(71.4%，20/28)、尿崩症或多饮多尿（67.9%，19/28）、视野或视力受损（39.3%，11/28）。患者首发症状多为头痛、发热伴随(25.0%，7/28)或不伴随(50.0%，14/28)垂体前叶功能低下、尿崩症、视力视野受损症状，不伴随这些症状的患者后期也会出现垂体前叶功能低下、尿崩症或视力视野受损症状（92.8%，13/14）。以尿崩症（10.7%，3/28）、垂体前叶功能低下（7.1%，2/28）、垂体前叶功能低下联合尿崩症（3.6%，1/28）及视野视力受损(3.6%，1/28)为单一首发症状者少见。MRI 增强扫描多显示鞍内或鞍内及鞍上囊性病变，典型征象为增强扫描环状或半环状强化。垂体柄出现增粗、结节状或囊状强化比例为 92.8%（26/28），是提示垂体脓肿的重要征象。
结论 原发性垂体脓肿典型 MRI 表现为鞍区环状或半环状强化囊性占位，垂体柄增粗、结节状或囊状强化是诊断原发性垂体脓肿的重要证据。典型症状为头痛、发热伴随或后续出现的垂体前叶功能低下、尿崩症或多饮多尿、视野视力受损。

PU-2036

淋巴细胞性漏斗神经垂体炎的 MRI 诊断

李艳
河南省人民医院

【目的】探讨淋巴细胞性漏斗神经垂体炎的 MR 诊断价值。**【方法】**回顾性分析我院 2012 年 2 月～2019 年 7 月经手术病理证实或临床治疗确诊为淋巴细胞性漏斗神经垂体炎的 5 例患者临床及 MR 资料。所有患者均行鞍区 MRI 平扫及增强扫描。**【结果】**5 例淋巴细胞性漏斗神经垂体炎患者 MRI 均表现为垂体柄增粗，2 例下丘脑可见肿块样稍长 T1 长 T2 信号影，4 例患者神经垂体 T1WI 高信号消失，3 例弥漫性增大，2 例垂体萎缩变小。5 例患者呈明显强化，2 例强化不均匀。1 例邻近硬脑膜增厚强化，呈脑膜尾征。**【结论】**对于育龄期女性患者，垂体柄漏斗增粗，临床有尿崩及垂体功能低下时要考虑淋巴细胞性垂体炎的诊断，MRI 对淋巴细胞性垂体炎具有重要的诊断价值。

PU-2037

Inflammatory pseudotumor in the ventral junction of the medulla oblongata and cervical cistern: a case report

Xiaochen Wang,Shengjun Sun,Yingying Li
Radiology Department of Beijing Tiantan Hospital, Capital Medical University

Purpose: Inflammatory pseudotumor is a histologically proven benign lesion of unknown etiology . It most commonly involves lungs and orbit but also reported to occur in many site or organ system.Here we report a a 61-year-old patient with right extremities weakness and found a mass in the ventral junction of the medulla oblongata

and cervical cisten through MRI appearance and diagnosed with an IPT after surgical excision followed by histopathology.And this tumor-like lesion we report is surrounding the bilateral intracranial segment of the vertebral arteries.There have been no reports of inflammatory pseudotumor growing around arteries up to date.We provide a new reference for clinical, imaging diagnosis and surgical resection of the tumor.

Materials and Methods:A 61-year-old man, presented with complaints of 10-year history of dizziness, developed over the past 2 months and with right limb weakness was admitted to the neurosurgery department. A neurologic examination revealed that he has a bilateral tinnitus,left hearing loss and left limb paresthesia, which was hypesthesia of the lower extremity while his deep sensation was normal. Physical examination of muscle strength showed IV grade of right limb and V grade of the left. He also had right limb ataxia and a stiff neck, without choking when drinking water and no dysphagia. Physiological reflex was presented and pathological signs were negative.
Magnetic resonance imaging(MRI) of the head showed a mixed isointense mass of approximately 38*26*44mm in the ventral junction of the medulla oblongata and cervical cistern ,with clear boundary and compression of the medulla oblongata and encase of bilateral vertebral arteries. It was isointense on both T1-weighted and T2-weighted imaging. DWI sequence showed no obvious diffusion restriction. It was obviously homogeneous enhanced on post-enhancement .There was no bony abnormality or erosion seen on computed tomography (CT) correlation. CT angiography(CTA) showed the V4 segment of bilateral vertebral arteries was surrounded by the mass and the location of the left vertebral artery was moving backward and it was slightly narrowed.The preoperative diagnosis was more likely to be a meningioma.

Result:According to above all, the mass was performed a right lateral approach for the resection. After arcuate incision of the dura mater, a well-circumscribed, well-vascularized, pink and slightly tough mass was observed . The mass was located in the ventral junction of the medulla oblongata and upper cervical cistern ,about 40*27*47mm in size. Laser knife was used to excised the tumor in pieces to decrease the volume of it to make it easier for resection. Some specimen were collected and sent to pathological biopsy. The tumor tissue surrounding the bilateral vertebral arteries was carefully dissected and resected under the microscope. The bilateral vertebral arteries were visible postoperatively and were all well protected.
Histopathology examination revealed a hyperplasia of collagen fibers with a large number of lymphocytes, plasma cells and histiocyte foci and scattered distribution ,which were considered as inflammatory pseudotumor.
At follow-up MR examination 2 months postoperatively, MRI on post-contrast T1-weighted sequences showing complete resection of the tumor with no signs of recurrence and residue. Nervous system examination showed he had clear consciousness, no dizziness, and the muscle strength of right limb is III-IV, the left limb movement is normal.

Conclusion:We report for the first time an inflammatory pseudotumor growing in the ventral medullary junction of the medulla oblongatal-cervical cistern and surrounding the bilateral intracranial segment of the vertebral arteries. Complete surgical resection has a better prognosis for the lesion.

PU-2038

DIXON 序列对视神经炎的诊断价值

相丽
安徽医科大学第二附属医院

摘要：目的 探讨 DIXON 序列对视神经炎的诊断价值。**方法** 研究对象 2016 年 4 月至 2019 年 1 月安徽医科大学第二附属医院眼科诊治的视神经炎病例 20 例，分别采用 dixon 序列及常规 T2WI 序列进行扫描。三维容积成像序列图像需要在后处理工作站进行图像的后处理重建及分析，由 2 名放射科诊断医生采用双盲法随机对两种序列磁共振图像共同判定并达成一致意见，主要测量指标为患侧视神经层面图像的 SNR 与 CNR、视神经边缘清晰度（清晰锐利光滑/欠清晰/边缘模糊）。用 SPSS 软件进行数据统计。采用配对样本 t 检验，检验效度 a=0.05，P 值<0.05 为差异有统计学意义。**结果** 20 例患者中女性 11 例，男性 9 例。平均发病年龄(38.1±12.1)岁(21~53 岁)。10 例患者 36 眼受累。dixon 序列及常规 T2WI 序列两组配对样本对比，P 值<0.05，差异有统计学意义。dixon 序列的 SNR 与 CNR 优于常规 T2WI 序列。**结论** Dixon 序列对视神经炎的影像诊断有重要价值。

PU-2039

磁共振 T1mapping 定量研究脑锰沉积在大鼠 B 型肝性脑病中的作用机制

张翠[1],张翠[1],张翠[1],张翠[1],张翠,张翠[1]
1.复旦大学附属金山医院
2.复旦大学附属金山医院
3.复旦大学附属金山医院
4.复旦大学附属金山医院
5.复旦大学附属金山医院
6.复旦大学附属金山医院

目的 探究 T1 mapping 序列定量测定 B 型肝性脑病（BHE）脑锰沉积价值。利用对氨基水杨酸钠（PAS-Na）治疗 BHE 大鼠，研究锰在 BHE 中作用机制。

材料与方法 采取部分门静脉结扎法构建 BHE 大鼠模型，造模同时使用对氨基水杨酸钠（PAS-Na）进行干预治疗。42 只 8 周龄雌性 SD 大鼠分为实验组 36 只，NC6 只。实验组根据有无 PAS-Na 治疗分为 BHEA（治疗）组和 BHEB（不治疗）组。实验组根据造模后时间分为 2、4 和 6 周 3 个亚组。每组大鼠检测血氨；进行磁共振扫描；测量脑组织 T1 值和锰含量；使用 Morris 水迷宫评估大鼠学习记忆能力；检测脑内 MPO 和 GS 活力，检测 IL-6、GSH、GLN 含量。

结果 与 NC 组比较，BHEB 组血氨升高（P<0.001）；脑组织 T1 值降低（P<0.001）；脑组织锰含量增多（P<0.001）；水迷宫头部 ROI 接触次数（P<0.01）、Right Top 进入次数（P<0.01）减少；脑内 IL-6 含量（P<0.001）、GLN 含量（P<0.01）增多；MPO 和 GS 活力均升高（P 值均＜0.001）；GSH 含量减少（P<0.001）。与 BHEB 组比较，BHEA 组脑组织 T1 值升高（P<0.01）；脑组织锰含量减少（P<0.01）；水迷宫 Right Top 进入次数增多（P<0.05）；脑内 IL-6 含量减少（P<0.05），MPO 活力（P<0.001）、GS 活力（P<0.05）降低，GSH 含量（P<0.05）增多。基底节（r=-0.744，P<0.05）、海马（r=-0.737，P<0.05）、皮层（r=-0.672，P<0.05）及小脑（r=-0.842，P<0.01）T1 值与锰含量之间存在线性负相关。

T1 mapping 可以定量检测 BHE 大鼠脑锰含量。PAS-Na 能降低脑锰含量,减轻神经性炎症，减少氧化应激，改善脑代谢，改善 BHE 大鼠认知达到治疗 BHE 作用。

PU-2040

儿童脓毒症相关性脑病 10 例影像学表现

白洁
首都医科大学附属北京儿童医院

【目的】通过分析儿童脓毒症相关性脑病的影像学表现，回顾相关文献，加强对该疾病的影像学特征认识。【方法】回顾性分析 10 例脓毒症相关性脑病患者的影像学资料，男 6 例，女 4 例，年龄 0.5 岁-11.8 岁，其中 8 例行 CT、7 例行 MRI 检查，1 例行 1H-MRS 检查，探讨并总结其影像学特点。【结果】（1）信号改变：双侧皮层及白质区长 T1 长 T2 信号，累及至少 2 个以上脑叶（6/7），DWI 病灶弥散受限高信号（5/7），增强扫描颅内未见异常强化（3/5）；（2）脑萎缩、脑水肿表现：脑沟加深（7/10），双侧大脑皮层肿胀（2/7）；（3）累及其它脏器：如肺、脊髓(9/10、1/10)；（4）MRS:桥脑、左侧丘脑、基底节区 NAA 峰降低。【结论】当伴有全身炎症反应的危重病人出现弥漫性双侧皮层及脑白质、深部灰质核团异常改变，增强扫描未见异常强化时，应高度警惕该病，及时为临床诊治与改善预后提供指导性意见。

PU-2041

神经梅毒的常规 MRI 表现及磁共振动脉自旋标记成像的特点

李洁,叶靖
江苏省苏北人民医院/扬州大学医学院附属医院/扬州市红十字中心医院

目 的 提高对神经梅毒常规 MRI 特点的认识 ， 并探讨 ASL 技术在神经梅毒的诊断和治疗中的作用。

资料与方法 分析 13 例本院经临床证实的神经梅毒患者及 20 例正常对照组常规 MRI 及 ASL 影像表现。分别在双侧额叶、顶叶、颞叶、枕叶、小脑半球皮层画兴趣区（ROI）测量 CBF 平均值。评价各部位血流灌注指标（CBF）两组之间的差别。其中 6 人在开始治疗后 1 周到 2 月内复查头颅常规磁共振及 ASL 扫描，并分析影像资料。

结果 1 常规 MRI 表现为：散在、多发或大片状异常信号，T_1WI 为稍低信号，T_2WI 高信号，DWI 为等或稍高信号。2 根据 CBF 值的升高或降低分为两组。3 6 例神经梅毒患者经正规住院治疗后 1 周-2 月内进行复查，原 CBF 值降低的部位未见明显变化，而原 CBF 值升高的部位现在减低；临床症状明显改善。

结论 神经梅毒的影像表现多样，无特异性。ASL 技术是一种无需注射对比剂的 MR 灌注方法，可以反映神经梅毒的疗效。

复发-缓解型多发性硬化合并症及相关临床特征的分析

孔丽娜[1],李咏梅[2],杨华[1]
1.重庆市中医院
2.重庆医科大学附属第一医院

目的 探讨 RRMS 合并症种类和数量及其与临床特征的关系。**方法** 回顾性分析 141 例 RRMS 患者临床资料，分析其合并症数量与临床特征的关系。**结果** ①约 72.3%RRMS 患者合并其他疾病，其中≥3 种 34 例、2 种 26 例、1 种 42 例、0 种 39 例；②≥3 种合并症组分别与 0 种、1 种、2 种合并症组比较年龄有显著差异（$P<0.05$）；③≥3 种合并症组与 0 种、1 种合并症组比较首发年龄有显著差异（$P<0.001$）；④各合并症组之间男女性别比较无显著差异，各组间比较 EDSS 评分及复发次数无明显差异。**结论** RRMS 患者年龄、首发年龄越大，合并症越多，合并症可能导致 MS 延迟发作以及对其准确认识，因此提高对合并症的认识有助于早期诊断、治疗 MS 及其合并症，提高患者生存率及生活质量，改善临床预后。

PU-2043

急性期放射性损伤的磁共振波谱研究

陈红[1],周正荣[2]
1.上海交通大学附属上海市精神卫生中心
2.复旦大学附属肿瘤医院

目的 磁共振波谱动态监测大鼠急性期放射性脑损伤的代谢变化规律。
材料和方法 22 只雄性成年 SD 大鼠接受 35Gy 半脑单次等中心点照射。采用 7T 小动物磁共振于照射前、照射后 3 天、2 周、3 周多个时间点进行常规 T1WI、T2WI、氢质子磁共振波谱的数据采集，观察各时间点双侧海马区的信号改变，利用 LCModel 软件进行波谱数据定量分析各时间点照射侧与非照射侧海马区组织的代谢产物变化。
结果 放射性脑损伤急性反应期 N-乙酰门冬氨酸（N-acetylaspartate, NAA）相对总肌酸的比值在照射侧与非照射侧总体上有差异（$P_{t*g}=0.036$，$P_g<0.001$，$P_t<0.001$），即照射侧与非照射侧在时间和组别上均有差异，照射侧与非照射侧随时间的变化趋势也不同，照射侧 NAA 明显下降。总胆碱（total Choline, tCh）相对总肌酸(total Creatine,tCr)的比值在照射侧和非照射侧之间存在差异（$P_{t*g}=0.018$），两者的变化趋势不同，照射侧呈上升趋势。病理结果显示照射侧出现神经元损伤，白质纤维的疏松改变。
结论 放射性脑损伤急性反应期，NAA 的显著下降和 tCh 的的上升可能反映了照射区域神经元的损伤和功能紊乱。^{1}H MRS 可以在常规 T2WI 出现异常改变前检测到损伤区域代谢物的异常。

PU-2044

长期监测大鼠放射性脑损伤的磁共振波谱研究

陈红[1],周正荣[2]
1.上海交通大学附属上海市精神卫生中心
2.复旦大学附属肿瘤医院

目的 长期动态监测放射后局部区域代谢物的变化，探究磁共振波谱在大鼠放射性脑损伤中的诊断价值。
材料与方法 18 只成年雄性 SD 大鼠进行 35Gy 半脑垂直单次照射。采用 7.0 T 小动物磁共振于照射前、照射后 4 周、6 周、8 周、12 周、24 周、36 周多个时间点进行 T1WI、T2WI 和 ^{1}H MRS 数据采集，利用 LCModel 软件定量分析各时间点照射侧与非照射侧海马区脑组织的代谢产物变化。

结果 NAA、tCh、谷氨酸（Glutamic acid, Glu）、Glu 和谷氨酰胺（Glutamic acid and glutamine, Glx）、肌醇（inositol, Ins）、谷胱甘肽（glutathione, GSH）、牛黄酸（taurine, Tau）在照射侧和非照射侧间总体有差异。tCh 表现为代谢物比值增加，余代谢物在 12 周后表现为下降趋势，较照射前有统计学差异。

结论 放射性脑损伤迟发性反应期 MRS 出现多种代谢物的异常，可能提示放射性脑损伤的出现。

PU-2045
复发缓解型多发性硬化患者扣带皮层结构和灌注研究

郑桥,李咏梅,谢敏,陈晓娅,曾春,韩永良
重庆医科大学附属第一医院

目的 采用高分辨率 3D-T1 序列和三维伪连续动脉自旋标记灌注成像(3D pCASL)序列探讨复发-缓解型多发性硬化(RRMS)患者扣带皮层的结构和灌注改变，并分析其临床相关性。

方法 纳入 RRMS 患者 28 例，健康对照者 28 例，采用 3D-T1 和 3D pCASL 序列测量扣带皮层左右共 8 个亚区的皮层厚度和脑血流量(cerebral blood flow，CBF)值，并进行组间比较。运用 *Pearson* 相关和偏相关分析评估 MR 参数值与临床数据以及认知评分之间的相关性。

结果 与正常对照组比较，RRMS 患者左侧前扣带皮层尾部，双侧扣带皮层峡部，双侧后扣带皮层的 CBF 值明显减低（$p<0.05$）；双侧扣带皮层峡部，左侧后扣带皮层萎缩，右侧前扣带皮层喙部的皮层厚度值增（$p<0.05$）。患者扣带皮层亚区的 CBF 值和皮层厚度与注意力、短时记忆能力、信息处理速度、视空间技能和视觉记忆等认知表现有相关性（$p<0.05$）。

结论 RRMS 患者存在扣带皮层亚区萎缩和灌注的改变，可能与高级认知功能的损害有关，为临床对伴有认知障碍的 RRMS 患者的治疗提供信息。

PU-2046
自身免疫性 GFAP 星形细胞病的磁共振影像特点

李又成,黎金林
温州医科大学附属第一医院

目的 自身免疫性胶质纤维酸性蛋白（Glial fibrillary acidic protein，GFAP）星形细胞病是于 2016 年首次被描述命名的神经系统自身免疫性疾病，至今文献报道近 300 例，其中，中国学者报道 38 例。本研究回顾性分析 2 例自身免疫性 GFAP 星形细胞病的中枢神经系统磁共振影像表现，结合文献资料，分析其影像特点，提高对该疾病的认识。

材料与方法 2 例患者均为男性，例 1，25 岁，发热三天、四肢无力一天就诊，例 2，55 岁，发热伴大小便未解，进行性双下肢乏力 20 余天就诊；脑脊液检查：白细胞增高，蛋白增高，抗 GFAP 抗体阳性（1:10），抗 AQP4 抗体阴性，抗 MOG 抗体阴性。磁共振检查采用 1.5T（西门子）或 3.0T（飞利浦）MR 机，例 1 行头颅 MR 常规平扫与增强，例 2 行头颅、颈椎、胸椎 MR 常规平扫与增强。

结果 例 1 头颅 MR 表现为：脑干及两侧基底节区大片或斑片状 T1WI 低信号、T2WI 高信号影，DWI 低信号为主伴少许斑点样高信号，增强扫描脑干病灶内可见与脑干长轴垂直的齿梳状线样强化影，两侧基底节区病灶强化不明显。例 2 头颅 MR 表现为：两侧侧脑室旁小斑片状长 T1 长 T2 异常信号影，增强扫描两侧脑室旁见放射状线样强化影；颈椎及胸椎 MR 表现为颈胸髓内偏侧小斑片状 T2WI 高信号影，增强扫描脊髓内病灶轻度强化，脊髓周围软脊膜可见不连续轻中度强化。

结论 结合文献资料，自身免疫性 GFAP 星形细胞病的 CNS 影像表现大致总结如下：1）病灶可累及脑部（包括白质、基底节、下丘脑、脑干、小脑、脑膜、脑室甚至颅骨）、脊髓（包括软脊膜），脊髓病灶一般比 AQP4 或 MOG 抗体阳性患者更轻微、更模糊；2）增强扫描最特异的表现是，垂直于脑室的脑白质内血管样放射状线样强化，脊髓强化表现为脊髓中央近中央管旁线样强化。自身免疫性 GFAP 星形细胞病的 CNS 影像表现有相对特征性，结合临床抗 GFAP 抗体的检查，能提示诊断。

PU-2047
T2 FLAIR 增强扫描在艾滋病并发隐球菌性脑膜炎诊断中的应用

林昭旺,尤昊溢,华绪文
福建医科大学孟超肝胆医院

目的 对比分析 T2 FLAIR 增强扫描及 T1 增强扫描两种检查技术对艾滋病并发隐球菌性脑膜炎诊断价值。
方法 回顾性分析我院近 1 年来 33 例艾滋病并发隐球菌性脑膜炎患者的 T2 FLAIR 增强扫描及 T1 增强扫描影像资料。应用 x 2 检验对比分析两种检查方法对病变检出阳性率。
结果 在 33 例艾滋病并发隐球菌性脑膜炎患者中，T2 FLAIR 增强扫描检出 27 例，未检出 6 例，阳性率 81.8%；T1 增强扫描检出 11 例，未检出 22 例，阳性率 33.3%。强化脑膜影像表现为局灶性或弥漫性线样高信号影。两种检查方法阳性率差异有统计学意义（ x 2=14.0625，P<0.001）。
结论 对于艾滋病并发隐球菌性脑膜炎的检出，T2 FLAIR 增强扫描敏感性优于 T1 增强扫描，且是后者的有益补充。

PU-2048
病毒性脑炎与 MELAS 的 MRI 特征分析及鉴别诊断

程冰雪
南昌大学第二附属医院

【摘要】 **目的** 探讨病毒性脑炎（Viral encephalitis,VE）与线粒体脑肌病伴乳酸酸中毒和卒中样发作(mitochondrialencephalomyopathy，lactic acidosis，and stroke－like episodes，MELAS)的临床表现及 MRI 特点，提高对两者的诊断和鉴别诊断水平。**方法** 回顾性分析本院 25 例 VE 和 22 例 MELAS 患者的临床资料及影像学检查。**结果** 统计分析显示：VE 组以发热为首发症状的比例高于比 MELAS 组(P <0.05)，并且很少有听力下降、身材矮小、智力低下等表现(P <0.05)。在影像学检查中，MELAS 组病灶累及颞叶、顶叶、枕叶的比例明显高于 VE(P <0.05)，且在 DWI 序列上病灶的信号强度明显高于 VE(P <0.05)，此为本研究的独特发现。此外，MELAS 组颅脑 MRS 检查倒置乳酸峰的出现率高于 VE 组(P <0.05)。而发病年龄、性别两者间差异无统计学意义（P 值均 >0.05）。结论 VE 和 MELAS 的 MRI 表现具有一定的特征性，特别是 DWI 序列和 MRS，有助于 VE 和 MELAS 颅内病灶的检出及两者的鉴别。

PU-2049
3.0T 磁共振在蜱传脑炎早期诊断中的价值

王斌
内蒙古林业总医院

探讨 MR 扩散加权成像（DWI）在蜱传脑炎诊断中的临床应用价值。资料与**方法** 对 78 例蜱传脑炎患者和 20 例无蜱传脑炎的志愿者行颅脑 T1WI、T2WI 及 DWI，由 2 名放射诊断医师采用盲法随机进行 MRI 阅片后对比分析单纯 T1WI、T2WI 及 DWI 对蜱传脑炎诊断正确率。**结果** 蜱传脑炎病灶主要分布于脑白质、内囊、胼胝体、基底节、脑皮质及脑干。脑白质区域的病灶均呈双侧对称性受累。所有异常信号在 T1WI 上均呈等信号或微低信号，T2WI 上呈高或微高信号，DWI 上为相对明显高信号。DWI 序列对病灶的检出率为 100%(78/78)，显著高于 T1WI 的 58.97%（46/78）（ χ^2=40.26, P=0.00）；亦高于 T2WI 的 85.90%(67/78)（ χ^2=11.83, P=0.00）。蜱传脑炎患者病灶部位的 ADC 值较正常脑组织明显降低，且差异具有统计学意义（t＝21.25, P＝0.00）。**结论** 3.0TMR DWI 能较直观地显示蜱传脑炎患者脑组织病变，其作为常规 T1WI 和 T2WI 的补充检查序列可以明显提高对蜱传脑炎的检出率

PU-2050
以癫痫为首发症状的脑内疾病的 MRI 诊断及分析

吴晓峰,张辉,王效春,谭艳,秦江波,王乐,张磊
山西医科大学第一医院

目的 分析、总结可引起癫痫的疾病的 MRI 表现，为临床治疗提供影像学依据。
方法 搜集 2018 年 1 月到 2019 年 5 月就诊于山西医科大学第一医院以癫痫发作为首发症状的患者 275 例，其中男 158 例，女 117 例，年龄 6-78 岁，平均年龄 56.8 岁，；所有患者均为初次发病，均行头颅磁共振扫描及海马冠状位薄层扫描，扫描序列包括 T1WI、T2WI、flair、DWI 和海马冠状位薄扫序列，扫描图像由两名主治医师进行诊断。
结果 颅内异常者 259 例，无异常者 16 例；海马硬化者 19 例，病毒性脑炎者 36 例，颅内占位者 139 例，外伤或占位术后者 60 例，脑先天发育异常者 5 例。
结论 根据 MRI 表现，对各个疾病进行精确诊断，对患者进行对症治疗及手术治疗，从而对减轻患者痛苦，更好的服务临床。

PU-2051
富于淋巴浆细胞型脑膜瘤影像表现（附 2 例报告并文献复习）

李文富[1],江林[1],李仕广[1],张体江[2]
1.遵义市第一人民医院
2.遵义医科大学附属医院

目的 探讨富于淋巴浆细胞型脑膜瘤的 CT、MRI 表现及其与病理特点的相关性，提高对本病的认识。**方法** 回顾性分析 2 例经手术及病理证实的富于淋巴浆细胞型脑膜瘤并复习相关文献。**结果** 肿瘤多为单发，圆形或类圆形，也可沿脑膜匍匐性生长。CT 平扫多表现为等或高密度肿块，钙化少见。MRI 平扫 T_1WI 多表现为等或稍低信号，T_2WI 呈等或稍高信号，增强扫描明显强化，呈匍匐性生长，脑膜广泛增厚。本组 1 例病灶呈囊实性，信号混杂，内见出血；1 例呈不规则分叶状，内见多发小斑片状长 T_2 信号，瘤内及瘤周见多发流空血管影，邻近颞骨、蝶骨大翼骨质吸收、变薄；增强扫描 2 例实性部分均明显强化，并可见“脑膜尾征”。病理显示瘤细胞排列成编织状、旋涡状，间质内可见大量淋巴细胞、浆细胞浸润。**结论** 富于淋巴浆细胞型脑膜瘤青壮年好发，无性别差异，“匍匐性生长”和瘤内出血是其特征性影像表现，外周血异常对本病具有提示作用，当

影像学检查显示肿瘤位于颅底和/或邻近骨质破坏时需长期随访，最终确诊需依赖组织病理学检查。

PU-2052
原发性中枢神经系统淋巴瘤 MRI 表现特征、DWI 弥散特性及其病理基础

张波
江苏省连云港市第一人民医院

目的 探讨中枢神经系统淋巴瘤 MRI 表现特征及其弥散特性与其病理特性的相关性，以期提高对该病诊断的准确性。
资料与方法 回顾性分析 13 例经病理证实中枢神经系统淋巴瘤完整影像学资料，分析病灶的部位、数目、大小、信号、强化特征、瘤周水肿、占位效应及扩散加权成像（DWI）表现、ADC 数值。
结果 13 例中原发性 CNSL11 例，继发性 2 例，其中原发性脑膜淋巴瘤 1 例，继发性脑膜淋巴瘤 1 例。单发病灶 8 例，多发病灶 5 例，多发者病灶 3-7 个；最多累积部位是大脑半球皮髓质交界部（9/13 例），其次是基底节区-丘脑放射冠（7/13 例），再次是胼胝体（4/13 例）；13 例中 12 例病灶强化，呈团块状、结节状均匀强化 8 例，不均匀强化 3 例，环形强化 1 例，无强化 1 例；1 例病灶表现“缺口征”，2 例表现“尖角征”；瘤周水肿轻到中度 12 例，重度 1 例。CNS 淋巴瘤组 ADC 值：0.780±0.137×10^{-3}m ㎡/sec，$rADC_L$比值：1.037±0.325；
结论 CNS 淋巴瘤通常位于脑表面或深部白质通路的单发或多发结节状、团块状异常均匀强化实性病灶；病变常与脑脊液间隙紧密接触；瘤周水肿轻，占位效应小，很少发生坏死、囊变及钙化、出血；胼胝体、脑干、放射冠等白质通路弥漫塑形性浸润病灶及“缺口征”和“尖角征”是其较为特征性影像学表现。激素冲击治疗表现为“鬼影状”强化。DWI 序列更具显示病灶高细胞密度的优越性，能提供额外的组织弥散特征信息，有助于淋巴瘤与胶质瘤的鉴别诊断。

PU-2053
磁共振功能成像在鉴别诊断脑胶质瘤复发与治疗后反应的研究进展

任龙飞
山西医科大学第一医院

脑胶质瘤是成人中枢神系统中最常见的恶性肿瘤，因其浸润性生长的特点，术后易复发，目前主要采用手术联合同步放化疗为治疗手段，但患者的生存期不容乐观，绝大多数病人在 2 年内复发，且部分患者可能在同步放化疗 3 个月后会出现一些治疗后反应，包括假性进展和放射性坏死。复发和治疗后反应出现的时间、临床症状及常规影像学表现非常相似，而预后及治疗方式截然不同，这给胶质瘤预后评估带来了极大的困难。临床上，胶质瘤复及治疗后反应均可表现为颅内高压及神经功能障碍等症状，而病理组织学基础上两者截然不同，胶质瘤复发组织学表现为肿瘤细胞迅速增殖、密度增加，血管内皮细胞增生，肿瘤血管增多，肿瘤组织代谢旺盛，侵犯正常脑组织，并伴有血脑屏障破坏；治疗后反应中的假性进展组织学基础为同步放化疗引起术区组织炎症反应、血管损伤，毛细血管透性短暂升高，不伴有肿瘤细胞增殖及组织坏死，具有一定程度的自限性。放射性坏死组织基础包括白质脱髓鞘、神经细胞坏死、纤维瘢痕组织形成、血管内皮细胞损伤及坏死，导致血脑屏障破坏。因治疗后反应与复发均可以引起血脑屏障的改变，所以常规影像学增强扫描均表现为伴

或不伴有水肿的新发强化灶，两者难以鉴别。目前，临床上仍以病理组织学检查作为诊断胶质瘤复发的金标准，但因其有创性和操作中存在的局限性使其难以在胶质瘤术后评估中广泛应用。近年来随着磁共振技术的发展，磁共振扩散成像中的 DWI、DTI、IVIM 技术，灌注成像中的 DSC-MRI、DCE-MRI 、ASL 以及磁共振波谱 MRS 技术等在胶质瘤的术后评估与检测中发挥着越来越重要的角色。

PU-2054
瘤周水肿区 DCE-MRI 对胶质瘤分级的应用价值

王茹
内蒙古医学院附属医院

目的 探讨动态对比增强磁共振成像（DCE-MRI）在脑胶质瘤患者瘤周水肿区的灌注特点及其对胶质瘤分级的临床应用价值，从而为临床提供可靠的手术切除范围。 方法 根据 2016 年 WHO 胶质瘤分类和分级标准将患者分为低级别胶质瘤组（LGG 组，Ⅱ级）17 例和高级别胶质瘤组（HGG 组，Ⅲ+Ⅳ级）27 例。 所有患者术前均行 DCE-MRI 检查，工作站进行 DCE-MRI 后处理，提取容积转运常数(Ktrans)、血管外细胞外间隙容积分数(Ve)2 个参数，选取瘤体区、肿瘤外水肿内 1cm、肿瘤外水肿内 2cm 区及对侧半球正常白质区为感兴趣区，得到各参数的测量值,比较其在 HGG 组、LGG 组中的差异。应用 Spearmann 相关系数分析 Ktrans 值、Ve 值与胶质瘤病理分级之间的相关性。结果 HGG 组瘤体区、肿瘤外水肿内 1cm、肿瘤外水肿内 2cm 区 Ktrans、Ve 分别高于 LGG 组，差异有统计学意义（P<0.05）；两组肿瘤各区域 Ktrans、Ve 从瘤体区至正常白质区呈递减趋势,两组瘤体区 Ktrans、Ve 与肿瘤外水肿内 1cm 、肿瘤外水肿内 2cm 区、正常白质区比较差异有统计学意义（P<0.05）；HGG 组肿瘤外水肿内 1cm 与肿瘤外水肿内 2cm 区、正常白质区比较差异有统计学意义（P<0.05），肿瘤外水肿内 2cm 区与正常白质区差异无统计学意义（P＞0.05）；LGG 组肿瘤外水肿内 1cm 与肿瘤外水肿内 2cm 区、正常白质区两两比较差异无统计学意义（P＞0.05）。Ktrans 值、Ve 值与胶质瘤病理分级呈正相关（P<0.05）。结论 DCE-MRI 能提高肿瘤的分级并指导临床手术切除范围。

PU-2055
大鼠 C6 脑胶质瘤瘤体 FA 值与其微结构特点的相关性研究及临床应用

李香营, 陈晶
中南大学湘雅医学院附属海口医院/海口市人民医院

目的 探讨大鼠 C6 脑胶质瘤瘤体 FA 值与其微结构（VEGF 阳性细胞百分比，MVD 和细胞密度）的相关性及其在临床中的应用价值。
材料与方法 通过建立鼠脑胶质瘤模型并收集 30 例胶质瘤患者接受 DTI 检查，获得瘤体 FA 值及肿瘤级别、VEGF 阳性细胞百分比，MVD 和细胞密度，分析不同级别胶质瘤瘤体 FA 值的差别及瘤体 FA 值（尤其是晚期阶段荷瘤大鼠）与其微观结构的相关性。
结果 （1）鼠脑胶质瘤及脑胶质瘤患者瘤体 FA 值均低于对侧脑组织 FA 值，差异有统计学意义，而晚期阶段Ⅲ级胶质瘤的平均 FA 值低于 IV 级胶质瘤平均 FA 值，差异无统计学意义。（2）鼠脑胶质瘤瘤体 FA 值与 VEGF 阳性细胞百分比，MVD，细胞密度均呈正相关，r 值分别为 0.62、0.62 和 0.69，而晚期阶段 r 值分别为 0.67,0.65 和 0.71。（3）脑胶质瘤患者瘤体 FA 值与其 VEGF 阳性细胞百分比、MVD 和细胞密度均亦呈正相关，r 值分别为 0.68、0.65 和 0.63。

结论 胶质瘤瘤体 FA 值可以为评估胶质瘤的微观结构，推测肿瘤生物学行为，制定手术方案提供准确可靠、无创的影像监测方法，也为临床通过 FA 值评估胶质瘤微观结构提供了实验基础及临床应用依据。

PU-2056
多 b 值 DWI 在诊断 WHO III 级星形细胞瘤 IDH1 基因型的初步研究

邓晓琳
山西医科大学第一医院

目的 探究多 b 值 DWI 对 WHO III级星形细胞瘤异柠檬酸脱氢酶 1(isocitrate dehydrogenase，IDH1)基因分型的诊断价值。材料与**方法** 回顾性分析 2015 年 1 月至 2018 年 12 月经手术病理确诊为星形细胞瘤III级且有基因结果的患者资料，术前均行颅脑常规 MRI 扫描及多 b 值弥散加权扫描，通过后处理工作站获得水通道蛋白相关扩散系数（AQP-ADC）、纯扩散系数（D）、灌注相关扩散系数（D*）、灌注分数（f）等伪彩图，测量肿瘤实质区及同一层面对侧正常脑实质区的各个参数值，计算获得校正后的参数值（瘤体参数值除以对侧正常脑实质值）：相对水通道蛋白扩散系数（rAQP-ADC）、相对纯扩散系数（rD）、相对灌注相关扩散系数（rD*）、相对灌注分数（rf）等，应用两样本 t 检验分析同一病理级别不同基因分型之间的参数值差异，对有统计学意义的参数值绘制受试者工作特征(receiver operating characteristic，ROC)曲线，计算敏感度及特异度。**结果** WHO III级星形细胞瘤 IDH1 突变组 AQP-ADC、rD 均高于同级别 IDH 野生型，D*以及 rf 值低于野生型，二者差异有统计学意义（$P<0.05$）。瘤体 AQP-ADC 值 ROC 曲线下面积、界值、敏感性及特异性分别为 0.826、0.156、83.33%、81.82%， rD 值分别为 0.758、 1.807、66.67%、81.82%，D*值分别为 0.856、 0.00287、100%、72.73，rf 值分别为 0.833、1.758、83.33、81.82；**结论** 多 b 值 DWI 对于术前诊断 WHO III级 IDH1 基因状态具有一定应用价值。

PU-2057
磁共振成像的直方图分析在鉴别鞍区生殖细胞瘤与颅咽管瘤中的价值

刘俊宏,程敬亮
郑州大学第一附属医院

背景与**目的** 准确的鉴别诊断对鞍区生殖细胞瘤和颅咽管瘤的治疗计划至关重要。本研究的目的是探讨磁共振的直方图分析在区分鞍区生殖细胞瘤和颅咽管瘤中的价值。
材料与**方法** 回顾性评价 5 年的病理数据库，获得经病理证实的 20 例鞍区生殖细胞瘤和 48 例鞍区颅咽管瘤的磁共振图像。使用 Mazda 软件对每位患者的 T1 和 T2 加权成像、ADC 图和对比剂增强后的 T1 加权成像进行分析。选择 9 个参数作为比较指标，包括方差、偏态、峰度、均值、1 分位数、10 分位数、50 分位数、90 分位数和 99 分位数。对有显著组间差异的参数绘制接收者操作特征曲线，计算曲线下面积。
结果 在直方图分析提取的 9 个参数中，我们选择了特异性和敏感性大于或等于 75%的指标，以准确满足临床需要。ADC 图的平均值、偏度、50 分位数和 90 分位数显示了组间比较具有统计学意义，曲线下面积分别为 0.915、0.890、0.916 和 0.808。与其相对应的区分鞍区生殖细胞瘤和颅咽

管瘤的最佳鉴别值分别为 165.73（特异性 87.5%，敏感性 80.0%），80.13（特异性 80.0%，敏感性 87.5%），170.50（特异性 83.3%，敏感性 85.0%）和 237.00（特异性为 81.3%，敏感性为 75%）。
结论 T1 和 T2 加权成像、ADC 图和对比剂增强后的 T1 加权成像的直方图分析有助于鞍区生殖细胞瘤和颅咽管瘤的鉴别。此外，ADC 图的直方图在鞍区生殖细胞瘤和颅咽管瘤的鉴别中比其他序列的直方图更有效。

PU-2058
颅内血管周细胞瘤与血管瘤型脑膜瘤的 MRI 鉴别分析

胡瑞,郑克华,陈文,吴奕君,徐霖
十堰市太和医院

目的 探讨颅内血管周细胞瘤(HPC) 与血管瘤型脑膜瘤(AM)的 MRI 影像征象及功能成像各参数在二者鉴别诊断中的价值。
方法 回顾性分析 2014 年 3 月至 2019 年 7 月期间经手术病理证实的 15 例 HPC 与 11 例 AM 的临床及 MRI 影像资料，包括平扫、增强、弥散张量成像（DTI）、动脉自旋标记成像（3D ASL），采用 $\chi 2$ 检验和两独立样本 t 检验对二者的临床资料、MRI 征象以及功能成像参数进行统计分析，以 $P<0.05$ 为差异有统计学意义。
结果 与 AM 比较，HPC 患者的平均 CBF 值(t= -8.998, P<0.001)及 FA 值(t= -3.666,P= 0.005)较低，ADC 值(t= 2.613,P= 0.028)较高，差异有统计学意义；其中高灌注区 CBF 值(t= -15.136, P<0.001)及低灌注区 CBF 值(t= -8.306, P<0.001)差异也均有统计学意义。另外，与 AM 比较，HPC 发病平均年龄偏小(t= -2.394,P= 0.025)、更容易出现分叶征($\chi 2$= 9.095, P=0.003)及囊变坏死($\chi 2$=9.383,P=0.002)、T1WI 以等高信号为主($\chi 2$=27.788,P<0.001)、T2WI 以等低信号为主($\chi 2$=16.330,P<0.001)、瘤周水肿程度轻($\chi 2$=19.253,P<0.001)、血管流空影更常见且更粗大($\chi 2$=9.027,P=0.011)、与硬脑膜多为窄基底相连（$\chi 2$=28.542,P<0.001）、脑膜尾征少见($\chi 2$=25.000,P<0.001)，上述差异均有统计学意义(P<0.05)；性别($\chi 2$=2.135, P=0.144)及 MDC 值(t= 2.109,P= 0.064)差异无统计学意义(P>0.05)。
结论 HPC 与 AM 的 MRI 征象及各功能成像参数值存在一定差异，对比分析其影像学特征并辅以功能成像分析有助于二者的鉴别诊断。

PU-2059
Imaging findings of atypical teratoid/rhabdoid tumors of central nervous system : report of 9 cases and literature review

Xiaofeng Li
The Third Affiliated Hospital of CQMU (Gener Hospital)

Objective: To explore the imaging features of atypical teratoid/rhabdoid tumors of central nervous system (CNS), and improve the understanding of it.
Methods: The imaging findings of 9 patients with **atypical teratoid / rhabdoid tumors of CNS** which proved by operation and pathology were retrospectively analyzed, with a review of the related literatures.

Results: There were 6 males and 3 females, the mean age of patients was 8.33 years. Tumors location at intracranial in 6 cases, and location at intraspinal 3 cases. The maximum diameter of intracranial tumors was varying from 3 to 5.1 cm, and intraspinal tumors was 4.5 to 13.2 cm. All AT/RTs showed marked heterogeneity on MRI images secondary to cystic changes in 8 cases, hemorrhage in 2 cases. 3 cases with meningeal invasion;1 case with intracerebrained metastasis. Diffused-weighted imaging (DWI) demonstrated inhomogeneous hyperintense signal, with a low ADC value.
Conclusion: AT/RT is large, signal or density is mixed, often accompanied by peripheral cystic change、hemorrhage、 low ADC value, and easily disseminated through cerebral spinal fluid. When young patients have these imaging characteristics, we should take AT/RTs into the diagnosis consideration.

PU-2060
原发中枢神经系统淋巴瘤的多模态影像学特征分析

阮志兵[1],胡雨[2]
1.贵州医科大学附属医院
2.贵州医科大学

目的 探讨原发中枢神经系统淋巴瘤（PCNSL）的影像学特征。方法 回顾性分析经病理证实的 47 例 PCNSL 患者的临床及术前影像学资料。结果 24 例单发，23 例多发，共 117 病灶。CT 检查：61 个病灶中等/稍高密度 52 个，低密度 9 个，3 例 CT 增强均呈轻中度均匀强化。MRI 检查：117 病灶中 107 个 T1WI 上呈等/低信号，10 个呈稍高信号；113 个病灶 T2WI 上呈等/稍高信号，4 个呈低信号；89 个病灶 FLAIR 上 71 呈稍高/高信号，16 个呈等信号，2 个呈低信号；增强扫描 98 个病灶中 75 个呈团块状、结节状均匀强化，23（19+4）个呈环形、斑片状不均强化，4 个合并出血，其中“握拳征”18 个、“尖角征”14 个、“裂隙征”15 个、“蝴蝶征”4 个，出现“卫星灶”11 个 ；DWI 上 43 个病灶均呈稍高/高信号，ADC 图上低信号；磁共振波谱 15 个病灶均 Cho 峰升高、NAA 峰均降低、10 个 Cr 峰降低、5 个 Cr 峰升高，6 个见 Lip 峰升高及 5 个见倒置 Lac 峰。FDG-PET 检查病灶 SUVmax 平均值为 21.3。95 个病灶周围出现轻中度水肿。结论 PCNSL 多模态影像表现具有一定的特征，合理应用多模态影像学有助于早期精准诊断。

伴椎体膨胀性骨质破坏的椎管内神经鞘瘤一例影像表现及误诊分析

张薇薇[1],邢妩[1,2],冷月爽[1],廖伟华[1,2]
1.中南大学湘雅医院
2.中南大学分子影像中心

目的 通过分析一例伴椎体及附件膨胀性骨质破坏的椎管内神经鞘瘤的影像表现，提高对神经鞘瘤罕见影像表现的认识。
方法 回顾经手术切除病理证实、影像学误诊的一例椎管内神经鞘瘤的影像表现，文献回顾神经鞘瘤少见影像表现。
结果 该病例位于髓外硬膜下，CT 表现为椎管内及椎旁软组织密度肿块灶，邻近椎体及附件呈膨胀性骨质破坏，MRI 表现为等 T1 稍长 T2 信号，增强后呈明显强化，内可见无强化囊变区，伴一侧椎间孔扩大，影像误诊为骨源性肿瘤，骨巨细胞瘤或浆细胞瘤。回顾文献发现，神经鞘瘤少数病例可累及椎体骨质，一般表现为压迫性骨质吸收表现，膨胀性骨质破坏者罕见，极易误诊为骨巨细胞瘤。神经鞘瘤其他少见表现还包括多发病变、T1 及 T2 信号多变及轻-中度强化，易误诊为神经纤维瘤、转移瘤及脊膜瘤等。
结论 伴椎体膨胀性骨质破坏的椎管内神经鞘瘤极易误诊为骨源性肿瘤，需要综合肿瘤形态、信号/密度、强化等特点综合考虑。

Application of MR DWI in Differential Diagnosis of Low- and High-Grade Meningioma

Fan Yu,Yi Shan
Xuanwu Hospital， Capital Medical University

*[Abstract] **Purpose** To investigate the value of DWI and ADC in differentiating low grade from high grade meningiomas. **Methods** We retrospectively analyzed 73 patients with meningioma confirmed by postoperative pathology from 2013 to 2017 in our hospital. ADC values of the tumor parenchymal area, contralateral normal white matter and peritumoral edema area were measured and normalized ADC values (NADC) were calculated; ADC values and NADC in meningioma at each grade and subtype were statistically compared. **Results** There were 66 cases of low grade meningiomas while 7 cases of high grade meningiomas. ADC value of low grade meningiomas was higher than that of the contralateral normal white matter (P<0.05), while high grade meningiomas had the tendency towards higher than that of the contralateral white matter (P=0.72). There was no significant difference in ADC values and NADC between low and high grade meningiomas (t=0.91, P=0.36; t=1.24, P=0.21). No significant difference showed in ADC of peritumoral edema area between meningiomas at different grades (P>0.05). ADC varied among subtypes, with angiomatous meningioma and secretory meningioma was higher. **Conclusion** ADC values can be used to figure out the microstructure and the component of meningioma, but it has few significant values in differentiating low grade meningioma from the high grade one.*

纹理分析在预测胶质瘤患者 ki67 是否表达的应用价值

董丽娜
徐州医科大学附属医院

【摘要】 目的 探讨 MRI 图像纹理分析在预测胶质瘤患者 ki67 是否表达的应用价值。**方法** 回顾性收集经手术病理证实的 116 例的胶质瘤患者，对其 T1WI 增强图像进行纹理分析，获取整个瘤体的平均值、中位数、标准差、偏度、峰度、能量和熵值等定量参数，并进行统计学分析。**结果** 对 MRI 图像纹理分析后所获得的定量参数中，平均值、中位数、标准差 3 个参数在 ki67（-）组与 ki67（+）组间的差异无统计学意义，偏度、峰度、能量和熵值 4 个参数在 ki67（-）组与 ki67（+）组间的差异有统计学意义（P＜0.001）；峰度和熵值参数鉴别效能明显优于其它参数值，有较高的敏感性、特异性及准确性。**结论** 纹理分析部分定量参数（偏度、峰度、能量和熵值）有助于预测胶质瘤患者 ki67 是否表达。

利用表观扩散系数 ADC 值对星形细胞瘤的分级研究

张远辉
南平市第一医院

摘要目的:评价最小表观扩散系数(ADC)和 ADC 差值在核磁共振成像中对星形细胞瘤分级的应用价值材料和方法:医院的机构审查委员会批准了这项回顾性研究，并放弃了知情同意。50 例(男 23 例)。27 岁女性患者;年龄中位数，53 岁)，新诊断为星形细胞瘤。两名对临床信息不知情的观察人员通过手工将 3 到 5 个感兴趣的区域(40-60 mm2)放置在 he 实体肿瘤中，无论有无增强对比材料的成分，独立测量 ADC，并计算平均 ADC 值。选择最小和最大 adc。将两者的差值记为 ADC 差值。这些 ADC 值作为肿瘤分级的参数，并通过 Kruskal-Wallis 检验和 receiver operating characteristic (ROC)曲线分析进行比较。结果:根据 ROC 曲线对肿瘤分级的鉴别分析，最小 adc 在 ROC 曲线下面积最大。最小 adc 最优地帮助区分界限值为 1.47 x 10-3 mm2/秒的 1 级肿瘤和界限值为 1.01 x 10-3 mm2/秒的 4 级肿瘤。001 对)。ADC 值的差异有助于区分 2 级和 3 级肿瘤，utoffi 值为 0.31 x 10-3 mm2/sec (P<.001)。采用上述最小 ADC 值和 ADC 差值联合截断值(双参数法)对肿瘤分级时，得到阳性预测值为:1 级肿瘤 73%(11 例中有 8 例);2 级肿瘤，100% (5 / 5);3 级肿瘤 67%(12 例中有 8 例)，4 级肿瘤 91%(22 例中有 20 例)结论:采用最小 ADC 值和 ADC 差值(双参数法)相结合的方法，可以准确地分级星形细胞瘤 RSNA 2009

PU-2066
颅内孤立性纤维性肿瘤/血管外皮瘤影像学表现

吴文菁
中国科学技术大学附属第一医院/安徽省立医院

目的 探讨 CT、MRI 在颅内孤立性纤维性肿瘤/血管外皮瘤（SFT/HPC）的影像学特征。方法 搜集我院经手术病理证实为颅内 SFT/HPC 15 例，结合临床、病理资料探讨其影像学特征。结果 1、基本信息：男 4 例，女 11 例，年龄 29~76 岁，平均（52.9±11.9）岁， 15 例行 MRI 平扫及增强，9 例行 CT 平扫。2、临床表现：主要表现为头痛头晕、肢体乏力，2 例分别以视力下降、耳鸣为主要表现[1]。3、影像学表现：肿瘤位于颞部 5 例、额部 2 例、小脑半球 2 例、另桥小

脑角、鞍旁、大脑镰、枕部、颞顶部、顶部各 1 例；肿瘤最大径平均值（5.1±2.1）cm；11 例边界尚清晰；2 例无灶周水肿，11 例轻度水肿，3 例重度水肿；WHO I、II、III 级分别 1 例、11 例、3 例，术后复发病例 5 例，其中 3 例 WHO III 级均为复发病例；CT 平扫病灶以稍高密度为主，较大者可伴囊变低密度；MR 平扫 T2WI 中 8 例病灶可见皂泡样小囊状高信号区；MR 增强扫描所有病例均明显强化，囊变区不强化，8 例可见脑膜尾征。4、病理学表现：肿瘤细胞呈梭形，排列密集，其间见裂隙样血管，内衬扁平内皮。结论　SFT/HPC 发病率低，好发女性，以头痛头晕为主要临床表现，多为低级别，边界尚清伴轻度灶周水肿，瘤体多较大[2]，级别高者易复发[3-6]，CT、MRI 平扫及增强与脑膜瘤有许多相似之处[3]，但 T2WI 中皂泡样改变有助于二者鉴别。

PU-2067
磁共振多期延迟增强扫描在肺癌脑转移中的对比研究

苏丽清,陈韵彬
福建省肿瘤医院

目的:本研究选择不同延迟增强时期对颅脑转移瘤的诊断进行对比评估。为肺癌治疗前分期患者评估颅脑转移瘤提供更合理的扫描方案。

材料与方法:连续对 2019 年 3 月-2019 年 8 月就诊于我院的肺癌治疗前分期患者行飞利浦 3.0T 磁共振检查。所有病人平扫+增强扫描并在注射钆喷酸葡胺结束后立即行横断位 T1WI FFE 序列扫描及 5 分钟、8 分钟、12 分钟和 15 分钟时行轴位 TI FFE 扫描。对所有图像评估，评估内容为病灶实性、边缘及总体转移，同时对所有转移病测量大小及相对应的 SNR（信号噪声比）、CNR（强化噪声比）、CE（强化程度）、CER（强化程度比）和 CBR（强化脑比）值。将五组不同时相的颅脑转移瘤 SNR、CNR、CE、CER、CBR 的比较采用重复测量设计方差分析，评价指标间对照研究使用配对 t 检验，检验标准 α 值=0.05;所有数据采用 $\bar{x} \pm s$ 均数和标准差表示，以 P＜0.05 为差异具有统计学意义。

结果:病灶数目统计即时期、5 分钟与 8 分钟、12 分钟和 15 分钟的结果有统计学意义（P＜0.05），但 8 分钟、12 分钟 15 分钟的各期之间没有统计学意义（P＞0.05）。SNR 在各期间没有统计学意义。CNR、CE、CER 在即时期、5 分钟与其他三期有统计学意义（P＜0.05），病灶实质和边缘评分在 15 分钟时与其他各期可见统计学意义。

结论　在肺癌脑转移患者行磁共振增强扫描中，至少延迟 8 分钟扫描有利于提高病灶的显示率，延迟时间的进一步增加有利于病灶实质及边缘的显示，值得临床推广应用。

PU-2068
MRI 常规序列纹理分析预测垂体大腺瘤术后复发或进展的价值

刘杨颖秋,苗延巍
大连医科大学附属第一医院

目的

评估垂体大腺瘤患者术前 MRI 常规序列纹理特征对于预测肿瘤术后复发或进展的价值，并探求预测垂体大腺瘤术后复发或进展的影像标志物。

方法

回顾性分析 2014 年 8 月-2018 年 10 月在本院进行手术且经 MRI 复查确诊肿瘤复发或进展的 14 例垂体大腺瘤患者的术前 MRI 资料（复发或进展组），同时收集同期在本院进行手术且在 2019 年 7 月之前经 MRI 复查未发现肿瘤复发或进展的 14 例垂体大腺瘤患者（未复发或进展组）。采用 GE 3.0T 进行扫描，选择矢状位 T2WI、冠状位 T1WI 上肿瘤的最大层面勾画 ROI，ROI 包含此层面全部肿瘤实质，并避开囊变、出血、坏死区，记录 56 个纹理特征。应用 SPSS 20.0 进行统计学分析。

结果

1、有 9 个 T1WI 信号值纹理特征在两组间有显著差异，分别是 Quantile5, Quantile10, Sum Average, Short Run Emphasis, Long Run Emphasis, Grey Level Nonuniformity, Surface Area, Compactness, Max 3D Diameter，其中以 Long Run Emphasis, Short Run Emphasis 和 Compactness 鉴别二者的 AUC 最佳，分别为 0.867、0.847 和 0.811；

2、T2WI 信号值纹理特征中，Short Run Emphasis 在两组间有显著差异，其鉴别二者的 AUC 为 0.74；

3、Logistic 多元回归分析结果显示 Quantile5, Quantile10, Short Run Emphasis, Long Run Emphasis, Max 3D Diameter 是垂体大腺瘤术后复发或进展的独立影响因素。

结论

MRI 常规序列纹理特征可以预测肿瘤术后复发或进展的风险，冠状位 T1WI 信号值 Long Run Emphasis 和 Short Run Emphasis 可以作为术后复发或进展的较好的影像标志物。

PU-2069

桥小脑角区占位性病变的 MRI 诊断分析

孙文萍
上海交通大学附属第六人民医院

目的 通过对桥小脑角区占位性病变的 MRI 表现进行分析，进一步提高对该区占位性病变的诊断及鉴别诊断水平。

方法 对手术病理证实的 35 例桥小脑角区占位性病变的 MRI 表现进行回顾性分析，对病变的形态、信号及强化情况进行系统化分析。

结果 36 例病变中，听神经瘤 18 例，MRI 表现为 T1WI 为等或等、低混杂信号,T2WI 为高信号，肿瘤边界清晰，囊变多见，增强扫描肿瘤实性部分明显强化，囊变部分无强化，肿瘤沿听神经孔向外生长。脑膜瘤 9 例，起源于岩锥尖部的脑膜，基底宽，与岩骨呈钝角相连，MRI 表现为 T1WI 等低，T2WI 等高，肿瘤边界清楚，增强扫描呈明显均匀强化，桥小脑角池有扩大。表皮样囊肿 3 例，形态不规则的囊性病变，T1WI 低，T2WI 高信号，FLAIR、DWI 呈高信号，增强扫描无强化，病变具有“见缝就钻”的生长特点。三叉神经瘤 2 例，MRI 表现为 T1WI 等或低、T2WI 高信号，囊变坏死多见，增强扫描肿瘤实性部分 明显强化，骑跨中后颅窝为其生长特点。蛛网膜囊肿 2 例，MRI 表现为 T1WI 低、T2WI 高，FLAIR 低信号，DWI 呈低信号，需与表皮样囊肿鉴别。血管母细胞瘤 1 例，典型表现为囊性灶，边缘有附壁结节，增强扫描囊性部分无强化，结节明显强化。转移瘤 1 例，有肺癌病史，MRI 表现为右侧小脑半球靠近桥小脑角区见 T1WI 低、T2WI 高信号影，增强扫描成多环形明显强化，边缘水肿明显。

结论 MRI 检查对桥脑小脑角区占位性病变的定位及定性有重要价值。

PU-2070

MRS 联合 ASL 在高级别脑胶质瘤假性进展诊断中的应用

秦丹蕾

山西医科大学第一医院

目的 探讨磁共振波谱分析技术(magnetic resonance spectroscopy，MRS) 联合动脉自旋标记技术(arterial spin labeling，ASL) 在高级别脑胶质瘤假性进展诊断中的应用。**方法** 回顾性分析我院 2013 年 1 月~2018 年 12 月高级别脑胶质瘤行手术及术后联合替莫唑胺放化疗 1-3 个月后 MRI 上出现水肿及增强范围扩大者 36 例，应用 MRS 分析病灶局部代谢产物及其比值情况，ASL 分析病灶局部血流情况。评价 2 种方法在高级别脑胶质瘤假性进展诊断中的意义。**结果** 36 例患者中，经二次手术病理或随访 10 月以上证实 28 例为假性进展，8 例为肿瘤复发。单纯应用 MRS、ASL 及二者联合正确诊断假性进展者分别为 19 例、23 例及 26 例。假性进展表现：MRS 图像 Cho /Cr 下降及 NAA/Cr 下降，ASL 出现病变区低灌注；肿瘤复发表现：MRS 图像 Cho /Cr 升高及 NAA/Cr 下降，ASL 出现病变区高灌注。**结论** 联合应用 MRS 及 ASL 分析可较好地诊断胶质瘤假性进展，具有良好的临床应用前景。

PU-2071

氧化石墨烯用于肿瘤成像和治疗一体化研究

乔志星
1.山西医科大学第一医院
2.山西医科大学 医学影像学系

癌症，是中国城市居民的头号杀手，在农村居民死因中也位居第二。尽管有许多技术可用于诊断和治疗，但这些方法仍然具有许多缺点。传统的临床诊断成像技术，如 CT 成像、磁共振成像、核素 PET 成像等，难以实现早期微小肿瘤病灶的检测，而发现时已处于癌症的中晚期，往往救治存活率较低。因此，在癌症刚刚发生的早期阶段，准确诊断出来可以极大地提高癌症病人的存活率；肿瘤的早期成像对于癌症病人的临床诊疗具有十分重要的意义。同时，传统的化学疗法、放射疗法以及外科切除手术等在治疗癌症时往往存在许多局限，如由于到达肿瘤部位的药物剂量不足导致的疗效不佳；因非特异性的抗癌药物递送导致的毒副作用；长期单一疗法导致的药物耐受；以及不完全的外科手术切除导致的肿瘤复发。光学疗法作为一种新的抗癌方式，通过特定的光照来消除肿瘤，利用纳米载体能够将光学制剂靶向的输送到肿瘤组织，将对正常器官的损伤降到最低。氧化石墨烯及其衍生物展示出极好的作为新型肿瘤诊断、成像及治疗纳米试剂的潜能，实现肿瘤的诊断和治疗一体化。

成人颅内原始神经外胚层肿瘤影像诊断及鉴别诊断

王佳宁[1],耿左军[2],殷小平[1],邢丽红[1]
1.河北大学附属医院
2.河北医科大学第二医院

目的 探讨成人颅内原始神经外胚层肿瘤（PNET）的 MRI 特征，提高对本病的术前确诊率。**方法** 回顾性分析 7 例经病理证实的 PNET 患者的影像资料，包括 CT 平扫、MRI 平扫及增强、弥散加权成像（DWI）、三维动脉自旋标记成像（3D-ASL）、磁共振波谱成像（MRS）。**结果** 7 例均为单发，肿瘤体积较大，类圆形，可有浅分叶。2 例有明显瘤周水肿，2 例有轻度瘤周水肿，3 例无瘤周水肿。平扫呈稍长 T1 稍长 T2 信号，5 例为囊实性，2 例为实性，3 例有出血。5 例 DWI 均呈高信号，2 例 3D-ASL 呈高灌注。增强后肿瘤实质部分呈明显均一或不规则环形强化。 3 例发生颅内转移，2

例发生肺部转移。**结论** PNET 缺乏典型的影像征象，MRI 平扫及增强可准确显示肿瘤的位置、大小、信号、边缘及与周围组织的关系，而 DWI、3D-ASL 及 MRS 等多种功能成像方法的综合分析有助于 PNET 的诊断及鉴别诊断。磁共振对 PNET 的诊断及治疗有重要价值。

PU-2073
基于常规 MRI 图像的影像组学对脑胶质瘤术前分级的临床价值

虞芯仪
南京医科大学附属无锡人民医院

【目的】
研究基于常规 MRI 多序列图像的影像组学对脑胶质瘤术前分级的效能及临床价值。
【方法】
回顾性连续性纳入行术前常规 MRI 检查并经手术病理证实的 144 例脑胶质瘤（*WHOII* 级 45 例，III 级 52 例，IV 级 47 例）。利用 ITK-SNAP 在 MR 图像上手动勾画肿瘤容积为感兴趣区（ROI 包括了肿瘤瘤体除囊变坏死以外的实性部分及肿瘤周边的水肿部分），采用影像组学工具针对训练集病例图像提取 4432 个量化特征，删除低方差特征，对剩余特征值通过 Mann-Whitney U 检验，删除在不同级别胶质瘤之间差异无统计学意义的特征。通过绘制受试者工作特征曲线计算各特征的效能及确定胶质瘤分级的最佳临界值。选取 ROC 曲线下面积较高且经多重排列组合测试，具有较高诊断效能的数个最优特征，采用决策树模型方法，构建基于训练集病例的胶质瘤分级预测模型，采用 ROC 曲线在验证集病例上对模型进行验证。
【结果】
（1）高级别与低级别胶质瘤的鉴别：低级别胶质瘤 DWI 序列的偏度值（$Skew_{DWI}$）、Flair 序列的长期高灰度水平强调值（Emp_{Flair}）、熵值（Ent_{Flair}）、中位数（Med_{Flair}）、T1WI 增强序列的标准差值（$SD_{T1WI-CE}$） 均小于高级别胶质瘤（$p<0.05$）。（2）II 级别与 III 级别胶质瘤鉴别：II 级别胶质瘤 Flair 序列的熵值（Ent_{Flair}）低于 III 级别胶质瘤（$p<0.05$）。（3）III 级别与 IV 级别胶质瘤的鉴别：III 级别胶质瘤 T1WI 增强序列的标准差（$SD_{T1WI-CE}$）、T2WI 序列的熵值（Ent_{T2WI}）比 IV 级别胶质瘤低，III 级别胶质瘤 T1WI 增强序列的延伸率（$Elo_{T1WI-CE}$）较 IV 级别胶质瘤高，差异均有统计学差异（$p<0.05$）。

PU-2074
颅内 DWI 低信号表皮样囊肿一例

吴迪
昆明医科大学第一附属医院

典型 MRI 表现为 T1WI 略高于脑脊液的均匀低信号，T2WI 呈均匀高信号，增强扫描多数肿瘤无强化，其特征性表现为 DWI 高信号。此外，FLAIR 序列由于脑脊液 T2 高信号，可以显示出沿脑池形状塑形生长的表皮样囊肿，也有助于对病变的诊断。典型的表皮样囊肿根据发病部位、生长方式及 MRI 表现诊断并不困难，然而本病例中肿瘤信号与常见者完全不同，呈短 T1、T2 信号及 DWI 低信号表现

PU-2075

椎管内孤立性纤维瘤 CT/MRI 表现

陈优,何来昌,谭永明,占雅如
南昌大学第一附属医院

目的 探讨椎管内孤立性纤维瘤（SFT）的 CT 与 MRI 表现，旨在提高临床诊断率。 **方法** 回顾性分析 5 例经病理证实椎管内孤立性纤维瘤的临床、影像及病理资料。 **结果** 5 例椎管内 SFT，均为单发肿块，颈段 2 例，胸段 1 例，腰段 2 例。4 例位于髓外硬膜下，1 例髓外硬膜外，其中 3 例边界清楚，2 例肿块边界不清。3 例 MRI 平扫呈均匀等 T1 等 T2 信号，2 例平扫病灶信号欠均匀伴病灶内条状囊变区，其中 1 例呈等 T1 稍长 T2 信号，另 1 例呈等 T1 等稍短 T2 信号。5 例增强扫描均呈明显强化，2 例囊变区不强化。仅 1 例可见“脊膜尾征。1 例硬膜外病变 CT 平扫上示 C2-3 段椎管右侧及附件区的等密度软组织肿块，沿相应椎间孔生长，局部骨质膨胀性吸收改变。 **结论** 椎管内 SFT 在影像学上多表现为椎管内规则或不规则肿块，密度/信号较均匀，肿块 CT 上多呈等或稍高密度，临近骨质可有膨胀性吸收改变。MRI 上 T1WI 多呈等信号，T2WI 多呈等或低信号，部分可有囊变，增强表现为明显强化，部分可有“脊膜尾征”。

PU-2076
颅内多发钙化性转移的 CT 与 MRI 影像特征分析(附 6 例报告)

梁高,宫宁,谢明国
成都中医药大学附属医院

目的 分析颅内多发钙化性转移的 CT、MRI 影像特征性表现和临床特点，总结提示颅内多发钙化性转移的 CT 与 MRI 影像特征以提高本病的诊断认识，为临床提供参考。**方法** 回顾性分析 6 例颅内多发钙化灶患者临床、CT、MRI 影像资料。 **结果** 病灶从点状到结节状大小不等的多发散在于颅内，分布在幕上者 1 例，幕上和幕下同时发现者 5 例，其中幕下脑干、小脑半球均可见者 2 例，位于小脑半球者 3 例。6 例患者头颅 CT 平扫中所有病灶呈稍高、高密度，CT 值最低约 42HU，最高可达 507HU，3 例增强扫描中 2 例未见强化，1 例可见强化，4 例病灶周围未见水肿，1 例于双侧顶枕叶病灶周围轻度水肿，1 例左侧侧脑室旁病灶周围轻度水肿；3 例患者复查中发现病灶大小、分布均呈再生长状态，原稍高密度灶更加致密，密度升高，CT 值升高约 10HU-110HU，病灶周围水肿未见变化。3 例患者行 MR 检查，2 例 T1WI 像呈低信号，T2WI、FLAIR 像呈稍高信号，增强见多个强化结节；另 1 例常规序列未能发现病灶，DWI 序列部分病灶呈低信号。 **结论** 颅内多发钙化性转移是一种少见的颅内转移类型， CT、MRI 表现有一定的特征性，尤其是短期内 CT 随访，结合病史资料有助于提高本病早期诊断及鉴别诊断。

PU-2077
磁共振弥散加权成像在胆脂瘤中的应用

王珍
徐州医科大学附属医院

目的 研究 MRI-DWI 检查对胆脂瘤的诊断价值。
方法 回顾性分析我院 10 例经病理证实的胆脂瘤患者的磁共振平扫、增强和 DWl 图像表现、特征。

结果 病变的好发部位在桥小脑角区，病灶为类圆形或不规则形，平扫 8 例表现为长 T1 长 T2 信号影，2 例表现为 T1，T2 的混杂信号；增强扫描病灶均无强化病灶 DWI 均表现为高信号。
结论 胆脂瘤在 DWI 上的特征性表现，有助于胆脂瘤的诊断以及与其他肿瘤的鉴别诊断。

PU-2078

嗅神经母细胞瘤的 MRI 影像学表现

冉雄,李康,周绍权
中国科学院大学重庆医院（重庆市人民医院）

摘要：目的探讨嗅神经母细胞瘤的 MRI 影像学表现，以提高对该病的诊断认识。
方法 收集我院 2015—2018 年期间 11 例经病理确诊为嗅神经母细胞瘤，回顾性分析嗅神经母细胞瘤的 MRI 影像资料。11 例全部行 MRI 平扫及增强扫描，采用 Siemns Trio Tim 3.0T 磁共振成像扫描仪，常规行 SE 序列，扫描方向为横断面、冠状面和矢状面。MR 对比剂为钆喷酸葡甲胺，剂量 0.1mmol / kg。根据 Kadish 分期标准，肿瘤局限于鼻腔者为 A 期，鼻腔肿瘤侵犯鼻窦者为 B 期，肿瘤超出鼻腔或鼻窦，侵及眼眶、颅内，并 / 或有颈部及远处器官转移为 C 期。对所有 MRI 资料进行回顾性分析与分期，并将分析结果与手术与病理进行对照。
结果 11 例中 8 例肿块中心位于鼻腔顶部的中后方，1 例位于鼻腔顶部的前方，1 例占据整个鼻腔，1 例位于鼻咽部。肿瘤形态和信号大小不等，形态不一，8 例形态不规则，边界不清；3 例形态规则，边界较清楚。肿块信号多不均匀，明显强化。中央夹杂可能是出血或坏死，1 例见囊变。增强后 11 例明显快速不均匀强化，2 例中度不均匀强化，1 例中度均匀强化。肿瘤侵犯筛窦 9 例、颅内 8 例、眼眶 7 例、蝶窦 5 例、鼻中隔上部 5 例、上颌窦 4 例、额窦 3 例、翼腭窝 2 例、鼻咽 2 例、斜坡 1 例。肿瘤阻塞鼻窦开口引起窦腔内黏液潴留与阻塞性炎症，增强后不强化；突入眼眶引起眼球突出 4 例；鼻咽部肿瘤阻塞咽鼓管引起中耳乳突炎 1 例；额叶水肿 2 例。与 9 例手术者的手术所见进行对照，7 例 MRI 显示额叶硬脑膜增厚强化并手术者，眼见 6 例硬脑膜粗糙受累，2 例光滑而认为未受累。
结论 鼻腔顶部的中后方肿块并穿越筛板侵犯嗅沟区，是嗅神经母细胞瘤的特征性改变；MRI 可准确显示肿瘤的部位和侵犯范围，可为临床分期和制订治疗方案提供依据。

PU-2079

中枢神经系统淋巴瘤的不典型 MRI 表现

曹璐
大医附二

目的 分析中枢神经系统淋巴瘤（central nervous system lymphoma，CNSL）的不典型 MRI 表现，增加对中枢神经系统淋巴瘤不典型 MRI 表现的认识。**方法** 回顾性分析我院经手术或穿刺病理活检证实的 23 例不典型中枢神经系统淋巴瘤 MRI 资料，通过发病部位、病灶信号、强化方式以及周围水肿程度分析其特征。**结果** 23 例患者共有病灶 58 个，10 例多发，13 例单发。不典型的发病部位（大脑半球表浅区 11 个、小脑半球 10 个、脑室内 4 个）；不典型表现主要为：病灶内信号（出现坏死 21 个，出血 1 个，DWI 信号：7 个表现为等低信号，3 个表现为混杂信号）；强化方式（22 个病灶不均匀强化，其中 12 个病灶表现为环形强化）；肿瘤周围水肿（重度 18 个）。**结论** 中枢神经系统淋巴瘤不典型 MR 表现可以表现为部位、信号、水肿、强化等各个方面，具有一定的特征，随着中枢神经系统淋巴瘤的发生率增加，正确认识其不典型表现有助于提高诊断的准确率。

PU-2080
自组装药物用于双模态成像指导下的耐药肿瘤的协同治疗

高海燕,白岩,陈丽娟,王梅云
河南省人民医院

一．研究目的

多药耐药性（MDR）是肿瘤细胞耐药的常见方式，也是肿瘤化疗失败的主要原因。肿瘤细胞的多药耐药性是由于细胞膜上过度表达外排抗肿瘤药物的蛋白引起的，如 P-糖蛋白的过度表达。癌症疗的方式多种多样，包括手术，化疗，放疗，免疫治疗等等。其中，化疗由于具有高效率，依然占据主导地位。此外，光热治疗，作为新兴的治疗方式，由于具有非侵袭性，近年来受到广泛关注，其原理是利用光热材料吸收近红外光产生热对癌细胞进行杀伤。单治疗模式很难将肿瘤彻底清除，将两种及两种以上治疗方式结合，可有效的解决单治疗方式的局限性。此外，在治疗过程中，跟踪药物的递送过程，评价治疗效果是及其重要的。研究人员将关注点越来越集中在成像模式上。单模态成像仍然受到组织穿透深度、低对比度、低灵敏度等限制，多模态成像作为一种新的成像模式，有望弥补单模态成像的内在局限性，对肿瘤的治疗有潜在的指导意义。

二．研究方法

（1）吲哚菁绿均匀溶解于水中，得到吲哚菁绿水溶液。
（2）阿霉素均匀溶解于水中，得到阿霉素水溶液。
（3）TPGS 均匀溶解于水中，得到 TPGS 水溶液。
（4）将所述（1）、（2）、（3）试剂混合，避光恒温振荡 12 h.离心，纯化后采用锡箔纸包裹进行避光。

三．研究结果

ICG 和 Dox 可以自组装成一个完整的 ICG-Dox 纳米药物结构，当加入 TPGS 之后，纳米药物分散更加均匀，形态更加规则，纳米药物在 780nm 的紫外吸收明显增强，具有非常明显的荧光及光声增强效果。纳米药物具有明显的杀伤肿瘤的效果。

四．研究结论

本文中双模态成像纳米药物自递送系统，成分简单安全，结构稳定并展现出增强的荧光效果和良好的生物安全性，同时利用 TPGS 乳化的纳米药物对耐药细胞外排微环境的影响。从而达到在影像的指导下，追踪药物的递送过程，实现对耐药肿瘤的协同杀伤效果。

PU-2081
VHL 综合征影像学及临床诊断-附家族性 4 例患者报告

许硕果,廖海波,张雪峰
深圳市宝安区中心医院

目的 探讨 VHL 综合征的影像学表现及发病特点。
方法 回顾性分析家族性 4 例 VHL 综合征患者的影像学资料及临床资料。
结果 收集家族性 4 例 VHL 综合征病例。患者一，女性，19 岁，半年内多次晕厥，腹部 CT 及 MRI 检查胰腺多发囊肿，颅脑 MRI 平扫及增强检查左侧小脑半球囊实性病灶，手术病理为血管母细胞瘤。患者二，男性，42 岁，患者一父亲，外院手术病理证实右肾细胞癌，另胰腺多发囊肿，影像学资料显示十余年无明显变化。患者三，男性，37 岁，患者一叔叔，右肾细胞癌和左侧小脑半球血管母细胞瘤，均行手术切除。患者四，女性，患者一祖母，2011 年去世，病历资料显示双肾及胰腺多发囊肿，延髓血管母细胞瘤，死因为脑肿瘤复发。

结论 VHL 综合征（von Hippel-Lindau syndrome，VHL）是一种常染色体显性遗传病，表现为中枢神经系统、视网膜血管母细胞瘤及腹部脏器肿瘤性病变、囊性病变等，基因学证实由第 3 号染色体变异所致，呈家族性分布，如确诊本病，应建议其直系亲属进行相关影像学及基因学检查。

PU-2082

CT 与 MRI 检查在颞骨段面神经鞘瘤术前评估的价值

姜涛
天津市第三中心医院

目的 探讨 CT 及 MRI 检查对颞骨段面神经鞘瘤术前评估的应用价值。
方法 回顾性分析 17 例经手术病理证实的颞骨段面神经鞘瘤的患者临床资料，17 例患者均行 MRI 平扫及增强扫描，其中 8 例同时行 CT 平扫及增强扫描。将术前 CT 与 MRI 检查情况与术中探查情况进行对比研究。
结果 17 例面神经鞘瘤患者 11 例位于左侧，6 例位于右侧，病变单独累及迷路段 12 例，鼓室段 3 例，乳突段 2 例；累及迷路段+鼓室段 7 例，鼓室段+乳突段 5 例。3 例肿瘤与面神经可见分界，其余 10 例均未见明显分界，6 例可见乳突及外耳道软组织肿块，与手术探查情况基本相同。
结论 CT 及 MRI 相互结合可以准确地显示颞骨段面神经鞘瘤的位置和形态及周围情况，可以作为面神经鞘瘤术前评估的首要检查方法。

PU-2083

首发精神障碍的脑肿瘤患者的影像学特征

李萍
西安市精神卫生中心

目的 探讨首发精神障碍的脑肿瘤患者的影像学特征，加深精神科医师排查器质性疾病重要性的认识
方法 回顾总结本院 15 例首发精神障碍的脑肿瘤患者的 3T MRI 图像，所有病例均行轴位 T1、T2，冠位以及轴位 T2FLAIR，矢状位 T1WI、DWI 及 ADC、3D-ASL、MRS、SWI 及 MRI 增强检查，对其所在部位、影像学表现及精神症状进行分析，复习相关文献
结果 脑肿瘤所在的位置致使相应的脑功能区域损害或者压迫而产生相应的精神症状，额叶的肿瘤、颞叶的肿瘤、第三脑室附近的肿瘤、胼胝体肿瘤、垂体肿瘤这些部位的肿瘤多引起精神障碍而且症状出现较早或者首先出现精神症状
结论 MRI 是精神科排查器质性疾病首选的检查方法

PU-2084

探讨磁共振 3D-SAPCE 序列联合图像融合技术在垂体大腺瘤术前评估中的应用价值

聂吉林,周高峰
中南大学湘雅医院

目的 评价磁共振 3D-SPACE（三维可变翻转角快速自旋回波）序列联合图像融合技术对于垂体大腺瘤术前评估中的应用价值。**方法** 收集 43 例我院术后证实为垂体大腺瘤患者 MRI 数据，包括采集常规 MRI 平扫增强序列，3D-SPACE T2WI、增强后 3D-SPACE T1WI 序列影像数据。将 3D-SPACE T2WI 与增强后 3D-SPACE T1WI 序列进行图像融合，并对融合后图像进行多平面重组。由两名放射科高级职称医生按照三级评分制对所有序列的图像进行评估。评估内容包括肿瘤的大小、边界，对海绵窦血管及颅神经的侵袭程度，并以术中显示结果作为金标准，采用配对 t 检验比较不同序列显示垂体病灶的优劣势，$P < 0.05$ 认为差异有统计学意义。**结果** 以术中观察结果为金标准，3D-SPACE 及融合后的 3D-SPACE 序列在显示肿瘤大小、边界及与周围血管及神经关系方面均优于常规 MRI（$P<0.05$，$P<0.01$）；融合后图像在显示肿瘤大小、边界与单独 3D-SPACE 序列相比无显著优势（$P>0.05$），而在显示肿瘤与血管及颅神经关系上有显著优势（$P<0.05$，$P<0.01$）。**结论** 磁共振 3D-SAPCE 序列联合图像融合技术对于垂体大腺瘤术前确定肿瘤大小、边界及评估肿瘤对血管神经的侵袭程度明显优于常规磁共振序列，显示肿瘤与血管及颅神经关系上明显优于单独的 3D-SPACE 序列，对于手术前的风险评估及手术方案制定有着良好的应用前景。

PU-2085
磁共振弥散与灌注成像技术在评估胶质瘤遗传学特征中的价值

张巨
华中科技大学同济医学院附属同济医院

目的 探索单指数模型弥散加权成像（DWI）、双指数模型 DWI、拉伸指数模型 DWI、弥散峰度成像（DKI）、以及动脉自旋标记（ASL）成像的主要影像学指标与胶质瘤常见的遗传学变异间的联系。
材料与**方法** 连续收集 32 名胶质瘤患者的影像数据与组织。影像测值包括表观弥散系数（ADC）、真弥散系数（D）、伪弥散系数（D*）、灌注分数（f）、分布弥散系数（DDC）、异质性指数（α）、平均弥散率（MD）、各向异性分数（FA）、平均峰度（MK）、脑血流量（CBF）。相应组织被用于常规组织学检查以及 71 个肿瘤相关遗传学标志物的检测。变异例数达可靠统计要求者被进一步分析。Mann-Whitney U 检验用于比较遗传指标变异与未变异的胶质瘤间各影像学参数的差异，受试者工作特征曲线（ROC）分析被用于评估各参数辨别胶质瘤遗传学特征的能力。所有影像学指标与对侧影像表现正常的白质行标准化后，以同样方式进行分析。
结果 8 项遗传学指标的变异例数达到统计分析要求，除 DDC 和 CBF 外，所有参数在 IDH 突变型与野生型的肿瘤间均存在显著差异；1p/19q 联合缺失阳性与阴性的肿瘤间无参数存在显著差异；CBF 在 TERT 基因启动子突变与未突变的胶质瘤间存在显著差异；ADC、f、α、FA 在 ATRX 基因突变与未突变的肿瘤间存在显著差异；FA 在 MGMT 基因启动子甲基化阴性与阳性的肿瘤间存在显著差异；D、f、α、MD、CBF 在 TP53 基因突变与未突变的肿瘤间存在显著性差异；f、MD、FA、CBF 在 EGFR 基因正常与扩增的肿瘤间存在显著性差异；MD、CBF 在 PTEN 基因突变与未突变的肿瘤间显著性差异（上述显著性差异均指 $P < 0.05$）。所有具有显著性差异的参数在区分相应遗传学特征时均表现出可接受或更高水平的辨别力（ROC 曲线下面积 > 0.7，$P < 0.05$）。
结论 携带不同遗传学特征的胶质瘤，其组织的弥散、灌注具有不同的偏向性。

PU-2086
基于分子分型的颅内弥漫性大 B 细胞淋巴瘤 MRI 特点研究

王政,王梅云
河南省人民医院

摘要：目的 回顾性分析 72 例颅内弥漫性大 B 细胞淋巴瘤的 MRI 资料及病理免疫组化结果，讨论其临床资料、MRI 特点与免疫组化分型的相关性。**方法** 收集病理诊断为颅内弥漫性大 B 细胞淋巴瘤，并具有完整免疫组化结果及术前 MRI 资料齐全的患者共 72 例，根据该肿瘤分子水平的 Hans 分型，将患者分为生发中心型及非生发中心型两组。讨论临床资料、一般影像学特征、定量影像学指标及分子分型之间的相关性，使用软件 SPSS 17.0 对各组指标进行统计分析。**结果** 在 72 个病例中，生发中心型组为 13 例（18.1%），非生发中心型组占 59 例（81.9%）。经 t 检验，发病年龄方面，生发中心组型平均发病年龄为 61.31±12.39 岁，非生发中心型组为 49.86±13.88 岁，差异有统计学意义($P<0.05$）。经 x^2检验，发病部位方面，生发中心型组较非生发中心型组更易累及深部结构,差异有统计学意义（$P<0.05$）。病变占位效应方面，生发中心型组较非生发中心型组轻,发生于大脑深部结构的病变轻于大脑凸面者，差异均有统计学意义（$P<0.05$）。经 *Mann-Whitney U*检验，定量影像学指标水肿指数在分子分型组间存在统计学差异（$P<0.05$）；发生于大脑深部结构与大脑凸面的病灶总体积及瘤周水肿体积存在差异（$P<0.05$）；肿瘤占位效应程度与定量影像学指标病变总体积、瘤体体积及肿瘤强化体积具有相关性（$P<0.05$）；肿瘤内是否发生坏死囊变出血改变与瘤体体积间具有相关性（$P<0.05$）。**结论** 弥漫性大 B 细胞淋巴瘤的临床及影像学特点具有一定的特征性。定量影像学方法的应用，使我们对该肿瘤分布特点、占位效应的程度、发生坏死出血囊变与否同肿瘤径线的关系有了更为直观的认识。年龄、深部结构是否受累和水肿指数三项指标与弥漫性大 B 细胞淋巴瘤的免疫组化 Hans 分型间的相关性，为我们揭示弥漫性大 B 细胞淋巴瘤影像学特点与分子病理学相关性研究的潜在价值。

PU-2087

白血病颅内浸润的 MRI 诊断价值

张洪涛,周娟,盛复庚
中国人民解放军总医院第五医学中心南院区

目的 白血病细胞在中枢神经系统内大量繁殖为中枢神经系统白血病。白血病颅内浸润是中枢神经系统白血病的特殊类型，即影像学方法能够发现颅内白血病病灶。白血病颅内浸润仅有个案报道，且没有影像学分析。本文总结白血病颅内浸润 11 例，分析白血病颅内浸润的 MRI 影像表现，提高对白血病颅内浸润的认识及诊断水平。**方法** 回顾性分析我院 2009 年 02 月至 2016 年 7 月期间 11 例白血病颅内浸润患者资料，男性 6 人，女性 5 人，年龄 11～68 岁，平均年龄 37 岁。白血病脑实质浸润 4 例，急性淋巴细胞白血病 3 例，急性非淋巴细胞白血病 1 例；白血病脑膜浸润 7 例，急性早幼粒细胞白血病 2 例，急性淋巴细胞白血病 2 例，急性非淋巴细胞白血病、浆细胞白血病、急性髓性白血病各 1 例。11 例患者通过脑脊液检查，明确诊断中枢神经系统白血病，颅内病变通过对病灶的放疗、鞘内注射化疗药病变缩小或消失。比较病变的部位、范围及 T2WI、T1WI、DWI、T2Flair 及增强表现。**结果** 白血病颅内浸润表现为脑实质浸润或脑膜浸润，本文无脑实质及脑膜同时浸润的病例，有一例脑膜浸润伴多发颅骨浸润。脑实质浸润为多发实性病变，DWI 呈明显高信号，增强扫描明显强化，病灶周围有不同程度脑水肿。脑膜浸润大部为脑表面弥漫线样强化，部分脑膜强化较为局限，脑实质未见明确受侵。**结论** MRI 诊断白血病颅内浸润具有明显优势， MRI 对病变的发现、诊断具有重要价值，需要与白血病颅内感染鉴别。白血病患者出现中枢神经系统症状，首选 MRI 检查。

PU-2088

MR 弥散加权成像鉴定胶质母细胞瘤周高复发风险的水肿亚区的准确性研究

王玉婷[1],张金岭[2],周良健[2],刘艳[2],衡雪源[2],车峰远[2]
1.四川省医学科学院·四川省人民医院
2.山东大学附属临沂市人民医院

目的 高级别脑胶质瘤术后容易局部复发,是造成其生存率低下的主要原因。本研究旨在评估用 MR 弥散加权成像（DWI）鉴定胶质母细胞瘤周高复发风险的水肿亚区的准确性。
方法 对手术病理确诊胶质母细胞瘤的患者，于术后两周内行常规 MR 及 DWI 检查，作为基线影像资料，并于术后每 3 个月进行规律临床随访及影像学检查，纳入由影像及临床综合信息确定为肿瘤复发的患者。在 T1W 增强、T2W、flair 及 ADC 图上手动勾画感兴趣体积（volume of interest, VOI），包含肿瘤体积和水肿体积。复发前后的 MR 图像进行严格配准后，鉴别出肿瘤复发的水肿亚区（复发前表现为水肿、复发后表现为肿瘤的区域）与无肿瘤复发的水肿亚区。用配对 t 检验比较两种水肿亚区在基线图像的 ADC 直方图特征。对有显著差异的参数用勾画曲线下面积（AUC），评估鉴别的准确性。对有病理检查结果（MR T2W 图指导下活检）的患者检测瘤周水肿区是否存在肿瘤细胞浸润。
结果 鉴定并纳入 19 名胶质母细胞瘤术后复发的患者。复发的瘤周水肿亚区体积明显大于未复发水肿亚区（$p<0.001$）。复发与未复发水肿亚区的基线图像的最大 ADC 值、最小 ADC 值、ADC 均值标准差、ADC 图峰态系数有显著差异，p 值分别为 0.010, <0.001, <0.001 and 0.021。而两种水肿亚区基线图像的 T1W 增强的信号强度无显著差异。联合最小 ADC 值和 ADC 均值鉴别上述两种水肿亚区，AUC 为 0.818。有病理检查结果的 8 例患者中均确认瘤周水肿区有肿瘤细胞浸润。
结论 ADC 直方图特征为分析胶质母细胞瘤周的水肿亚区提供了比常规影像更多的重要参数，能较准确地鉴别出瘤周高复发风险的水肿亚区，有助于胶质母细胞瘤术后复发病灶位置的准确预测和早期诊治。

PU-2089

颅内恶性淋巴瘤的 MRI、CT 诊断和鉴别诊断

严培
贵州省第二人民医院(原:贵州省安宁医院)

目的 中枢神经系统恶性淋巴瘤（PCNSL ）临床上少见，约占颅内肿瘤发生率的 1% ，与其他颅内肿瘤在治疗手段上有较大差异，故治疗前正确诊断显得尤为重要。颅内单发淋巴瘤由于其影像学表现与其它中枢神经系统病变有类似重叠之处，导致误诊率较高。搜集 2015 年 8 月—2018 年 10 月期间 5 例脑淋巴瘤的 MRI 、 CT 检查及临床、手术和病理结果进行回顾性分析，以提高对本病的认识。
方法 5 例磁共振扫描均采用 GE1.5T 机型，常规 MRI 平扫及增强扫描，其中 2 例同时行 CT 横断位平扫加增强扫描。
结果 4 例肿块位于幕上，额叶 1 例，顶叶 1 例，颞叶 1 例，胼胝体膝部 1 例；幕下 1 例，位于小脑蚓部。 其中额叶病例未行任何治疗肿块自行消失，而在 2 年后复查见右顶叶 又出现新病灶。3 例淋巴瘤位于颅内靠近表面或近中线的部位， 2 例位于深部白质区。 肿块 T1WI 呈等或稍低信号，T2WI 呈等、低或稍高信号，信号均匀或不均匀，弥散加权成像，呈稍高或高信号。 增强扫描肿块明显强化，2 例呈圆形或椭圆形，3 例呈分叶状或不规则形，其中 1 例出现“脐凹征”，1 例“尖角征”， 1 例出现“指套征”， 1 例呈“脑回样”、“核桃仁样”强化。肿块 1.5cm×1cm—7cm×5.5cm 大小不等。 1 例肿块较脑表面，邻近脑膜疑受累。4 例瘤周水肿明显，

同侧脑室系统受压变窄， 其中 2 例同时接受 CT 扫描， CT 平扫均呈等密度或稍高密度肿块，与周围低密度水肿区分界清晰，肿块明显较均 匀 强 化 ，1 例 呈圆形或椭圆形，例形态不规则似出现“脐凹征”，肿块位于幕上， 无明显囊变、 坏死及钙化，病灶周 围见 中 一重 度低密度水肿影。病理学证实均为 B 细胞型非霍奇金淋巴瘤。

结论 颅内淋巴瘤的 MRI 、CT 表现虽具有多样性、重叠性，在部位、形态、信号或密度改变及强化形式仍具有一定的特征性，通过正确的影像鉴别分析，在术前作出定性诊断是可能的，这对于提示临床穿刺活检进一步明确诊断及指导选择治疗方案具有重要意义。

回顾性分析：常规 MRI 对原发性脑内淋巴瘤和高级别胶质瘤的鉴别诊断

陈延帆[1],邱乾德[2],吴海[1],刘绪明[1],严志汉[3]
1.温州市人民医院
2.乐清市人民医院
3.温州医科大学附属第二医院

摘要：目的 分析原发性脑内淋巴瘤（免疫功能正常）和高级别胶质瘤的 MRI 特征，并进行鉴别诊断，为临床诊断提供帮助。**方法** 回顾性分析我院及温州医科大学附属第二医院 2000 年至 2018 年经病理学诊断为原发性中枢神经淋巴瘤（PCNSL）和高级别胶质瘤（WHO III、IV 级）的病人的 MRI 表现，定量分析病灶的数目，大小，形态，位置，信号强度，增强特征，周边水肿及病灶坏死情况，并为其提供鉴别诊断的依据。**结果** 总共 37 例病人被确诊为 PCNSL，总共病灶 61 个。胶质瘤患者 45 例，总共病灶 48 个。病灶位置：PCNSL40.5%（15/37）为多发病灶，胶质瘤为 6.7%（3/45），P<0.001；幕上和幕下同时累及，PCNSL（24.3%，9/37），胶质瘤则无，P<0.001；大脑深部中心区累及，PCNSL 发生率为 50.8%高于胶质瘤 16.4%；大脑皮层或脑叶累及则胶质瘤的发生率为 62.1%高于 PCNSL 的 29.5%；病灶形态：两者皆表现为肿块型（直径大于 30mm）或结节型（直径小于 30mm），9.8%的 PCNSL（6/61）表现为不规则浸润型,胶质瘤则无，P<0.001；增强后 PCNSL 患者 70.1%表现为均匀强化，而 GBM 患者仅 4.3%表现为均匀强化；PCNSL 坏死率为 16.4%（10/61），胶质瘤 70.8%(34/48)存在坏死，P<0.001。 **结论** 常规形态学 MRI 能够在多数情况下能区分颅内高级别胶质瘤和 PCNSL。影像科医生仔细分析还是可以发现其中的一些特征性的改变，并以此来提高两者的鉴别诊断。

PU-2091
基于磁共振常规影像学特征评估高级别胶质瘤预后

胡译心
重庆市肿瘤研究所

材料与方法

1.研究对象：2009 年 1 月至 2016 年 12 月就诊于南方医科大学南方医院神经外科，经手术全切治疗并且经过病理确诊为高级别胶质瘤的患者。

2.研究**方法** 回顾性分析上述高级别胶质瘤患者的影像特征，包括瘤周水肿程度、水肿形态、坏死程度、强化程度、囊变、卫星灶及多灶性、水肿是否跨中线，肿瘤是否跨中线，中线移位置程度以及肿瘤的最大径，临床数据包括年龄、性别、KPS 评分以及术后行放、化疗治疗。分析上述特征对 PFS 的影响。

3.统计分析：采用 R 软件，单因素分析采用 Kaplan-Meier 生存分析，对上述各影像和临床特征对 PFS 的影响逐个进行分析，并采用 Log-rank 检验进行生存率比较；进一步将 P＜0.05 的特征纳入多因素分析模型，多因素分析采用 Cox 比例风险模型，采用逐步回归分析法，将 P＜0.05 的特征认定为无进展生存期的独立影响因素，并采用一致性指数 C-index 评估模型的精度。

结果

1.单因素分析**结果** 术后放疗、化疗、MR 图像上肿瘤囊变、多灶性、强化程度、坏死程度对患者 PFS 的影响存在显著性（P＜0.05）；

2.多因素分析**结果** 基于 MR 影像学特征构建的 Cox 比例风险模型中，肿瘤中度坏死、重度坏死以及肿瘤囊变为影响患者 PFS 的显著独立影响因素；在影像学联合临床资料构建的 Cox 比例风险模型中，肿瘤重度坏死、囊变、多灶性以及化疗为影响患者 PFS 的显著独立影响因素，多因素 Cox 比例风险模型分析中获得的 C-index 为 0.6546。

结论

1.高级别胶质瘤患者术后行放疗、化疗以及 MR 图像上肿瘤伴随囊变，是判断患者预后较好的有利支持因素。而 MR 图像上肿瘤伴随多灶性、坏死程度以及强化程度越重，是影响高级别胶质瘤患者预后的不利因素。其中术后化疗、肿瘤伴随囊变、多灶性、重度坏死是影响患者预后的独立影响因素。

PU-2092
原发性中枢神经系统淋巴瘤的少见影像学表现及其误诊分析

陈延帆[1],邱乾德[2],吴海[1],刘绪明[1],严志汉[3]
1.温州市人民医院
2.乐清市人民医院
3.温州医科大学附属第二医院

摘要：目的 归纳原发性中枢神经系统淋巴瘤的少见影像学表现特征，分析部分误诊病例，为临床诊断提供帮助。**方法** 回顾性分析温州市人民医院及温州医科大学附属第二医 2000 年至 2019 年经病理学诊断为原发性中枢神经淋巴瘤（PCNSL）患者 39 例，总共病灶 65 处，定量分析病灶的数目，大小，形态，位置，信号强度，增强特征，周边水肿及病灶坏死情况，总结归纳 PCNSL 的少见影像学表现，并对这些少见的、部分误诊病例进行分析。**结果** 少见的影像学表现包括：一、少见病灶位置：病灶位于皮层下 6 例，其中 4 例误诊为转移瘤；病灶位于灰质皮层 1 例；硬脑膜原发淋巴瘤 1 例；鞍区 1 例，误诊为侵袭性垂体瘤；脑室内 2 例。二、少见病灶形态、信号改变：，1、病灶呈斑片状、絮状异常信号，无具体肿块，病灶周边无或轻度水肿 3 例，均误诊为脱髓鞘疾病；2、病灶大片坏死 2 例，其中 1 例伴出血，均误诊为高级别胶质瘤；3、病灶轻度环形强化 1 例，误诊为脱髓鞘疾病。**结论** 具有不典型影像学表现的原发性中枢神经系统淋巴瘤诊断困难，极容易造成误诊，仔细分析其影像学特征、分类归纳，并总结误诊病例其鉴别诊断，可提高放射科医生对其诊断的准确性。

PU-2093
脑内神经中轴钙化性假瘤 1 例

邓锡佳
重庆市肿瘤医院

目的 分析 1 例脑内神经中轴钙化性假瘤影像特征。

方法 回顾性分析 1 例脑内神经中轴钙化性假瘤影像特征。患者，女，39 岁，因癫痫 9 年，头痛 2 月，加重伴左侧肢体乏力 3 周入院。查体：左侧上下肢肌力 3 级，肌张力高，腱反射亢进，病理征可疑阳性。影像学检查：头部 CT 示右侧额叶结节状钙化密度影，其边缘可见弧形囊变区，增强扫描病灶边缘及其内分隔可见强化；右侧额叶近中线区另见条形低密度影，其内见多发斑点、结节状钙化；MR 示右侧额叶两枚结节状混杂信号影，其内可见 T1W、T2W 低信号影及囊变区，范围分别约 2.5×2.4cm、1.0×0.8cm，形态不规则，周围见大片水肿带，增强扫描病灶边缘明显强化，病灶内部见多发斑片状强化；右侧侧脑室前角受压。
结果 行右额叶占位病变切除术，术中示其中一病灶位于右额叶近中线皮层下约 2cm，呈灰红色，质硬，内有大量致密钙化，边界较清楚，血供丰富；另一处病灶位于右额叶上回后份皮层下约 1cm，血供不丰富。镜下所见：送检组织示大片非折光性、嗜碱性基质物，伴有灶状间质钙盐沉着及骨化，周围有淋巴细胞、组织细胞浸润，星形细胞有增生。免疫组化：CD68(+)，EMA(+)，S-100(+)，CD34(-)，Olig-2(-)，Vim(+)，SMA(-)，NSE(+)，GFAP(+)， LCA(+)，CK(-)，CD5(-)，Bcl-2 散在(+)，CD34(-)，CD99(+)。病理诊断：纤维—骨化病变（钙化性假瘤）。
结论 神经中轴钙化性假瘤又称中枢神经系统纤维骨病变，是一种罕见的良性、非肿瘤性疾病，颅内及脊椎均可发病。患者多无特异性临床症状及体征。影像学上大部分病灶表现为单发孤立肿块，部分病灶显现为多发病变广泛累及周围组织。CT 均表现为高密度的钙化病灶。MRI 表现无特征性，多表现为 T1WI、T2WI 低信号，周围水肿不明显，增强后大多边缘或内部有不均匀强化。

PU-2094
DWI 与 DSC-MRI 联合应用鉴别脑胶质瘤术后复发与放射性坏死的诊断价值

吴奕君,徐霖,李梦婕
湖北省十堰市太和医院

目的 探讨弥散加权成像及动态磁敏感对比增强 MRI 在鉴别脑胶质瘤术后复发和放射性脑损伤中的临床应用价值。**方法** 回顾性分析 2016 年 1 月—2019 年 5 月在十堰市太和医院就诊的共 54 例胶质瘤术后放疗患者的临床及影像资料，其中胶质瘤复发 34 例，放射性脑损伤 20 例。分析 54 例患者的 T1 增强、DWI、 PWI 等磁共振影像资料，比较 T1WI 异常强化区与对侧脑白质区比值的相对表观扩散系数(rADC)、相对脑血容量 (rCBV)、相对脑血流量(rCBF)等参数，分析各参数在鉴别诊断中的价值。**结果** 20 例为放射性脑损伤（37.0%），34 例为胶质瘤复发（62.9%）。胶质瘤复发组 rADC 值明显低于放射性脑损伤组(P<0.05)，胶质瘤复发组 rCBF、 rCBV 值均明显高于放射性脑损伤组(P 均<0.05)；rADC＜1.57 时诊断胶质瘤复发敏感性 86.7%，特异性 72.9%；rCBV≥3.53 时，诊断胶质瘤复发的敏感性 76.5%，特异性 94.7%；rCBF≥2.16 时，诊断胶质瘤复发敏感性 94.1%，特异性 78.9%；当联合应用 rADC 和 rCBV 时，诊断胶质瘤复发的敏感性 94.7%，特异性 100%。**结论** DWI 及 DSC-MR 有助于鉴别胶质瘤复发和放射性脑损伤，两者联合应用可提高诊断准确性。

PU-2095
少突胶质细胞瘤 MRI 表现及 ADC 值、rADC 值与 Ki-67 增殖指数相关性分析

殷敏敏,徐丽艳,詹鹤琴,余永强
安徽医科大学第一附属医院

目的 分析 20 例少突胶质细胞瘤的 MR 表现，探讨少突胶质细胞瘤表观扩散系数（ADC）值、相对表观扩散系数（rADC）值与 Ki-67 增殖指数相关性，提高术前对该病的认识。**方法** 回顾性分析 20 例经手术病理证实的少突胶质细胞瘤，皆行常规 MR 扫描及功能扫描并测量相关 ADC、rADC 值；病理采用免疫组化染色并测量 Ki-67 表达情况，分析 ADC、rADC 值与 Ki-67 表达相关性。**结果** 20 例少突胶质细胞瘤中 7 例为Ⅱ级，13 例为Ⅲ级；随着病理等级增加，肿瘤呈向脑叶深部及跨脑叶生长，平扫肿瘤实质信号更为混杂，坏死囊变出血更为明显，周围水肿及强化更为显著。少突胶质细胞瘤瘤体实质 ADC 值与 Ki-67 增殖指数呈负相关性（r=-0.521，p=0.019），瘤体实质 rADC 值与 Ki-67 增殖指数亦呈负相关（r=-0.440，p=0.030）。**结论** 少突胶质细胞瘤 MRI 表现及 ADC 值、rADC 值在一定程度上可以反映其生物学特征，可间接评估其基因表达，可术前无创性评估肿瘤的恶性度，为临床诊疗提供依据。

额部副神经节瘤 1 例

张凯[1,2],王绍武[1,2],沙琳[1,2],戴越[1,2],陶娟[1,3]
1.大连医科大学附属第二医院
2.放射科
3.病理科

摘要：收集经手术病理证实的额部脑实质外副神经节瘤一例。患者以性格改变、头痛为主要症状。颅脑 CT 示额部正中稍高密度分叶状肿块，周围见大片状低密度影，病灶邻近颅骨破坏。MRI 示肿块大小 74mm×61mm×68mm，边界清楚，T_1WI 呈等信号为主，T_2WI 呈稍高信号为主，可见多发点条状高信号及流空血管影，提示“盐和胡椒征”。肿块侵犯硬脑膜、侵破颅骨，侵及皮下，其后缘与脑实质间可见脑脊液环绕征，脑实质受压见大片状水肿信号。DWI 呈不均匀稍高信号。增强扫描示肿块不均匀、明显强化，内见小片状无强化区，肿块内部及后下方见多发迂曲增粗血管影。颅内副神经节瘤罕见，与其他颅内肿瘤鉴别困难，需要综合临床、影像及病理检查。当 MRI 出现“盐和胡椒征”时，应考虑到此病。

PU-2097

颅内幕下生殖细胞瘤 2 例并文献复习

张烁琪
华中科技大学同济医学院附属同济医院

目的 原发性颅内生殖细胞瘤是少见的颅内恶性肿瘤，约占所有颅内肿瘤的 0.5%-2%，多发生于儿童及青少年，肿瘤绝大多数位于中线结构，最常见发生于松果体区，其次是鞍区、丘脑和基底节区，极少发生于幕下。本文回顾分析 2 例颅内幕下生殖细胞瘤的临床及影像学表现并对相关病例报道汇总复习，旨在提高该肿瘤的术前诊断正确率。

方法 回顾性分析 2 例经病理证实的颅内幕下生殖细胞瘤临床和影像学资料，搜集幕下生殖细胞瘤病例报道汇总分析

结果 2 例颅内生殖细胞瘤均仅位于幕下，在颅内其他部位如松果体区无病灶，为原发性幕下生殖细胞瘤。幕下生殖细胞瘤的临床症状主要取决于肿瘤发生部位。CT 平扫主要表现为等/稍高密度，既往有病例发现在多次 CT 检查后病灶由于受到射线照射肿块一过性减小(Wang et al., 2017)。MR 上，生殖细胞瘤通常呈等 T1，等/长 T2 信号，而多例报道幕下生殖细胞瘤 T2 信号较低(Minami et al., 2016)，可能是其诊断线索之一，增强呈均匀或不均匀强化。通常认为生殖细胞瘤在血浆和脑脊液中β-HCG、AFP、PLAP 等肿瘤标记物为阴性，但在一些病例中，β-HCG 可以升高(Jia et al.,

2003)，亦可作为生殖细胞瘤诊断线索。生殖细胞瘤对放化疗敏感，对于影像学或肿瘤标记物高度提示为生殖细胞瘤的病例可以采用诊断性放化疗。幕下生殖细胞瘤预后较颅内常见部位生殖细胞瘤差，可能是由于肿瘤更容易侵犯脑干。

结论

生殖细胞瘤对放化疗敏感，是少数几种可以通过非手术方式治疗的颅内恶性肿瘤(Martens et al., 2014)，因此正确诊断对于治疗方案的选择和预后评估很重要。对于发生于青少年的非常见部位、影像学特异性不显著的生殖细胞瘤，可以检查血浆及脑脊液的肿瘤标记物来辅助诊断，还可以结合临床考虑采用诊断性放化疗或立体定位活检来明确诊断以避免开颅手术创伤。

椎管内神经鞘瘤 MRI 误诊分析

郗玉珍
中国人民解放军联勤保障部队第 903 医院

目的 分析椎管内神经鞘瘤 MR 误诊原因，提高其影像诊断的准确率，减少误诊。**方法** 回顾分析 6 例术后病理证实为椎管内神经鞘瘤的误诊病例，4 名男性，2 名女性，年龄范围 23-72 岁，平均年龄 48.3 岁，进行详细询问病史并采集 CT 及 MR 影像资料，仔细分析其 MR 不典型征象。**结果** 4 例术前 MR 诊断为脊膜瘤，1 例诊断为血管畸形，1 例诊断为血肿，6 例患者均行椎管内肿瘤摘除术，术后病理证实为神经鞘瘤。**结论** 椎管内神经鞘瘤有其不典型的 MR 影像学表现，结合性别、发病部位及临床病史等进行综合分析，有助于提高其术前 MRI 诊断和鉴别诊断水平。

PU-2099

椎管内巨长型神经鞘瘤伴出血一例

张铎蛲
中国人民解放军联勤保障部队第九〇三医院

患者 女，54 岁。因腰及双下肢疼痛 1 年余，加重 20 余入院，无低热，盗汗等症，无鞍区麻木。门诊以“腰椎间盘突出症”收住入院。专科情况：腰椎生理曲度变直，腰部活动受限，腰 3－骶 1 棘突及椎旁压痛（+），叩击痛（+），向右下肢放射，余无殊。

MRI 检查：平扫示胸 11-腰 4 椎体水平椎管内见长条状异常信号影，大小约 27 mm×45 mm×48 mm，形状规则，边界尚清，呈 T 1 稍高信号， T 2 高号影，病灶前缘见条片状 T1 等高信号、T2 等信号影，相邻脊髓受压，椎体无侵犯，同层面椎管狭窄，增强扫描病灶边缘强化明显，病灶内部强化不明显。余无殊。

手术及病理所见：患者入院后行肿瘤切除术，见硬脊膜囊膨大，张力高，硬脊膜菲薄，色紫红。架显微镜，于后正中纵行切开硬脊膜，见酱油色液体喷射而出。硬脊膜下右侧见占位性病变，长条状，17.5*1.4*2.0cm 大小，色灰红，肿瘤实质内有暗红色陈旧血性液体。肿瘤有完整包膜，与硬脊膜及神经根粘连不重，马尾神经丛和脊髓圆锥受压明显。手术切除标本镜下可见(椎管内髓外)梭形细胞肿瘤，免疫组织化学：突触素（Syn）、神经元特异性核蛋白（Neu-N）、神经丝蛋白（NF）、CD34 均为阳性，Ki-67<5%。病理诊断：胸腰椎管内（T12-L4）脊髓外、硬膜下神经鞘瘤，伴出血。

讨论 ：神经鞘瘤是最常见的椎管内髓外硬膜内肿瘤，起源于神经鞘膜细胞的雪旺氏细胞，可发生于脊髓各个节段，多呈孤立性结节，有包膜，常与脊神经根相连，与脊髓无黏连。组织学上，肿瘤由细胞密集区(Antoni A)和细胞疏松区(Antoni B)两种结构组成。有学者认为肿瘤强化程度及发生囊变坏死的情况与这两种结构含量有关。含 AntoniB 的易发生囊变坏死，Antoni A 型较 Antoni B

型强化明显。本例神经鞘瘤较罕见，体积巨大，边界尚清，囊变并出血范围较大，组织学上倾向于 Antoni A 型。国内外罕见报道巨长型神经鞘瘤伴出血。

PU-2100

脑实质内室管膜瘤的影像表现分析

祝爽
西南医科大学附属中医医院

目的 探讨脑实质内室管膜瘤影像特征，以期提高影像诊断准确率。**方法** 收集经手术病理证实的 23 例脑实质内室管膜瘤的临床和影像学资料，回顾性分析其影像学表现。**结果** 23 例脑实质室管膜瘤中 15 例位于幕上，多为长径大于 4cm 的囊实性肿块，1/2 病灶内见出血、小钙化灶。幕上病灶多无瘤周水肿，增强显示实性成分明显强化或呈环状强化，可见包绕病灶或穿行于实性部分中的血管影。8 例幕下脑实质内室管膜瘤以实性肿块多见，4 例见瘤内钙化。幕下病灶瘤周亦多无水肿，增强扫描显示不均匀或环状强化。**结论** 脑实质内室管膜瘤影像学表现缺乏特异性，易误诊。CT 及 MRI 表现对本病的术前诊断有一定的价值。

PU-2101

椎管内脊髓外神经鞘瘤与脊膜瘤的 临床和 MRI 综合诊断要点探讨

杨丽[1],宋英儒[1,2]
1.贵港市人民医院
2.广西医科大学第一附属医院

目的 回顾性分析经手术病理证实的椎管内脊髓外神经鞘瘤、脊膜瘤的临床常见症状和体征及 MRI 的常见征象，评价各种因素在诊断和鉴别椎管内脊髓外神经鞘瘤、脊膜瘤的能力，以提高椎管内脊髓外神经鞘瘤、脊膜瘤的术前诊断和鉴别诊断能力。
材料和方法 回顾分析、总结广西医科大学第一及第八附属医院经手术及病理证实的椎管内 180 例神经鞘瘤和 50 例脊膜瘤的临床资料、MRI 影像资料，分析和统计学比较影响诊断的各种常见的临床因素和 MRI 征象因素，运用卡方检验及 Logistic 回归分析，筛选出影响二者 MRI 诊断的主要因素，运用统计学处理方法推导各影响因素的鉴别价值。
结果 二者性别分布间差异有统计学意义，脊膜瘤好发在女性。二者年龄分布差异无统计学意义。
二者以感觉障碍为首发症状差异有统计学意义，脊膜瘤比神经鞘瘤更容易引起感觉障碍。
肿瘤个数：二者均以单发常见。
肿瘤位置：（1）二者在胸段、腰段椎体分布差异间有显著统计学意义。（2）二者均以髓外硬膜下发生率最高，髓外硬膜下脊膜瘤比神经鞘瘤发生比率大，硬膜外则是神经鞘瘤发生比率高于脊膜瘤组。（3）二者在脊髓腹侧和脊髓背侧分布差异间无统计学意义。
肿瘤形态：半圆形、哑铃形组二者分布差异存在显著统计学意义。
肿瘤大小：二者最大前后径分段的 3 个等级两组间差异无统计学意义。二者最大长径的 4 个等级间只有 10mm～20mm 及≥30mm 两组分布差异具显著统计学意义。
信号表现：二者信号强度、均匀度及出现囊变差异均存在统计学意义。
瘤体与周围组织关系：二者之间出现与硬膜宽基底相接或存在硬膜尾征、邻近椎间孔扩大差异存在显著意义。

Logistic 回归分析提示，在其他变量不变的条件下，形态、有硬膜尾征或与硬膜宽基底接触是诊断脊膜瘤的对立因素。

结论 椎管内脊髓外神经鞘瘤、脊膜瘤都有特征性 MRI 表现。MRI 是临床诊断和鉴别诊断椎管内脊髓外神经鞘瘤、脊膜瘤的重要手段。

PU-2102

一例伴有钙化的鞍上区脊索样胶质瘤

冯杰,鱼笑,马林,娄昕,陈新静
中国人民解放军总医院第一医学中心

病例资料

男，32 岁，汉族。双眼实力下降 1 年余来诊。

影像表现

头颅 MRI 扫描可见病变位于鞍上区偏右侧，大小约 2.5×2.4×1.9cm，形态不规则。稍长 T1 稍长 T2 信号，DWI 呈等信号，增强扫描呈明显均匀强化。右侧视神经稍受压，病变包绕右侧颈内动脉，管壁光滑。灌注成像病变呈等信号。SWI 序列病变内可见小片状低信号，相位图呈高信号。头颅 CT 扫描病变呈稍低密度，CT 值约 27HU，内可见小片状高密度影，CT 值约 200HU。病变与周围脑组织边界欠清。

病理结果

鞍上占位，中等细胞密度的肿瘤，部分肿瘤细胞浆红染，血管内皮细胞增生较显著，间质粘液样变性，可见卢梭小体，考虑为脊索样胶质瘤。免疫组化**结果** Olig-2（＋），IDH-1（－），P53（－），GFAP（＋），MGMT（+30%），Ki-67（+3%），ATRX（＋）。

讨论

脊索样胶质瘤是一种罕见的起源于第三脑室前壁中枢神经系统原发肿瘤，1998 年 Brat 等首次报道， WHO 2007 分类将其归入神经上皮肿瘤（Ⅱ级）。临床表现一般为头痛、视觉障碍以及记忆障碍，少见情况会有下丘脑或垂体内分泌紊乱的表现（闭经，甲状腺功能减退，体重增加，多饮），其他局部症状少见。其通常定位于第三脑室前部，向蝶鞍上区和侧脑室呈不同程度的延伸，近四分之一的患者存在脑积水，这更多地取决于肿瘤的位置而不是大小。影像学表现，CT 上通常表现为高密度，在 MRI 扫描时，多数呈界限清楚的卵圆形肿物，T1WI 呈等信号，T2WI 呈高信号。增强扫描可见显著强化，可见囊变，但是罕见钙化。本文报道的病例，与周围组织边界欠清，并且其内可见片状 CT 高密度影，是脊索样胶质瘤中的罕见表现。

PU-2103

丘脑肿瘤的 MRI 诊断与鉴别诊断

任雅,张伟
湖南省第二人民医院/湖南中医药大学附属人民医院（原：湖南省脑科医院）

目的 探讨丘脑肿瘤的 MRI 表现特征，以提高对丘脑肿瘤诊断的准确性 方法 回顾性分析经手术病理证实的丘脑肿瘤的 MRI 表现。结果 星形细胞瘤 22 例（其中 I-II 级 10 例， III-IV 级 12 例）I-II 级轻度强化，占位效应较轻，III-IV 级坏死、囊变多见，明显不均匀强化；少突胶质细胞瘤 3 例（其中 1 例间变性少突胶质细胞瘤），多见于成年人，肿瘤呈实性，钙化常见，斑片状轻至中度强化；间变性少突胶质细胞瘤坏死明显、钙化较少、明显强化。生殖细胞瘤 10 例，好发于青春

期前后的男性，肿瘤体积较大，水肿轻，囊变、坏死、出血多见，增强呈不规则形、斑片状强化，易导致阻塞性脑积水；淋巴瘤 4 例，常见于中老年人，信号较均匀，瘤周水肿无至明显，明显强化，转移瘤 5 例，多见于中老年人，多发，在丘脑外可见其他病灶。 结论 丘脑肿瘤种类较多，MRI 检查有助于丘脑肿瘤的诊断与鉴别诊断

PU-2104

侧脑室起源神经母细胞瘤一例

焦晓,邓辉煌
中南大学湘雅医院

目的 通过报道 1 例经病理确诊的右侧侧脑室起源神经母细胞瘤，以提高临床医生对该病的认识。
方法 从临床、影像、手术及病理表现等方面详细分析一例右侧侧脑室起源的神经母细胞瘤。
结果 患儿女性,2 岁,因“头痛、呕吐 20 余天，伴肢体不自主抖动、缄默、双下肢无力 7 天”于医院就诊。查体：神清,言语缄默；记忆力、定向力、智力不合作，双下肢肌力及肌张力减低。影像学表现：MRI：幕上中线区巨大占位性病变, 大小约 8.2cm×7.3cm×8.0cm，呈长 T1 长 T2 信号为主 ，其内见片状短 T1 稍长 T2 信号灶，其内亦见更长 T1 更长 T2 信号，增强后病灶实性部分可见轻度强化 , 坏死囊变区未见强化，邻近大脑镰前份受累，病变与侧脑室、胼胝体体部及压部分界欠清，双侧脑室扩张并体部形态失常；CT：病灶为混杂密度灶，其内见散在斑点状钙化灶。术中见肿瘤起源附着部为右侧侧脑室壁，其供血主要来源于侧脑室脉络丛血管。病理及免疫组化**结果**(脑室内)胚胎性肿瘤(WHOⅣ级)，神经母细胞瘤。免疫组化结果:Lin28A(灶性+),INI1(+),Nestin(+),Ki67(区域达 50%+),GFAP(-),Olig2(-),Sym(+),NeuN(-)。
结论 神经母细胞瘤又称成神经细胞瘤，起源于肾上腺髓质和交感神经链神经嵴细胞，是儿童常见的肿瘤，成人罕见，原发于中枢神经系统罕见，侧脑室起源更罕见。侧脑室起源者与脑实质原发者影像学表现类似，需与脑室内室管膜瘤、多形性胶质母细胞瘤及中枢神经细胞瘤鉴别。当患者为儿童，表现为与侧脑室关系密切的巨大囊实性肿块，病灶多发钙化、出血、坏死及囊变，增强后实性部分明显不均匀强化，周围水肿不明显，需要考虑侧脑室起源中枢神经系统神经母细胞瘤的可能。其恶性程度高，容易发生早期转移，对于早期神经母细胞瘤应尽可能最大程度完全切除肿瘤并术后辅助放化疗，以提高患者的生存时间。

PU-2105

沟通性脑膜瘤两例及相关文献复习

杨云竣,黄飚
广东省人民医院

脑膜瘤很常见，而沟通性脑肿瘤比较少见，顾名思义，沟通性脑膜瘤，是指颅内的肿瘤经过解剖孔道或间隙，延伸向颅外生长的肿瘤，它的解剖位置多样，可以经过视神经管或者眶上裂形成颅眶沟通，或者经过鼻窦形成颅鼻沟通，也可以经过颈静脉孔形成颅颈沟通。本文就该特殊类型的脑膜瘤病例报道，并相关文献复习。

PU-2106
MR 三维颅脑容积成像增强扫描序列在内听道区病变中的诊断价值

耿承军,夏云宝,宣璐璐
联勤保障部队第 904 医院

目的 探讨 MR 三维颅脑容积成像（3D-BRAVO）增强扫描序列在内听道区病变的诊断价值。**方法** 回顾性分析本院诊疗的 83 例累及内听道以及面听神经内听道段病例，所有患者均行 3D-BRAVO 增强扫描序列以及常规 MR 平扫、常规增强扫描序列，分析其影像表现，对比两种增强扫描序列诊断内听道周围病变的敏感性，评价 MR 三维颅脑容积成像序列在内听道区病变的诊断价值。**结果** 本组 83 例内听道区病例中，3D-BRAVO 增强序列上发现病变 115 个，常规增强序列上发现内听道周围病变 86 个（包括 3 个误诊病灶），以 3D-BRAVO 增强序列图像上发现病灶为准，常规增强发现病灶灵敏度为 71.55%，漏诊率为 28.45%。**结论** 在内听道区病变的显示中，3D-BRAVO 增强序列较常规增强序列更敏感，能够在较短时间内完成全颅脑的三维高分辨 T1 加权容积成像，具有薄层扫描及多方位成像的优势，通过在工作站上进行任意斜面的重建，可以显示更多的解剖细节，清晰的显示病灶大小、形态及范围和实现对小血管的追踪，帮助病变的判断以及与周围结构的关系评估，明显减少漏诊、误诊，提高病灶检出率。能够为临床的诊疗及预后评估提供影像学证据。

PU-2107
胶质母细胞瘤的磁共振（MR）表现及误诊分析

范雪丽,时高峰
河北医科大学第四医院

【摘 要】 目的 分析我院近两年 41 例胶质母细胞瘤的磁共振（MR）表现，提高对本病的认识，减少误诊率。方法 回顾性分析 41 例经手术病理证实的胶质母细胞瘤的 MR 表现，其中男 21 例，女 20 例，年龄 30～77 岁。 均行 MRI 平扫加增强扫描，其中 10 例行 MRS 检查。 结果 MR 平扫 T1WI 呈等/低信号为主，T2WI 呈等/高信号为主，另可见 T1 及 T2 混杂高信号者。 病变弥散加权成像（DWI）以斑片状高信号多见，17 例为颅内多发病变，24 例为单发，共 60 个病灶，以颞叶病变多见，其次为额叶，病变瘤周不同程度水肿，以中重度水肿多见，占位效应明显，增强扫描呈花环样强化，强化环厚而不规则伴结节状突起，内部不规则坏死腔无强化，瘤周水肿区不强化。10 例行 MRS 检查者，病变区各波峰降低，Cho/Cr 及 Cho/NAA 值升高结合 MRS 着均正确诊断。所有病例中 6 例误诊，3 例未定性，建议复查或进一步检查，余 32 例正确诊断。对于 6 例误诊者，其中 5 例为多发病变，4 例误诊为转移瘤，1 例误诊为脑脓肿，1 例误诊为血管母细胞瘤。
结论 认真分析胶质母细胞瘤 MRI 的影像学表现，大多能作出正确的术前诊断，结合核磁波谱分析（MRS）、核磁灌注等功能成像方法，能提高胶质母细胞瘤的诊断准确率，结合病理及免疫组化分析，更有助于判断临床预后。
【关键词】 胶质母细胞瘤； 影像学 MRI； 诊断；误诊

PU-2108
原发性脑内淋巴瘤 MRI 表现与病理结果的关系

杨柳青

陆军军医大学第二附属医院（新桥医院）

目的 分析原发性脑内淋巴瘤 MRI 影像表现与病理的关系，提高对本病术前影像诊断的准确性。方法 回顾性分析 2009 年 4 月- 2015 年 8 月我院经手术及病理确诊为原发性脑内淋巴瘤 39 例的 MRI 影像学表现，分析其与病理的关系。结果 39 例中 23 例单发，16 例多发，共发现 79 个病灶，其中幕上 68 个，幕下 11 个，幕上病灶多位于脑实质深部或中线区域，其中额、顶、颞、枕叶脑白质深部共 33 个，基底节区 15 个，胼胝体 8 个，大脑半球灰白质交界区 7 个，丘脑 5 个。MRI 平扫于 T1WI 序列，呈等信号病灶 47 个，稍低信号 32 个；T2WI 序列呈等信号病灶 54 个，稍高信号 25 个；T2 flair 序列以等信号为主。MRI 增强扫描，均匀或较均匀团状强化病灶 25 个，不均匀团状强化 8 个，结节状强化 29 个，不规则片状或斑片状强化 9 个，病变位于胼胝体呈蝶翼状强化 8 个。其中 15 个病灶出现“握拳状”强化征象，26 个见“尖角征”，28 个病灶出现“缺口征”或“脐凹征”，3 个病灶可见邻近脑膜强化。33 个病灶瘤周轻度水肿，29 个瘤周中度水肿，17 个瘤周重度水肿。结论 原发性脑内淋巴瘤 MRI 多表现为与灰质相近的等信号，其病理基础为肿瘤细胞排列紧密、核浆比例较高、细胞间隙含水少，肿瘤围绕血管周围间隙浸润生长、破坏血脑屏障，且由于囊变坏死少见，故多呈明显均匀强化。

PU-2109
DTI 定量参数对脑胶质瘤的诊断价值及其与血管内皮生长因子、细胞核增殖相关抗原的关系

徐慧琳
陆军军医大学第二附属医院（新桥医院）

目的:探讨扩散张量成像(DTI)定量参数对脑胶质瘤的诊断价值及其与血管内皮生长因子(VEGF)、细胞核增殖相关抗原(Ki-67)的关系。方法:选取 2014 年 6 月到 2017 年 6 月期间在我院接受治疗的 90 例脑胶质瘤患者,根据病理分级的不同分为中低级别组(n=46)和高级别组(n=44),比较两组患者表观扩散系数(ADC)值、各向异性分数(FA)值、相对表观扩散系数(rADC)值、相对各向异性分数(rFA)值、VEGF 和 Ki-67 的阳性率,分析 ADC 值、FA 值、rADC 值、rFA 值与 VEGF、Ki-67 表达的相关性。结果:高级别组的 ADC 值、FA 值、rADC 值和 rFA 值低于中低级别组(P<0.05)。高级别组病理组织中 VEGF、Ki-67 的阳性表达率高于中低级别组(P<0.05)。经 Spearman 相关分析显示,ADC 值、FA 值、rADC 值和 rFA 值与 VEGF、Ki-67 的表达水平均呈负相关(P<0.05)。结论:DTI 定量参数与脑胶质瘤病理分级和 VEGF、Ki-67 的表达水平密切相关。

PU-2110
MR 检查对冯· 希佩尔· 林道综合征诊断的意义

张磊
陆军军医大学第二附属医院（新桥医院）

目的 探讨磁共振检查对冯·希佩尔·林道(Von Hippel-Lindau，VHL) 综合征诊断的价值。方法 回顾性分析 2010 年 5 月- 2015 年 9 月第三军医大学新桥医院 16 例经病理及影像证实为 VHL 综合征的临床及多部位磁共振资料，并总结其临床及 MR 表现，探讨本病的诊断思路。结果 16 例中女性 10 例，男性 6 例，平均年龄 32.4 岁，10 例有家族患病史。16 例 MR 资料均显示为多系统病变，全部合并中枢神经系统血管母细胞瘤(MR 表现多呈“大囊肿伴壁结节”混合肿块)，5 例为首发病变；6 例合并视网膜血管母细胞瘤，其中 2 例为首发病变；9 例合并肾透明细胞癌及肾囊肿，其中 4 例为首发病变；7 例合并胰腺多发囊肿，其中 2 例为首发病变；7 例合并嗜铬细胞

瘤，其中 3 例为首发病变；其他还合并肾血管平滑肌脂肪瘤、肝血管瘤等。结合临床及多部位 MR 资料，最后诊断为Ⅰ A 型 6 例，Ⅰ B 型 3 例，Ⅱ A 型 4 例，Ⅱ B 型 3 例。结论 VHL 综合征有遗传倾向且常累及多个器官，多以中枢神经系统血管母细胞瘤及内脏病变为首发病变；联合多部位 MR 检查有利于 VHL 综合征的诊断。

PU-2111
磁共振弹性成像(MRE)评价垂体腺瘤硬度的应用价值

胡平
中南大学湘雅医院

目的 探讨磁共振弹性成像在评价垂体腺瘤质地硬度的运用价值。
方法 对 30 例垂体肿块经鼻神经内镜术前患者行磁共振弹性成像（MRE)检查,半定量分析肿块质硬度，避开图像伪影区域，在每个病人病灶层面取 2-3 个横断面图像勾画 ROI,取其平均值，并对照神经内镜夹取结果，评估其准确性。
结果 30 个垂体肿块有 25 例经组织病理学诊断为垂体腺瘤质，经神经内镜夹取，其中 7 例质地较硬，13 例质地较软，还有 5 例质地较韧。磁共振弹性成像半定量测量其弹性值，质地较硬者为 0.75-0.96kPa，质地较软者为 0.49-0.69kPa，质地较韧者为 0.27-0.55kPa。其准确率较高。
结论 磁共振弹性成像（MRE）在垂体腺瘤质地硬度评价具有较大价值，有助于垂体腺瘤手术方式选择的评估。

PU-2112
基于磁敏感加权成像的局部图像方差分析方法鉴别低级别胶质瘤分子分型的价值

吴昊,张伟国
陆军特色医学中心（大坪医院）

目的 磁敏感加权成像（SWI）低信号区主要是由神经胶质瘤中的肿瘤微血管，血液沉积和钙化引起的。局部图像方差分析（local image variance， LIV）方法是对 SWI 图像低信号量化分析的新技术。本研究目的探索 SWI-LIV 方法在术前鉴别低级别胶质瘤的分子分型的价值。
方法 2016 年至 2019 年，回顾性分析 37 例于西门子 1.5T MR 成像仪行 SWI 扫描和增强扫描的低级别（WHO II/III）级胶质瘤患者。其中分子生物学手段鉴定胶质瘤患者分子分型（IDH 野生型：*IDH^{wt}；IDHT 突变及 1p/19q 联合共缺失 IDH^{MUT}/1p/19q^{+}；IDHT 突变及 1p/19q 未有联合共缺失：IDH^{MUT}/1p/19q^{+}* ）。病理切片分析胶质瘤组织的微血管密度（MVD）。*参照 T1 增强图像在 SWI 图上肿瘤实质区提取 ROI 用于计算 LIV 值。LIV 计算按照公式：$LIV=G(X^2)-[G(X)]^2$。其中 x 为 SWI 内体素信号值，G 为低通高斯滤波器。ROC 曲线用于鉴别诊断。皮尔森相关分析 LIV 值和 MVD 的相关性*
结果 35 例患者其中：*IDH^{wt} 14 例，IDH^{MUT}/1p/19q^{+} 为 14 例，及 IDH^{MUT}/1p/19q^{-}* 共缺失 9 例。ROC 分析曲线证明 LIV 在鉴别低级别胶质瘤分子分型具有具有较高的效能（曲线下面积 AUC: *IDH^{wt}* vs IDH^{MUT}, 0.968; *IDH^{MUT}/1p/19q^{+} VS IDH^{MUT}/1p/19q^{-}*, 0.883）。LIV 值与 MVD 具有显著相关性（r=0.763， p<0.05）。

讨论：我们的研究结果表明，基于 SWI 图像的局方差分析可以可以精确鉴别 WHO II 级和 III 级胶质瘤的分子分型，并离体预测肿瘤的微血管结构改变。本研究的主要不足为样本量较小，LIV 和常规 ITSS 分析方法之间缺乏比较。

PU-2113

脊髓节细胞胶质瘤 2 例影像表现并文献复习

唐文英,曾珍,柏永华,李文富,张体江
遵义医科大学附属医院

目的 探讨脊髓节细胞胶质瘤的影像学表现，提高对该病的认识。 **方法** 回顾性分析 2 例经病理证实的脊髓节细胞胶质瘤，2 例均行 MRI 平扫＋增强
检查，并作手术治疗和病理检查。**结果** 本组 2 例肿瘤影像表现均较典型，病例 1 肿瘤呈囊实性，T_1WI、T_2WI 均呈混杂信号，脊髓表面强化，肿瘤下方脊髓空洞形成。病例 2 肿瘤呈实性，等 T_1、稍长 T_2 信号，脊髓表面强化，邻近脊髓水肿。**结论** 儿童或年轻人，颈段脊髓占位，累及范围广泛，增强扫描脊髓表面强化或斑片样强化，有助于本病诊断。

PU-2114

IDH 突变弥漫性胶质瘤的 MR 影像学特征研究

崔园园,马林
中国人民解放军总医院第一医学中心

目的 分析存在 IDH 突变的弥漫性胶质瘤的在传统 MR 上的影像学特点，为对 IDH 突变的胶质瘤进行无创诊断提供线索。**方法** 对 136 名来我院行 MR 检查并病理诊断为弥漫性胶质瘤的患者进行研究。分析患者的影像学特点，包括：额叶受累；皮层受累；脑室旁受累；受累脑叶个数；肿瘤多发；清晰边界；水肿程度（轻重）；囊变；T2 信号均匀；T2 信号强度；T1 高信号；增强程度（轻、中、重）。使用卡方检验对 IDH 突变型和 IDH 野生型两组胶质瘤上述影像特点的发生率进行分析。**结果** 额叶受累（p＜0.000）；脑室旁受累（p=0.002）；多发（p=0.010）；水肿程度（p=0.036）；囊变（p=0.010）；T2 信号均匀（p=0.007）；T2 信号强度（p=0.001）；增强程度（p＜0.001）存在统计学差异。皮层受累（p=0.105）；清晰边界（p=0.075）；受累脑叶个数（p=0.069）；T1 高信号（p=0.169）不存在差异。**结论** IDH 突变型和 IDH 野生型弥漫性胶质瘤的影像特点存在差异，可以利用该部分影像特点对其进行分辨。

PU-2115

鼠脑胶质瘤瘤周水肿组织 PWI 参数与 AQP1 的相关性研究

袁园,李香营
海口市人民医院/中南大学湘雅医学院附属海口医院

目的 探讨 Wistar 大鼠脑胶质瘤瘤周水肿组织 AQP1 的表达与局部脑血容量(rCBV)、表面血管通透性（PS）的相关性。**方法** 将 C6 细胞株接种至 Wistar 大鼠右侧尾状核，3～4 周后行常规 MRI 及 PWI 检查，借助 Function Tool 软件对 PWI 数据后处理，获得相应部位 rCBV 值和 PS 值，处死后行

AQP1 免疫组化染色。**结果** 荷瘤大鼠瘤周水肿组织 rCBV 值（244.34±45.96）和 PS 值（1.42±0.25）较正常脑组织 rCBV 值（205.18±30.46）和 PS 值（0.25±0.23）均升高，且差异具有统计学意义（$P<0.05$）。瘤周水肿组织 rCBV 值和 PS 值分别与 AQP1 阳性表达 IOD 值间均存在正相关(r_1=0.51，r_2=0.49,$P<0.05$)。**结论** 3～4 周大鼠 C6 胶质瘤瘤周水肿组织灌注参数 rCBV 值和 PS 值均较正常侧脑组织升高，并可以体现瘤周水肿组织 AQP1 的表达水平。

PU-2116

椎管内胚胎性肿瘤 2 例影像表现并文献复习

唐文英,曾珍,吴应行,李文富,张体江
遵义医科大学附属医院

目的 探讨椎管内胚胎性肿瘤的影像学表现，提高对该病的认识。 **方法** 回顾性分析 2 例经病理证实的椎管内胚胎性肿瘤，2 例均行 MRI 增强
检查，并作手术治疗和病理检查。**结果** 病例 1 肿瘤位于腰骶段椎管内硬膜下，其内见斑片状长 T_2 信号，结合手术记录分析其原因可能与肿瘤侵犯导致的马尾神经变性有关。病例 2 肿瘤位于胸腰段髓外硬膜外、脊髓两侧呈“夹心”样生长，术后短期复发。**结论** 儿童或青少年，椎管内占位，“夹心”或“半包围”状生长，沿椎间孔向外生长，MRI 增强扫描中度或明显强化，需考虑本病可能。

PU-2117

Application of magnetic resonance perfusion weighted imaging in cerebral gliomas grading

Xiaoxue Liu,Jian Li,Zhiqiang Zhang,Guangming Lu
Jinling Hospital

Objective To estimate the application value of MRI perfusion imaging techniques, including three dimensional pseudo-continuos arterial spin labeling (3D-pCASL), dynamic contrast-enhanced (DCE) MRI and enhanced diffusion weighted imaging (eDWI) in cerebral gliomas grading. And compare the accuracy of the parameters which derived from these technology in glioma grading, explore whether the combination of these three techniques can further improve the accuracy of identification of high and low grade gliomas, and explore the correlation between perfusion related parameters, and the correlation between them and the pathological parameter Ki-67.
Methods Thrity-three consecutive patients with pathologically confirmed gliomas, 17 high grade gliomas (HGG, WHO grade III - IV) and 16 low grade gliomas (LGG, WHO grade II). All patients underwent preoperative MRI conventional sequences, 3D-pCASL, DCE and eDWI sequences. The data of 3D-pCASL was processed to generate the cerebral blood flow(CBF) map which imply the perfusion imformation. Parametric maps of K^{trans}, K_{ep}, V_e and V_p were calculated from DCE imaging. The raw data of eDWI were processed to calculate the parametric images of fast diffusion coefficient (D*), slow diffusion coefficient (D), and fractional perfusion-related volume (f). Combined with conventional apparent diffusion coefficient (ADC) map which derived from 0 and 1000 s/mm^2 and 3D T1WI images, we manually placed the

regions of interest in the solid parts of gliomas and the parts of normal white matter contralateral to tumors. The corresponding image parameters and the relative image parameters in comparison with normal white matter (rCBF, rD*, rD, rf and rADC) were measured and compared between HGG and LGG. Then, the receiver operating characteristic (ROC) curve analyses were used to assess the sensitivity and specificity in glioma grading, and find the cut-off value. Then, in the combination of 3D-pCASL, DCE and eDWI three techniques for glioma grading, we use two classification Logistic regression and support vector machine to obtain the parameters with statistical differences between high and low grade tumors. Bivariate correlation analysis was used to explore the correlation between perfusion parameters and perfusion parameters and Ki-67. Finally, the perfusion parameters associated with Ki-67 were obtained by general linear regression.

Result rCBF, K^{trans}, V_e, V_p and rD* values were significantly higher in the high-grade gliomas, whereas rD, rf and rADC tended to be lower (all P<0.05). The analysis of ROC showed that rCBF, K^{trans}, V_e, V_p and rD* had better diagnostic value in differentiating high and low grade gliomas (AUC>0.7). In all parameters, K^{trans} has the smallest P value (P<0.001) and the largest area under the receiver (AUC=0.993), and when the threshold is 0.158, the sensitivity and specificity are 100% and 93.75%, respectively. When combined with 3D-pCASL, DCE and eDWI to identify high and low grade gliomas, two classification Logistic regression was found that only K^{trans} had the best diagnostic efficacy. But support vector machine was found that, in a single parameter, the accuracy of K^{trans} was 93.94%, which is the best diagnostic parameter, and rCBF combined with K^{trans}, K_{ep} and rD* can further improve the accuracy to 100%. There was a significant positive correlation between rCBF and rD*, K^{trans} and rD*, V_e and rD* in the perfusion parameters in different techniques (r=0.551 P=0.002, r=0.643 P<0.001, r=0.770 P<0.001). Correlation analysis between perfusion parameters and Ki-67 showed that the correlation between V_e and Ki-67 was more significant (P=0.001).

Conclusion 3D-pCASL, DCE and eDWI have good diagnostic value in differentiating high and low grade gliomas, and the parameters rCBF, K^{trans}, V_e, V_p and rD* have good diagnostic significance. Among the three perfusion related magnetic resonance imaging, the DCE shows more efficient than eDWI and 3D-pCASL in discriminating the high from low grade gliomas. The combination of 3D-pCASL, DCE and eDWI, can further improve the accuracy of identifying high and low grade gliomas. Correlation analysis showed that rCBF and rD*, K^{trans} and rD*, V_e and rD* were the parameters of correlation among the three magnetic resonance techniques. There is a good correlation between V_e the perfusion parameters of DCE and Ki-67, which can reflect the value added ability of tumor.

能谱 CT 定量参数碘含量在胶质瘤分级中的价值

李莹莹,孙胜军
首都医科大学附属北京天坛医院

【摘要】**目的** 分析能谱 CT 定量参数碘含量在胶质瘤分级中的作用，探讨其在胶质瘤 WHO 分级的预测价值。**方法** 收集经组织病理证实的不同级别胶质瘤患者共 74 例，对其 CT 影像资料进行回顾

性分析；利用 K-W-H 检验不同级别胶质瘤肿瘤肿瘤内碘含量有无差异，并利用 pearson 检验判断碘含量与 KI-67 标记指数是否具有相关性。**结果** 二级胶质瘤（40 例）肿瘤内平均碘含量为 0.275±0.084mg/ml；三级胶质瘤（17 例）肿瘤内平均碘含量为 0.71±0.216mg/ml，四级胶质瘤（17 例）肿瘤内平均碘含量为 1.28±0.216mg/ml。在 II 级和 III 级（P<0.01）、III 级和 IV 级（P<0.01）以及 II 级和 IV 级（P<0.01）之间肿瘤内碘含量存在显著差异。碘含量与 KI-67 呈正相关。**结论** 肿瘤内碘含量可预测胶质瘤的组织病理学分级。

PU-2119

第三脑室内 Rosai-Dorfman 病 1 例

林小翼
重庆市第七人民医院

目的 探讨颅内 Rosai-Dorfman 病 CT 及 MRI 影像学表现、病理特点，提高对该病的认识，拓展诊断思维。

方法 对 1 例经病理证实的 Rosai-Dorfman 病患者 CT 及 MRI、病理特点进行回顾性分析，并进行相关文献复习。

结果 影像学表现：CT 平扫第三脑室后部等、低密度影，其内密度较均匀，边界不清，周围脑组织受压水肿，其上脑室系统梗阻性积水。MRI 表现为三脑室后部不规则肿块，边界清楚，边缘呈多发浅分叶，信号欠均匀。T1WI 病灶呈等低信号，其内见条状稍高信号。T2WI 病灶呈等高信号，其中可出现聚集低信号影（可能是 Rosai-Dorfman 病较为特征性表现，研究者推测与氧自由基介导下巨噬细胞的吞噬作用有关）。病变周围丘脑明显受压水肿。增强扫描示病变明显均匀强化，邻近血管受压。MRI 功能成像：DWI 示病灶为低信号，无弥散受限；SWI 病灶内有多发短条状低信号；MRS 示病变内 NAA 峰降低，Cho 峰轻度降低，见高耸的脂质乳酸峰。 PWI 提示病变 CBV 不均匀升高。病理表现为弥漫浸润的组织细胞、浆细胞和淋巴细胞比较完整的存在于组织细胞内，即“伸入现象”，是组织病理学特征性表现。免疫组织化学中组织细胞 S－100 蛋白及 CD68 表达阳性有助于确诊。

结论 颅内 Rosai-Dorfman 病较少见，易误诊，免疫组化检查有助于鉴别诊断。在临床实践中应考虑到 Rosai-Dorfman 病的可能。

PU-2120

基底节区生殖细胞瘤的 MRI 征象分析

柳佳,汪晶
华中科技大学同济医学院附属协和医院

目的 基底节区生殖细胞瘤（basal ganglia germinoma，BGG）是颅内一种少见的胚胎性肿瘤，该类肿瘤对放射线极其敏感，治疗首选放疗。探讨 BGG 的 MRI 特征，提高影像诊断准确性，使患者在疾病早期选择最佳的治疗方式，提高生存质量。

方法 回顾性分析经手术病理证实的 5 例 BGG 临床及影像学资料。

结果 5 例 BGG 患者均为男性，年龄 7-26 岁，平均年龄 16.8 岁。5 例患者中 3 例病灶为右侧，2 例为左侧，其中 1 例病灶较大者范围包括视交叉上方-左额叶-左丘脑，另 1 例同时发现鞍上-鞍区生殖细胞瘤。肿瘤实质部分 T1 呈略低于或接近于脑灰质信号，T2 或 Flair 呈高或稍高信号；4 例病灶内均可见 T1 高信号；肿瘤呈囊实性者 3 例，实性者 2 例；所有病例瘤周均轻度水肿或无水肿；无明显占位效应 2 例；增强后病灶边缘呈小片状或小结节状强化；其中 1 例患者行 CT 检查发

现高、低混杂密度肿块影，病灶呈囊实性，伴出血和少许钙化；其中 2 例患者同时行 SWI 检查，均可见病灶内大范围低信号影。

结论 颅内生殖细胞瘤好发于松果体区，其次为鞍上区、丘脑和基底节区。BGG 绝大多数发生于男性。该类型肿瘤好发于青少年人群，发病高峰 10-14 岁。如果病史提示青春期男性患者出现一侧的肢体肌力减退，提示考虑本病。BGG 在 CT 和 MRI 特征性表现为不规则形团块，易合并囊变、出血和坏死。CT 为高低混杂密度，常伴出血，部分病灶出现少许钙化。MRI 为等长 T1、T2 高低混杂信号，当合并出血时，SWI 呈现大范围低信号影。增强后实性部分明显均匀或不均匀强化。瘤周水肿相对较轻。肿瘤可膨胀性生长浸润邻近组织，或沿前连合纤维束向对侧基底节区扩散，还能沿脑脊液，室管膜及脑膜种植转移。如果在基底节区的病灶同时发现在鞍区或鞍上，高度提示本病。 BGG 需与淋巴瘤、胶质瘤及恶性畸胎瘤进行鉴别。BGG 的 MRI 表现具有一定的特征性，结合 CT 及 SWI 检查可提高其诊断准确率。

PU-2121

脑室外中枢神经细胞瘤影像学诊断进展

李傲天
重庆医科大学附属第一医院

目的 综述国内外脑室外中枢神经细胞瘤（extraventricular neurocytoma）最新影像学诊断进展，以期为临床工作中诊断这一罕见、少见病提供影像学诊断依据。

方法 检索国内外相关脑室外中枢神经细胞瘤影像学诊断文献并提取重要影像学征象进行综述。其中，中文数据库检索中国知网，检索式为：((题名&关键词&摘要=脑室外中枢神经细胞瘤) 并且 (题名&关键词&摘要=影像 或者 题名&关键词&摘要=CT 或者 题名&关键词&摘要=MR))(精确匹配)；英文数据库检索 Pubmed，检索式为：extraventricular neurocytoma and (imaging or CT or MR)，对所命中结果进行二次筛选后，提取主要影像学特点进行综述。

结果 脑室外中枢神经细胞瘤可发生位置广泛，通常累积脑室外的皮层灰质及深部白质，较多报道发生于额叶，但不具备特征性定位提示意义。实性部分在 T1WI 和 T2WI 上常与灰质信号相仿，常伴不同程度的钙化、囊变或坏死，增强后实性部分呈明显强化，但该征象亦不具备特征性提示意义。有研究指出，具有神经节样分化的病灶常倾向于有更多的囊变且增强后呈不均匀强化，具有一定的提示作用。因此，大多数文献认为，脑室外中枢神经细胞瘤的影像学诊断需结合直径≥5cm、跨脑回生长、浅分叶、边界不清、出血、囊变、坏死等多种征象。

结论 目前脑室外中枢神经细胞瘤影像学诊断困难，相关病理及影像学表现仍需进一步研究。

PU-2122

基于生物信息学方法筛选胶质母细胞瘤的关键基因和信号通路

蒋锡丽,张伟
湖南省第二人民医院

背景：本研究旨在通过系统的生物信息学方法挖掘胶质母细胞瘤（GBM）的关键差异基因和信号通路。

方法 从 GEO 数据库下载 GSE2223, GSE4290, GSE12657, GSE15824, GSE42656，GSE66354 数据集。这六个数据集共有 175 个 GBM 样本（165 个 GBM 肿瘤组织和 10 个 GBM 细胞样本）和 55 个非肿瘤样本（正常脑组织或正常人星形胶质细胞）。使用 RobustRankAggreg（RRA）方法和 R 软件对来自每个数据集的差异表达基因（DEG）进行分析和整合，并筛选出整合后的差异性表达基因。随

后，使用在线工具 DAVID 数据库进行 GO 和 KEGG 通路富集分析，并使用 STRING 构建 PPI 蛋白互作网络。最后，在线数据库 UALCA 用于分析关键基因的表达量与 GBM 患者预后之间的关系，使用 ONCOMINE，GEPIA 和 cBioPortal 数据库分析前 10 位的关键基因转录的相关信息。
结果 首先，从六个数据集中筛选出了 570 个差异基因（287 个上调基因和 283 个下调基因）。GO 分析显示上调基因主要参与细胞分裂，细胞外空间和蛋白质结合，下调基因主要参与化学突触传递，细胞连接和钙离子结合。KEGG 通路富集分析显示差异性基因主要集中在 GABA 能突触，细胞周期，吗啡成瘾，百日咳和金黄色葡萄球菌感染。构建 PPI 网络并筛选出其中最重要的两个模块。其中前 10 位的关键基因是 KIF2C，KIF4A，AURKA，MCM2，MELK，TPX2，ASPM，ASF1B，RRM2 和 BIRC5。最后，我们发现 GBM 组织中这 10 个基因的表达水平显著高于正常组织，并且 BDNF，P4HB，PKB 和 SST 的表达量与患者较差的预后显著相关。
结论 本研究筛选出了 GBM 中的一些关键基因和信号通路，这提高了我们对 GBM 发病和进展机制的理解，并鉴定出了几个 GBM 诊断和治疗的候选标志物。

PU-2123
小脑囊实性血管母细胞瘤与毛细胞星形细胞瘤强化程度对比分析

李莹莹[1],孙胜军[2]
1.首都医科大学附属北京天坛医院
2.北京市神经外科研究所

目的 探讨小脑囊实性血管母细胞瘤实性成分强化程度同毛细胞星形细胞瘤之间的差异，以期提高两者的鉴别。**方法** 收集经病理证实的位于小脑的囊实性的血管母细胞瘤及毛细胞星形细胞瘤各 30 例，对其 MR 影像资料进行回顾性分析，计算病灶实性成分强化程度值，采用独立样本 t 检验(正态分布)或 Mann-Whitney U 检验（偏态分布）进行分析，绘制受试者工作特征曲线（*ROC*）,评价实性成分强化程度值对囊实性血管母细胞瘤的诊断效能。**结果** 两组病例实性成分均强化，平均强化程度值均以正偏态分布。两者强化程度值差异具有统计学意义（p=0.000），*ROC* 曲线下面积为 0.952，以实性成分强化程度值 2.58 作为阈值，诊断小脑囊实性血管母细胞瘤的特异度和敏感度分别为 88.9%和 92.9%。**结论** 肿瘤实质部分强化程度值有助于鉴别小脑囊实性血管母细胞瘤与毛细胞星形细胞瘤，可通过测定实性部分强化程度值提高对小脑囊实性血管母细胞瘤的诊断准确率。

PU-2124
多模态 MRI 在鉴别高级别胶质瘤、脑转移瘤及原发性中枢神经系统淋巴瘤中的应用

彭虹
中国人民解放军总医院第一医学中心

目的 评价多模态 MRI 对高级别胶质瘤（HGG）、脑转移瘤与原发性中枢神经系统淋巴瘤（PCNSL）的诊断价值。
材料与**方法** 收集本院经临床病理证实的 HGG 25 例、脑转移瘤 36 例、PCNSL12 例的术前磁共振成像，成像序列包括 T1WI、T2WI、T2-FLAIR、T1+C、ASL、DWI 和 DCE。定量参数包括 ADC、CBF、K^{trans}、Ve。利用 ROC 曲线分析评价各个参数值的诊断效能。
结果 PCNSL 较 HGG 及脑转移瘤 ADC、CBF 值更低，Ktrans、Ve 值更高。ROC 曲线分析显示 Ktrans 和 CBF 在区分 PCNSL 与 HGG 及转移方面均具有良好的诊断性能，AUC 分别为 0.868 和 0.880。

结论 CBF 和 Ktrans 能有效鉴别 PCNSL 与 HGG 及脑转移瘤。结合多个定量参数能进一步提高了 PCNSL 的诊断性能。

PU-2125
不典型原发性中枢神经系统淋巴瘤的 MRI 表现分析

魏琳
贵州省人民医院

目的 回顾性分析总结原发性中枢神经系统淋巴瘤的不典型磁共振表现，以提高放射科医生对该病的认识及诊断水平。
方法 回顾性分析经病理证实的 12 例原发性中枢神经系统淋巴瘤的 MRI 表现，总结及分析其形态、信号、生长部位、及强化方式等特征。
结果 12 例中单发病灶 7 例,多发病灶者 5 例。发生于透明隔、延髓背外侧、小脑半球等不典型生长部位各 1 例。8 例 MRI 平扫呈等或稍长 T1，等或稍长 T2 信号,4 例 T1WI、T2WI 为不均匀混杂信号。DWI 稍高信号者 11 例，1 例为等信号。8 例呈病灶均匀明显强化,1 例呈轻度条片状强化；3 例表现为不均匀环形明显强化。病变可呈不规则形、类圆形、以及条形，部分边界模糊。仅少数者磁共振波谱出血了典型脂质峰，多数表现为 NAA 明显下降及 Cho 升高。
结论 不典型形态、信号特点及生长部位的原发性中枢神经系统淋巴瘤 MRI 影像学表现多变，缺乏明显特征，鉴别诊断较困难，了解其不典型 MRI 特点有助于拓宽诊断思维及提高诊断水平。

PU-2126
64 排螺旋 CT 脑血管造影联合富士 Synapse v3.0 软件模拟切除颅内乏血供肿瘤

韦璐
柳州市人民医院

目的 颅内乏血供肿瘤的模拟立体显示一直是影像学科的难题，本研究通过 64 排螺旋 CT 脑血管造影联合富士血管后处理软件的融合成像功能，探讨如何灵活联合运用两者展示颅内乏血供肿瘤的立体观，以及肿瘤与血管及颅底关系。为外科医师制定合理的手术方案。
材料及方法 5 例 CT 或 MR 平扫发现颅内占位患者，行脑血管 CT 造影，采用荷兰 Philips 64 排螺旋 CT， 扫描范围从颅顶到颅底。扫描结束后将薄层图像传至富士 Synapse v3.0 后处理工作站，运用虚拟颅内肿瘤手术规划软件 ，重组肿瘤立体模型，形态逼真，解剖标志清楚，清晰显示颅内主要动脉及其分支、走行及与肿瘤相互毗邻关系。并且利用融合成像功能，将肿瘤、颅内动脉及颅底骨结构同时展示。针对三维影像中不同的肿瘤、颅内解剖结构的相对位置即时定义最佳曲面进行虚拟手术切割模拟，考察拟切除后的颅内结构，
结果 5 例颅内缺血供肿瘤均经手术及病理证实。其中脑膜瘤 3 例、听神经瘤 1 例，星形细胞瘤 1 例。模拟肿瘤形态显示与术中所见基本一致，5 例图像均能清楚展示肿瘤与邻近血管及骨质结构。
讨论：精准手术切除是目前外科研究的热点，该项研究能够完整、清楚的展示颅内乏血供肿瘤，暴露肿瘤与周围血管的邻近关系，立体展示肿瘤在颅内的空间位置， 模拟切除颅骨及肿瘤以及邻近脑组织成像显示，可以有效避免术中误伤血管导致大出血，避免切除过多的周围正常脑组织，从而辅助外科医师制定更加精准、合理的个体化手术方案。

PU-2127
IDH 突变型伴 1p19q 联合缺失少突胶质细胞瘤与 IDH 野生型胶质母细胞瘤单体素质子 MRS 2-HG 峰检出的比较研究

肖华锋,陈新静,王岩,王玉林,娄昕,马林
中国人民解放军总医院第一医学中心

目的 2-HG 是胶质瘤枸橼酸脱氢酶突变的代谢产物，文献报道 3.0T 磁共振扫描仪单体素质子 MRS 能直接检出 2-HG 峰。本研究拟通过 IDH 突变型伴 1p19q 联合缺失少突胶质细胞瘤与 IDH 野生型胶质母细胞瘤单体素质子 MRS 的表现特点，比较在两种肿瘤中 2-HG 峰的检出差异。材料与**方法** 所有 18 例 IDH 突变型伴 1p19q 联合缺失少突胶质细胞瘤和 31 例 IDH 野生型胶质母细胞瘤病人均经术后病理、免疫组化和基因测序证实，术前运用 GE3.0Tdiscovery 扫描仪，除常规 MRI 平扫及增强扫描，在肿瘤实性区放置 ROI 进行单体素质子 MRS 成像。按照术后分组运用统计学方法比较两种肿瘤其术前 2-HG 峰的检出差异。**结果** 2-HG 峰在 IDH 突变型伴 1p19q 联合缺失少突胶质细胞瘤与 IDH 野生型胶质母细胞瘤无明显统计学差异。**结论** 由于代谢物峰的重叠，加之信噪比低等原因，3.0T 单体素质子 MRS 对于 2HG 峰的检出尚达不到临床的需要，急需进一步改正和相关后处理软件的支持。

PU-2128
大脑多结节和空泡状神经元肿瘤 MRI 表现及文献回顾

张浩,冯杰,马林
中国人民解放军总医院第一医学中心

目的 大脑多结节及空泡状神经元肿瘤（Multinodular and vacuolated neuronal tumors，MVNT）是近年来新发现的一种少见疾病，其影像诊断尚未被大多数放射科医师熟悉，本文回顾性分析我院 5 年内所有脑部 MRI 影像资料，检索到 8 例 MVNT 病例，通过分析 MVNT 的 MRI 表现并进行分析总结，以及文献回顾，旨在提高放射科医师对 MVNT 的认识，提高诊断水平。
方法 回顾性分析 8 例大脑多结节和空泡状神经元肿瘤的临床及影像资料，并结合文献进行分析和总结。
结果 8 例均为青中年病人，平均年龄为 30.75 岁（13-53 岁），5 例为男性患者，3 例为女性患者，6 例发生于右侧，2 例发生于左侧，额叶较常见（5 例），顶叶次之（3 例），临床表现不具特征性，多为体检偶然发现，2 例为局部偶发头痛。病变多分布于皮层深部和皮层下浅表白质内的边界较清晰的离散或合并的结节，MRI 表现具有明显特征性，大部分病例表现为多发簇样小囊结构，少数病例表现为簇样小囊片状融合，病变未见明显周围水肿及占位效应，T2WI 及 T2 FLAIR 呈明显高信号，T1WI 呈等或低信号，DWI 多呈高信号，但无弥散受限，增强多数未见强化，仅一例轻度强化，其中 2 例行 MRS 序列检查均未见异常，2 例行 ASL 检查均未见异常。其中三例在我院每年随访复查头部核磁共振及增强扫描检查，影像均较前未见变化。
结论 尽管 MVNT 是少见疾病，且其临床表现无特征性，但其影像学表现具有特征性，大部分病例可通过其影像学表现确诊，而避免不必要的有创检查与手术，因此，掌握其 MRI 表现具有重要意义。

PU-2129

颅内腱鞘纤维瘤一例

刘顼,韩丹
昆明医科大学第一附属医院

患者　　女，40 岁，以“头痛、头昏、耳鸣 10 余天”为主诉就诊。行 MRI 检查示：右侧中后颅窝可见一不规则囊实性占位，大小约 4.3x7.7x4.9cm，实性部分呈等 T1、T2 信号，囊性部分呈长 T1、T2 信号，DWI 呈高、低混杂信号，增强扫描实性部分呈明显均匀强化，囊性部分未见确切强化；病灶向外突出于外耳道，邻近骨质受累，周围脑实质内见稍长 T2 信号水肿带，第四脑室受压，向左侧移位，致幕上脑室系统积水扩张。
手术：行右侧外耳道内肿物取材活检。肿瘤呈灰白色、质硬。
病理：腱鞘纤维瘤。免疫组化：S-100（-），CD57（-），CD34（+血管），SOX10（-），SMA（+局部），WT-1（-），Desmin（-），GFAP（-），MSA（-），KI-67（0），Calponin（+）。
讨论：腱鞘纤维瘤（fibroma of tendon sheath,FTS）又叫腱鞘滑膜纤维瘤，是一种少见的良性肿瘤，由 Buxton 于 1923 年首次报道。因为发病率低，直到 1979 年才由 Chung 和 Enzinger 对 138 例 FTS 进行总结分析。该病多见于成年人，发病高峰为 30~50 岁，男女发病比例约为 3:1，绝大多数起源于四肢的肌腱或腱鞘组织，好发部位依次为手指、手、手腕、膝关节、肩关节和眼内肌部等，发生于颅内者国内至今尚未见相关报道。

PU-2130

3D-ASL 在鉴别高级别胶质瘤复发与假性进展的的价值

于秀英,何勇,韩广
山东省临沂市中医医院

【摘要】**目的**　探讨三维动脉自旋标记成像（3D-ASL）在鉴别高级别胶质瘤复发与假性进展的临床应用价值。**方法**　选取经手术病理证实的高级别胶质瘤 16 例进行 MRI 平扫及强化扫描和 3D-ASL 扫描，测量异常强化区（患侧）及对称健侧的脑血流量（CBF）值。**结果**　16 例高级别胶质瘤手术后在 MRI 平扫 及强化扫描表现为异常强化病灶，经随访证实，高级别胶质瘤术后复发的有 8 例，假性进展的有 8 例。复发患者的平均 CBF 值　患侧 为 110.5±30.96 ml/(100g* min)，健侧 48±7.38 ml/(100g* min)；假性进展患者平均 CBF 值患侧为 17.5±4.06 ml/(100g* min)，健侧 44.25±9.81 ml/(100g* min)，复 发患侧 的 平 均 CBF 值　与假性进展患侧平均 CBF 值，两者表现为有统计学意义的差异（P< 0.05）,复发组 CBF 值显著高于假性进展组。**结论**　3D-ASL 在鉴别高级别胶质瘤复发与假性进展有重要的临床应用价值

PU-2131

256 层螺旋 CT 血管成像对颅内动脉瘤的诊断价值

周伟恩,付丽媛,陈自谦
中国人民解放军联勤保障部队第九〇〇医院(原福州总医院)

目的　探讨 256 层螺旋 CT 血管造影（CT angiography，CTA）对颅内动脉瘤的诊断价值。
方法　选取 2013 年 5 月至 2014 年 12 月期间南京军区福州总医院 116 例颅内动脉瘤患者，对其影像学和临床资料进行回顾性分析。所有患者均行头颅 256 层 iCT 平扫及 CTA 检查。

结果 116 例患者，113 例阳性，发现 133 个动脉瘤，3 例阴性；瘤体最大者大小约 1.72×1.34cm，瘤颈部宽约 0.72cm，位于颈内动脉末端；最小者大小约 0.28×0.2cm，位于前交通动脉。①经手术发现 137 例动脉瘤，CTA 对脑动脉瘤的诊断符合率 97%（133/137），与金标准 DSA 或手术所见基本一致。

结论　CTA 检查是诊断颅内动脉瘤安全、快速、无创、有效的方法,具有较好的特异性和敏感性，可以确定病变范围和程度，有利于临床准确分期，可作为颅内动脉瘤筛查的首选方法，直接指导临床进一步检查和治疗。

PU-2132
高级别神经胶质瘤靶向治疗后的影像学评估标准：RANO 共识解读

胡晓云[1],Sanjeev Kumar Ps[2],Manish Sharma[2]
1.无锡市人民医院
2.Department of Medical Imaging， Parexel International Pvt Ltd， Hyderabad， Telangana， India

目的　探讨高级别神经胶质瘤的影像学评估标准的应用要点及影像报告规范与 QC，以提高影像科对 RANO 的认识与重视，有利于临床 MDT 的开展及临床诊断的统一性、标准化。

方法　浅析、比较肿瘤影像评估标准的发展演变过程，从 WHO 标准发展到 RECIST 和 RANO 标准及其之间的区别。解读 RANO 标准中的主要诊断术语解析及应用要点；胶质瘤影像评估实例案例分析及国内外学科应用现状对比。

结果　目前主流的肿瘤疗效影像评估标准是 RECIST 1.1，其特点是易普及、操作简便、变异性小，涵盖肿瘤本身及转移灶、淋巴结等整体性影像综合评估；但胶质瘤治疗疗效的判断一直是一个临床上的难题，2010 年由哈佛医学院提出了新的高级别胶质瘤治疗反应评价标准，即 RANO 标准。RANO 标准经过近 6 年的临床实践，得到了神经肿瘤学界的认可，也成为高级别胶质瘤临床试验研究的常用评价标准。胶质瘤应用的要点与难点在于靶病灶的选择、测量序列选择、新病灶定义及甄别、非靶病灶显著进展的掌握等；与欧美发达国家的 RANO 应用情况相比，无论是放射诊断医师/临床医师普及性还是影像报告的规范性均有明显差距。

结论　高级别神经胶质瘤治疗后的影像学评估标准及报告规范的推广亟待提高、任重道远；影像科重视 RANO 有利于肿瘤疗效评估标准的掌握及诊断报告的规范，有利于影像科与其它学科在 MDT 时的良性互动与协作，推动临床诊断的统一性与标准化，提升影像诊断学的应有地位与影响力。

PU-2133
3D-CE-TOF-MRV 对上矢状窦旁脑膜瘤术前评估的应用价值

吴瑜,詹松华
上海中医药大学附属曙光医院

目的　探讨三维对比增强时间飞跃法磁共振静脉成像（three dimensional contrast enhance time of flight magnetic resonance venography，3D-CE-TOF-MRV）技术对上矢状窦旁脑膜瘤术前静脉窦侵犯评估的应用价值。**方法**　回顾性分析经手术治疗的幕上矢状窦旁脑膜瘤患者 26 例，共 26 枚肿瘤，所有患者术前行三维对比增强 MR 静脉血管成像（three dimensional contrast enhance magnetic resonance venography，3D-CE-MRV）及 3D-CE-TOF-MRV 检查。对比观察其在显示肿瘤染色、与上矢状窦关系的差异。以术中所见肿瘤侵犯静脉的程度为标准，计算诊断准确度，并采用配对 χ^2 检验比较 3D-CE-MRV 及 3D-CE-TOF-MRV 在评估肿瘤对上矢状窦侵犯程度的差异

的统计学意义。**结果** 19 枚肿瘤在 3D-CE-MRV 上可见肿瘤染色，26 枚在 3D-CE-TOF-MRV 显示清晰的肿瘤染色。术中见 5 枚肿瘤与上矢状窦分离（0 级），9 枚与窦壁黏连（1 级），9 枚突入窦腔（2 级），3 枚填满窦腔（3 级），3D-CE-MRV 假阴性 1 例，假阳性 8 例，准确度 65%，3D-CE-TOF-MRV 假阴性 2 例，假阳性 1 例，准确度 88%，差异有统计学意义，P=0.021。**结论** 3D-CE-TOF-MRV 技术清晰显示其对相邻静脉窦侵犯程度，在显示肿瘤对上矢状窦侵犯程度方面优于 3D-CE-MRV，可以为脑膜瘤术前评估提供准确的影像信息。

PU-2134

侧脑室异位神经鞘瘤的 MRI 表现及相关病理分析

刘显旺[1,2,3],周俊林[1,2,3]
1.兰大二院
2.兰州大学第二临床医学院
3.甘肃省影像重点实验室

目的 探讨侧脑室异位神经鞘瘤的 MRI 表现，并与其病理结果进行对照分析，以提高对该病的认识水平，为患者的诊疗提供依据。**方法** 回顾性分析经手术病理及免疫组织化学染色证实的 2 例侧脑室异位神经鞘瘤，并结合国内外相关文献报道的 25 例患者进行分析。2 例均行 MR 平扫及增强扫描。**结果** 2 例分别为 29 岁及 51 岁的女性；病变均位于右侧侧脑室内，呈囊实性改变，瘤周脑实质可见水肿，增强后实性部分明显强化，囊性部分不强化。病理镜下可见 Antoni A 区和 Antoni B 区；免疫组化:S-100(+)、Vimentin(+)；EMA(-)、GFAP(-)、CK(-)。**结论** 侧脑室异位神经鞘瘤好发于青少年，男性多见，瘤体多位于右侧侧脑室内，囊实性改变、瘤周水肿及局灶性钙化为其特异性表现，结合病理学检查及免疫组化可以对该病进行确诊。

PU-2135

应用受试者工作特征曲线分析多模态 MRI 对原发性中枢神经系统淋巴瘤与胶质母细胞瘤鉴别诊断价值

宋伟[1],邓雪飞[1,2],王肖[1],徐茂林[1],谭德力[1],骆祥伟[1],朱友志[1],张禹[1]
1.901 医院
2.安徽医科大学解剖教研室

目的 探讨多模态 MRI 对原发性中枢神经系统淋巴瘤和胶质母细胞瘤鉴别价值。**方法** 回顾性分析经病理证实 20 例 PCNSL 和 25 例 GBM。患者术前均行扩散加权成像、磁敏感加权成像、动态磁敏感对比增强灌注成像，测肿瘤平均表观弥散系数值、磁敏感信号强度分级、脑血容量平均值比值。用独立样本 t 检验比较两者多模态 MRI 参量差异；用受试工作特性曲线（ROC）评价各参量诊断效能，获最佳阈值、敏感度、特异度、准确度等指标；用 Z 检验比较各参量间 ROC 曲线下面积（AUC）差异。**结果** PCNSL ADC_{mean}平均值（0.64 ±0.09）$\times10^{-3}$ mm^2/s、ITSS 平均值 0.75±0.64 级、$rCBV_{mean}$平均值 1.67±0.77，GBM ADC_{mean}平均值（0.86 ±0.16）$\times10^{-3}$ mm^2/s、ITSS 平均值 2.56±0.58 级、$rCBV_{mean}$平均值 3.53±0.82；各参量均有统计学差异。ROC 示：ADC_{mean}最佳阈值 0.84×10^{-3} mm^2/s，AUC0.902，敏感度 100%，特异度 72%，准确度 72%；ITSS 最佳阈值 1 级，AUC0.967，敏感度 90%，特异度 96%，准确度 86%；$rCBV_{mean}$最佳阈值 2.69，AUC0.942，敏感度 95%，特异度 92%，准确度 87%；ADC_{mean}+ITSS+$rCBV_{mean}$效能最优（AUC0.996，敏感度 100%，特异度 96%，准确度 96%），其 AUC 与 ADC_{mean}（p=0.038）间有差异，与双参量及其他单参量间无差异；双参量 AUC 与单参量相比，仅 ADC_{mean}+ITSS、ITSS+$rCBV_{mean}$与 ADC_{mean}（p=0.037、0.038）间有差异；双

参量间 AUC 无差异。**结论** 基于平扫 DWI 和 SWI 联合对 PCNSL 与 GBM 鉴别能力与多模态 MRI 联合相似，且优于单模态 MRI，有较高临床实践价值。

PU-2136

脑实质间变性室管膜瘤的 MSCT 及 MRI 表现

施豪波[1],余一凡[2],梁文[1],史达[1],杨心悦[1]
1.南方医科大学珠江医院
2.南方医科大学中西医结合医院

目的 探讨总结脑实质间变性室管膜瘤的多层螺旋 CT(MSCT)及 MRI 表现，结合病理结果分析，期待提高对此疾病的诊断水平。
方法 收集经手术病理证实的脑实质间变性室管膜瘤，并同时行 MSCT 平扫及 MRI 的 T1WI、T2WI 及增强检查，分析其形态及信号特点。
结果 本组病人共 11 例，男 10 例，女 1 例，年龄为 3-67 岁，呈两极分布，其中小于 20 岁的病人共 5 个，大于 50 岁的病人共 5 个；肿瘤主要位于幕上，共 10 例，多位于额顶叶；幕下 1 例，累及两侧小脑半球。本组形态分 2 型，囊实性 8 例，实性 3 例。囊实性肿瘤形状多为不规则型，其中囊性部分与实性部分比例差别较大；实性肿瘤主要呈类圆形或分叶状。囊实性肿瘤边界不清或欠清，瘤周水肿较轻；实质性边界较清，多伴有轻或中度瘤周水肿。MSCT 平扫示病灶实性成分主要呈等或稍高密度，CT 值约 31-40Hu，囊性成分呈脑脊液样密度改变，CT 值约 9-16Hu；MRI 扫描示病灶实性成分于 T1WI 呈稍低或低信号，T2WI 呈等或稍高信号，MRI 增强扫描示肿瘤实性部分明显不均匀强化，囊性部分囊壁明显强化，囊内无强化。
结论 脑实质间变性室管膜瘤的 MSCT 及 MRI 表现有一定的特征性，结合病人性别、发病年龄及临床病史，对其诊断及鉴别诊断有较高的临床意义。

PU-2137

Advanced MRI Findings of 2 Anaplastic Papillary Glioneuronal Tumor: One Transform into GBM

Jingqin Fang
Daping Hospital, Army Medical University

Papillary glioneuronal tumor (PGNT) is generally recognized as Grade Itumor, fewer anaplastic cases showing aggressive clinical course and histological characteristics were reported. In this presentation, we reported 2 anaplastic PGNT cases, one of which eventually transformed into glioblastoma (GBM, WHO IV). The first case was a 47-year-old women who mainly presented with absence seizure. MRI revealed an irregular mass with multiple cyst and mural nodule in left parietal lobe. Histological examination demonstrated an anaplastic PGNT. 19 moths later, she was readmitted and brain MRI demonstrated a mass at the previous surgical site. For the second resection, histology revealed a GBM developing from glial component of the primary tumor. The second case was a 7-year-old boy who admitted to hospital for progressive headache. MRI found a solid with cystic mass in right frontal lobe with markedly peritumoral edema. Postoperative histopathology revealed an anaplastic PGNT with a large area of necrosis.

SeveralMRI findings, such asnotable edema, ring-enhancing cyst wall, restricted diffusion and increased Lip/Lac peak, may predict aggressive nature of anaplastic PGNT. More important, this presentation suggest that anaplastic PGNT could undergo malignant transformation and turn into a more aggressive tumor.

PU-2138
MRI 对腰骶段椎管内黏液乳头型室管膜瘤及神经鞘瘤的鉴别价值

刘春华,毛怡,肖钦,邓晓娟*
陆军军医大学大坪医院

目的 比较并分析腰骶段椎管内黏液乳头型室管膜瘤(MPEs)和神经鞘瘤(SCHs)的临床资料及影像（MRI）表现，探讨 MRI 对腰骶段椎管内 MPEs 及 SCHs 的鉴别诊断价值，为临床手术方式的选择及预后评估提供更有价值的信息。**方法** 回顾分析本院 2010 年-2018 年发生于腰骶段椎管内经手术病理证实且影像资料及手术记录完整的 5 例粘液乳头型室管膜瘤及 29 例神经鞘瘤的临床资料及影像表现，比较 MPEs 和 SCHs 的临床和影像学差异。**结果** MPEs 与 SCHs 在年龄、肿瘤纵向长度、与脊髓圆锥/马尾神经分界、T2WI 信号均匀性、坏死及囊变、T1WI 及 T2WI 信号强度、T2WI 高信号区域在 T1WI 增强表现特点上的差异具有统计学意义（$P<0.05$）。而肿瘤在性别、形态、轴向位置、边界、出血、强化方式、强化程度及邻近骨质改变情况之间的差异均无统计学意义（$P>0.05$）。**结论** 腰骶段椎管内粘液乳头型室管膜瘤（MPEs）和神经鞘瘤（SCHs）在临床特点及影像学表现上存在一定的差异，MRI 对两种肿瘤的鉴别诊断有较大的价值。

PU-2139
磁共振波谱基于检测 2-羟基戊二酸诊断 IDH1 突变型胶质瘤的临床研究。

李文菲[1],张明[2],王占秋[1],刘兰祥[1]
1.秦皇岛市第一医院
2.西安交通大学第一附属医院

背景：自 2016 年最新的 WHO 胶质瘤诊断标准出现以来，胶质瘤高发病率、复发率、死亡率和低治愈率与 IDH 突变状态显著相关。本研究旨在检测 2-羟基戊二酸评估磁共振波谱（MRS）在预测胶质瘤 IDH 突变状态的诊断性能。
方法 系统搜索 Ovid-MEDLINE，Web of Knowledge 和 Google Scholar 数据库，以获得 2019 年 7 月发表的关于 MRS 鉴别胶质瘤 IDH 基因突变状态的研究。采用 Stata 和 Meta-Disc 分析工具构建汇总灵敏度和特异性，汇总受试者操作曲线（SROC）。进行 Cochran 的 Q-tset 评估研究异质性。发表偏倚分析由 Deeks 的漏斗图评估。
结果 共纳入 9 篇文献，汇总敏感性为 82%（95%CI，75-87%），特异性为 85%（95%CI，80-89%）。汇总的诊断比值比（DOR）和曲线下面积（AUC）分别为 36.3 和 0.92。通过 I2 检验评估中度异质性。基于敏感性分析表明，该研究结果是可靠的。未发现明显发表偏倚（p=0.08）。
结论 总之，目前所有证据均表明 MRS 在预测 IDH 突变型胶质瘤中具有较高特异性和敏感性。长-TE 和多体素技术可显著提高灵敏度和特异性预测 IDH 突变。但是，由于考虑的样本量较小，必须谨慎解释结果。进一步的前瞻性研究有必要验证基于检测 2-羟基戊二酸的 MRS 在预测胶质瘤 IDH 突变状态的临床价值。

颅内脑室外室管膜瘤影像分析

陈佳
陆军军医大学附属新桥医院放射科

摘要：目的　探讨颅内脑室外室管膜瘤的 CT 和 MRI 表现，以提高诊断正确率。方法　回顾性分析 19 例经病理证实颅内脑室外室管膜瘤的临床和影像学资料。19 例患者均行 MRI 平扫及增强，其中 8 例时行 CT 扫描，2 例行 DWI、PWI 检查。结果　肿瘤位于幕上脑室周围白质区 13 例，幕下脑室周围 3 例，非脑室周围区 3 例。实性肿瘤 7 例，囊实型 12 例，其中大囊为主型 2 例，大小囊混合型 10 例。肿瘤边界清楚，瘤周水肿与肿瘤体积不对称。肿瘤实质多为等、高密度，T1WI 等/稍低信号，T2WI 稍高/高信号，囊腔 T2Flair 部分呈高信号（5/12）。瘤内钙化多见（7/19），以 WHOⅡ级肿瘤多见。4 例瘤内合并出血，6 例瘤内见流空血管影。DWI 肿瘤实质呈等信号。增强扫描实质型肿瘤不同程度强化，大囊为主型囊壁均有强化，大小囊混合型肿瘤小囊表现为“虫洞”样强化。结论 颅内脑室外室管膜瘤的影像表现具有一定特征性，通过分析其征象有助于提高术前诊断正确率。同时 WHOⅡ级肿瘤更易出现钙化。

PU-2141

颅内原发黑色素瘤的磁共振与病理特征分析

肖云飞
郑州大学第一附属医院

目的　探索颅内原发黑色素瘤的磁共振表现与病理特征。**方法**　回顾性分析我院 2011 年-2016 年经常规染色及免疫组化诊断的原发颅内黑色素瘤 8 例的磁共振表现与病理特征。**结果**　1、典型黑色素型黑色素瘤表现为短 T1 短 T2 信号，容易诊断；2、非典型黑色素瘤可出现以下特征，之前文献较少报道：①病灶周边及病灶内的短 T2 信号，②囊变坏死，③临近脑膜强化。**结论**　1、典型黑色素性黑色素瘤磁共振表现具有特征性；2、病灶周边及病灶内的短 T2 信号、囊变坏死、临近脑膜强化等征象有助于非典型黑色素瘤的诊断。

PU-2142

IVIM-DWI 在胶质瘤病理分级诊断及预测 IDH-1、Ki-67LI 表达的应用研究

王唯伟,陈月芹
济宁医学院附属医院

目的　探究 IVIM 在术前胶质瘤病理分级及预测胶质瘤 IDH1 及 Ki-67LI 表达的价值。**方法**　收集本院经病理证实的中枢神经系统胶质瘤 30 例，低级别组 13 例，高级别组 17 例。统计学方法采用独立样本 t 检验及 Mann-Whitney U 非参数秩和检验。不同级别胶质瘤 IDH-1 表达状态的差异性采用 Fisher 的精确检验；Ki-67LI 与 D 值，f 值及 D*值的相关性运用双变量 Spearson 相关分析。各个参数的诊断效能运用受试者特性曲线（ROC）进行评价。

结果 D、D*及 f 值两次测量的一致性均较强（ICC＞0.80）。D、D*及 f 值在高低级别胶质瘤组间差异性具有统计学意义（p＜0.05）。高低级别胶质瘤组间 IDH-1 的表达状态的差异性具有统计学差异（P＜0.05）。D、D*值在 IDH-1 不同表达状态时差异性具有统计学意义（P＜0.05），f 值在 IDH-1 不同表达状态时差异不具统计学意义（P＞0.05）。IVIM 的参数 D 值与 Ki-67LI 呈负相关，相关系数为-0.659，p＜0.01；D*及 f 值均与 Ki-67LI 呈正相关（p＜0.01），且 f 值相关系数较 D*值大。

结论 IVIM 诸参数 D、D*及 f 值在高低级别胶质瘤间的差异性有统计学意义，三者均具有很好的鉴别诊断效能，可用于术前胶质瘤的病理分级的定量鉴别诊断。IVIM 的 D、D*值在 IDH-1 不同表达状态时差异性具有统计学意义，两者鉴别诊断效能相类似，均能通过鉴别 IDH-1 不同表达状态，提示肿瘤的预后，而 f 值不具备这方面的价值。IVIM 的 D 值与 KI-67LI 呈中度负相关，D*及 f 值与 KI-67LI 呈中度正相关，可间接反映肿瘤细胞增殖活性，进而定量评估其预后。

PU-2143

胶质母细胞瘤 MRI 环形强化特征评价 IDH1 突变型和野生型的价值

程诚
陆军军医大学大坪医院

目的 讨论胶质母细胞瘤 MRI 环形强化特征在评价 IDH1 突变型和 IDH1 野生型的价值。

方法 回顾性分析我院 2013 年 2 月至 2018 年 4 月期间 46 例经手术证实为胶质母细胞瘤的患者 MRI 影像资料，所有患者均行 1.5T 或 3.0T 场强磁共振常规 T1WI、T2WI、Flair、DWI、SWI 及增强扫描。观察患者性别、年龄、环形强化、环形强化病灶张力、环形强化内壁是否光整、卫星灶、病灶内囊性变、壁结节、出血、肿瘤周围水肿。病例按 IDH1 突变型、IDH1 野生型分成两组，分别统计各组各征象中征象的出现频数、出现率。连续变量采用 t 检验，分类变量采用 χ^2 检验及 Fisher 确切概率法。

结果 46 例胶质母细胞瘤患者中 IDH1 突变型 9 例、IDH1 野生型 37 例。IDH1 突型、野生型平均年龄，两组间无显著统计学差异。9 例 IDH1 突变型病例中 6 例出现环形强化，3 例未形成环形强化；37 例 IDH1 野生型病例中有 35 例出现环形强化，2 例未见环形强化。环形强化（P=0.044）在 IDH1 野生型、IDH1 突变型两组间有统计学差异。另对比两组病例中其余 7 个 MRI 征象，仅肿瘤周围水肿（P=0.047）在两组间有统计学差异，其余 MRI 征象包括环形强化病灶张力（P=0.224）、环形强化内壁是否光整（P=0.161）、卫星灶（P=0.262）、病灶内囊性变（P=0.609）、壁结节（P=0.248）、出血（P=0.609）,在 IDH1 突变型及 IDH1 野生型之间没有统计学差异。

结论 胶质母细胞瘤 IDH1 野生型比 IDH1 突变型在 MRI 增强扫描中更容易出现环形强化，但环形强化病灶的张力、内壁光整度两组之间没有差异。IDH1 野生型患者较 IDH1 突变型患者更容易出现肿瘤周围水肿，但水肿程度无差异。胶质母细胞瘤的 IDH1 突
变与否在常规 MRI 上有一定影像特征。

PU-2144

原发中枢神经系统淋巴瘤不典型影像表现

李美蓉
浙江大学医学院附属第一医院

目的 探讨颅内原发淋巴瘤的不典型影像表现，提高术前正确诊断率。资料与**方法** 回顾性分析术前误诊最后经病理证实 12 例淋巴瘤的临床和影像表现，总结影像表现及分析误诊原因。女 5 例，男 7 例，年龄范围为 43-71 岁，平均年龄 543 岁。**结果** 单发 5 例，幕上 4 例，幕下 1 例。多发 7 例，累及幕上 4 例，幕上和幕下 2 例，其中 1 例累及颅内和脊髓。所有病例共 29 个病灶，幕上多见，共 21 个病灶，基底节、丘脑和胼胝体多见，其次为额叶。发生于幕下共 7 个病灶，小脑多见，其次为脑桥。脊髓 1 个病灶。MRI 表现：信号均匀 17 个病灶，混杂信号 12 个病灶。T1WI 序列上，低信号为主 17 个病灶；等信号为主 11 个病灶；高信号 1 个病灶。T2WI 序列上，高信号为主 16 个病灶；等信号为主 12 个病灶；低信号为主 1 个病灶。不均匀强化 7 个病灶，实性部分均明显均匀强化；斑片状或线状明显强化 5 个病灶；轻度强化 5 个病灶。出血 9 例，共 12 个病灶，斑片状出血多见 9 个病灶，点状和线状出血 3 个病灶。**结论** 误诊原因主要包括多发病灶，累及幕下和脊髓，信号表现不典型、多种强化方式（如轻度或无强化，不均匀强化）和瘤内出血，结合年龄、实验室检查和影像表现综合诊断。

PU-2145
单指数、双指数、拉伸指数扩散加权成像在鉴别胶质母细胞瘤术后复发及假性进展中的价值

廖旦,王荣品
贵州省人民医院

探讨单指数、双指数及拉伸指数扩散加权成像在胶质瘤术后复发及假性进展中的鉴别价值。 方法 本组研究纳入 38 例经病理证实为胶质母细胞瘤行术后同步放化疗的患者，所有患者均磁共振平扫、增强及体素内不相干运动扩散加权成像。分别测量胶质瘤术后复发及假性进展组病灶的单指数模型、双指数模型及拉伸指数模型参数，包括表观弥散系数，真扩散系数，伪弥散系数， 灌注分数， α 值，分布扩散系数，采用组内相关系数(intraclass correlation coefficient，ICC) 评价两名医师测量结果之间的一致性，采用两独立样本 t 检验比较胶质瘤术后复发及假性进展两组之间的差异，采用受试者工作特征(receiver operating characteristic，ROC)曲线分析各参数评估胶质瘤术后复发及假性进展两组间的诊断效能。 结果 胶质瘤术后复发组的 ADC、D、DDC、α 值小于胶质瘤假性进展组（t=6.271, t= 5.761, t=2.219, t=8.007, P< 0.05）；胶质瘤术后复发组的 D*、f 值大于胶质瘤假性进展组，差异有统计学意义（t=4.034, t= 2.947, P< 0.05）。胶质瘤患者 ADC、D、D*、f、DDC、α 判断术后复发及假性进展的 ROC 曲线下面积分别为 0.908、0.925、0.804、0.743、0.901、0.961。 结论 单指数、双指数及拉伸指数模型扩散加权成像能够较好的反应肿瘤的扩散、灌注及微观结构信息，对于鉴别胶质瘤术后复发及假性进展具有重要的应用价值

PU-2146
脑室外中枢神经细胞瘤的 CT 及 MRI 表现与病理分析

李津
广西医科大学第一附属医院

目的 探讨总结脑室外中枢神经细胞瘤（extraventricular neurocytoma，EVN）的 CT 及 MRI 影像学表现及病理学特征。**方法** 搜集经手术病理证实的 12 例 EVN，6 例行 MRI 平扫及增强检查，2 例行 CT 平扫及增强检查，4 例同时行 MRI 和 CT 平扫及增强检查，回顾性分析其 CT 及 MRI 表现及病理学特征。**结果** 12 例均为单发病灶。位于额颞叶 10 例，其中 7 例位于左侧。实质肿块型 6 例，囊-实性 2 例，囊性 3 例。3 例伴有出血，2 例伴有钙化灶。CT 平扫呈等或稍低密度。MRI 平扫，实

性部分 T1WI 呈低或稍低信号，T2WI 呈等或稍高或高信号。增强扫描，8 例肿瘤实性部分不均匀强化，1 例囊壁中度花环型强化，1 例钙化灶临近脑膜强化，2 例未见明显强化。病理检查，3 例镜下组织切片发现钙化灶。免疫组织化学检查中 NeuN 全部阳性，SYN 阳性或强阳性 11 例，GFAP 阳性 5 例，4 例复发病例中有 3 例 Ki-67 标记指数≥2%。**结论** EVN 少见，影像表现缺乏特异性，位于额颞叶的单发实质肿块或多发囊变的囊实性占位应将该病列入鉴别诊断范围。Ki-67 标记指数≥2%的患者应定期复查 MRI 监测肿瘤复发。

PU-2147
体素内不相干运动成像（IVIM）监测脑胶质瘤复发和治疗后反应的初步探讨

王斌
山西医科大学第一医院

目的 探讨磁共振体素内不相干运动成像（intravoxel incoherent motion, IVIM）在监测脑胶质瘤复发和治疗后反应中的应用价值。**材料和方法** 26 例脑胶质瘤患者（15 例脑胶质瘤复发，11 例治疗后反应）在同步放化疗结束 2 月内行头部常规 MRI 扫描、增强扫描及多 b 值弥散加权扫描，通过 IVIM 软件的双指数模型，对图像后处理得到 standard ADC、slow ADC（D）、fast ADC（D^*）、fraction of fast ADC（f）的伪彩图，分别测量病例异常强化区 standard ADC 值、D 值、D^*值、f 值。采用两样本 t 检验比较两组各参数值是否存在差异，受试者工作特性曲线（ROC）评估各参数值在脑胶质瘤复发和治疗后反应鉴别诊断的效能。**结果** 复发组的强化病灶 standard ADC 值、D 值低于治疗后反应组，差异有统计学意义（$P<0.05$）。ROC 曲线分析，当 standard ADC 值、D 值曲线下面积分别为 0.703、0.788 时，其阈值分别为 1.166、0.631，敏感性分别为 54.5%、81.8%，特异性分别为 86.7%、73.3%；复发组的强化病灶 D^*值、f 值均高于治疗后反应组，差异有统计学意义（$P<0.05$）。ROC 曲线分析，当 D^*值、f 值曲线下面积分别为 0.752、0.758 时，诊断阈值分别为 2.642、0.693，敏感性分别为 66.7%、81.8%，特异性分别为 81.8%、66.7%。**结论** IVIM 可以监测脑胶质瘤复发和治疗后反应，为脑胶质瘤患者在临床的进一步治疗提供影像依据。

PU-2148
磁共振功能成像评估脑胶质瘤复发与治疗后反应的研究进展

王斌
山西医科大学第一医院

【摘要】 目前，脑胶质瘤术后患者的监测任务主要依靠其临床表现和磁共振的长期随访。但由于肿瘤复发和治疗后反应均可导致血脑屏障破坏，因此常规 MRI 增强扫描时可在术区及放疗照射野内出现新的强化病灶，常规磁共振表现难以对二者进行准确监测。但随着磁共振技术的发展，应用磁共振功能成像的方法对其进行研究的报道越来越多。扩散加权成像、扩散张量成像、体素内不相干运动成像、磁共振波谱成像、磁共振灌注成像[动态磁敏感对比增强 MRI、动态对比增强 MR 成像]在两者鉴别诊断中各具优势和限度，本文对近年有关影像学监测胶质瘤术后的新进展进行综述。

PU-2149
小脑半球单发原发性中枢神经系统淋巴瘤的 MRI 表现

张旭妃
首都医科大学三博脑科医院

目的 探讨小脑半球单发原发性中枢神经系统淋巴瘤（PCNSL）的 MRI 表现。**方法** 回顾性总结我院 2009 年 5 月至 2019 年 4 月 20 例经手术病理证实的位于小脑半球单发 PCNSL 患者的影像资料，全部患者均行常规 MRI 平扫、增强扫描及 DWI 检查。**结果** 左侧小脑半球 15 例，右侧 5 例。17 例位于小脑深部白质中线部位，3 例位于小脑半球皮层。T_1WI 像上 3 例呈等信号，17 例呈稍低信号。T_2WI 像上 6 例呈等信号，14 例呈稍高信号。FLAIR 序列上 14 例呈等信号，5 例为稍高信号，1 例呈低信号。10 例中度水肿，8 例轻度水肿，2 例重度水肿。DWI 图上 14 例呈高信号，ADC 图上呈低信号；5 例呈等信号，ADC 图上呈等信号；1 例呈低信号，ADC 图上呈等信号。DWI 与增强对照，测得肿瘤实性部分的平均 ADC 值为（ 0.643±0.20 ）$\times 10^{-3}mm^2/s$。8 例呈“棘”征，5 例“缺口”征，4 例“条纹”征，2 例“脐凹征”,1 例圆形强化。所有病例中，9 例形态不规则的强化病变边缘可见“脑叶征”。**结论** 小脑半球单发 PCNSL 的 MRI 表现具有一定特征性，术前正确诊断对指导临床治疗方案具有一定参考意义。

PU-2150
椎管内占位性病变的 MRI 特点及其鉴别诊断

顾思婧
上海交通大学附属第六人民医院

目的

探讨椎管内占位性病变的 MRI 特点及其鉴别诊断。

方法

回顾性分析经病理证实的 207 例椎管内原发肿瘤性占位病变的 MRI 表现，191 例行 MRI 常规平扫加增强扫描，16 例仅行平扫扫描。病理上属神经鞘瘤 114 例，有两例神经鞘瘤患者其中一例同时患有血管脂肪瘤，另一例同时患有脊膜瘤，脊膜瘤 31 例，室管膜瘤 17 例，神经纤维瘤 3 例，副神经节瘤 3 例，节细胞性神经瘤 2 例，血管瘤 8 例，其中一例为海绵状血管瘤+毛细血管瘤，动静脉血管瘤 2 例，毛细血管瘤 2 例，动静脉血管畸形 3 例，血管脂肪瘤 3 例，脂肪瘤 2 例，血管母细胞瘤 4 例，星形胶质细胞瘤 2 例，畸胎瘤 3 例，蛛网膜囊肿 2 例，表皮样囊肿 2 例，腱鞘囊肿 1 例，陈旧性血肿 1 例，孤立性纤维性肿瘤（血管外皮瘤）1 例，脂肪纤维血管瘤样增生 1 例。

结果

MRI 检查**结果** 肿瘤部位：髓内肿瘤 25 例，髓外硬膜下肿瘤 150 例，硬膜外肿瘤 29 例。2 例硬膜外与硬膜下均受累且通过椎间孔到达椎旁，2 例椎管内外均有累及；MRI 诊断符合率 80%（167 / 207）；不同肿瘤在发病年龄、性别、形态、发病位置、累及范围、信号特点及脊髓的变化等有各自的特点。

结论

MRI 可反应不同椎管肿瘤的病理特点，据此特点可进行鉴别诊断。

PU-2151
Value of susceptibility-weighted imaging in assessing WHO grade for brain astrocytomas

Xiaochun Wang,Xiaofeng Wu
First Clinical Medical College， Shanxi Medical University，

Purpose—To assess the value of combining susceptibility-weighted imaging (SWI) and dynamic susceptibility-weighted contrast-enhanced (DSC) perfusion-weighted magnetic resonance imaging (PWI) in assessing World Health Organization (WHO) grade for brain astrocytoma.
Materials and Methods—A total of 94 patients with pathologically-confirmed astrocytomas underwent SWI and DSC scans. The evaluation included intratumoral susceptibility signal intensity (ITSS) and relative cerebral blood volume (rCBV) max. The receiver operating characteristic curve (ROC) was used to assess the efficacy of combining two sequences in astrocytoma grading.
Results—ITSS within astrocytomas showed significant correlations with rCBV max (r =0.72, P <0.01) and with tumor grades (r = 0.92, P <0.01), and there was also a significant correlation between rCBV and tumor grade (r=0.77, P<0.001). The area under the ROC, SWI, PWI, SWI and PWI, in differentiation of the grades II and III astrocytomas were 0.995, 0.942 and 1.000, respectively; identifying grades III and IV were 0.773, 0.919 and 0.978, respectively; and identifying high and low-grade astrocytomas were 0.999, 0.992, 1.000, respectively.
Conclusion—ITSS was useful for assessing the WHO tumor grade in this cohort of patients with astrocytoma. The combination of SWI and PWI may improve the diagnostic accuracy of astrocytoma grading.

PU-2152

肥胖细胞型星形细胞瘤的 MRI 表现探讨

吴玉珍
中国人民解放军联勤保障部队第九〇〇医院(原福州总医院)

目的 初步探讨肥胖细胞型星形细胞瘤(Gemistocytic Astrocytoma,Gem A)的 MRI 表现及功能成像特点,以提高对该病的认识及诊断水平。
方法 回顾性分析 2010 年 10 月~2015 年 12 月经手术及病理证实的 13 例 Gem A 患者的临床及影像资料,所有患者均行 MRI 平扫、增强,其中 9 例加扫磁共振波普(Magnetic Resonance Spectroscopy,MRS)、弥散张量成像(Diffusion Tensor Imaging,DTI)、动脉自旋标记技术(Arterial Spin Labeling,ASL)及灌注加权成像(Perfusion Weighted Imaging,PWI)成像,1 例加扫磁敏感加权成像(Susceptibility Weighted Imaging,SWI)序列,分析总结其 MRI 影像特征。
结果 13 例患者均为单发病灶,且均发生于幕上,其中发生于额叶 10 例,颞叶 2 例,顶叶 1 例;8 例病灶局限于单脑叶,5 例累及多个脑叶,并通过胼胝体侵犯对侧脑组织;边界不清 8 例,边界清楚 5 例;肿瘤内部有大小不等囊变成分 7 例。肿瘤的实性成分在 T1WI 呈稍低信号,T2WI 呈稍高信号,DWI 呈稍高信号,增强后肿瘤实性成分多呈中度及以上不均匀强化;MRS 表现为 Cho 峰升高,NAA 峰减低,Cr 峰基本稳定;ASL 及使用 PWI 均呈低灌注,DTI 显示患侧大脑皮质纤维束明显较对侧稀疏。
结论 Gem A 的 MRI 表现为幕上单发,额叶多见,多边界不清且内部常伴囊变,并累及胼胝体侵犯对侧脑叶,增强扫描肿块实性成分多中度及以上不均匀强化,结合 MRS、DTI、ASL、SWI 及 PWI,可对本病提供诊断帮助。

PU-2153
胚胎发育不良性神经上皮瘤的影像诊断及鉴别诊断

陆菲菲,肖慧
中国人民解放军联勤保障部队第九〇〇医院(原福州总医院)

目的 分析颅内胚胎发育不良性神经上皮瘤的影像表现及病理特点,提高对该类肿瘤诊断的准确性。方法 回顾性分析经手术病理证实的胚胎发育不良性神经上皮肿瘤 11 例,3 例行 CT 检查,其中 2 例行 CT 和 MR 检查,10 例行 MR 检查,其中 7 例行增强扫描,5 例加扫波普检查,3 例行 PET 检查。结果 本组均为单发病灶,位于幕上 10 例(颞叶 3 例,顶叶 1 例,额叶 3 例,岛叶 1 例、枕叶 2 例),小脑半球 1 例。11 例位于皮层或皮层下,形态呈脑回状 5 例、楔形 4 例、不规则状 2 例。CT 表现:2 例呈低密度,1 例呈混杂高密度,其中 2 例临近颅骨内板呈稍受压变薄改变。病理组织学分型:复杂型 5 例(其中 4 例见厚薄均匀的线样分隔征,3 例合并壁内结节),简单型 6 例(其中 2 例见厚薄均匀的线样分隔征)。8 例呈囊样改变,T1WI 呈低信号、T2WI 呈高信号,2 例 T1WI 呈混杂低信号,T2WI 呈混杂高信号,FLAIR 8 例病灶周围呈环状高信号,2 例呈等低信号。DWI8 例均呈等低信号,2 例呈等稍高信号,增强扫描大部分病灶无强化,壁结节呈轻度强化。2 例病灶内部可见散在小点状强化。9 例周围均无水肿,2 例周围可见片状水肿带。5 例波普均表现为胆碱(Cho)峰较对侧正常脑组织轻度升高,N-乙酰天门冬氨酸(NAA 峰)未见明显降低,3 例行 PET 检查呈低代谢。
结论 胚胎发育不良性神经上皮瘤影像学表现具有一定的特征性,运用多模态影像检查方法,可以提高诊断准确性。

PU-2154
非典型脑膜瘤的 MRI 表现及鉴别诊断

陆菲菲,肖慧
解放军福州总医院

目的 分析非典型脑膜瘤的 MRI 表现,提高其诊断及鉴别诊断的准确性。方法 回顾性分析经手术病理证实的非典型脑膜瘤 19 例,并与胶质母细胞瘤 20 例、脑内单发转移瘤 13 例进行比较。全部病例均行 MR 常规和扩散加权成像(Diffusion Weighted Imaging,DWI)检查,其中 7 例脑膜瘤、9 例脑内单发转移瘤和 16 例胶质母细胞瘤行磁共振氢质子波谱(H1-Magnetic Resonance Spectroscopy,H1-MRS)检查。结果 非典型脑膜瘤瘤周多为轻度水肿,边缘模糊;实性部分多为全瘤性强化,其强化程度较其他二者明显,瘤内囊型囊壁均强化,瘤周囊型部分囊壁强化。DWI 示:三者间在肿瘤实质区和水肿区 ADC 值均无统计学差异,但胶质母细胞瘤与转移瘤的水肿区 ADC 值有统计学差异(P=0.021);MRS 示:三者 Cho 峰均明显升高,NAA 峰均明显降低,脑膜瘤未见明显 NAA 峰,且 lip 峰和 lac 峰出现的几率明显小于其他二者。结论 非典型脑膜瘤 MRI 表现多样,但仍具有一定特征性,运用多模态影像检查方法有助于提高诊断的准确性。

PU-2155
神经上皮肿瘤放射性损伤的磁共振波谱研究

张鑫,金松,张冰
南京大学医学院附属鼓楼医院

目的 讨神经上皮肿瘤患者放疗后脑放射性损伤的磁共振波谱特点。方法 收集临床确诊的神经上皮肿瘤放疗后脑放射性损伤患者 20 例，另外收集原发神经上皮肿瘤 20 例，所有患者均在 3.0T 磁共振传统平扫及增强的基础上行磁共振多体素氢质子波谱分析扫描。分别以病灶强化区、水肿区及正常对照区为感兴趣区，测量各感兴趣区 Cho / Cr、NAA / Cr、Cho 刷 AA 的比值。以独立样本 f 检验比较原发神经上皮肿瘤和放射性损伤病灶的强化区、水肿区 cho / Cr、NA/Cr、cho/NAA 的比值，以 $p<0.05$ 为差异有显著统计学意义。结果 原发神经上皮肿瘤病灶的强化区与水肿区 cho / Cr 比值分别为(3.50±1.10)和(1.95±0.66)；其 cho / NAA 比值分别为(4.42±1.98)和(2.14±1.11)。放射性损伤病灶的强化区与水肿区 Cho / Cr 比值分别为(1.80±0.21)和(1.20±0.26)；其 cho 小 AA 比值分别为(1.69±0.37)和(0.84±0.24)。NAA/Cr 比值差异无统计学意义($p>0.05$)。结论 原发神经上皮肿瘤病灶的强化区与水肿区 Cho / Cr、Cho/NAA 比值与放射性损伤有明显差异，可作为诊断依据。

PU-2156

中枢神经细胞瘤影像学表现及病理分析

杨艳秋,陈自谦
中国人民解放军联勤保障部队第九〇〇医院(原福州总医院)

目的 探讨中枢神经细胞瘤(CNC)的影像及病理表现,以提高其诊断准确率。
方法 回顾性分析 11 例经手术病理证实的 CNC 患者的临床、影像资料及病理表现。
结果 11 例行 MRI 检查,4 例行 CT 平扫。10 例肿瘤位于侧脑室,邻近 Monro 孔,与透明隔宽基底相连。CT 及 MRI 上肿瘤为囊实性,呈"海绵征"或"皂泡征";CT 上 3 例病灶内见不同程度钙化;9 例病灶边缘与侧脑室壁之间见多发实性条索影;增强 8 例呈轻-中度强化,3 例呈不均匀明显强化,7 例病灶内部及周边见强化血管影。10 例均伴有不同程度侧脑室积水。另 1 例位于左侧额颞叶。
结论 中枢神经细胞瘤临床、影像及病理学表现有一定特征性,结合发病年龄及典型特点,有助于与其它脑室内肿瘤鉴别。

PU-2157

传统 MRI 结合 DWI 在颅内 WHOII 级和 WHOIII 级孤立性纤维瘤/血管外皮细胞瘤中的诊断价值

张婧,周俊林
兰州大学第二医院

目的 探讨 WHOII 级和 WHOIII 级孤立性纤维瘤/血管外皮细胞瘤（SFT/HPC）的 MRI 和 DWI 影像学特征。
材料和方法 回顾性分析经病理证实的 WHOII 级 SFT/HPC 27 例和 WHOIII 级 SFT/HPC31 例，所有病例术前均行传统 MRI 和 DWI 检查。所有病灶在肿瘤实体测量最大 ADC 值（ADCmax），平均 ADC 值（ADCmean）和最小 ADC 值（ADCmin）。统计学方法使用卡方检验和秩和检验。
结果 肿瘤的形态（c^2=13.445）、“硬膜尾征”（c^2=10.6925）、囊变、坏死（c^2=9.810）、强化特点（c^2=13.726）、明显瘤周水肿（c^2=13.464）和骨质破坏（c^2=8.086）在 WHOII 级和 WHOIII 级 SFT/HPC 中具有明显统计学意义，P 值<0.001；DWI 信号（c^2=3.279）具有统计学意义，P 值<0.05。在 WHOII 级和 WHOIII 级 SFT/HPC 中平均 ADCmax（ADCmean and ADCmin）分别为 1.232±0.357 × 10^{-3} mm^2/s 和 0.744±0.222 × 10^{-3} mm^2/s (1.102±0.274 × 10^{-3} mm^2/s 和

0.703±0.203 × 10^{-3} mm^2/s, 0.975±0.192 × 10^{-3} mm^2/s 和 0.664±0.191 × 10^{-3} mm^2/s)，P 值均<0.001.
WHOIII 级 SFT/HPC 平均 ADCmax、ADCmean 和 ADCmin 值低于 WHOII 级 SFT/HPC。
结论 WHOII 级和 WHOIII 级 SFT/HPC 影像学表现有重叠，鉴别困难，传统 MRI 结合 DWI 有助于这两种肿瘤的鉴别诊断。

PU-2158

横纹肌样脑膜瘤 MRI 表现并文献复习

唐文兵,陈自谦
中国人民解放军联勤保障部队第九〇〇医院(原福州总医院)

目的 :探讨横纹肌样脑膜瘤的 MRI 表现与病理特点的相关性,结合文献报道提高对本病的影像诊断水平,减少漏诊及误诊。
方法:回顾性分析本院经手术病理证实的 2 例横纹肌样脑膜瘤患者的临床及 MRI 影像资料,并结合相关文献报道 9 例。
结果:本组病例女 7 例,男 4 例,均为单发,7 例囊实性,4 例实性,实性部分 T1WI 主要呈等信号,T2WI 主要呈稍高信号,囊性部分 T1WI 主要呈低信号,T2WI 主要呈高信号,增强扫描 2 例均匀强化,9 例不均匀强化,内有坏死囊变区,6 例有"脑膜尾征",5 例瘤周可见迂曲血管且肿瘤内可见流空信号,6 例瘤周见明显水肿区。病理显示肿瘤绝大部分由横纹肌母细胞样瘤细胞构成。瘤组织内常出现坏死、出血、血管增生。
结论:横纹肌样脑膜瘤 MRI 表现为实性或囊实性,特征是肿瘤内或瘤周可见低信号流空影及瘤周可见不同程度的水肿,但因其缺乏特异性,最终确诊还需依赖病理学检查。

PU-2159

常规 MRI 特征在预测低级别胶质瘤 1p/19q 缺失状态的应用价值

潘婷,苏春秋,张璇,鲁珊珊,施海彬,洪汛宁
南京医科大学第一附属医院

目的 探讨应用常规 MRI 特征在预测低级别胶质瘤 1p/19q 缺失状态的价值。**资料与方法** 回顾性分析经手术和病理证实的 64 例低级别胶质瘤（WHOII、III 级）患者（31 例 IDH 突变伴 1p/19q 非联合缺失，33 例 IDH 突变伴 1p/19q 联合缺失）的常规 MR 图像资料。由两名不知道病理结果的中枢影像医师独立依据 VASARI 特征集的标准进行影像学特征的提取。运用 Kappa 检验评价 2 名医生对影像学特征评分结果的一致性。应用卡方检验或 Fisher 精确检验评价两组胶质瘤影像学特征的统计学差异。运用 Logistic 回归分析及受试者工作特性（ROC）曲线分析评价影像学特征对于预测低级别胶质瘤 1p/19q 缺失状态的诊断效能。**结果** 两名放射科医师对影像学特征评分的一致性较好（Kappa 值范围 0.718-1.000）。增强比例、T2/FLAIR 不匹配比例对于 1p/19q 缺失状态的预测具有统计学意义（P＜0.05），其中＞50%T2/FLAIR 不匹配比例对于预测 1p/19q 非联合缺失胶质瘤诊断效能最高（AUC=0.884，敏感性、特异性、阳性预测值、阴性预测值分别为 74.19%、100.0%、100%、80.51%）。**结论** 术前常规 MRI 特征可以用于非侵入性的预测低级别胶质瘤 1p/19q 缺失状态。

PU-2160
MR 成像中胶质母细胞瘤的表面形态对患者的生存期和手术疗效的预测价值

孙祥茹
山西医科大学第一医院

目的 评价治疗前增强容积 T1 加权 MRI 上胶质母细胞瘤肿瘤表面形态对胶质母细胞瘤病人预后的预测价值。

方法 收集本院 2016-2018 年间经病理证实的胶质母细胞瘤患者共 59 例，其中女性占 43%，中位年龄为 65 岁。获取预处理容积 T1 加权 MR 成像序列和相关临床变量：年龄，切除类型，治疗方案和最后一次随访的生存信息。进行肿瘤分割和图像处理，计算每个患者和分割的总体积、表面特征和表面规则程度，之后计算几个几何测量值与 GBM 的存活相关的**结果** 总体积，CE 体积，坏死体积，CE 边缘宽度和 CE 边缘几何异质性。Kaplan-Meier 分析用于确定与预后相关的参数，使用 log-rank 和 Breslow 检验来评估结果的显著性。

结果 表面规律性是 GBM 患者术后生存和结局反应的独立预测因子（P =0 .005，风险比[HR] = 1.48）。年龄（P<0.001，HR = 2.554）和边缘宽度（P=0.006，HR = 2.372）对采用表面规则性分类的患者亚组之间的治疗差异有统计学意义。表面规则肿瘤确实从完全切除中获益（P=0.004，HR=2.071），而表面不规则肿瘤则没有（P=0.572，HR=1.169）。

结论 患有常规肿瘤的患者从完全切除中获得了实质性益处。 然而，不规则肿瘤的预后可能较少依赖于切除的程度。 因此，表面规则性可以与其他标准整合，作为患者通过广泛切除的潜在益处的成像生物标志物。

PU-2161
多序列 MRI 影像组学特征在胶质瘤分级的应用

秦江波,王效春,谭艳,张辉
山西医科大学第一医院

目的 比较基于多序列 MRI（T2WI-FLAIR、T1WI-CE 和 ADC 图）的影像组学特征在胶质瘤分级的能力，并通过联合多个特征来提高胶质瘤分级能力。
方法 经病理证实 66 例胶质瘤患者均行 T2-FLAIR，T1WI-CE 和 DWI 扫描。使用内部软件对三个 MRI 序列图像处理，共获得 114 个 影像组学特征。比较低级别（LGGs）和高级别胶质瘤（HGGs）各序列的所有影像组学特征值。对有显著统计学差异的特征进行接受者操作特性曲线分析，以判定鉴别 LGGs 和 HGGs 的能力。通过联合所有显著差异的特征，来确定联合特征的分类效能是否可以进一步得到提升。每个 MRI 序列中有差异的影像组学特征分别与胶质原纤维酸性蛋白（Glial Fibrillary Acidic Protein，GFAP）的表达进行 Pearson 相关性分析。
结果 FLAIR 序列 2 特征，T1-CE 序列 3 个特征，ADC 图 13 特征在 LGGs 和 HGGs 间有显 著统计学差异（P <0.05）。 FLAIR_GLCM_Cluster_Shade（ROC 曲线下面积[area under the ROC curve，AUC] = 0.838），T1-CE_GLCM_Entropy（AUC = 0.936），ADC_GLCM_Homogeneity（AUC = 0.905）分别在各 MRI 序列中具有较高地鉴别 LGGs 和 HGGs 的效能。联合特征在鉴别 LGGs 和 HGGs 具有最高的 AUC（AUC = 0.943）值，鉴别 LGGs 和 HGGs 的能力最高。GFAP 和 T1-CE_GLCM_Entropy 间呈显著负相关性，GFAP 和 ADC_GLCM_Homogeneity 呈正相关。

结论 多个 MRI 序列的特征具有鉴别 HGGs 和 LGGs 的潜力，同时通过联合多个影像组学特征可以提高胶质瘤分级准确性。

PU-2162

增强 BTFE 序列在垂体大腺瘤质地评估中的应用

宋玉坤,韩海伟
厦门大学附属第一医院

目的

大多数垂体大腺瘤的质地较软，可通过经蝶窦途径进行吸除和刮除。然而，有 5%-15％的腺瘤是坚硬和纤维状的，导致经蝶窦途径切除困难。垂体大腺瘤术前需要明确肿瘤的边界、周围结构关系及肿瘤本身的特性，基于此，术前评估肿瘤的一致性对于手术非常重要。本研究旨在应用增强 BTFE（平衡式自由稳态进动）序列评估垂体大腺瘤质地的临床价值。

方法

本研究纳入垂体占位患者 30 例（平均年龄：46.7±18.1 岁，年龄范围：25-60 岁），术后经病理证实均为垂体大腺瘤。术前使用飞利浦 Ingenia 3.0T MRI 扫描仪分布获取增强 BTFE、T2WI 和增强 T1WI 图像，所有的图像由三位经验丰富的神经放射学家根据影像特征评估垂体质地，所有的垂体大腺瘤在术中被神经外科医生分类为质软或质硬型。通过使用 Fisher 精确检验比较两组肿瘤质地类型的差异。

结果

通过术中分类，20 例肿瘤是质软型，10 例肿瘤是质硬型。影像结果表明，在 CE-BTFE 图像中，质硬型肿瘤信号均匀，肿瘤内部没有分布斑点状高信号，而质软型肿瘤信号混杂，肿瘤内部可见多个或弥漫性分布的斑点状高信号。统计结果表明肿瘤质地和 CE-BTFE 影像特征之间存在显著相关性（P ＜0.05），而肿瘤质地与 T2WI 以及 CE-T1WI 影像特征之间无显著相关性（P＞ 0.05）。

结论

增强 BTFE 序列可以有效评估垂体大腺瘤的质地类型，从而为手术方法的选择提供有效参考。

PU-2163

颅内原发性胶质肉瘤 MRI 表现及诊断价值

汪文胜,梁倩雯
广东三九脑科医院

目的 总结颅内原发胶质肉瘤的 MRI 影像表现，分析 MRI 对该肿瘤的诊断价值，并复习相关文献。**方法**，回顾性分析经病理证实的 25 例胶质肉瘤临床资料及 MRI 表现。**结果** 25 例患者中，男性 15 例，女性 10 例，年龄 15～71 岁（平均 46.4 岁）。24 例均位于幕上，1 例位于脑干-右侧桥臂，肿瘤边界清楚，80%肿瘤伴有明显囊变坏死以及不同程度的瘤周水肿，增强扫描均呈明显不均匀强化，20 例呈不规则厚壁环状或花环状强化，14 例内部可见栅栏样的条状不规则强化。**结论** 胶质肉瘤 MRI 表现具有一定特点，结合病人病史和年龄有助于与颅内常见肿瘤的鉴别。

PU-2164

节细胞神经瘤的影像学诊断

冯婵,李向东
中国人民解放军南部战区总医院

【摘要】 **目的** 通过分析节细胞神经瘤的影像学表现，提高对该病诊断的准确性。 **方法** 回顾性分析 15 例经手术病理证实的节细胞神经瘤，包括病灶部位、形态、密度、边界、强化及与周围结构关系等影像学特点。结果:15 例肿瘤中，5 例位于肾上腺，3 例位于纵隔，2 例位于胸腔，2 例位于腹膜后间隙，1 例位于颈椎间孔，1 例位于腰椎间孔， 1 例位于盆腔；肿瘤边界大部分清楚，呈类圆形、梭形或不规则形，不规则形肿块多沿周围脏器呈嵌入性生长。15 例 CT 平扫表现为低或等密度，低于或等于肌肉密度，1 例病灶内见多发斑点状、结节状钙化，4 例见散在点状、小条状钙化，2 例见少许脂肪密度影，1 例伴有出血；其中 5 例 MR 扫描表现为 T1WI 呈等或低信号，T2WI 呈中高混杂信号；1 例 PET/CT 扫描表现为代谢轻微增高；14 例行增强扫描，7 例呈条片状或片絮状不均匀轻中度进行性强化，5 例各期扫描均无明显强化，2 例呈不均匀明显强化。结论:节细胞神经瘤的 CT 和 MRI 表现有一定的特征，正确认识其影像表现，有助于其诊断和鉴别诊断。

PU-2165

探讨动态磁敏感对比增强 MRI（DSC-MRI）监测脑胶质瘤复发和治疗后反应的应用价值

王斌
山西医科大学第一医院

目的
探讨动态磁敏感对比增强 MRI（dynamic susceptibility contrast MRI，DSC-MRI）灌注成像在监测脑胶质瘤治脑胶质瘤术后复发和治疗后反应的应用价值。
方法
26 例脑胶质瘤患者（15 例脑胶质瘤复发，11 例治疗后反应）在同步放化疗结束 2 月内行头部常规 MRI 扫描、增强扫描及 DSC 脑灌注成像，通过 DSC 软件分析，对图像后处理得到病例异常强化区、水肿区的相对脑血容量（relative cerebral blood volume,rCBV）、相对脑血流量的（relative cerebral blood flow，rCVF）的伪彩图，分别测量病例异常强化区、水肿区的 rCBV 值、rCVF 值，采用两样本 t 检验比较两组各参数值是否存在差异。
结果
复发组的异常强化区平均 rCBV 值及 rCBF 值均显著高于放射性脑损伤组［(5.62±2.01) vs (2.17±0.94)；(5.14±1.96) vs (1.96±1.25)，P＜0.05］，强化区两灌注指标在肿瘤复发和治疗后反应两组间差异有统计学意义。复发组的水肿区平均 rCBV 值及 rCBF 值均显著高于放射性脑损伤组［(4.11±1.17) vs (1.72±0.83)；(3.76±1.83) vs (1.43±0.65)，P＜0.05］，水肿区两灌注指标在肿瘤复发和治疗后反应两组间差异有统计学意义。
结论
DSC-MRI 能早期评估脑胶质瘤复发和治疗后反应，为脑胶质瘤患者在临床上的进一步治疗提供影像依据。

PU-2166
半剂量增强 T2 FLAIR 在脑转移瘤中的应用研究

金腾[1],郑传胜[1],姚振威[2],冯晓源[2]
1.华中科技大学同济医学院附属协和医院
2.复旦大学附属华山医院

目的 探讨 1/2-dose CE-T2 FLAIR 序列在脑转移瘤中的应用价值。
方法 前瞻性我院就诊的 46 例脑转移瘤患者。扫描序列依次包括平扫 T2 FLAIR、1/2-dose CE-T2 FLAIR、1/2-dose CE-T1WI 以及 routine-dose CE-BRAVO。以病灶直径 5mm 为分界，将所有病灶按强化方式分为 ABC 三组：A 组，直径<5mm 的病灶；B 组，病灶直径≥5mm 且呈环形强化的病灶；C 组，直径≥5mm 且呈实性强化的病灶。对所有转移灶在 1/2-dose CE-T2 FLAIR、1/2-dose CE-T1WI 以及 routine-dose CE-BRAVO 三个序列上的强化程度进行评分，评分标准如下：3 分，病灶强化程度高；2 分，病灶强化程度中等；1 分，病灶强化程度低（病灶漏诊同样记为 1 分）。（I）分别计算 A 组、B 组、C 组病灶在 1/2-dose CE-T2 FLAIR 上的强化增长百分率（PI），并进行统计学比较；（II）分别在 A 组、B 组、C 组内，对病灶在不同序列上的强化程度进行统计学比较。**结果** 46 例患者共 89 个病灶被确诊为脑转移灶：A 组（n=39），B 组（n=23），C 组（n=27）。(I)病灶在 ABC 组中 1/2-dose CE-T2 FLAIR 的 PI 值比较：$PI_C<PI_A$，$PI_C<PI_B$，PI_B与PI_A无统计学差异。（II）A 组：病灶在 1/2-dose CE-T2 FLAIR 的强化程度高于 1/2-dose CE-T1WI and CE-BRAVO。B 组：病灶在 1/2-dose CE-T2 FLAIR 的强化程度高于 1/2-dose CE-T1WI；C 组：病灶在 1/2-dose CE-T2 FLAIR 的强化程度低于 1/2-dose CE-T1WI 与 routine-dose CE-BRAVO。**结论** 使用 1/2-dose CE-T2 FLAIR 不仅可以降低对比剂剂量，且对显示小转移灶或环形转移灶有明显的优势。

PU-2167
增强 T2 FLAIR 序列在复发胶质瘤与颅内放射性坏死的鉴别诊断价值

吴诗熳[1],王容[1],高心逸[3],唐作华[2],姚振威[1]
1.复旦大学附属华山医院
2.复旦大学附属眼耳鼻喉医院
3.浙江省肿瘤医院

目的 由于胶质瘤复发和放射性坏死都伴随血脑屏障的破坏，在常规进行的增强 MR 扫描中都显示出强化，因此无法有效地鉴别两者。该研究探讨在增强 T1 扫描后补充 T2FLAIR 扫描对鉴别复发与放射性坏死的诊断价值和应用。
材料和方法 回顾性分析纳入 2016 年 1 月到 2019 年 3 月期间来我院就诊的 26 例脑胶质瘤术后复发患者（共 32 个肿瘤），作为 A 组；前瞻性收集由临床确诊鼻咽癌放疗后引起颅内放射性损伤的病人 22 例（共 31 个病灶）作为 B 组。所有患者的扫描序列都有包括平扫 T1WI、平扫 T2 FLAIR、增强 T1WI 和增强 T2 FLAIR.

由两位高年资神经放射学医师对所有病灶在 CE-T1WI、 CE-T2 FLAIR 的强化程度进行评分，评分标准如下：3 分，病灶强化程度高；2 分，病灶强化程度中等；1 分，病灶强化程度低（病灶漏诊同样记为 1 分）；并在 CE-T2 FLAIR 增强区域画 3 个感兴趣区域，其平均值作为该医师测量的值，计算其 CR 值、CR 差值（difference of contrast ratio, D-CR），并对两组进行统计学比较。
结论 复发胶质瘤在增强 T1WI 序列上强化程度较高，由于高浓度的 GBCA 会在 T2 FLAIR 发生信号反转，因此病灶在紧接着增强 T1WI 后扫描的 T2FLAIR 不明显。而放射性坏死相反，T1 强化不明

显，在补充的 T2FLAIR 上强化明显。因此增强扫描后补充 T2 FLAIR 扫描对鉴别放射性坏死和胶质瘤复发有重要意义。

PU-2168
探讨增强 MR 及 DWI 在脑转移瘤早期疗效及其预后评估的价值

钟贻洪,刘周,李丽,文杰,罗德红
中国医学科学院肿瘤医院深圳医院

目的 探讨增强 MR 及 DWI 在脑转移瘤早期疗效及其预后评估的应用价值。
方法 选择经病理诊断或临床诊断的脑转移瘤 83 例,均予以化学治疗方案，随访 2 ～10 次，行 DWI 及 MRI 增强扫描，测量肿瘤最大直径、肿瘤实质及正常脑白质的 ADC 值，计算 rADC 值。分析肿瘤治疗前后 rADC 值差值对预测疗效的可行性。采用实体瘤疗效评价标准 1.1 版本评价临床疗效，并按临床疗效不同分为缓解组和未缓解组。两组患者均在治疗前后行增强 MR 及 DWI 扫描，并对 DWI 图像测定 ADC 值及计算 rADC。观察治疗前后 ADC 值与预后的关系。
结果 缓解组 48 例，未缓解组 43 例，与治疗前相比,缓解组 ADC 值升高而未缓解组治疗后 ADC 值降低(P <0.05)。随访 32 个月，缓解组生存时间和生存率显著优于未缓解组(P <0.05)。
结论 MR 增强及 DWI 扫描在评估脑转移瘤患者早期疗效及预后有重要价值。

PU-2169
MR 常规征象结合 ADC 值对微囊型脑膜瘤与非典型脑膜瘤的鉴别

柯晓艾,周俊林
兰州大学第二医院

目的 用 MR 常征象结合 ADC 值鉴别诊断微囊型脑膜瘤及非典型脑膜瘤，以提高术前诊断准确率 。
材料与方法 回顾性分析经手术病理证实的 25 例微囊型脑膜瘤患者与 50 例非典型脑膜瘤患者的术前临床、影像及病理资料。对两种病理亚型脑膜瘤的定性指标（分叶征、 肿瘤囊变、 瘤周水肿、瘤脑界面、 脑膜尾征、 邻近颅骨改变、强化均匀性、瘤内流空血管）及定量指标（肿瘤最大径、最大、最小、平均 ADC 值）进行统计学分析，并用多因素 Logistic 回归分析与两种脑膜瘤亚型鉴别相关的独立预测指标。
结果 25 例微囊型脑膜瘤与 50 例非典型性脑膜瘤相比，定性指标：分叶征（ x^2=17.033，P<0.01）、肿瘤囊变（ x^2=4.412，P<0.05）、瘤周水肿程度（ x^2=14.476，P<0.05）、 瘤脑界面（ x^2=9.000，P<0.05）、 邻近颅骨改变（ x^2=14.109，P<0.01）、瘤内流空血管（ x^2=9.925，P<0.05）6 项影像学征象差异有统计学意义；定量指标：MaxADC 值微囊型脑膜瘤（1.09±0.11）大于非典型脑膜瘤（0.85±0.17），组间有统计学意义（P<0.01），MinADC 值微囊型脑膜瘤（0.96±0.13）大于非典型脑膜瘤（0.72±0.09），组间有统计学意义（P<0.01），AvgADC 值微囊型脑膜瘤（1.01±0.12）大于非典型脑膜瘤（0.78±0.10），组间有统计学意义（P<0.01）；多因素 logist 回归分析得出分叶征在微囊型脑膜瘤和非典型脑膜瘤间有统计学差异(P<0. 05)。
结论 微囊型脑膜瘤与非典型性脑膜瘤在肿瘤分叶征、 肿瘤囊变、 瘤周水肿程度、瘤脑界面、邻近骨质改变、瘤内流空血管方面存在差异，同时，最大、最小、平均 ADC 值可以作为一种量化工具鉴别两种病理亚型脑膜瘤，提高术前诊断准确率。

PU-2170
多形性黄色瘤样星形细胞瘤的影像分型及鉴别诊断

许多,蒋飚,余鑫锋,张敏鸣
浙江大学医学院附属第二医院

目的 分析总结多形性黄色瘤样星形细胞瘤的影像特征，并进行影像分型及探讨各型的鉴别诊断。
方法 回顾性分析 25 例经病理证实的多形性黄色瘤样星形细胞瘤临床资料及影像表现，术前进行癫痫序列检查 7 例，MR 增强检查 18 例。
结果 男性 10 例，女性 15 例，女性多于男性。平均年龄 36.4 岁，中位年龄 30 岁。25 例均为单发，均位于幕上。病灶发生于颞叶 13 例，顶叶 3 例，枕叶 3 例，额叶 2 例，额颞岛叶交界区 1 例，下丘脑 1 例，松果体区 1 例，杏仁核 1 例。病灶位于皮层及皮层下 13 例，仅累及皮层 5 例，位于皮层下白质而不累及皮层 4 例。影像表现可分为 3 种类型：实性 / 实性为主型（15 例，主要表现为实性为主肿块，多有明显强化），囊伴结节型（8 例，主要表现为囊伴附壁结节，结节及囊壁有较明显强化）及囊性型（2 例，主要表现为皮层及皮层下囊性结节）。
结论 多形性黄色瘤样星形细胞瘤好发于年轻人，单发且多位于幕上浅表部位，影像可表现从实性－囊伴结节－囊性不同类型，实性瘤体部分常强化明显，灶周水肿大小不一，可伴有脑膜尾征及邻近颅骨凹陷塑形，可伴钙化，病灶弥散受限不明显。主要的鉴别诊断包括毛细胞型星形细胞瘤、脑膜瘤、节细胞胶质瘤、胶质母细胞瘤，少突胶质细胞瘤。

PU-2171
磁共振功能成像在高级别脑胶质瘤复发与假性进展鉴别诊断的价值

梁笑
山西医科大学第一医院

目的 探讨磁共振功能成像在脑胶质瘤术后复发与假性进展中的临床价值。
方法 将 2018 年 1 月—2019 年 5 月收治的 20 例高级别脑胶质瘤术后复发和 11 例高级别脑胶质瘤假性进展患者资料进行回顾性研究；并对所有患者的 DCE-MRI （磁共振动态对比增强）、DWI（扩散加权成像）和 DKI（磁共振扩散峰度成像）资料进行总结和分析。
结果 资料统计显示，高级别脑胶质瘤复发组实性强化区 Krans 值和 iAUC 值明显高于假性进展组，且差异有统计学差异（ P ＜ 0.05）；假性进展组 ADC 平均值高于复发组，差异有统计学差异（ P ＜ 0.05）；脑胶质瘤复发区 DKI 参数值与假性进展区比较有统计学差异（ P ＜ 0.05）。
结论 应用 DCE-MRI 联合 DWI、DKI 成像技术可以有效鉴别诊断高级别胶质瘤复发和假性进展，对指导临床治疗方案的选择以及预后评估具有重要价值。

PU-2172
胸椎旁黑色素性神经鞘瘤 1 例

李德凯
重庆市第七人民医院

神经鞘瘤起源于神经鞘膜的施万细胞，是椎管内最常见的肿瘤，占所有椎管内肿瘤的 29%，以中上颈段及上胸段多见。跨脊膜生长，在 CT 及 MR 影像上可表现为典型的哑铃征，增强扫描表现为明显不均匀强化，可见囊变、出血、坏死，诊断较容易。黑色素性神经鞘瘤是一种很罕见的肿瘤，占所有神经鞘瘤的 1%以下，是一种交感神经节含有色素的肿瘤，可发生在 10-92 岁的患者，其发病高峰年龄为 30-40 岁，无性别优势。MRI 扫描时，黑色素 T1WI 上呈高信号，T2WI 上呈低信号是其特征性的表现。但由于黑色素含量及分布的不同，在 MRI 上表现的信号有时也没有特征性，同时由于神经鞘瘤可伴有出血，而出血在亚急性期和慢性期 TWI 均可表现为高信号，从而难以鉴别。

综上所述，黑色素性神经鞘瘤在 MR 上有一定的特征性表现，但仍难以诊断，需结合临床及病理相关检查明确诊断。

PU-2173

Comparing the value of DKI and DTI in detecting isocitrate dehydrogenase genotype of astrocytomas

Yan Tan,Hui Zhang,Xiaochun Wang,Lei Zhang
The first hospital of Shanxi medical university

AIM: To compare the value of diffusion kurtosis imaging (DKI) and diffusion tensor imaging (DTI) in evaluating astrocytomas with an isocitrate dehydrogenase (IDH) genotype. MATERIALSANDMETHODS: Fifty-eight astrocytomas were divided into IDH-wild-type(IDHW) and IDH-mutant (IDH-M) groups, in all astrocytomas, low-grade astrocytomas (LGA) and high-grade astrocytomas (HGA),respectively. The DKI (mean kurtosis[MK],radial kurtosis[Kr], axial kurtosis [Ka]), and DTI (fractional anisotropy [FA], mean diffusivity [MD]) values were measured. The differences of parameter values between the IDH-W and IDH-M groups were compared by t-test. Receiver operating characteristic (ROC) curves were used to identify the best parameter and z-score tests were used to compare the performance between DKI and DTI.

RESULTS: In all astrocytomas, MK, Ka, and Kr values were significantly higher (p<0.001, p¼0.002, and p<0.001), and the MD value (p¼0.005) was lower in the IDH-W group than those in the IDH-M group. The areas under the ROC curve (AUC) of MK (0.811) and Kr (0.800) were significantly higher than that of MD (0.704). In LGA, MK, Ka, and Kr values were also significantly higher in the IDH-W group than those in the IDH-M group (p¼0.002, p¼0.008, p¼0.006), whereas MD and FA values showed no differences. In HGA, MK and Kr values were significantly higher (p¼0.008, p¼0.003), and the MD value (p¼0.031)was significantly lower in the IDH-W group than that in the IDH-M group, the AUC of MK (0.750) and Kr (0.788) were also higher than MD (0.637; p¼0.032, p¼0.025).

CONCLUSION: DKI may be a new imaging biomarker for evaluating the IDH genotype of astrocytomas, which is more accurate and stable than DTI.

PU-2174

非典型性脉络丛乳头状瘤的 MRI 诊断

吴晓峰,张辉,王效春,谭艳,秦江波,王乐,张磊

山西医科大学第一医院

目的 分析非典型脉络丛乳头状瘤的的临床与影像学表现特点，以提高临床对本病的认识。
方法 收集经我院病理证实的 5 例非典型性脉络丛乳头状瘤，结合相关文献分析其 MRI 表现。5 例病例术前均行头颅 MRI 平扫及增强扫描，均为单发肿瘤。其中男性 3 例，发病年龄分别为 10 岁、26 岁、42 岁；女性 2 例，发病年龄分别为 1 6 岁、27 岁。临床症状包括：头痛、眩晕、走路不稳等，其中，3 例位于侧脑室， 1 例位于第四脑室， 1 例位于左侧桥小脑角区。
结果 5 例非典型性脉络丛乳头状瘤中，2 例呈囊实性改变，实性部分 T1WI 呈稍低信号，T2WI 呈稍高信号，增强后实性肿块、囊壁及分隔呈明显强化；3 例呈菜花状生长的实性肿块，T1WI 呈稍低信号，T2WI 呈稍高信号，增强后肿块呈中－重度均匀强化；位于桥小脑角区的病例呈不规则状并沿 Luschka 孔塑形生长。3 例伴瘤周水肿，2 例可见“囊泡征”。1 例 CT 表现密度稍高，可见钙化。
结论 非典型脉络丛乳头状瘤具有一定的影像学特点，表现为肿块边界较清楚，脑组织浸润、瘤内囊变、出血等恶性征象较少见。位于
脑室或桥小脑角区的“菜花状”肿块，呈塑形式生长，明显强化，肿块周围可见“囊泡征”。

PU-2175

椎管内节细胞神经瘤的 MRI 表现及文献复习

吴晓峰,张辉,王效春,谭艳,秦江波,王乐,张磊
山西医科大学第一医院

目的 探讨椎管内节细胞神经瘤的临床表现及 MRI 特点，提高术前诊断该病的准确率。
方法 分析经本院手术病理证实的椎管内节细胞神经瘤的临床表现、影像特点，并结合文献复习，总结其诊断要点。
结果 椎管内节细胞神经瘤以颈段好发，沿椎间孔生长，与神经鞘瘤难鉴别。病灶 MRI 平扫 T1WI 呈等或稍低信号，T2WI 呈高信号，信号均匀或不均匀，增强扫描病灶强化或强化不明显。
结论 椎管内节细胞神经瘤有一定 MRI 特征性表现，进行准确诊断及鉴别诊断有重要意义。

PU-2176

The value of multi ultra high-b-value DWI in grading cerebral astrocytomas and its association with aquaporin-4

Yan Tan,Hui Zhang
The first hospital of Shanxi medical university

Objective: To investigate the value of multi-ultrahighb-value diffusion-weighted imaging (UHBV-DWI) in differentiating high-grade astrocytomas (HGAs) from low-grade astrocytomas (LGAs), analyze its association with aquaporin (AQP) expression.
Methods: 40 astrocytomas divided into LGAs (N = 15) and HGAs (N = 25) were studied. Apparent diffusion coefficient (ADC) and UHBV-ADC values in solid parts and peritumoral edema were compared between LGAs and HGAs groups by the t-test. Using receiver operating characteristic curves to identify the better parameter. Using real

time polymerase chain reaction to assess AQP messenger ribonucleic acid (mRNA). Using spearman correlation analysis to assess the correlation of AQP mRNA with each parameter.
Results: ADC values in solid parts of HGAs were significantly lower than LGAs ($p = 0.02$), while UHBV-ADC values of HGAs were significantly higher than LGAs ($p < 0.01$). Area under the curve (AUC) of UHBV-ADC (0.810) was larger than ADC (0.713), and the area under the curve of UHBV-ADC was significantly higher than that of ADC ($p = 0.041$). AQP4 mRNA was significantly higher in HGAs than that in LGAs ($p < 0.01$); there was less AQP9 mRNA and no AQP1 mRNA in LGAs and HGAs groups ($p > 0.05$); ADC value showed a negative correlation with AQP4 mRNA ($r = -0.357$; $p = 0.024$). UHBV-ADC value positively correlated with the AQP4 mRNA ($r = 0.646$; $p < 0.01$).
Conclusion: UHBV-DWI allowed for a more accurate grading of cerebral astrocytoma than DWI, and UHBV-ADC value may be related with the AQP4 mRNA levels. UHBV-DWI could be of value in the assessment of astrocytoma. advances in knowledge: UHBV-DWI generated by multi UHBV could have particular value for astrocytoma grading, and the level of AQP4 mRNA might be potentially linked to the change of UHBV-DWI parameter, and we might find the exact reason for the difference of UHBV-ADC between the LGAs and HGAs.

PU-2177
基于 MRI-T2WI 纹理分析鉴别四脑室不典型髓母细胞瘤和室管膜瘤价值研究

沈桂萍,黄文才
中国人民解放军中部战区总医院

目的 探讨 MRI-T2WI 纹理分析在鉴别四脑室不典型髓母细胞瘤和室管膜瘤的价值。**方法** 回顾性分析病理证实 36 例四脑室肿瘤（其中 19 例髓母细胞瘤、17 例室管膜瘤）患者术前 MRI 资料，运用纹理分析软件手动勾画感兴趣区（ROI），获取直方图参数，包括均值、中位数、标准差、偏度、峰度、最大值、最小值，异质性、熵、第 5 百分位数（$T2WI_{5th}$）、第 10 百分位数（$T2WI_{10th}$）、第 25 百分位数($T2WI_{25th}$)、第 50 百分位数($T2WI_{50th}$)、第 75 百分位数($T2WI_{75th}$)、第 95 百分位数($T2WI_{95th}$)。采用独立样本 t 检验或 Mann-Whitney U 检验对两组间各参数值进行统计学分析，应用 Logistic 回归分析对有意义参数行多参数联合分析，应用受试者工作特征曲线（ROC），获得曲线下面积（AUC），确定鉴别两者的阈值和诊断效能。**结果** 参数中髓母细胞瘤组均值、中位数、$T2WI_{5th}$、$T2WI_{10th}$、$T2WI_{25th}$、$T2WI_{50th}$、$T2WI_{75th}$百分位数小于室管膜瘤组，差异有统计学意义（$P<0.05$）。其中 $T2WI_{5th}$ 诊断效能最佳，当临界值为 1343 时诊断特异度为 75%，敏感度为 92.9%。应用 Logistic 回归预测概率参数联合分析 $T2WI_{5th}$+$T2WI_{10th}$ 诊断效能最佳，AUC 为 0.928，当临界值为 0.75 时诊断特异度为 75%，敏感度为 100%。**结论** MRI-T2WI 纹理分析能为不典型髓母细胞瘤与室管膜瘤术前诊断提供量化信息，提高术前诊断准确率，具有较明显临床价值。

PU-2178
探讨磁共振灌注成像在监测脑胶质瘤复发和治疗后反应的初步研究

陕曼玉

山西医科大学第一医院

目的:目的通过对脑胶质瘤术后放疗患者的磁共振灌注成像(PWI)研究,探讨其在判断胶质瘤复发与放射性损伤中的价值。材料与方法选取 30 例脑胶质瘤术后、放疗后常规 MR 增强序列出现新强化灶的患者。30 例患者均行常规 MR 平扫、增强扫描和 PWI 检查。比较异常强化区与对侧正常区的参数比值,包括相对脑血容量(rCBV)、相对脑血流量(rCBF)比值，根据病理及临床随诊结果,分析 PWI 对肿瘤复发与放射性损伤的鉴别诊断价值。结果 30 例患者最终经手术和随访证实有 20 例胶质瘤复发,10 例放射性脑损伤。胶质瘤复发组 rCBV、rCBF 比值的 M 值分别为均明显高于放射性损伤组比值 rCBV、rCBF,差异有统计学意义(P 值均<0.05)。依据 PWI 诊断胶质瘤复发与放射性损伤诊断准确率为 85.3%(26/30),常规 MR 与 PWI 诊断准确率差异具有显著性意义(P<0.001)。结论:PWI 可用于监测脑胶质瘤复发和治疗后反应,为脑胶质瘤术后患者的临床治疗提供影像依据，其灌注成像 rCBVmax 值对胶质瘤复发与放射性损伤鉴别具有重要价值。

PU-2179
DSC 灌注成像联合 MRS 在鉴别高级别胶质瘤假性进展中的应用价值

秦丹蕾
山西医科大学第一医院

目的 探讨动态磁化率对比增强 MR 灌注成像（dynamic susceptibility contrast MR perfusion imaging，DSC-MRI）联合磁共振波谱成像（magnatic resonance spectroscopy，MRS）在鉴别高级别胶质瘤假性进展中的应用价值。**方法** 回顾性分析我院 2013 年 1 月~2018 年 12 月高级别脑胶质瘤患者行手术及术后联合放化疗治疗后 1-3 月内 MRI 上出现新的强化病灶或强化范围扩大者 52 例，应用 DSC-MRI 分析病灶局部血流情况，应用 MRS 分析病灶局部代谢产物及其比值情况。评价两种方法联合在鉴别高级别胶质瘤假性进展中的应用价值。**结果** 52 例患者中，经二次手术病理或随访 6 个月以上证实 30 例为假性进展，22 例为肿瘤复发。单纯应用 DSC-MRI、MRS 及二者联合正确诊断假性进展者分别为 20 例、25 例及 28 例。复发的表现：DSC-MRI 病变区呈高灌注,MRS 表现为 Cho/Cr 升高，假性进展的表现：DSC-MRI 病变区呈低灌注，MRS 表现为 Cho/Cr 下降。**结论** DSC-MRI 和 MRS 联合应用可更好地诊断高级别胶质瘤假性进展，具有很大的临床应用价值。

PU-2180
颅内脑膜瘤 MRI 表现与其肿瘤分级相关性分析

刘杰
辽宁省肿瘤医院

目的探讨脑膜瘤 MRI 表现与其病理分级相关性。方法回顾性分析 2009 年 9 月至 2019 年 7 月手术治疗的 207 例脑膜瘤的临床资料，根据术后病理结果分为 WHO Ⅰ级(良性组)，WHO Ⅱ、Ⅲ级(恶性组)。采用多因素 Logistic 回归分析分析不同性质脑膜瘤 MRI 特征。结果 207 例脑膜瘤中，WHO Ⅰ级 145 例，Ⅱ级 40 例，Ⅲ级 1 例。多因素 Logistic 回归分析显示，肿瘤形态不规则、肿瘤强化不均匀、瘤周水肿严重是恶性脑膜瘤的独立预测因子，而脑膜尾征是良性脑膜瘤的独立预测因子，弥散加权序列 ADC 值对良恶性鉴别无统计学意义。结论肿瘤形态、肿瘤强化、瘤周水肿、脑膜尾征等 MRI 征象与脑膜瘤分级存在相关性。

PU-2181

A Case Report: Optic Nerve Hemangioblastoma with Bilateral Frontal Lobe Edema

shujia xu[1],Qian Li[1],Dan Li[1],Bingyang Bian[1],Hongli Zhou[2]
1.The first hospital of Jilin University
2.Sino-Japanese Friendship Hospital of Jilin Universit

Hemangioblastomas (HBLs) are benign tumors of the central nervous system, accounting for only 1-2% of the primary tumors of the central nervous system, most commonly detected in the subtentorium or spinal cord. Hemangioblastoma is an autosomaldominant inherited disease. The main ophthalmological manifestation is retinal hemangioblastoma. Optic nerve hemangioblastoma is very rare, most commonly associated with Von Hippel-Lindau (VHL) syndrome, and the tumor is genetically predisposed. At present, only 35 cases of optic nerve hemangioblastoma have been reported in the literature, 71% of which were related to VHL syndrome. The present article is a case report of hemangioblastoma of the optic nerve with bilateral frontal lobe edema, without VHL syndrome, which has not been reported previously.

PU-2182

磁共振扩散峰度成像及定量磁化率图在帕金森病诊断中的应用

祝叶
佛山市第一人民医院

目的
探讨磁共振扩散峰度成像技术（DKI）及定量磁化率图（QSM）在帕金森病（PD）中的诊断价值。

方法
选取早期 PD 患者 17 例（早期 PD 组）、进展期 PD 患者 11 例（进展期 PD 组）、非 PD 志愿者组 17 例（对照组）同时行 DKI 及 QSM，观察 3 组在 DKI 中双侧尾状核头、壳核、苍白球、丘脑、黑质及红核的 FA 值、MD 值及 MK 值，并观察 QSM 所显示的 MS 值。

结果
3 组双侧黑质中的 MK 值从大到小依次为对照组、早期 PD 组及进展期 PD 组，且黑质中早期 PD 组及进展期 PD 组 MK 值大小与对照组差异具有统计学意义（P<0.05），3 组双侧红核中的 MK 值从大到小依次为进展期 PD 组、早期 PD 组及对照组红核中进展期 PD 组 MK 值大小与对照组差异具有统计学意义（P<0.05）。3 组双侧黑质、红核及壳核中的 MS 值从大到小依次为进展期 PD 组、早期 PD 组及对照组，且黑质、红核及壳核中早期 PD 组及进展期 PD 组 MS 值大小与对照组差异具有统计学意义（P<0.05）。进展期 PD 组双侧壳核中 FA 值较对照组小，且差异具有统计学意义（P<0.05）。3 组双侧尾状核头及丘脑各种观察指标之间差异均无统计学意义。
结论
早期 PD 患者黑质 MK 值减低，红核中 MK 值增高，黑质、红核及壳核中的 MS 值增高，并随着病程进展而改变，DKI 及 QSM 技术均能为 PD 临床早期诊断及病情监控提供一定价值。

PU-2183
不同年龄段正常人群臂丛神经的 DTI 参数变化

陈昱帆,王姗姗,王光彬
山东省医学影像学研究所

目的 确定年龄相关的臂丛神经扩散张量成像(DTI)的参数变化趋势，建立健康人群臂丛神经部分各向异性(FA)的正常范围。
方法 54 名健康志愿者分为三个年龄组（21-40 岁、20 人,41-60 岁、20 人,61-以上、14 人）行 3.0TMR 成像。扫描序列包括 DTI 序列及 3D NERVE VIEW 序列，2 名阅片者独立测量 54 名志愿者臂丛神经每条神经根的 FA 值。采用组内相关系数（ICC）检验 2 名阅片者测量参数结果的一致性。用简单线性回归模型分析 FA 均值与年龄的相关性。用单因素方差分析两两比较 FA 均值的组间差异。
结果 臂丛神经 FA 均值与年龄呈负相关(R=0.897,R^2=0.800,P<0.001)。21-40 岁年龄组的 FA 均值为（0.396±0.023）,41-60 岁年龄组的 FA 均值为（0.359±0.017）,61-以上岁年龄组的 FA 均值为（0.333±0.089），三组年龄组的 FA 均值差异具有统计学意义（P=0.002）。
结论 健康人臂丛神经 FA 值存在随年龄变化而发生变化的趋势。在临床鉴别工作中，应将年龄因素考虑在内。

PU-2184
慢性酒精依赖者脑细微结构改变与认知功能损害

俞翔,刘筠,许亮,范翔
天津市人民医院

目的 探讨慢性酒精依赖(chronic alcohol dependent，CAD)者脑细微结构损害的空间分布及其与认知功能的关系。**材料与方法** 19 例 CAD 者和 16 例健康志愿者（healthy control，HC）行头部常规 MRI、3DT1WI 和 DTI 扫描，分别应用基于体素的形态测量学（voxel-based morphometry，VBM）和基于纤维束示踪的空间统计（tract-based spatial statistics, TBSS）方法对原始数据进行后处理，分别采用双样本 *t* 检验和非参数检验比较两组人群灰质体积（gray matter volume, GMV）和各向异性分数（fractional anisotropy, FA）值组间差异，采用 Pearson 法对显著差异数值与 MoCA 评分进行相关分析。**结果** 与 HC 组比较，CAD 组 GMV 减少脑区包括双侧腹侧纹状体、前扣带回、背外侧前额叶、楔叶、顶下小叶，右侧梭状回及左侧眶额回、岛叶、舌回；FA 值减小脑区包括胼胝体膝部、体部及压部、双侧辐射冠和右侧大脑脚、内囊后肢、视辐射。右侧前扣带回的 GMV 和胼胝体压部的 FA 值与 MoCA 评分呈正相关（*P* 值均<0.05）。**结论** CAD 者大脑灰质和白质纤维束均存在不同程度的结构异常，奖赏环路相关脑区和胼胝体为酒精性脑损害的敏感部位，其中右侧前扣带回和胼胝体压部可能参与 CAD 者认知损害相关的神经病理学改变。

PU-2185
可逆性胼胝体压部病变综合征的病因、临床特点及 MR 表现

周芳芳
安徽医科大学第二附属医院

目的 探讨可逆性胼胝体压部病变综合征的病因、临床特点及 MR 表现。**方法** 回顾性分析 2011 年 12 月～2018 年 04 月共 35 例患者资料，总结其特点。**结果** 男性 24 例，女性 11 例；年龄 3d～

43y。以发热或癫痫、头痛头晕为首发症状 28 例；外伤 4 例;免疫性或代谢性疾病 3 例。实验室检查电解质紊乱患者占 77.14%（27/35）；血常规异常患者占 68.57%（24/35）；脑脊液生化及常规异常患者占 37.50%（6/16）；TAOCH 系列异常患者占 66.67（8/12）。首诊头颅 MRI 示胼胝体压部异常信号，T1 呈等或稍低信号，T2 及 FLAIR 上呈等或稍高信号，DWI 上呈高信号，ADC 图呈低信号，范围约 0.22-1.27×$10^{-3}$$mm^2$/s，均值 0.40×$10^{-3}$$mm^2$/s。35 例患者中有 9 例行 MR 增强扫描，增强后病灶均无明显强化；有 2 例新生儿患者行 SWI 检查，SWI 序列未见明显异常。复诊头颅 MRI 示，原胼胝体异常信号消失 32 例；信号减低 3 例；**结论** RESLES 病因主要为感染和电解质代谢紊乱；MR 表现为胼胝体压部的可逆性异常信号，可累及邻近脑白质；预后和病因及 RESLES 病变累及范围均相关，大部分经积极治疗原发病后好转，少数患者短期遗留轻度神经系统病症，正确认识该病对临床有积极指导作用。

PU-2186
磁敏感加权成像(SWI)直方图分析帕金森病患者脑铁沉积变化及其与 Hoehn-Yahr 分级(HY 分级)的相关性

赵瑞琛,高雪梅,陈晨
郑州大学第一附属医院

目的 探讨采用 SWI 直方图分析帕金森病(PD)患者随疾病进展的脑铁沉积变化及其与 HY 分级的相关性，及该方法在 PD 早期诊断和分期的价值。材料和**方法** 33 例 PD 患者，分为 21 例早期 PD(EPD)组和 11 例中晚期 PD(LPD)组，22 例健康对照组(HC)组。对被试进行 SWI 序列扫描并采用统一帕金森病评定量表(UPDRS)和 HY 分级量表进行评估。在校正相位图上选取双侧尾状核头部，壳核，苍白球，丘脑，红核和黑质的最大层面，通过 Mazda 软件绘制感兴趣区域(ROI)，并用直方图进行分析。用双侧核团的平均值进行比较，单因素方差分析用于比较三组之间的直方图参数值。用 Spearman 相关分析研究有统计学意义的参数与 HY 分级之间的相关性。通过受试者操作特征(ROC)曲线评价参数的诊断效能。**结果** LPD 患者黑质(SN)的第 1、10、50 百分位数值，红核(RN)的第 1 百分位数值和苍白球(GP)的第 90 百分位数值明显高于 EPD 患者，表明这些区域的铁含量增加。在 EPD 患者中，SN 的第 50、90、99 百分位数值，RN 的第 10 百分位数值，尾状核头(PN)的偏度值和壳核(CN)的峰度值均显著高于 HC。LPD 患者 SN 的平均值、偏度值和第 1、10、50、90 和 99 百分位数值，RN 的平均值和第 1、10 百分位数值，GP 的第 90 百分位数值，PN 的偏度值和 CN 的峰度值均显著高于 HC。SN 的平均值和第 1、10、50 百分位数值，RN 的第 1 和第 10 百分位数值和 GP 的第 90 百分位数值与 HY 分级呈强正相关。RN 的第 1 百分位数值、PN 的偏度值和 SN 的第 10 百分位数值分别对区分 EPD 和 LPD、EPD 和 HC、LPD 和 HC 的诊断价值最高，灵敏度和特异度分别为 72.7%和 81.8%，73.9%和 72.7%，90.9%和 82.6%。**结论** PD 患者随疾病进展脑铁沉积分布变化并和 HY 分级呈正相关。SWI 直方图有助于 PD 早期诊断和分期。

PU-2187
MCI 患者中空间导航能力与海马亚区体积的相关性研究

张冰,李卫萍,刘任远,王芳芳,张鑫
南京大学医学院附属鼓楼医院

目的: 探讨轻度认知功能障碍(Mild Cognitive Impairment, MCI)患者空间导航能力的改变，及其与海马亚区体积改变的相关性。

方法：收集南京大学医学院附属鼓楼医院神经内科记忆门诊 MCI 患者 24 例，同时纳入 25 例性别、年龄匹配的认知正常老年人（Normal Control, NC）作为对照组。所有被试者均行空间导航测试及头颅磁共振检查。使用 PC 版空间导航测试软件进行空间导航能力检测，包括综合导航（自我导航+环境导航）能力（Allo-egocentric virtual，AEV）、自我导航能力（Egocentric virtual，EV）及环境导航能力（Allocentric virtual，AV）等；磁共振 3DT1W 成像序列进行颅脑高清结构相信息采集。根据空间导航测试软件计算的指标评估被试的空间导航能力，利用 FreeSurfer 软件分割及计算得到每个被试双侧海马亚区体积，分为 14 个亚区。采用两样本 T 检验分析 MCI 与 NC 组空间导航能力及海马亚区体积的差异，采用双变量相关分析及多元线性回归方法分析组间差异显著的空间导航能力及海马亚区体积的相关性，将年龄、性别、受教育程度及颅内容积作为协变量回归掉。
结果：与 NC 组相比，MCI 患者无论是环境导航（AV）还是自我导航（EV）能力均降低（P<0.05），AV 评分与左侧海马 CA2_3、CA4_DG、前下托、左侧海马总体积及右侧海马前下托体积呈负相关，而 EV 评分与海马亚区体积无相关性；进一步回归分析发现， AV 评分只与左侧海马前下托体积呈负相关，与其他海马体积不相关（P<0.05）。
结论：与 NC 组相比，MCI 组空间导航能力明显减低，说明 MCI 患者空间导航能力受损； AV 能力与海马亚区体积相关，说明早期海马亚区体积改变可能是 MCI 出现空间导航障碍的结构基础。

PU-2188
视神经脊髓炎谱系疾病患者脑白质网络拓扑属性改变研究

陈晓娅[1],李咏梅[1],罗天友[1],刘亚欧[2],郑桥[1],谢敏[1]
1.重庆医科大学附属第一医院
2.首都医科大学附属天坛医院

目的 探讨基于病程分类为病程短期及长期视神经脊髓炎谱系疾病(Neuromyelitis optical spectrum disorder, NMOSD)患者脑白质网络拓扑属性的差异,寻找 NMOSD 患者随病程发展的网络特征改变。
材料与**方法** 纳入来自 2 个中心的 77 例 NMOSD 患者和 79 例对照组。根据 NMOSD 患者的病程分为病程短期、病程长期两组。采用确定性纤维跟踪技术构建白质网络,使用图论分析各组脑白质网络属性差异。
结果 根据纳入的 NMOSD 被试病程的中位数（48 个月）为中点，将病人分为病程短期组及病程长期组。（1）全局属性显示：与对照组相比，NMOSD 组的小世界属性减低，最短路径升高，全脑效率减低；与对照组相比，病程短期 NMOSD 组的小世界属性减低、最短路径升高以及全脑效率减低，病程长期 NMOSD 组的小世界减低、最短路径升高以及全脑效率减低；病程短期 NMOSD 组与病程长期 NMOSD 组间最短路径减低，小世界属性，聚类系数及全局效率无明显差异。(2)局部属性分析显示：与对照组相比，病程短期 NMOSD 的右背外侧额上回、颞上回、左侧补充运动区 betweenness 减低，而病程长期的 NMOSD 的右背外侧额上回、额中回、尾状核、豆状壳核、颞上回、左侧中央前回、补充运动区以及楔前叶 betweenness 减低，右侧楔叶、左侧枕上回 betweenness 升高（FDR 校正，p<0.05）。与对照组相比，病程早期 NMOSD 及病程晚期 NMOSD 存在广泛的节点 degree 减低（FDR 校正，p<0.05），而病程短期与病程长期 NMOSD 患者 betweenness 和 degree 属性无显著差异。
结论 NMOSD 患者网络小世界属性以及全局效率存在明显异常，且多个脑区的节点属性存在异常。NMOSD 的属性未随病程的延长而明显改变，这可能与该疾病反复发作后缓解的临床特征有关。

PU-2189
常规 T2 FLAIR 序列灰度游程矩阵纹理分析对帕金森病的诊断价值

张祥林,吕晓虹,刘磐石
锦州医科大学附属第一医院

目的 探讨帕金森病（PD）患者壳核处 T2 FLAIR 序列灰度游程矩阵纹理特征参数的变化及 T2 FLAIR 序列灰度游程矩阵纹理分析对 PD 的诊断价值。
方法 回顾性分析 2017 年 2 月—2019 年 6 月锦州医科大学附属第一医院的 45 例 PD 患者（PD 组）和 45 例健康体检者 MRI 影像和临床资料。选取每例 T2 FLAIR 图像显示壳核的最大层面，用 MaZda 软件手动勾画感兴趣区并提取灰度游程矩阵特征参数。对两组的纹理特征参数进行比较，并采用受试者工作特征曲线（ROC）分析曲线下面积（AUC）、敏感度、特异度。
结果 采用灰度游程矩阵纹理分析方法提取出 20 个特征参数，组内左右壳核处比较差异无统计学意义（$P>0.05$）。PD 组与对照组的壳核处特征参数 Horzl_ShrtREmp、135dr_RLNonUni 比较，差异均有统计学意义（$P<0.05$）。以特征参数 Horzl_ShrtREmp、135dr_RLNonUni 绘制 ROC 曲线，AUC 分别为 0.76[95%CI(0.64~0.89)，$P<0.05$]和 0.64[95%CI(0.53~0.80)，$P<0.05$]。
结论 PD 患者 T2 FLAIR 壳核处灰度游程矩阵特征参数 Horzl_ShrtREmp、135dr_RLNonUni 发生改变。T2 FLAIR 灰度游程矩阵纹理分析对 PD 的诊断具有一定临床价值。

PU-2190
弥散张量成像在海马区域正常老年人、轻度认知障碍、及阿尔莫兹海默病诊断中的作用及与海马体积测量的比较

王丹
上海交通大学附属第六人民医院

目的 研究弥散张量成像在轻度认知障碍（MCI）、阿尔莫兹海默病（AD）诊断中的作用。
材料和**方法** 搜集了 2012 年 7 月至 2013 年 9 月在上海交通大学上海附属第六人民医院的正常人、MCI 患者、AD 患者各 30 例。进行常规扫描及 DTI、T1-3D 扫描。测量的感兴趣为双侧海马。测量 DTI 图像的感兴趣区域的 ADC 值及 T1-3D 图像的海马体积。并进行 ANOVA 进行分析比较三组人之间的差异
结果 正常人、MCI 患者、AD 患者的海马 ADC 值(正常人与 MCI 比较，P=0.0483<0.05，MCI 与 AD 比较 P=0.03632<0.05，正常人与 AD 患者比较 P =0.03542<0.05)有显著差异。正常人与 MCI 组海马体积无明显差异，正常人与 AD 比较、MCI 与 AD 海马体积均有显著性差异。
结论 弥散张量成像在轻度认知障碍的早期诊断中具有重要作用，轻度认知障碍、及阿尔莫兹海默病诊断中具有重要作用。

PU-2191
DARTEL 算法分析原发性三叉神经痛患者脑灰质体积

张振光,蒋元明
昆明医科大学第一附属医院

目的 用 DARTEL 算法分析左面原发性三叉神经痛（ idiopathic trigeminal neuralgia, ITN）患者脑内灰质体积（gray matter volume, GMV）的变化。**方法** 用 DARTEL 算法对 21 例左面部原发性三叉神经痛患者（left idiopathic trigeminal neuralgia, LITN）和与实验组年龄、性别及受教育程度相匹配的 25 例健康对照组的 GMV 数据进行分析。**结果** 与对照组相比较，LITN 组患者在右颞下回、右颞上回、右岛盖、双额叶皮层、右侧中央前回、左前扣带回、双中扣带回、双后扣带回、双楔前叶等区域灰质体积减少。**结论** 本研究发现 LITN 患者部分脑区 GMV 减少，这些改变可能在 ITN 形成和发展过程中扮演重要角色。

PU-2192
基于因果结构谐变和方法探究阿尔茨海默病发展过程中脑萎缩的模式

青钊,陈丰,张冰
南京大学医学院附属鼓楼医院

目的： 阿尔茨海默病发展过程中脑萎缩以往按照 Braak 分级等前人研究可分为几个阶段，然脑萎缩在各脑区间发展的连续、因果的模式尚未有大样本研究。结构谐变可用于在横断面样本中探究脑结构变化的个体间一致性，而因果结构谐变近期被提出，可用于检测脑区体积随某种序列（如疾病发展）的变化过程中，彼此之前的因果联系。本研究提出引入滑动时间窗方法，可进一步获取这一因果联系随疾病发展的变化过程，有助于发现阿尔茨海默病发展过程中各脑区萎缩的关键驱动脑区和扩散模式。
方法： 本研究使用了国际阿尔茨海默病影像数据库（ADNI）共 463 名被试，每名被试均有 3D-T1w 结构磁共振数据。首先采用基于源的形态学（source based morphometry）分析将所有被试的体积个体差异分解为 20 个成分，对其进组间差异分析。然后，对其中 213 个具有脑脊液生理指标测量的被试，我们以 tau 蛋白和 A-β 蛋白指标进行标准化和平均，得到 AD 发展从轻到重的序列，并根据该序列进行因果结构谐变分析，统计每个成分的驱动其他脑区和被其他脑区驱动的分数，找到脑萎缩发展的重要驱动节点。
结果： 我们发现这些成分绝大部分在阿尔茨海默(AD）、轻度认知障碍(MCI)和正常对照(NC)之间存在体积萎缩。构成的结构谐变网络以双侧海马和左侧颞中回为中心，存在显著的组间差异。在因果结构谐变分析中，默认网络、双侧海马和丘脑是重要驱动节点。
结论： 阿尔茨海默病发展过程中的脑萎缩存在特定的关键脑区如丘脑、默认网络和海马。这些脑区的脑萎缩可作为重要标记，可分别预测其它重要功能脑区的萎缩，这一不同驱动脑区的模式，可能也是阿尔茨海默病不同类型的重要区分特征。

PU-2193
POC 亚区-海马-DMN 的功能连接在正常年轻人特征的研究

陆加明,张冰
南京大学医学院附属鼓楼医院

目的： 默认网络和嗅觉神经网络是阿尔茨海默病早期受损的重要目标脑区。以往研究提示这二者可能存在功能上的重要相关性，然并未有研究直接系统报告。本研究目的为探寻正常年轻人静息态嗅觉网络（ON）和默认模式网络（DMN）之间的联系，揭示嗅觉网络的神经机制。
方法： 研究纳入 65 名健康的右利手受试者，所有被试进行了结构磁共振和静息态功能磁共振（fMRI）扫描。我们人工定义了初级嗅觉皮层的感兴趣区（ROI），采用独立成分分析对 POC 进行

亚区分割。然后根据独立成分分析的结果，定义 POC 亚区，并使用每个 POC 的亚区为种子点分期全脑功能连接分析。最后，通过全脑脑网络分析，探讨 ON 与 DMN 之间的连接。

结果：独立成分分析可以稳定的把 POC 分割成内嗅皮层、嗅前核、以及梨状皮层，以 POC 亚区为种子的静息态功能网络和 DMN 默认网络在海马、内侧颞叶和后扣带回的区域有着巨大的空间重叠，这表明 POC 和 DMN 实际上是交换信息并且彼此交互。脑网络分析发现， POC 通过海马与 DMN 之间存在功能连接。海马在 ON 与 DMN 功能连接之间的关键节点。

结论：目前的研究发现了 POC 的功能异质性，并揭示了 POC 中的亚区与高阶认知相关脑网络（DMN）之间的显著功能连接性。POC，海马和 DMN 被证明彼此紧密连接，海马作为 POC 和 DMN 之间的连接脑区。该模型将来可以进一步用于 AD 研究，解释 AD 病理变化及其进展。

PU-2194
1 例关于 CIDP 患者臂丛神经 MRI 成像特点的报道

王政,王梅云
河南省人民医院

［摘要］慢性炎症性脱髓鞘多发性神经根神经病（Chronic inflammatory Demyelinating Polyneuropathy, CIDP）, CIDP 是一种获得性周围神经根神经病。其临床表现为慢性进展性、阶梯样加重或复发性对称性四肢远端和近端无力伴感觉障碍，运动症状重于远端症状，肢体远端重于近端。本病可累及任何年龄的人群，但以老年男性最为常见。本病诊断的金标准为周围神经活检，以腓肠神经活检为多，但具有创伤性，故临床极少应用。目前公认欧洲神经病学会联盟和周围神经病学会（EFNS-PNS）2005 年发布的 CIDP 诊治指南，该指南将周围神经电生理特征作为确诊的关键指标，而影像学指标未被纳入。目前为止，CIDP 影像学表现相关的国内外文献报道较少。随着核磁共振在中枢及周围神经系统成像技术的发展与成熟，MRI 以其无创高效、成像清晰全面、可获得成分相关信息等优势逐渐在 CIDP 患者的临床诊断中的价值日益显现。本文选取近期我院 1 例经神经电生理检查证实，符合 2005 EFNS-PNS 关于 CIDP 确诊标准的病例，对其进行头颅及臂丛神经的 MRI 扫描，脑实质及所扫颅神经 MRI 平扫未见明显阳性发现，但臂丛神经 MRI 成像，STIR 成像见双侧臂丛神经广泛对称性增粗，呈稍高或高信号，外形不规则，走行僵硬。增强扫描内见斑片状强化影。具有典型的周围神经改变，但缺乏特异性，仍须与神经根增粗的疾病如淋巴瘤、结节病、神经纤维瘤病 1 型等鉴别；当累及脑实质，须与 MS 及其他传染病和炎症性疾病相鉴别。

PU-2195
脑淀粉样血管病多模态 MR 表现及其与 AD 的关系

李栋学,王荣品,杨维新,刘远成,熊真亮
贵州省人民医院

目的 分析淀粉样脑血管病（CAA）的影像学表现，对比影像特征与病理学改变，并探讨 CAA 与阿尔兹海默病（AD）的关系。**方法** 回顾分析 40 例 CAA 的 SWI 检查图像，其中 5 例 3D-ASL 成像、2 例 QSM 成像；分析病变分布及形态学特点，并与年龄、性别作相关性分析；CAA 的 SWI 图像特征与病理学对比分析；勾画感兴趣区 ROI，测量 3D-ASL 图像血流量（CBF）、QSM 图像的磁化率值。 **结果** 病变与年龄呈正相关关系，r 值＝0.526，P＜0.05，与性别无相关；SWI 及 QSM 可清晰显示病变形态学特征，SWI 发现多数病变呈黑环白点征象，部分病灶周围可见稍高信号晕环；3D-ASL 发现

高灌注病灶占 9.71%，余大多数呈低灌注；QSM 较好显示脑铁沉积，发现病灶最高磁化率值超过 0.5 ppm。 **结论** CAA 与年龄高度相关，磁共振 SWI、QSM 及 ASL 可较好地显示病变特征；3D-ASL 及 QSM 检查对灌注异常、铁过载脑区监测具有重要意义；CAA 与 AD 互为疾病发展的促进因素，合并发生可加快病情发展。

PU-2196

Can thickness asymmetry of entorhinal cortex help distinguish different subtypes of amnestic mild cognitive impairment?

Qianqian Li[1],Yongxiang Zhao[1],Peipeng Liang[1,2],Kuncheng Li[1]
1.Xuanwu Hospital Captial Medical University
2.Capital Normal University

Purpose:
To use structural magnetic resonance imaging (MRI) to investigate whether asymmetry of entorhinal cortex (ERC) can help distinguish two subtypes of amnestic mild cognitive impairment (aMCI), including single domain and multiple domain of aMCI (aMCI-s, aMCI-m).
Methods and Materials:
A total of 95 participants were recruited: 26 normal controls (NC), 29 with aMCI-s, 22 with aMCI-m and 18 with Alzheimer's disease (AD). They were scaled according to the Clinical Dementia Rating (CDR), Mini-Mental State Examination (MMSE) and Montreal cognitive assessment (MoCA). In addition, the diagnosis of aMCI-s and aMCI-m were met Petersen's diagnostic criteria. FreeSurfer was applied to T1WI images for measuring thickness, surface and volume of ERC corresponding to the Talairach standard brain atlas. The asymmetry index was defined as AI=(Li-Ri)/(Li+Ri), where Li and Ri represented value of ERC of the left and right hemisphere. Analysis of covariance (ANCOVA) was performed to analysis the difference among four groups, in which thickness, surface and volume of ERC were dependent variables respectively. Subject gender, age, years of education and estimated total intracranial volume were used as covariates.
Results:
The thickness of right ERC and the thickness asymmetry of ERC presented significant difference between aMCI-s and aMCI-m. Meanwhile, the alteration of thickness asymmetry in aMCI-s reached a trend towards significance compared to NC. In addition, there was a trend involving the ERC thickness and volume: NC>aMCI-s>aMCI-m>AD. However, the surface of ERC was fairly preserved in patients with aMCI and AD.
Conclusion:
Our findings suggested that the thickness asymmetry of ERC had an advantage in distinguishing aMCI-s from NC and aMCI-m.

PU-2197
MiR-146a 经 Aβ 环节干预中晚期 APP/PS1 双转基因小鼠的神经影像对照研究

管修汉
广东医科大学附属医院

【目的】
运用 GE Signa Excite HD 3.0T 磁共振对 APPswe / PSEN1de9 基因突变型小鼠、非转基因野生型小鼠、经 miR-146a 干预治疗后的转基因小鼠进行磁共振常规序列扫描。通过后处理计算小鼠海马区的 T2WI 信号强度比值，半定量分析海马区的铁含量，判断双转基因小鼠在 miRNA-146a 干预治疗下的疗效改变。
【方法】
使用 GE Signa Excite HD 3.0T 超导磁共振扫描仪对中期（12 月）的 APP/PS1 双转基因小鼠正常组、AD 组、干预组各 5 只和对应的晚期（18 月）的各组小鼠各 4 只行 T2WI 冠状位扫描。应用 GE Medical Systems Functool 4.4 工作站软件进行图像后处理，并测得 1mm² ROI 下的海马与同侧肌肉的 T2WI 信号强度比值。采用方差分析比较中晚期双转基因小鼠正常组、AD 组、干预组的试验数据，P<0.05 为差异有统计学意义。
【结果】
12 月 AD 组小鼠的 T2WI 信号强度比值为(1.8120±0.3080),正常组(2.2631±0.2859),干预组(2.3414±0.2002)；18 月 AD 组小鼠的 T2WI 信号强度比值为（2.0887±0.1395），正常组（2.9474±0.1121），干预组（2.6549±0.0366）；中晚期小鼠的 AD 组 T2WI 信号强度比值均较正常组减低（P=0.021，P=0.0004），随着 miRNA-146a 干预治疗，中晚期小鼠中干预组的 T2WI 信号强度比值均较 AD 组增高（P=0.009，P=0.00003），两者间的差异均具有统计学意义（P<0.05）。
【结论】
运用 3.0T 磁共振 T2WI 成像对海马区的 T2 信号强度比值进行对比分析，有助于判断 APP/PS1 双转基因小鼠的成模情况及其在 miRNA-146a 干预治疗下的疗效，为临床阿尔茨海默病患者的新型诊疗方案提供更多的支持。

PU-2198
高度疑似神经元核内包涵体病一例

范晓媛
中国医学科学院北京协和医院

目的 神经元核内包涵体病（neuronal intranuclear inclusion disease，NIID）是一种罕见的神经系统变性病，其主要特征为在中枢和外周神经系统、内脏中可以发现广泛存在的嗜酸性神经元核内包涵体。该病的临床表现多种多样，包括痴呆、肢体无力、感觉异常、自主神经功能紊乱、意识障碍、共济失调等。由于其临床表现多样，缺乏特异性，因此在临床上极易造成漏诊、误诊。但本病的影像学表现具有高度的特异性，对于疾病的提示有重要意义。本病的最终诊断主要依靠皮肤活检，在脂肪细胞、成纤维细胞及汗腺细胞中均可发现神经元核内包涵体。本病按照发病年龄分为婴幼儿型、青少年型、成年型。我们分析一例成年型神经元核内包涵体病的临床表现及影像学特征，旨在提高对本病的理解和认识，尽早做出正确诊断。

材料与**方法** 本例患者为老年男性，因精神症状入院，入院后行体格检查及头部核磁检查，因患者家属拒绝，未行皮肤活检。

结果 本例患者以共济失调起病，主要临床表现为行走不稳、尿失禁、智力减退，此次入院时出现强哭强笑，嗜睡等精神症状。查体发现双手震颤，定向力、记忆力减退，四肢腱反射减低或消失。头核磁检查示全脑萎缩，可见特征性的皮髓交界处广泛连续 DWI 高信号，另可见弥漫脑白质病变，这些表现与文献报道的 NIID 的经典表现高度一致。未观察到明显的小脑萎缩和小脑异常信号。

结论 本病的特征性影像学表现为沿着皮髓质交界处分布的线样 DWI 高信号，常双侧对称，始于额叶，随病程加重范围扩大，但即使在疾病晚期，仍不会累及白质深部。此外，白质病变多见，部分患者中可观察到小脑或弥漫性脑萎缩、小脑蚓旁 FLAIR 高信号。以脑炎症状起病的，可观察到脑水肿、脑膜强化等脑膜炎性表现。当临床表现提示本病或特异性不足时，掌握其影像学特点尤为重要。

Decreased functional connectivity in frontostriatal circuit in Parkinson disease

Xiuqin Jia,Tao Jiang
Beijing Chaoyang Hospital, Capital Medical University

Background:
The pathological hallmark of Parkinson’s disease is the degeneration of dopaminergic nigrostriatal neurons, which in turn leads to depletion of striatal dopamine. The aim of this study was to investigate whether dopaminergic dysfunction in Parkinson’s disease was associated with impairments in functional connectivity across frontostriatal pathway.
Methods: In the present study, 21 patients with PD who met the UK Bank criteria for the diagnosis of PD (Hughes et al., 1992) were recruited in the present study. The HC group comprised 20 volunteers who were matched for age and gender ratio. Regions in the frontostriatal circuit were defined as regions of interest (ROIs) determined by from FSL Harvard-Oxford Atlas. ROI-to-ROI functional connectivity (FC) within this frontostriatal circuit was performed.
Results: No significant differences were found in gender, age and MMSE between HC and PD. ROI-to-ROI analysis found that significant decreases FC of the bilateral putamen were found in the left supplementary motor area and the left superior frontal gyrus, which was further correlated with the motor impairment of this disease.
Conclusion: These findings provides further insight into the understanding the neural mechanisms of motor dysfunction in PD.

PU-2200

基于 MRI 的早期未用药帕金森病患者皮层形态学改变与血脂水平相关性研究

苟露斌
兰州大学第一医院

目的 探讨早期未用药帕金森病患者大脑皮层形态改变与血脂水平之间的相关性。
方法 本研究所有数据均来自 PPMI 数据库，共纳入 43 例早期未用药帕金森病患者（H&Y 分期：1-2 期；MMSE 量表评分＞24；无其他神经或精神疾病），所有患者均行 T_1WI 结构成像扫描。采用 CAT（Computational Anatomy Toolbox）工具包对 MRI 数据处理分析，得到皮层厚度、皮层绝对平均曲率（AMC）、脑沟深度等皮层形态学参数。基于 SPM12 软件，应用 TFCE 方法分别对全脑上述参数与血清高密度脂蛋白、低密度脂蛋白、总胆固醇和甘油三酯浓度进行回归分析，年龄、性别及运动症状评分作为协变量，多重比较误差采用 FWE（family wise error）方法进行校正。
结果 早期未用药帕金森病患者右侧额上回、右侧缘上回、左侧顶下小叶局部皮层厚度与血清高密度脂蛋白浓度成正相关（r=0.601，r=0.589，P＜0.05，FWE 校正）；右侧舌回、楔叶局部脑沟深度与血清低密度脂蛋白浓度成负相关（r=0.712，r=0.643，P＜0.05，FWE 校正）。余大脑皮层形态学参数与血脂水平均无显著相关性。
结论 本研究初步发现血脂水平的异常可能导致早期未用药帕金森病患者大脑皮层厚度、脑沟深度等形态学的改变，为进一步探讨脂质代谢在帕金森病发病机制中的作用提供了影像学证据。

神经元核内包涵体病的磁共振特征分析

秦燕
中南大学湘雅医院

目的 探讨神经元核内包涵体病的磁共振表现特征
材料与方法 回顾性分析临床确诊的 8 例神经元核内包涵体病的磁共振表现及临床资料。其中男性 5 例，女性 3 例，年龄 61-81 岁，平均年龄 71 岁。8 例患者均行磁共振检查。
结果 患者临床表现为认知障碍、椎体外系病变、精神行为异常等。所有患者磁共振表现均为阳性。具体表现为双侧额顶颞枕叶广泛的深部白质及脑室旁白质长 T1 长 T2 信号，FLAIR 呈高信号，边界不清，绵延呈片状，Fazekas 分级呈 II 级及以上脑白质病变。全脑不同程度萎缩。DWI 表现为广泛皮层下 U 型纤维呈高信号，包括额叶、丁叶、颞叶和枕叶，部分患者累及胼胝体及外囊；呈“绸带征”或“飘带征”改变，较具特征性。ADC 图未见明显弥散受限征象。部分病例的随访结果显示 DWI“绸带征”不随时间变化而消失。
结论 神经元核内包涵体病的磁共振表现颇具特征性，病理与影像间有一定相关性，结合临床、影像资料可做出定性诊断。

PU-2202

The clinical value of synthetic magnetic resonance imaging using in Alzheimer’s disease

Yuwei Jiang,Chunmei Li,Min Chen
Beijing Hospital, National Center of Gerontology

Purpose
The aim of this study was to explore the value of synthetic magnetic resonance imaging (MAGnetic resonance image Compilation, MAGiC) in diagnosis of Alzheimer’s disease (AD) and quantitative evaluating the disease severity.

Methods

Twelve AD patients (4 men and 8 women; age range, 54－81 years) and fifteen age-matchednormal controls(5 men and 10 women; age range, 56－82 years) underwent MRI on a 3.0T MRI scanner (Signa Pioneer, GE Healthcare, Milwaukee, USA). The scan protocal included 3D fast spoiled gradient recalled echo and MAGiC (scanning time = 5min 8sec). MRI data processing was performed using FreeSurfer, Matlab R2015b and ITK-SNAP v3.6.0. Finally, these parameters were obtained including the volume, T1 values, T2 values, PD values of bilateral cerebral cortex, cerebral white matter, cerebellum cortex, cerebellum white matter, thalamus,caudate, putamen, pallidum and hippocampus. The values of these parameters in AD and normal controls were compared using independent-samples T test. The mini-mental state examination (MMSE) was performed on all subjects by a neurologist. The correlation between the values of these parameters and MMSE was assessed by the Pearson correlation test.

Results

Compared with normal controls, the volume of bilateral caudate was significantly increased in AD patients (left t = 2.897, p = 0.008; right t = 2.447, p = 0.022), but the volume of bilateral hippocampus was significantly decreased in AD patients (left t = -3.120, p = 0.005; right t = -2.800, p = 0.010). T1 values of left caudatewere significantly decreased in AD patients (t = -2.148, p = 0.042). T2 values of bilateral hippocampus (left t = 2.565, p = 0.017; right t = 2.506, p = 0.019) and PD values of right hippocampus (t = 2.471, p = 0.021) were significantly increased in AD patients. There were significantly negatively correlations between MMSE with T2 values of bilateral hippocampus (left r = -0.855, p = 0.000; right r = -0.602, p = 0.038); PD values of bilateral hippocampus (left r = -0.755, p = 0.005; right r = -0.624, p = 0.024); T1 values of left hippocampus (r = -0.707, p = 0.010), right cerebral cortex (r = -0.719, p = 0.008) and bilateral cerebral white matter (left r = -0.760, p = 0.004; right r = -0.795, p = 0.002).

Conclusion

MAGiC is feasible for diagnosis of AD and could potentially help to monitor the condition of patients with AD in a shorter scanning time.

PU-2203

海马内部结构清晰度评分在颞叶癫痫中的应用

王芳
东莞市人民医院

目的 探讨海马内部结构（HIA）清晰度评分在颞叶癫痫定侧中的应用价值。

资料与方法 HIA 清晰度评分系统主要用于对海马的非对称性进行分级，以评估 HIA 和癫痫发作定侧的一致性。回顾性分析 58 例单侧颞叶癫痫患者的海马内部结构清晰度评分。比较 HS+致痫海马、HS-致痫海马和非致痫海马每侧海马的平均 HIA 分数，统计学方法应用 Kruskal-Wallis 单因素方差分析法。应用双侧 Mann-Whitney U 检验评估组间成对差异性。应用平均 HIA 非对称性分数预测癫痫发作侧，视频脑电图显示真正的癫痫放电侧，统计学方法采用 Logistic 回归模型。用每组病人的各种非对称性阈值来评价其敏感性和特异性。

结果 58 例颞叶癫痫患者符合纳入标准。12 例患者（21%）MR 上显示有海马萎缩和/或海马信号异常的 HS 征象（HS+），46 例患者（79%）MR 上没有显示 HS 征象（HS-）。各组海马的单个海马 HIA

分数和平均 HIA 分数存在明显差异，其中，HS+组 HIA 分数最低，非致痫组海马的 HIA 分数最高。Logistic 回归分析显示 HIA 非对称性分数平均值是癫痫发作定侧很好的预测指标（ß= 3.93508, $p < 0.001$）。HIA 非对称性在进行 HS+/HS-状态调整后仍然具有显著差异性（ß= 3.8854, $p < 0.001$）。HS-患者中，当 HIA 非对称性分数平均值等于或大于阈值 0.5 时，正确预测癫痫发作定侧的特异性为 95%~100%，敏感性为 40%~45%。HS+患者中，0.3 的阈值，敏感性为 85%，特异性为 100%。

结论 HIA 非对称性能够预测颞叶癫痫病人发作侧。建议使用 HIA 评分系统，其对于颞叶癫痫患者定侧具有很高的特异性和较好的敏感性。

PU-2204
成人型神经元核内包涵体病的影像学表现与病理对照

陈学飞
龙岩市第二医院

目的 探讨成人型神经元核内包涵体病的影像学特征并与病理进行对照，提高对该病的诊断水平。
方法 回顾性分析经病理证实的 5 例神经元核内包涵体病的病理学与影像学特征，包括肿瘤的发生部位、形状、大小以及在 CT 和 MR I 上的影像学表现。
结果 5 例病例中，CT 平扫均为脑白质低密度，在 T1WI 上为低信号，在 T2WI、T2FLAIR 上脑白质为高信号,DWI 在皮髓质交界处（ U 型纤维）持续性高信号，有称为皮层下火焰征、尿布征,增强未见明显强化。
结论 神经元核内包涵体病具有一定的特征，掌握其影像学征象可提高对该病的诊断水平。

PU-2205
颞叶癫痫患者与正常人海马体积 MRI 测定及 MRS 对比研究

刘怡
北华大学附属医院

目的 运用 MRI 对颞叶癫痫与正常人海马体积测定及 MRS，评价两者的海马体积及 MRS 相应改变的关系。**材料及方法** 取得健康志愿者 50 例和收集我院神经内科住院及门诊颞叶癫痫患者 80 例的双侧海马体积及 MRS 结果，并根据年龄各分为三组，比较分析健康志愿者各年龄组海马体积和 MRS 的变化并计算出均值。根据海马体积的结果对 80 例颞叶癫痫患者年龄组细分为海马硬化组、非硬化组，并与正常对照组进行比对，进行定位、定侧诊断。**结果** 1.男性青年组左、右海马体积青年组大于中年组、老年组有统计学意义（$p<0.05$），中年组、老年组左、右海马体积无统计学意义（$p>0.05$）。男性 40 岁以后双侧海马体积逐渐萎缩，与年龄增长呈反比。2.女性青年组和中年组左、右海马体积大于老年组有统计学意义（$p<0.05$），青年组、中年组左、右海马体积无统计学意义（$p>0.05$）。女性 60 岁以后双侧海马体积逐渐萎缩，与年龄增长呈反比。3. 50 例健康志愿者三组间 NAA/Cr+Cho)、NAA/Cr、NAA/Cho 峰下面积比值进行比对，青年组>中年组>老年组有统计学意义（$p<0.05$），说明随着年龄的增长，海马的神经元就逐渐减少，同时就伴有反应性胶质细胞增生。4. MRI 海马体积测定对 80 例颞叶癫痫患者诊断阳性率为 71.3%，定侧诊断率 90%。5. MRS 对 80 例颞叶癫痫的诊断阳性率是 95%，定侧的诊断率 97.4%。6. MRI 海马体积测定的诊断阳性率、定侧诊断敏感度低于 MRS。
结论 1. MRI 海马体积的测量对颞叶癫痫具有较高诊断及定侧诊断，对早期海马硬化或海马体积未见萎缩患者诊断率不高。2.MRS 是根据脑组织内生物浓度变化功能成像，对早期海马体积萎缩不

明显或未见萎缩患者能做出准确的判断，明显提高诊断阳性率、定侧诊断 3.二者联合应用提高了对颞叶癫痫诊断的敏感性，为临床提供定侧、定位的辅助诊断信息。

PU-2206

帕金森病不同运动障碍亚型的临床特征比较

庞坚信[1],黄沛钰[2],王冬女[1],季文斌[1]
1.浙江省台州医院
2.浙江大学医学院附属第二医院

目的 比较不同运动障碍亚型帕金森病患者的临床特征，提高对帕金森病运动障碍的认识。**方法** 收集帕金森病患者 76 例，据统一帕金森病评估量表（UPDRS）评分分为震颤为主型 PD（TD-PD）组 19 例、姿势异常步态障碍为主型 PD（PIGD-PD）组 47 例和不确定型 PD 组 10 例，记录所有 PD 患者年龄、性别、受教育程度、病程、起病年龄、起病部位、UPDRS 评分、改良 Hoehn-Yahr 分期评分、简易精神状态监测量表（MMSE）评分、蒙特利尔认知量表（MoCA）评分、老年抑郁量表（GDS-15）评分、汉密尔顿焦虑量表（HAMA）评分、汉密尔顿抑郁量表（HAMD）评分、生活质量量表（PDQ-8）评分、Berg 平衡量表（BBS）评分、冻结步态量表（NFOG-Q）评分、便秘临床评分量表（CCS）评分和便秘生活质量量表（PAC-QOL）评分，统计分析 TD-PD 组和 PIGD-PD 组临床特征的差异。**结果** 性别构成在两组之间存在显著性差异（$P<0.05$），TD-PD 组男性较多，而 PIGD-PD 组女性较多。两组患者 UPDRS-Ⅰ、UPDRS-Ⅱ、改良 Hoehn-Yahr 分期、GDS-15、HAMA、HAMD、BBS、NFOG-Q、PAC-QOL 评分均存在显著性差异（$P<0.05$）。**结论** 帕金森病不同运动障碍亚型之间存在明显的异质性，提高对运动障碍亚型的认识利于分组诊治。

PU-2207

T2WI 在帕金森氏病的诊断价值

肖华锋, 陈新静,王岩,王玉林,娄昕,马林
中国人民解放军总医院第一医学中心

目的 通过比较 T2WI 正常老人中脑黑质致密带的宽度与帕金森氏病人黑质致密带的宽度，比较两者之间的差异，得出 T2WI 在帕金森氏病中的诊断价值。材料与**方法** 测量临床明确诊断的 34 例帕金森氏病人的黑质致密带宽度，按照年龄与性别等一一匹配的方法，随机选取 34 个正常老人的 T2WI 图像，测量其中脑黑质致密带的宽度，首先采用方差齐性检验，然后采用两独立样本 t 检验的方法，进行统计学分析。**结果** 34 个正常老人与 34 个帕金森氏病人的黑质致密带宽度没有明显的统计学差异。**结论** T2WI 对帕金森氏病没有明显的诊断价值，在临床确诊的帕金森病人中，其 T2WI 表现可能有一定的参考价值。

PU-2208

复发缓解型多发性硬化默认网络动态功能连接变异性分析

黄木华,周福庆,吴麟,曾献军,龚洪翰
南昌大学第一附属医院

目的 探讨复发缓解型多发性硬化（RRMS）患者默认网络（DMN）的动态功能连接（dFC）变异性模式与疾病状态的关系。
方法 使用 siemens 3.0 T MRI 采集 18 例急性期、26 例缓解期 RRMS 患者和 23 例性别、年龄相匹配的正常对照组(HC)静息态功能磁共振（fMRI）数据。选择后扣带回为种子点定义 DMN，基于滑动时间窗及聚类分析方法，比较三组间 DMN 内动态功能连接变异性模式差异，并分析差异脑区与临床参数之间的相关性。
结果 基于种子点方法构建的 DMN 主要包含双侧楔前叶/扣带回、双侧额上中回、双侧颞上中回、左侧角回。DMN 的 dFC 变异性组间比较发现，相比正常对照和急性期 RRMS 患者，缓解期 RRMS 组在左侧颞上回(L.STG)、左内侧额上回(L.MSFG)和右侧颞中回(R.MTG)显示过度增加的 dFC 变异性。与缓解期 RRMS 相比，急性期 RRMS 在 L.STG、L.MSFG、右内侧和旁扣带回(R.MCPG)、R.MTG 均显示过度稳定的变异性（dFC 变异性降低）。使用 k 均值聚类识别瞬时功能连接状态，得到 DMN 最优聚类数为 2，在状态 2 中相比于 HC 组，急性期 RRMS 在 L.STG、L.MSFG、R.MTG 功能连接降低，R.MCPG 功能连接增加；而缓解期仅在 R.MTG 显示较 HC 组功能连接减低。而在状态 1 中仅发现急性期 RRMS 的 L.MSFG 较 HC 组功能连接降低。相关分析发现，缓解期 RRMS 组 L.MSFG 的 dFC 变异性系数(0.14± 0.02)与病程之间呈正相关(r=0.582，P= 0.003)；急性期 RRMS 患者组 R.MTG 的 dFC 变异系数(0.12± 0.02)与病程之间呈正相关(r=0.509，P= 0.044）。
结论 缓解期 RRMS 患者 DMN 内存在过度增加的 dFC 变异性，可能是维持 DMN 功能稳定的有限代偿机制，而急性期 DMN 脆弱性增加且因时间状态而异。

PU-2209
2 型糖尿病患者静息态及嗅觉任务态脑功能磁共振研究

张冰,王欣,张洲,毕艳
南京大学医学院附属鼓楼医院

目的 糖尿病相关认知障碍指代谢紊乱和微血管病变所致的大脑高级功能障碍，可被归类为轻度认知障碍（ MCI）或痴呆。糖尿病患者的痴呆风险是非糖尿病人群的 1.5-2.5 倍，早期诊断有助于延缓认知衰退进程。嗅觉功能受损与遗忘型轻度认知功能障碍（ aMCI）可作为认知损害的早期诊断指标。 2 型糖尿病（ T2DM）增加嗅觉功能损伤的风险，但目前尚未有其嗅觉环路相关的影像学研究。本研究旨在探讨 T2DM 患者静息态及嗅觉任务态脑活动改变与认知功能改变的关联。 方法 研究对象包括认知正常的 41 名 T2DM 患者（包括 24 名男性，年龄： 51±9 岁，教育程度： 14±3 年）及 36 名正常志愿者（包括 18 名男性，年龄 50±7 岁，教育程度： 14±4 年）。收集详细的临床信息以及神经心理学量表，同时运用嗅觉功能测试仪进行嗅觉阈值、识别和记忆评分，对嗅觉任务态功能磁共振成像结果进行分析，得到嗅觉相关脑区的激活情况及组间差异，并以正常志愿者激活脑区为感兴趣区，进行静息态功能连接分析。 结果 T2DM 组嗅觉阈值评分明显低于正常志愿者组（分别为 8.7±3.2 与 11±2.5， P = 0.001）。任务态功能磁共振结果显示两组嗅觉神经环路相关脑区均被激活，组间分析显示 T2DM 组左侧海马及海马旁回激活程度较正常志愿者组减低，而双侧眶额回激活程度增加（ P <0.05， AlphaSim 校正）。功能连接分析提示 2 型糖尿病患者组双侧海马、内嗅皮层及杏仁核，与双侧眶额回间的功能连接均减弱（ P <0.05，AlphaSim 校正）。相关性分析显示，嗅觉神经环路内部功能连接减弱与 2 型糖尿病患者包括记忆力、注意力和执行功能在内的认知损伤相关。且左侧海马和左侧眶额回间功能连接与 2 型糖尿病患者餐后 2 小时胰岛素呈正相关。 结论 嗅觉任务态脑功能及静息态功能连接已经出现改变，可以作为认知衰退的早期影像学预警指标，而保存胰岛 β细胞功能有助于患者认知功能的保护。

PU-2210
遗忘型轻度认知障碍脑灰质扩散张量成像特征研究

张鑫,顾康康,张冰
南京大学医学院附属鼓楼医院

目的 既往研究多是利用扩散张量成像（ＤＴＩ）研究脑白质特性以评估遗忘型轻度认知障碍 （ａＭＣＩ）和阿尔茨海默病（ＡＤ）患者。 文中应用 ＤＴＩ 中的平均扩散率（ＭＤ）评估 ａＭＣＩ 和 ＡＤ 患者灰质微观结构完整性的损伤特征，从而判断其转化规律。 方法 回顾性分析南京大学医学院附属鼓楼医院 ２０１４ 年 １ 月至 ２０１６ 年 １２ 月期间 ３０ 例符合 Ｐｅｔｅｒｓｅｎ 标准的 ａＭＣＩ 患者（ａＭＣＩ 组）、３０ 例 ＡＤ 患者（ＡＤ 组）以及 ３０ 例正常对照组（ＣＮ 组）测量的全脑灰质 ＭＤ 值，构建灰质水分子平均扩散率网络，计算小世界网络特性，并与神经心理学评分进行相关性分析。 结果 与 ＣＮ 组相比，ａＭＣＩ 和 ＡＤ 组的灰质水分子平均扩散率网络显示出异常的小世界特性，即聚集程度较高和路径长度较长，反映了灰质微结构的损伤，且 ａＭＣＩ 患者网络的平均连接度低于ＣＮ 组，但高于 ＡＤ 组，差异均有统计学意义（Ｐ＜０．０５）。 包括双侧海马和边缘系统的 １１ 个枢纽脑区灰质 ＭＤ 值和蒙特利尔认知评估量表得分呈负相关（Ｐ＜０．０５）。 结论 ａＭＣＩ 脑灰质的水分子扩散特征有助于发现 ＡＤ 前期患者，并反映神经退行性疾病脑微观结构的破坏。

PU-2211
DKI 在不同运动障碍亚型帕金森病脑灰质核团微观结构的研究价值

王波,马莎,张洁,任丽香,陈渝晖,安鸿飞
云南第一人民医院

采用扩散峰度成像(diffusion kurtosis imaging，DKI)量化不同运动障碍亚型帕金森病（Parkinson's disease，PD）患者及正常对照组灰质核团的 DKI 各参数值，探讨 DKI 各参数值的微结构变化及不同运动障碍亚型临床异质性表现。**方法** 对 97 例 PD 及 83 例正常对照组进行常规序列及 DKI 序列检查。根据运动症状分为两型：PIGD 型（57 例）及 TD 型（40 例）。经图像后处理生成 FA、MD、Da、Dr、MK、Ka 和 Kr 图，分别测量灰质核团的各参数值，并对所得数据进行统计分析。**结果** PD 中，TD 型的首发症状以震颤为主；而 PIGD 型 PD 的首发症状以强直、运动迟缓及步态障碍为主；TD 型的 MMSE 评分较 PIGD 型高（$P<0.05$）；且改良 Hoehn-Yahr 病情分级较轻（$P<0.01$）；这两型 PD 在发病年龄、性别构成、起病侧、病程等方面对比无统计学意义（$P>0.05$）。与正常对照组对比，①PIGD 型及 TD 型各核团 MD 值、Da 值及 Dr 值均明显降低，而 Ka 值升高，有统计学差异（$P<0.01$）；②PIGD 型黑质网状带、TD 型黑质网状带、黑质致密带、壳核和苍白球 MK 值升高，有统计学差异（$P<0.05$）；③PIGD 型壳核、尾状核头 Kr、TD 型尾状核头 Kr 值降低，有统计学差异（$P<0.05$）；④TD 型与 PIGD 型对比壳核的 MK 值有统计学差异（$P<0.05$）；⑤余核团的参数值无统计学差异（$P>0.05$）。PIGD 型和 TD 型各灰质核团的各参数值与病程、MMSE 评分及改良 Hoehn-Yahr 病情分级之间均无统计学上的相关性（$P>0.05$）。**结论** TD 型与 PIGD 型 PD 在首发疾病、典型症状方面具有明显的异质性。DKI 参数可以较敏感地量化不同运动障碍亚型 PD 患者灰质核团微观结构的细微变化。

PU-2212
帕金森患者数字 N-Back 工作记忆功能磁共振研究

袁婷婷,张颖,王晓蕾,蒋雪
吉林大学白求恩第一医院

目的 近年来，帕金森病人认知功能障碍受到大家重视，认知障碍被认为是一种独立的非运动方面的障碍，并在转化为帕金森痴呆的关键作用，到目前为止，PD 患者记忆障碍方面研究较少，我们期望利用 N-back 方法发现帕金森病人在工作记忆中的网络功能障碍。
方法 轻度认知功能障碍 PD 患者 17 例，剔除 4 名未做反应和反应异常的被试，PD 患者入组 13 例（平均年龄 63.8 岁，M：F=7:6），和 10 例匹配良好的对照组（平均年龄 63.2 岁，M：F=6:4）采用 N-BCK 评估工作记忆，利用 SPM12 对正常组被试和病人组被试的 N-back 数据（2-back+3-back>0-back）进行了 T 检验，设置 p 值为 0.005，未矫正，激活团块阈限为 10 个体素。
结果 相比于病人组，正常组被试显著激活了左脑的旁海马回、颞上回、颞横回、海马、边缘叶、枕上回等脑区；相比与正常组，病人组被试显著激活了右脑的额中回、中央后回、顶上小叶、顶下小叶、楔前叶以及左脑的额中回等脑区。
结论 因记忆难度或注意需求增加，执行相同的功能需枕-颞-额-顶叶中多个区域共同协调一致，多个区域共同参与调节功能，各脑区在功能上相互联系。

PU-2213
认知训练改善 MCI 患者 认知功能的静息态 BOLD-fMRI 研究

文玉
山西医科大学第一医院

目的 利用静息态 BOLD-fMRI 探索 MCI 患者大脑默认网络（Default Mode Network，DMN）与执行控制网络（Executive Control Network ， ECN）功能连接的改变与认知功能改善之间的关系；**方法** 将 40 例 MCI 患者及 20 例正常认知受试者分为三组，将 40 例 MCI 患者分成实验组和对照组，实验组每周一进行一次认识训练辅导，每次约 1 小时，并要求实验组患者每周二至周日在家完成当周训练任务，持续 12 周。对照组及正常认知组不做干预，实验组干预前后、对照组及认知正常组 2 周前后分别进行多认知域量表采集及静息态 BOLD-fMRI 扫描；**结果** 干预组在经过认知训练后，患者脑默认网络（DMN）与执行控制网络（ ECN）间的连接显著增强，且这种改变与患者整体认知功能改善显著相关。**结论** 认知训练能在一定程度上改善 MCI 患者的认知能力及日常生活活动能力。

PU-2214
基于 CT 的 DESH 量表评分在特发性正常压力脑积水患者中应用

张弘,何文杰,雷益
深圳市第二人民医院

目的 探讨 CT 对特发性正常压力脑积水患者 DESH 征评分的应用价值。
方法 回顾性分析 29 例可疑 iNPH 患者临床及影像学资料，所有患者治疗前均行头颅 CT 及 MR 检查。分别对样本的头颅 CT 及 MR 图像进行 DESH 量表评分，比较 CT 与 MR 的 DESH 量表各参数的一致性。

结果 iNPH 患者 CT 与 MR 的 DESH 量表各评分参数组内相关系数如下：ICC_{EI} 为 0.928，$ICC_{侧脑室评分}$ 为 0.905，ICC_{CA} 为 0.855，$ICC_{CA\ 评分}$ 为 0.743，$ICC_{侧裂池评分}$ 为 0.983，$ICC_{凸面挤压评分}$ 为 0.984，$ICC_{局部脑沟评分}$ 0.814，$ICC_{DESH\ 总分}$ 0.914。
结论 CT 的 DESH 量表各参数评分与 MR 的 DESH 具有良好的一致性，头颅薄层 CT 的三维重建可应用于 iNPH 患者 DESH 量表评分。

PU-2215

Longitudinal Microstructural Changes in Traumatic Brain Injury Rat: a Diffusion Kurtosis Imaging, Histology, and Behavior Study

Mingliang Wang
shanghaijiaotongdaxuefushudiliurenminyiyuan

Objective: This study aimed to assess the longitudinal brain microstructural changes in traumatic brain injury (TBI) rat using Diffusion Kurtosis Imaging (DKI).

Methods: DKI was performed in a group of 5 rats at pre-injury, 3 day, 14 day and 28 day after TBI. The DKI parameters were measured in bilateral cortex, hippocampus, and callosum. Another four groups of 5 rats were used as brain Immunohistochemistry (IHC) analysis of neuron (NeuN), astroglia (GFAP), microglia (Iba-1), and myelin (MBP) in the same area to DKI parameter measurement. Furthermore, two groups of 6 rats underwent a Morris water maze (MWM) test at 28 day after TBI. The DKI parameters, IHC results, and MWM test results were compared longitudinally or between TBI and control group.

Results: Compared with baseline, the TBI rat had higher mean kurtosis (MK), higher mean diffusion (MD) value in ipsilateral perilesional cortex and hippocampus, lower fractional anisotropy (FA) value in callosum (P<0.05). The TBI group showed higher staining of GFAP and Iba-1, and lower IHC staining of NeuN and MBP in all ipsilateral ROIs (P<0.05). There was no significant difference in the contralateral ROIs in DKI parameters or IHC results. The MWM test revealed lower platform crossing times in the probe test (P<0.05).

Conclusion: Our study indicated that there were longitudinal changes in DKI parameters, accompanied by multiple pathological changes at different time points following TBI. And MK is more sensitive to detect microstructural changes especially in grey matter than MD and FA.

PU-2216

SWI 与 DWI 在多发性硬化中的应用价值

王乐
山西医科大学第一医院

目的 探讨 SWI 与 DWI 在多发性硬化中的应用价值。
方法 回顾分析 10 例确诊的复发缓解型多发性硬化患者的 MR 资料。扫描序列为平扫轴位 T1WI、T2WI、SWI、DWI 及增强轴位 T1WI，将直径>5 mm 的病灶纳入研究对象，观察各个病灶的 SWI 及 DWI 图像特点以及测量病灶平均 ADC 值。
结果 1、SWI 图像分析：16 个病灶伴行静脉，4 个病灶内可见静脉穿行。病灶周边为低信号环者 32 个，病灶呈不均匀低信号者 22 个，10 个病灶表现为均匀低信号。2、DWI 图像分析：低信号与等信号病灶的 ADC 值分别为(113．2±9．1)×10-5～(165．1±6.1)x10-5mm2／s，二者差异有统计学意义(F=55．10，P<0．05)；结节性与环形强化病灶 ADC 值分别为(111．7±11．3)x 10-5～(137．7±13．0)×10-5 mm2／s，二者差异有统计学意义(F=62．35，P<0．01)；融合与分散病灶 ADC 值分别为(146．2±6.4)×10-5～(110．4±11.6)×10-5 mm2／s，二者差异有统计学意义(t=9．20，P<0．01)。

结论 1、SWI 对脑内静脉、铁沉积显示敏感，结合常规 MRI，SWI 有助于全面、客观评价病情演变和监测临床治疗效果，提高对 MS 病理发生机制的认识；2、ADC 值的定量分析在解释 MS 各种病灶的病理变化、监测其病程时有一定的价值。

PU-2217
扩散峰度成像在帕金森病早期诊断中的应用价值探讨

李燕
山西医科大学第一医院

扩散峰度成像在帕金森病早期诊断中的应用价值
选取 2017 年 9 月至 2018 年 9 月经山西医科大学第一医院 PD 专科确诊的原发性早期 PD21 例，H-Y 分级 1-2.5 级，同一时期招募年龄、性别相匹配的 20 例健康志愿者作为对照，所有受试者均行头颅 MRI 平扫及 DKI 扫描，测量各受试者的双侧红核、黑质、尾状核头、苍白球、壳核、丘脑的各向异性分数(fractional anisotropy，FA)、平均弥散峰度(mean kurtosis，MK)、平均弥散率（mean diffusivity，MD），分析组间有差异的脑深部灰质核团，并计算核团 DKI 参数与临床症状的相关性，同时 评价 DKI 参数值对 PD 早期患者的诊断效能。 得出**结论** 磁共振 DKI I 技术对检测 PD 早期患者脑内灰质核团的 早期患者脑内灰质核团的 病理改变具有一定应用价 值，其中双侧壳核的 FA 值对 PD 早期患者诊断的敏感性较高， 双侧黑质的 MK 值则有较高的特异性。

PU-2218
基于 ADC 值鉴别华勒氏变性及腔隙性梗死

王君昕,邢雨,崔羽楠,姜健,苗延巍
大连医科大学附属第一医院

目的：华勒氏变性(WD)患者的脑干锥体束异常信号常被误诊为缺血性病变。本研究的目的是比较华勒氏变性与腔隙性脑梗死的表观扩散系数(ADC)值，以提高诊断准确性。
材料与方法：回顾性收集我院 2016 年 12 月至 2019 年 1 月单侧脑干华勒氏变性患者 27 例，其中男 17 例，女 10 例，平均年龄(65.85±9.12)岁。本研究同时纳入 24 例年龄、性别匹配的单侧脑干腔隙性脑梗死患者，分为急性腔隙性脑梗死组(AL, 13 例)和慢性腔隙性脑梗死组(CL, 11 例)。所有受试者均接受常规 MRI 序列和弥散加权成像(DWI)。由两名放射科医师(5 年、20 年)分别测量病灶侧及对侧的 ADC 值(ADC_{WD}、ADC_{AL}、ADC_{CL})，然后通过将病灶侧 ADC 值除以对侧 ADC 值计算出 ADC 值的比值(rADC)。采用 SPSS 21.0 对数据进行统计分析，对于非正态分布的 rADC 计量资料采用中位数（25 四分位数，75 四分位数）表示，三组间比较采用多组样本资料的秩和检验，组间有统计学意义再采用两独立样本的秩和进行比较，并且用 Bonferroni 进行矫正。检验水准 a=0.05，即 P<0.05 差异有统计学意义。
结果：组间年龄、性别差异无统计学意义。中位数 $rADC_{WD}$[1.24(1.15, 1.35)]高于 $rADC_{AL}$ [0.78(0.71, 0.84)]，但低于 $rADC_{CL}$ [1.50 (1.28, 1.68)] ($\chi 2 = 20.328$, $P < 0.01$)。Bonferroni 检验正确后，秩和检验显示 $rADC_{WD}$ 与 $rADC_{AL}$ 差异有统计学意义(P <0.001)， $rADC_{WD}$ 与 $rADC_{CL}$ 差异也有统计学意义(P =0.002)。
结论：通过计算出 ADC 值的比值有助于区分华勒氏变性与急性或慢性腔隙性脑梗死。

PU-2219
磁敏感加权成像在认知功能障碍脑铁沉积中的价值研究

梁欣
山西医科大学第一医院

目的 应用磁敏感加权成像(SWI)比较阿尔茨海默病(AD)患者、轻度认知障碍(MCI)患者及正常对照组脑铁沉积的差异。**方法** 收集就诊于本院经临床确诊为 AD 的患者 31 例,男 17 例,女 14 例,年龄 61-81 岁,平均年龄 70.2 岁；MCI 患者 20 例,男 10 例,女 10 例,年龄 63-82 岁,平均年龄 72.1；正常志愿者 60 例,男 30 例,女 30 例,年龄 37-82 岁,平均年龄 62 岁。行颅脑常规磁共振检查除外脑梗塞、脑出血、脑肿瘤、颅脑手术及脑外伤等神经系统疾病。行颅脑 SWI 检查,于 SWI 校正相位图上分别测量各组红核、黑质、尾状核头、苍白球、壳核、丘脑、海马及颞叶皮层相位值,用单因素方差分析评价正常组脑组织不同年龄阶段的 SWI 相位值的差异显著性**结果** 1）AD 患者、MCI 患者及正常志愿者红核、黑质、尾状核头、苍白球、壳核、海马及颞叶皮层的相位值差异有统计学意义(P<0.05),丘脑的相位值在三组间差异无统计学意义(P>0.05)。2）AD 组与 MCI 组比较：红核、黑质及壳核相位值差异有统计学意义(P<0.05)；AD 组与正常对照组比较：红核、黑质、尾状核头、苍白球、壳核、海马及颞叶皮层相位值差异有统计学意义(P<0.05)；MCI 组与正常对照组比较：壳核、海马及颞叶皮层相位值差异有统计学意义(P<0.05)。**结论** SWI 技术可以定量分析脑内铁沉积的变化规律,是一种简单、安全、无创的检查方法,具有较好的可重复性,可用于鉴别 AD 患者、MCI 患者及正常人脑铁沉积的差异,为较早诊断 AD 及 MCI 并预防 MCI 发展为 AD 提供一种新的无创的动态监测方法和可靠的生物学指标。

PU-2220
基于 T2 FLAIR 变化（信号及面积）鉴别华勒氏变性及腔隙性梗死

王君昕,邢雨,崔羽楠,姜健,苗延巍
大连医科大学附属第一医院

目的: 缺血性脑卒中患者脑干锥体束高信号强度常被误诊为缺血性病变。本研究的目的是比较华勒氏变性(WD)与腔隙性脑梗死患者脑干面积变化和信号强度的差异。
材料与方法: 回顾性收集我院 2016 年 12 月至 2019 年 1 月单侧脑干华勒氏变性患者 27 例，其中男 17 例，女 10 例，平均年龄(65.85±9.12)岁。将 24 例年龄、性别相匹配的单侧脑干腔隙性脑梗死患者纳入本研究，分为急性腔隙性脑梗死组(AL, 13 例)和慢性腔隙性脑梗死组(CL, 11 例)。所有受试者均接受常规 MRI 检查。每位病人的患侧脑干面积(AR_{WD}, AR_{AL}, AR_{CL})和信号强度(SI_{WD}, SI_{AL}, SI_{CL})分别由两名放射科医生(5 年和 20 年的工作)测量两次。脑干面积比值(rAR)的计算方法是将病变的一侧脑干面积除以对侧脑干面积，同法计算信号强度比值(rSI)。采用 SPSS 21.0 对数据进行统计分析，对于正态分布的 rAR 及 rSI 计量资料采用均数加减标准差表示，三组间比较采用方差分析，组间有统计学意义再采用 Post hoc Tukey 法进行两两比较。
结果:计算出脑干面积比值 rAR_{WD}(0.82±0.13) 是小于 rAR_{AL} (1.01±0.05)和 rAR_{CL}(0.98±0.04) (F=52.87, P＜0.01). rAR_{WD}和 rAR_{CL} 之间有显著差异(P <0.01) ，rAR_{WD} 和 rAR_{AL}之间也有显著差异(P <0.01).
计算出信号强度比值 rSI_{WD} (1.23±0.13) 是大于 rSI_{CL} (0.81±0.07)，但是小于 rSI_{AL} (1.31±0.16). rSI_{WD} 和 rSI_{CL}之间有显著差异(P <0.01), 但是 rSI_{WD} 和 rSI_{AL} 之间无明显差异(P =0.155).

结论：T2 FLAIR 信号强度比值有助于鉴别华勒氏变性与慢性腔隙性梗死。华勒氏变性患者的患侧脑干萎缩可作为鉴别急性或慢性腔隙性脑梗死与华勒氏变性的鉴别依据。

PU-2221
多发性硬化症的 MRI 特点及 MRI 增强病灶数目与炎症因子水平的关系研究

姚灵生
安阳市中医院

目的 探讨多发性硬化症（MS）的磁共振成像（MRI）特点，分析 MRI 增强病灶数目与炎症因子[干扰素-γ（INF-γ）、白细胞介素-17（IL-17）]、抑炎因子[白细胞介素-10（IL-10）、白细胞介素-27（IL-27）]水平的关系。
方法 回顾性分析 66 例 MS 患者临床资料，分析其 MRI 特点。根据患者头颅 MRI 增强病灶数目将其分为 A 组（MRI 增强病灶数目≤3 处）和 B 组（MRI 增强病灶数目＞3 处），比较各组血清炎症因子（INF-γ、IL-17）、抑炎因子（IL-10、IL-27）检测结果差异，经 Pearson 线性相关分析法分析 MS 患者 MRI 增强病灶数目与血清 INF-γ、IL-17、IL-10、IL-27 水平的关系。
结果 MS 患者病灶多分布于胼胝体周围（29.1%）、双侧脑室周围（27.2%）及双侧半卵圆中心（23.5%）处。MRI 图像多见大小不一，呈不规则团块状或融合成条带状、片状形态病灶；侧脑室病灶垂直于侧脑室长轴呈 T1 低信号，T2、FLIAIR 呈高信号，可见较典型的“直角脱髓鞘征”；增强扫描可见脑干和侧脑室旁病灶部分强化部分不强化。B 组血清 IL-17、INF-γ检测结果均明显高于 A 组，血清 IL-10、IL-27 检测结果则明显低于 A 组，差异均有统计学意义（P均＜0.05）。Pearson 线性相关分析法分析结果显示，MS 患者 MRI 增强病灶数目与血清 IL-17、INF-γ水平均呈正相关（r=0.713,0.681,P均＜0.05），与 IL-10、IL-27 水平均呈负相关（r=-0.526,-0.627,P均＜0.05）。
结论 MS 有其 MRI 影像特点，可为临床诊断提供依据；MS 患者 MRI 增强病灶数目与血清炎症因子、血清抑炎因子均关系密切，需引起重视。

PU-2222
神经纤维瘤病Ⅰ型脑内影像学表现探讨

吕秀花
空军军医大学西京医院

目的 探讨神经纤维瘤病 I 型（NF1）患者脑内影像学表现。**方法** 回顾性分析 16 例临床确诊 NF1 患者头颅影像学资料。16 例行常规 MRI 平扫(T2 WI、T1 WI、FLAIR)，5 例加扫 MRI 增强扫描，3 例加扫 DWI 检查，1 例加扫 MRS；6 例加扫 CT。**结果** 11 例病变表现为基底节受累的 T2/FLAIR 高信号，其中 1 例单侧，10 例双侧；累及丘脑 5 例，脑干受累 4 例；脑内病灶形态呈斑片状，T2WI 序列共检出 27 个，FLAIR 序列共检出 39 个。仅 1 例患者病灶呈肿块样改变；5 例增强未见强化；1 例 MRS 显示 Cho/Cr:1.93，Cho/NAA:2.52；DWI 未见弥散受限。其中 6 例 CT 平扫显示阴性。**结论** NF1 患者在颅脑具有特征性 MRI 表现，基底节好发，FLAIR 序列较 T2 序列检出病灶更具有优势；磁共振在 NF1 患者基底节病变的检出及定性、随诊方面具有明显优势。

PU-2223

糖尿病患者静息态脑功能网络分析

冯蒙蒙
THE FIRST AFFILIATED HOSPITAL OF SOOCHOW UNIVERSITY

目的：运用静息态功能磁共振成像（Resting-state Functional Megnetic Resonence Imaging, rfMRI）脑功能网络分析技术，探讨 2 型糖尿病（Type 2 Diabetes mellitus，T2DM）患者的脑功能网络改变。方法：本研究前瞻性收集 24 名 T2DM 患者与 27 名健康志愿者进行 3.0T MRI 扫描，获得受试者的 rfMRI 数据。将自动解剖标签（Automated Anatomical Labeling, AAL）模板定义的 90 个大脑区域作为复杂网络的节点，利用 pearson 相关建立 90 个节点之间的相关关联。选定阈值，构建病变组和对照组受试者的无向网络，得到量化的网络指标——平均效率，聚类系数、节点度分布和模块化组织。结果：在不同的阈值条件下，病变组脑功能网络的全局效率及平均聚类系数较对照组变小（$p<0.05$）；病变组节点度大于 8.5 的节点较对照组少；病变组的脑功能网络模块数较对照组多，且病变组每个模块的组分都发生了改变。结论：T2DM 患者脑功能网络的全局效率及聚类系数下降，T2DM 患者脑功能网络的模块数量及各模块组分发生改变，提示 1）T2DM 患者脑功能连接受损，2）与疾病相关的某些功能皮层发生改变和重组，局部脑区可能出现功能代偿，3）脑功能网络分析技术为 T2DM 患者提供了无创性评估中枢改变的新方法。

PU-2224

视-膈发育不良的 MR 影像学特征及临床认识

唐业欢
广西医科大学第一附属医院

目的：视-膈发育不良（SOD）指一种罕见的前脑中线结构发育异常，以儿童发病多见，包括透明隔缺如及视觉传导通路发育不良，常合并其它脑内发育异常。本文通过探讨、总结视-膈发育不良的影像学特征和临床表现，旨在提高临床工作中对该病的认识，协助临床及早诊疗。
方法：回顾性分析本院 8 例经临床、影像证实的视-膈发育不良患者的资料，总结其临床表现和影像学特征。临床表现主要关注患儿是否有视力障碍、癫痫发作、发育迟缓及垂体功能异常等病史。MRI 检查包括颅脑 MRI 平扫（T1WI、T2WI、FLAIR）、扩散加权成像(DWI)、视神经及垂体 MRI 平扫；在横轴位及冠状面观察有无透明隔缺如、脑实质发育畸形，利用矢状面及冠状面观察视路（包括视神经、视交叉、视束）有无发育异常、垂体形态及位置，DWI 观察脑实质有无弥散受限改变。
结果：本组 8 例患者女性 5 例、男性 3 例，年龄为 1-8 岁，中位年龄 5 岁；临床多表现为视力障碍、癫痫发作、生长迟缓等。影像学上根据透明隔缺如程度、视路发育不良情况、脑实质发育畸形、垂体形态及位置等情况，将视-隔发育不良（SOD）共分为 3 型；本组病例中视-隔发育不良Ⅰ型 4 例（最常见）、Ⅱ型 3 例、Ⅲ型 1 例。其中视-隔发育不良Ⅰ型 MRI 表现为透明隔部分缺如，1 例合并灰质异位；Ⅱ型 MRI 表现为透明隔完全缺如，两侧侧脑室融合扩大，2 例合并胼胝体变薄，1 例视神经和 1 例视束形态变细；Ⅲ型 MRI 表现为透明隔部分缺如，胼胝体扁小，视束变细且伴垂体发育不良（腺垂体小、神经垂体异位）。
结论：视-隔发育不良（SOD）临床上容易误判，当患儿合并视力障碍、生长迟缓等临床表现时，应考虑到该病可能，颅脑、视神经及垂体磁共振（MRI）联合检查对于诊断 SOD 具有重要的价值，其特征影像学表现为透明隔部分或完全缺如、视路发育不良及合并脑内其他畸形。认识和准确诊断该疾病有助于临床选择最合理的治疗方式，稳定病情和改善患儿生存质量。

PU-2225

An analysis of MRI characteristics and risk factors in patients with central pontine and extrapontine myelinolysis after orthotopic liver transplantation

Meizhu Zheng[1], SHUANG XIA[2]
1.The third central hospital of Tianjin
2.Tianjin First Central Hospital

Objective: To analyze risk factors for different MRI manifestations and characteristics of the initial and follow-up images of patients with central pontine and extrapontine myelinolysis (CPEPM) or central pontine myelinolysis (CPM) after orthotopic liver transplantation (OLT).
Material and Methods: The characteristics of the initial and follow-up MR images of 7 patients with CPEPM or CPM were collected and analyzed. Fluctuations of serum sodium, serum potassium and ammonia, regarded as risk factors, were observed.
Results: Symmetric hyperintensity was seem in brain stems in all the 7 patients on T2WI and DWI, and in extrapontine areas in 3. 2 patients with CPEPM suffered persistent hyperammonemia after surgery. Serum ammonia returned to normal level after operation in the 4 patients with CPM. Extrapontine myelinolysis (EPM) occurred first, followed by CPM in 1 case , whereas CPM and EPM occurred simultaneously in the other 2. The follow-up MR of the patients with higher fluctuation in serum electrolyte showed more lesions.
Conclusion: The persistent hyperammonemia may play an important role in the pathogenic mechanisms of CPEPM. The sequence of CPM and EPM occurrence presents in 2 ways in patients with CPEPM. The magnitude of serum electrolyte changes may be related with the prognosis of lesions.

白质微结构完整性和脑自发活动改变介导胰岛素抵抗对 2 型糖尿病患者认知障碍的影响

张冰,张洲,毕艳
南京大学医学院附属鼓楼医院

目的： 2 型糖尿病与认知障碍有关，而其背后的神经机制，特别是白质改变，仍有争议。本研究探讨糖尿病患者白质微观结构完整性和血氧合水平依赖性波动的变化，探讨这些变化是否能调节或调节糖尿病相关特征对认知障碍的影响。
方法： 本前瞻性研究于 2016 年至 2018 年期间，包括 55 名 2 型糖尿病患者（30 名男性和 25 名女性；平均年龄 53.2 岁）和 40 名非糖尿病对照受试者（17 名男性和 23 名女性；平均年龄 51.9 岁）。收集详细的神经心理评估、临床和生化信息、弥散张量成像和静息状态功能磁共振成像。比较两组患者白质的分数各向异性（fa）、平均扩散率（md）和低频波动幅度（alff），提取其与临床参数和认知评估的相关性和中介分析。
结果： 尽管糖尿病患者的总体认知状态没有明显下降，但胼胝体、左侧扣带回、双侧额叶和左侧颞叶的 FA 下降，右侧扣带回、双侧额叶和右侧顶叶的 MD 升高，而白质胼胝体膝关节 ALFF 升高（GRF

校正，体素 P 值<0.001，聚类 P 值<0.05）。同时，胼胝体中的 Fa 介导了胰岛素抵抗对糖尿病患者（β=0.0907，95%自举置信区间[0.00081，0.2261]）和非糖尿病对照组（β=0.3124，95%自举置信区间[0.0040，0.6468]）执行功能的影响。而仅在非糖尿病对照组，ALFF 可减缓 FA 对执行功能的影响（β=-0.3025，P=0.0163）。

结论：2 型糖尿病患者存在结构完整性和白质激活的改变，在胰岛素抵抗引起的认知障碍过程中起到调节和调节作用。

PU-2227

一例粘多糖贮积症 II 型（MPS II）早期进行性神经系统表型的影像学特点分析

柏梅,乔中伟
复旦大学附属儿科医院

目的：探讨粘多糖贮积 II 型（Mucopolysaccharidosis II, MPS II）早期进行性神经系统表型的影像学表现。

方法：回顾性分析在复旦大学附属儿科医院就诊的 1 例 MPS II 型患儿的影像资料并进行分析和总结。

结果：男性患儿，患儿四岁时在我院因打鼾行腺样体削切术。后发现患儿双手指弯曲并逐渐加重，当时未重视。7 岁时我院就诊时考虑结缔组织病，临床表现为爪形手，上肢僵直，身材矮小，面容丑陋，智力低于正常患儿；肌电图示轻度肌源性损伤；肌肉活检示炎性细胞散在；B 超提示双腕关节积液，关节滑膜病变。8 岁时我院风湿科就诊，患儿双手指、腕、肩、膝关节均有功能受累，头颅 MRI 提示异常，腹部 B 超示肝脏肿大，心脏超声示主动脉瓣及二三尖瓣轻度反流，会诊后考虑粘多糖病可能。追问病史，父母非近亲结婚，但患儿母亲的祖父母为姑表近亲结婚。进一步做尿糖胺聚糖（GAG）检查高于正常。基因检测示 IDS 基因突变，可能导致粘多糖型。该患儿 8 岁时，头颅 MRI 示大脑白质多发异常信号，脑内血管周围间隙扩大；头颅 DTI 示半卵圆区白质纤维束减少；胸部平片检查示双侧锁骨增粗，双侧肋骨胸骨端变细呈“飘带征”；双手正位片示掌骨近端、指骨远端变尖，尺桡骨干骺端倾斜稍呈 V 形；四肢长骨正位片示双侧股骨远端干骺端增宽；脊柱全长正侧位片未见明显异常；双侧股骨及左膝关节 MRI 未见明显异常。

结论：粘多糖贮积 II 型，也称作亨特综合征（Hunter syndrome），是一种 X 连锁的累及身体多系统的疾病，其特征在于身体多个器官内 GAG 的聚集，绝大多数受影响的是男性。根据发病年龄和进展速度，分为早期进行性和缓慢进展性两种表型。早期进行性中枢神经系统受累是儿童群体中最重要的特征，该表型可能是缓慢进展性表型的两倍多。MPS 的神经系统典型影像学表现包括扩张的血管周围间隙，白质病变，脑积水，脑萎缩和颈椎管狭窄伴或不伴脊髓压迫或脊髓病变。

PU-2228

肥胖与食物动机的神经机制：ALE 荟萃分析

刘晨
陆军军医大学第一附属医院（西南医院）

目的：肥胖被定义为由于消耗和消耗卡路里之间的不平衡而导致的身体脂肪过度积累。神经系统调节人类的食欲和食物摄入，包括肥胖个体。然而引起肥胖者食欲过大和食物摄入的神经机制仍不清楚。本研究的目的是通过荟萃分析近年来大脑对不同食物刺激的功能成像，确定大脑区域对肥胖受试者、正常体重受试者、野营中食物图片的反应更为活跃的同时，并评估饥饿状态和食物能量含量

的调节作用。**材料与方法**:本实验在 Pubmed 数据库以(fMRI OR PET) AND (food OR nutrition) AND (pictures OR images or vision) AND (Obesity OR Obese OR Overweight)为搜索关键词，入组标准为必须包含正常组及肥胖组，都是对食物图片进行任务态脑功能成像，为了评估饥饿状态和食物能量含量的调节作用，必须提取饥饿状态和饱足状态之间的激活对比坐标，或是对高热量食物和高热量食物的图片的反应坐标。**结果**：最终入组 11 篇文献，通过 ALE 分析显示，12 组间（肥胖>正常体重志愿者）肥胖对食物图片的反应比对非食物图片的反应更强的区域。分别位于左额内侧回、左豆状核等区域。组间（正常体重志愿者>肥胖）对食物和非食物图片的大脑反应差异位于左侧海马体、右侧海马旁回和左侧脑岛。对于高热量和低热量食物图片，组间（肥胖>正常体重志愿者）大脑反应的差异位于海马旁左侧，右腹侧后外侧核和右尾状体。在饥饿和饱足状态下看照片 ALE 分析显示，对食物和非食物图片的大脑反应差异有 8 个区域位于左壳核、右前扣带回、左丘脑、左额上回、右小脑前叶、右额上回、左颞上回、左额下回。**结论**：利用 ALE 荟萃分析，我们确定了肥胖和健康正常体重个体在观看食物图片时激活的的大脑区域。在进行荟萃分析时，我们还确定了与饥饿状态和食物能量含量调节相关的大脑区域，对于肥胖形成的神经机制进行了初步探讨。

PU-2229

STAGE 成像方案对早期原发性帕金森病的研究价值

孙荣庆,徐海波
武汉大学中南医院

目的：应用 STAGE 成像方案对原发性帕金森病早期诊断提供影像学依据，为进一步指导临床对帕金森的评估及预后提供新的参考标准。
方法：应用西门子 Prisma 3.0T 磁共振对经临床诊断为早期帕金森的 24 名患者行脑部 STAGE 扫描，另选年龄及性别等与帕金森组相匹配的健康者纳入健康对照组，通过 STAGE 后处理软件，分别得到两组对应 SWI、tSWI、QSM 等序列，进一步获取高清对比磁敏感图及定量磁化率参数，分析帕金森患者与正常对照者在黑质核团磁敏感及定量磁化率参数差异性。
结果：所有 48 位受试者均成功行 STAGE 扫描。帕金森组与对照组 tSWI 与 SWI 相比，tSWI 更能清晰显示大脑深部核团结构，特别可以较为清晰的显示和分辨黑质致密部、网状部；24 例健康对照组中 4 例（16.67%） “燕尾”征消失，24 例帕金森病患者中 23 例（95.83%）“燕尾征”消失；QSM 具有极高的信号对比度和分辨率，通过后处理软件分析得出定量磁化率，帕金森组黑质明显高于正常对照组，差异有统计学意义（P = 0.000）
结论：STAGE 方案是可以通过一次扫描同时生成 SWI、tSWI、QSM 等多模态新的 MRI 成像方法，通过 tSWI 可以提供比 SWI 更高分辨率的磁敏感图像；QSM 获取磁化率参数可以对早期帕金森患者进行定量分析，为临床对早期帕金森的诊断提供客观的影像学依据，为进一步指导临床对早期帕金森患者病情评估及预后提供新的参考标准。

Pathophysiological evaluation in a case of Wernicke’s encephalopathy by multimodal MRI

吕悦雷,王韵,蒋涛
首都医科大学附属北京朝阳医院

Background To report a patient with Wernicke’s encephalopathy using multimodal MRI including conventional MRI, DWI, ASL and MR Spectroscopy(MRS).

Methods A 50-year-old woman of Wernicke's encephalopathy with a history of cholecystectomy and acute pancreatitis was given MRI scans including DWI, MRS and ASL pre- and post- thiamine treatment.
Results Two weeks after admission, the patient's condition rapidly improved. The typical MRI findings and lesions in frontal cortex at baseline, disappeared or resolved partially. The reduced ADCvalue in part of the thalamus lesion, the elevated cerebral blood flow in the frontal cortex, and the lactate doublet peak in the right thalamus lesion and cerebral spinal fluid, all resolved after treatment.
Conclusions The combination of conventional MR imaging with DWI, MRS, and ASL, offers a powerful diagnostic tool and better understanding of the pathophysiological mechanisms.

PU-2231
发作性运动诱发性运动障碍动脉自旋标记灌注磁共振成像研究

陈光祥[1],雷都[2],黎磊[2],黄晓琦[2],周东[3],龚启勇[2]
1.西南医科大学附属医院
2.四川大学华西医院放射科
3.四川大学华西医院神经内科

目的 采用多个标记后延迟时间（post labelling delay，PLD）的动脉自旋标记（arterial spin labelling，ASL）灌注磁共振成像研究发作性运动诱发性运动障碍（paroxysmal kinesigenic dyskinesia，PKD）患者的脑灌注特征。
方法 收集 47 例 PKD 病人和 42 例正常对照，ASL 使用 3.0 T 磁共振伪连续式动脉自旋标记（pseudo-continuous ASL，pCASL）序列进行扫描， 4 个 PLD 分别为，1,400/1,800/2,200/2,600 ms。计算出每个 PLD 对应的脑血流量（cerebral blood flow，CBF）、平均 CBF（CBFmean）以及动脉通过时间（arterial transit time，ATT）。采用 t 检验进行组间比较分析，Pearson 相关分析探讨显著性差异脑区的异常灌注参数值与临床变量的相关性。
结果 PKD 病人组较正常对照组右侧中央前回、右侧颞上回、右侧顶下小叶、左侧海马旁回、左侧额上回以及双侧额中回的 CBFmean 显著降低，未发现 CBFmean 显著增高的脑区。对于 4 个不同 PLD 所探测到的 CBF，CBF1,400 发现的两组间具有显著性差异的脑区最多。PKD 病人组与正常对照组 ATT 的组间比较未发现具有显著性差异的脑区。PKD 组右侧颞上回的 CBFmean 与发病年龄呈负相关(r=-0.428，p=0.003)；右侧顶下小叶的 CBFmean 与疾病病程呈正相关(r=0.453，p=0.001)。
结论 PKD 患者的脑血流动力学存在异常改变，主要表现为包括运动皮层在内的多个皮层区域的 CBF 降低。我们的研究从血流动力学的角度进一步证实了 PKD 的神经机制可能不只是仅仅涉及到基底节、丘脑的异常，包括运动皮层在内的多个皮层区域的异常可能也在 PKD 的神经机制中扮演着重要角色。

PU-2232
老年非酮症高血糖性舞蹈病 75 例临床、影像特点和机制探讨

张晓亚
南阳市中心医院

【摘要】 目的 探讨非酮症高血糖性舞蹈病的临床、影像特点及可能的致病机制。 **方法** 通过中国知网，万方及维普等全文数据库搜集有关非酮症高血糖性舞蹈病的临床病例报道文献，共获得 22 篇（包含 75 例研究对象）文献，分析每名患者的临床表现、实验室检查、影像学特点及治疗效果，并据此对其发病机制进行探讨。 **结果** 75 例患者均为老年人，均因舞蹈样不自主运动入院，其中 55 例既往糖尿病诊断明确，20 例入院后诊断为糖尿病，发病时血糖水平 11.4-42.8（21.5±4.8）mmol/l，尿酮体阴性；6 例影像学正常，69 例纹状体 CT 早期表现为高密度，可在短时间内消失，MRI T1 呈高信号，数月后信号无明显变化；治疗上采用降低血糖或联合多巴胺受体抑制剂、安定类药物控制舞蹈样症状有效。**结论** 非酮症高血糖性舞蹈病是一特殊的临床综合征，其发病机制尚不清，早期积极治疗多呈良性经过，预后良好。

PU-2233

脑干非肿瘤性病变的 MRI 诊断及及临床决策

吴晓峰,张辉,王效春,谭艳,秦江波,王乐,张磊
山西医科大学第一医院

目的：通过对脑干非肿瘤性病变的诊断及鉴别诊断，提示临床及时针对性治疗。
方法：搜集 2017 年 1 月到 2019 年 5 月就诊于山西医科大学第一医院怀疑脑干病变患者 319 例，其中男 180 例，女 139 例，年龄 26-80 岁，平均年龄 63.8 岁；所有患者均为初次发病，症状包括：肢体无力、意识障碍、头晕、呕吐、吞咽困难、癫痫等；所有患者均行头颅磁共振扫描，扫描序列包括 T1WI、T2WI、flair、DWI，扫描图像由两名主治医师进行诊断。
结果：脑梗死 217 例，脑干出血 58 例，脑干脑炎 13 例，桥脑中央髓鞘溶解症 9 例，脱髓鞘病变 31 例，脑干萎缩 18 例；所有病例病灶均为单发。
结论：根据 MRI 表现分析病灶形态、分布、信号特点，对各个疾病进行精确诊断，及时准确指导临床决策，对患者进行对症治疗。

PU-2234

不同剂量急性饮酒对健康人群认知功能影响及扩散峰度成像（DKI）的研究

谭慧
武汉大学人民医院

目的：研究不同剂量急性饮酒对健康人群认知功能的影响及其与脑白质微观结构扩散峰度成像（DKI）改变的相关性。
方法：选取 25 名健康志愿者随机摄入不同剂量白酒，分别于饮酒开始之前，饮酒后 30 及 60min 完成一系列神经心理学测试量表以及常规 MRI、DKI 扫描。量表包括蒙特利尔认知量表(MoCA)、数字广度测验(DST)及语音流畅试验（PFT）。根据饮酒后 30min 血液酒精浓度(BAC)分组。测量感兴趣区内（额叶、颞叶、半卵圆中心、胼胝体膝、压部及小脑中脚）DKI 参数值，并与不同浓度组饮酒前、后神经心理学量表评分进行相关性研究。
结果：1.不同浓度组饮酒前、后认知功能总体评分 MoCA 及 DST 总分未见明显差异；饮酒后 30 及 *60min DST* 逆序分及 PFT 评分明显降低，且高浓度组降低更明显；饮酒后 60min DST、PFT 评分与酒后 30min 未见明显差异。

2.饮酒后 30min 额、颞叶和胼胝体膝部 FA 值明显升高；BAC 与额、颞叶 FA 值呈正相关。饮酒后 60 与 30min 相比，额叶 FA 值升高，且高浓度组升高显著。饮酒后 30min 额叶和小脑中脚 MD 值较饮酒前明显下降，其中，高浓度组下降最显著；饮酒后 60 与 30min 之间各感兴趣区内 MD 值差异无明显统计学意义。饮酒后 30min 额、颞叶和胼胝体膝部 MK 值较饮酒前明显升高，不同浓度组间 MK 值无明显差异；饮酒后 60 与 30min 相比，中等浓度组额叶 MK 值明显升高，高浓度组额叶和颞叶 MK 值明显升高。

3.饮酒后 30min 额叶 MK 值与 PFT 评分呈负相关，颞叶 MK 值与 DST 总分及 DST 逆序评分呈负相关，FA 及 MD 值与神经心理学量表评分无明显相关性。

结论：1.饮酒后会引起记忆力、注意力及执行功能等认知功能损害，且具有剂量相关性。

2.DKI 能敏感检测出饮酒后脑白质微观结构的变化，其中，MK 值较 FA、MD 值更敏感。

3.饮酒后额、颞叶 MK 值与量表评分具有显著相关性。

基于 TBSS 磁共振扩散张量成像方法对轻微型肝性脑病的研究

王建萍,汪涛,戚乐
杭州师范大学附属医院

摘要：目的 运用磁共振扩散张量成像（ DTI）基于纤维束示踪的空间统计分析（ TBSS）方法研究轻微型肝性脑病（MHE）患者脑白质微观结构的改变，为 MHE 早期诊断提供帮助。 **方法** 纳入被试 30 例 ，包括 15 例 MHE 患者及 15 例正常人，用 3.0T 磁共振获得全脑 DTI 数据，运用 FSL 软件解算全脑白质各向异性分数（ FA）值，通过 TBSS 方法比较两组间差异。提取患者组有差异脑区的 FA 值与临床指标进行统计分析。 **结果** 与对照组比较 ，MHE 组的胼胝体、左侧丘脑、内囊、额叶及右侧大脑脚等脑区 FA 值减小（FWE 校正，*P<0.05*）。而对照组、MHE 组的 FA 值变化与 NCT-A 时间、DST 评分之间无显著相关性（FWE 校正，*P<0.05*）。 **结论** 基于 TBSS 分析的磁共振扩散张量成像可以敏感地发现 MHE 患者脑白质微观结构的损害，对于解释 MHE 病理生理机制及早期诊断具有一定参考意义。

经筋疗法促进小儿脑性瘫痪脑白质神经纤维束生长：DTI 表现

高琪璐[1],吴京铧[2],郑文斌[1]
1.汕头大学医学院第二附属医院
2.北京筋柔中医研究院

背景与目的：小儿脑性瘫痪简称脑瘫，是指一组持续存在的导致活动受限的运动和姿势发育障碍症候群，这种症候群是由于发育中的胎儿或婴儿脑部非进行性损伤引起的。国际上统计脑瘫的发病率为 1‰ ～5‰，国内脑瘫的发病率为 1.8‰ ～4‰。该病给患者家庭及社会带来极大的负担，已成为严重的公共卫生问题。本研究利用磁共振弥散张量成像技术（DTI）追踪小儿脑瘫患儿经筋疗法治疗后脑白质神经纤维束生长情况，为经筋疗法治疗小儿脑瘫的有效性提供影像学依据。

方法：患儿男 11 岁，出生后被发现“哑巴”，就诊时额头可见隆起筋包，嘴歪 ，智力低下，为 3 岁正常儿童智力水平，行经筋治疗，治疗前及治疗后 2 个月分别进行 3T 磁共振平扫及 DTI 检查。经筋疗法每天 1 次，包括理筋手疗及针刺法，理筋手疗法按 12 经筋循行地图进行“消灶解结”，每日松筋治疗 1 小时，针刺位于百会、四神聪、神庭、风池筋区，留针 1 小时。

结果： 磁共振常规扫描示后颅窝蛛网膜囊肿压迫小脑，小脑发育不良（图 A,B） ，磁共振弥散张量成像（DTI）纤维追综显示额顶叶脑纤维束少(图 C)，经筋手疗及针刺治疗 3 周后，额部筋结包扁平，嘴歪改善，走路平衡及理解能力有明显改善 ，治疗 2 个月后复查 MRI 及 DTI，MRI 脑部表现与治疗前大致相同，但当测定全脑 63 个脑区 FA 值，各脑区 FA 值均较治疗前有显著增高,DTI 纤维追踪显示额顶叶有新的纤维束出现。
结论：DTI 可以直观反映经筋治疗促进小儿脑瘫脑白质神经纤维束生长情况，并可作为疗效定量评估的有效手段。

PU-2237

Altered functional connectivity of brainstem structures: Red Nucleus and Substantia Nigra in migraineurs without aura

Xiaobin Huang,Di Zhang,Hao Liu,Xindao Yin,Xinying Wu
Nanjing First Hospital

Purpose: Functional connectivity (FC) has been used to investigate the pathophysiology of migraine. Accumulating evidence is pointing to the malfunctioning of brainstem structures: the red nucleus (RN) and substantia nigra (SN) as important factors for migraine without aura. We aimed to identify atypical FC between the RN and SN and other brain areas in migraineurs without aura and to explore the association between the RN and SN connectivity changes and the cognitive test in these patients.
Materials and Methods: Resting-state functional magnetic resonance imaging (fMRI) data were obtained from 30 migraineurs without aura and 22 age-, gender-, and years of education-matched healthy controls. The FC of the brainstem structures were analyzed by using a standard seed-based whole-brain correlation method. The results of the brainstem structures FC were assessed for correlations with other clinical features.
Results: MwoA patients exhibited reduced left RN-based functional connectivity with the left middle frontal gyrus, and reduced right RN-based functional connectivity with the ipsilateral superior parietal lobe and increased functional connectivity with the ipsilateral cerebellum. Additionally, patients with MwoA demonstrated significantly decreased right SN-based function connectivity with right postcentral gyrus, left parietal lobule and left superior frontal gyrus. Hypo-connectivity between the right SN and right postcentral gyrus was negatively correlated with disease duration (r=-0.506, p=0.004). Additionally, increased connectivity of the right RN to ipsilateral cerebellar lobes was positively correlated with headache impact test-6 (HIT-6) scores (r=-o.506, p=0.004).
Conclusion: The present study suggested that migraineurs without aura suffer from disruption in their RN and SN resting-state networks, which are associated with specific clinical characteristics. Taking together, these results may better improve our understanding of the neuropathological mechanism of migraine.

PU-2238

失眠与颈动脉粥样硬化相关性分析

熊雪颖
武汉大学中南医院

目的：通过观察失眠人群颈动脉粥样硬化的特点，分析失眠及睡眠相关因素与颈动脉粥样硬化的关系。
方法：本实验纳入 2012 年 10 月至 2013 年 6 月在武汉市第五医院神经内科就诊的患者共 171 例；年龄在 35 至 65 岁之间，按照中国精神疾病分类方案与诊断标准中失眠症的诊断标准，将纳入人群分为失眠与非失眠组。收集纳入患者的一般信息、以及颈动脉内膜中层厚度，及颈动脉斑块等颈动脉超声动脉硬化诊断相关指标情况，采用方差分析及多元性线性回归等统计学方法对数据进行相关性分析。
结果：失眠组患者的颈动脉内膜中层厚度（IMT）和动脉斑块指数明显高于非失眠组患者，结果具有显著的统计学差异（P＜0.05）。与非失眠且睡眠时间＞5 小时的患者相比，失眠且睡眠时间＞5 小时患者的 IMT 及斑块指数增加；而且失眠且睡眠时间≤5 小时患者的 IMT 明显增加，斑块指数更高，结果均有明显统计学差异（P＜0.05）。对失眠和血管危险因素与颈动脉粥样硬化进行相关性分析，结果发现收缩压升高、睡眠总时间减少以及匹兹堡睡眠质量评分（PSQI）升高与 IMT 增加有显著相关性（P＜0.05）,且 PSQI 评分越高，IMT 增厚更加显著（P＜0.05）。
结论：失眠可以增加颈动脉粥样硬化的风险；且睡眠持续时间越短，颈动脉粥样硬化风险更高。收缩压，睡眠持续时间，以及匹茨堡睡眠质量指数（PSQI）评分均与颈动脉粥样硬化的显著相关。

PU-2239

胎儿脑部先天性异常的 MRI 诊断

龙运祥,邹成林,周艳,林云,杨星桥
成都市妇女儿童中心医院

目的 探讨胎儿脑部先天性异常的 MRI 诊断方法，提高对脑部先天畸形的早期诊断准确性。
方法：回顾性分析 2017-5 月-2019-3 月临床诊断明确的胎儿脑部先天性发育异常 23 例的影像资料，均于 MRI 检查前完成至少 1 次孕期胎儿超声检查，其中经阴道超声检查 15 例，常规腹部超声检查 7 例；需要 MRI 进一步检查者进行常规 MRI 平扫，包括 T1WI、T2WI 及 DWI 序列，对怀疑存在脂肪信号病灶者加扫 T1WI 压制序列，怀疑胎儿脑部微小出血灶加扫 SWI 序列， T2WI 序列含轴位、冠状位及矢状位，T1WI 序列视病变位置选择轴位或冠状位，DWI（b 值 0,800）常规轴位扫描。
结果：本组胎儿超声初步检查发现脑穿通畸形经 MRI 证实 1 例；脑室扩张伴胼胝体缺如经 MRI 证实 2 例；超声怀疑胼胝体发育异常 5 例 ，MRI 检查发现胼胝体体后部缺如并左侧透明隔部分缺如 1 例，胼胝体压部缺如 2 例，胼胝体体部发育不良并透明隔缺如 2 例；超声怀疑小脑蚓部发育不良 1 例，MRI 检查发现小脑下蚓部发育不全并透明隔局部缺如；超声怀疑脑裂畸形 1 例，MRI 证实系开唇型脑裂畸形并胼胝体压部缺如；超声怀疑后颅窝囊肿 1 例，MRI 发现系 Dandy-Walker 畸形伴脑积水；超声诊断脑积水 1 例，MRI 检查发现系小脑扁桃体枕骨大孔疝并脑积水；超声诊断侧脑室增宽 3 例，MRI 检查发现系透明隔缺如。本组 15 例胎儿脑部先天异常共 23 处病变，超声诊断率约 61%，MRI 诊断率 100%。
结论：超声作为胎儿常规检查，较 MRI 检查经济便捷，无 MRI 的幽闭恐惧症及 SAR 值积累等不良因素；但 MRI 无体位限制，扫描序列丰富，对胎儿脑部先天畸形细微结构显示、解释更全面准确。对

于胎儿神经系统先天异常影像检查，超声结合 MRI，能够对疾病早发现、早诊断，进而为临床及早干预提供有力支撑。

“臼齿”综合征 1 例

龙运祥[1],李淑琴[1],刘春英[1],李平[1],袁诚[1],龙运祥[1],李淑琴[1],刘春英[1],李平,袁诚[1]
1.成都市妇女儿童中心医院
2.成都市妇女儿童中心医院

患儿，男，6 岁，以“运动语言发育落后”就诊。
MRI 常规平扫：小脑蚓部体积较小，可见半球间“中线裂”征，小脑齿状核显示尚可，四脑室呈“蝙蝠翼”状，中脑呈“磨牙征”；双侧大脑半球脑实质信号未见确切异常。双侧脑室增宽，双侧侧脑室旁白质较薄。脑沟、裂、池未见增宽加深。中线结构居中。胼胝体形态、大小及信号未见确切异常。
MRI 诊断： 考虑 Joubert 综合征。
讨论： Joubert 综合征是一组病理学特征为小脑蚓部完全或部分发育不全的罕见先天发育畸形，美国统计发病率仅约 1/10 万。其典型神经病理学改变为小脑蚓部发育不良或不发育，齿状核、脑桥基底核及延髓的神经核团发育不良，锥体交叉几乎完全缺如。Joubert 等于 1969 年首次报道。通常认为该病是常染色体隐性遗传性疾病，多见于 AHI1 基因的突变。
Saraiva 和 Baraiser1992 年提出本病的 5 项诊断标准，必须具备小脑蚓部发育不全、张力减退、发育迟缓共三项；异常呼吸、异常眼球运动必须存在至少一项。目前，Joubert 综合征的确诊须依赖影像学与临床，二者缺一不可。“磨牙征”、“蝙蝠翼征”、“裂隙征”均是 Joubert 综合征的典型影像学征象，这些影像学表现均与病理改变相呼应。“磨牙征”是由于小脑上脚纤维缺乏正常交叉，导致小脑上脚增粗并垂直于脑桥中脑结合部，中脑前后径缩短，脚间池加深，在轴位图像形态极似磨牙的侧面观，故称为“磨牙征”。“蝙蝠翼征”是轴位片第四脑室形态如蝙蝠翼状，故而得名。“裂隙征”是由于小脑蚓部严重发育不良或不发育，导致双侧小脑半球紧密相连，中间无正常小脑蚓部结构，只有一细线样脑脊液影，形如裂隙，故称“裂隙征”。对影像表现不典型者，需紧密结合临床进行诊断。

PU-2241

产后抑郁症患者脑镜像同伦功能连接的 fMRI 研究

王玮
海军军医大学第二附属医院（上海长征医院）

目的:探讨产后抑郁症(PPD)患者静息态大脑半球间功能连接性的变化及其与临床严重程度的潜在相关性。
方法：对 28 名 PPD 患者和 25 名分娩后 4 周内的健康产后(HP)妇女进行静息状态功能性磁共振(fMRI)扫描。计算体素水平镜像同伦功能连接(VMHC)，并分析其组间差异及与临床指标之间的相关性。
结果：与 HP 相比，PPD 患者双侧背内侧前额叶皮质(dmPFC)、背侧前扣带回皮质(dACC)和眶额叶皮质(Ofc)的 VMHC 值明显降低(P<0.0 5)。提示 PPD 患者多个镜像脑区之间的功能协调受损。
结论：本研究为 PPD 产妇保健网络相关脑区内异常的半球间连通性提供了证据，并可能有助于进一步了解 PPD 的神经机制。

SBM 在中枢神经系统中的研究进展

成涛,黄小华,匡静,刘念
川北医学院附属医院

基于表面的形态学（(surface-based morphometry，SBM）是一种对脑结构磁共振图像定量计算的数字图像处理技术。该技术能对高分辨率的磁共振解剖图像进行三维重建并生成展平或胀平图像，进一步计算得到灰质厚度、表面积、体积、曲率等解剖参数。因此，可更精确地显示常规影像检查不能发现的多种神经病变所引起的脑组织形态学改变，对阐明病理机制以及疾病的辅助诊断有重要意义。

PU-2243

弥散张量成像联合 Fugl-Meyer 评分评价针刺治疗脑卒中后运动功能障碍的研究进展

唐玲玲,黄小华
川北医学院附属医院

脑卒中多伴有锥体系、锥体外系及脑灰质的损伤，因此，多数患者伴有不同程度的运动功能障碍，研究表明针刺治疗有助于运动功能的恢复。弥散张量成像（diffusion tensor imaging ,DTI）通过施加多个不同方向的弥散梯度场，能够直观的显示脑白质纤维走向，并运用其各向异性参数能够评估白质纤维结构的完整性及病理变化；Fugl-Meyer 评分法（FMA）是一种基于运动表现的神经系统功能评分方法。因此 DTI 联合 FMA 评分能够在结构及功能水平对于脑卒中后运动功能障碍的严重程度、预后及针刺治疗的机制、疗效做出有效评估，基于此，本文就相关研究进展进行综述。

PU-2244

可逆性胼胝体压部病变综合征的临床和神经影像特征

潘金万,方坤华,王世英,李棠华
龙岩市第二医院

目的：分析可逆性胼胝体压部病变综合征（ reversible splenial lesion syndrome，RESLES）孤立性病变的 MRI 表现。方法：对我院 2016 年 8 月至 2019 年 4 月收治的对 11 例可逆性胼胝体压部病变综合征孤立性病变患者的临床病史、影像资料及随访结果进行回顾性分析。结果：3 例为低血糖患者，2 例为癫痫患者，2 例为上呼吸道感染患者，1 例腮腺炎患者，1 例胃部大部分切除患者，2 例为糖尿病患者。头颅 MRI 共同特点为可逆性胼胝体压部孤立性病灶，呈类圆形，部分有“回旋镖征”，边界清楚，胼胝体压部类圆形、边界清楚的孤立结节，T2WI 序列呈稍高信号，液体衰减反转恢复（Fluid attenuated inversion recovery，FLAIR）及扩散加权成像（Diffusion weighted imaging，DWI）序列呈高信号，而相应表观扩散系数（Apparent diffusion coefficient，ADC）序列呈低信号，病灶周围无水肿。结论：可逆性胼胝体压部病变综合征是一种病因复杂、临床症候无特异性、MRI 表现有一定的特征性，结合临床资料，对疾病早期诊断、早期治疗提供依据，对判断预后具有很大价值。

PU-2245

White Matter Structural Differences in OSA Patients Experiencing Residual Daytime Sleepiness with High CPAP Use: A Non-Gaussian Diffusion MRI Study

jiaxuan Zhang
Tongji hospital, Tongji medical college, HUST

Objectives: To investigate white matter (WM) difference in obstructive sleep apnea (OSA) patients with and without residual sleepiness following continuous positive airway pressure (CPAP) treatment by employing diffusion magnetic resonance imaging (MRI) with a continuous-time random-walk (CTRW) model.
Methods: Twenty-seven male patients (30-55 years of age) with OSA received CPAP treatment (≥ 6h/night) for at least 30 days. Based on the Psychomotor Vigilance Task (PVT) results, the patients were divided into a non-sleepy (n=18) and a sleepy group (n=9). High b-value diffusion-weighted images were obtained at 3 Tesla and analyzed using a CTRW model. The differences in CTRW parameters α, β, and D_m, as well as their combinations, between the two groups were investigated using a whole-brain analysis with tract-based spatial statistics and a regional analysis on individual fiber tracts, both with age as a covariate. The CTRW parameters were also correlated with the clinical assessment scores.
Results: In the whole-brain analysis, the sleepy group showed higher α and D_m than the non-sleepy group. In the regional analysis, the two groups showed significant differences in α, β, D_m, or their combinations in a total of twelve fiber tracts. Additionally, moderate to strong correlations between the CTRW parameters and the sleepiness clinical assessment scores were observed.
Conclusion: The observed differences in the CTRW parameters between the two patient groups indicate that WM alterations can be a possible mechanism to explain reversible versus residual sleepiness in OSA patients with identical high level of CPAP nightly use.

PU-2246

轻度脑外伤脑白质纤维束完整性损害磁共振弥散张量成像研究

高琪璐[1],吴京铧[2],郑文斌[1]
1.汕头大学医学院第二附属医院
2.北京筋柔中医研究院

目的：本研究基于弥散张量成像(DTI)和基于纤维束追踪空间统计分析(TBSS)，研究轻度创伤性脑损伤(MTBI)患者与正常人全脑白质的扩散张量成像(DTI)的参数变化，分析脑白质束的异常及其与临床表现的关系。

方法:纳入 28 例 MTBI 患者(MTBI 组：GCS, 13-15, 年龄 20-45 岁)与 20 例受教育程度、年龄相匹配的健康者(对照组)行 MRI 和 DTI 扫描。应用 TBSS 方法分析两组受检者脑白质纤维 DTI 的各向异性分数(FA)，并对异常脑白质区进行概率纤维追踪。
结果：MTBI 组与对照组在中央前回、中央后回、扣带回、楔前叶皮层及枕叶皮层外侧上 FA 值具有显著差异（P<0.05）。MTBI 组与对照组在性别，年龄及 GCS 组间无显著差异。
结论:脑白质的完整性降低可能是由于髓鞘缺失，并与轻度创伤性脑损伤患者的神经或认知功能存在一定程度的差异有关。应用 DTI 和 TBSS 可以检测传统磁共振及 CT 检测不到的早期异常损伤，为临床医生更好的解释病人的症状提供的证据。

颅骨单次直接穿刺注血制作兔 SS-CNS 模型的可行性研究

黄帅,邵园,龚向阳
浙江省人民医院

研究目的 中枢神经系统表面铁质沉积症（superficial siderosis of the central nervous system, SS-CNS）是由软脑（脊）膜、软脑（脊）膜下和室管膜下含铁血黄素沉积所造成的一组综合征。通常认为该病是由于反复多次的蛛网膜下腔出血（SAH ）引起的，近来有文献报道在临床工作中，在对由于或动脉瘤破裂引起 SAH 的 MRI 检查中也可以观察到 SS-CNS 现象，基于此我们提出猜想，单次 SAH 也可能引起脑表面含铁血黄素沉积，但是患者既往可能存在 SAH 的病史。我们采用新西兰兔作为试验动物，利用颅骨单次直接穿刺注射自体动脉血模拟人类的 SAH，并采用 MRI 及病理学检查验证模型，目的在于评价该模型制作方法的可行性，并研究单次注血造成 SS-CNS 的可能性。
研究方法 普通级新西兰兔 38 只，雌雄不拘，全麻后抽取动脉血 2ml 备用，使用颅骨直接穿刺法钻孔将动脉血注入蛛网膜下腔，经 CT 扫描验证 SAH 模型成功与否，在饲养 6-9 月后全麻行使用兔子专业线圈行头颅 3.0T MRI 检查，检查序列为 T1WI、T2WI、SWI，MRI 检查 5 天后，常规麻醉福尔马灌注注取得兔的大脑标本，标本切片后行常规 H-E 染色及普鲁士蓝染色，显微镜下观察脑表面是否有含铁血黄素颗粒沉积。
研究结果 SAH 造模成功兔子 MRI SWI 序列上可以观察到造模部位的线样低信号，普鲁士蓝染色在脑表面观察到蓝色颗粒样物质沉积，在部分兔子可以观察到多部位的含铁血黄素沉积，应用颅骨直接穿刺注血法制作 SS-CNS 模型成功率为 28.9%（11/38）大体标本阳性率为 44%（11/25）,病理检查阳性率为 40%（10/25），MRI 阳性率为 48%（12/25），以三者均为阳性结果为最终阳性病例的阳性率为 40%（10/25）。

研究结论 单次注血可以造成 SS-CNS，应用颅骨直接穿刺注血法建立家兔神经系统表面铁质沉积症模型可行。

PU-2248
乳腺癌患者化疗相关体素度中心性改变与执行功能损害的相关性研究

赵彦琳,周福庆
南昌大学第一附属医院

目的 应用度中心性（degree centrality, DC）的方法，探讨乳腺癌化疗患者静息态脑网络变化与主观执行能力下降之间的关系。
方法 使用 3.0T MRI 采集未化疗的和主观认知受损的化疗的女性乳腺癌患者的 rs-fMRI 数据，使用连线测验（TMT）评估被试者执行功能。计算两组患者 rf-MRI 数据全脑体素水平的二值化的及加权的 DC 值，比较两组间差异，并探讨差异脑区的 DC 值与 TMT 之间的相关性 （年龄、教育程度为协变量）。
结果 主观认知受损的化疗后乳腺癌患者(n=20)和未化疗乳腺癌患者(n=27)年龄（P=0.207）、教育程度（P=0.455）、TMT-A1(P=0.977)、TMT-A2(P=0.601)和 TMT-B(P=0.356)差异无统计学意义。相较于未化疗乳腺癌患者，主观认知受损的化疗后乳腺癌患者右侧小脑上叶、右侧海马旁回二值化的 DC 值增高，右侧小脑上叶/海马旁回、双侧脑桥加权的 DC 值增高（P=0.01；高斯随机域理论校正，体素水平 P=0.01，簇水平 P=0.05）。控制两组被试者的年龄及教育程度，将差异脑区 DC 值与连线测验量表做偏相关，右侧小脑上叶（P=0.027，R=0.502）、右侧海马旁回（P=0.008，R=0.607）、右侧小脑上叶/海马旁回（P=0.014，R=0.566）、双侧脑桥（P=0.005，R=0.635）的 DC 值与 TMTA2 部分呈显著正相关。
结论 乳腺癌化疗患者存在静息态全脑网络的 DC 值改变，这可能是化疗相关主观执行功能损害的病理生理学基础。

PU-2249

创伤性脊髓损伤的 MRI 评价

邹俊婷,麦筱莉,张冰
南京大学医学院附属鼓楼医院

创伤性脊髓损伤是最常见的创伤性中枢神经损伤之一，致残、致死率较高，随着交通及建筑业的发展，脊髓损伤的发生率逐年升高。脊髓损伤的病理生理机制复杂，临床治疗效果不佳，给家庭和社会带来了沉重负担。当常规 T2WI 发现脊髓异常信号时，提示损伤严重不可逆，因此，选择有效、精确、无创的影像学技术早期诊断脊髓损伤，对于临床早期制订正确的治疗方案及对患者的预后至关重要。目前，无创性 MRI 成像技术不仅可以观察脊髓的形态和信号改变，还可以进行脊髓微观结构的研究。本文就扩散张量成像（diffusion tensor imaging, DTI)、扩散峰度成像(diffusion kurtosis imaging, DKI)、磁共振波谱成像（magnetic resonance spectroscopic imaging, MRS)、磁敏感加权成像（susceptibility-weighted imaging, SWI)、定量磁敏感成像(quantitative susceptibility mapping, QSM)、血氧水平依赖性功能磁共振成像（blood oxygenation level dependent fMRI, BOLD-fMRI）等无创性 MRI 技术在创伤性脊髓损伤方面的应用进展进行综述。

PU-2250

乳腺癌患者化疗相关静息态局部一致性改变与记忆功能损害的相关性研究

赵彦琳,周福庆
南昌大学第一附属医院

目的 探讨乳腺癌患者化疗相关的脑局部一致性改变与记忆功能损害的关系。
方法 采集未化疗的和主观认知受损的化疗后女性乳腺癌患者的 rs-fMRI 数据，使用 Rey 听觉词语学习测试（RAVLT）评估被试者记忆功能。计算两 rs-fMRI 数据在标准频率频带及五个特定频率频

带内肯德尔一致性系数局部一致性（Reho），比较两组间差异，并探讨差异脑区的 ReHo 值与 RAVLT 之间的偏相关性。
结果 化疗后乳腺癌患者(n=20)和未化疗乳腺癌患者(n=27)年龄（P=0.207）、教育程度（P=0.455）及 RAVLT 的即时记忆（P=0.512）、延时记忆（P=0.896）、学习得分（P=0.134）差异无统计学意义，遗忘得分（P=0.032）差异有统计学意义。组间分析显示，乳腺癌化疗患者标准频段内右侧楔前叶/楔叶及 0.027-0.073Hz 频带内右侧楔前叶/楔叶、左侧楔叶/后扣带回局部一致性增高（P=0.01，高斯随机域理论校正，体素水平 P=0.01，簇水平 P=0.05）。将差异脑区 ReHo 值与 RAVLT 做偏相关，标准频带内乳腺癌化疗患者的右侧楔前叶/楔叶 ReHo 值与即时记忆（P=0.011，R=-0.586）、延时记忆（P=0.027，R=-0.521）、遗忘得分（P=0.024，R=0.53）显著相关；0.027-0.073Hz 频带内右侧楔前叶/楔叶脑区与即时记忆（P=0.004，R=-0.648）、延迟记忆（P=0.006，R=-0.62）显著相关，左侧楔叶/后扣带 ReHo 值与即时记忆（P＜0.001，R=-0.747）、延时记忆（P=0.001，R=-0.693）、遗忘得分（P=0.004，R=0.646）显著相关（年龄及教育程度为协变量）。
结论 乳腺癌化疗患者存在静息态 ReHo 改变，这可能是化疗相关记忆功能损害的病理生理学基础。

PU-2251

The relationship between sleep quality and cognitive function in type 2 diabetes mellitus: an fMRI study

Qing Cai
the Third Affiliated Hospital of Zunyi Medical University

Purpose: To explore the relationship between sleep quality and cognitive function in type 2 diabetes mellitus (T2DM) using the brain resting-state functional MRI (rs-fMRI).
Methods: 40 T2DM patients (20 with good sleep quality (T2DM-GSQ), 20 with poor sleep quality (T2DM-PSQ)) and 18 healthy controls (HCs) underwent rs-fMRI. Normalized regional homogeneity (ReHo) and amplitude of low-frequency fluctuation (ALFF) resting state parameters were measured. The correlations between the Pittsburgh Sleep Quality Index (PSQI), abnormal ReHo/ALFF, and Montreal Cognitive Assessment (MoCA) in T2DM patients was investigated.
Results: Compared with HCs, the T2DM-PSQ group had lower ReHo values in the bilateral middle occipital gyrus (MOG) and left cerebellum, higher ReHo values in the right middle frontal gyrus (MFG), and decreased ALFF values in the bilateral cerebellum. The T2DM-GSQ group had lower ReHo values than HCs in the vermis and left cerebellum, increased ReHo values in the MFG and right superior frontal gyrus, decreased ALFF values in the left cerebellum, and increased ALFF values in the right MFG. T2DM-PSQ group had decreased ReHo values than T2DM-GSQ group in the right precuneus and left MOG, while decreased ALFF values in the right precuneus. In T2DM patients, a negative association was found between PSQI and MoCA, and abnormal ReHo/ALFF values had a significantly negative associated with PSQI.
Conclusions: Our main finding is that poor sleep quality and cognitive dysfunction are interrelated events in T2DM patients highly associated with rs-fMRI outcomes. The long-term effects of T2DM on sleep and cognitive impairment remain to be further elucidated.

PU-2252
经筋疗法“调神醒脑” 相关机制磁共振静息态脑功能成像及 3D-ASL 研究

高琪璐[1],郑文斌[1],吴京铧[2]
1.汕头大学医学院第二附属医院
2.2.北京筋柔中医研究院

目的：利用静息态脑功能成像(rfMRI)及动脉自旋标记(3D-ASL)了解经筋疗法对脑部网络结构及血流改变的影响，为经筋疗法“调神醒脑”的可能效应机制提供影像学依据。
方法：正常青年志愿者 12 人，年龄 23-25 岁，男 6 人，女 6 人，在经筋治疗前后进行脑部 3TMRI 平扫，磁共振静息态功能成像，ASL 扫描，获取相关图像数据，对理疗前后各脑区影像学数据进行自身配对对比，经筋疗法包括理筋手疗及针刺法，理筋疗法于神庭、风池筋区及颞筋区、颈筋区等进行“消灶解结”，针刺采用百会、四神聪筋区留针半小时。
结果：12 名志愿者治疗后均自诉有头脑轻松、眼睛明亮、精神爽快等感觉，磁共振平扫未见异常改变，与治疗前对比，静息态脑功能成像(rfMRI)reho 法观察到治疗后右侧枕叶区激活信号增强，而扣带回，右侧额叶，左侧岛叶信号减弱。ASL 显示经筋手疗治疗后，以下脑区 CBF 增高，治疗前后出现统计学差异，左侧视辐射 P=0.003，左颞中回皮质 P=0.012，右枕叶白质 P=0.045；
结论：经筋治疗后，静息态功能磁共振成像所出现的脑部枕叶区神经元活动一致性增强，及 ASL 所见枕叶区脑血流量增高可能与经筋疗法“调神醒脑”相关作用机制有关。

PU-2253
壁结节在 Rathke 囊肿 MR 诊断中的价值研究

陈平,陈宝莹
西安国际医学中心

目的：Rathke 囊肿囊内液体成份多样，MR 表现各异，与鞍内及鞍上囊性病变鉴别困难。旨在探讨壁结节在 Rathke 囊肿 MR 诊断中的价值。方法：回顾性分析 139 例 MR 诊断为鞍内或鞍上 Ratheke 囊肿的病变，分析壁结节出现的概率及 MR 信号特点。结果：79 例经手术及组织病理学证实为 Rathke 囊肿,其中出现壁结节 65 例（82%）；壁结节在 T1 上多表现为低、等或稍高信号，T2 上表现为低信号，其中壁结节为 T1 高信号、T2 低信号共 60 例（76%）。60 例经随访证实病变大小及形态未发生明显变化，临床诊断为 Ratheke 囊肿,病变出现壁结节为 34 例（57%），壁结节在 T1 上多表现为低、等或稍高信号，T2 上表现为低信号。所有病例壁结节在静脉注射造影剂后均未出现强化。结论：壁结节在 Rathke 囊肿 MR 诊断中具有重要意义，尤其对在 MRT1 表现为高信号，T2 上表现为低信号的壁结节，可以作为诊断 Rathke 囊肿的特征性影像表现。

不同注射方案结合不同 KV 在头颈部 CTA 中的可行性研究

任蔺
西南医科大学附属中医院

【摘要】目的:探讨不同注射方案结合不同 KV 在头颈部 CTA 中检查的可行性。**资料和方法**：选取 2018 年 9 月至 2019 年 5 月在我院临床怀疑头颈部斑块并行头颈部 CTA 检查的 45 例患者。平均分成分成 A、B、C 三组，三组均在西门子二代双源 CT 下进行扫描，A 组：采用 350 对比剂、100kv、60ml 对比剂，50ml 生理盐水，注射速率 4.5ML/S。B 组 350 对比剂、80kv、对比剂总量 50ml、生理盐水 50ml 注射流率 4.5ml/S,注射方案（A 筒：对比剂 35ml，AB 筒：30ml 混合液，对比剂与生理盐水 1:1 的比例注射，B 筒 35ml 生理盐水）。C 组 350 对比剂、80kv、对比剂总量 45ml、生理盐水 50ml 注射流率 4.5ml/S,注射方案 A 筒：对比剂 36ml，AB 筒：30ml 混合液，对比剂与生理盐水 3：:7 的比例注射，B 筒 29ml 生理盐水）。分别测量 A、B、C 三组的主动脉弓、上腔静脉、头臂干、左侧锁骨下动脉、颈内动脉，基底动脉的 CT 值、SD,同时计算三组的辐射剂量 ED 值、SNR、CNR 值。**结果**:AB 两组的辐射剂量差异有统计学意义 p<0.01,SD,SNR,CNR、HU 差异无统计学意义 P>0.01,AC 两组辐射剂量差异有统计学意义，p<0.01,AC 两组上腔静脉、头臂干、左锁骨下动脉的 SD、SNR、CNR、HU 差异有统计学意义 p<0.01,BC 两组辐射剂量无统计学意义 p>0.01,两组的上腔静脉，头臂干，左锁骨下动脉的 CT 值、SNR、CNR、SD 差异有统计学意义 P<0.01,结果:在头颈部 CTA 成像中，改变其注射方案，降低 KV 值，减少对比剂用量，采用双混合液（对比剂与生理盐水 3:7 比例）可以降低辐射剂量，降低血管线束硬化伪影，提高头颈部血管的显示，提高图像质量，为临床提供更优质的图像质量。**结论**：改变注射方案可优化头颈部 CTA 的图像质量，降低 KV 可降低辐射剂量，减少对比剂用量。

PU-2255
外伤所致蛛网膜下腔出血的临床 CT 分析

周子杨
广东三九脑科医院

目的：探究外伤所致蛛网膜下腔出血的临床 CT 分析。方法：选取时间段在 2016 年 7 月至 2017 年 1 月，在我院接收治疗的 72 例外伤性蛛网膜下腔出血患者作为观察对象，分析所有患者的检查结果，均采用 CT 检查方式。结果：从积血部位的角度而言，最常见的是显示为 58.3%发生率的脑池积血，相较于其他数据差异具有统计学的意义（P＜0.05）；从疾病分类的角度而言，所有患者中最常见的是显示为 50.00%的发生率的单纯外伤性。结论：在治疗外伤性蛛网膜下腔出血患者的过程中，应当按照患者的真实病情给予相应的治疗，临床医师还需要对患者的 CT 检查特点进行了解。

PU-2256
骨性膝关节炎患者脑功能 MRI 改变与手术前后疼痛的相关性研究

王欣,张鑫,张冰
南京大学医学院附属鼓楼医院

目的：人工膝关节关节置换术（total knee arthroplasties, TKA）是近年临床常用的治疗人工膝关节置换术（TKA）的手术方法，可以有效缓解患者的关节疼痛并改善膝关节功。但 6-10％的骨性膝关节炎（KOA）患者在 TKA 术后仍存在慢性中重度疼痛。此研究旨在探索 KOA 患者脑功能的改变与手术前后疼痛的相关性。

方法：运用低频振幅（ALFF）及格兰仕因果关系分析（GCA），比较 KOA 患者（n=18）及正常对照组（n=14）静息状态下的脑功能活动差异，以及与 TKA 手术前后疼痛视觉模拟评分（VAS）的相关性。

结果：KOA 患者右侧丘脑 ALFF 值显著减低，右侧中央前回、中央后回、顶上小叶、楔前叶与右侧丘脑的有效连接存在异常（p<0.05, GRF 校正）。相关分析显示 KOA 患者的术后 VAS 评分与右侧丘脑对右侧中央后回的影响呈正相关（r=0.536, p=0.022）；术前 VAS 评分与右侧楔前叶对右侧丘脑的影响呈负相关（r=-0.492，p=0.038）。
结论：KOA 导致的长期慢性疼痛会引起脑功能的改变，进而影响治疗后的疼痛感知，这说明术前对于慢性疼痛的控制是十分必要的，而术前脑功能检查有助于识别术后慢性疼痛高危患者。

PU-2257

胎儿大脑皮质发育畸形的影像-病理对照分析

张冰,徐学翠,陈大捷
南京大学医学院附属鼓楼医院

目的 分析胎儿大脑皮质发育畸形的产前 MRI 图像特征，并与病理结果对照分析，以总结胎儿 MRI 的诊断价值和图像特征。**方法** 选择 2011 年 1 月至 2018 年 1 月在南京大学医学院附属鼓楼医院行颅脑 MRI 检查者，经引产胎儿病理解剖确诊为大脑皮质发育畸形，将病理解剖结果与产前 MRI 图像对照，回顾性分析胎儿大脑皮质发育畸形的产前 MRI 诊断价值及图像特征。
结果 经引产胎儿病理解剖共诊断胎儿大脑皮质发育畸形 11 例，其中无脑回畸形 4 例，巨脑回畸形 4 例，局部小微脑回畸形 3 例。产前 MRI 诊断准确性为 100%。无脑回畸形产前 MRI 图像特征（n=4）：胎儿孕龄＞24 周，胎儿两侧顶枕沟、矩状沟、中央沟、中央前沟、中央后沟、扣带沟均未见显示，胼胝体发育不良，侧脑室扩张。合并其他畸形：1 例合并小头畸形及脑坏死。巨脑回畸形产前 MRI 图像特征（n=4）：孕龄＞24 周，顶枕沟及矩状沟可见，中央沟、中央前沟、中央后沟、扣带沟均未见显示，见粗大脑回，胼胝体发育不良，侧脑室扩张。合并其他畸形：1 例合并脑穿通畸形。多微脑回畸形产前 MRI 图像特征（n=3）：胎儿孕龄＞25 周，局部大脑皮质见细小脑回，数目增多。合并其他畸形：1 例合并胝体发育不良，脑室扩张，大脑缺血缺氧性脑病；1 例合并胝体发育不良，脑室扩张；1 例合并脑穿通畸形。染色体核型检查结果：11 例胎儿仅 2 例行染色体核型检查，其中 1 例无脑回畸形胎儿染色体微阵列检测发现染色体 6q25.2-q27 存在约 15.5Mb 的 DNA 片段单拷贝缺失，1 例巨脑回畸形胎儿染色体核型正常。
讨论 产前 MRI 可准确诊断胎儿脑组织、脑沟及脑回的发育状况，能明确诊断胎儿大脑皮质发育异常的具体分型及颅脑合并畸形，为产科处理及大脑皮质发育畸形的研究提供可靠依据。

Olfactory function deficiency detected by task-based functional magnetic resonance imaging in a Kallmann syndrome patient: A case report

Jiaming Lu,Fei Zhou,Bing Zhang
The Affiliated Drum Tower Hospital of Nanjing University Medical School

The case reported is of a 15-year-old boy admitted to endocrinology department due to secondary sexual characteristics development retardation with olfactory deficiency since 3 years. A diagnostic work-up by endocrinology department identified the presence of Kallmann syndrome (KS) and serious hyposmia. This patient underwent the olfactory threshold test, odor identification test and olfactory task fMRI to evaluate

the olfactory function. Case reports of the activation in central olfactory system in KS patients using fMRI are scarce. While the incidence of KS in the clinical is rare, this case proposes the olfactory fMRI, revealing the activation in the central olfactory system, along with olfactory behavior test and structural MRI, can be useful tools to a multidisciplinary assessment and awareness for KS in clinical practice.

PU-2259

Detectability and Reproducibility of the Olfactory fMRI signal under the influence of magnetic susceptibility artifacts in the Primary Olfactory Cortex

Jiaming Lu,Zhang Bing
The Affiliated Drum Tower Hospital of Nanjing University Medical School

For human olfactory functional MRI studies, the primary olfactory cortex (POC) suffers severe magnetic susceptibility artifacts, which adversely influences the detectability and reproducibility of the olfactory fMRI data and its clinical applications. The goal of this work is to assess the impacts of the image artifacts on the detectability and reproducibility of the olfactory activation in the POC. The severity of artifacts in the POC were classified into three levels using a Subjective Artifact score (SA_score). The mean temporal signal-to-noise ratio (tSNR) of the fMRI data acquired by a given MRI sequence and olfactory activation (β value) in POC were evaluated and compared to the concurrent activations in the primary visual cortex (Brodmann area 17, BA17) by an odor-visual association paradigm using ninety-nine normal human subjects. Our study revealed that the mean tSNR in POC was above the threshold for reliable detection of the functional activation signal, and, consequently, the mean olfactory activations in the POC were not significantly different from those in BA17. The reproducibility of the activation in the POC was assessed by a random half-split stimulation of a test-retest experiment. The overlap of the activation maps for all the trials (n=1000) in the POC were not statistically different from that observed in BA17. These results show that the detectability and reproducibility of olfactory activation in the presence of susceptibility artifacts in the POC was at similar level of that in the visual cortex.

PU-2260

不同 T2 压脂序列应用于视神经成像的可行性

孙莉华
安徽医科大学第二附属医院

在临床中大多数眼眶病变通过磁共振扫描来辅助临床诊疗工作的病例非常的常见，但是如果只采用专科检查技术具有一定的局限性，随着磁共振序列的快速发展和软组织分辨率高的特性，视神经薄层扫描也成为一种新的检查技术并逐渐应用到临床工作中。

随机选择无眼部疾患，无视力障碍，无眼部外伤史的健康志愿者，所有研究对象均告之检查目的并签署知情同意书。
扫描方法：检查采用西门子 MAGNETOM Verio Dot 磁共振设备，12 通道头颈联合线圈。所有志愿者进行磁共振横轴位 fs TSE-T2WI 序列，T2space 序列和 DIXON 序列，以 NOP 平面作为基准线平行于该线进行视神经（眼眶）横轴位扫描，扫描前指导患者闭眼并且不能转动眼球。
测量指标：（1）视神经显示的长度（从球后到达视交叉水平）（包括视神经和视神经鞘）；（2）视神经眶内段的宽径（球后 4mm）；（3）视神经边缘清晰度（清晰锐利光滑/欠清晰/边缘模糊）；
统计学方法：本研究中，计量资料采用均数±标准差表示，计数资料用数值表示，计算百分比。所有统计数据采用 SPSS 统计软件包统计完成。在原始图像上分别测量和计算三种成像方法的 SNR 与 CNR，采用 t 检验，检验 效度 a=0.05，P 值<0.05 为差异有统计学意义。
结果：1.三种 T2 压脂序列均可清晰显示视神经的长度及宽径，与解剖学对比位于 95%可信区间内；
2.spcae 序列信噪比较高，视神经显示边界光滑锐利最清晰，尤其是视神经鞘膜积液对比明显，但是视神经球后段经常出现脂肪信号伪影，和磁共振序列抑制脂肪的原理有关；
3.T2fs 视神经球后段近眼球处压脂不均匀可出现背景信号伪影；
3.dixon 序列容易出现运动伪影，影响图像质量及视神经眶尖段的观察，但是如果患者配合佳，则视神经显示清晰。

PU-2261
儿童及青少年异基因造血干细胞移植后神经系统并发症及影像学表现

朱建彬,温志波
南方医科大学珠江医院

目的 探讨儿童及青少年异基因造血干细胞移植(allo-HSCT)后中枢神经系统并发症(CNS)的类型，与患者免疫状态的关系以及影像学表现。**资料与方法** 回顾性分析我院 11 例 allo-HSCT 后发生 CNS 并发症儿童及青少年患者的临床及影像学资料，分析其并发症类型及相应 CT、MRI 表现。根据免疫状态及并发症的发生时间，将 CNS 并发症分为移植前时期（<allo-HSCT 后 30 天）、移植后早期（allo-HSCT 后 30-100 天）及移植后晚期（allo-HSCT 后>100 天）。**结果**：发生 CNS 并发症移植前时期 2 例，移植后早期 4 例，移植后晚期 5 例。颅内病毒感染 3 例，均表现为皮层下白质多发斑片状 CT 低密度/T2WI 及 FLAIR 高信号灶，1 例可见周边轻度强化。脑血管并发症中脑出血 4 例，均发生于移植前时期及移植后早期，CT 表现为单/多发高密度血肿/出血灶，TIWI 呈混杂高信号影。治疗导致的并发症 5 例，包括可逆性后部脑病综合征（PRES）1 例，MRI 示双侧顶枕叶后部皮层处 T2WI 及 FLAIR 高信号，治疗后临床症状及颅内异常信号消失；放化疗导致脑白质病 4 例，MRI 中 T2WI 和 FLAIR 均表现为双侧室周白质区对称性高信号，增强无强化。移植后晚期中枢神经系统白血病复发 1 例，CT 示脑内皮层、皮层下多发斑片状及肿块样高密度灶。其中 1 例患儿同时患有脑出血、脑白质病及颅内病毒感染特征。2 例患者因 CNS 并发症死亡（1 例出血，1 例 CNS 白血病复发）。**结论** 异基因造血干细胞移植后中枢神经系统并发症类型多样，是患儿发病和死亡的重要原因；早期认识中枢神经系统并发症发生时期及其 CT、MRI 影像学表现对患者成功治疗和良好预后至关重要。

PU-2262

联影 DR770i 自动曝光摄取脊柱全长临床应用的探讨

邹桥,温云
重庆三峡中心医院

目的:分析联影 DR770i 自动曝光控制摄取脊柱全长存在的问题，以达到精确和规范的使用该设备，降低差片率。研究方法：2016 年 8 月-2018 年 8 月在我院放射科行脊柱全长摄影 100 例病例，男 52 例，女 48 例，年龄范围为 11-82 岁；既往无脊柱手术病史；脊柱畸形后凸大于 40° 。结果：联影 DR770i 自动曝光控制摄取脊柱全长，总体来说，该方法自动摄取脊柱全长失败率高于 20%，21 例差片中均是图像清晰度不高，胸椎和腰椎显示不清，不能精确的测 Cobb 角。自动曝光技术在脊柱全长摄影中使用有待进一步改善。讨论：自动曝光控制由于其成像原理，对操作技师要求不高，提高了工作效率，但在脊柱全长摄影中的图像质量欠佳。自动曝光控制成像过程中，主要由电离室反馈中断曝光，被检者身高、体重、肢体厚度都会影响电离室反馈，即图像清晰度不高的重要原因。若取消自动曝光控制，根据被检者的身高、体重、肢体厚度优化一套手动曝光摄影技术方案，在提高图像质量的同时也能将辐射剂量控制在一个更理想的范围。小结：自动曝光控制摄取脊柱全长，在一定程度上，对操作技师的经验要求不高，但总体成像质量有待进一步提高。不使用自动曝光控制情况下，对技师的经验有一定要求，为一次性得到优质的脊柱全长图像，联影 DR770i 自动曝光控制摄取脊柱全长方案有待优化。

PU-2263
稳定期 COPD 患者静息态脑神经血管耦合变化的研究

王玮
海军军医大学第二附属医院（上海长征医院）

目的:慢性阻塞性肺病(COPD)患者轻度认知损害(MCI)越来越受到重视。目前已发现慢性阻塞性肺疾病患者脑结构和功能存在异常，但在静息状态下的神经血管耦合变化研究甚少。本研究旨在通过动脉自旋标记(ASL)和血液氧合水平依赖(BOLD)技术研究慢性阻塞性肺病患者神经血管耦合变化。方法:招募 45 例稳定期 COPD 患者，40 例健康对照组。采集 BOLD 和 ASL 数据，分别计算度中心性(DC)和脑血流量(CBF)。比较两组间的 CBF-DC 耦合和 CBF/DC 比值差异。结果:与对照组相比，COPD 患者认知和情感相关区域的神经血管耦合异常，包括双侧内侧额叶皮质、双侧尾状核、左侧颞回、左侧舌回和左侧额上回。左侧舌回 CBF/DC 与命名评分呈负相关，内侧额叶皮质/颞回 CBF/DC 与 MoCA、视觉空间/执行和延迟回忆评分呈正相关。结论:COPD 患者神经血管异常改变可能是 MCI 发生的神经病理机制之一。

EC-T 化疗方案治疗的乳腺浸润性导管癌长期幸存者海马磁共振波谱及记忆的相关分析

刘同辉,张华文,李朋,冯伟,陈瑞
陕西省核工业二一五医院

目的 探讨利用氢质子磁共振波谱技术（^{1}H-MRS）研究经 EC-T（E，表柔比星；C，环磷酰胺；T，紫杉醇）化疗方案治疗的乳腺浸润性导管癌长期幸存者海马代谢与记忆的关系。**方法** 选择 29 例完成 EC-T 化疗方案治疗后的乳腺浸润性导管癌幸存者，平均病程约 28.65±3.79 月，结束化疗至入组时间间隔大于 1 年，平均年龄 45.41±7.11，同时选择年龄、教育程度相匹配的健康志愿者作为对照组，分别进行记忆量表 AVLT-H 检查（词语学习、短期记忆、长期记忆及词语再认），进而进行数字广度（数字顺背、数字倒背）测试评分，完成量表测试后进行磁共振 3D-Brova 薄层扫描，以双侧海马显示的 3D-Brova 像为定位像，选取双侧海马为中心点，构建大小为 2cm×2cm×2cm 的立方体为感兴趣区，进行及 ^{1}H-MRS 检查，获得双侧海马的 NAA 浓度、Cho 浓度、Cr 浓度、NAA/Cr 值、Cho/Cr 值，并使用 SPSS 24.0 软件包对双侧海马波谱数据及量表评分进行统计分析，对正态分布的数据进行独立样本 t 检验，对不符合正态分布的数据进行 Mann-Whitney U 检验。**结果** 患者组右侧海马 Cho 浓度较正常对照组增高，左侧海马 NAA/Cr 值较正常对照组减低，差异均具有统计学意义（$p<0.05$）。患者组左侧 NAA 浓度、Cr 浓度、Cho 浓度、Cho/Cr 值与正常对照组无明显统计学差异（$p>0.05$），患者组右侧海马 NAA 浓度、Cr 浓度、NAA/Cr 值、Cho/Cr 值与正常对照组亦无明显统计学差异。两组受试者 AVLT-H 及数字广度测试评分无明显统计学差异（$p>0.05$）。**结论** 完成 EC-T 化疗方案的乳腺浸润性导管癌长期幸存者海马代谢仍然存在异常，但词语及数字记忆均恢复正常。

PU-2265
脑白质疏松与帕金森病患者认知功能损害的相关性研究

郭楠
徐州医科大学附属医院

目的 研究脑白质疏松与帕金森病（Parkinson disease，PD）患者认知功能损害的相关性。方法 选取本院 2018 年 6 月至 2018 年 12 月门诊就诊及住院的 120 例 PD 患者为研究对象，根据临床检查和诊断结果，将符合轻度认知损害（mild cognitive impairment，MCI）诊断标准的患者纳入 MCI 组，将符合帕金森病痴呆（Parkinson disease dementia，PDD）诊断标准的患者纳入 PDD 组，其余无认知损害（non-cognitive impairment，NCI）患者纳入 NCI 组。对 3 组患者均使用 MMSE(简明精神状态量表) 以及剑桥老年认知量表中文版评分进行认知功能评估,以及对 3 组患者进行脑白质高信号评分，脑白质高信号评分是根据 MRI 影像学结果，对脑室旁、深部白质、基底节及幕下 4 个区域的病变情况进行评分，评分标准采用 Scheltens 视觉评定量表，从而分析脑白质疏松与患者认知功能障碍的相关性。结果 NCI 组患者 MMSE 评分和 CAMCOG-C 评分均显著高于 MCI 组和 PDD 组（P ＜0.05），MCI 组患者 MMSE 评分和 CAMCOG-C 评分均显著高于 PDD 组（P ＜0.05）；三组患者脑室旁白质、基底节白质及幕下白质高信号评分比较均无显著差异（P ＞0.05）；NCI 组患者深部白质高信号评分显著低于 MCI 组和 PDD 组（P ＜0.05），MCI 组患者深部白质高信号评分显著低于 PDD 组（P ＜0.05）。多元回归分析结果显示：MMSE 与深部白质高信号评分呈显著负相关，且与深部白质高信号评分相关性最高（P ＜0.05）。结论 PD 患者认知功能损害为多因素共同作用的结果，而脑白质疏松尤其是深部白质病变可能是导致 PD 患者认知功能损害的重要因素，其作用机制为加速认知功能损害甚加速 PDD 的出现。

PU-2266
KIBRA 基因多态性对健康年轻志愿者海马亚区体积影响的研究

张冰,梁雪,王坤,张庆雷,李茗,张鑫,吴思楚

南京大学医学院附属鼓楼医院

目的：运用海马亚区体积自动分割方法研究 KIBRA rs17070145 位点基因多态性对健康年轻志愿者海马亚区体积的影响。
方法：通过志愿者招募流程，选择符合入组标准的健康年轻志愿者 60 例纳入本研究。根据基因型测定结果将受试者分为两组：一组为 C 等位基因携带者，另一组为 TT 纯合子携带者。所有受试者均行头颅磁共振扫描，其中 23 例受试者行神经心理学量表评估。利用 FreeSurfer 软件将每一被试的 3D-T_1加权成像序列颅脑高清结构像进行海马亚区分割及体积计算，分别得到每个被试左右半球海马各亚区体积。将全脑颅内容积（eTIV）作为协变量，去除每个被试头部大小不一所导致的海马体积差异，采用线性回归检验对两组受试者进行组间比较，观察海马亚区体积改变模式。再将有统计学差异的海马亚区体积与神经心理学量表行 Pearson 相关性检验，对其相关性进行观察。

结果：与 TT 纯合子携带者组相比，C 等位基因携带者组左侧 CA1 区海马亚区体积明显增大（p=0.032）。并且左侧 CA1 区海马亚区体积与数字连线测验-B（NCT-B）完成时间呈明显正相关（r=0.459, p=0.028）。
结论：在健康年轻受试者中，左侧 CA1 区海马亚区体积受到 KIBRA 基因多态性的影响，KIBRA C 等位基因携带者左侧 CA1 区海马亚区体积的增加可能是对记忆功能减低的一种代偿作用，该研究结果有助于 KIBRA 基因多态性与健康年轻人记忆功能关系神经机制的研究。

PU-2267

Detecting social-cognitive deficits after traumatic brain injury: An ALE meta-analysis of fMRI studies

Hui Xiao,Ziqian Chen
The 900th Hospital of Joint Logistic Support Force， PLA

Purpose: Traumatic brain injury (TBI) can result in significant social dysfunction, which is represented by impairment to social-cognitive abilities (i.e. social cognition, social attention/executive function and communication). This study is aimed to explore brain networks mediating the social dysfunction after TBI and its underlying mechanisms.
Methods: We performed a quantitative meta-analysis using the activation likelihood estimation (ALE) approach on functional magnetic resonance imaging (fMRI) studies of social-cognitive abilities following TBI. Sixteen studies fulfilled the inclusion criteria resulting in a total of 190 patients with TBI and 206 controls enrolled in the ALE meta-analysis.
Results: The temporoparietal junction (TPJ) and the medial prefrontal cortex (mPFC) were the specific regions that social cognition predominantly engaged. The cingulate gyrus, frontal gyrus and inferior parietal lobule were the main regions related to social attention/executive functions. Communication dysfunction, especially related to language deficits, was found to show greater activation of the temporal gyrus and fusiform gyrus in TBI.
Conclusion: The current ALE meta-analytic findings provide evidence that patients have significant social cognitive disabilities following TBI. The relatively limited pool of literature and the varied fMRI results from published studies indicate that social-cognitive abilities following TBI is an area that would greatly benefit from further investigation.

PU-2268

3D LAVA-Flex 序列对腰椎间盘退变的初步研究

李金锋,娄昕,马林
解放军总医院第一医学中心放射诊断科

目的：采用 3D LAVA-Flex 序列对腰椎间盘退变进行评估。
材料和方法：对 45 例腰椎间盘退变患者行矢状位 3D LAVA-Flex 序列及矢状位 T2WI 序列扫描。基于 T2WI 并采用 Pfirrmann 分级对每个患者椎间盘进行评估，同时基于 3D LAVA-Flex 成像对髓核与纤维环的界限、椎间盘内低信号及椎间隙进行了评估。对两种序列的评估结果进行比较，并采用基于 3D LAVA-Flex 成像的仿真内窥镜技术对椎间盘退变进行评估。
结果：3D LAVA-Flex 序列显示正常髓核呈均匀中等信号，纤维环为完整高信号，两者之间界限清楚。在伴有椎间隙狭窄的椎间盘中，线样低信号发生率(65/91)显著高于正常的椎间盘(4/134)（P = 0.000）。3D LAVA-Flex 分级与基于 T2WI 的 Pfirrmann 分级具有较好一致性。基于 3D LAVA-Flex 成像的仿真内窥镜技术可以较满意地显示退变椎间盘与椎间孔的关系。
结论：在评估腰椎间盘退变方面，3D LAVA-Flex 序列与常规 T2WI 具有相似的效能，3D LAVA-Flex 的仿真内窥镜技术在腰椎间盘病变的研究中具有潜在的应用前景。

PU-2269

Brain atrophy was a risk factor for neurocognitive impairment in hemodialysis patients: a longitudinal voxel-based morphology study

Huiying Wang[1,2],Chao Chai[2],Shuang Xia[2]
1.Qinghai University Affiliated Hospital
2.Tianjin First Central Hospital

Background: To explore longitudinal changes of brain volume in hemodialysis patients, the risk factors for brain volume changes, and the relationship between brain volume changes and results of neuropsychological test.
Methods: Thirty-three hemodialysis patients and thirty healthy controls (HCs) were recruited to this study. All patients underwent magnetic resonance examinations to evaluate baseline and follow-up brain volumes. The mean follow-up time was 21.2±6.8 months. Changes in brain volume, the risk factors for these brain volume changes, and the correlations between brain volume changes and mini-mental state examination (MMSE) scores were analyzed for the time period between baseline and follow-up examinations.
Results: Compared to the HCs, patients at baseline and follow-up showed decreased gray matter (GM) volume and decreased white matter (WM) volume (FWE corrected with age, gender and total intracranial volume [TIV] as covariates, $P<0.05$). Compared to baseline patients, follow-up patients showed diffusely decreased GM volume and decreased WM volume (with age and TIV as covariates, uncorrected, $P=0.001$). Compared to patients at baseline, the patients at follow-up also showed increased GM and increased WM volume in some brain regions (with age and TIV as covariates, uncorrected,

P=0.001). Creatinine, urea, hematocrit, parathyroid hormone and alkaline phosphatase were independent risk factors for decreased brain volume in patients (all *P*<0.05). The decreased GM volume of left caudate volume were positively correlated with reduced MMSE scores in patients (r_s=0.542, *P*=0.002).

Conclusions: Brain atrophy occurred in hemodialysis patients, leading to progressive neurocognitive impairment.

PU-2270

半剂量磁共振造影剂应用于渗透成像 DCE 序列对疾病诊断效能的探讨

李金锋[1],李锐[1],徐正扬[1],武江芬[2],别非[2],娄昕[1],马林[1]
1.解放军总医院第一医学中心放射诊断科
2.GE

目的：半剂量与全剂量磁共振造影剂应用于渗透成像 DCE 序列对疾病诊断效能的探讨。材料与方法：回顾性分析拟行神外科手术患者 20 例，8 例脑外疾病，其中脑膜瘤 4 例，后颅窝病变 4 例；12 例脑内病变，胶质瘤 8 例，淋巴瘤 4 例。对此 20 例患者行两次磁共振动态增强扫描，按患者的公斤体重 0.2ml/Kg，第一次用于诊断性扫描，应用造影剂为按公斤体重的半剂量。第二次用于术前磁共振定位扫描，应用同样造影剂的全剂量扫描，扫描间隔为 48 小时以上。扫描应用 GE750W 磁共振成像仪，原始图像为 3D 横轴位扫描。因为此研究旨在得到血管渗透性，所以动态增强的注射速度为 2.0ml/s，后处理均应用 GE Adw4.6 版本，对 Ktrans，Kep，Ve，fPV 定量参数测定，及 IAUGC，MaxSlope，BAT 半定量参数测量，两次扫描后处理参数均行组间统计学分析。为了尽量减少测量误差，每例患者均在同一位置做三次测量取平均值。结果:此 20 例患者定量值（Ktrans，Kep，Ve，fPV）无显著性差异，半定量值（IAUGC，MaxSlope，BAT）随着药量分布的区别有显著性差异。结论:半剂量与全剂量磁共振造影剂应用于渗透成像 DCE 序列，基于 T1WI 的灌注成像对疾病的诊断效能无显著性差异，所以半剂量造影剂渗透成像可以替代全剂量造影剂的应用。

PU-2271

基于比率低频振幅的静息态功能磁共振成像在产后抑郁症中的研究

陈暇女,郭定波,易小琦,黄俊浩,余娇艳,胡良波
重庆医科大学附属永川医院

目的 通过静息态功能磁共振(fMRI)成像探讨产后抑郁症患者在比率低频振幅(fractional amplitude of low frequency fluctuation，fALFF)下异常激活的脑区，旨在探讨产后抑郁症（postpartum depression，PPD）患者脑功能活动的异常改变及其与普通抑郁症之间的差异。 **方法** 选择 23 例产后抑郁症患者（PPD 组）、28 例产后健康志愿者（Healthy Postpartum Women，HPW）以及 20 例年龄、文化程度相匹配的女性脑普通抑郁患者（Major Depressive Disorder，MDD）作为研究对象，对所有入选受试者进行 3.0T 静息态功能磁共振扫描，用 fALFF 技术处理各组图像，分析 PPD 组与 HPW 组、PPD 组与 MDD 组之间的差异脑区，并提取 PPD 组与 HPW 组差异脑区的 fALFF 值，与抑郁程度之间进行相关分析。 **结果** 与 HPW 组比较，PPD 组患者在左侧后扣带回、左侧楔前叶、左侧枕中回及左侧枕下回的 fALFF 值增高，右侧眶部额下回、右侧脑岛、右侧嗅皮质、右侧海马的 fALFF 值减低（AlphaSim 校正，Clusters＞25，*P*＜0.05）。与 MDD 组比较，PPD 组患者在左侧中央前回、右侧舌回、Cerebelum_6_R 的 fALFF 值增高，在右侧背外侧前额叶、

右侧楔前叶、左侧顶上回、左侧角回、右侧旁扣带回、右侧颞下回的 fALFF 值减低（AlphaSim 校正，Clusters＞30，P＜0.05）。相关分析仅发现：PPD 组患者右侧脑岛 fALFF 值与 EPDS 得分间存在正相关关系(r= 0.890，P =0.043)。 **结论** 1.在静息状态下产后抑郁症患者大脑部分区域存在自发性神经活动异常，复制了部分重度抑郁症的神经影像特征，但也存在自己独特的脑功能改变。2.PPD 患者右侧脑岛的功能磁共振 fALFF 值增加与抑郁严重程度密切相关。

PU-2272

椎间盘真空征在 CT 图像上的影像学表现

郑辉
华中科技大学同济医学院附属协和医院

目的：椎间盘真空征在临床上并不少见，笔者根据日常生活中收集的 47 例椎间盘真空征表现进行探讨。
方法：本组病例来源于我科 2016 年 10 月~2017 年 5 月，共 47 例椎间盘真空征现象，男 28 例，女 19 例，男女比例约 1：0.7。年龄 25~73 岁，平均 55 岁。25~40 岁 6 例，占 12.77%，40~50 岁 8 例，占 17.02%，50 岁以上 33 例，占 70.21%。采用 CT 机为美国 GE 750HD ,常规平行扫描，体位采用仰卧位，特殊患者可考虑仰卧屈膝位。扫描条件 550mA，120KV,自动曝光技术，层厚层间距 3x3mm，特殊情况加 2x2mm 薄层扫描，可选择双窗摄片，骨窗窗宽 2000，窗位 650-700，软组织窗宽 300，窗位 60。
结果：47 例病例均伴随有不同程度的脊椎骨质增生和椎间盘膨出与突出，少数伴随有椎间隙狭窄和韧带钙化现象，腰椎滑脱症 2 例。真空区域 CT 值大多数在—100~—300HU 左右，个别可高于 0~25HU 以上。气泡中等偏大者多数呈不规则形，有少数表现为多边三角形、梭形或菱形。气泡小者多数呈圆形或椭圆形。病灶边缘清，与周围组织分界明显。
结论：椎间盘真空征发生后 100%合并有不同程度脊椎退行性改变，同时可见不同程度的椎间盘膨出与突出征象。同时，再次证实 CT 检查是诊断椎间盘真空征的重要检查方式。

磁共振扩散张量成像在轻度创伤性脑损伤中的定量研究

同斯平[1,2],毛翠萍[1],黄丹丹[1],唐鉴[1],聂倩[1],Kifle Esayas Tiruneh[1],张秋娟*[1]
1.西安交通大学第二附属医院
2.合阳县中医医院

[摘要] 目的：基于磁共振扩散张量成像（Diffusion-tensor imaging, DTI）定量评估轻度创伤性脑损伤(mild traumatic brain injury,mTBI)患者脑损伤的区域及程度。方法：选取急性期 mTBI 患者 14 例(男 6 例，女 8 例，年龄 20-50 岁，平均 33.0±10.2，受教育年限 9-19 年)，其纳入标准为：①急性期（t≤7 天）头部外伤史；②格拉斯哥昏迷评分（Glasgow coma scale，GCS）13～15 分；③无昏迷或昏迷时间不超过 30min；④轻微头痛、头晕等自觉症状；⑤头颅 CT、MRI 检查未发现损伤征象（伴或不伴颅骨骨折）；⑥神经系统检查未发现阳性体征。既往具有颅脑损伤史、脑部疾患、精神疾病史以及 MRI 检查禁忌症均被排除在外。对照组来自同期招募的性别、年龄及教育程度相匹配的 14 名健康者志愿者（男 7 例，女 7 例，年龄 24-49 岁，平均 32.2±9.4，受教育年限 12-19 年）。采用 GE3.0T 磁共振扫描仪对两组受试者进行 DTI 图像采集，应用功能磁共振软件库（FMRIB Software Library,FSL）软件包处理 DTI 数据，基于 TBSS 方法构建纤维束网络骨架并检测病例组与对照组有显著差异的白质体素，计算白质纤维束的部分各向异性（FA）、平均扩散率（MD）。结果：与对照组比较，急性期轻度创伤性脑损伤患者双侧内囊前、后肢的 FA 值均

高于对照组（P<0.05），胼胝体膝部 FA 值低于对照组（P<0.05），胼胝体体部 FA 值略低于对照组，胼胝体压部 FA 值略高于对照组（P>0.05），左侧内囊前肢 MD 值低于对照组（P<0.05）；右侧内囊前肢及胼胝体膝部、体部、压部 MD 值均高于对照组（P>0.05），双侧内囊后肢 MD 值均低于对照组（P>0.05）。结论：基于 TBSS 分析的 DTI 有助于发现 TBI 患者白质纤维束的微结构异常。

PU-2274
基于 1H-MRS 探究标准 ECT 化疗后乳腺浸润性导管癌长期幸存者记忆功能改变的海马代谢异常研究

刘同辉,李朋,张华文,冯伟,陈瑞
215 医院

目的 探讨利用氢质子磁共振波谱技术（^{1}H-MRS）研究经 EC-T（E，表柔比星；C，环磷酰胺；T，紫杉醇）化疗方案治疗的乳腺浸润性导管癌长期幸存者海马代谢与记忆的关系。**方法** 选择 29 例完成 EC-T 化疗方案治疗后的乳腺浸润性导管癌幸存者，平均病程约 28.65±3.79 月，结束化疗至入组时间间隔大于 1 年，平均年龄 45.41±7.11，同时选择年龄、教育程度相匹配的健康志愿者作为对照组，分别进行记忆量表 AVLT-H 检查（词语学习、短期记忆、长期记忆及词语再认），进而进行数字广度（数字顺背、数字倒背）测试评分，完成量表测试后进行磁共振 3D-Brova 薄层扫描，以双侧海马显示的 3D-Brova 像为定位像，选取双侧海马为中心点，构建大小为 2cm×2cm×2cm 的立方体为感兴趣区，进行及 ^{1}H-MRS 检查，获得双侧海马的 NAA 浓度、Cho 浓度、Cr 浓度、NAA/Cr 值、Cho/Cr 值，并使用 SPSS 24.0 软件包对双侧海马波谱数据及量表评分进行统计分析，对正态分布的数据进行独立样本 t 检验，对不符合正态分布的数据进行 Mann-Whitney U 检验。**结果** 患者组右侧海马 Cho 浓度较正常对照组增高，左侧海马 NAA/Cr 值较正常对照组减低，差异均具有统计学意义（p＜0.05）。患者组左侧 NAA 浓度、Cr 浓度、Cho 浓度、Cho/Cr 值与正常对照组无明显统计学差异（p＞0.05），患者组右侧海马 NAA 浓度、Cr 浓度、NAA/Cr 值、Cho/Cr 值与正常对照组亦无明显统计学差异。两组受试者 AVLT-H 及数字广度测试评分无明显统计学差异（p＞0.05）。**结论** 完成 EC-T 化疗方案的乳腺浸润性导管癌长期幸存者海马代谢仍然存在异常，但词语及数字记忆均恢复正常。

PU-2275
2 型糖尿病患者执行控制网络及额顶网络的功能磁共振研究

余苗
徐州医科大学附属医院

目的采用静息态功能磁共振技术（rs-fMRI），联合运用独立成分分析（independent component analysis，ICA）方法，研究 2 型糖尿病（Type 2 diabetes mellitus，T2DM）患者认知障碍的特点及大脑执行控制网络（executive control network，ECN）、额顶网络（frontoparietal network ,FPN）的完整性。**方法** 对 23 名 T2DM 患者及 25 名健康对照者行临床资料采集、多维度认知功能测试及静息态功能磁共振扫描。使用双样本 T 检验分析两组生化指标、认知功能、静息态脑网络同步性活动的组间差异，并采用 pearson 相关分析脑网络差异与生化指标、认知功能测试的相关性。**结果** T2DM 患者蒙特利尔认知评估北京版（MoCA）、连线测试 B（TMT- B)、复杂图形测试(CFT)、 CFT-延迟、数字广度测验(DST)的得分低于健康对照组（均 P<0.05）。T2DM 患者 ECN 左顶叶深部白质、扣带回、右侧前额叶功能连接减弱（P<0.05，AlphaSim 校正）。右侧 FPN 中的右侧额下回、额中回功能连接增强，右中央后回功能连接减低（P<0.05，AlphaSim 校正）。左侧 FPN

中左顶叶功能连接减低（P<0.05, AlphaSim 校正）。另 ECN 中的右侧前额叶功能连接减低与胰岛素抵抗水平水平显著相关。**结论** T2DM 患者执行功能、注意功能、信息处理速度及空间情景记忆功能障碍，并且存在 ECN、右侧 FPN 和左侧 FPN 选择性受损，T2DM 患者 ECN 功能连接受损与胰岛素抵抗水平相关。

PU-2276
慢性肾功能不全患者脑白质微结构变化扩散张量成像的 TBSS 分析

李娟,朱文珍
华中科技大学同济医学院附属同济医院

目的：利用基于白质骨架的空间统计分析方法（tract-based spatial statistics，TBSS）对慢性肾病（chronic kidney disease，CKD）患者的脑部扩散张量成像（diffusion tensor imaging，DTI）进行分析，以探讨 CKD 患者脑白质微结构异常改变的特点。
方法：研究纳入 CKD3～5 期的患者共 16 例（男性 10 例，女性 6 例），另招募 16 例年龄及性别均匹配的健康志愿者作为健康对照组（男性 10 例，女性 6 例）。所有受试者均行常规头部 MRI 及 DTI 扫描。采用 TBSS 方法分析 DTI 数据，比较 CKD 组与对照组脑白质微结构异常改变的情况，最后统计结果采用 FWE（family-wise error）校正，P<0.05 表示存在统计学差异。
结果：CKD 组与对照组相比，其年龄、性别均无统计学差异（P>0.05）。全脑 TBSS 分析可见，与正常对照组相比，CKD 组可见广泛 MD、AD 升高区域，MD 升高区域主要见于双侧前放射冠、双侧上纵束、双侧胼胝体膝部、双侧外囊、双侧丘脑后辐射、双侧内囊、双侧穹窿、双侧下纵束及下额枕束，左侧扣带回、左侧胼胝体体部、左侧上放射冠、左侧钩束，右侧胼胝体压部等区域，AD 升高区域双侧基本对称，除上述 MD 异常区域外，另可见于右侧扣带回、右侧胼胝体、右侧钩束、双侧扣带回（海马），未见 MD 与 AD 值下降的区域，两组之间 FA 与 RD 值相比无明显统计学差异。
结论：与正常对照组相比，CKD 患者的全脑白质微结构完整性被破坏，可能由血管源性水肿所致，MD 及 AD 可能是 CKD 患者脑白质微结构异常的更敏感的监测指标。

PU-2277
COPD 患者轻度认知功能障碍及临床特征研究

彭兆辉,王玮,王祥,范丽,蔡佳丽,刘士远
海军军医大学第二附属医院（上海长征医院）

研究目的： 采用 MoCA 量表研究 COPD 患者轻度认知功能障碍发病率、特定的认知障碍域，评价 COPD 患者 MoCA 评分与肺功能、动脉血气分析的关系。
材料与方法： 纳入 72 例稳定期 COPD 患者和 55 例性别、年龄、受教育程度、体重指数与之相匹配的健康志愿者(healthy controls, HC)。利用 MoCA 量表对两组被试进行认知功能评分，分别对其 MoCA 总分及视空间及执行功能、命名、记忆、注意、语言、抽象、延迟回忆、定向等认知域比较分析，多重回归分析 COPD 组临床参数与轻度认知障碍的相关性。
结果： 共 60 例 COPD 患者及 48 例健康志愿者纳入最终分析。 COPD 组 MoCA 评分明显低于 HC 组（P<0.05）。COPD 组主要认知障碍域为视空间与执行功能、命名、注意、抽象。 COPD 组 MoCA 评分与 SaO2、 PaO2 呈正相关，与 PaCO2 呈负相关（P<0.05）。

结论： 稳定期 COPD 患者存在轻度认知功能障碍，主要表现在视空间与执行功能、命名、注意、抽象等认知域，而且认知功能障碍与动脉血气相关 。

PU-2278

3D-ASL 评价 COPD 患者脑灌注变化

彭兆辉,范丽,王玮,王祥,蔡佳丽,刘士远
海军军医大学第二附属医院（上海长征医院）

研究目的： 分析 COPD 患者的脑灌注变化，并评估 CBF 与动脉血气分析、肺功能和神经认知评分之间的关系。
材料与方法： 对 40 例 COPD 患者和 40 例 HC 组行全脑 3D 伪连续动脉自旋标记（3D pc-ASL）MR 扫描。采集两组动脉血气、肺功能和认知功能评分数据。使用 SPM 软件，基于体素水平比较两组全脑 CBF 值差异。进一步分析 COPD 患者 CBF 与肺功能、动脉血气分析和神经认知评分的相关性。
结果： COPD 组视空间与执行功能、注意、抽象、延迟记忆评分明显低于 HC 组（P <0.001）。COPD 组全脑（41.40±9.71mL/100g/min： 46.15±7.91mL/100g/min）、灰质（43.91±10.67mL/100g/min： 49.34±9.13mL/100g/min）和白质（38.34±8.70mL/100g/min：42.51±6.29mL/100g/min）平均 CBF 均低于 HC 组 (P<0.05)； COPD 组较 HC 组右侧额中回、右侧顶下小叶及右侧纹状体（P<0.05）等 3 个脑区 CBF 减低。而且 COPD 组右侧纹状体、右侧顶下小叶 CBF 与 PaCO2 呈正相关（r=0.413，P=0.008；r=0.397， P=0.011）。
结论： COPD 脑灌注异常与其神经认知障碍存在相关性， PaCO2 可能是影响右侧额中回、右侧顶下小叶及右侧纹状体 CBF 的减低的因素。 3D pc-ASL 作为一种无创的技术为 COPD 神经病理学研究提供有价值的脑灌注信息。

PU-2279

颞叶内侧癫痫所致认知功能障碍的工作记忆任务 fMRI 研究

艾克旦·艾斯卡尔
1.天津市第一中心医院
2.天津医科大学

目的：本研究采用图片记忆任务功能性磁共振成像技术（BOLD-fMRI）检测工作记忆相关脑区激活情况，进一步了解颞叶内侧癫痫患者工作记忆功能受损情况，以助于探讨颞叶内侧癫痫患者认知功能受损的情况与受累脑区之间的关联。**方法：**收集了 80 例 mTLE 患者，并招募 50 例健康正常人作为对照组，采集其基本信息，并对所有受试者均进行神经学量表检查（简易精神状态评定量表（MMSE）贝克抑郁自评表量表（BDI）），排除患有焦虑抑郁等精神类疾病患者。根据 MMSE 量表将 mTLE 全组患者分为颞叶内侧癫痫不伴随认知障碍组（NCI-mTLE）及颞叶内侧癫痫伴认知障碍组（CI-mTLE）,并分析工作记忆任务时编码期（encoding）及延迟期（delay）的脑区激活情况与对照组比较。**结果：**NCI-mTLE 组与正常对照组相比，在工作记忆任务编码期会有与任务相关脑区的代偿性激活升高，包括双侧额下回、额中回及颞叶亚叶等，此外脑默认网络的局部脑区也可出现激活升高，主要为双侧内侧额叶、左侧后扣带回及顶下小叶等。而在延迟期与任务相关脑区表现出激活明显减低，包括双侧顶叶、额下回与左侧扣带回等。而与正常对照组相比，CI-mTLE 组在编码期主要表现出双侧额中回、额叶亚叶及颞前回等与任务相关脑区的失代偿性激活减低，在延迟期亦可表现出与任务相关脑区以及更广泛脑区的激活明显减低。在两组 mTLE 相比较，发现 CI-mTLE 组在

编码期与延迟期表现出颞叶、额叶及顶叶等与工作记忆相关脑区失代偿性激活减低，而脑默认网络局部脑区代偿性激活升高。**结论**：结果表明，在执行 记忆任务时，编码期与延迟期 mTLE 患者和正常人以及两组 mTLE 患者各个脑区域的活动显着不同，可能是颞叶内侧癫痫初期各脑区出现代偿性升高，而长期颞叶内侧癫痫则会造成工作记忆相关脑区失代偿性激活减低，则会导致认知功能受损，揭示了 mTLE 造成工作记忆相关认知功能下降的病理生理机制。

PU-2280

磁共振 DTI 技术在内囊走形纤维束临床应用研究

姜洪新
故城县医院

目的：采用弥散张量成像（DTI）技术研究观察内囊内纤维束走形及毗邻关系。 **方法**：在一千多病例中，选择健康志愿者一名， 采用 PHILIPS 1.5 磁共振扫描，颅内未发现异常信号，后行 DTI 扫描，应用独立成分分析法分别筛选出 DTI 成分。分别提取脑网络功能连接差异脑区的功能连接强度值，采用 Extended MR WorkSpace 工作站上的 DTI Studio 软件对所有受试者的 DTI 原始数据进行预处理，单独显示内囊纤维束，并对纤维束毗邻关系进行研究。
结果：内囊内纤维束包括、皮质小脑束、丘脑中央辐射、交叉的皮质小脑束、、桥连纤维等
结论：发现内囊纤维束的走形于排列都有一定的顺序，受损后与临床症状息息相关。

PU-2281

推注高流速生理盐水在头颈 CTA 中的应用

祝君
重庆市中医院

目的：探讨推注高流速生理盐水在头颈 CTA 扫描中的应用。方法：采用 A、B、C 三组实验法。其中 A 组为常规组，采用对比剂 75ml 对比剂+35ml 生理盐水，流速均为 4.5ml/s。B 组为实验 1 组，采用 45ml 对比剂+50ml 生理盐水，流速均为 4.5ml/s。C 组为实验 2 组，采用 45ml 对比剂+50ml 生理盐水，对比剂流速为 4.5ml/s，生理盐水流速为 5.5ml/s。三组均采用碘普罗胺对比剂，由右侧肘正中静脉入路，采用小剂量预实验法进行扫描。每组各 30 例，对三组的头颈动脉 CT 值及锁骨下静脉伪影干扰情况进行综合评价。结果：A 组中 20 例为优，9 例为良，1 例差，30 例均有锁骨下静脉的伪影干扰。B 组中 17 例优，13 例良，21 例有锁骨下静脉伪影干扰。C 组中有 21 例优，9 例良，13 例有锁骨下静脉伪影干扰。结论：推注高流速生理盐水在头颈 CTA 扫描中能够确保图像质量。为临床诊断提供参考。经过高流速盐水的冲刷，能快速的将对比剂输入体内参与循环，并在峰值时间窗进行扫描，同时高流速生理盐水的使用能减少对比剂的总量，可以有效减少右锁骨下静脉的伪影干扰，还能减少患者经济负担，值得推广。

基于静息态 fMRI 的血管性认知功能障碍患者的小世界属性改变

刘晨
陆军军医大学第一附属医院（西南医院）

目的：阿尔茨海默病以及轻度认知功能障碍已经被认为与脑网络拓扑结构的改变有关，但是目前轻度皮质下血管性认知功能障碍（svMCI）的脑网络拓扑结构改变尚不可知，本研究利用静息态血氧水平依赖功能磁共振(BOLD—fMRI)数据，构建大脑功能网络，探讨 svMCI 患者脑功能网络的拓扑属性是否改变。**材料与方法**:本实验一共收集了 28 名 svMCI 患者以及 30 名健康对照组的静息态功能磁共振数据以及临床、神经量表评估信息，使用图论的方法在大尺度水平上对 svMCI 患者脑功能网络拓扑改变进行系统的研究。**结果**：在稀疏度 0.3-0.5 区间，svMCI 患者的全局拓扑属性中小世界指数、聚类系数均显著小于健康对照组（P<0.05），但是最短路径长度没有显著差异。在局部拓扑属性中，svMCI 患者在额叶、颞叶、岛叶、缘上回、后扣带回区域出现节点度、节点介素、局部效率、聚类系数、显著小于健康对照组（P<0.05）。在网络枢纽的研究中发现：两组之间相同的枢纽为双侧眶内额上回、颞中回，左侧眶部额下回，右侧前扣带回，颞下回,正常组独有的枢纽为双侧扣带回中部，左侧梭状回，右侧的颞上回以及颞极，而 svMCI 组独有的枢纽为右侧额上回、内侧额上回，左侧眶部额下回、颞上级、颞中级、颞下回。**结论**：本研究首次在脑功能网络大尺度水平上证明了 svMCI 患者的脑网络信息传递能力、不同脑区的信息整合能力受损以及网络枢纽的改变，为 svMCI 患者的血管性因素对大脑认知功能损害的机制研究提供了新的生物指标。

PU-2283
基于静息态功能磁共振对乳腺癌化疗患者 ALFF 值与认知功能的相关性研究

黄斌,沈桂权,高波
贵州医科大学附属医院

目的：通过静息态功能磁共振(resting-state functioning magnetic resonance image, rs-fmri)探索乳腺癌患者化疗前后 ALFF 值变化及 ALFF 值与认知功能的相关性。
方法：化疗组纳入 10 例乳腺癌患者，选择时间为化疗前（t1）、化疗后 3-4 周（t2）进行评估，分别进行神经心理学测评及 rs-fmri 扫描。同时纳入 8 名健康对照组，均在相应时间进行神经心理学测评及 rs-fmri 扫描。蒙特利尔认知评估量表（MoCA）用来评估一般认知功能，ALFF 值反应大脑活动情况。通过配对 t 检验对比化疗组、对照组 MoCA 分数及 ALFF 值变化；对大脑活动变化与 MoCA 分数进行相关性分析。
结果：化疗组 MoCA 评分较对照组差（P＜0.05）；化疗组在右侧颞叶，右侧额叶及左侧小脑可见异常 ALFF 值变化。对照组 MoCA 评分及 ALFF 值无显著差异。ALFF 值变化与 MoCA 评分之间无明显相关性。
结论：研究发现，乳腺癌患者化疗后出现认知功能损害，通过 rs-fmri 反映化疗后大脑部分脑区活动异常变化。

PU-2284
前庭康复治疗对前庭性偏头痛自发性脑活动的影响：静息态功能磁共振成像纵向对比研究

胡晓飞
陆军军医大学西南医院

目的：前庭康复可改善前庭性偏头痛患者的前庭功能障碍，本研究目的是观察前庭性偏头痛经前庭康复治疗后自发性脑活动的改变，探讨物理治疗改善前庭功能障碍的可能机制。方法：纳入 14 例

前庭性偏头痛患者，在基线和前庭康复训练 1 月后接受 MRI 检查，使用眩晕残障量表（DHI）、SF-36 简明健康调查问卷、汉密尔顿焦虑量表（HAMA）和汉密尔顿抑郁量表（HAMD）评估患者临床指标，所有的被试者进行了静息状态功能磁共振成像（functional magnetic resonance imaging, fMRI）扫描和临床评估。采用 DPABI 及 REST 软件包对功能磁共振数据进行预处理，使用低频振幅（ALFF）方法评估患者自发性脑活动，利用配对样本 T 检验比较 14 例前庭性偏头痛患者康复治疗前后的 ALFF 改变，将差异的 ALFF 值和临床特征之间的相关性分析。结果：前庭康复治疗后，前庭性偏头痛患者症状有明显改善。前庭康复治疗后与治疗前相比，前庭性偏头痛患者左侧小脑后叶 ALFF 值增加（GRF 校正，P<0.001）。此外，左小脑后叶的 ALFF 值与 DHI 量表评分的变化呈负相关（r=-0.485，P=0.009）。结论：在这项纵向 fMRI 研究中，我们观察到前庭康复治疗后，小脑的自发神经活动可能在改善前庭功能障碍中起到重要作用。

PU-2285
低频聚焦超声刺激联合盐酸帕罗西汀对老年人抑郁症患者疗效观察

李旭
武汉大学中南医院

研究目的 探讨低频聚焦超声刺激（LIFUP）联合盐酸帕罗西汀对老年人抑郁症（MDD）患者的疗效。**研究方法** 随机抽取本院收治的 60 例 MDD 老人，2018 年 1 月至 2019 年 1 月为研究时段，随机数字表法分组，分为实验组与对照组，各 30 例。对照组采用盐酸帕罗西汀，观察组采用盐酸帕罗西汀+低频聚焦超声刺激（LIFUP）治疗，两组均持续治疗 2 个月。入院时及治疗结束后统计对比两组抑郁评分（HAMD,GDS）、睡眠指数评分（PSQI）、治疗效果及不良反应。**研究结果** ①两组治疗后 HAMD 及 GDS 分值低于治疗前，且观察组较对照组低（p<0.05）；②两组治疗后睡眠质量评分 PSQI 分值低于治疗前，且观察组较对照组低（p<0.05）；③两组治疗效果比较，观察组 90%（27/30）较对照组 63.33%（19/30）高（ p<0.05）；④两组不良反应发生率差异无统计学意义（p>0.05）。**研究结论** 低频聚焦超声刺激（LIFUP）联合帕罗西汀可有效改善抑郁症患者病情，减轻抑郁症状，改善失眠，效果显著，且无不良反应发生风险。

PU-2286
慢性期脑桥梗死脑白质微结构改变的 DTI 评价

郭亚飞,赵鑫
郑州大学第三附属医院

目的 探索慢性期脑桥不同侧别梗死患者脑白质微结构损伤、重组模式以及与认知功能改变的潜在关系。 **方法** 收集脑桥梗塞患者 34 例（其中脑桥左侧梗死病变 19 例，脑桥右侧梗死病变 15 例）；另外招募年龄、性别与之相匹配的 25 名健康被试入组为对照组。所有被试行 DTI 序列扫描并使用 TBSS 方法处理图像；同时所有被试进行临床运动功能评价及神经行为学测试。 **结果** 与健康对照组相比，脑桥左侧梗死组患者左侧大脑脚处（体素 16 个，P=0.001）FA 值减低；脑桥右侧梗死组患者右侧前辐射冠（体素 4 个，P=0.010）、右侧内囊后肢（体素 5 个，P=0.005）、右侧大脑脚（体素 2 个，P=0.029）、小脑中脚处（体素 13 个，P=0.006）FA 值减低，左侧内囊前肢处（体素 2 个，P=0.022）FA 值升高。且脑桥右侧梗死组右侧前辐射冠处 FA 值与 RAVLT-short（P = 0.004，r = 0.690）、Numlback-ACC（P = 0.006，r = 0.673）正相关，与 Numlback-RT（P = 0.000，r = -0.807） 负相关。 **结论** 慢性期脑桥不同侧别梗死患者脑白质微结构均存在继发

性损伤，包括顺行性和逆行性损伤；但右侧梗死组的脑白质微结构损伤范围更广，且存在对侧白质纤维重塑现象。同时，脑白质微结构的损伤是造成认知功能损伤的潜在机制及病理基础。

PU-2287
三叉神经痛的灰质体积改变：基于体素的形态学研究的系统评价和 Meta 分析

唐玉,王茂华,郑婷,袁凤英,杨翰,韩福刚,陈光祥
西南医科大学附属医院

目的：目前许多基于体素的形态测量学（voxel-based morphometry, VBM）研究已经证实了三叉神经痛（trigeminal neuralgia, TN）患者存在多个脑区灰质改变。本研究旨在利用基于体素的 Meta 分析方法对 TN 异常脑区灰质体积变化情况进行归纳、分析及讨论，以发现一致的和可重复的灰质改变区。
材料与方法：在 PubMed、Web of Science、EBSO、Cochrane 图书馆、Elsevier Clinicalkey 等数据库中对 1994 年 1 月至 2018 年 11 月运用 VBM 的分析方法探讨 TN 患者脑灰质体积变化的研究进行系统和全面的检索。采用 ES-SDM（effect-size signed differential mapping）软件进行 Meta 分析。另外，Meta 回归分析被用于探讨 TN 患者临床特征与脑灰质体积变化之间的联系。
结果：本研究共纳入了 13 项研究，共含 15 个数据集，其中包括 407 名 TN 患者和 376 名健康对照组。研究发现，与健康对照组相比，TN 患者全脑灰质体积改变区主要位于基底节（壳核、伏隔核、尾状核和杏仁核）、扣带回、丘脑、岛叶和颞上回等区域。Meta 回归分析显示，左侧纹状体的灰质体积变化程度可能是 TN 疾病严重程度的预测指标；病程越长，左侧颞上回和左侧岛叶灰质体积可能萎缩更明显。
结论：以上发现对 TN 患者脑灰质体积变化情况进行了比较全面的概况，并且有力地表明了参与和调控感觉-运动和情感处理过程的脑灰质的异常改变可能在 TN 的病理生理过程中起重要的作用。

PU-2288
多巴胺 D4 受体基因对多动注意缺陷障碍儿童静息态功能网络中心度的影响

陈双利,王美豪
温州医科大学附属第一医院

目的探讨多巴胺 D4 受体基因（DRD4）第三外显子 48bp 数目可变重复串联序列（VNTR）多态性对多动注意缺陷障碍（ADHD）儿童静息态脑功能网络中心度的影响及其意义。**方法**采用度中心度（DC）以及基于种子点的功能连接（FC）算法观察 DRD4 基因多态性对 ADHD 儿童脑功能网络的影响。收集 105 例 ADHD 儿童静息态 fMRI 以及神经心理学测验数据，并根据基因检测结果分为携带 DRD4 2 次重复杂合子（2R）基因型组（37 名）以及非携带组（68 名），观察携带 2R 基因型组相对非携带组 DC 值升高或降低的脑区，并根据 DC 结果作为种子点进行全脑功能连接分析，最后对两种算法得出的功能网络参数（DC 及 FC 值）与 Conners 临床量表进行相关分析。**结果**相对非携带组，携带 2R 基因组 DC 值降低的脑区包括右侧额上回、左侧顶下叶，基于右侧额上回的 FC 值降低的包括右侧颞下回、距状沟、左侧颞中回、枕中叶，基于左侧顶下叶的 FC 值降低的包括左侧顶下叶（$p<0.005$）。并且顶下叶 DC 值及 FC 值的改变与冲动多动症状具有显著相关性（$p<0.05$）。**结论**额顶

叶及枕颞叶作为注意控制、情感、视觉网络的重要脑区，与 ADHD 多动冲动、注意缺陷症状密切相关，本次功能网络研究提示 DRD4 2R 基因可能参与这些网络的神经活动，从而影响 ADHD 的冲动多动症状，同时为 ADHD 基因-脑功能-行为通路提供了初步证据。

本研究由浙江省医药卫生科技计划项目（NO. 2019326177）及温州市科技局基础性科研计划项目（NO.Y20180185）资助。

PU-2289
基于静息态功能磁共振对原发性失眠伴认知功能障碍患者的功能连接研究

吴牧熙,沈桂权,高波
贵州医科大学附属医院

目的：通过静息态功能磁共振(resting-state functioning magnetic resonance image, rs-fmri)探索原发性失眠（Primary insomnia, PI）伴认知功能障碍患者 FC 与认知功能的相关性。**方法：**失眠组纳入 30 例伴有认知功能障碍的失眠患者，采用系统的对称体素同伦连接(Voxel—mirrored HomotopicConnectivity，VMHC)分析比较大脑半球间的静息状态 FC 值。同时纳入 30 名健康对照组，均在相应时间进行神经心理学测评及 rs-fmri 扫描。神经心理量表方面使用匹兹堡睡眠质量指数（Pittsburgh sleep quality index，PSQI）、焦虑自评量表（Self-rating Anxiety Scale，SAS）和抑郁自评量表（Self-rating Depression Scale，SDS）。PI 患者还完成失眠严重程度指数（Insomnia Severity Index，ISI）。**结果：**PI 患者前扣带回（ACC）的同伦静息状态 FC 显著增加。左前扣带回和右丘脑之间以及右扣带回和左眶额皮质之间的 FC 也增加。**结论：**本研究发现，与健康对照组相比，PI 患者表现出异常的 FC，不仅在 ACC 的 VMHC 中，而且在 ACC 和其他脑区之间的 FC 中，这些结果均支持 ACC 中增强的 FC 参与原发性失眠的病理机制。

PU-2290
大枕池大囊肿磁共振表现

刘广月
南京大学医学院附属鼓楼医院

【目的】介绍大枕大池囊肿 MRI 表现。
【材料与方法】枕大池位于颅后窝下部，小脑下面，向上与第四脑室相通。大枕大池诊断标准：小脑蚓部距枕骨内板 10 毫米以上。见于任何年龄，临床意义部大。第四脑室正常、无占位效应、无脑扩张、无枕骨变薄、后颅窝大小正常。可长期处于稳定状态。MRI 表现：大枕大池囊肿 MRI 见长 T1 信号、长 T2 信号，成片状。囊肿位于小脑蚓部距枕骨内板 10 毫米以上
【结果】根据以上 MRI 表现，诊断大枕大池囊肿成功率为 99%。
【结论】头颅见长 T1T2 信号、成片状，位于小脑蚓部距枕骨内板 10 毫米以上，面积大于 10 毫米，可诊断大枕大池囊肿。

Headache frequency influences brain microstructure of patients with migraine without aura

Yang Yu,Hongru Zhao,Lingling Dai,Yunyan Su,Ximing Wang,Can Chen,Yalei Shang,Jun Ke,Chunhong Hu
The First Affiliated Hospital of Soochow University

Abstract Neuroimaging studies have implicated the influence of migraine on brain microstructure. However, whether the effects of migraine on brain is altered during migraine chronification is not well known. Fifty-six patients with migraine without aura, including 39 episodic migraine (EM) and 17 chronic migraine (CM) patients, and 35 matched health controls (HC) were enrolled. All subjects underwent a 3 Tesla MRI scan and high resolution T1-weighted images were acquired. VBM analysis was performed to assess gray matter (GM) volume differences among groups and it association with clinical feature. Compared with the HC group, both the CM and EM groups showed increased GM volume in the periaqueductal grey matter (PAG) and decreased GM volume in the anterior cingulate cortex (ACC). The EM group showed smaller GM volume in the dorsolateral prefrontal cortex (dlPFC) relative to both the HC and CM groups. The hippocampus/parahippocampal gyrus (HIP/PHG) volume of the HC group was smaller than that of the EM group, but larger than the CM group. Higher headache frequency is positively associated with greater GM volume in the PAG and dlPFC, but with smaller GM volume in the ACC and HIP/PHG across all patients. Migraine can influence microstructure of the brain, depending on headache frequency. Structural changes of the PAG and ACC may be strengthened with repeated headache, and CM has opposite effect on GM volume in the dlPFC and HIP/PHG in contrast to EM.

PU-2292

Abnormal Insula White Matter Fiber Tracts in Nicotine-dependent Smokers

Chao Wang,Shuyue Wang,Peiyu Huang,Zhujing Shen,Minming Zhang
Department of Radiology， the Second Affiliated Hospital， Zhejiang University School of Medicine

Nicotine dependence is characterized as a neural circuit dysfunction, particularly with regard to the alterations in central reward pathways.The insula, a cortical region that is thought to play a central role in this reward circuitry, has been implicated as an important role in the maintenance of nicotine dependence. However, it remains largely unclear about the differences in white-matter diffusion properties of the insular circuits between nicotine-dependent smokers and nonsmokers as well as between relapsers and non-relapsers according to the smoking cessation outcomes. Here, diffusion tensor imaging and probabilistic tractography was used to investigate the white-matter tracts of the insular circuits in two following studies (Study1: 58 smokers (38.5±7.3 years) *vs.* 34 nonsmokers (38.5±8.5 years); Study2: 38 relapsers (38.7±6.7 years) vs. 20 nonrelapsers (38.2±8.6 years)). Relative to nonsmokers, smokers showed lower fractional anisotropy (FA) in the anterior insular cortex-to-nucleus accumbens and posterior insular cortex-to-nucleus accumbens fiber tracts in the left hemisphere, suggesting decreased white matter integrity in these insular

tracts; but smokers showed higer FA, and lower axial (AD), radial (RD), and mean diffusivity (MD) in the right anterior insular cortex-to-medial orbitofrontal cortex, posterior insular cortex-to-medial orbitofrontal cortex, and posterior insular cortex-to-nucleus accumbens fiber tracts in the right hemisphere, suggesting excessive myelination and axonal loss in these insular tracts. However, there were no differences of FA, AD, MD and RD values between relapsers and nonrelapsers. These altered structural insula white matter fiber connectivity could interfere with the normal neural circuitry of reward processing. The present study clarified the precise roles of the insular white-matter microstructure in smoking behaviors, which could improve the understanding of the underlying neurobiology of nicotine dependence.

PU-2293

脊髓型囊虫病 1 例报告

谢思思
广西医科大学第一附属医院

患者女，49 岁，因“左下肢麻痛不适 2 年。”入院。既往史:（-）。查体：左下肢肌力约 4 级，余肢体肌张力正常，腱反射+++，病理反射-，左脐以下感觉迟钝。胸椎 MRI 平扫+增强扫描见 Th8-9 椎体水平见一团状异常信号影，T1WI 以稍低信号为主，其内见一小类圆形低信号，T2WI 呈不均匀高信号，T2WI 脂肪抑制序列呈明显高信号，边界清楚，大小约 1.6cm×0.8cm，增强扫描呈明显边缘强化，相应脊髓受压移位。颅脑 MRI 未见异常。术前诊断：Th8-9 椎管内占位性病变。术中大体病理见椎管内髓内硬膜下占位病变，病变为实质性，大小约 2cm× 1 cm，病变肉眼观为白红色，质地较韧，血供，边界清楚，有虫体及节结，局部脊髓受压移位。术后病理：符合囊虫病。

讨论:囊虫病以颅内多见，脊髓型囊虫病少见，通常认为与颅内囊虫病并存，单纯脊髓型囊虫病更少见。按照部位可分为蛛网膜下腔型、硬膜下腔型及脊髓型。文献报道以蛛网膜下腔型及硬膜下腔型多见。囊虫 MRI 表现可分为 3 期：生存期：囊虫表现为囊性长 T1 长 T2 信号，囊内可见点状实性头节影，增强扫描可见强化效应。退行性变期：头节消失，虫体肿大肿大变性，周围可见炎性水肿。钙化期：囊虫死后机化、钙化。本病例考虑囊变期，但未见明确显示头节。脊髓型囊虫病的临床诊断比较困难，尤其缺乏颅内病变及椎管内单发病灶的患者，且大部分患者缺乏流行病学相关依据。该疾病还需要与星型细胞瘤、蛛网膜囊肿、神经鞘瘤等相鉴别。MRI 可作为脊髓型囊虫病首先的影像学检查，可清晰的显示病灶的位置、大小、形态、分布及分型，认识其影像学特征，对早期明确诊断、手术及驱虫治疗提供重要依据。

PU-2294

The Three-dimensional Double Echo Steady State Sequence (3D-DESS) Magnetic Resonance Imaging (MRI) technique on diagnosis of a rare Multiple Neurofibromatosis: A case report

Yiming Chen[1],Yang Liu[2],He Ren[1],Haoxuan Luo[1]
1.Chongqing Hospital of Traditional Chinese Medicine
2.Chongqing Medical and Pharmaceutical College

The type-I of neurofibromatosis (NF-I) is with a high morbidity in clinic. Due to the clear image on the location, quantity, size, morphological characteristics and adjacent structures, the Magnetic Resonance Imaging (MRI) technique is usually utilized to help clinicians diagnosing NF. However, the general radiological technologies on localization diagnosis and classification diagnosis of NF-I are unclear and unsatisfied. Here, we report a case of NF-I diagnosed by the Three-dimensional Double Echo Steady State Sequence (3D-DESS) MRI technique. The aim of the present study is to provide a novel strategy for the diagnosis and treatment guidelines of NF and NF-related diseases.

大鼠甲亢模型的颅脑 18-FDG PET/CT 研究

翟林寒,张菁
湖北省武汉市华中科技大学同济医学院附属同济医院

目的：应用 18-FDG PET/CT 研究大鼠甲亢模型脑内葡萄糖代谢的特点，探讨甲状腺激素水平增高对于脑部结构和代谢的作用机制。**方法：**将 10 只 SD 大鼠随机分为甲亢模型组和对照组各 5 只，甲亢模型组采用优甲乐（左甲状腺素钠片）75ug/100g 灌胃造模，持续给药 4 周，对照组给予生理盐水，后尾静脉采血经放免法测定血清游离 T3、游离 T4 及 TSH 值，确定造模成功。将 10 只大鼠进行脑部 PET/CT 扫描，后处理得到大鼠脑部各脑区的标准摄取值（SUV），对比甲亢模型组和对照组各脑区 SUV 值的差异。**结果：**和对照组相比，甲亢模型组各脑区的 SUV 值均有不同程度减低。其中，双侧扣带回（左侧 P=0.02 右侧 P=0.02）、双侧岛叶皮层（左侧 P=0.012 右侧 P=0.007）、双侧前额叶内侧皮层（左侧 P=0.024 右侧 P=0.022）、双侧眶额皮层（左侧 P=0.024 右侧 P=0.018）、双侧前背侧海马（左侧 P=0.02 右侧 P=0.021）及左侧海马后部（P=0.011）有统计学差异。**结论：**甲状腺激素水平增高导致大鼠脑部葡萄糖代谢的降低，其中扣带回、前额叶内侧皮层、眶额皮层及海马均属于边缘系统，边缘系统的功能多样，与嗅觉、学习和记忆、情绪活动、内脏活动等有关，为研究甲亢状态下中枢神经系统功能紊乱机制提供依据。

DKI 在脑损伤后皮质脊髓束继发性损害的动物实验研究

黄丽轩[1],申炜[1],唐华民[2]
1.南宁市第一人民医院
2.广西国际壮医医院

目的 应用扩散峰度成像（diffusion kurtosis imaging ，DKI）技术观察急性颅内高压致脑疝（brain herniation，BH）及脑损伤后下行皮质脊髓束（corticospinal tract ，CST）继发性损害的微结构改变，探讨 DKI 检测 CST 继发性损害的可行性。

方法 采用微量注射泵向巴马小型猪左侧额叶内注射自体股动脉血，建立急性颅内高压致 BH 模型猪 10 只，应用 DKI 技术分别测量 BH 模型猪制模前、制模成功后脑桥皮质脊髓束走行区的 DKI 各参数值，统计分析制模前后各参数值变化，并对比分析病理学改变。

结果 制模前巴马小型猪两侧脑桥皮质脊髓束走行区 MK、AK、FA、MD 间差异无统计学意义（P>0.05）。制模后患侧脑桥皮质脊髓束走行区的 MK 较制模前及制模后的镜像侧明显增高，差异

均具有统计学意义（P<0.05）。制模后患侧及镜像侧脑桥皮质脊髓束走行区的 AK 均较制模前明显增高，差异均具有统计学意义（P<0.05），但患侧及镜像侧 AK 间差异无统计学意义（P<0.05）。制模后患侧及镜像侧脑桥皮质脊髓束走行区的 FA、MD 均较制模前减低，但差异无统计学意义（P>0.05）。病理切片行 HE 染色后进行光学生物显微镜观察显示：脑桥神经元核固缩、核消失，神经元周围小胶质细胞围绕，围管样浸润。

结论 急性颅内高压致脑疝及脑损伤后，两侧下行皮质脊髓束发生继发性损害，并可被 DKI 量化评估，较传统弥散成像准确。DKI 有望作为观察皮质脊髓束继发性损害的新的影像学指标。

PU-2297

基于 3D-ASL 脑灌注成像首发未用药强迫症患者静息状态脑血流特征分析

李晓茗,刘俊宏,张焱,程敬亮
郑州大学第一附属医院

【摘要】 目的：应用 3D 动脉自旋标记成像（ASL）全脑灌注成像技术探讨首发未用药强迫症患者脑血流灌注特点。**材料和方法**：对 34 名首发未用药强迫症患者的静息状态脑灌注图（ASL）和脑血流（CBF）图像进行分析，并与正常对照组比较。所有患者强迫症状的严重程度使用耶鲁布朗强迫量表（Y-BOCS）评估。**结果**：首发未用药强迫症患者的脑血流较正常对照主要表现为双侧扣带回低灌注，左侧颞中回、颞下回高灌注。**结论**：首发未用药强迫症患者存在静息状态脑血流的异常，提示强迫障碍可能的神经发病机制。

PU-2298

原发性低颅压综合征的 MRI 影像学表现

李晓凡,余红军
昆明市第一人民医院

目的 探讨原发性低颅压综合征的 MRI 影像学表现。

方法 将 2017 年 3 月-2019 年 3 月经临床证实的 12 例原发性低颅压综合征患者列为病例组，对照组选取同时期与病例组性别与年龄相匹配普通患者 24 例。所有患者均行头部 CT 平扫及头部 MRI 平扫及增强扫描检查，计算两组脑桥和乳头体间距、脑桥腹侧和中脑夹角、直窦(SS)和大脑大静脉(VOG)夹角、VOG 和大脑内静脉(ICV)夹角。

结果 12 例病例组患者头部 CT 平扫中 4 例未见明显异常，6 例可见硬膜下积液（6/12），2 例硬膜下血肿（2/12）；头部 MRI 均可见硬脑膜增厚并强化（12/12）；11 例硬膜下积液及血肿（11/12）；10 例脑室、脑池狭窄及脑沟变浅（10/12）、静脉窦扩张（6/12）、10 例脑组织下移及垂体增大脑下垂征象（10/12）。病例组的脑桥和乳头体间距、脑桥腹侧和中脑夹角、SS 和 VOG 夹角、VOG 和 ICV 夹角均小于对照组，差异具有统计学意义(P＜0.05)。

结论 MRI 诊断原发性低颅压综合征具有特异性，且敏感性比 CT 高；且脑桥和乳头体间距、脑桥腹侧和中脑夹角、SS 和 VOG 夹角、VOG 和 ICV 夹角对原发性低颅压综合征诊断提供客观标准。

PU-2299

不同扫描层厚对脑白质纤维束扩散张量成像定量评估的研究

吕发金,吕亮
重庆医科大学附属第一医院

目的

探讨扩散张量成像（DTI）中不同扫描层厚的选择对脑白质纤维束各 DTI 定量指标的影响。

资料与方法

采用不同扫描层厚（分别为 3 mm、5 mm、7 mm）对 30 名健康志愿者在 3.0 T MR 扫描仪上行 DTI 以及 3D T1WI 扫描，获得胼胝体压部区域的各向异性分数（FA）、平均弥散率（MD）、轴向弥散（AD）、横向弥散（RD）以及右侧海马区域纤维束数目（FN）、最小纤维束长度（FL_{min}）、最大纤维束长度（FL_{max}）等扩散定量评估指标。比较不同扫描层厚下（3 mm 组、5 mm 组和 7 mm 组）各扩散定量指标，分析扫描层厚与各扩散定量指标的相关性。

结果

FA、MD、RD、FN、FLmin 在各组间、AD 在 3 mm 组与 7 mm 组以及 5 mm 组与 7 mm 组间差异有统计学意义（P 均<0.05），FL_{max} 各组间以及 AD 在 3 mm 组与 5 mm 组间差异无统计学意义（P>0.05）。FA、AD、FN 与扫描层厚呈负相关（r=-0.887，-0.316，-0.560，P<0.05），MD、RD、FL_{min} 与扫描层厚呈正相关（r=0.606，0.767，0.501，P<0.05）。FL_{max} 与扫描层厚无相关性（r=0.008，P>0.05）。

结论

不同扫描层厚对 DTI 部分扩散定量指标有明显的影响，数据获取过程中应引起重视。

PU-2300
磁共振在帕金森病双侧丘脑底核脑深部刺激术前影像学定位的应用价值

吴琛,路莉,徐凯
徐州医科大学附属医院

目的 探讨磁共振在帕金森病患者双侧丘脑底核（STN）脑深部刺激术（DBS）治疗前的术前影像学定位价值。

方法 50 例行双侧丘脑底核 DBS 治疗的帕金森病（PD）患者，术前均进行 CT 及 3.0T 磁共振扫描，术后均进行 1.5TMRI 扫描，采用手术计划系统计算靶点坐标，比较术前与术后的靶点坐标的差异，以及侧脑室与针道角度的相关性。

结果 本组 MRI 术前定位坐标数据用均数±标准差表示，结果为术前与术后的靶点坐标无统计学意义；Arc 角的大小可能与侧脑室的大小有关。

结论 磁共振在帕金森病双侧丘脑底核脑深部刺激术治疗前的定位中具有重要意义，为避免误穿侧脑室，制定坐标时注意调整 Arc 角的大小。

PU-2301
岛叶脑沟及脑回形态有望成为可靠的脑部精神疾病的研究指标

田欣,王嘉琪,刘丽萍,张旭
河北医科大学第二医院

目的:利用 MRI 对不同年龄段中国人优势大脑半球岛叶进行测量，建立正常人岛叶脑沟、脑回的形态正常值标准，评价岛叶脑沟、脑回形态与年龄的相关性，为多种岛叶精神疾病诊断提供影像诊断依据。**方法**:选取 75 例健康志愿者，进行头部核磁扫描，测量并统计中国人优势大脑半球岛叶各亚回形态学数据，包括各亚回皮质、白质、脑沟宽度值，并对各年龄组形态学数据进行对比分析。**结果**：正常人优势大脑半球岛叶形态学测量值：各年龄数值组均符合正态分布的有长前回灰质宽度，平均值为((1.84±0.59))mm；横回白质宽度，平均值为((2.73±0.10))mm；横回灰白质比，平均值为(1.02±0.35)；横沟深度，平均值为((3.18±1.15))mm。其中，横沟长径在各年龄组间差异有统计学意义（P<0.05）。其他优势大脑半球岛叶各亚回皮质、白质、脑沟宽度差异没有因年龄而发生显著变化（PP>0.05）。**结论**：岛叶属于较低级别脑叶，是最先分化和发育的皮质，其形态学参数受年龄影响较小，岛叶灰质宽度与年龄差异无直接相关性，因此有可能成为较可靠的研究脑部精神疾病的指标。

小脑组织疝入颅骨 MRI 诊断

张海深
濮阳市油田总医院（原中原油田总医院）

目的

探讨小脑组织疝入颅骨的 MRI 影像特点及临床意义

方法

搜集经我院经 MRI 检查发现的 3 例小脑组织疝入颅骨的患者，男 2 例，女 1 例，年龄 50-71 岁；和 5 例蛛网膜颗粒患者做对照比较；采用 Siemens Trio3.0 超导 MR 仪，头颈部联合线圈，行常规 T1WI 及 T2WI　T2Flair 横断面、矢状面平扫。

结果

3 例患者中，2 例为右侧小脑半球局限结节状突起的小脑组织疝入右侧枕骨，陷入深度分别约 6mm，6.9mm；1 例为双侧小脑半球 3 个结节突起的小脑组织疝入枕骨内，陷入最大深度约 8mm，陷入最深达板障层，邻近颅骨外板的内缘，陷入颅骨的小脑组织呈结节状、菜花样改变，侧位观部分呈鸟嘴样改变，突起结节与小脑连续且信号与小脑组织相同，T2WI 显示结节后方见脑脊液信号环绕；局部受压枕骨弧形、欠规则凹陷缺损，颅骨内板低信号不连续。5 例蛛网膜颗粒均表现为大小不一的类圆形、圆形，表现为 T1WI 低信号，T2WI 高信号，T2Flair 低信号，与脑组织无连续。

结论

小脑组织疝入颅骨较为罕见，考虑为小脑局部发育异常，分为单发型和多发型，MRI 表现具有特异性，MRI 平扫横轴位、矢状位可以准确诊断，能和蛛网膜颗粒做出准确的鉴别。临床对于该类患者的枕骨手术等，认识小脑组织这种发育异常具有重要意义。

PU-2303

线性钆对比剂 MR 多次增强后小脑齿状核钆沉积的初步研究

符念霞,宋建勋
深圳市宝安区人民医院

【摘要】 目的 探讨多次使用线性钆对比剂后，MRI 平扫 T1WI 上双侧小脑齿状核、脑桥信号强度的改变。**方法** 回顾性分析 2015 年 1 月至 2018 年 12 月 95 例进行至少 3 次 MR 增强检查的患者的临床及影像学资料，所有 MR 增强检查均在本院进行，且多次增强前后均进行过颅脑 MR 平扫。所有数

据均在西门子后处理工作站进行后处理，在第一次 MRI 检查的及多次使用线性钆对比剂后的 T1WI 上分别测量双侧小脑齿状核、脑桥的信号强度，将左右两侧小脑齿状核的信号强度取平均值作为该病人的小脑齿状核信号强度，计算第一次和最后一次 MRI 检查之间的齿状核/脑桥信号比（SI）。多次增强检查前后齿状核/脑桥信号比采用配对 t 检验，多次增强检查后、齿状核/脑桥信号比采用 Pearson 相关，采用线性回归分析方法，分析多种临床因素与多次增强前后齿状核/脑桥信号强度的相关性。**结果** 95 例患者中 13 例 MRI 平扫小脑齿状核 T1WI 信号增高；11 例多次 MR 增强后小脑齿状核/脑桥的信号强度比大于第一次 MRI 检查的信号强度比，2 例小于第一次 MRI 检查的信号强度比。第一次 MRI 平扫、多次使用线性钆对比剂后小脑齿状核/脑桥的信号强度分别是 1.10±0.07、1.13±0.19（t=-0.40，P=0.698）。接受线性钆对比剂注射次数与信号强度比之间无明显相关性，与临床其他因素无关（P 值均＞0.05）。**结论** 多次使用线性钆对比剂 MR 增强后的患者，T1WI 齿状核信号不一定增高，与增强检查次数无明显相关性。

PU-2304

86 例单纯性软脑膜增厚病因分析及文献复习

何惠琴,曾俊杰,黄绮玲
河源市人民医院

【摘要】目的 总结软脑膜增厚病因，分析其病理生理、好发部位、分布规律。 **方法** 回顾性分析 86 例患者软脑膜增厚的 MRI 表现，联系其发病原因、临床症状、软脑膜增厚部位，了解软脑膜增厚与疾病病理生理的相关性。**结果** 86 例患者均为软脑膜增厚而不累及硬脑膜，可归纳为 3 大类疾病：①炎性疾病：细菌感染，结核感染，真菌感染，寄生虫感染，病毒感染，梅毒感染，非病毒感染无菌性脑膜炎，化学性脑膜炎（表皮样囊肿或皮样囊肿破入蛛网膜下腔），术后炎性反应；②血管性疾病：蛛网膜下腔出血，烟雾病，脑颜面血管瘤病，急性缺血、梗死后反应；③肿瘤性疾病：脑内原发肿瘤直接累及或蛛网膜下腔种植，癌性脑膜炎，硬脑膜（脑外）肿瘤反应性增厚等。不同病因所致软脑膜增厚部位不同。**结论** 软脑膜增厚病因多为炎性刺激增生反应、肿瘤增殖、血管代偿扩张等，其分布、增厚程度有规律可循，非肿瘤性病变常不累及皮层，MRI 常规 T2-FLAIR 及增强 T2-FLAIR 可很好的发现病变并鉴别病因。

PU-2305

慢性创伤性脑损伤后认知障碍大鼠模型弥散峰度成像的研究

王铭梁,李文彬
上海交通大学附属第六人民医院

研究背景：慢性创伤性脑损伤（Traumatic brain injury, TBI）后认知障碍发生的病理改变机制尚未完全清楚。弥散峰度成像 （Diffusion kurtosis imaging, DKI）序列对于评估脑组织改变有重要的作用。应用 DKI 探索慢性 TBI 认知障碍脑组织病理改变有一定的前景。
研究目的：探讨慢性 TBI 大鼠脑组织 DKI 参数以及脑组织病理改变情况，并分析慢性 TBI 大鼠 DKI 参数与组织病理学、认知障碍的关系。
材料与方法：纳入 TBI 大鼠模型及对照组大鼠各 6 只，造模后 7 月后进行水迷宫测试、DKI 扫描、免疫组化（包括 NeuN、GFAP、MBP、Iba-1 指标）。分析双侧大脑皮质、海马、胼胝体 DKI 参数及免疫组化指标改变情况，并分析 DKI 参数与免疫组化指标及认知测试的相关性。
研究结果：与对照组比较，TBI 大鼠 7 月后在外伤侧皮质、外伤侧海马、胼胝体 MD 升高、MK 降低(P ＜ 0.05)；免疫组化表现为 NeuN 降低，Iba-1、MBP 升高(P ＜ 0.05)。外伤侧皮质的 MK 与

NeuN，MD 与 MBP 存在正相关(P ＜ 0.05)，外伤侧皮质、外伤侧海马的 MK 与 Iba-1、MBP 存在负相关(P ＜ 0.05)。外伤侧皮质、外伤侧海马 MK 与认知功能存在相关性(P<0.05)。
研究结论：慢性 TBI 大鼠存在认知障碍，DKI 参数改变与免疫组化所反映的神经元丢失、神经炎症、髓鞘破坏存在相关性，DKI 可用来评估慢性 TBI 后认知障碍的脑组织改变情况。

PU-2306
3.0T MR 多参数成像对脑海绵状血管瘤的诊断价值

白卓杰
南京江北人民医院

【摘要】目的 探讨磁共振多参数扫描显示脑海绵状血管瘤的应用价值。方法 回顾性总结分析经临床诊断为脑海绵状血管瘤的 45 例患者的 MR 影像资料。45 例患者均行 T1WI、T2WI、DWI、SWI 等序列检查，部分患者行增强 MRI 检查。分析脑海绵状血管瘤的影像特征，并对各序列的检出率进行统计分析，采用 SPSS19.0 统计软件，比较各序列病灶检出率的差别。结果 45 患者共发现 56 处病灶，T2WI 显示“爆米花”征 26 例，“黑环”征 30 例。病灶分布于脑内多个区域。其中 41 例 CA 为单发病灶，4 例多发病灶。各序列检出数量：56 处病灶中，T1WI 显示 26 个，T2WI 显示 37 个，DWI 显示 49 个，SWI 显示 56 个。SWI/DWI 序列检出率高于常规序列（*P*＜0.05）；SWI 检出率高于 DWI（*P*＜0.05）。结论 脑海绵状血管瘤影像表现具有一定特征，多参数扫描提供了更多病灶信息，为临床提供大量有用信息。

PU-2307
全脑 CT 灌注成像对缺血性脑卒中侧支循环的定量分析及预后评估

刘顼,韩丹,金文凤,闵蕊
昆明医科大学第一附属医院

目的 探讨 CT 灌注成像（CTP）定量评估缺血性脑卒中侧支循环及其对判断预后的价值。
材料与方法 回顾性收集治疗前行 CTP 成像且确诊为急性缺血性脑卒中和大脑中动脉 M1 段闭塞的病人 45 例（中位年龄：73 岁；四分位距：62～80 岁；其中女 20 例，男 25 例)。所有病例均采用德国西门子第二代炫速双源 CT 行多模态一站式一次扫描（NCCT+CTP15cm）或多模态一站式二次扫描（NCCT+CTP10cm+头颈 CTA）。常规平扫、CTP 采用摇篮床低剂量技术，80kV、50mAs，间隔 1.5-2.5 秒，共采集 33 个动态容积数据。所有图像传输到后处理工作站 Siemens MMWP，运行工作站内 VP Neuro 软件，可以得到 4 个灌注参数和灌注图（分别为 CBV、CBF、TTP、MTT），根据研究仅选其中的 1 个即 CBF，测量病变大脑中动脉远端距离闭塞部位最近点血管的血流量（bCBF），采用区域软脑膜侧支循环评分系统将所有患者分为侧支循环良好组、中等组及不良组，比较三组间 bCBF 值。采集患者 90 天改良 Rankin 量表（mRS）评分量表，评定为 0～2 分时被认定为理想的治疗效果，并采用多变量 logistic 回归分析确定 bCBF 和预后之间的关系。
结果 侧支循环不良、中等和良好的患者间 bCBF 存在差异（41mL/100g/min，75mL/100g/min，93mL/100g/min，P<0.05）。区域软脑膜侧支循环评分（rLMC：1-20）分析显示 bCBF 与 rLMC 评分呈正相关（r=0.55，P<0.05）。多变量逻辑回归分析显示 bCBF 是良好预后的独立预测因子。结局良好患者 30 例（90 天 mRS≤2）的 bCBF 高于结局不佳的患者 15 例（90 天 mRS>2）（82mL/100g/min；53mL/100g/min；P <0.05）
结论 全脑 CT 灌注成像是可行的侧支循环定量评估方法，并与缺血性卒中患者的临床结局相关。

PU-2308

Resting-state functional MRI study of functional connectivity density (FCD) in patients with migraine without aura

Yang Yu, Jun Ke, Chunhong Hu, Ximing Wang, Hongru Zhao
The First Affiliated Hospital of Soochow University

To explore the changes of functional connectivity density (FCD) in patients with migraine without aura (MWoA), including chronic migraine (CM) and episodic migraine (EM) patients, resting state functional magnetic resonance imaging (rs-fMRI) and high resolution T_1WI of 56 MWoA patients (EM 39, CM 17) and 35 matched healthy controls (HC) were collected. The patients were admitted to the department of neurology of the first affiliated hospital of soochow university for the first time from December 2016 to September 2017. The FCD differences among the three groups: LFCD changes were mainly found in the right hippocampus, left temporal cortex and temporal pole, and bilateral ventromedial prefrontal cortices. LFCD of these regions in migraine patients were increased than the HC group. For these regions, LFCD in the CM group was higher than that in the EM group. LFCD was decreased in bilateral dorsolateral prefrontal cortices in patients when compared with the HC group. For longFCD, the results of the right temporal cortex and hippocampus showed the same trend as the LFCD results. Moreover, longFCD of bilateral ventromedial prefrontal cortices was increased in migraine patients as compared with the HC group, but there were no significant differences between the CM and EM groups. Compared with the HC group, longFCD in bilateral dorsolateral prefrontal cortices was slight decreased in the EM group, but no significant difference was found in the CM group. So in resting state, the difference among the three groups gathered at the areas closely related to the generation, conduction and regulation of pain itself, as well as the emotional and cognitive changes of patients after frequent and long-term pain attacks. This changes suggest that multiple brain regions are involved in the adjustment to pain and the self-regulation to emotions in migraine patients.

PU-2309

无先兆偏头痛患者发作间期右侧海马区域静息状态下脑功能连接的改变

于洋, 柯俊, 胡春洪, 王希明, 赵红如
苏州大学附属第一医院

目的：采用静息态功能磁共振成像（resting state functional magnetic resonance imaging, rs-fMRI）通过基于种子点的海马功能连接分析，探究无先兆偏头痛（migraine without aura, MWoA）慢性组（chronic migraine, CM）及偶发组（episodic migraine, EM）患者的脑功能连接改变。

方法：分别采集 2016 年 12 月至 2017 年 9 月间就诊于苏州大学附属第一医院神经内科门诊首诊无先兆偏头痛患者 56 例（偶发组 39 例，慢性组 17 例）及 35 名相匹配的健康志愿者（healthy control, HC）的 rs-fMRI 图像及高分辨 T_1WI 解剖图像，对所得图像应用专业软件预处理及建模计算相关系数后比较右侧海马的功能连接(functional connectivity, FC)在两组患者及正常对照组间的差异。

结果：三组间右侧海马的脑功能连接差异：与 EM 组相比，CM 组右侧海马与两侧颞极的功能连接增强。相较于 HC 组，EM 组与两侧颞极、两侧腹内侧前额叶（额下回、直回及前扣带回）功能连接增强；与 HC 组相比，CM 组两侧颞叶（两侧颞极及颞上回、颞中回）、右侧海马及海马旁回、两侧腹内侧前额叶（额下回、直回及前扣带回等）可见显著功能连接增强。

结论：海马功能连接存在组间差异的脑区主要位于边缘系统及脑默认网络内侧组，提示在发作间期疼痛相关脑网络长程应急记忆及情绪反应的功能网络依旧活跃，并可能为偏头痛发作间期的治疗提供理论支持。

通过功能连接密度及脑网络属性探讨早泄患者的 多巴胺通路中长短距离的功能连接失调

张冰,张鑫,陆加明
南京大学医学院附属鼓楼医院

目的 通过功能连接密度（ Functionalconnectivitydensity， FCD）和脑网络属性分析来探讨早泄（ prematureejaculation， PE）患者大脑中多巴胺（ dopamine， DA）通路的改变。 材料与方法 南京大学医学院附属鼓楼医院医学研究伦理委员会批准了这项横断面研究，并且签署书面知情同意书。本研究共包括 20 名右利手早泄患者（年龄： 27.95±4.52，男性）和 15 名年龄和性别匹配的正常对照年龄： 27.87±3.78，男性）。所有被试均接受了静息态功能磁共振和高分辨 T1w 结构磁共振扫描。所有入组患者均排除神经或精神系统病史。应用功能连接密度分析早泄患者组与正常对照组在短距离功能连接密度和远距离功能连接密度之间的组间差异。此外，还采用了基于 ROI 的分析，及基于脑网络和图论来比较网络属性。 最后进行 Pearson 相关分析， 将临床评分（如阴道射精潜伏时间， IELT）与功能连接密度和网络属性进行相关分析。 结果 早泄患者的短距离功能连接密度在多巴胺通路中显著降低，包括双侧中间颞回，梭状回，左眶额叶皮层，伏隔核，尾状核和丘脑（ $p<0.05$）；而左侧岛叶，颞横回和壳核以及双侧楔前叶、辅助运动区中扣带回（ MCC）、前扣带回（ ACC）的长距离功能连接密度显著增高（ $p<0.05$）。脑网络分析发现，早泄患者的脑网络连接在某些节点中得到加强。此外，患者右侧前扣带回，下额叶和中扣带回的枢纽节点的度在早泄患者中显著增加。阴道射精潜伏时间与短距离功能连接呈显著正相关，与长距离功能连接和节点的度呈显著负相关。 结论 我们的研究表明， 早泄患者存在多巴胺通路中短距离及长距离脑区的协同作用障碍及网络特性变化。这种改变可称为反映早泄疾病生物标志物及治疗靶点。

PU-2311
通过来自子宫内正常发育胎儿白质信号强度间接反映胎儿大脑发育

张冰,张鑫,朱斌
南京大学医学院附属鼓楼医院

研究目的 在 1.5T 磁共振上通过 sBTFE 序列检测不同孕周正常胎儿大脑白质信号强度，探索正常胎儿大脑白质信号强度与孕周之间的关系。 材料与方法 收集南京市鼓楼医院 2010 年 9 月至 2013 年 9 月 136 例孕周在 22-39 周的单胎胎脑图像， 测量 18 个选定脑区及双侧脑室后角脑脊液信号强度值（ SI）。考虑到线圈敏感度造成的信号不均一性，通过计算相对信号强度(SIR)，即用相应脑区的 SI 值比上两侧脑室后角脑脊液平均值。 测量并计算出选定区域的 SIR 值： 胼胝体膝部、 体部、压部、双侧额叶、枕叶、颞叶、顶叶及中央前回、丘脑、小脑、脑桥同孕周的相关性。 结果 18 个脑区中，双侧的枕叶、中央前回、中央后回、颞叶、丘脑、小脑及脑桥的信号强度与孕周存在相关
性（ $P<0.05$）。不同脑区的信号强度值与孕周之间的拟合模型不同。 结论 本研究使用相对较大的队列来证明在其改变的不同阶段的胎儿脑中白质的 SIR 差异，使用常规使用的临床 sBTFE 序列。白质信号强度随胎龄的变化，可能在一定程度上反映了生殖矩阵迁移的时间顺序和髓鞘形成进程的时间顺序。

PU-2312

A Combined DTI and Resting State functional MRI Study in Patients with Postherpetic Neuralgia

Hui Dai[1],Hui Dai[1]
1.First Affiliated Hospital of Soochow University
2.First Affiliated Hospital of Soochow University

Purpose: To explore the brain microstructural and functional changes in patients with PHN.
Materials and Methods: 12 PHN patients and 12 healthy volunteers were enrolled in the study. A 3 T MR scanner was used in this study. DTI, rfMRI and 3D-MPRAGEsequences were used. FA and MD t-maps were obtained after DTI data processing with PANDA, and ALFF and fALFF were obtained after the rfMRI data processing with DPABI. The statistical analysis module of the REST software was used to compare the FA, MD, ALFF and fALFF differences between the PHN patients and normal controls.
Results: There were no statistically significant differences in gender, age and education years between the two groups. FA, MD, ALFF and/or fALFF showed significant alterations in some pain or pain-related brain regions, such as brainstem, cerebellum, parietal lobe, precuneus, frontal lobe, temporal lobe, postcentral and precentral gyrus, corpus callosum, cingulate gyrus, putamen and insula.
Conclusion: Multi-local alterations of spontaneous brain activity form a network related to chronic pain, sensory discrimination, emotion and cognition, suggesting complicated central mechanisms of PHN, combined-action of brain microstructure and function may play a critical role in comprehension of neurological mechanisms of PHN pain.

强制戒断与美沙酮维持治疗半年对海洛因成瘾者脑功能影响的低频振幅 fMRI 研究

刘为,陈佳杰,李强,时宏,薛久华,刘艳,李玮,朱佳,金龙,魏龙晓,王玮
空军军医大学唐都医院

[摘要] **目的** 探讨强制戒断和美沙酮维持治疗两种干预措施半年对海洛因成瘾者大脑功能影响的差异。**方法** 招募 22 名强制戒断约半年的海洛因成瘾者（PA 组）、25 名美沙酮维持治疗约半年的海洛因成瘾者（MMT 组）与 35 名正常对照组（HC 组）参加本研究，对所有受试者进行功能磁共振扫描采集静息态数据，利用低频振幅（ALFF）方法计算三组大脑局部自发性脑活动的强度，分析比较 PA 组与 MMT 组大脑低频振幅差异。**结果** 与正常对照组相比，美沙酮维持治疗组与强制戒断组在右侧额中回、左侧内侧额上回、左侧岛叶、左侧舌回、右侧舌回、右侧辅助运动区 ALFF 存在显著性差异；且强制戒断组在右侧额中回、左侧内侧额上回与右侧辅助运动区脑活动更趋近于正常组。**结论** 经过半年干预后，美沙酮维持治疗者与强制戒断者在部分脑区仍存在异常，但强制戒断可能更有利于海洛因成瘾者脑功能恢复。

3DT1FFE 对三叉神经痛和面肌痉挛的诊断价值

李黎明,张冰
南京大学医学院附属鼓楼医院

目的 探讨磁共振 3DT1FFE 序列对诊断三叉神经痛和面肌痉挛血管神经压迫的价值。 方法 临床诊断的三叉神经痛 11 例，面肌痉挛 13 例，行 3DT1FFE 序列采集图像，利用原始图像对两侧三叉神经和面神经进行斜矢状位和冠状位重建，观测血管神经的关系。 结果 11 例三叉神经痛中，图像显示 9 例存在三叉神经血管压迫或接触，阳性率为 81.8%(9/11)，可疑接触 2 例。 13 例面肌痉挛中有 12 例显示了面神经起始段有微血管跨越或对面神经有轻微的推压改变，阳性率为 92.3%(12/13)。 结论 3DT1FFE 序列对发现三叉神经痛和面肌痉挛血管神经压迫具有重要价值，其原始图像及斜矢状位和冠状位重建是显示神经血管接触的敏感方法，对选择手术方式具有重要的指导意义。

PU-2315

大鼠放射性脑损伤动物模型建立与病理观察

陈红[1],周正荣[2]
1.上海交通大学附属上海市精神卫生中心
2.复旦大学附属肿瘤医院

目的：建立大鼠放射性脑损伤模型，观察模型组和空白对照组大鼠海马区脑组织常规磁共振和病理学变化情况，观察动物存活率及用于中长期监测放射性脑损伤组织的磁共振信号变化的可行性。
材料和方法：46 只雄性 Sprague-Dawley（SD）大鼠，分模型组（n=40）和空白组（n=6）。照射组给予单次 35Gy 剂量进行半脑照射，空白组麻醉后假照射。于小动物放疗研究平台进行等中心点照射，精准制造大鼠半脑放射性脑损伤模型。采用 7T 小动物 MRI 进行影像数据采集。于照射前一周、照射后 3 天、2 周、3 周、4 周、6 周、8 周、12 周、24 周、36 周各时间点定期进行大鼠体重、照射区软组织反应、常规 MR 检查（T1WI 和 T2WI）、脑组织病理学检查及两组动物的生存率情况的观察。
结果：模型组与空白对照组大鼠体重及生存率无明显统计学差异。模型组大鼠照射区域 2 周后出现毛发脱落，皮肤出现红肿。空白组无明显改变。模型组大鼠照射后前 24 周常规 MRI 无明显异常信号，36 周时出现照射侧的信号异常，模型组非照射侧也出现轻度的信号改变。病理结果显示模型

组照射侧海马区神经细胞损伤、坏死，神经纤维和胶质细胞出现损伤，非照射侧也出现神经细胞的损伤。空白组常规磁共振检查及病理结果均未见明显异常

结论：35Gy 剂量单次半脑照射能够成功建立放射性脑损伤模型，小照射野有助于动物的长期存活，中晚期出现放射性脑坏死，能够满足放射性脑损伤组织的长期磁共振观察研究的需求。

PU-2316

SCD 及 MCI 患者海马功能连接的研究

韦懿宸
广西中医药大学第一附属医院

目的：分析主观认知下降（SCD）患者的功能网络异常，探讨健康志愿者(HC)、SCD 及轻度认知功能损害（MCI）的海马功能连接损害的演变。

材料与方法：按照纳入标准纳入 SCD 患者 35 例，MCI 患者 88 例，正常对照 32 例。收集受试者的相关临床数据及神经心理学量表评估数据，采集受试者的多模态 MRI 数据。以海马作为种子点，应用功能连接度（FC）分析方法，分析 SCD、MCI 和 HC 患者的脑功能连接差异。

结果：

以 HIP 为种子点的 FC 分析结果：与对照组相比，SCD 组与 HIP 的功能连接降低主要在双侧 TPJ、双侧 mPFC，与 HIP 功能连接增强的脑区主要在对侧 HIP、PHIP。MCI 组与 HIP 的功能连接降低主要在双侧 TPJ/角回、双侧 mPFC、双侧 ACC、双侧旁中央小叶，未发现功能连接增强的脑区。

结论： SCD 患者存在的脑结构及脑功能异常，此异常可能可以作为 SCD 的影像学生物标记。

第三脑室底造瘘术后中脑导水管脑脊液流速流量分析

王丽宁,朱明旺
首都医科大学三博脑科医院

目的 第三脑室底造瘘术后中脑导水管脑脊液流速流量测定分析。**方法** 回顾性分析第三脑室底造瘘术前及术后中脑导水管脑脊液流速流量改变。8 例患者 MR 扫描全部采用 Philips Archiena 1.5T 成像系统，常规扫描轴面，采用 SE 序列 T1WI（TR600ms, TE15ms, SE 序列, 矩阵 256×192），T2WI（TR4500ms, TE100ms, FSE 序列, 矩阵 324×228），FLAIR（TR6000ms, TE100ms, TI2000ms, 矩阵 256×192）和矢状面 T1WI。中脑导水管层面矢状位 CSF-DRIVE 及相位对比磁共振电影成像。患者第三脑室底造瘘术前及术后均进行中脑导水管水平脑脊液流速流量测定，主要进行中脑导水管

选定层面每博容量，返流分数，绝对容量，平均通过量，每博距离及平均速度的测量。**结果** 8 例患者中，男 7 例，女 1 例，年龄 2～80（平均 38）岁。第三脑室底造瘘术前均有不同程度脑积水，由不同基础病变造成，其中 5 例中脑导水管有膜性狭窄，3 例中脑导水管通畅。8 例患者第三脑室底造瘘术后，其中 5 例患者均出现每博容量下降，返流分数增加，绝对容量下降，平均通过量减少，每博距离减小，平均速度减低。**结论** 第三脑室底造瘘术重建了脑脊液循环，减少了脑积水症状。相位对比磁共振电影成像技术及脑脊液流速流量测定对第三脑室底造瘘术后效果评估具有重要意义。

PU-2319
颈椎间盘源性疼痛患者全脑结构异常与相关临床特征的研究

杨倩,王渊
西安交通大学第一附属医院

目的 采用基于体素的形态学方法（Voxel Based Morphometry, VBM）和基于纤维束的空间统计方法（Tract-Based Spatial Statistics,TBSS）探讨颈椎源性疼痛（Cervical spondylotic pain, CSP）患者大脑灰白质微结构及相关临床特征的异常。
方法 对招募的 31 例 CSP 患者（CDP 组）和 30 例年龄、性别匹配的健康志愿者（对照组）分别采集全脑 3D-T1 结构像和扩散张量成像(Diffusion tensor imaging, DTI)数据，应用 SPM(statistical parametric mapping)和 FSL(FMRIB Software Library)软件分析 CSP 与对照组全脑灰白质微结构的差异，并与 CSP 组的视觉模拟评分（visual analogue scale, VAS）进行相关分析。
结果 与对照组相比，CSP 组右侧楔前叶、右侧颞上回和右侧中扣带回灰质体积减少，且右侧楔前叶、右侧颞上回、右侧中扣带回灰质体积与 VAS 评分呈线性负相关（右侧楔前叶：r=-0.397,p=0.045;右侧颞上回 r=-0.402,p=0.034;右侧中扣带回 r=-0.388,p=0.045）；此外，CSP 组双侧上纵束 FA 值减低，并与 VAS 评分呈负相关关系（左侧上纵束：r=-0.337,p=0.022;右侧上纵束：r=-0.331,p=0.026）
结论 CDP 存在右侧楔前叶、右侧颞上回、右侧中扣带回灰质结构及双侧上纵束白质微结构异常，将为 CSP 疼痛机制的探索提供一定的理论依据。

PU-2320
基于结构协变网络评价尼古丁依赖者脑结构损伤机制研究

朱晨迪[1],张勇[2],张刚[1],张岚[1]
1.河南中医药大学第一附属医院
2.郑州大学第一附属医院

目的：本研究通过基于体素形态学测量(voxel-based morphometry,VBM）的结构协变网络(structural covariance networks,SCNs)分析方法探讨尼古丁依赖引起的大脑灰质结构差异及不同脑区之间灰质改变的协同性。 **材料及方法：**对 118 名长期吸烟者和 57 例不吸烟的健康对照进行 3D-T1 结构像（3D-mprage）序列扫描，将所有志愿者的脑结构像数据在 Matlab 软件平台上的 SPM8 进行分割，并对分割后得到的吸烟组与对照组灰质结构进行两样本 t 检验，找出两组间的差异脑区，然后将吸烟组与对照组的差异脑区作为种子点进行结构协变网络分析。 **结果：**①将所有吸烟组与对照组进行比较可见吸烟组右侧丘脑、左侧顶下叶灰质体积减少($P< 0.001$, cluster size >50voxels),未发现吸烟组存在灰质体积增加的脑区。②结构协变网络分析发现：以右侧丘脑为种

子点，吸烟组相较于对照组表现出右侧丘脑与左侧颞中回、左侧颞下回、左侧顶下叶、右侧顶上叶灰质体积协同性增加，而与右侧额下回（三角部）、左侧丘脑、双侧枕中回、双侧额中回、右侧中央前回皮层厚度的协同性降低；以左侧顶下叶为种子点，吸烟组相较于对照组表现出左侧顶下叶与左侧颞极中部、双侧颞下回、左侧中央后回及右侧额中回灰质体积的协同性增加，而与左内侧额上回、右侧顶上叶、双侧颞下回、左侧扣带回（中部）及左侧小脑灰质体积协同性降低。 **结论：**吸烟可对大脑灰质结构产生影响；长期吸烟者右侧丘脑及左侧顶下叶相关的 SCN 明显不同于对照组，提示在香烟的长期刺激下发生了右侧丘脑及左侧顶下叶 SCN 重塑，可为吸烟成瘾机制的研究及戒烟的临床指导在影像方面提供更多有价值的信息。

PU-2321

Dyke-Davidoff-Masson 综合征一例 MR 特征分析

黄佳
广东省人民医院

Dyke-Davidoff-Masson 综合征(DDMS)是一种以脑损伤后偏侧大脑萎缩，并伴有同侧颅骨代偿性肥大及对侧偏瘫为特点的罕见中枢神经系统疾病，常见于胎儿期或幼儿期。临床症状包括癫痫发作、面部不对称、对侧肢体偏瘫或无力、智力低下及精神异常等。典型的影像表现有：单侧大脑半球萎缩、同侧颅骨增生、同侧鼻窦增大等[1]。本文旨在通过对一例我院确诊的 DDMS 患者的临床表现及其 MR 影像特征进行分析，增进对该病的影像特征了解，以减少漏诊、误诊。

PU-2322

阿帕替尼诱导可逆性后部白质脑病综合征 1 例报道及文献复习

罗跃胜
重庆市肿瘤医院

目的：报道 1 例阿帕替尼诱导可逆性后部白质脑病综合征（PRES），提高临床对本病的认识。
方法：报道 1 例阿帕替尼诱导 PRES，分析文献，对本病的概况、临床及影像特征做一总结。
结果：患者，女，47 岁，2 月余前于诊断为升结肠腺癌伴腹膜、右侧卵巢转移，行右半结肠根治术和卵巢肿瘤切除术，病理提示：1、(右半结肠)腺癌，Ⅱ级，伴坏死，癌组织侵及浆膜外脂肪组织，脉管癌栓（+），神经侵犯（+）。2、右卵巢、大网膜见癌累及。术后诊断为：1.升结肠腺癌 pT4bN0M1ⅣC 期 2.卵巢转移癌 3.大网膜转移癌，并予以两个疗程 XELOX+阿帕替尼化疗。患者否认高血压病史，时头颅 MRI 未见确切异常。
本次因突发头痛、恶心、视物不能，伴恶心，无呕吐，不能视物，仍有光感，急入我院求诊。6 小时后头痛加重，轻微呕吐胃液，意识障碍，双侧瞳孔 3mm，左下斜视，呼之不应，心率 88bpm，血压 223/110mmHg，呼吸 20 次/分，氧饱和度 99%。辅助检查：LDH334.00U/L；颅内 CT 平扫未见明显异常。头颅 MRI 提示：双侧额顶枕颞叶、双侧小脑半球多发斑片状异常信号影，基本对称性分布，T1WI 呈稍低信号，T2WI 呈高信号，FLAIR 呈高信号，DWI 弥散未见受限，以双侧顶枕叶及小脑半球为著。治疗上予以呋塞米利尿、硝普钠控制血压、甘露醇脱水及地塞米松激素等对症支持治疗后缓解。追问患者病史，自诉服用阿帕替尼后出现血压升高、头痛等不适，停药后症状恢复。恢复后 LDH172.00U/L，复查头颅 MRI，较前病灶完全消失；
结论：PRES 是一种罕见的临床-影像综合征，急性或亚急性起病，表现为头痛、癫痫发作、视觉障碍、意识障碍、精神异常等，影像学上以大脑后部白质改变为主。阿帕替尼诱导 PRES 临床鲜有报

道，仅见《OncoTargets and Therapy》一个案报道，PRES 病程可逆、预后较好临床医生应加深认识、及时识别及积极治疗。

PU-2323

性别差异的 DTI 脑网络图论分析研究

吕发金,吕亮
重庆医科大学附属第一医院

目的

通过 DTI 脑网络图论分析技术探究性别差异。

资料与方法

将 40 名健康志愿者（男 20 名，女 20 名）分成男女两组，在 3.0 T MR 扫描仪上行 DTI 以及 3D T1WI 扫描，获得 g、l、s、C_p、L_p、E_{glob}、E_{loc} 等网络总体属性度量评估指标。比较不同性别下各度量评估指标差异。

结果

g、l、E_{loc} 在两组间差异有统计学意义（P 均<0.05），s、C_p、L_p、E_{glob} 在两组间差异无统计学意义（P>0.05）。

结论

男女两组 DTI 脑网络均具有小世界属性。部分网络总体属性度量评估指标有性别差异。

PU-2324

不同碘浓度对比剂对头部 CT 动脉成像质量的研究

亓俊霞
天津市第三中心医院

目的：在头部 CT 动脉成像检查过程中应用不同碘浓度对比剂后会得到不同效果的成像，本次探究的主要目的就是探究对比剂浓度对成像质量的影响。

方法：选取接诊的 120 例患者，经随机数字法随机分成 A、B、C 三组，对三组患者采用不同浓度的对比剂，比较分析扫描检查的结果。

结果：A、B、C 三组的对比剂浓度不断升高，颈内动脉 CT 值、基底动脉 CT 值不断增大，成像的质量越来越高；A、B、C 三组出现不良反应的概率分别为 9.59% 、21.59% 及 35.84% ，C 组最高且明显高于 A 组，差异具有统计学意义(P<0.05) 。

结论：对比剂的浓度是影响检查扫描质量的主要因素，其浓度越高扫描质量越好但是患者出现的不良反应越多，因此应把握对比剂的使用浓度。

PU-2325

磁共振基于凸显网络静息态功能连接对终末期肾病患者的研究

胡润月,高磊,陈佩娜,吴宝林
武汉大学中南医院

目的：近年来大量研究均发现终末期肾病(ESRD)患者和健康人（HC）的重要功能连接主要是默认网络存在显著差异,而凸显网络（SN）作为默认网络及执行控制网络的调控开关在 ESRD 认知障碍机制

中的作用一直少有报道。本研究旨在通过 SN 功能连接分析,探讨 ESRD 和 HC 在 SN 功能连接的差异，找到其认知障碍的生物学标记并探究神经学机制。
方法：纳入 ESRD 患者 43 名及性别、年龄及教育程度均匹配 HC 组 43 名采集静息态功能 MRI、神经认知量表及临床实验室数据。使用 DPABI 中基于种子点功能连接方法提取 SN 功能连接矩阵,用 NBS1.2 软件比较两组的功能连接差异；用 matlab2012a 将差异功能连接作为特征向量构建基于线性支持向量分类器；用 SPSS21.0 分析病人组功能连接强度与临床指标及分类分数与神经心理学评分之间的关系，用 sobel 检验来探讨功能连接对临床指标作用于神经心理学评分的中介效应。
结果:与 HC 对比,ESRD 患者蒙特利尔认知评估量表(MoCA)中的视觉空间，命名，语言和抽象思维等认知功能评分下降，同时在焦虑、抑郁、数字连线、数字广度及数字符号转换试验得分上均较有差异(P<0.01)。ESRD 患者的 SN 连接异常，主要位于小脑，岛叶，背侧前扣带回，缘上回和额中回。分类器可将 ESRD 与 HC 区分开，准确率为 72%，ROC 曲线下的面积为 0.78。 超平面距离与数字广度试验，MoCA，焦虑，数字连线试验得分显着相关.背侧前扣带回与左岛叶的功能连接强度与红细胞相关指标呈正相关。SN 中差异性功能连接对临床实验室指标作用于神经心理学评分过程中未见明显中介效应。
结论： 凸显网络中的前岛叶、背侧前扣带回及小脑之间的连接能准确区分 ESRD 和 HC，并且能反映患者的血生化状态、执行功能和情绪调节障碍，有望作为一个潜在 ESRD 认知功能下降的早期生物学标志。需要大样本和纵向数据进一步确认其作用并确定量化标准。

PU-2326

Aberrant brain function in active-stage ulcerative colitis patients: A resting-state functional MRI study

Weijie Fan,Dong Zhang
Department of Radiology，XinQiao Hosptial， Third Military Medical University

Background: Patients with ulcerative colitis (UC) usually display cognitive impairments, such as memory loss, attention deficits, and declining executive functions, particularly during the active stage of the disease. However, the potential neurological mechanisms of these symptoms remain unclear.

Method: Forty-one patients with mildly to moderately active UC, as well as forty-two matched healthy controls, were recruited for an examination using psychological scales, cognitive function tests and resting-state functional magnetic resonance imaging (rs-fMRI). Seed points were identified via analysis of amplitude of low-frequency fluctuation (ALFF), and functional connectivity (FC) was calculated between these seed regions and other voxels in the whole brain. Correlation analyses were performed among clinical indexes, neuropsychological assessments and neuroimaging data.

Result: Compared with the healthy controls, patients with UC exhibited lower ALFF values in the bilateral hippocampal/parahippocampal (HIPP/ParaHIPP) region and higher ALFF values in the left posterior cingulate cortex (PCC.L) and left middle frontal gyrus (MFG.L). With HIPP/ParaHIPP as the seed point, the strengths of the FC in the bilateral middle frontal gyri, anterior cingulate cortex (ACC), and left caudate nucleus (CAU.L) increased; Using the PCC.L as the seed point, the strengths of the FC in the middle cingulate cortex (MCC) and the left angular gyrus (AUG.L) increased. These abnormal brain regions were mainly located in limbic system. By analyzing the

correlations between these brain regions and behavioral data, we observed a close correlation between decreased HIPP/ParaHIPP activity and memory loss; increased PCC activity and strength of FC with the AUG.L were related to dysfunction of executive function and attention network in patients with UC.

Conclusion: Based on these results, the limbic lobe might be the core of the brain-gut axis (BGA) and play an important role in cognitive impairments, suggesting potential mechanisms for cognitive impairment in patients with UC in the active stage of the disease.

PU-2327
基于图论的稳定期慢性阻塞性疾病脑结构和功能的研究

张曦
陆军军医大学第二附属医院（新桥医院）

目的：采用图论分析(graph-based analysis)的方法探究稳定期慢性阻塞性肺疾病患者功能及结构脑网络拓扑属性改变，分析稳定期 COPD 患者认知功能损伤的神经机制。
方法：选取 57 例稳定期 COPD 患者及 57 例性别、年龄及受教育程度匹配的健康志愿者（对照组），应用 MOCA、MMSE 临床量表进行认知功能情况评估，进一步对 COPD 患者认知功能障碍发生率及相关影响因素进行统计学分析。采用静息态功能磁共振(rs-fMRI) 、3.0T 磁共振进行全脑 DTI(Diffusion Tensor Imaging)技术进行功能及结构像序列扫描。通过图论方法比较功能及结构脑网络的整体和局部网络拓扑属性,并分析拓扑属性与临床变量之间的关系。
,
结果：稳定期 COPD 患者功能及结构脑网络虽具有明显"小世界"属性,但其功能、结构属性存在异常破坏。COPD 患者组全局效率、局部效率、节点度明显降低，具有统计学意义。患者组与对照组相比均显示出广泛的功能、结构连接改变，默认网络和执行控制网络内功能连接减低。而相比于对照组表现出结构-功能去耦合的趋势。

结论：稳定期 COPD 患者脑功能及结构网络表现出明显的拓扑网络属性改变，表现出结构—功能网络去耦合，稳定期 COPD 患者拓扑属性异常可能是认知功能障碍的潜在生物学标志。

PU-2328
经颅聚焦超声开放幼鼠血脑屏障后使用荧光金标记视觉神经通路

李进丹,许泽艳,王瑞,廖承德
昆明医科大学第三附属医院云南省肿瘤医院

目的：使用经颅聚焦超声（focused ultrasound, FUS）开放幼鼠视上核血脑屏障（blood brain barrier, BBB）后，采用荧光金无创、逆向标记视觉神经通路，探索活体内神经细胞的轴突转运机制。
方法：本研究获得所在医院实验动物伦理委员会批准。使用 4~5 周龄的 Sprague-Dawley（SD）雄性幼鼠 20 只，随机数字法分为实验组和对照组。实验组动物经尾静脉注入超声造影微泡后，使用

FUS 经颅辐照幼鼠视上丘，对照组则不做 FUS 处理。确定实验组幼鼠 FUS 开放视上核 BBB 的微泡剂量、FUS 作用时间以及能量大小等最佳实验参数组合。辐照后的实验组和未辐照的对照组均经尾静脉注入荧光金 0.1 mg，入血循环 1 天、3 天、7 天、14 天分别病理取材。每次取材前 3 小时尾静脉注射伊文思蓝（Evan’s blue, EB），冰冻切片中观察不同时间点荧光金在幼鼠大脑、视神经和视网膜的转运情况。

结果：（1）实验组 FUS 开放视上核局部 BBB；（2）荧光金透过 BBB 开放区域标记大脑神经元细胞；（3）随着荧光金循环时间延长，视神经和视网膜荧光金标记细胞逐渐增多；（4）实验组冰冻切片见靶向区域少量出血；（5）FUS 开放 BBB 增加了荧光金的转运速率。

结论：经颅聚焦超声联合造影微泡可无创开放视上核血脑屏障，荧光金能透过该区域标记局部的神经元细胞，随后通过跨轴突逆向转运至双侧的视神经和视网膜，提供了一种新的神经元和神经通路标记的方法。

PU-2329
急性期轻度创伤性脑损伤患者的灰质体积及认知功能改变

李逢芳
南京市第一医院

目的：探讨急性期轻度创伤性脑损伤患者(mild traumatic brain injury，mTBI)的灰质体积及认知功能的变化。

方法：选取符合入组标准的 39 例 mTBI 患者和 32 例年龄、性别及受教育程度与之相匹配的健康对照被试者作为研究对象。采用蒙特利尔认知评估量表（MoCA）对所有受试者进行认知功能评估，之后在 3.0T 磁共振仪进行常相同参数的高分辨率 3D-T1WI 序列扫描，采用 VBM (voxel-based morphometry)方法分析比较 mTBI 组与健康对照组间的脑灰质体积差异，从而发现 mTBI 患者存在显著差异的脑区。

结果：（1）与健康对照组相比，mTBI 患者组双侧额下回、右侧岛叶及左侧小脑等脑区的灰质体积明显减小，全脑灰质未见体积增大的区域。（2）与健康对照组相比， mTBI 患者的认知功能在视空间及执行能力、注意力方面显著降低。

结论：mTBI 患者的大脑灰质体积及认知功能存在异常改变，这种改变可能对于 mTBI 的诊断及预后提供一定的帮助。

PU-2330
MRI 观察复发缓解型多发性硬化患者脑内病灶穿通静脉的研究

杜思霖
重庆医科大学附属第一医院

目的 利用 3.0T MRI 3-D 增强型 T_2*加权血管成像(ESWAN)技术观察复发-缓解型多发性硬化(RRMS)患者脑内病灶穿通静脉，并分析病灶与静脉间的关系。**方法** 对 30 例 RRMS 患者组和 30 例自身免疫性结缔组织疾病患者组（其中 12 例系统性红斑狼疮，6 例硬皮病，12 例类风湿关节炎）及 30 例正常对照组行常规 MRI 和 ESWAN 扫描，ESWAN 原始图后处理所得静脉图像应用 MinIP 处理后，由 2 名有经验的医师盲法评定 RRMS 患者大脑内静脉及其主要属支和深部髓静脉的改变，并与结缔组织疾病患者组及对照组比较，分析病灶与静脉间的关系。统计学分析采用 Kruskal Wallis H 检验和 Wilcoxon 秩和检验。**结果** 30 例 RRMS 患者中，110 个侧脑室体旁病灶内“穿通静脉”，在 SWI 图像上呈 3 种表现：①病灶呈稍高信号而无明显低信号区，有异常血管区（22 个）；②病灶呈低信

号，有小血管环绕或穿行（37 个）；③病灶呈低信号，无异常血管区（41 个）；30 例自身免疫性结缔组织疾病患者组侧脑室体旁 40 个病灶呈低信号，有小血管环绕或穿行，50 个病灶呈稍高信号有异常血管区。**结论** RRMS 患者脑内病灶内穿通静脉不具有特异性。

PU-2331
弥散峰度成像预测急性一氧化碳中毒迟发脑病的价值

张艳利,郭顺林,雷军强
兰州大学第一医院

目的 探讨弥散峰度成像(DKI)对急性一氧化碳中毒（CO）迟发脑病（DNS）定量预测的应用价值。 **方法** 前瞻性收集 2016 年 11 月至 2019 年 2 月就诊于兰州大学第一医院符合急性 CO 中毒诊断患者 75 人，于中毒后 7 天内行 DKI 扫描并获得相关参数图。随访 3 月后将其分为 DNS 组（22 人）、非 DNS 组（53 人）。测量脑白质 9 个感兴趣区（ROI）各参数值，两组间各参数值比较采用两独立样本 t 检验，采用 ROC 曲线评价 DKI 参数值预测 DNS 发生的效能。**结果** ①与非 DNS 组相比，DNS 组各感兴趣区 MK、AK 及 RK 值均呈升高趋势。②DNS 组半卵圆中心前部 MK 值明显高于非 DNS 组（1.091±0.081 vs 1.029±0.064，*P*=0.001），差异有统计学意义（*P*<0.05）。③在半卵圆中心前后部（1.079±0.040 vs 1.032±0.044，*P*=0.000；1.044±0.051 vs 1.013±0.031，*P*=0.013）、胼胝体膝部（0.728±0.035 vs 0.709±0.021）、额叶（0.960±0.041 vs 0.936±0.027，*P*=0.018）及顶叶（0.751±0.021 vs 0.740±0.019，*P*=0.036），DNS 组 AK 值明显高于非 DNS 组，差异有统计学意义（*P*<0.05）。④半卵圆中心前部 AK 值预测 DNS 的 ROC 曲线下面积值最大（0.784，P=0.000），95%可信区间为 0.676～0.892，以 1.045 为临界值，诊断敏感度为 81.8%（18/22），特异度为 60.4%（32/53），阳性预测值为 46.2%（18/39），阴性预测值为 88.9%（32/36），准确度为 66.7%（50/75）。**结论** 急性 CO 中毒 DKI 的峰度参数值升高与 DNS 的发生关系密切、可以定量预测 DNS 发生。

PU-2332
腰椎 MRI 征象与急性和亚急性下腰痛的相关性研究

李瑞梅
上海交通大学附属第六人民医院

目的 ：探讨急性和亚急性下腰痛的 MRI 征象，评价其临床意义。方法 ：回顾性连续收集因下腰痛至本院就诊并行腰椎 MRI 检查患者 177 例。根据病程时间将患者分为 A 组（亚急性下腰痛组，103 例）和 B 组（急性下腰痛组，74 例），另招募 42 例无下腰痛志愿者作为正常对照组 C 组。腰痛程度依据视觉模拟评分（visual anologue scale,VAS）评定。观察 MRI 征象包括：椎间盘退变、椎间盘突出、椎间盘膨出，纤维环后方高信号、许莫氏结节、椎体终板炎、小关节退变、小关节积液、棘间韧带高信号、皮下或椎后旁肌肉水肿，小关节退变。对不同组间腰椎 MRI 征象分布行统计学比较分析。结果 ：与 C 组相比，A 组和 B 组椎间盘退变、椎间盘突出发生率较高（P<0.05）。三组间椎间盘膨出、许莫氏结节、Modic 改变无统计学差异（P>0.05）。B 组纤维环后方高信号、棘间韧带高信号、皮下或椎后旁软组织肿胀发生率均高于 A 组和 C 组（P<0.05）；A 组中小关节退变和小关节积液发生率均高于 B 组和 C 组（P<0.05）。结论 ：椎间盘退变、突出可能是引起腰痛症状持续存在的主要原因。纤维环后方高信号、棘间韧带高信号和皮下或椎后旁软组织肿胀可能是急性下腰痛患者致痛的原因；小关节退变、小关节积液可能与亚急性下腰痛有关。

PU-2333
320 排 CT 脑灌注对偏头痛患者脑血流动力学评估

尹学青[1],黄求理[1],梁超[2]
1.宁波市第一医院
2.宁波市医疗中心李惠利医院

目的：利用 320 排 CT 颅脑灌注成像技术，分析偏头痛患者血流分布及灌注特征，研究偏头痛患者及有无先兆症状与脑血流灌注的相关性，以期为偏头痛患者诊断及治疗提供有效的影像学支持。方法：收集 2015 年 1 月-2019 年 6 月于我院临床诊断偏头痛的例患者作为偏头痛组，去除严重心功能不全者。再根据发病前有无先兆将其分为有先兆组（58 名）及无先兆组（72 名），以同期 23 名健康体检者作为对照组。所有入组者进行颅脑 CT 平扫+动态增强扫描，选择听眶线为基线进行扫描，去除颅内占位、脑动脉明显狭窄者。由两名有经验的放射医师对图像进行血管 VR 重建及灌注成像，分别记录并计算两侧额叶、颞叶及枕叶大脑皮层下白质区、半卵圆中心区、丘脑相同感兴趣区的脑灌注脑血流量（rCBF）、平均通过时间（MTT）数值，分别对组内及组间进行统计学分析。结果：1.健康组及无先兆偏头痛组大脑两侧脑灌注对比均无明显统计学差异，有先兆组一侧丘脑区、额叶皮层下区 rCBF 减少、MTT 延长，两侧对比差异均有统计学意义。2.无先兆性偏头痛组较健康组一侧额叶皮层下白质区及丘脑区 MTT 延长，差异有统计学意义，其余区域灌注无统计学意义。 3.有先兆偏头痛组一侧额叶及颞叶皮层下白质区、半卵圆中心区及丘脑区 rCBF、MTT 与健康组相比均有显著统计学差异。结论：320 排 CT 颅脑 CT 灌注成像能反应偏头痛患者颅内血流动力学变化，可能影响偏头痛的先兆发生和预后，为临床诊断及治疗偏头痛提供重要依据。

PU-2334

Altered gray matter volume and white matter integrity in patients with sensorineural hearing loss: A VBM and TBSS study

Suisheng Zheng
Hefei Ping An Health Testing Center

Objective: The purpose of the present study was to detect structural changes in the brains of patients with sensorineural hearing loss (SNHL) by combining voxel-based morphometry (VBM) and tract-based spatial statistics (TBSS).
Methods: Thirty-five patients with SNHL (mean age: 39.72±1.81 years) and 23 age-matched control subjects (mean age: 39.83±1.96 years) were assessed using 3-dimensional, T1-weighted imaging and diffusion tensor imaging. TBSS and VBM analysis were performed to evaluate grey matter (GM) volume changes and white matter (WM) alternations, as measured by mean diffusivity (MD), fractional anisotropy (FA), axial diffusivity (AD), and radial diffusivity (RD).
Results: VBM showed decreased GM volume in patients with SNHL in the fusiform gyrus of the right temporal lobe and right middle occipital gyrus. TBSS revealed WM integrity changes, including decreased FA and RD and increased RD in several WM regions. However, MD showed no significant difference between patients with SNHL and age-matched controls.
Conclusion: Patients with SNHL showed smaller GM volume and WM integrity changes in several regions.

PU-2335

Abnormal Resting-state Functional Connectivity in Adolescent Patients of First-episode Major Depressive Disorder with Suicidal Ideation:Evidence from a Voxel-wise Degree Centrality Analysis

Chen Chen,Cui-ping Ren
The First Affiliated Hospital of Zhengzhou University

Objective: The aim of the present study was to investigate the alternations of functional connectivity (FC) in the brain of adolescent patients of first-episode major depressive disorder(MDD) with suicidal ideation at resting-state using the voxel-wise degree centrality(DC) method.
Methods: We analyzed resting-state functional magnetic resonance imaging data obtained from 53 first-episode, treatment-naive adolescent patients of MDD with suicidal ideation using the Beck Scale for Suicide Ideation (BSS) and from 33 healthy control subjects. Analysis of degree centrality(DC) map and the results of DC were select as the seed point to make FC calculation with the whole brain.
Results: Compared with the control group, patients showed significantly decreased FC value in
frontal_mid,supp_motor_area,insula,frontal_inf_tri,postcentral,precentral,temporal_sup and cingulum_ant. Brain regions with increased FC included
calcarine,lingual,occipital_sup,occipital_mid,cuneus and fusiform
（T=4.48,P<0.05,FWE correction）.However,the DC is not correlated with BSS.
Conclusion：DC,as a novel resting-state function MRI parameter in the voxel-wise whole-brain functional networks,might be an appealing alternative index for further studying on pathologic and neuropsychological states of first-episode MDD with suicidal ideation.

PU-2336

SMS Bold 联合 MP2RAGE 对长期冥想者脑的研究

李瑞阳,鲍海华,康东杰
青海大学医学院附属医院

目的 研究长期慈悲冥想者脑结构和功能的改变。 **方法** 招募年龄、性别、冥想年限(3 年以上）并世居于青海的长期慈悲冥想者 12 例及健康藏族志愿者 12 例，应用 Prisma 3.0T 磁共振扫描仪对所有受检者进行脑结构及脑功能序列的图像采集，应用基于体素形态学(VBM)、局部一致性(ReHo)和低频振幅(ALFF)等方法处理并进行组间对比，提取差异脑区灰质体积、ReHo 值、ALFF 值；**结果** 与正常组相比，长期慈悲冥想者在双侧颞上回，右侧枕中回，左侧中央前回及右侧上部中央后回的灰质体积增加；ReHo 值增加的脑区有左侧丘脑及左侧小脑 4/5 区；ReHo 值减低的脑区有右侧岛盖部额下回，右侧三角部额下回，右侧额中回，左侧背外侧额上回及左侧内侧额上回。ALFF 值增加的脑区有左侧海马旁回，左侧颞下回，左侧小脑 4/5 区，及双侧小脑蚓部 4/5 区；ALFF 值减少的脑区有右侧额中回及右侧三角部额下回。**结论** 长期慈悲冥想者在多个脑区灰质体积

增加、ReHo 值及 ALFF 值的变化，长期冥想者和正常组脑结构和功能的差异可能为冥想辅助治疗临床神经疾病提供了相应的证据。

上颈椎复杂畸形手术前后的 MRI 诊断与评价

罗道首,李向东
中国人民解放军南部战区总医院

摘要 目的 分析复杂性上颈椎畸形经口手术前后的 MRI 图像，探讨 MRI 成像对其手术方式的选择及手术效果判断的价值。 **方法** 收集 2008 年 12 月至 2010 年 2 月收治的复杂性上颈椎畸形患者 60 例，男 38 例，女 22 例，术前均行 X 线、CT、MRI 检查，根据影像学分为发育不全畸形 29 例，分节不全畸形 21 例，结构畸形 10 例，其中 15 例伴有脊髓前方受压、变性，均采用经口前入路齿状突切除、减压，然后内固定、取自体松质骨植骨融合，术后常规行 MRI 检查。**结果** 所有患者均顺利完成手术，未出现脊髓血管损伤等严重并发症。60 例患者术后 MRI 成像显示内固定在位，寰枢椎复位，脊髓受压情况改善，36 例随访患者中，原上颈椎局部疼痛、活动受限等情况有 30 例明显改善或消失。**结论** MRI 成像可为上颈椎畸形的原因、手术方式的选择、脊髓受压情况及手术效果的判断、术后的恢复提供客观依据。

1.中国人民解放军北部战区总医院
2.锦州医科大学中国人民解放军北部战区总医院研究生培养基地

目的 通过影像学检查预测脑外伤行去骨瓣减压术（DC）后新发出血或出血量扩大的危险因素，并提高预测出血扩大或新发出血准确率。**方法** 收集 197 例我院收治的脑外伤行 DC 的患者，记录患者临床资料（年龄、性别、出血部位、中线是否移位等），通过 CT 检查图像计算术前、术后血肿量。t 检验分析变量（术前体征），Logistic 回归分析患者术前体征、血肿量的多少与术后出血量扩大或新发出血的关系，ROC 曲线分析脑外伤 DC 后出血扩大或新发出血预测效能。**结果** t 检验提示术前血肿量大于 20cm³、伴有硬膜下血肿与脑出血扩大或新发出血有关（$P<0.05$），与年龄、性别、中线移位等无关（$P>0.05$），Logistic 回归分析提示术前伴有硬膜下血肿（$P<0.001$）和术前血肿量大于 20cm³（$P<0.001$）为出血扩大或新发出血的危险因素，根据 ROC 曲线得出术前血肿量大于 20cm³（AUC=0.788）比术前伴有硬膜下血肿（AUC=0.839）模型效果好，患者同时伴有硬膜下血肿和血肿量＞20cm³ AUC 面积最大（AUC=0.914），有较强的预测效能。**结论** DC 前伴有硬膜下血肿和术前血肿量大于 20cm³ 是出血量扩大或新发出血的危险因素，单一血肿量大于 20cm³ 比硬膜下血肿有更高的危险性，二者同时存在风险最高。

Brain GABA Levels by 1H-MRS in Insomnia Disorder

Binghu Jiang,Zhiwei Guo,Fuzhou Zhang,Qiwen Mu
Nanchong Central Hospital

Objective: Proton magnetic resonance spectroscopy (^{1}H-MRS) can non-invasively determine GABA levels in human brain, which plays an important role in the etiology and maintenance of insomnia disorder. However, current evidences are of contradiction. Our aim was to assess brain GABA levels by ^{1}H-MRS in naïve patients with insomnia disorder.
Methods: We performed a comprehensive literature search for relevant ^{1}H-MRS studies comparing brain GABA levels between patients with insomnia disorder and healthy controls. We pooled separate effect size estimates (Hedge's *g*) across trials for outcome measures of GABA/Cr levels using a meta-analysis according to the Cochrane guideline.
Results: A total of 72 patients with insomnia disorder and 73 healthy controls were enrolled. Insomnia patients exhibited significantly lower GABA level compared with healthy controls only in anterior cingulate cortex (ACC) with Hedges' *g* of -0.50 (95% CI: -0.95, -0.06) (p = 0.027), and heterogeneity was not of significance (I^2 = 28.0%, p = 0.239). The global brain average weighted GABA level (Hedges' *g*, -0.24; 95% CI: -0.50, 0.01)showed a reduced trend in insomnia patients (p = 0.063).
Conclusion: Brain GABA levels probed by ^{1}H-MRS show a reduced trend in patients with insomnia disorder. It is essential to investigate the spatial heterogeneity and dynamic change of brain GABA levels in the future.

PU-2340
3D Cube 技术在帕金森病患者 DBS 术前丘脑底核 MRI 定位扫描的应用研究

刘新云,娄昕,李金锋,余雯,胡坚兴
中国人民解放军总医院第一医学中心

目的 探讨 3D T2 FLAIR Cube 序列对帕金森病(PD)患者深部脑电刺激术（DBS）术前显示丘脑底核(STN) 的价值。**方法** 采用 3.0T MRI 对 12 例正常人及 12 例 PD 患者 DBS 术前进行扫描，其中 3D T2 FLAIR Cube 序列的 TR=6300ms，TE=105ms，矩阵=256X256，层厚=0.9mm，层间距=0 mm，对 12 例正常人与 12 例 PD 患者采集的 3D Cube 序列进行对比，再对 12 例 PD 患者采集的 3D Cube 与以往定位扫描序列进行对比，用两种对比结果进行半定量分析 3D Cube 序列对 STN 显示的情况，术后进行 1.5T MRI 与 CT 扫描复查并确认患者微电极记录(MER） 电极探针位置。**结果** 3D Cube 序列能完成高质量、高效率的薄层采集，一次采集可任意角度观察图像，半定量评分高于常用的 SPACE 和 T2 FLAIR 序列，并与患者术中 MER 确定的电极探针位置有较高的一致性。**结论** 使用 3D Cube 序列明显缩短患者术前检查时间，可以准确预定靶点位置，提高定位精确度和手术效率。

PU-2341
针刺合谷穴激发前额叶 BOLD 信号与 GABA 含量变化的多模态 fMRI 研究

孙黎,陈媛媛,方继良,洪洋,王寅,许可,李小娇,陈丽梅,张国雷

中国中医科学院广安门医院

目的：“面口合谷收”的脑机理尚未明确，本课题通过研究针刺右侧合谷穴时前额叶脑皮质血流的 fMRI BOLD 信号与此皮层内神经递质 GABA 变化的关系，探索针刺右侧合谷穴的脑作用机制。**方法：**本研究共招募到 79 名青年健康志愿者，男 24 名，女 55 名，平均年龄（24.42±1.44）岁。志愿者接受两次 fMRI-MRS 扫描，手针针刺（实验组）和 Von Frey 纤毛针表皮刺激（对照组）右侧合谷穴，两种刺激方式顺序随机分配，两次间隔 1 周。扫描序列含任务前静息态 BOLD、MRS，任务态 BOLD、MRS 扫描；感兴趣区（VOI）定位于双侧前额叶内侧皮层。fMRI 数据采用 SPM12、REST、Brainnet 软件进行处理，MRS 数据采用 LC Model 软件处理；随后行组内分析、组间比较，计算 VOI 内 BOLD 信号定量值，最后行 SPSS 23.0 统计分析 BOLD 信号与 MRS 含量变化的关系。**结果：**实验组与对照组均诱发了大脑皮层广泛 BOLD 负激活信号，主要集中在中线区域脑皮层（包含前额叶内侧皮层）和边缘叶脑区，对照组诱发的信号较少而弱。两组前额叶内侧皮层 ROI 内的 BOLD 信号变化与基线 GABA、任务后 GABA 及 GABA 差值均未发现明显相关性（实验组：r= -0.07，-0.08，0.04；p=0.57，0.88，0.74；对照组：r= -0.10，-0.09，0.01；p=0.43，0.46，0.96）。**结论：**针刺较 Von Frey 纤毛针表皮刺激合谷穴激发了更强更广的包含前额叶内侧皮层的边缘叶-旁边缘叶-新皮层网络负激活效应，但两种刺激下前额叶内侧皮层 VOI 区域内的 BOLD 信号与 GABA 含量变化未发现明确相关，需要进一步在疾病状态下研究证实。

PU-2342

腰椎穿刺活检技术及安全注意事项

黄俊成,李向东
中国人民解放军南部战区总医院

目的：探讨 CT 引导下经皮椎体穿刺活检技术的方法及安全措施。
方法:对患者进行术前相关检验、影像等检查及准备，行 CT 扫描，对病变椎体进行定位测量，再 CT 引导下进行定位并穿刺。整理椎体穿刺活检病例共 23 例，均成功穿刺取材。其中，颈椎 2 例，胸椎 5 例，腰椎 12 例，骶椎 4 例。
结果：23 例患者均成功穿刺取材，穿刺活检阳性率为 87%，假阳性率为 13%。23 例患者均未发生并发症。
结论： CT 引导下椎体穿刺活检术具有创伤小，安全可靠，可多次多处取材等优点，只需局部麻醉即可完成操作，成为柱病变活检的理想方法。CT 引导下活检，实现了从活体组织取材病例检查，是确定病变性质的金标准，对临床手术、治疗提供重要的指导作用。

PU-2343

HIF-1α-Notch 通路在急性癫痫神经发生机制中的研究

李玉爽
武汉大学人民医院

目的:探究 HIF-1α 在急性癫痫神经发生分子机制中的作用以及 Notch 信号通路是否参与该过程。
方法:采用匹罗卡品 SD 大鼠癫痫模型，将动物随机分为四组：对照组，癫痫组，癫痫+2ME2 组，癫痫+DAPT 组。
1.用 Western Blotting，PCR 以及免疫组化法测定 HIF-1α 在急性癫痫中的表达情况。
2.用免疫组化和免疫荧光的方法通过测定急性期癫痫大鼠脑组织神经元凋亡和丢失，内源性神经干细胞的增殖和分化情况来评价 HIF-1α 和 Notch 信号通路在癫痫神经发生过程中的作用。

3. 采用免疫共沉淀和免疫荧光共定位的方法来探究 HIF-1α 与 Notch 信号通路的关系。
结果:1.HIF-1α 在急性癫痫中表达上调,且具有时间依赖性。
2.上调的 HIF-1α 能够调节急性癫痫的神经发生包括神经元丢失，神经干细胞增殖和分化，该过程需要 Notch 信号通路的参与。
3.免疫共沉淀结果表明 HIF-1α 在癫痫中主要通过与 NICD 直接结合来激活 Notch 通路。
结论:我们的结果表明 HIF-1α -Notch 信号通路能够促进急性癫痫的神经发生，该通路如果被阻断，神经发生就会减少。该研究为癫痫治疗提供了新的治疗靶点。

PU-2344

MRS 在脑震荡综合征中的应用

武刚
复旦大学附属中山医院青浦分院

目的 用绝对定量对脑震荡患者进行枕叶皮质质子 MR 波谱(^{1}H-MRS)研究，探讨脑震荡后脑代谢物的变化。**材料与方法** 对轻度脑外伤，符合脑震荡临床诊断的 20 例患者进行研究，20 名正常志愿者作为对照组，行常规 MRI 平扫及 ^{1}H-MRS 检查。主要观察的代谢物指标为 N-乙酰天冬氨酸(NAA)、胆碱(Cho)、肌酸(Cr)等，采用后软件进行代谢物绝对浓度定量，获取 NAA、Cr、Cho 浓度，以及 NAA/Cr、Cho/Cr 比值。**结果** 与对照组对比，脑震荡组 NAA 浓度、NAA/Cr 降低，差异有统计学意义($P<0.05$)，Cho 浓度和 Cho/Cr 比值略升高，无统计学意义。**结论** ^{1}H-MRS 能够反映脑震荡患者损伤后脑代谢物的变化，为脑震荡的诊断提供相应的影像学依据。

PU-2345

扩散张量成像技术关于非神经精神性狼疮研究的系统评价

王伊玲,曾自三
广西医科大学第一附属医院

目的：神经精神性狼疮（Neuropsychiatric systemic lupus, NPSLE）是系统性红斑狼疮常见的并发症之一，其预后较差[1-2]，然而无神经精神症状的 SLE 患者（非 NPSLE）患者亦可能存在脑损伤[2-3]。研究表明扩散张量成像（Diffusion Tensor Imaging, DTI）能够实现对非 NPSLE 脑部微结构损伤的可视化[2-3]。本文旨在对弥散张量成像技术关于非神经精神性狼疮的研究进行系统回顾。
方法：系统回顾 2008 年 1 月至 2019 年 3 月期间发表的应用弥散张量成像技术对非神经精神性狼疮的研究以描述其脑部微结构改变的一些共同特征。
结果：本研究纳入了 15 篇文章[3-17]，大部分的研究都发现相比于健康对照组，非 NPSLE 组的平均扩散系数（Mean Diffusivity, MD）、轴向扩散系数（Axial Diffusivity,AD）及径向扩散系数（Radial Diffusivity, RD）升高而各向异性分数（Fractional Anisotropy, FA）下降，这提示非 NPSLE 组脑白质发生了轴突变性、脱髓鞘改变及细胞内环境的紊乱等改变[3-16]。FA 值的下降及 MD 值的升高被大部分的研究证实集中于胼胝体、双侧后扣带回、钩状束及额叶皮层下白质[3-16]，关于 DTI 的数据后处理技术，较多研究采用的是基于纤维骨架的空间统计分析（Tract-based spatialstatistics, TBSS），但在 Xu 等及 Zhao 等[15,17]采用基于连通性的分析来研究非 NPSLE 白质网络的拓扑组织发现其白质网络结构中断可能会导致认知障碍，可见这种方法在今后 SLE 脑部改变的机制学研究方面十分有前景。

结论：无神经精神症状的 SLE 患者（非 NPSLE）已存在脑微结构的损伤，弥散张量成像技术（DTI）在能敏感地检测出这种异常改变。

PU-2346

毁损梯度在消除颅脑 MRI 中 FID 伪影的应用

区杰浩
广东省人民医院

目的：研究毁损梯度在消除 FID 伪影中的作用。
材料和方法：收集本院 2019 年 3-4 月的头颅 MRI 检查 50 例，其中，男 28 例，女 22 例，年龄：8-92 岁。采用飞利浦 Ingenia3.0T 磁共振成像仪，序列为 T1WI-IR，FOV：230mm×200mm，TR/TI/TE=2000/800/20ms，毁损梯度参数：fid reduction = default（不施加） / strong（施加），同一个被检者的序列其余参数相同。每个被检者均行常规 T1WI-IR 及实验 T1WI-IR 序列扫描，对常规序列（不施加毁损梯度）与实验序列（施加毁损梯度）所得图像的伪影情况、SNR、扫描时间等进行分析。分析软件为 spss19.0。
结果：由 2 位诊断医师及 2 位技师对图像质量进行评分，伪影明显为 0 分，伪影轻微为 1 分，无肉眼可辨伪影为 2 分。被检者为 50 例，常规序列：0 分的为 48 例，1 分的为 2 例，2 分的为 0 例；实验序列：0 分的为 0 例，1 分的为 0 例，2 分的为 50 例。
常规序列（不施加毁损梯度）与实验序列（施加毁损梯度）所得 T1WI-IR 图像的伪影情况有统计学意义，SNR 有无统计学意义，扫描时间无统计学意义。
结论：实验序列（施加毁损梯度）所得图像的 FID 伪影较常规序列（不施加毁损梯度）明显减少甚至消除。说明施加毁损梯度，在消除 FID 伪影中的作用是肯定的。施加毁损梯度，虽然在信号采集时会采集更多的噪声，使得图像的 SNR 有所下降，但是这种下降是轻微的，肉眼几乎不能分辨出来，对诊断并不产生影响。同一被检者，实验序列（施加毁损梯度）与常规序列（不施加毁损梯度）的扫描时间相同，证明施加毁损梯度并不会增加序列的扫描时间，不会增加被检者的 SAR，不会对日常工作增加负担。对常规 T1WI-IR 序列施加额外的毁损梯度，可以很好地消除 FID 伪影，对图像的 SNR 影响轻微，而且不增加扫描时间，值得在日常工作中推广使用。

轻度创伤性脑损伤定量磁化率成像研究

张雨[1],李伟[1],刘伟明[1],马军[1],张雨[1],李伟[1],刘伟明[1],马军[1],张雨[1],李伟[1],刘伟明,马军[1],张雨[1],李伟[1],刘伟明[1],马军[1]
1.首都医科大学附属北京天坛医院
2.首都医科大学附属北京天坛医院
3.首都医科大学附属北京天坛医院
4.首都医科大学附属北京天坛医院

目的：通过 QSM 研究 mTBI 患者脑皮层下白质及深部灰质核团的铁含量变化，预测 QSM 对 mTBI 临床诊断及预后评估的潜在价值。
资料与方法：本研究前瞻性收集 2017 年 10 月 1 日至 2018 年 12 月 31 日期间就诊于北京天坛医院“轻度创伤性脑损伤”门诊、符合收录标准患者 15 人。通过 RPQ 评估 mTBI 患者脑外伤后继发症状

的严重程度。采用 3T 磁共振扫描技术得到 T1WI 和 QSM 图像，根据 T1WI 的解剖定位，于 QSM 上手动勾画感兴趣区 ROI，为双侧尾状核头、壳核、苍白球、丘脑、红核、黑质、额、顶、颞叶皮层下白质，分别测量以上 ROI 的磁敏感值。同时招募 15 名性别、年龄相匹配的健康人群为对照组，采用相同的扫描、勾画方法，并且选定相同的 ROIs 得到其磁敏感值。统计分析采用 SPSS 统计学分析软件。协方差分析（年龄为协变量）和曼惠特尼 U 检验比较 mTBI 组与对照组脑铁含量差异，P<0.05（Bonferroni 校正）有统计学差异。多元线性回归分析通过调整年龄、创伤时间研究患者脑铁与 RPQ 分数关系，分析脑铁对 mTBI 后继发神经退行性症状的独立作用大小。

结果：mTBI 组与对照组相比，左侧丘脑(0.0203±0.0117 vs 0.0128±0.0061)、右侧黑质(0.0923±0.0225 vs 0.0764±0.0180)磁敏感率增加，左侧额叶皮层下白质（-0.0251±0.0086 vs -0.0167±0.0106）磁敏感率减低，差异具有统计学意义（P=0.039，P=0.039，P=0.011）。左侧苍白球磁敏感率与 RPQ 分数呈负相关(P=0.02, β=-586.929)。

结论：mTBI 患者左侧丘脑、右侧黑质磁敏感率增加、左侧额叶皮层下白质磁敏感率减低，左侧苍白球磁敏感率与 mTBI 后临床症状的严重程度呈负相关，提示 QSM 为预测 mTBI 后神经退行性改变风险的潜在生物学指标之一。

PU-2348
基于扩散张量成像技术的双相障碍患者脑白质纤维束异常的研究

王菊蓉[1],邓凤[2],钟舒明[3],陈观茂[1],龚佳英[4],黄瑞旺[5],贾艳滨[3],黄力[1],王颖[1]
1.暨南大学附属第一医院医学影像中心
2.爱尔兰 都柏林圣三一学院心理学系全球大脑健康研究所
3.广州市天河区暨南大学附属第一医院精神心理科
4.中山大学附属第六医院放射科
5.华南师范大学心理学院脑研究与康复研究所

目的 探讨处于抑郁期的双相情感障碍（Bipolar Disorder, BD）患者白质纤维束是否发生变化。**方法** 选取 42 名未用药的 BD 抑郁期患者和 59 名年龄、性别和右利手相匹配的对照者接受 DTI 检查，根据现有的白质纤维束图谱，将大脑白质组织分割为 20 条公认存在的粗大纤维束，然后计算每个被试的每条白质纤维束的四项平均扩散属性，采用非参数置换检验（置换次数 10000 次）来探测两组被试在这 20 条白质纤维束上扩散指标的差异。**结果** (1)双相障碍组左侧钩束 FA 值(0.40 ± 0.01)低于对照组(0.41 ± 0.01, p = 0.001)。(2)双相障碍组胼胝体辐射线额部 FA 值(0.36±0.02)低于对照组(0.38 ± 0.02, p < 0.001)。(3)双相障碍组左侧钩束 RD 值 (6.57e-4 ± 2.41e-5)高于对照组(6.40e-4 ± 2.42e-5, p = 0.0017)。**结论** 本研究结果表明处于抑郁期的双相障碍患者钩束及胼胝体辐射线额部存在白质完整性破坏。

PU-2349
颈源性头痛患者静息态脑功能磁共振局部一致性研究

方可薇
川北医学院附属医院

目的：应用静息态脑功能磁共振局部一致性方法探究颈源性头痛发生的中枢机制以及病人脑区的改变程度。**方法：**采用 GE 3.0T 磁共振对 13 例颈源性头痛患者（Cervicocogenic headache, CeH 组）和 13 例健康志愿者（health control group，HC 组）进行静息态脑功能磁共振扫描。再利用后处理软件进行数据处理统计。并将 CeH 组有差异脑区的局部一致性值（Regional homogeneity ，ReHo 值）与患者视觉模拟评分（visual analogue scale，VAS）及病程进行相关分析。**结果：**CeH 组与 HC 组相比，ReHo 值增高的脑区有双侧楔前叶、左侧胼胝体压部、左侧背侧

丘脑、左侧海马旁回、右侧岛叶、右侧枕中回以及双侧小脑半球；ReHo 值降低的脑区有：双侧额上回-额中回-前扣带回、右侧中央后回、右侧楔前叶-后扣带回、右侧颞中回、左侧枕下回。且 CeH 组差异脑区 ReHo 值与 VAS 评分及病程之间没有相关性。**结论：**颈源性头痛是累积多个脑区的病理状态，涉及情感、记忆、认知等多个方面。

PU-2350

Mass in the encephalomalacia:Intracranial posthemorrhagic granuloma--an veiled disease?

Hao Chen
Shanghai Ninth People's Hospital, Shanghai JiaoTong University School of Medicine

AIM:
Mass in the encephalomalacia is uncommon and not well understood.We retrospectively investigated the clinical profiles and neuroimaging data of patients with Mass in the encephalomalacia
METHODS:
From 2011 to 2018,all patients who had brain MRI examinations and diagnosed with encephalomalacia at our hospital were reviewed.Mass inside the site of encephalomalacia were identified after review and their data were retrospectively analyzed.
RESULTS:
3 patients were found to have mass in the encephalomalacia,all with well-known history and complete clinical and radiological follow-ups confirmed their stablity.though with different clinical profiles,Mass in the encephalomalacia of all 3 cases have similar MRI manifestations. Axial DWI image displays the hyperintensity of the lesion with associating low ADC map.FLAIR MR images demonstrates the hyper signal intensity of lesion similar with encephalomalacia gliosis.
CONCLUSION:Mass in the encephalomalacia may be posthemorrhagic granuloma and have characteristic MRI manifestations. It is a disease still needing unveiling and It's a leave-alone lesion and can be monitered.

PU-2351

建立大鼠脑放射性坏死模型的初步探索及磁共振形态学测量、ADC 值测量在放射性损伤检测中的应用价值

刘刚
解放军总医院第一医学中心放射诊断科

目的：通过电子线照射、陀螺刀照射等方法建立磁共振扫描可以检测出的大鼠放射性脑坏死模型。并通过磁共振常规扫描、弥散加权成像并与病理结果对照，验证大鼠放射性脑损伤的存在。
材料和方法：清洁级 Wistar 大鼠，麻醉后医用直线加速器 5mm 直径电子线半球照射 160Gy（5 只），顶叶局部照射 80Gy（5 只）；CT 扫描定位，数据传输至陀螺刀立体定位系统，左侧顶叶皮层靶点陀螺刀伽玛射线 80Gy 照射（3 只），60Gy 照射（7 只）。伽玛射线照射后 1 周、5 周分别行常规磁共振扫描及磁共振弥散加权成像扫描。

结果：直线加速器 160Gy、80Gy 照射，大鼠存活期约 7-14 天，照射后 1 周 MRI 显示大鼠全脑明显萎缩。伽玛射线 80Gy 照射，大鼠未存活，60Gy 照射均存活。照射后 1 周常规磁共振扫描及 DWI 扫描未见明确异常。第 5 周常规磁共振扫描可见皮层厚度明显变薄，平均（1.50 ± 0.01）mm（n = 7），与正常同月龄大鼠比较 1.71 ± 0.02mm（n = 7），差异具有统计学意义（P <0.05）。5 周后，弥散加权成像照射靶点区 ADC 值（0.643 ± 0.042）×10^{-3} mm^2/s，对称的对侧剂量稍低区 ADC 值（0.701 ± 0.037）×10^{-3} mm^2/s，与照射前相应区域的 ADC 值（0.857 ± 0.012）×10^{-3} mm^2/s 比较，均具有统计学差异（P<0.01）。病理示照射靶点区皮层结构紊乱，细胞肿胀，血管周围间隙扩大，可见慢性炎细胞浸润（以淋巴细胞为主）。
结论：电子线或伽玛射线照射大鼠，单次最大剂量不能超过 80Gy。伽玛射线 60Gy 剂量照射大鼠均可存活，常规磁共振扫描示皮层萎缩，弥散加权成像示 ADC 值降低，可以作为放射性脑损伤的诊断依据。

PU-2352
静息态低频振幅评估轻微型肝性脑病的临床应用价值

潘磊[1],汪涛[2],王建萍[2],戚乐[2]
1.杭州市第一人民医院分院
2.杭州师范大学附属医院

目的 利用静息态脑功能成像，探索肝硬化轻微型肝性脑病（MHE）患者相关脑区低频振幅（ALFF）值的变化。 **方法** 搜集实验组肝硬化 MHE 患者 20 例，对照组健康人 20 例。应用 SPSS 19.0 软件对 MHE 组与健康对照组的性别、年龄、教育年限、数字连接测试-A（NCT-A）和数字符号试验（DST）进行统计检验。采用 GE 3.0T 磁共振扫描仪行 resting-state fMRI 扫描，应用基于 Matlab 环境下运行的 rest-plus 软件对扫描得到的图像进行后处理，使用双样本 t 检验，统计分析两组间 ALFF 值的差异。 **结果** 在双样本 t 检验中，NCT-A 和 DST 的差异有统计学意义（P< 0.05）。静息态脑功能磁共振成像的研究显示，与健康对照组对比，MHE 组的右侧眶部额下回、左侧直回、右侧三角部额下回、左侧颞中回、左侧脑岛、左侧颞下回的 ALFF 值降低（P<0.05），而双侧楔叶、右侧小脑上部、右侧中央后回、右侧颞上回、右侧中央前回、右侧缘上回、右侧顶上回的 ALFF 值升高（P<0.05）。 **结论** MHE 会潜在改变大脑的认知功能，自发性脑活动的改变可能是肝硬化 MHE 患者出现相应临床表现的神经病理生理学基础。

基于体素分析的动脉自旋标记技术在针刺对阿尔茨海默病模型大鼠脑血流量成像研究

杨玉婵,谭文莉,成建明,詹松华
上海中医药大学附属曙光医院

摘要：目的 应用动脉自旋标记(ASL)技术研究中医针刺治疗阿尔茨海默病后脑组织康复的影像学生物标记。**方法** 对 AD 大鼠随机分成正常组、假手术组、模型组、针刺组，每组 10 只。Meynert 核注射微量 Aβ1-42 制备阿尔茨海默病模型。针刺百会、太溪、足三里，每次治疗 30min，每天 1 次，20 次为一个疗程，共治疗 4 个疗程。各组大鼠模型均于干预前、干预即刻、干预后 4 个疗程进行头颅 ASL 检查，应用基于体素分析技术观察各组相同时间点局部脑血流量特征，并用三维连续动脉自旋标记技术分析针刺组不同时间点全脑平均脑血流量变化。**结果** 针刺组与正常组、假手术组、模型组各组间全脑平均脑血流量差异有统计学意义（P<0.05）。基于体素分析发现，静息状态

下针刺组，与干预前相比，干预即刻 CBF 增加主要分布于右顶叶皮层，4 个疗程后 CBF 增加主要分布于后扣带回。**结论** 应用基于体素分析的 ASL 技术发现，提示此技术为中医针刺治疗阿尔茨海默病提供影像生物标记，为针刺治疗机制提供了崭新的研究途径。

甲状腺相关性眼病病理、临床与影像学

丁忠祥
杭州市第一人民医院

目的：分析甲状腺相关性眼病的病理、临床及影像学表现，以提高对该病的认识。
材料与方法：收集 38 例甲状腺相关性眼病患者的病理、临床及影像学资料，对其进行总结分析，并进行文献综述。
结果：甲状腺相关性眼病目前发病机理尚不完全明确，其病理、临床与影像学表现具有一定的相关性，甲状腺相关性眼病多由 GRAVES 病引起，但是也会发生在甲状腺功能正常甚至甲状腺功能低下的患者。
结论：全面认识甲状腺相关性眼病的病理、临床、影像及可能的发病机理，对该病的诊治具有重要的价值。

2.云南省第二人民医院

【摘要】目的：探讨 MR 常规序列灰度直方图分析对眶区黑色素瘤复发的风险评估。方法：回顾性分析经病理证实的 40 例眶区黑色素瘤，术后随访时间为 0.5-6.0 年，依据是否复发分为复发组和无复发组，使用 Mazda 软件在常规 MR 序列图像上勾画提取 ROI 并进行灰度直方图分析，对两组病变直方图参数进行统计学分析，比较两组病变差异有统计学意义的特征参数，绘制其 ROC 曲线，评价其对眶区黑色素瘤复发风险的诊断效果。结果：在平扫 T1WI、T2WI、DWI 及 TIWI 矢状增强四个序列灰度直方图分别提取的 9 个特征性参数中，T1WI 直方图的 9 组病变参数差异均有统计学意义，其中第 50 百分位数诊断价值较大，ROC 为 0.985，最佳临界值为 1267，敏感度为 100%，特异度为 88.46%；T2WI 直方图其中 2 组病变参数差异有统计学意义，其中方差诊断价值较大，ROC 为 0.755，最佳临界值为 12152，敏感度为 100%，特异度为 57.69%；DWI 直方图其中 5 组病变参数差异有统计学意义，其中方差诊断价值较大，ROC 为 0.885，最佳临界值为 10489，敏感度为 92.86%，特异度为 84.62%；T1WI 增强直方图其中 2 组病变参数差异有统计学意义，其中方差鉴别价值较大，ROC 为 0.876，最佳临界值为 36282，敏感度为 92.86%，特异度为 76.92%。结论：常规 MR 序列图像灰度直方图可以作为眶区黑色素瘤复发风险评估的重要辅助手段，其中 T1WI、DWI 及 TIWI 增强直方图在鉴别肿瘤复发中的价值较高。

PU-2356

动态增强 MR 对眼眶海绵状血管瘤的诊断价值

张瑞玲
上海交通大学附属第六人民医院

目的 应用动态增强 MR 扫描对眼眶海绵状血管瘤进行血液动力学分析，确定肿瘤内的供血特点。
方法 回顾性的分析 2011 年 4 月至 2012 年 12 月期间病理组织学检查确诊的海绵状血管瘤 26 例，除进行常规影像检查外，均进行动态增强 MRI 扫描。男性 16 例，女性 10 例，右眼 12 例，左眼 14 例；年龄 18-55 岁，平均 40.16 岁。使用 1.5 超导 MR 机，头颅线圈采集。MR 平扫包括：横断面 T1WI、T2WI 及 T1WI 矢状和 T2WI 冠状面扫描，层厚 4mm。增强检查为使用对比剂后立即连续动态扫描，而后 30s、1min、3mins、5min 和 10min 进行扫描，以观察病变的动态变化状况。
结果 26 例海绵状血管瘤动态增强 MR 扫描检查发现：在注射造影剂后 30s 血管瘤边缘或内部出现点状高信号影，1min 后显示点状增强区域扩大；到 3min 时达到 30％～50％被强化，在 5min 时血管瘤内部 60～80％以上强化，在 10min 时有 20 例患者血管瘤内部呈均匀一致强化，以上增强特点即所谓“渐进性强化”。
结论 利用动态增强 MR 扫描对眼眶海绵状血管瘤进行血液动力学分析，可以反映出肿瘤内部的血液供应和分布情况，揭示肿瘤内部 “渐进性强化”的特点，可提高诊断的正确性，对手术治疗具有指导意义。

基于离体头颅标本眼眶扫描探讨 ADMIRE 重建联合低管电压扫描技术的可行性

唐滢,曾宪春,王荣品
贵州省人民医院

目的 基于离体头颅标本，探讨 Force CT ADMIRE 重建技术结合低管电压在眼眶扫描中的可行性。方法 用西门子 Force CT 对 10 例离体头颅标本行眼眶 CT 平扫，每例均行 100Kv+FBP 重建扫描、90Kv+ADMIRE-3 级重建扫描、80Kv+ADMIRE-3 级重建扫描、70Kv+ADMIRE-3 级重建扫描扫描。扫描流程：头先进；摄眼眶侧位定位像，扫描范围：眼眶上缘至下缘。扫描条件：打开 CARE Dose4D，关闭 CARE Kv，分别固定 Kv 在 100Kv、90Kv、80Kv、70Kv，参考管电流均为 88mAs；扫描完成后用分别行滤波反投影（FBP）重建以及 ADMIRE-3 级重建，每例眼眶均获得 4 组数据。扫描后图像传入 sngio.via 后处理系统进行常规三维重建处理分析。 结果 用单因素方差分析，与常规扫描组比较，90Kv、80Kv、70Kv 扫描 ADMIRE-3 级重建三组辐射剂量间有统计学差异（P＜0.05），进一步两两比较（SNK-q 检验），组间均存在统计学差异（P＜0.05），与常规扫描组比较 80kV、70kV 扫描辐射剂量分别降低 51.26% 、70.59%。四组数据间眼球玻璃体及框内脂肪平均 CT 值无统计学差异（P＞0.05），噪声、SNR、CNR 有统计学差异（P＜0.05）；通过进一步计算，与常规扫描组比较，80kV、70kV 扫描 ADMIRE-3 级重建组玻璃体噪声增加 10.21%、29.73%，SNR 降低 6.8%、19.98%，CNR 降低 8.6%、20.6%。对于软组织病变，可以优先选择 80Kv 剂量组扫描观察，有效剂量降低 51.26% ，对病变及细节显示较好。对 于骨质病变，可以优先选择 70Kv 剂量组扫描观察，ED 仅为 0.035mSv，有效剂量降低 70.59%，但对粘膜及软组织病变的显示稍差，应用受到一定限制。

PU-2358

急性眼眶炎性病变 CT、MRI 表现

王飞,郭珊熹,张程程
海南省人民医院

目的 分析急性眼眶炎性病变的 CT、MRI 表现并探讨其临床价值。**方法** 回顾总结 40 例眼眶炎性病变患者的 CT、MRI 征象。眼眶 CT、MRI 检查 12 例,仅行眼眶 CT 检查 28 例。**结果** 按病因分类:鼻窦源性 22 例,外伤源性 12 例,肝克雷伯杆菌感染 2 例,糖尿病 4 例。按累及结构分类:骨膜下脓肿形成 5 例,肌锥内间隙脓肿 1 例,肌锥外间隙炎症 4 例,眶隔前炎症 3 例,海绵窦炎 3 例,弥漫性炎症 7 例,内源性眼内炎 3 例,眼球筋膜炎 5 例,泪囊炎 2 例,泪腺炎 7 例。眼眶炎症影像特点取决于受累结构及范围,表现为眶内正常结构界面消失和一个或多个解剖间隙局限或弥漫浸润。**结论** CT、MRI 对客观显示眼眶炎症的致病原因和累及范围具有重要价值。

PU-2359

儿童眼眶横纹肌肉瘤临床及影像

浦俭,何茜,向述天
云南省第二人民医院

目的 探讨 6 例儿童眼眶横纹肌肉瘤 CT 及 MRI 影像特征及误诊原因。**方法** 回顾性分析 6 例经病理证实的儿童眼眶横纹肌肉瘤 CT 及 MR 影像资料，对病变的位置、大小、形态、平扫密度及信号、强化方式进行归纳，总结其临床及影像学特征，分析误诊原因。**结果** 6 例儿童眼眶横纹肌肉瘤中，左眼 4 例，右眼 2 例，均位于眼眶内，其中 1 例位于球后肌锥内外间隙、1 例位于眼眶上象限，1 例位于眼眶下象限，1 例位于眼眶内下象限，2 例位于眼眶内上象限。CT 及 MR 平扫 4 例为均匀实性病灶，增强后均匀强化；2 例为囊实性，囊实性成分比例不一，多以实性成分为主，增强扫描病变明显不均匀强化。**结论** 儿童眼眶横纹肌肉瘤的临床及影像表现具有一定特征性，但临床上少见，术前容易误诊，需充分认识其影像学特征，结合临床表现，以提高影像术前诊断准确性。

PU-2360

眼眶视神经鞘蛛网膜囊肿一例

张天顺[1],向述天[2]
1.昆明医科大学第四附属医院
2.云南省第二人民医院

目的：视神经鞘蛛网膜囊肿临床极为少见，通过对该病例的报道，希望能够对眼眶肌锥内间隙肿瘤的影像诊断提供新的诊断思路。
病例资料：50 岁女性患者因术前行 B 超检查发现左眼球后占位，临床表现无特殊，当时未做特殊处理，今为进一步诊治来我院就诊，专科检查提示左眼视野缺损，患者先后行双眼眶 CT 及 MRI 平扫+增强检查，提示眼球后肌锥内间隙占位，病变与视神经关系密切，考虑良性病变，神经源性病变不除外，后行手术治疗并送病理，最终综合影像、病理及免疫组化考虑视神经鞘蛛网膜囊肿。
讨论：视神经鞘蛛网膜囊肿临床极为少见，可伴有先天发育异常，以及视力减退、视乳头水肿、视睫状静脉怒张等症状，其发病机制可能为视神经鞘膜与视神经之间形成腔隙发育过程中闭塞障碍，第三脑室与视神经鞘膜腔隙仍保持通畅，脑脊液逐渐聚集，形成包绕视神经的囊肿。影像征象与发生于颅内的蛛网膜囊肿表现相似，表现为均匀的液性密度/信号，增强不强化，因周围为脑膜包裹

可见边缘强化。视神经鞘蛛网膜囊肿与视神经关系密切，除了与眼眶内囊性病变（皮样囊肿、表皮样囊肿）鉴别外，应与来源于视神经的视神经鞘脑膜瘤、视神经胶质瘤等鉴别。
结论：视神经鞘蛛网膜囊肿临床极少见，但当影像学发现视神经周围异常病灶，特别是表现为囊性密度/信号的时候，我们应把该病纳入诊断的范畴，其治疗以手术切除为主。

PU-2361

眼眶径线与年龄相关性研究

冯福婷,罗敏
自贡市第四人民医院

摘要：目的 探讨眼眶前后径、横径及眼球横径与年龄的关系。方法 选择 210 例正常人眼眶，男女各 105 例，根据年龄分为 7 组，0-10 岁组、11-20 岁组、21-30 岁组、31-40 岁组、41-50 岁组、51-60 岁组、＞60 岁组，每组均包含 30 例，男女各 15 例。使用螺旋 CT 进行轴位扫描，分别测量左右眼眶的前后径、眼眶横径及眼球横径。分析年龄与眼眶前后径、眼眶横径及眼球横径的关系。结果 左右眼眶前后径分别为 5.16cm、5.16cm，眼眶横径分别为 3.73cm、3.74cm，眼球横径分别为 2.45cm、2.45cm，左右眼眶各径线差异无统计学意义。眼眶前后径（双侧平均值）在 7 组的值分别为：4.64cm、5.06cm、5.24cm、5.30cm、5.28cm、5.29cm、5.24cm，整体平均值为 5.16cm；眼眶横径在 7 组的值分别为：3.40cm、3.78cm、3.82cm、3.80cm、3.79cm、3.76cm、3.82cm，整体平均值为 3.74cm；眼球横径在 7 组的值分别为：2.34cm、2.44cm、2.48cm、2.50cm、2.50cm、2.44cm、2.41cm，整体平均值为 2.45cm；眼眶前后径、眼眶横径和年龄呈正相关，相关性较弱，r 值分别约 0.440、0.363，P 值＜0.001；眼球横径与年龄相关性不大，r 值为 0.146，p 值＜0.05。0-10 岁组三径线与其余各个组之间的差异均有统计学意义，p 值＜0.05；11-20 岁的眼眶前后径与其余各组之间差异有统计学意义（p 值＜0.05）；眼球横径在 51-60 岁组、＞60 岁组和前 5 组（即≤50 岁各组）差异均有统计学意义（p＜0.05），而两者之间差异无统计学意义（p＞0.05）。结论 眼眶前后径、眼眶横径和年龄呈弱正相关关系；双侧眼眶各径线对称。

PU-2362

眼眶肿瘤样病变的 MRI 影像学表现

徐睿,田冲,明星,曾宪春,王荣品
贵州省人民医院

目的 总结眼眶肿瘤及类肿瘤病变的 MRI 特点，探讨其诊断思路。提高眼眶的肿瘤样病变的诊断能力。

材料与方法 收集 2011 年 1 月-2018 年 12 月本院疑眼眶内肿瘤样病变收治且经手术病理证实的 35 例眼眶肿瘤的 MRI 表现,归纳总结每种病变的好发部位、形态、边界、信号特点及强化方式,并结合文献找出疾病的具有诊断价值的影像学共同特征。

结果 本组 35 例眼眶肿瘤中,泪腺区肿瘤 6 例,包括多形性腺瘤 4 例及腺样囊性癌 2 例,呈等 T1 稍长 T2 信号,增强后中度-明显强化。视神经鞘膜脑膜瘤 3 例,呈等 T1 等 T2 信号,增强中度-明显强化。血管类病变 10 例,包括海绵状血管瘤 9 例及静脉畸形 1 例,海绵状血管瘤呈长 T1 长 T2 信号,增强明显强化。神经鞘瘤 4 例,3 例合并囊变,呈长 T1 长 T2 信号,增强后实性成分明显强化。淋巴瘤 5 例,呈等 T1 等 T2 信号,增强后轻-中度强化。皮样囊肿 1 例,短或等 T1、长 T2 信号,增强无强化。骨膜

下脓肿 1 例,增强环形强化。神经纤维瘤、纤维肉瘤各 1 例,信号呈等或稍长 T1、等或长 T2 信号,增强明显强化。炎性假瘤 3 例,呈等 T1 等 T2 信号,增强后中度-明显强化。

结论 MRI 可清晰显示肿瘤的大小、形态、内部结构及与周围组织的关系,对眼眶肿瘤及瘤样病变的定位、定量及定性诊断有较大的价值,可提供较好的诊断思路。

螺旋 CT 对单侧先天性小眼球患者的术后评估

欧舒斐,李华雨,谢苏民,马珑,陈燕,雷春阳,田甜
中国人民解放军第 458 医院（南部战区空军医院）

目的
探讨螺旋 CT 测量眼眶容积在临床的运用
材料与方法
选取中山医眼科医院病人，已确诊单侧先天性小眼球（不伴其他眼部畸形）并已放入硅胶填充物进行干预的患者 8 例，使用东芝 16 排螺旋 CT 进行平扫。
结果
在三维重建模式下，可以直观显示眼眶的形态，在横断位中选择视神经层面，测量眼眶深径及左右径，使用几何公式计算眼眶的容积距离，有 7 例病人患侧眼眶容积与健侧差距值较小，有 1 例病人患侧眼眶容积与健侧差距值较大。
结论
CT 技术是目前眼眶容积测量的重要方法之一，它可以使用三维重建的方法，按几何公式计算眼眶的容积，可以较为准确的对先天性小眼球患者术后的效果评估，对临床具有一定的指导意义。

PU-2364

眶内肿瘤的影像学诊断与鉴别诊断

张庆亚,马湘乔
中国人民解放军北部战区空军医院

C T 与 MR I 可清楚显示眼球 、视神经和其他眶内结构或组织的眼球肿瘤，视网膜 、脉络膜和巩膜 , C T 与 MRI 不能分辨 , 表现为一厚度匀称的环影 , 称眼环 。起自视网膜或脉络膜的较小肿瘤均表现为眼环后部向内突入玻璃体的小结节影 。 多单发 , 可多发 , 大者可充填整个眼球 , 并使眼球撑大。 根据影像学表现不能确定是来自哪一层膜的肿瘤 。但 CT 上结节的密度和 MR I 上的信号强度有助于诊断。

PU-2365

眼肌颗粒细胞瘤的 CT 和 MRI 表现

齐萌,沙炎
复旦大学附属眼耳鼻喉科医院

本文报道 3 例眼肌颗粒细胞瘤（GCT）的影像学及病理表现。其影像特点为肿块以肌腹为中心，CT 上呈均匀等或稍高密度；常规 MRI 上，相对于脑灰质，肿块于 T1WI 上呈等信号，T2WI 上呈低信号，增强扫描呈中等至显著强化；DWI 上呈等或稍低信号，ADC 均值为 0.60±0.13×$10^{-3}$$mm^2$/s。其病理特点为瘤细胞体积大，且细胞排列紧密，胞质充满嗜酸性颗粒，S-100 强阳性表达，从而可诊断眼肌颗粒细胞瘤。

PU-2366

先天性内耳畸形的 128 排螺旋 HRCT 图像后处理表现分析

舒意
四川大学华西医院

目的: 分析先天性内耳畸形的 128 排螺旋 HRCT 表现特征，提高对先天性内耳畸形的认识，减少漏诊、误诊
方法:收集 21 例先天性内耳畸形的 128 排螺旋 HRCT 扫描资料，根据 Levent 分类法进行统计 ，分析各种内耳畸形的 16 层螺旋 HRCT 所见。
结果:21 例先天性内耳畸形中，各种畸形均有，部分合并发生，统计如下：耳蜗畸形 16 例（76.19%）(31 耳 73.80%，此例患者中两耳均畸形 15 例占 93.75 %)，Michel 型 2 例(9.52%)(2 耳 4.76%)；Mondini 型 5 例（23.81%）(9 耳，21.43%);前庭及半规管畸形 18 例（85. 71%）（32 耳，76.19%）；不伴内耳畸形的前庭水管扩大 13 例（61.90%）(23 耳，54.76%)；内耳道发育畸形 3 例（14.29%）(4 耳，9.52%)；耳蜗小管畸形 1 例（4.76%）（2 耳，4. 76%）。伴中、外耳畸形 1 耳（2.38%），伴颈静脉高位 4 耳（9.52%）。
结论: 16 层螺旋 HRCT 能清晰显示先天性内耳畸形的细微解剖及骨质情况、畸形部位和程度，并明确分类，有助于影像医师提高先天性内耳畸形诊断率，并 为临床正确制定治疗方案提供重要的参考依据。

PU-2367

HRCT 及 MRI 对小儿耳蜗畸形的应用

程广
柳州市妇幼保健院

目的 探讨薄层高分辨率 CT 及 MRI 对小儿耳蜗畸形的应用价值。方法 对 32 例小儿耳蜗畸形的薄层高分辨率 CT 及 MRI 影像进行回顾性分析；结果 32 例(39 耳)耳蜗畸形患儿的 CT 及 MRI 表现：其中：Michel 畸形 2 耳；耳蜗未发育 2 耳；耳蜗发育不良 4 耳；共同腔畸形 6 耳；IP-I 型 3 耳；IP-II 型 12 耳；IP-III 型 4 耳；蜗神经孔狭窄、闭塞 6 耳。合并畸形：前庭畸形 14 耳；半规管畸形 10 耳；大前庭导水管 8 耳；内听道畸形 8 耳；听神经缺如 4 耳；听神经发育不良 2 耳。结论 薄层高分辨率 CT 可对小儿耳蜗畸形的解剖结构清晰显示，对耳蜗畸形的类型及严重程度可有效判断，并发畸形显示清晰，MRI 对听神经显示清晰，两者联合应用可为人工耳蜗植入术前提供重要影像评估。

PU-2368

内耳钆剂造影在梅尼埃病诊断中的应用进展

李俊
川北医学院附属医院

梅尼埃病（Ménière’s disease，MD）是一种以波动性听力丧失、间歇性眩晕、耳鸣和耳胀为特征的慢性疾病，其解剖及病理学基础为膜迷路积水（endolymphatic hydrops，EH）。目前诊断 MD 主要依靠患者临床表现及前庭诱发肌源性电位（VEMP）等检查，但这些诊断方式无法对 EH 进行直观准确地评估。随着高分辨 MRI 及内耳钆剂造影的发展应用，使直接评估 EH 成为可能。文本将对内耳钆剂造影在梅尼埃病诊断中的应用进展进行综述。

PU-2369

Ramsay-Hunt 综合征 1 例报道

张珅夏,马湘乔
中国人民解放军北部战区空军医院

病历摘要
带状疱疹病毒侵及膝状神经节所致周围性面瘫较少见，国内文献报告不多，报告如下。
患者女，66 岁，2018 年 10 月无明显诱因出现左耳部疼痛，同时伴有眩晕，外耳道内可见疱疹样肿物，听力略有下降，1 天后出现嘴角歪斜，无耳道流脓、流血，门诊以“亨特综合症”收入科。病来患者精神尚可，体力正常，食欲正常，睡眠正常，体重无明显变化，大便正常，排尿正常。查体：体温：36℃，脉搏 76 次/分，呼吸 18 次/分，血压 164/105mmHg。头颅无畸形，左侧耳廓正常，外耳道内可见疱疹样肿物及少量干痂，鼓膜完整、无内陷；左侧额纹消失，眼裂变小，左侧鼻唇沟变浅，嘴角歪斜，鼓腮漏气。脑积液检查：蛋白定量 63.9mg/dl↑、白细胞计数(csf)35 个/ul↑。入院后呕吐、眩晕症状精神状态差，检测离子：钾 2.9mmol/L↓、氯 95mmol/L↓，对症治疗后症状减轻。影像表现：中耳乳突 CT 平扫：面神经管增宽；左侧乳突炎；头颅 MR 增强扫描：脑缺血灶；脑白质变性；左侧听神经强化，左侧海绵窦增宽，左侧耳蜗及前庭区异常强化灶，考虑炎性病变；
本例患者在治疗上采用联合抗病毒、糖皮质激素、改善微循环及营养神经方案，取得了满意疗效。

PU-2370

双源 CT 对颞骨微小结构显示的初步观察

李统,孙立新,巩若箴
山东大学附属山东省耳鼻喉医院

目的：应用双源 CT 评价正常人颞骨微小结构的显示情况。
方法：应用双源 CT 对 40 耳（20 例）正常志愿者行颞骨薄层扫描，进行多平面重建，观察 27 处颞骨微小解剖结构，由两名从事影像阅片工作多年医师进行评估。
结果：（1）所有耳听骨链结构清晰可见，三块听小骨及其关节均可清晰显示。（2）所有耳骨迷路及前庭导水管、蜗轴结构清晰可见。（3）所有耳面神经经、岩浅大神经均可清晰显示。35 耳镫骨

肌隐约可见。28 耳锤骨前韧带隐约可见。（4）MPR 重建后，23 耳鼓索神经可见从面神经中发出，隐约可见鼓索神经走行于锤骨颈和砧骨长脚之间。
结论：双源 CT 明显提高了时间分辨率，可以提供低噪声、高质量的颞骨微小结构的图像，在临床手术术前设计方面有重要价值。

PU-2371

MSCT 颞部茎突规范化扫描及后处理

李宗文,黄显龙
中国科学院大学重庆医院（重庆市人民医院）

目的：多层螺旋 CT 在颞部茎突的扫描、后处理方法的规范
方法：设备：TOSHIBA Aquilion 64 排 128 层螺旋 CT。体位设计：仰卧位，头先进，下颌抬高，听眶线（Reid 线）垂直于检查床。扫描范围：茎突、茎突舌骨韧带和舌骨小角统称为茎突复合体（茎突舌骨链）。其分为四段，近段为鼓舌段，发育成茎突根部；中近段为茎舌段，骨化后发育成茎突体部：中远段为角舌段，于出生后发育成舌骨茎突韧带；邻近舌骨处为下舌段，骨化成舌骨小角。故扫描范围应为外耳孔上方 1cm（包括眶下缘）至舌骨。扫描参数：120Kv，200mA，Rot 0.75，0.5x64 采集，螺距 1.484，HP95，层厚 3mm，层间距 3mm 后处理方法：所有测量方法、基线统一规范。使用 VR、MIP、MPR、CPR、斜位等 5 项后处理技术观察茎突形态，测量颞部茎突长度、内倾角、前倾角、茎咽线。
结果：1.VR 是显示茎突形态的最佳后处理方式。3.茎突长度测量由于茎突鞘的遮挡，不宜使用 VR，而选用斜面+MIP。3.内、前倾角推荐使用 MIP+冠状位、MIP+矢状位最优。4.茎咽线推荐使用标准横断位，而非 MIP 或 MPR。
结论：1.熟悉颞骨解剖（鳞部、鼓部、岩部、乳突部、茎突部）2.掌握茎突的解剖（分型、分段、毗邻关系）3.熟悉茎突舌骨链。3.测量方法统一规范。4.规范扫描范围为外耳孔上方 1cm（包括眶下缘）至舌骨。5.观察茎突形态推荐首选使用 VR，其次 MPR。6.测量茎突长度首选斜矢状位（首选）/斜冠状位+MIP，不使用 CPR。7.测量前倾角推荐矢状位+MIP。8.测量内倾角推荐斜冠状位+MIP。9.测量茎咽线推荐标准横断位+冠状位上测量，不能使用 MIP 和斜位。10.窗宽 2800-3000，窗位 1000。11.MIP 为 3-5cm

PU-2372

3.0T 磁共振 3D-T2w-DRIVE-HR 序列在小儿先天内耳畸形及蜗神经发育异常的诊断价值

高明,邬小平,刘红生,宁文锋,马鸣岳,杨想春
西安市中心医院

目的：探讨利用 3.0T 高场磁共振 3D-T2w-DRIVE-HR 序列对先天内耳畸形及蜗神经发育异常的诊断价值，提高内耳畸形及蜗神经缺如诊断率，为患儿听力早期听力干预提供影像学评估。
方法：选取小儿听力复查仍未通过和未做听力检测发现一侧无听力的 25 名患儿。在 PHILIPS 3.0T 磁共振利用 3D-T2w-DRIVE-HR 序列成像，参数：TR:1500、TE:220、层厚 0.6mm、间隔-0.3mm、NSA：1、Voxel：0.6X0.6X0.6mm，并对所得图像行最大密度投影(MIP)、多平面重组（MPR）、蜗神经斜矢状位重建后处理技术，重点观察内耳、蜗神经。

结果：3.0T 磁共振 3D-T2w-DRIVE-HR 序列示：双侧蜗神经未显示 8 例、单侧蜗神经未显示 6 例、双侧蜗神经纤细 1 例、双侧蜗神经未显示合并内耳畸形 6 例、单侧侧蜗神经未显示合并内耳畸形 4 例。。
结论：3.0T 高场磁共振 3D-T2w-DRIVE-HR 序列成像技术可以清晰显示内耳畸形及蜗神经缺如，对先天性小儿内耳畸形及蜗神经发育异常的患儿早期听力干预提供影像学评估。

PU-2373

HRCT 诊断颈静脉球窝高位合并憩室

陈萍,马湘乔
北部战区空军医院

颈静脉球的血管性变异主要有：颈静脉球窝高位（high jugular bulb，HJB）和颈静脉球窝憩室（ jugular bulb diverticulum, JBD)。颈静脉球窝高位是较常见的解剖变异，颈静脉憩室临床少见，而颈静脉球窝高位合并憩室更是罕见，因其引起的症状缺乏特异性而易被漏诊、误诊。

PU-2374

梅尼埃病患者脑灰质体积的研究

胡颖,朱文珍,赵旭,李娟
华中科技大学同济医学院附属同济医院

目的 应用基于体素的形态学分析方法检测梅尼埃病患者脑灰质体积的变化，探讨中枢神经系统在梅尼埃患者中的作用。 **方法** 对 28 例单侧型（左侧）梅尼埃患者和 20 名年龄性别相匹配的正常对照者进行磁共振三维 T1 结构像扫描（3D-T1 bravo），应用基于体素形态学分析（voxel-based morphometry，VBM），比较两组的全脑灰质体积的变化，探索各脑区变化在梅尼埃病发生过程中的作用。**结果** 与对照组相比，梅尼埃病患者组双侧海马旁回，双侧枕中回、枕下回、楔叶，左侧额叶直回、扣带回，左侧枕颞内侧回，右侧舌回，右侧颞叶角回，颞中回，左侧小脑蚓部，胼胝体，左侧顶叶缘上回区灰质体积明显下降（P<0.05）**结论** 梅尼埃患者脑灰质异常改变区域可能参与了梅尼埃病患者的脑皮质重塑，可能与梅尼埃眩晕的中枢机制相关。

PU-2375

中耳炎颅内并发症 CT、MRI 表现

王飞,张程程,郭珊熹
海南省人民医院

目的 分析中耳炎颅内并发症 CT 和 MRI 表现。**方法** 回顾性分析 28 例（33 侧）中耳炎颅内并发症的 CT 和 MRI 表现。**结果** 33 侧中耳炎中，CT 显示骨质破坏 20 侧，MRI 显示脑膜炎 3 侧，乙状窦感染 2 侧，脑炎 3 侧，脑脓肿 2 侧，迷路炎 3 侧，硬膜外脓肿 3 侧，面神经炎 1 侧。**结论** CT 结合 MRI 检查可以明确颅内并发症的类型、部位和范围。

PU-2376
颞骨孤立性浆细胞瘤 1 例病例报道并文献复习

孙鹏峰
西安市中心医院

目的：探讨颞骨孤立性浆细胞瘤（SPB）的 CT 及 MRI 表现特征，以提高诊断准确率。
方法：对西安市中心医院 2019 年 2 月接诊的 1 例颞骨孤立性浆细胞瘤患者的影像及临床资料结合相关文献进行回顾性分析，并运用多平面重组及曲面重建评估听骨链、半规管、耳蜗及面神经管的情况。
结果：该例患者的临床表现为右侧耳痛，位于右耳周围，呈放射性疼痛，伴有听力下降及耳鸣；影像学上，CT 表现为右侧颞骨溶骨性、膨胀性骨质破坏，无明显硬化边，以颞骨岩部及乳突部为主，累及右侧岩尖、乳突及枕骨斜坡；颞骨多平面重组及曲面重建显示右侧上半规管上壁及面神经管乳突段局部骨质破坏；MRI 上病变呈等 T1 等 T2 信号，信号均匀，增强后呈中等强化，内部强化较均匀；病理上肿瘤由弥漫片状分布分化程度不同的浆细胞构成，大小一致，形态单一，细胞胞浆丰富。
结论：颞骨 SPB 的影像学表现具有一定特征性；颞骨多平面重组及曲面重建可以为临床诊治提供更多信息。

PU-2377
中耳乳突区骨质破坏性病变的影像诊断（专题讲座）

黄龙
中国科学院大学重庆医院（重庆市人民医院）

目的：通过对中耳乳突区骨质破坏性病变的临床及影像特征的分析，提高对该病的影像诊断能力。**方法：**收集我院 2014 年 5 月～2019 年 4 月经病理证实的中耳乳突区骨质破坏病例 12 例，对其临床及影像征象进行分析。男性 7 例、女性 5 例，年龄 10 月～79 岁，11 例行 CT 平扫，其中 5 例行 CT 增强扫描；1 例行 MR 平扫，9 例行 MR 平扫+增强。**结果：**中耳部疼痛伴流脓血 5 例，溢液流脓 3 例，肿痛 2 例，无痛性包块 2 例，所有病例均有骨质破坏。中耳癌 6 例，其中鳞状上皮癌 5 例，腺样囊性癌 1 例；骨纤维异常增殖症、骨巨细胞瘤、颈静脉球瘤、胆脂瘤伴肉芽组织、朗格汉斯组织细胞增多症、化脓性中耳炎各 1 例。6 例中耳癌均可见软组织团块影，溶骨性骨质破坏，其中 5 例破坏边缘毛糙、模糊；4 例行 MR 平扫+增强均可见明显强化软组织突入颅内，邻近脑膜明显强化、增厚；2 例 DWI 弥散受限。1 例骨纤维异常增殖症面颅多骨膨大，骨硬化、磨玻璃、不规则低密度内化钙化骨化影。5 例良性病灶除化脓性中耳乳突炎骨质破坏边缘稍显毛糙外，其余边缘均较清楚，骨巨细胞瘤边缘见残留骨，胆脂瘤病例骨质破坏边缘硬化；颈静脉球瘤、骨巨细胞瘤、胆脂瘤可见鼓室盖不连续；除胆脂瘤病例仅行 CT 和 MRI 平扫，其余病例均行增强扫描，病灶明显强化。朗格汉斯组织细胞增多症强化较均匀，余不均匀强化。静脉球瘤 MRI 可见“盐和胡椒”征。化脓性中耳乳突炎累及耳周、颞下窝及咽旁，多个环形强化影。颈静脉球瘤、骨巨细胞瘤、朗格汉斯组织细胞增多症鼓室盖不连续处见局部脑膜强化，强化脑膜规整，其中，1 例朗格汉斯组织细胞增多症骨质破坏呈大块溶骨性穿凿样缺损，边缘清楚，无骨膜反应，跨越颅缝；颈静脉球瘤 DWI 弥散受限。**结论：**中耳乳突区骨质破坏性病变，根据其临床特征、CT 平扫+后处理与 MRI 平扫+增强+DWI 能对其骨质破坏、软组织肿块及强化表现、颅内侵犯及脑膜改变、以及弥散等差异，可较准确地对其诊断和鉴别。

PU-2378
探讨不典型岩尖综合征漏诊分析、影像诊断及临床治疗预后。

梅宝玉,周莉
南昌大学第一附属医院

摘要：探讨不典型岩尖综合征漏诊分析、影像诊断及临床治疗预后。方法：回顾性分析一例不典型岩尖综合征病例，结合 CT 及 MR 多次复查结果分析该病例出现不典型临床症状的原因及以此导致的漏诊。结果：该病例有反复发热，渐进性听力下降症状，但无耳部流脓、三叉神经痛及外展神经麻痹症状，通过分析 CT 及 MR 检查可发现该患者岩尖骨质破坏主要位于岩尖内后侧，非 Meckel 腔及 Dorello 管走形区，故主要累及前庭窝神经而非三叉神经及外展神经，故该患者临床症状不典型，极易漏诊。患者岩尖骨质破坏及前庭窝神经受累在后期经过保守治疗后形态恢复但该患者听力情况无明显好转，可能与神经功能不易恢复相关。虽然大多数岩尖炎的治疗以积极引流为主，但本病例经过保守治疗，岩尖病灶吸收完全，且经过半年随访，患者恢复可。结论：当岩尖炎累及岩尖骨质部位不同时，可不出现典型岩尖综合征表现，此时极易漏诊，综合 CT 及 MR 检查有助于该病的确诊。本病例经保守治疗，随访 6 个月，患者岩尖病灶吸收完全，可见保守治疗也可取得较好的结果。

PU-2379
腮腺影像解剖与常见良恶性肿瘤诊断

欧陕兴[1],欧舒斐[1,2]
1.中国人民解放军南部战区总医院
2.中国人民解放军南部战区空军医院

目的 通过对腮腺解剖与常见良恶性肿瘤影像特征分析，旨在通过分析影像解剖征象达到提高常见腮腺肿瘤的诊疗水平，尤其对血管与神经结构判读指导临床手术有重要价值。
材料与方法：
1.解剖要点：面神经、腮腺导管、下颌后静脉与筋膜与脂肪间隙、颈外动脉与静脉血管、淋巴结。
2.病变侵犯范围判断位置，基于间隙脂肪推移判断肿瘤生长方向。
2.影像技术显示特点
2.1 平片显示骨骼变化与钙化征象
2.2 CT 增强对血管判断与及肿瘤定性诊断有重要帮助。
2.3 MRI 对于腮腺导管与肿瘤沿神经转移帮助非常大。
2.4 导管造影对于腮腺导管病定性与定位诊断帮助大。
3.结果
3.1 征象判断：如肿瘤直接征象 、间接征象、周围累及病变范围等。
3.2 综合影像技术：对于肿瘤诊断及治疗随访的作用大。
结论：腮腺影像解剖对良恶性肿瘤定位诊断作用重要，判断病变征象结合血管、神经及淋巴结有否侵犯，对肿瘤定性诊断、肿瘤分期及手术计划的临床诊疗的价值较大。

专题讲座

PU-2380

Diagnostic accuracy of magnetic resonance imaging techniques for parotid tumors, a systematic review and meta-analysis

Fan Xu
Guangzhou Red Cross Hospital

Objective To assess the added benefit of combining different MRI techniques for preoperative diagnosis of parotid tumors when compared to conventional MRI and advanced MRI techniques alone with meta-analysis.
Methods A comprehensive PubMed electronic database search was performed for original diagnostic studies up to July 2017. The methodologic quality of each study was evaluated by two independent reviewers who used the Quality Assessment of Diagnostic Accuracy Studies 2 (QUADAS-2) tool. Statistical analysis included pooling of sensitivity and specificity with 95% confidence intervals (CI). All analyses were conducted using STATA (version 12.0), RevMan (version 5.2), and Meta-Disc 1.4 software programs.
Results Pooled sensitivity and specificity of conventional MRI, diffusion weighted imaging (DWI), dynamic contrast enhanced (DCE) and the above combination were 76% (95%CI)/ 91% (95%CI)/ 80% (95%CI)/ 86% (95%CI) and 83% (95%CI)/ 56% (95%CI)/ 90% (95%CI)/ 90% (95%CI).
Conclusion Conventional MRI combined with DWI and DCE showed higher diagnostic accuracy than conventional or advanced MRI alone, supporting their use in parotid tumors diagnosis.

PU-2381

常规 MRI 诊断胆脂瘤型中耳炎的应用价值研究

李卓,马湘乔
中国人民解放军北部战区空军医院

目的:探讨 MRI 序列成像在胆脂瘤型中耳炎诊断中的应用价值。**方法:**选取中国人民解放军北部战区空军医院 2018 年 6 月至 2019 年 6 月期间 63 位临床上初步怀疑胆脂瘤型中耳炎的患者行常规序列检查(包括 T1WI、T2WI 及 T1WI 增强序列)。后在患者知情同意条件下行患耳手术探查或鼓室成形术,并将术中标本送病理,最后将影像诊断与手术、病理结果进行对比。**结果：**在 63 位患者中，患耳 46，影像上病灶大小不等。在常规 MRI 序列上，46 耳中有 36 耳符合胆脂瘤诊断标准，即 T1WI 上病灶相对脑组织显示低或等信号，T2WI 上高信号，且 T1WI 增强无明显强化或边缘轻度强化；6 耳影像上不典型，但术中及病理均证实有胆脂瘤还有耳假阴性。常规 MRI 序列诊断胆脂瘤型中耳炎的敏感性、特异性可分别达到 86.4%、50.0%。阅片者间一致性极强。**结论：**常规 MRI 序列对于胆脂瘤型中耳炎的诊断具有较高敏感性，并能够清晰地显示较大胆脂瘤与周围组织间关系，阅片者间诊

断一致性强，并且影像上病灶大小更接近实际,为手术治疗提供很有价值的影像信息，但其诊断特异性偏低，且对于大小早期病灶难以辨别出。

PU-2382

搏动性耳鸣乙状窦骨壁缺损患者手术前后的影像学评估及手术效果分析

张戈
河南省人民医院

目的：分析乙状窦骨壁缺损所致搏动性耳鸣患者手术前后的颞骨影像学特点，探讨乙状窦骨壁重建手术取得相应治疗效果的原因与机制。
方法：纳入乙状窦骨壁重建术治疗的搏动性耳鸣患者 18 例，回顾性分析患者手术前后高分辨率 CT 的影像学表现，在多平面重建图像上观察术后是否仍伴有乙状窦憩室、乙状窦骨壁缺损以及手术侧颞骨蜂房的气化情况。
结果：17 例研究对象均为女性，平均（42.94±9.93）岁，搏动性耳鸣病程 2 个月-6 年，术后耳鸣完全消失 11 例，耳鸣症状明显缓解 3 例，耳鸣症状未缓解 2 例，搏动性耳鸣消失但发生其它类型耳鸣 1 例，术后耳鸣消失患者中术后颈静脉球高位 8 例，憩室 3 例，耳鸣症状缓解患者中均有颈静脉球高位，合并乙状窦前置 3 例，憩室 1 例，耳鸣症状未缓解患者中颈静脉球高位 3 例，乙状窦前置 1 例。
结论：本研究表明，乙状窦骨壁缺损是搏动性耳鸣的重要病因之一，但是可能并不是导致搏动性耳鸣发生的直接因素。对有确定的乙状窦异常影像表现的搏动性耳鸣进手术行治疗前，可以结合搏动性耳鸣的发病机制进行更全面的考虑，来完善乙状窦骨壁重建术的治疗效果。

PU-2383

头颈部磁共振检查规范化操作

刘博,马湘乔
北部战区空军医院

[摘要]随着磁共振应用于临床，起良好的软组织分辨力，在颈部软组织检查中起到了重要作用。为很多头颈部病变的检出、鉴别诊断提供了非常重要的价值。同时磁共振还具有空间分便利，无辐射，多参数成像，获得信息量大的优势。结合 CT、B 超、核医学及实验室检查，给临床诊断和治疗提高了巨大的参考价值。但由于磁共振成像速度慢，颈部不可避免的存在呼吸运动伪影与血管搏动伪影。头颈部磁共振需要规范化操作以提高检查效果。

PU-2384

鼻腔鼻窦髓外浆细胞瘤的 CT 和 MRI 表现

齐萌,沙炎

复旦大学附属眼耳鼻喉科医院

目的：探讨鼻腔鼻窦髓外浆细胞瘤（EMP）的 CT、MRI 表现特点，以提高该病的诊断准确率。
方法：回顾性分析经病理证实的 12 例 EMP 的 CT、MR 图像。CT 上主要观察病灶的密度、周围骨质破坏情况；MRI 上主要观察病灶的形状、大小、位置、信号、强化特点，并测量病灶的表观扩散系数(ADC)。
结果：4 例仅行 MR 检查，4 例仅行 CT 检查，4 例同时行 CT 和 MR 检查。男性 9 例，女性 3 例；大部分（7/12）肿瘤形态不规则，最大径 2.5~7.3cm。12 例中，6 例位于鼻腔，6 例位于鼻窦。相对于肌肉，CT 平扫上，6 例呈稍高密度，6 例密度均匀，2 例伴少许液化坏死，7 例伴有周围溶骨性骨质破坏，5 例出现线样残留骨脊。相对于脑灰质，T1WI 上 8 例呈均匀等信号，T2WI 上 6 例呈等信号，2 例呈稍高信号，2 例伴少许液化坏死，4 例出现血管流空影，增强后 8 例均呈显著强化。病变平均 ADC 值为（0.53±0.06)×$10^{-3}mm^2/s$。
结论 CT、MRI 对鼻腔鼻窦 EMP 诊断及鉴别诊断具有一定临床应用价值。

PU-2385
鼻中隔非霍奇金淋巴瘤的影像学表现及误诊分析

梁丰丽,黄刚
甘肃省人民医院

目的：探讨鼻中隔非霍奇金淋巴瘤的影像学特点及不同 MR 抑脂序列对疾病诊断的应用价值。
方法：回顾性分析我院经手术、病理证实的 1 例鼻中隔霍奇金淋巴瘤。患者女，26 岁，以“间断鼻塞头痛 10 年余，加重 10 天”之主诉入院。行前鼻镜检查示：双侧鼻腔脓性分泌物。CT 示鼻中隔类圆形软组织肿块，膨胀性生长，临近骨质吸收变薄，内密度均匀，边界清晰，增强扫描呈弱强化。MRI 示病灶呈短 T1 等 T2 信号，STIR 压脂呈明显低信号，Dixon 压脂呈稍高信号，DWI 呈低信号，影像诊断为黏液囊肿合并感染，病理诊断为非霍奇金淋巴瘤（NHL，T 细胞）。分析并探讨疾病误诊的原因。
结果：鼻中隔淋巴瘤影像学表现为：多起源于鼻腔前部或鼻前庭，呈单或双侧鼻腔分布，沿鼻腔及鼻中隔边缘蔓延；CT 密度相对均匀，呈等或稍高密度，增强后呈轻或中度强化；早期主要循自然窦道生长，表现为膨胀性生长方式，多为筛孔状、虚线状或虫蚀样骨质吸收，无骨质破坏或少数局部轻度骨质破坏；MRI 表现为 T1WI 等或低信号，T2WI 等或高信号，部分病灶信号不均匀。误诊原因分析：①MRI 抑脂序列选择不当。STIR 和 Dixon 序列对脂肪抑制作用机理不同。STIR 序列既可抑制脂肪也可抑制 T1 值与脂肪相近的组织，对脂肪的抑制作用是非特异的。而 Dixon 序列对脂肪抑制作用是特异的，应首选 Dixon 序列。②此病例的影像表现不典型，鼻腔淋巴瘤 T1WI 多为等或稍低信号，而本例表现为明亮高信号；病变比较局限，边界清楚，无骨质破坏，更倾向于良性占位。③鼻中隔淋巴瘤相对少见，对此疾病的认识不足。
结论：鼻中隔淋巴瘤在临床中不多见，应提高对此疾病的认识，选择合适的影像技术，尽可能实现准确诊断，以期达到早期治疗，提高患者生存率、改善生存质量。

PU-2386
PET/CT 与 CT 在喉癌临床诊断与分期中的应用价值

石兢恒,段庆红
贵州省肿瘤医院

目的：探讨 ^{18}F-PET/CT 和 CT 检查在喉癌诊断及分期中的应用价值；其次探讨喉癌颈部淋巴结转移的影响因素。**方法：**选取 2015 年 1 月至 2018 年 12 月期间我院怀疑喉部恶性肿瘤患者 45 例，所有患者均在治疗前及手术前进行 CT 平扫、CT 增强及 ^{18}F-PET/CT 检查，判读喉部病灶是否为恶性并对恶性病灶分期，于 PET/CT 测量病灶大小，测量 PET/CT 感兴趣区 SUVmax，分析两种影像学检查方法的诊断正确性、特异性、敏感性、阳性预测值、阴性预测值；分析影响喉癌颈部淋巴结转移的因素。**结果：**1.CT 平扫+增强检查对喉癌原发灶诊断的敏感性为 87.18%，特异性 33.33%，阳性预测值 94.44%，阴性预测值 16.67%，诊断符合率 83.33%；PET/CT 诊断喉癌原发灶的敏感性为 97.44%，特异性为 33.33%，阳性预测值 95%，阴性预测值 50%，诊断符合率 92.86%；CT 平扫+增强与 PET/CT 诊断效能在诊断符合率、敏感性及阴性预测值上差异具有统计学意义（P=0.03，P=0.01，P=0.00），特异性和阳性预测值的差异不具统计学意义（P=1.00，P=0.76）；2.^{18}F-FDG PET/CT 对颈部淋巴结转移的诊断敏感性为 77.78%、特异性为 63.64%、阳性预测值为 58.33%、阴性预测值为 93.33%、诊断符合率为 83.33%；以患者为单位计算时，^{18}F-FDG PET/CT 与 CT 平扫+增强在喉癌颈部淋巴结转移的诊断敏感性上差异无统计学意义（P=0.16）。**结论：**与 CT 比较，^{18}F-FDG PET/CT 对喉癌原发灶及颈部淋巴结转移的诊断具有较高的诊断效能，喉癌患者原发灶的分化程度是影响喉癌患者的颈部淋巴结转移的独立因素。

PU-2387

鼻腔和鼻旁窦平滑肌肉瘤的影像学表现

陈元畅
上海交通大学附属第六人民医院

目的 分析及评价 MRI 检查在鼻腔和鼻旁窦平滑肌肉瘤的影像学表现及临床应用价值。 **资料与方法** 回顾分析经病理证实的鼻腔鼻旁窦平滑肌肉瘤 3 例，均行 MRI 检查。 **结果** 肿瘤原发于鼻腔 1 例，上颌窦 1 例， 1 例肿瘤范围广已无法确定其原发部位，肿瘤涉及范围包括鼻腔、筛窦、鼻咽部、眼眶、翼腭窝、颞下窝、咽旁间隙、硬腭甚 至口咽侧壁、中颅窝等。该类肿瘤呈浸润性生长及局部较广泛骨质破坏，无 1 例发生钙化及颈淋巴结转移。肿块在 MRIT1WI 呈均匀中等信号，T2WI 表现为略不均匀的中等到稍高号。 **结论** 鼻部平滑肌肉瘤表现为较广泛浸润性生长及骨质破坏，无钙化。MRI 检查在肿瘤范围及与周围炎性相鉴别方面较清楚。

PU-2388

鼻咽部木村病的影像诊断及鉴别

柯腾飞,李进丹,廖承德
云南省肿瘤医院/昆明医学院第三附属医院

目的 分析鼻咽部木村病(KD) 的影像学表现，提高对该病的诊断及鉴别诊断水平。**方法** 回顾性分析经病理证实的 2 例鼻咽部 KD 的实验室检查及影像学资料，分析病灶位置、形态、密度/信号及增强表现等特征。结果 2 例患者外周血嗜酸性粒细胞均明显增高。 2 例均表现为鼻咽部肿块并双侧颈部多发肿大淋巴结，其中 1 例鼻咽部肿块及双侧颈部肿大淋巴结在 CT 平扫呈均匀等密度，在 T1WI 呈稍低、T2WI 稍高信号，DWI 鼻咽部肿块及双侧颈部淋巴结均呈明显高信号，ADC 值约 0.541×10-3 mm2/s，增强上述病灶均明显均匀强化; 另 1 例鼻咽部肿块在 CT 上平扫密度不均匀，其内可见小片状低密度区，在 T1WI 呈稍低、T2WI 稍高信号，双侧颈部肿大淋巴结在 CT 平扫呈均匀等密度，在 T1WI 呈稍低、T2WI 稍高信号，DWI 鼻咽部肿块及双侧颈部淋巴结均呈明显高

信号，ADC 值约 0.487×10-3 mm2/s，增强扫描鼻咽部肿块明显不均匀强化，双侧颈部肿大淋巴结呈明显均匀强化。**结论** 鼻咽部占位并淋巴结肿大的患者，尤其是伴外周血嗜酸性粒细胞升高者，应考虑到木村病的可能，需结合临床病史、实验室检查、影像学表现综合诊断，以免误诊。

PU-2389

喉癌在 CT 与磁共振的影像学表现

王博,马湘乔
中国人民解放军第四六三医院

喉癌是头颈部常见的恶性肿瘤，在耳鼻喉系统领域发病率仅次于鼻咽癌与鼻腔及鼻窦癌。好发于中老年男性，吸烟及过量饮酒是喉癌发生的危险因素，近些年其发病率呈逐年升高趋势。它来源于喉粘膜的上皮组织，其病理类型多为鳞状细胞癌。临床上常常通过喉镜活检进行诊断，可以直观地显示喉部粘膜、声带、喉室、梨状窝等形态，但是粘膜下的肿瘤侵犯并不能直接观察。治疗喉癌的首选方法主要是手术切除，因此术前对原发肿瘤的精准定位、周围组织是否受侵的评价异常重要，制定合适的手术方案，对患者的预后产生很大的影响。因此使用 CT 及磁共振技术对喉部结合分析，清晰地对肿瘤的原发部位进行定位，诊断粘膜下的病变、淋巴肿大情况以及喉旁间隙和喉软骨受侵情况，结合手术后的病理结果，可以提高对喉癌影像表现的认识，有益于早期发现和诊断喉癌，准确、客观的评价喉癌的病变程度，帮助临床制定治疗方案，从而提高喉癌患者的生存率，对于改善患者预后有着重要的临床意义。

PU-2390

CT and MRI manifestations of rhinoscleroma.

Rong Chang[1],Xiaowen Ma[1],Ming Zhang[2]
1.Xi'an Honghui Hospital
2.First Affiliated Hospital, Medical College Xi'an Jiaotong University

Objective To explore the features and differential diagnosis of CT and MRI imagings of the rhinoscleroma. **Methods** CT and MRI findings of 8 patients with pathologically confirmed nasal scleroma were retrospectively analyzed. **Results** CT findings of nasal scleroses: non-specific mucosal thickening in early stage. Granulomatous stage presents limited or large soft tissue masses with uniform density and clear contour, but usually not obvious enhancement. Often involve middle, inferior turbinate, expression is out of shape, atrophy or destroy completely, nasal septum is easy to destroy, but remnant bone often has apparent sclerosis. Different degrees of consolidation in adjacent sinuses, including granulation tissue invading the sinuses and distal obstructive inflammation; Bone in the antrum wall may be displaced, atrophied, damaged, or hardened. This disease affects the orbit, causing translocation of the extraocular muscle, surrounding the extraocular muscle or optic nerve; In the scar stage, the turbinate, nasal septum and lateral wall of maxillary sinus were obviously destroyed and disappeared, and the nasal cavity was enlarged with scattered cord shadow. External nasal deformities are common and perinasal soft tissues are markedly thickened.Early nasal scleroses in MRI were only mucosal thickening, which was difficult to distinguish from other inflammatory lesions. In the granulomatous

stage, MR T1WI and T2WI showed mild to significantly high signal, while T2WI usually showed uneven signal, while T1WI showed characteristic high signal, suggesting the diagnosis of this disease. MR T1WI in scar stage presented low or equal signal, while T2WI presented obvious low signal. After enhancement, the lesions were mostly moderately to severely enhanced. MRI findings in the granuloma stage and scar stage often overlap due to unsynchronized lesion development. Sinus scleroses appear on MRI in the same way as nasal scleroses, but tend to spread to adjacent structures such as the orbit, intracranial, pterygopalatine fossa, and the nasal cavity is usually not affected.

Conclusion CT and MRI diagnosis of rhinoscleroma is a more effective method of examination ,moreover ,CT and MRI at the same time the two methods is more conducive to rhinoscleroma diagnosis and treatment.

PU-2391

鼻腔鼻窦少见肿瘤的 CT 及 MRI 表现

李征真,张体江,刘衡,冉春艳
遵义医科大学附属医院

目的 分析几种少见鼻腔鼻窦肿瘤的 CT 和 MRI 表现，提高对其的认识及影像诊断水平。 **方法** 回顾分析 18 例经病理证实的鼻腔鼻窦少见肿瘤的 CT 及 MRI 表现。17 例行 CT 平扫，其中 6 例行 CT 增强扫描；9 例行 MRI 平扫+增强扫描；8 例同时行 CT 及 MRI 检查。 **结果** 脑膜瘤 4 例，神经鞘瘤 3 例，多形性腺瘤 2 例,横纹肌肉瘤 5 例（胚胎型横纹肌肉瘤 3 例，腺泡型横纹肌肉瘤 1 例，1 例未分型），原始神经外胚层肿瘤 3 例，转移瘤 1 例。脑膜瘤多见钙化灶，周围骨质吸收、变薄，肿瘤易累及颅底，部分可见不典型脑膜尾征。神经鞘瘤形态较规则，边缘光滑，T_2WI 中可见斑片状、结节状高信号。多形性腺瘤多呈分叶状，增强扫描轻中度强化。横纹肌肉瘤累及范围广泛，周围骨质破坏明显，可见颈部淋巴结肿大表现。原始神经外胚层肿瘤类似于筛骨纸板的线样强化及肿瘤内迂曲血管具有特征性。转移瘤与原发肿瘤表现类似，难以鉴别，需结合病史。**结论** 部分少见鼻腔鼻窦肿瘤具有一定特征性的 CT 及 MRI 表现，结合病史，可在术前做出正确诊断，为临床提供参考。

PU-2392

鼻咽部淋巴瘤多序列 MRI 诊断分析-附 1 例报道

杜磊,谢琦
广州市第一人民医院南沙医院

【目的】总结鼻咽部淋巴瘤（nasopharyngeal lymphoma,NPL）多序列 MRI 影像表现，从而提高对该疾病的认识，探讨 MRI 多序列成像对该疾病定性诊断的可能性。
【方法】分析 1 例鼻咽部淋巴瘤患者临床、MRI 影像资料，结合文献，梳理 NPL 的多序列 MRI 特征性表现。
【结果】男，76 岁。无明显诱因发现左颈部肿物，偶感疼痛，CT 增强扫描示鼻咽壁明显增厚并颈部多发肿大淋巴结，无明显强化， MRI 平扫+DWI 提示：双侧鼻咽壁明显增厚，呈肿块样隆起填塞鼻咽腔，T1WI 呈稍低信号，T2WI 呈稍高信号，DWI 示弥散受限，ADC 值为 0.552×10^-

3mm^2/sec，鼻咽腔消失，病灶向前突向鼻腔，向下突向口咽腔，向两侧突向咽旁间隙，双侧腭帆张肌、腭帆提肌、咽鼓管圆枕及头长肌显示不清，部分肌肉内见 T2W 稍高信号。颏下、双侧颈动脉鞘区及颌下腺区见多发肿大淋巴结，边界清晰，信号均匀，DWI 示弥散受限。我院病理检查诊断为弥漫大 B 细胞淋巴瘤，

【结论】鼻咽癌（nasopharyngeal carcinoma,NPC）与 NPL 是最常见的两种鼻咽部恶性肿瘤，两者 MRI 平扫均表现为 T1WI 等或稍低信号，T2WI 等或稍高信号，增强扫描轻度强化，仅基于常规 MRI 平扫及增强扫描很难区分。NPL 肿瘤组织的细胞密度大于 NPC,细胞外间隙小，导致其水分子弥散运动受限程度也大于 NPC，使其平均 ADC 值明显低于 NPC。文献报道 DWI 被公认为鉴别 NPC 和 NPL 的重要序列，NPC 的 ADC 值明显高于 NPL，差异存在统计学意义；另有文献表明 ADC 的直方图分析较传统的 ADC 平均值测量有明显优势。本例患者 DWI 明显受限，ADC 值仅为 0.552×10^-3mm^2/sec。因此综合常规 MRI 和 DWI 对于 NPL 的诊断与鉴别诊断有重要意义。

PU-2393

Characteristic radiological features of sinonasal rhinoscleroma: a retrospective study of six minority patients in Southwest China

Naier Lin[1],Yan Sha[1],Zuohua Tang[1],Rujian Hong[1],Yucheng Pan[1],Zhengkui Kang[2],Wenxiu Yang[2]
1.Department of Radiology， Eye and ENT Hospital of Fudan University， Shanghai Medical College
2.Department of Radiology， The Second People's Hospital of Lincang， Lincang， China

Objectives: To study the characteristic radiological features of sinonasal rhinoscleroma (RS).
Materials and methods: Six minority patients with sinonasal RSs were retrospectively studied through computed tomography (CT) (n = 5) and magnetic resonance imaging (MRI) (n = 3).
Results: Five cases originated in the nasal cavity and one originated in the sinus. Of the primary nasal lesions, four were bilateral and one was unilateral. Turbinate destruction (n=5) and nasal septum perforation (n=2) were observed. All nasal RSs showed involvement of the paranasal sinus, consisting of destruction of the sinus walls associated with sclerosis of the remaining sinus bone. On CT, RSs exhibited isodensity and mild heterogeneous enhancement. On MRI, RSs showed heterogeneous iso-, hypo- and slight hypointensity on T2WI, consistent with lesion at the granulomatous stage, fibrosclerotic stage or overlap phase. Two cases contained multiple small nodular areas that exhibited mild hyperintensity on both T1WI and T2WI. Dynamic enhancement (DCE) time-signal intensity curve (TIC) examination showed persistent and plateau types.
Conclusions: A sinonasal lesion exhibiting destruction of the turbinates and nasal septum, together with destruction of sinus walls and sclerosis of the remaining sinus bone, particularly, the unique MR signal intensity should provoke the diagnosis of RS.

PU-2394

侵袭性喉念珠菌病一例及文献复习

董梦艺
广东省人民医院

目的：学习一例误诊为喉癌的侵袭性喉念珠菌病，以提高临床医师的诊疗意识。方法：搜集一例经病原学证实的侵袭性喉念珠菌感染患者的临床资料及诊治过程，并检索复习国内外喉念珠菌感染的相关文献。结果：念珠菌是真菌中最常见的条件致病菌，一般认为念珠菌病常发生于免疫功能低下宿主。本文报道了一例相对少见的侵袭性孤立性喉念珠菌病，且发生在免疫功能正常的宿主，因影像及内镜检查均提示恶性肿瘤可能，导致了临床误诊，结合文献对该病例的临床、病理、影像学表现与鉴别诊断进行复习，以期提高影像科医生警惕,加深对该病的认识。结论：侵袭性喉念珠菌病罕见，临床表现不典型，早期易误诊，诊断需依靠病理检查，全身或局部抗真菌治疗是其主要治疗方法，预后良好，必要时可行病损切除术，以提高患者呼吸道通畅情况。

PU-2395
磁共振扩散峰度成像及体素内不相干运动扩散加权成像在鼻咽癌疗效评估中的应用研究

冯福婷,罗敏
自贡市第四人民医院

目的 探讨磁共振峰度成像、体素内不相干运动扩散加权成像在鼻咽癌疗效评估中的价值。**方法** 收集本院病理确诊的鼻咽癌患者 40 例，于治疗前、治疗 3 个月后、治疗 6 个月后行磁共振检查，每次检查均测量 DKI 参数（包括 MD、MK、FA）、IVIM 参数（包括 D、D*、f）。治疗 6 个月后根据鼻咽镜结果将患者分为病灶无残留组、病灶残留组。采用独立样本 t 检验比较治疗不同时间点各参数差异。采用配对 t 检验比较不同分组各参数差异。采用多因素联合诊断的 ROC 曲线比较不同参数对鼻咽癌疗效预测的价值。**结果** 治疗前病灶无残留组和病灶残留组 MD 值分别为 $1.12\times10^{-3}m^2/s$、$1.22\times10^{-3}m^2/s$，MK 值分别为 1.01、1.10，D 值分别为 0.7、0.87，在两组之间差异有统计学意义（$P<0.05$）。治疗不同时间点（治疗前、治疗 3 个月后、治疗 6 个月后）MD 值分别为 $1.15\times10^{-3}m^2/s$、$1.38\times10^{-3}m^2/s$、$1.70\times10^{-3}m^2/$，MK 值分别为 1.04、0.91、0.80，D 值分别为 $0.75\times10^{-3}m^2/s$、$1.37\times10^{-3}m^2/s$、$1.51\times10^{-3}m^2/s$，f 值分别为 8.87%、17.95%、13.17%，不同时间点两两比较差异有统计学意义（$P<0.05$）。联合 MD、MK、D 值预测鼻咽癌疗效 ROC 曲线下面积最大，AUC 值为 0.863，灵敏度和特异度分别为 0.769、0.621。**结论** DKI 和 IVIM 均能有效的评估鼻咽癌的疗效，治疗前联合 DKI 及 IVIM 定量参数较单独使用一种方法预测鼻咽癌疗效价值更大。

PU-2396
CT Findings of Laryngeal Tuberculosis: Report of 8 Cases

Jiayue Liu,Lijun Wang
The First Affiliated Hospital of Dalian Medical University

Objective: Our goal was to evaluate retrospectively CT findings of 8 patients with laryngeal tuberculosis (LTB) to determine its main characters as well as to associate with the other findings of laryngoscopy and chest checks. Methods: Eight cases of LTB were analyzed; they were all proved by histological tests. All of them went through laryngoscopy and laryngeal CT tests, and six patients had chest DR check, four had

chest CT check. Result: These cases were categorized into two types: diffuse type (n=4), focal type (n=4). The CT scan mainly showed diffuse thickening of bilateral vocal cords, epiglottis and aryepiglottic folds or focal masses in soft tissue density. The contrast-enhanced CT examination showed diffuse enhancement (n=4) or linear enhancement in mucosa (n=3). Among the 7 patients identified pulmonary tuberculosis by chest checks, 6 were active pulmonary tuberculosis (85.7%) and one was old (14.3%). The one patient was regarded as primary laryngeal tuberculosis. Conclusion: LTB should be considered, if laryngeal CT shows diffuse thickening and linear enhancement in mucosa, and the chest check reveals pulmonary tuberculosis.

PU-2397

鼻腔孤立性纤维瘤/血管外皮细胞瘤影像学表现（附 1 例报告并文献复习）

刘显旺[1,2,3],周俊林[1,2,3]
1.兰州大学第二医院
2.兰州大学第二临床医学院
3.甘肃省医学影像重点实验室

目的 ：探讨鼻腔孤立性纤维瘤/血管外皮细胞瘤影像学表现，以提高术前诊断水平。
方法：回顾性分析我院 1 例经手术病理证实的鼻腔孤立性纤维瘤/血管外皮细胞瘤的临床资料及 CT、MR 表现，并复习相关文献。
结果：48 岁中年女性，CT 及 MRI 均提示左侧鼻腔内不规则占位性病变，伴周围骨质破坏，结合影像学表现、镜下病理表现及免疫组织化学染色，最终确诊为鼻腔孤立性纤维瘤/血管外皮细胞瘤。
结论：鼻腔孤立性纤维瘤/血管外皮细胞瘤好发于中年人，无性别差异，常表现为边界清楚的孤立性、圆形或不规则形实性质韧肿块，呈膨胀性生长，可填充整个鼻腔并累及鼻窦，推挤周围组织，并可致邻近骨质压迫吸收。CT 平扫多呈边界清晰、密度均匀的软组织肿块。MR 检查 TIWI 为等低信号，因肿瘤内富含纤维成分，T2WI 常表现为低信号。增强后肿瘤强化常较明显，并可见粗大的引流血管。当鼻腔肿块呈分叶状，膨胀性生长，周围骨质受压吸收、破坏，T2WI 为低信号，增强后明显强化并可见引流血管时高度提示 SFT/HPC 可能。

PU-2398

鼻窦内翻性乳头状瘤诊断要点与分析

王博,马湘乔
北部战区空军医院

目的：探讨 CT 及 MR 对鼻腔及副鼻窦内翻性乳头状瘤的诊断价值。材料与方法：回顾性分析 30 例经病理证实的鼻窦及副鼻窦内翻性乳头状瘤的 CT 及 MR 征象，术后 16 例行 CT 及 MR 随访。结果：肿瘤呈不规则软组织肿块。以中鼻道为中心，同时侵犯同侧鼻腔及副鼻窦 19 倒，单纯累及上颌窦 3 例；所致骨质改变以骨质破坏多见。术后肿瘤复发率高(75%)，3 例恶性变。结论：CT 及 MR 能较好地显示鼻腔及副鼻窦内翻性乳头状瘤的病变部位、范围及术后有无肿瘤复发，有利于临床治疗方案的选择。

PU-2399
鼻中隔偏曲及窦口鼻道复合体解剖变异的 CT 评价与慢性鼻窦炎相关性研究

张珅夏,马湘乔
中国人民解放军北部战区空军医院

目的 研究鼻窦 CT 冠状位片鼻中隔偏曲及窦口鼻道复合体解剖变异与慢性鼻窦炎的关系
方法 选择 200 例(400 侧)经鼻窦 CT 检查患者，进行 Lund-Mackay 评分并分为慢性鼻窦炎组(,n=146,292 侧)和非鼻窦炎组(n=54,108 侧),选择冠状位片观测鼻中隔偏曲方向、程度及位置，中鼻甲反向偏曲、中鼻甲气化、钩突肥大、钩突气化、钩突角度（内偏、外偏）、Haller 气房和筛漏斗宽度，并进行统计学分析
结果 中鼻甲反向偏曲 3.3%，中鼻甲气化：垂直部 10%，球状部 3.3%，广泛气化 5%；钩突内偏 23.3%，钩突外偏 38.3%，Haller 气房 29.2%，鼻中隔偏曲 281 侧，其中左偏 162 例，右偏 119 例，双侧同时偏曲 31 例；偏曲程度：轻度 62.2%、中度 35.6%、重度 2.2%；偏曲位置：高位 33.3%、低位 51.1%、混合 15.6%；不同钩突变异其慢性鼻窦炎发病率差异有统计学意义(x2=18.528,P＜0.01).其中钩突外偏型和 Haller 气房发病率均明显高于钩突内偏型,差异有统计学意义(P＜0.05).鼻窦炎组钩突角度筛和漏斗宽度分别为(119.5±19.5)°和(5.7±3.5) mm,与非鼻窦炎组(137.1±11.6)°和(3.6±1.4) mm 比较,差异有统计学意义(P＜0.05)
结论 鼻中隔偏曲及窦口鼻道复合体解剖变异与慢性鼻窦炎关系密切,鼻窦 CT 冠状位片扫描可明确其解剖变异及其毗邻关系

PU-2400
磁共振成像(MRI)对鼻咽癌早期诊断的临床价值

马蕊,马湘乔
中国人民解放军北部战区空军医院

【摘要】 目的 探析核磁共振成像(MRI)对鼻咽癌早期诊断的临床价值。方法收集 2017 年 1 月-2019 年 1 月收治的拟诊断为鼻咽癌的患者 40 例进行回顾性分析。所有患者均进行动态增强成像(DCE-MRI)和弥散加权成像(DWI)扫描,并以穿刺活检病理结果为金标准,比较两种检测方式对鼻咽癌的灵敏度、特异度和准确度;将拟诊断为鼻咽癌患者根据 MRI 的扫描方式不同分为动态增强成像(DCEMRI)组和弥散加权成像(DWI)组。分析两种扫描方式对鼻炎癌患者和非鼻炎癌患者的肿瘤的生物学差异 结论 DCE-MRI 扫描和 DWI 扫描均能对鼻炎癌早期进行一定程度的影像学诊断,但 DCE-MRI 对早期鼻咽癌患者诊断的灵敏度、特异度和准确度更高。

PU-2401
出血坏死性息肉的 CT 和 MRI 特点分析

陈灿,马湘乔
中国人民解放军北部战区空军医院

目的探讨出血坏死性息肉的 CT 和 MRI 特点,提高术前诊断准确率。**方法** 回顾复习近 3 年收治的 15 出血坏死性息肉患者的影像学资料,分析总结其术前鼻窦 CT 和 MRI 的特点并讨论其与相似疾病的鉴别要点。**结果** 部分病例 CT 表现与一部分真菌性鼻窦炎、内翻乳头状瘤以及上颌窦癌有相似之处。但这些病的 MRI 表现各异,可资鉴别。**结论**相较于单一的鼻窦 CT 检查,CT 结合 MR 影像可提

供更多的诊断信息以提高出血坏死性息肉的术前诊断准确性,有助于术前预估内镜下手术方案,有利于与患者沟通病情。

PU-2402

鼻腔鼻窦畸胎癌肉瘤 1 例

葛欢
山东省立医院耳鼻喉医院山东省立医院西院(原:山东煤矿总医院)

患者男，53 岁，3 月余前无明显诱因出现头痛，程度轻，可耐受，伴有涕中带血丝，未予重视，未行治疗。1 月前出现右侧鼻塞，并逐渐加重，呈持续性，伴有嗅觉减退，无视力下降及头痛加重等。 专科检查：鼻外形正常，右侧鼻腔可见暗红色新生物。
影像学表现：CT：右侧鼻腔、后鼻孔见不规则形软组织密度肿块，密度不均匀，内见钙化灶，最大截面面积约 5.8cm×1.5cm，与邻居鼻甲分界不清，增强检查后可见不均匀强化，内见低密度。考虑肿瘤。MRI：右侧鼻腔、筛窦、后鼻孔区见不规则形等长 T1 长 T2 异常信号，最大截面约 5.7cm×1.4cm，增强扫描呈明显不均质强化，其内可见无强化区，病变与邻近鼻甲分界不清，右眶内侧壁受累，鼻中隔向左侧偏移。考虑恶性肿瘤。术后病理示：（右侧鼻腔）鼻腔鼻窦畸胎瘤肉瘤；免疫组化：CK(+)、Vimentin(+)、Syn （ + ）、CD99 部分（+)、CgA(-)、SMA 部分（+)、Desmin(-)、Ki-67index 50%。
鼻腔鼻窦畸胎癌肉瘤(sinonasal teratocarcinosarcoma, SNTCS)又称“恶性畸胎瘤”、“畸胎样癌肉瘤”等，2005 年 WTO 正式命名为“鼻腔鼻窦畸胎癌肉瘤”，为一种罕见的高度恶性肿瘤。本病好发于成年男性，男女比例为 8:1，发病年龄 18～79 岁，平均 60 岁。其临床症状主要表现为鼻塞、鼻出血、嗅觉减退、头痛、视力降低等症状。该病通常表现为鼻腔内占位、密度均匀或欠均匀、无明显的钙化或囊性变，增强扫描后肿块多不均匀强化。局部进展者可见周围骨质结构破坏，甚至侵及颅底、海绵窦及中枢神经等。确诊需依靠病理学检查，多需多次活检或根治手术方能确诊。
鉴别诊断 ：（1）内翻性乳头状瘤；（2）嗅神经母细胞瘤。

PU-2403

鼻骨区陈旧骨折和新鲜骨折的螺旋 CT 影像特征分析

陶建华
首都医科大学附属北京同仁医院

目的 应用多层螺旋 CT（multi-slice spiral CT，MSCT）分析鼻骨区陈旧骨折（外伤半年以上）的影像特征，探索和新鲜骨折的鉴别点。**方法** 对 100 例鼻骨区陈旧骨折和 1500 例新鲜骨折（外伤 3 天内）的 MSCT 影像进行回顾性分析，首先确定观察指标：1.骨折断端的形态；2.轮廓改变；3.骨折断端是否伴发游离气体。4. 鼻背部软组织情况。5.鼻腔和鼻前庭的粘膜改变，由三名高年资影像主治医师根据上述指标对陈旧骨折和新鲜骨折做出独立诊断。并统计上述征象在陈旧和新鲜骨折中的出现率和特异性。**结果** 陈旧骨折断端圆钝清晰，骨质增厚硬化，新鲜骨折断端锐利模糊；新鲜骨折断端可伴发游离气体，新鲜骨折的鼻腔和鼻前庭的粘膜明显增厚，陈旧骨折的鼻腔和鼻前庭的粘膜无或轻微增厚。骨折断端形态改变、骨折断端处是否伴发游离气体、鼻腔和鼻前庭的粘膜是否增厚是判断陈旧或新鲜骨折最具有特异性的征象。骨折的轮廓改变和鼻背部软组织是否增厚不具有鉴别陈旧和新鲜骨折的特异性。**结论** 骨折断端形态改变和鼻腔鼻前庭的粘膜改变是判断新鲜

或陈旧鼻骨区骨折的重要征象，正确诊断新鲜或陈旧的鼻骨区骨折对于鼻骨骨折的司法鉴定意义重大。

PU-2404

鼻骨区陈旧骨折的螺旋 CT 影像特征的探索

陶建华
首都医科大学附属北京同仁医院

目的 应用多层螺旋 CT（multi-slice spiral CT，MSCT）分析鼻骨区不同部位骨折的影像特征和临床特点。 **方法** 对 1500 例新鲜鼻部外伤的患者进行 MSCT 扫描，图像的多平面重建（MPR）和锐化，包括横断位、冠状位、以及容积再现（VR）。把鼻骨区骨折按照发生部位分为：前部骨折：即鼻骨前部，包括鼻骨缝和骨性鼻中隔前部；中部骨折：即鼻颌缝附近和骨性鼻中隔中部；后部骨折：上颌骨额突后部；复合骨折：至少包括前中后任何两处骨折。骨折类型分为：凹陷型，隆起型 ，青枝型，粉碎型（＞或=2 块骨折）。**结果** 骨折发生率：复合-中部-前部-后部。复合骨折最多见，其次是中部骨折，可能和鼻颌缝附近的骨质是最薄弱的有关。下部骨折最少，因为额突下部很坚硬，不易骨折。最常见骨折类型是凹陷骨折，其次是粉碎骨折和隆起型骨折，最少见的是青枝型骨折。**结论** 额突后部是额突最坚硬的部位，骨折发生率最低。青枝骨折最多见于前部骨折，凹陷骨折最多见于中部和后部骨折， 粉碎骨折最多见于复合骨折。鼻中隔骨折最容易引起双侧鼻腔阻塞和出血。复合骨折最容易引起单侧鼻腔和鼻前庭阻塞和出血。前部骨折引起的鼻塞和出血最轻。

PU-2405

鼻骨区新鲜骨折的多层螺旋 CT 影像特征分析

陶建华
首都医科大学附属北京同仁医院

目的 应用多层螺旋 CT（multi-slice spiral CT，MSCT）观察鼻骨区新鲜骨折（外伤 3 天内）的影像特征。 **方法** 对 1500 例新鲜鼻部外伤的患者进行 MSCT 扫描和图像的多平面重建（MPR）和图像锐化，包括横断位、冠状位、以及容积再现（VR），由三名高年资影像主治医师分析骨折主要征象，并做出独立诊断。 **结果** 总结出新鲜骨折主要影像特征：1.骨折线，明显骨折能够看到骨折线，断端移位成角。2.轮廓改变，轻微骨折，骨折线显示不清，仅表现为鼻骨和上颌骨额突的穹隆弧形塌陷。3. 骨折断端处游离气体。4. 沿骨折外缘轮廓贴边走行的低密度线影消失。5. 鼻背部皮肤中断，软组织增厚，层次模糊伴/不伴积气。6.鼻腔和鼻前庭的粘膜增厚。统计上述征象的出现率，准确率，特异性和敏感性。**结论** 1. 明确骨折线是诊断新鲜骨折最特异性的征象。2.冠状位显示鼻骨的横行骨折有优势。3. 软组织算法的彩色 VR 因能够多角度观察，很好显示鼻骨区轮廓改变，对于诊断轻微急诊骨折有优势。3.骨折断端处游离气体对于诊断新鲜骨折和鉴别陈旧骨折有意义。4.鼻腔和鼻前庭的粘膜增厚对于鉴别新鲜和陈旧骨折有重要意义。5. 骨折断端外缘的低密度线影消失在诊断骨折时并不具有特征性。

PU-2406

鼻软骨间叶性错构瘤 2 例报告并文献复习

高博,潘晓晔,陈莉军
甘肃省人民医院

病例 1，女性，7 岁，因右侧鼻腔出血半月就诊，伴鼻塞、视物模糊，无头痛及眼球运动受限等，鼻内镜示鼻腔肿物，行 CT 增强及 MRI 平扫检查，示右侧鼻腔-筛窦-上颌窦肿物，病变内合并结节状、条片状钙化，筛窦间隔及下鼻甲、中鼻甲部分骨质破坏，增强呈不均匀强化，影像诊断鼻腔良性肿瘤，内翻乳头状瘤可能性大，手术切除后病理示鼻软骨间叶性错构瘤。

病例 2，女性，8 岁，左侧鼻塞半年就诊，因感冒后左侧鼻塞伴黏液分泌物，抗炎治疗后效果不佳，就诊于当地医院提示鼻腔肿物，为就进一步治疗就诊我院。行副鼻窦 CT 增强检查，左侧鼻腔见混杂密度肿块影，部分突入上颌窦，肿块内合并条片状钙化，增强实性成份可见中度强化，影像诊断为鼻腔良性肿瘤，纤维血管瘤可能性大，行手术切除后病理提示鼻软骨间叶性错构瘤。

讨论：鼻软骨间叶性错构瘤是一种罕见小儿肿瘤，1998 年，McDermott 等首次报道，认为肿瘤由软骨及软骨样组织的间充质细胞组成，形态上类似于肺部间叶性错构瘤，具体发病机制尚不清楚。鼻腔错构瘤包括间质和上皮成份，常见类型错构瘤包括血管、脂肪、软骨、神经及上皮，各种成份占比决定了其病理、影像表现不同。CT 主要表现为鼻腔内不均质软组织肿块，伴囊性成份，伴或不伴钙化，实性成份呈稍长 T1 稍长 T2 信号影，增强不均匀强化，钙化可以提示诊断。本组 2 例病例图像均显示为软组织肿块伴钙化，MRI 信号混杂，符合文献报道的鼻软骨间叶性错构瘤影像表现。本病影像表现虽具有一定特征，诊断时需与脑膜脑膨出、鼻部神经胶质瘤及鼻腔异位脑膜瘤相鉴别。手术完整切除为主要治疗手段，远期预后良好，暂无复发及恶变相关报道，早期准确诊断，精确描述病变范围，对于手术计划制定及治疗至关重要。

PU-2407

舌扁桃体肥大的影像观察

闫昆
中国科学院大学宁波华美医院（宁波市第二医院）

摘要
目的：探究 CT 对舌扁桃体肥大的影像诊断效能。
方法：收集 267 例因阻塞性睡眠呼吸暂停低通气综合征行上气道 CT 检查患者的影像资料，观察舌扁桃体形态，对舌扁桃体肥大程度进行影像分级，并与临床纤维喉镜检查结果进行对比，观察影像诊断的准确性。
结果：影像组Ⅰ度、Ⅱ度、Ⅲ度舌扁桃体肥大患者例数分别为 48：135：84 例；纤维喉镜组Ⅰ度、Ⅱ度、Ⅲ度舌扁桃体肥大患者例数分别为 37：138：92 例；Kappa 检查提示两种检查有较高的一致性。
结论：CT 检查能够有效、准确、无创、无痛苦的检出舌扁桃体肥大。既往因阻塞性睡眠呼吸暂停低通气综合征行上气道 CT 检查常忽视对舌扁桃体病变的观察，但该类患者中，咽部异物感症状出现频率高。影像检查对该病变的描述，可有效促进临床对患者的有效治疗，值得在临床上进行推广应用。

PU-2408

断层融合技术在鼻骨骨折中的应用价值探讨

谢冬生
苏北人民医院

目的：常规拍摄鼻骨制约因素较多，常不能满足临床工作的需要，文中通过与普通鼻骨侧位片比较，探讨数字
断层融合技术(digital tomosynthesis，DTS)在鼻骨摄片中的应用价值。
方法：选取 43 例因各种原因所致鼻骨骨折患者，
行普通 X 线鼻骨侧位片和 DTS 断层融合成像，将 2 种图像的清晰度、对比度进行比较。分析其相应的表现和诊断。
结果：43 例鼻骨确诊骨折患者所拍普通鼻骨侧位片与 DTS 断层融合图像的鼻骨骨折率各为 60．4％和 100％，可疑骨折
率各为 37．2％和 0％，常规普通 X 线拍片有 4．6％未见明显骨折，而 DTS 断层融合为 0％，所以 DTS 断层融合成像质量
明显高于普通成像。
结论：DTS 断层融合戚像拍摄鼻骨图像清晰度高，避免了临近结构的重叠，不受拍摄时其他条件的限制．辐射剂量低。价格低廉，在实际明确诊断鼻骨骨折中起到很重要的作用。

PU-2409

喉癌肉瘤 1 例

冯瑶杰,瞿姣,杨亚英,张梦梅,韦文彦
昆明医科大学第一附属医院

癌肉瘤是一种由上皮和间质成分组成的恶性肿瘤，因其发生有许多假说，故产生了多种命名，如肉瘤样癌、假肉瘤、化生癌等。组织学上癌成分以鳞状细胞癌及腺癌多见，常位于肿瘤基底部粘膜及粘膜下，肉瘤成分以横纹肌及平滑肌多见，多分布在肿瘤近中心部或蒂部。免疫组织化学中细胞角蛋白 CK 和波形蛋白 VIM 同时阳性较具特征性。**喉部癌肉瘤罕见，仅占喉部恶性肿瘤的 2%-3%**，好发于 50-69 岁中老年男性，恶性程度高，侵袭性强，预后差。发病病因不明，可能与吸烟、饮酒及放射线接触史有关。**喉癌肉瘤多位于声门区，且多为外生性生长，早期即可堵塞喉腔而导致呼吸困难。因生长部位特殊，肿瘤体积常小于 3cm，而其他部位的癌肉瘤生长部位隐匿，初诊时体积常大于 5cm。复习相关文献并结合本例喉癌肉瘤 CT 表现发现：喉癌肉瘤多表现为声门区外生性肿物，呈较均匀等或稍高密度，边缘较清晰，增强扫描呈渐进性强化，晚期可侵犯周围结构，但区域淋巴结转移少见。**

PU-2410

鼻腔骨外尤文肉瘤 1 例

冯瑶杰,危春容,张梦梅,杨亚英,者光玲,吕艳娥
昆明医科大学第一附属医院

骨外尤文肉瘤/外周原始神经外胚层肿瘤（Extraskeletal Ewing's Sarcoma/Peripheral Primitive Neuroectodermal tumor，EES/pPNET）是一种罕见的高度侵袭性小圆细胞肿瘤，是起源于软组织的尤文肉瘤，好发于 10-20 岁，男性稍多于女性。EES 好发于脊柱旁、躯干、腹膜后、四肢等，仅 1-4%发生于头颈部，**发生于鼻腔鼻窦者更为罕见**。本文报告了 1

例鼻腔骨外尤文肉瘤，**鼻腔鼻窦骨外尤文肉瘤多位于筛窦及上颌窦，在影像上多为体积较大的软组织肿块，CT 为等或稍低密度，磁共振平扫 T1WI 呈等或稍低信号，T2WI 呈高信号，密度或信号不均匀，囊变坏死多见而钙化少见，常伴邻近骨质膨胀性或筛孔状破坏，可见残留骨壳，通常无骨内尤文肉瘤典型的洋葱皮样骨膜反应或肿瘤骨，增强后伴分隔状强化较具特征性，可能与病灶内局部血管丰富，强化较其他区域明显有关。部分学者认为磁共振图像上病灶内或边缘见流空血管影较具特点**。EES 恶性程度高，易复发或转移，治疗主要采取手术及放化疗等综合治疗，而鼻腔鼻窦结构特殊且紧邻血管神经，往往难以根治性切除，术后需定期随访。

PU-2411

鼻咽纤维血管瘤的 MRI 诊断及其临床价值

殷洁
南阳市中心医院磁共振室

[摘要] **目的：**探讨鼻咽纤维血管瘤的 MRI 影像特点及其临床价值。**材料和方法：**回顾性分析 45 例鼻咽纤维血管瘤 MRI 资料，对肿瘤的侵犯范围、大小、边界、信号、周围骨质改变等进行观察分析。**结果：**影像学表现：鼻咽部软组织肿块；大部分边界清楚；信号均匀；翼腭窝的扩大增宽，上颌窦后壁受压前移、塑形，但后壁骨质无破坏是其特征性表现；周围骨质的压迫塑形或吸收破坏；显著强化。**结论：**MRI 扫描有助于肿瘤诊断、定位及分期，具有重要的临床价值。

PU-2412

CT、MRI 在喉癌术前评估中准确性分析

李卓,马湘乔
中国人民解放军北部战区空军医院

目的：研究多层螺旋 CT、MRI 在喉癌术前评估中准确性的对照分析，探讨 CT、MRI 对喉癌诊断及治疗方案选择的临床应用价值。方法：为收集解放军北部战区空军医院 2018 年 5 月~2019 年 5 月经术后病理证实的喉癌病例，对 CT 及 MRI 表现与喉镜及术后病理结果对照研究，并用 CT 后处理技术和喉镜图像进行对照研究及相关数据分析。结果：CT 对喉癌的正确诊断率为 86.36%，敏感性为 86.93%，假阴性率为 13.07%; MRI 对喉癌的正确诊断率为 84.08%，敏感性为 89.19%，假阴性率为 10.81%。CT 图像与 MRI 图像在评价肿瘤侵犯范围的对比中各具优势。结论：CT 图像及 MRI 图像可以很好的显示肿瘤的部位、大小、密度或信号、边界及侵犯范围，为喉癌术前评估和治疗方案的制定提供影像学依据。

PU-2413

鼻腔肿瘤的诊断及鉴别诊断

于桐泊,马湘乔
中国人民解放军第四六三医院

分析鼻腔常见肿瘤的 CT 表现， 了解其诊断及鉴别诊断要点。方法 分析经病理证实的鼻腔肿瘤 43 例， 内翻乳头状瘤 12 例(其中恶变 2 例),非霍奇金淋巴瘤 12 例,鼻腔癌 19 例。结果 12 例内翻乳头状瘤均为单侧病变, 12 例 肿物均位于鼻腔外侧壁, 10 例良性内翻乳头状瘤中， 肿

物主要位于鼻腔中后部 9 例(90%) , 10 例(100%) 边界清晰, 无明显 外侵征象,密度均匀 8 例。12 例淋巴瘤中,单侧病变 10 例(83. 3%) ,9 例(75%)位于鼻腔前部,9 例(75%)侵犯鼻翼、颜面 部皮肤,6 例(50%)皮下脂肪层消失,骨质侵蚀变薄 3 例。鼻腔癌 19 例,单侧病变 13 例(68. 4%) ,形态不规则、明显外侵 18 例(94.7%),溶骨性破坏 15 例(78.4 %)。结论 鼻腔内翻乳头状瘤、淋巴瘤、鼻腔癌有不同的影像特点,CT 扫描有助于诊 断及鉴别鼻腔各种常见肿瘤。

PU-2414

嗅神经母细胞瘤一例报道

王博,马湘乔
北部战区空军医院

嗅神经母细胞瘤(olfactory neuroblastoma，ONB)嗅神经母细胞瘤是一种少见的神经外胚层起源的恶性肿瘤，是低度恶性肿瘤，因其确切组织来源不明确，曾命名为嗅神经上皮瘤，嗅神经细胞瘤，成感觉神经母细胞瘤。它起源于上鼻甲、鼻中隔、筛板表面的嗅上皮。约占鼻腔恶性肿瘤的5%以上。ONB 发病隐匿，症状与肿瘤侵袭的部位有关，大多数无特征性症状表现，且肿瘤生长缓慢，患者常常由于数月后肿瘤侵犯出现如鼻出血、鼻塞、嗅觉减退或丧失、头痛、视物不清等症状后才得以确诊，嗅觉减退或丧失对诊断有提示作用。

PU-2415

鼻腔鼻窦少见良性肿瘤及类肿瘤样病变的 CT 和 MRI 诊断

向世凤
中国科学院大学重庆医院（重庆市人民医院）

目的 探讨 CT 和 MRI 对鼻腔鼻窦少见良性肿瘤及类肿瘤样病变的诊断价值。**方法** 收集我院行 CT 或/和 MRI 检查并经病理证实的鼻腔良性肿瘤及类肿瘤样病变 22 例，对其 CT 和 MRI 影像特征进行分析。**结果** 多形性腺瘤 2 例、神经鞘瘤 3 例、呼吸道上皮腺瘤样错构瘤 2 例、鼻腔鼻窦型血管外皮细胞瘤 2 例、孤立性纤维瘤 1 例、类肿瘤样胆固醇性肉芽肿 4 例、出血坏死性鼻息肉 8 例。病灶边界均较清楚，除 2 例呼吸道上皮腺瘤样错构瘤和 2 例后鼻孔区胆固醇性肉芽肿有沿鼻腔鼻道蔓延填充生长外，其余 18 例均表现为类圆形或欠规则局灶性结节、肿块。8 例见邻近骨质轻度吸收破坏，1 例胆固醇性肉芽肿骨质破坏明显。呼吸道上皮腺瘤样错构瘤嗅裂均增宽。CT 平扫除 1 例血管外皮细胞瘤、1 例胆固醇性肉芽肿、2 例出血性鼻息肉密度不均外，余密度均匀。2 例多形性腺瘤呈等/略低 T1、稍高 T2 信号，轻中度延迟强化伴小斑片无强化区；1 例行 MRI 检查神经鞘瘤小病灶呈等 T1、长 T2 信号，明显均匀强化，另 2 例行 CT 增强检查分别呈中度均匀和明显不均匀强化；2 例鼻腔鼻窦型血管外皮细胞瘤动脉期不均匀强化，其中 1 例延迟期均匀强化；孤立性纤维瘤动脉期不均匀强化，延迟期均匀强化；1 例位于上颌窦胆固醇性肉芽肿病灶内见多发钙化，余均为无强化较低密度占位改变；出血坏死性鼻息肉 CT 增强 1 例无明显强化，其余 7 例不均匀强化，其中 4 例强化峰值达 200HU 以上，4 例可见斑条状强化，2 例行 MRI 检查信号混杂，T1WI 等低信号为主，T2WI 高信号为主，1 例病灶周边可见低信号环及内部分隔表现，增强均明显不均匀强化。**结论** 鼻腔鼻窦少见良性肿瘤及肿瘤样病变 CT 及 MRI 表现各有一定的特征，常规 CT 和 MRI 检查能清楚显示病变部位、血供及周围结构的关系，有助于术前诊断，辅助制订治疗方案并指导手术。

3.0T 磁共振扩散加权成像判别咽后组淋巴结性质的临床价值分析

梁久平,符念霞,胡钰 ,陈惠枚,彭华荣,宋建勋
深圳大学第二附属医院（深圳市宝安人民医院）

目的 探讨 3.0T 扩散加权成像（DWI）在判别咽后组淋巴结性质的临床价值。**方法** 搜集 25 例伴咽后淋巴结肿大的鼻咽部病变患者的 MR 及临床资料，其鼻咽病变经临床或病理活检证实，良性组 13 例 23 枚，恶性组 12 例 15 枚；对比分析良、恶性咽后淋巴结的扩散加权成像（DWI）信号及表观弥散系数（ADC）值，采用受试者工作特征曲线（ROC）得出咽后淋巴结 ADC 值最佳诊断分界点。**结果** 咽后良、恶性淋巴结 ADC 值分别为（0.833±0.095）×$10^{-3}$$mm^2$/s、（0.663±0.070）×$10^{-3}$$mm^2$/s，二者差异有统计学意义（*P*=0.000），ADC 值判断淋巴结性质 ROC 曲线下面积为 0.959，以 0.767×$10^{-3}$$mm^2$/s 为阈值，敏感度为 78.3%，特异度为 100%。**结论** DWI 在鉴别咽后组良、恶性淋巴结具有重要的临床价值，能进一步提高对淋巴结性质判断的准确性。

PU-2417

鼻腔鼻窦恶性黑色素瘤的 CT 及 MRI 表现

刘从涛,孙立新,巩若箴
山东省耳鼻喉医院

目的：回顾性分析鼻腔鼻窦恶性黑色素瘤(Malignant sinonasal melanoma，MSM))的 CT 和 MRI 影像特点，并与病理对照，以提高 MSM 的诊断与鉴别诊断。
方法：回顾性分析本院 2016 年 1 月至 2019 年 6 月经手术或穿刺病理证实的鼻腔鼻窦部恶性黑色素瘤 13 例，其中行 CT 检查 10 例（其中平扫+增强扫描 5 例；平扫 5 例）；行 MRI 检查 6 例（其中平扫+增强扫描 3 例；平扫 3 例）。分析 MSM 在 CT 和 MRI 上的影像学特点。
结果：肿瘤位于鼻腔 10 例；后鼻孔 1 例；上颌窦 1 例；同时累及鼻腔鼻窦 3 例；CT 平扫呈结节状，边缘规则，密度均匀 5 例，无骨质破坏，增强扫描呈明显强化；膨胀性生长软组织肿块 5 例，密度不均匀，内见高密度出血及低密度坏死，邻近骨质呈溶骨性破坏，增强扫描中度不均匀强化；同时累及鼻腔及鼻窦 3 例，累及鼻窦及眼眶，增强扫描不均匀强化；MRI 典型黑色素型 3 例，呈 T1WI 高信号 T2 低信号，增强扫描呈明显强化；非典型无黑色素型 3 例，T1WI 呈等低信号，T2WI 呈等高信号，其中 2 例内见出血和坏死；增强扫描呈不均匀中度强化。
结论：CT 与 MRI 对鼻腔及鼻窦恶性黑色素瘤的定位、定性及临床分期具有重要作用。CT 表现软组织肿块，部分见溶骨性骨质破坏；MRI 典型黑色素性 MSM 呈 T1WI 高信号 T2WI 呈低信号，非典型无色素性 MSM 表现复杂，须与鼻腔鼻窦其他肿瘤鉴别，结合发病年龄、发生部位、临床表现综合分析后做出诊断。

PU-2418

MRI 对喉癌术前诊断的价值

李卓,马湘乔
中国人民解放军北部战区空军医院

目的 探讨 MRI 对喉癌术前诊断准确性评估及诊断价值。**方法** 收集中国人民解放军北部战区空军医院 2018 年 4 月-2019 年 4 月 34 例(平均年龄 62.2±5.1 岁)疑似喉癌的喉内窥镜检查并同时行 MRI 检查的病例，并与病理结果对比。**结果** MRI 影像表现为侵袭前联合、声带、舌骨及会厌前间隙，喉部软骨浸润。在 15 例病例中，声门型有 15 例(44%)、声门上型有 10 例(29%)、跨声门有 9 例(27%)。受累部位包括前联合 (48 例 48%)、会厌前间隙(33%)、软骨浸润(19 例 14%)，与术后病理结果对比差异无统计学意义。根据 MRI 发现，4 例(12%)为 T2，26(76%)为 T3 和 4 例(12%)为 T4；在术后病理结果中，12 例为 T2(35%)，18 例为 T3(53%)，4 例为 T4(12%)。通过 MRI 诊断，76%的患者正确分类，显示有统计学意义(ρ=0.59；p＜0.05)。**结论** MRI 对喉癌术前诊断准确性高,具有重要诊断价值。

PU-2419

复发性喉癌螺旋 CT 诊断价值分析

杨健
中国科学院大学重庆医院（重庆市人民医院）

目的：探讨喉癌术后复发的螺旋 CT 诊断价值。
材料与方法：回顾分析我院 2015 年 1 月 2019 年 1 月经病理活检证实的 25 例复发性喉癌的 CT 资料。采用东芝 AquilionCX64CT，准直为 0. 625 mm 螺旋 CT 扫描，利用扫描获取的容积资料行薄层 1 mm 冠状、矢状、轴位多平面重组(MPR)，标准算法，矩阵 512×512。
结果：25 例术后复发性喉癌，术前皆为鳞癌，其中声门上型 18 例、声门型 5 例、跨声门型 2 例，分别采用声门上半喉、垂直半喉、全喉切除。术后复发见于 3～5 月 3 例，6～11 月 8 例，12 月～4 年 14 例。主要表现为术后新增强化软组织肿块及周围结构受侵，其中不规则强化肿块 20 例，淋巴结肿大 17 例，喉软骨破坏 5 例，颈动脉鞘受累 5 例，气管造瘘口癌 3 例，颈椎骨质破坏 1 例。
结论：喉癌术后定期 CT 复查，可以及时发现复发性喉癌。

Small cell neuroendocrine carcinoma (SNEC) of paranasal sinuses: Radiologic features in fourteen

Naier Lin,Sha Yan,Tang Zuohua,Zhang Fang
Department of Radiology, Eye and ENT Hospital of Fudan University, Shanghai Medical College

Objective: To explore the characteristic computed tomography (CT) and magnetic resonance imaging (MRI) features of small cell neuroendocrine carcinoma (SNEC) of paranasal sinuses.
Materials and Methods: CT (n = 8) and MRI (n = 14) images, as well as the clinical findings from 14 patients with a pathologically diagnosed SNEC of paranasal sinuses were retrospectively reviewed.
Results: 8 lesions were located in ethmoidal sinus, 4 in maxillary sinus and 2 in sphenoid sinus. SNECs of sphenoid sinus showed bilateral asymmetry pattern. On CT scan, lesions were isodensity, and moderate (n = 5) or mild (n = 3) enhancement. Bony changes were visible in all 8 cases. On MRI scan, 3 cases contained haemorrhage, 9 cases contained cystic or necrotic areas. All cases demonstrated heterogeneous marked enhancement with half showed “cribriform-

like" or "geographic" appearance. Nasal cavity was the most common sites invaded by SNEC of paranasal sinuses. followed by orbits. Time-signal intensity curve (TIC) exam showed wash-out type in all but one cases. The mean apparent diffusion coefficient (ADC) values was 0.77 ± 0.21 * 10^{-3} mm^2/s. Immunohistochemical demonstrated a consistent positive staining for cytokeratin(CK) and synaptophysin(Syn), while negative staining for S-100 and thyroid transcription tactor-1(TTF-1) in all tumors. According to the Dulguerov staging system, tumors were staged as 9 N0 (1 T2, 6 T3, 2 T4) and 5N1 (3 T3, 2 T4).The recurrence rate is 64.3% and 3 patients at T4 stag expired during the 3-30 months follow-up period.

Conclusion: The diagnosis of SNEC is challenging and it can easily be misdiagnosed. Some characteristics of radiological findings can supply important clues for preoperative diagnosis and suitable treatment planning

螺旋 CT 多平面重组技术在喉癌诊断中的应用效果观察

马蕊,马湘乔
中国人民解放军北部战区空军医院

【摘要】 目的分析螺旋 CT 多平面重组(MPR)技术在喉癌诊断及术前评价中的应用价值。方法选取 50 例喉癌手术患者术前螺旋 CT 横断面及 MPR 图像处理资料,与手术及病理结果相对比,分析 CT 轴位、CT 轴位+MPR 联合 2 种方法对喉旁间隙、甲状软骨等结构受侵评价的准确性、敏感性、特异性。结果 CT、CT+MPR 2 种不同检查方法中,对喉旁间隙受侵的评价准确性分别为 82.0%、94.0%(P<0.05),其中 CT+MPR 检查准确性明显高于单纯 CT 轴位技术;对甲状软骨受侵的评价准确性分别为 83.0%、96.0%(P<0.05);对声带、会厌、室带、梨状窝、会厌前间隙、喉外结构以及杓状软骨受侵的评价准确率差异无统计学意义(P>0.05),但 CT+MPR 对各个结构受侵情况准确性、敏感性以及特异性较高。结论 CT+MPR 可提高喉癌诊断确诊率,在喉癌术前评价中有应用价值。

PU-2422

CT 和 MRI 对鼻内翻性乳头状瘤的诊断价值

张珅夏,马湘乔
中国人民解放军北部战区空军医院

[摘 要] 目的 分析鼻内翻性乳头状瘤的 CT 和 MRI 表现，探讨其诊断价值。**方法** 回顾 21 例经病理证实的鼻内翻性乳头状瘤的 CT 和 MRI 影像，并与术中所见、术后病理及随访结果比较。结果 21 例中，起源于上颌窦 8 例，筛窦 1 例，额窦 1 例，鼻甲 9 例，窦口鼻道复合体 2 例。CT 表现：单侧鼻腔鼻窦软组织病变，骨炎征的出现率为 61.90%，与起源部位一致的 76.92%，2 例出现眶纸板或前颅底骨质破坏，与恶变相关。MRI 表现：20 例出现脑回征，根据脑回征逆向回溯法，18 例准确预测起源部位。**结论** CT 与 MRI 相结合，对于判断鼻内翻性乳头状瘤的起源、范围及是否合并恶变更具有诊断价值。

双源 CT 平扫碘图在甲状腺良恶性结节诊断中的应用研究

吴小红,戴志军
宁夏回族自治区人民医院

目的 探讨二代光子双源 CT 双能量平扫时碘图碘含量对甲状腺良恶性结节的鉴别诊断价值。**方法** 搜集行二代光子双源 CT 双能平扫的甲状腺结节患者 40 例，且 40 例甲状腺结节患者中发现 65 枚结节全部经病理明确病灶性质，并根据病理结果将其分为良恶性两组。测量甲状腺良性结节与恶性结节行双能 CT 扫描后碘图含碘量，统计分析甲状腺良恶性结节含碘量之间有无差异，并比较良性结节周围正常甲状腺含碘量及恶性结节周围正常甲状腺组织含碘量之间有无差异。 **结果** 40 例行双源 CT 双能扫描的患者共发现 65 枚结节，与手术证实结节数目一致，其中甲状腺良性结节 37 枚，甲状腺恶性结节 28 枚，甲状腺良性结节碘图含碘量为（-0.5±0.36ml/mg）、甲状腺恶性结节碘图含碘量为（ -1.32±0.12 ml/mg），两者之间碘图含碘量有统计学意义（P＜0.05），甲状腺良恶性结节周围在正常甲状腺组织含碘图碘量分别为（1.83±0.28）mg/mL、（1.81±0.26）mg/mL，差异无统计学意义（P＞0.05）。**结论** 双源 CT 双能量平扫时通过碘图定量分析碘含量并结合甲状腺形态学判断甲状腺结节良恶性，可以提高甲状腺结节性病变诊断的准确性和诊断信心。

Madelung’s disease：manifestations of CT and MR imaging (report of 5 cases and literature review)

Yan Wang,Jing Wang
Xiehe Hospital， Tongji Medical College， Huazhong University of Science and Technology

Abstract:
Purpose: The aim of this study is to investigate the Madelung ’disease clinical manifestations of CT and MR imaging and improve the detection rate of the disease.
Materials and Methods: Link the literature and review clinic date of 5 cases Madelung`s diseases, review date of 5 cases Madelung`s diseases all were made sure by the clinic department from 2014-1~ 2019-7. 3 cases underwent CT plain scan，1 case underwent CT enhanced scan at the same time; 2 cases underwent MRI plain scan and 1 patients underwent MRI enhancement scan. The MR scanning all apply the squence of fat-restrain.
Result: The patients in this group were male. The clinical manifestations were typical "horse collar" signs. They all had long history of alcohol abuse and smoking history, and the age ranged from 51 to 63 years old, which was consistent with the literature.There were 1 case of type 2 diabetes mellitus, 1 case of esophageal cancer, 2 cases of hyperuricemia, 3 cases of hyperlipidemia, 4 cases of impaired liver function and 3 cases of postoperative recurrence. The central nervous system and peripheral nervous system of this group were not. Clearly involved, there were no characteristic changes in brain MR and cervical vascular MRA.CT showed diffuse thickening of the symmetry of the subcutaneous and/or platysma deep muscles and muscle interstitial fat layer in the neck region,no capsule;most involved bilateral parotid and parapharyngeal spaces. Around the hypopharynx, MRI showed short T1 long T2 signal; low signal on lipostatic sequence and no enhanced enhancement in enhanced scan; combined with patient alcohol abuse history, they were in A preliminary diagnosis was

made before surgery, and postoperative confirmation and pathological results were obtained.
Conclusion: CT and MR examination can display the distribution of neck and shoulder thickening fat and the involvement of adjacent structures, which can provide a clear anatomical relationship for surgical treatment.
Key word: Madelung`s disease,x- ray computer, tomography

PU-2425

颈部粘液样软骨肉瘤 1 例

陈惠娴,谢琦
广州市第一人民医院 南沙医院

目的：熟悉骨外粘液样软骨肉瘤的发病特点及影像学表现。
方法：报道本院经病理证实的颈部软组织粘液样软骨肉瘤 1 例，结合文献分析其 CT 及 MRI 影像学特点及机制。
结果：肿块 CT 表现为中心低密度伴少许钙化和等密度分隔，增强呈边缘强化；MRI 表现为 T1W 低、T2W 高信号影，信号混杂不均，内可见斑片状及索条状 T2W 低信号，增强呈边缘明显强化，中央区域不强化，其内部斑片及索条影强化明显，肿块侵犯邻近骨质。
结论：当软组织内出现长 T1、长 T2 信号肿块，尤其是表现为分叶状外形，其内可见放射状、网格状短 T2 低信号分隔影，增强后呈现边缘及分隔状强化时，应考虑 EMC 的可能，并需与骨骼外间质软骨肉瘤、粘液样脂肪肉瘤鉴别。

PU-2426

甲状腺伴胸腺样分化的梭形细胞肿瘤一例

姚丽锭
浙江大学医学院附属第二医院

目的 分析甲状腺伴胸腺样分化的梭形细胞肿瘤(spindle cell tumor with thymus-like differentiation，SETTLE)的临床及影像表现，提高临床医生对该疾病的认识。
方法 回顾性分析我院 1 例甲状腺伴胸腺样分化的梭形细胞肿瘤患者的临床及 CT 表现。
结果 患者，男性，50 岁，因“发现左颈部肿块 20 年，声音改变 10 余天”入院，其肿块呈无痛性进行性增大，并出现声音嘶哑。甲状腺增强 CT 提示：甲状腺左侧叶肿块，大小为 83.3mmx63.1mmx96.6mm（左右 x 前后 x 上下）。病灶分叶状，边界尚清，内密度不规则，大片环形钙化。实质密度约 53.8Hu-69.8Hu 不等，增强扫描，病灶实质强化至 115Hu，部分区域 48Hu，提示囊变坏死区可能。气管明显向右偏移，压扁，前后刀鞘状，颈鞘血管向左外推压。遂行手术治疗，病理提示伴有胸腺样分化的梭形细胞肿瘤（SETTLE）。
结论 甲状腺伴胸腺样分化的梭形细胞肿瘤是一种罕见的生长缓慢的甲状腺低度恶性肿瘤。本文报道 1 例甲状腺 SETTLE，并复习既往相关文献，以提高对这种甲状腺罕见肿瘤的认识和诊断的敏感性。

PU-2427

低管电压技术对甲状腺 CT 值的影响

徐列印,苏寿红,禹意平
桂林医学院附属医院

目的：探讨低管电压 CT 扫描对甲状腺实质 CT 值的影响。**方法：**连续收集 2017.12-2018.2 期间行颈部或颈椎 CT 扫描患者 40 例，按时间先后分成 A（20 例）、B（20 例）两组，对应管电压分别为 100/80KVp，其中 A 组 8 例、B 组 12 行增强扫描。两组均与自身对照（管电压为 120KVp，对照组图像为同次或前后一个月内包含甲状腺 CT 图像。）。测量平扫及增强扫描甲状腺左右叶及胸锁乳突肌 CT 值，计算 A、B 两组部分病例甲状腺实质增强幅度与对照组增强幅度之差 DA 和 DB。A、B 组平扫或增强时，甲状腺实质、胸锁乳突肌 CT 值与对照组采用配对 t 检验。 DA 、DB 间采用两独立样本 t 检验。**结果：**A、B 两组平扫甲状腺左、右叶 CT 值均高于自身对照组，且差异有统计学意义（117±12.86HU 和 109±11.76HU/100±16.97 和 88±20.84，136 ± 37.95HU 和 133 ± 31.40HU/100 ± 21.84HU 和 97 ±18.16HU $P<0.05$）；增强扫描，A、B 组甲状腺左、右叶 CT 值均高于自身对照组，但 A 组无统计学差异（$P>0.05$）， B 组有统计学差异（269 ± 65.26HU 和 267 ±74.24HU/177 ± 18.90HU 和 173 ± 17.39HU，$P<0.05$）；A、B 组胸锁乳突肌平扫及增强扫描其 CT 值均与对照组无明显统计学差异（$P>0.05$）；A、B 两组甲状腺实质强化幅度与对照组强化幅度之差比较，差异具有统计学意义（DA =43.0±15.46，DB =60.53±60.83 $P<0.05$）。**结论：**低管电压技术在甲状腺 CT 平扫及增强扫描中均影响甲状腺 CT 值，管电压分别为 120KVp、100KVp、80KVp 时，对应甲状腺 CT 值依次增加。

PU-2428

低剂量 CT 在甲状腺疾病中的应用

申娜,乔英
山西医科大学第一医院

目的：探究 70KVp、最佳虚拟单能与常规 120KVp 在甲状腺结节诊断中的图像质量和诊断效能。
方法：回顾性收集本院西门子第 3 代 FORCE 双源 CT（70/150kv，选取其中 70kv 的图像为 A 组；虚拟单能图像 40Kev 为 B 组）和美国 GE64 排 CT（常规 120Kvp）（C 组）因临床需要行甲状腺 CT 平扫+增强扫描的患者分别 50 例，（1）进行图像质量主、客观评价；客观评价指标为：CT 值、噪声、信噪比（SNR）及对比噪声比（CNR）；主观评分：由 2 位医师双盲、独立完成图像质量评分，a、总体图像质量：评分分级为 1-4 分，分别为差、一般、良好、优（以诊断的可接受性为标准）；b、噪声：1-4 分，分别为很大（不能诊断）；中等（略影像诊断）；轻微（不影响诊断）；无噪声；c、伪影：1-4 分，分别为严重伪影；中等（略影像诊断）；轻微（不影响诊断）；无伪影（2）采用薄层、多窗宽、窗位、MPR 观察，观察结节包膜在平扫及增强时的有无、完整程度及强化方式，与病理结果进行对比分析，观察其诊断效能；（3）辐射剂量比较。
结果：A、B、C 组的主、客观图像质量均无显著差异；诊断效能亦无显著差异，但 A 组其辐射剂量显著降低。
结论：甲状腺成像中采用 70Kvp 管电压可以在亚毫希伏水平不影响诊断效能的同时显著降低辐射剂量，使其能够更广泛的应用于临床。

颈部 CT 扫描中不同体位对甲状腺骨伪影干扰的应用价值探讨

伍希,李征,吴蓉,马绍文
湘雅常德医院

目的：探讨颈部 CT 扫描中不同体位对甲状腺骨伪影干扰的应用价值。
方法：选取颈部 CT 检查的患者，随机分成 A、B 两组。A 组患者设为常规组；B 组患者为改进组，即让患者双手及肩部尽量用力向足侧，下颌尽量抬高，使定位片上的颌咽角（下颌骨下缘与咽喉壁的夹角）≥80° 。测量 A、B 两组患者图像的噪声值。
结果：B 组的图像质量明显优于 A 组（P＜0.05）。A 组图像噪声变化范围明显增大，噪声平均值明显高于 B 组。与 B 组的差异有统计学意义（P＜0.05）。
结论：患者行甲状腺 CT 扫描，双手及肩部尽量用力向足侧，下颌尽量抬高，能有效减少骨伪影对甲状腺的干扰，提高图像质量。

Noninvasive amide proton transfer imaging and ZOOM diffusion-weighted imaging in differentiating benign and malignant thyroid nodules

jianhao yan,GUOMIN Li,Yingjie Mei,Guihua Jiang
GUANGDONG SECOND PROVINCIAL CENTRAL HOSPITAL

Synopsis
To identify thyroid papillary carcinoma from thyroid adenoma, we acquired amide proton transfer(APT) value of the both by using the 3T MRI. The differences of APT value of the both were statistically compared by means of nonparametric methods and receiver operating characteristic (ROC) curve analyses were used. The results showed statistical differences among the two nodules, suggesting that APTw imaging can be considered for differentiation of thyroid carcinoma from benign thyroid carcinoma.
Purpose
Thyroid nodules are a common clinical problem. Epidemiologic studies have shown that the prevalence of palpable thyroid nodules was accounted for approximately 5% in women and 1% in men living in iodine-sufficient parts of the world. Thyroid nodules are abnormal growths located on the thyroid gland. In case thyroid nodules are

benign, like the thyroid adenoma, the first thing a doctor will recommend is to watch the way the nodules evolve. In the cases in which the thyroid nodules formed are cancerous, like the thyroid papillary carcinoma, the most common treatment involves surgery. Differention thyroid cancer from benign nodules is becoming increasingly prevalent. Amide proton transfer weighted(APTW) imaging can generate molecular MRI signals that are based on the amide protons of endogenous mobile proteins and peptides. This study aimed to investigate the feasibility of this new imaging method on the thyroid gland tissue by using the 3T MRI, and its role on differentiating thyroid papillary cancer from thyroid adenoma for better clinical management.

Methods
Twenty-six patients who signed informed consent were recruited, including 17 thyroid adenoma patients and 10 thyroid papillary carcinoma patients. Patients had no clinical history of previous surgery, corticosteroid administration, chemotherapy, or radiotherapy. MRI studies were performed using a 3.0 T system (Ingenia, Philips, the Netherlands) with a 25-channel head-neck coil. APT imaging was performed using a three-dimensional (3D) turbo-spin-echo Dixon sequence with imaging parameters as follows: acquisition voxel size of 1.8 × 1.8 mm, slice thickness of 4.4 mm, repetition time (TR)/echo time (TE) of 4108 ms/5.9 ms, turbo spin echo factor of 158; total slice of 10 to cover the entire lesions. seven saturation frequency offsets (±3.5, ±3.42, ±3.58 ppm and 1540ppm) were adapted with four repetitions at ±3.5 ppm to attain a sufficient signal-to-noise ratio (SNR) within an appropriate clinical time frame. Saturation RF pulses for APT imaging were implemented with an amplitude of 2 μT and duration of 2 seconds. B0 maps were obtained with three acquistions at 3.5ppm of different TEs. B0 corrected ATPw images were reconstructed online.
A 2D region of interest (ROI) was visually placed over each solid nodule for each patient and then the mean APTW value were recorded for each ROI. To assess such molecular information differences between thyroid carcinoma and thyroid adenoma, nonparametric methods and receiver operating characteristic (ROC) curve analyses were used.

PU-2432
甲状软骨旁痛风影像学特点及临床分析的病例回顾性研究

黄国超
中国科学院大学重庆医院（重庆市人民医院）

目的：通过对我院诊治的 1 例甲状软骨旁痛风病例进行回顾性分析,提高罕见部位痛风的认识,避免漏诊误诊。
方法：收集我院经病理证实 1 例甲状软骨旁痛风结节伴钙化及囊变病例，回顾性总结 CT 和 MRI 影像学表现并分析误诊原因。
结果：CT 检查示舌骨后方至双侧甲状软骨前见不规则囊状混杂密度影，囊内可见斑结/条状钙化。MRI 扫描呈不规则囊状长 T1、长/短混杂 T2 信号，增强扫描 CT/MRI 均囊壁强化，囊内无强化改变，DWI 弥散无确切受限。实验室检查：尿酸 581.2 umol/L。我院诊断为甲状舌管囊肿伴感染及钙化。
结论：痛风主要发生在关节部位，而发生于甲状软骨旁的痛风极为罕见，临床及影像表现缺乏特异性，易误诊漏诊，提高罕见部位痛风的认识，是很有必要的。CT 能很好显示病灶内钙化，磁共振显示病灶范围及信号特征，而实验室尿酸异常增高对发现不典型部位痛风起到很大提示作用。

甲状腺良恶性病变 的 CT 征象差异性比 较

陈柱典
徐州医科大学附属医院

目的 探讨甲状腺良、恶性病变的 CT 诊断鉴别。**方法** 收集我院 148 例甲状腺病变患者影像学资料，根据良、恶性病变分为良性组与恶性组，并与术后病理诊断比较，评估 CT 对甲状腺良恶性病变的诊断效能，并分析两组 CT 成像特点。**结果** 手术病理显示良性病变 57 例，恶性病变 91 例：CT 检查显示良性病变 65 例，恶性病变 83 例，示 CT 诊断甲状腺良恶性病变的灵敏度为 92．6%，特异度 96．8%，阳性预测值 96．2%，阴性预测值 93．8%，准确率 94．8%。其中良性甲状腺病变以多发结节为主，其结节边缘形态清晰、密度均匀、甲状腺包膜完整，多无沙砾样钙化，且多无淋巴结肿大，但良恶性病变结节的密度及囊变程度差异不大。**结论** CT 可用于甲状腺良、恶性病变检查，具有较高的诊断应用价值。

20 例鳃裂瘘管的 CT 及 MRI 影像总结

高博,潘晓晔,陈莉军
甘肃省人民医院

目的：总结鳃裂瘘管的 CT 和（或）MRI 表现及诊断价值。方法：收集本院 2014 年 1 月至 2019 年 6 月经临床确诊的鳃裂瘘管 20 例，分析各型鳃裂瘘管 CT 和（或）MRI 影像表现，总结其特点。结果：鳃裂瘘管根据组织来源分为 4 型，根据解剖位置特点，各型具有相应的 CT 和 MRI 影像表现特点。本组患者中，5 例（25%）符合第 1 鳃裂瘘管，病灶均起自腮腺、外耳道周围，表现为外耳周围的管道样结构，部分病例内口显示不清。10 例（50%）符合第 2 鳃裂瘘管，表现为胸锁乳突肌前外侧至胸锁关节范围的纵行管道样结构。5 例（25%）符合第 3 或第 4 鳃裂瘘管，二者不易区分，均起自梨状窝基底部，部分穿经甲状腺。结论：CT 及 MRI 能清楚显示病变范围及走行途径，协助诊断及分型鳃裂瘘管。

双源 CT 碘含量及能谱曲线 在鉴别甲状旁腺增生、甲状腺和淋巴结中的价值

王国杰,秦培鑫,杨思怡
中山大学附属第五医院

目的　利用双源 CT 碘含量及能谱曲线斜率鉴别甲状旁腺增生、甲状腺和淋巴结。方法　回顾分析手术病理证实的 10 例甲状旁腺增生患者共计 38 枚甲状旁腺增生的双源 CT 图像，分别测量动脉期甲状旁腺增生、同层面甲状腺及相邻层面淋巴结的融合图像 CT 值、碘含量及能谱曲线斜率，并比较其差异。结果　甲状旁腺增生、甲状腺、淋巴结的 CT 值、碘含量、能谱曲线斜率分别为(88.66±12.78)HU、(165.07±24.62)HU、(69.03±13.80)HU，（1.51±0.27）g/L、（3.24±0.75）g/L、（0.71±0.34）g/L，2.14±0.57、4.31±0.90、0.95±0.36；甲状腺与甲状旁腺增生、甲状腺与淋巴结的 CT 值、碘含量及能谱曲线斜率均存在统计学差异；甲状旁腺与淋巴结的 CT 值没有统计学差异，但碘含量、能谱曲线斜率存在统计学差异；ROC 曲线表明，1.15 g/L 是区分甲状旁腺及淋巴结碘含量的界值，敏感性为 100%，特异性为 81.6%，1.38 为区分甲状旁腺及淋巴结能谱曲线斜率的界值，敏感性为 100%，特异性为 89.5%。结论　双源 CT 碘含量及能谱曲线斜率能够有效鉴别甲状旁腺增生、甲状腺和淋巴结。

异位甲状腺的诊治进展

盛林丽,马玲,韩丹
昆明医科大学第一附属医院

异位甲状腺是一种临床少见疾病，由于其发生部位、临床症状及影像表现缺乏特异性，且可继发甲状腺的任何疾病，加之临床医师对其认识不足和缺少慎密的检查极易被误诊、误治，最终给患者带来严重后果。为此，笔者针对国内外异位甲状腺诊治的文献报道加以回顾分析，进一步对异位甲状腺的临床特点及诊治方法进行综述，以期提高对该疾病的认识，减少误诊、误治。

PU-2438

双源 CT 甲状腺碘含量测定与甲状腺功能的相关性研究

李正腾,王敏,潘冬梅
济宁市第一人民医院

目的　探讨双源 CT 双能量扫描测量甲状腺平均碘浓度、总碘含量与甲状腺功能的相关性。**方法**　采用双源 CT 对扫描颈部的患者行双能量扫描，并检测甲状腺功能，测量甲状腺组织的平均碘浓度、体积，计算甲状腺总碘量，分析成年人甲状腺平均碘浓度及总碘含量与甲状腺功能的相关性。**结果**　CT 值与 FT3 呈正相关，甲状腺总碘含量与 FT3 呈正相关，甲状腺总碘含量与 TSH 呈负相关，甲状腺平均碘浓度与 FT3 呈正相关，甲状腺平均碘浓度与 TT3 呈正相关。**结论**　双源 CT 甲状腺碘含量测定可以用于评估甲状腺功能以及判断机体碘营养状况，为甲状腺疾病诊断及治疗提供帮助。

PU-2439

C1-3 哑铃型的良恶性肿瘤的影像诊断及临床意义

欧陕兴[1],欧舒斐[2]
1.中国人民解放军南部战区总医院
2.中国人民解放军南部战区空军医院

目的 探讨 C1-3 哑铃型良恶性肿瘤分型及定性诊断及指导临床手术前方案制定。方法 收集我院 2008-2016 年经过手术病理证实发生 C1-3 哑铃型 9 例良恶性肿瘤。采用平片，CT 及 MRI 等影像技术进行诊断与鉴别。结果 哑铃型形态学分为三型。良性肿瘤多无骨质破坏及明显的软组织肿块，恶性肿瘤多有骨质破坏及软组织肿块，肿块多有不规则强化征象。临床外科采用肿瘤的局部切除加放疗治疗。其中恶性肿瘤术前对病变范围获得准确判断，参与手术方案指导及制定。短期随访，多数病人未见肿瘤复发。结论 综合影像技术对 C1-3 哑铃型肿瘤定性诊断有决定意义，尤其术前恶性肿瘤准确判断对临床预后有重要意义。

PU-2440

基于影像组学的腮腺肿瘤良恶性鉴别研究

郑伊能,王安然,彭娟
重庆医科大学附属第一医院

研究目的：探究是否基于 CT 的影像组学特征结合机器学习能够用于腮腺肿瘤的良恶性鉴别。
方法：本研究回顾分析了重庆医科大学附属第一医院耳鼻喉科确诊的 109 例患者，其中腮腺良性肿瘤 54 例，腮腺恶性肿瘤 55 例。从平扫期、动脉和门静脉期 CT 图像中提取了 1352 个定量影像组学特征。采用 LASSO 回归进行特征选择和降维，基于随机森林构建了分类模型，对模型的性能进行交叉验证结合 boosting 算法测试。
结果：基于随机森林的 ROC 曲线显示，腮腺肿瘤良恶性鉴别准确率达 92.33%，AUC 为 0.874。
结论：本研究表明，影像组学特征对腮腺肿瘤的良恶性有很好的鉴别诊断价值。

PU-2441

颈部软组织巨细胞瘤一例

严映,瞿娇,杨亚英
昆明医科大学第一附属医院

软组织巨细胞瘤(Gaint cell tumor of soft tissue，GCT-ST)，也称低度恶性潜能的巨细胞瘤，是一种罕见的原发软组织肿瘤，1972 年由 Salm 和 Sissons 首次报道，并发现其与骨 GCT 具有相同的组织学特征[1]。因 GCT-ST 与骨 GCT 组织学和免疫组织化学的相似性，GCT-ST 被认为是骨 GCT 的对应物[2]。组织学多表现为圆形或梭形细胞，与均匀分散的破骨细胞样多核巨细胞密切混合[4]。GCT-ST 可发生在任何年龄，中年人好发，无性别差异。临床表现无特殊性，多表现为无痛性生长的软组织肿块[3]。肿瘤常位于四肢或躯干的浅表部位或深部软组织，其中下肢尤其大腿最为常见，而颈部 GCT-ST 极为罕见，本文就此罕见病例展开讨论

PU-2442

弥漫性甲状腺转移癌一例

郭修玉,何华,高巧灵,金银华
中国科学院大学宁波华美医院

目的：通过一例罕见的肺癌伴甲状腺弥漫性转移癌的病例学习，探讨 18F-FDG PET/CT 在发现转移瘤的价值。
方法：患者男，60 岁。发现甲状腺肿大 20 余天，就诊当地医院超声提示甲状腺双侧叶不均质肿大伴钙化，双侧颈部、锁骨上多发淋巴结肿大，考虑弥漫性甲状腺癌，伴淋巴结转移可能大。转诊我院查血常规：无异常；肿瘤标志物：鳞状细胞癌抗原（SCC）5.8mg/L（正常值<1.5mg/L）、细胞角蛋白 211（CYFRA21-1）12ng/ml（正常值：0.10~4ng/ml），其他肿瘤标志物无异常。进一步 ^{18}F-FDG PET/CT 检查，结果显示：甲状腺弥漫肿大，内散在斑点状钙化灶，代谢增高（SUVmax8.01）；右肺上叶不规则结节，内见支气管截断，边缘多发毛刺，邻近胸膜牵拉、凹陷，代谢增高（SUVmax10.69）；双颈部、双锁骨上区、左腋窝、双肺门及纵隔多发肿大淋巴结，代谢增高（SUVmax9.45）。考虑：右肺癌，伴双肺门及纵隔、双颈部及锁骨上区、左腋窝多处淋巴结转移，甲状腺弥漫转移。
结果：活检病理结果：（右甲状腺）非小细胞癌，鳞癌可能性大；（颈淋巴结）：符合癌转移；（右肺结节）非小细胞癌，鳞癌首先考虑。
结论：在 ^{18}F-FDG PET/CT 上，当甲状腺病灶放射性摄取较高，且其 SUV 值与原发肿瘤病灶（如肺癌、结直肠癌、乳腺癌等）SUV 值在同一基线时，应高度怀疑甲状腺转移癌的可能。与传统解剖影像学相比，^{18}F-FDG PET/CT 在探测不典型部位的转移瘤方面更具有优势。

PU-2443

颈动脉间隙血管移位的方向在颈Ⅱ-Ⅳ区淋巴结源性及神经源性病变中的鉴别价值

廖鸿帆
重庆医科大学附属第一医院

目的：探讨颈动脉间隙血管移位的方向在颈Ⅱ-Ⅳ区淋巴结源性及神经源性病变中的鉴别价值。
方法：收集我院 2017.1.1-2019.4.15 间经病理证实的位于颈Ⅱ-Ⅳ区的淋巴结源性（26 例，其中淋巴结结核 7 例，淋巴结转移 8 例，淋巴瘤 7 例，淋巴结炎 4 例）及神经源性（7 例，其中神经鞘瘤 6 例，神经纤维瘤 1 例）病变共 33 例，除了观察病灶大小、边界、形态、密度，强化方式、强化程度等直接征象外，还重点观察颈动脉间隙血管受压移位的方向。
结果：两组病灶的大小（P=0.866）、边界（P=0.122）、形态（P=0.077）、密度（P=0.228）、强化方式（P=0.697）、强化程度（P=0.123）均无明显统计学差异；而淋巴结源性病变的颈动脉间隙血管向内移位为 26 例（100%），神经源性病变的颈动脉间隙血管向外移位 6 例（85.7%），向内移位 1 例（14.3%），差异具有统计学意义（P=0.000）。
结论：颈动脉间隙血管移位的方向可作为颈Ⅱ-Ⅳ区淋巴结源性及神经源性病变的重要鉴别指标。

PU-2444

蝶窦骨肉瘤 1 例

崔晓,金文凤
昆明医科大学第一附属医院

骨肉瘤是一种高度恶性肿瘤，好发于长骨，该肿瘤常见于青壮年及儿童，且多见于男性（60%）。头骨以及颅底原发骨肉瘤在头骨肿瘤中的发病率不到 2%，原发于蝶窦的骨肉瘤更为罕见。目前国内仅见少量报道蝶窦软骨肉瘤，国外文献报道蝶窦骨肉瘤者主要为临床诊治分析，影像学报道较少。本病病因复杂，蝶窦患有较大骨肉瘤的患者通常表现为眼球突出或面部肿块、颞下颌关节疼痛、视力下降以及头痛。CT 表现为骨皮质破坏、软组织脓肿、肿瘤骨以及骨膜反应，借助 CT 骨窗扫描可以看到病变骨的硬化以及溶解情况，CT 以及 MRI 增强扫描有助于判断肿瘤侵犯软组织的程度，CT 增强扫描呈明显强化，可伴有周围淋巴结肿大。MRI 增强扫描在 T1 加权像上呈等信号，T2 加权像上呈低信号。本例患者为老年女性，临床及影像学表现可见以上大部分征象，但需与软骨肉瘤进行鉴别。出现骨膜反应、 Codman 三角、放射状骨针、长管状骨软组织肿块环绕度 >1 / 2 、髓腔内斑片状致密钙质密度影、骨小梁显示不清等征象提示骨肉瘤的可能性较大，出现弓状、环状钙质密度影提示软骨肉瘤可能性更大，但最后确诊仍需依赖病理组织学检查。

PU-2445

Dural venous sinuses: What we need to know

Xiang Yu[1],Changqing Zong[1],Jun Liu[1],Yawu Liu[2]
1.Tianjin Union Medical Center
2.Department of Neurology and Neuroscience

The aim of this review is to provide a general overview of the normal anatomy and notable variants of the cerebral venous system as surveyed from the available literature. The pros and cons of different multimodal imaging methods for investigating dural venous sinuses (DVS) are also outlined. Finally, cases of variously pathological entities are illustrated from current clinical practice.As we are now better aware of the many technical advantages and pitfalls, it seems likely that non-invasive venography protocols may become a feasible alternative to the classical DSA approach and one would predict that they will improve the diagnostic accuracy in most pathological situations.

PU-2446

MR 动态延迟扫描对于鉴别垂体微腺瘤的价值

冷琦
四川大学华西医院

探讨垂体动态增强扫描并延迟扫描对鉴别垂体微腺瘤的价值。方法:对 25 例垂体微腺瘤患者行 MRI 动态增强扫描，对 19 例垂体微腺瘤患者行 MRI 动态增强扫描并延迟扫描的影像图进行回顾性分析,主要观察垂体内病变的强化特点。结果:垂体微腺瘤的强化特点为动态增强扫描信号强度弱,延迟扫描信号强度高于正常垂体或与正常垂体相仿。结论:延迟扫描对比剂是否进入是垂体微腺瘤的主要鉴别点。

PU-2447

蝶窦区腺泡型横纹肌肉瘤一例

郭珊熹,王飞,张程程
海南省人民医院

患者，男、48 岁,入院前 4 天无明显诱因突发双眼视力下降，左眼为主，无眼痛、溢泪、红肿，偶伴头晕、头痛，无恶心、呕吐；体检：双下鼻甲肿胀，各鼻腔鼻道内未见异常，各鼻道未及引流。双侧眼球活动自如，对光反射灵敏，运动无受限，左眼 10cm 可视物，右眼 30cm 可数指。
影像检查：CT 提示蝶窦区软组织肿块，邻近骨质吸收破坏；MRI 示肿块大小约 4.9cm×4.4cm，呈混杂长 T1 长 T2 信号，增强扫描不均匀强化；包绕海绵窦，向前突向鼻窦、双侧眶尖，向上突向前中颅窝，邻近脑膜增厚、强化，向下累及鼻咽顶，向后累及蝶鞍及斜坡。诊断：蝶窦肿瘤或侵袭性垂体瘤累及蝶窦。
手术及病理：经鼻内镜颅底肿物切除术、蝶窦开放术、双侧视神经减压术等。术后病理（颅底）腺泡状横纹肌肉瘤，伴瘤旁小囊肿，免疫组化：MYod1(+++)、Myogenin（+++）、Vim（弱+）、HMB45（-）、Ki-67（75%），CD45（-）,Syn（灶+），CD56（+++）。
讨论：横纹肌肉瘤（rhabdomyosarcoma，RMS）是最常见的头颈部肉瘤。根据 2016 WHO 中枢神经系统肿瘤分类，RMS 属于间叶细胞、非脑膜上皮肿瘤一类，分为胚胎型 RMS、腺泡状 RMS 和多形性 RMS 3 种亚型。其中腺泡型恶性度高，主要发生于去躯干和四肢，头颈部中好发于眼眶、副鼻窦和颞骨，鼻咽部是颈部的好发部位，常侵犯颅底，原发于蝶窦区的腺泡状 RMS 少见，有明显的侵袭性，发展速度很快，早期即可沿血管、淋巴管等转移。临床表现与肿瘤位置密切相关，本例出现视力下降与颅神经受侵有关。CT 平扫为等、低密度肿块，增强后中度不均匀强化，可有周围骨质破坏。MRI 平扫 T1WI 表现为等或低信号，T2WI 表现为高信号，增强后有显著强化。CT、MRI 检查可为肿瘤性质的判断、累及范围提供依据，最终诊断依靠病理诊断。

PU-2448

CT 灌注成像评价急性自发性高血压脑出血患者的经期预后

易思琪
四川省肿瘤医院

目的：用 CT 灌注成像（CTP），对急性自发性高血压出血性脑卒中（shlcH）血肿周围脑血流动力学变化进行定量测量，评价脑血肿周围组织灌注参数改变与近期预后的相关性。
方法：对华西医院 2017 年 3 月到 2018 年 3 月的 26 例（男 15 例，女 11 例，年龄 30-79，平均年龄 55.7 岁）CT 平扫确诊为急性幕上自发性脑出血的患者行 CTP 检查，自发患者的灌注扫描时间为 3-24h。以血中最大层面为参照，测量血肿周围 1cm 内及对侧镜像区脑血流量（CBF）、脑血容量（CBV）、平均通过时间（MTT），获得相对灌注参数 rCBF、rCBV、rMTT（患侧/健侧）。电话随访患者脑出血后一个月生活表现，并记录日常生活能力表（BI）分值。
结果：shlcH 血肿周围带 CBV 值为（1.61±1.53）ml/100g，CBF 值为（16.48±12.58）ml/(100g*min)，明显低于对侧镜像区（Z=-2.603、-4.178，$p<0.05$）；MTT 值为（9.12±2.57）s，较对侧镜像区明显延长（$t=4.747, p<0.05$）。血肿周围 CBV、CBF 值与 BI 相关（Z=-3.40、-2.98，$p<0.01$），参数 MTT、rCBF、rCBV、rMTT 与近期预后无关（$p>0.05$）;ROC 曲线下面积分别为 0.897/0.848，且 CBV 界限值为 1.24ml/100g 时，敏感度为 66.78%，特异度为 100%；CBF 界限值为 8.44ml/(100g*min)时，敏感度 100%，特异度为 72.70%。

结论：CTP 可预测 shlcH 血肿患者近期预后，在一定范围内，血肿 CBV、CBF 值越大提示预后越差。研究表明，脑出血后血肿周围存在不同程度的低血流灌注，但有关血肿周围灌注改变与预后的关系报道较少。本研究对接受内科保守治疗的急性 shlcH 患者进行动态 CT 灌注成像，并探讨血肿周围组织的血流动力学改变与患者的关系。

PU-2449

Study of a Novel Classification Method on the Circle of Willis on CT Angiography

Simin Lin[1],Qianwen Huang[2],Hua Zhong[2],Shaoying Duan[2]
1.Xiamen Cardiovascular Hospital， Xiamen University
2.Xiamen Zhongshan Hospital， Xiamen University

Purpose In this study, we aimed to propose a novel classification method on the circle of Willis (CoW) using the computed tomography angiography (CTA).
Methods A total of 114 participants who had undergone the CTA examination were recruited in this study. The CoW was classified into three types: the complete type (an intact CoW with no hypoplastic arteries), the relative-complete type (an intact CoW with hypoplastic ACA or PCA), and the incomplete type (any of CoW arteries were absent). Each type was subdivided into two types: no variation and variation. Besides, the diameters of internal carotid artery (ICA), middle cerebral artery (MCA), anterior cerebral artery (ACA), posterior cerebral artery (PCA), anterior communicating artery (AComA) and posterior communicating artery (PComA) were measured and the ratio of their diameter was calculated.
Results Among the 114 cases, 26 cases were complete type, 9 cases were relative-complete type and 79 cases were incomplete type. The proportion of hypoplastic CoW was 77.2%, of which 64.8% was posterior circulation and 47.7% was two arteries. The proportion of variant CoW was 43.0%, of which 71.4% was posterior circulation and 69.4% was one artery. The ratio of diameter of ICA, MCA, ACA, PCA, AComA and PComA was 1.00: 0.74: 0.54: 0.51: 0.41: 0.40.
Conclusion The novel classification method induced the conception of relative-complete type in order to generate the associations between the development and morphology of CoW. In addition, hypoplasia and variation of CoW were located and quantified. The novel classification may contribute to the treatment of cerebrovascular disease and the ratio of CoW artery diameter may lay the foundation for the study of hemodynamics.

Eustachian tube teratoma: a case report

Jinye Li,Lixin Sun,Hui Zhao,Jing Tian,Ruozhen Gong
Shandong Provincial ENT Hospital affiliated to Shandong University

Objective: A combination of computed tomography and MR imaging is necessary pre-operation when patients with recurrent episodes of otitis media and chronic otorrhea. **Methods:** The present case is the first report of a 48-years-old male patient with eustachian tube teratoma that is composed of two parts, who has a history of chronic otitis of the left ear from infancy and been cured via two operations. **Results:** Two mastoidectomies were performed because of the clinical symptoms persisted after the first operation. **Conclusions:** When we found a long history of chronic otitis of ear, and even found polyps in the tympanum and/or external auditory canal, a combination of computed tomography and magnetic resonance imaging is necessary pre-operation.

PU-2452

能谱 CT 头颅平扫图像的最佳单能量选择

李志洁
安徽医科大学第一附属医院

目的 探讨临床适用的头颅 CT 平扫最佳单能量水平。**方法** 在 Revolution CT 上采用能谱扫描模式采集 62 例头颅 CT 平扫数据。将原始扫描数据重建获得 40-140keV 间距为 5keV 的 21 组单能量图像及 120kVp-like 混合能量图像，比较各组图像的噪声、SNR、 CNR、颞骨内板下伪影指数及后颅窝伪影指数；并根据灰白质对比度、颞骨岩部伪影、后颅窝伪影及病变显示 4 个方面对图像质量进行主观评分，然后进行统计学分析。**结果** 最佳单能量水平为 65-75keV。65keV 图像的灰白质 SNR（12.10±2.51, 9.25±2.59），CNR（1.26±0.24）高于其他单能量及混合能量图像，75keV 图像的灰白质噪声（3.51±0.31, 3.22±0.40），颞骨内板下伪影指数（5.76±0.99）及后颅窝伪影指数（3.13±1.04）高于其他单能量及混合能量图像（均 P<0.05）。最佳单能量图像质量评分更高（均 P<0.05），PFAI 除外（P=0.2）。**结论** 65keV 图像幕上脑组织对比度最佳，75keV 图像颞骨岩部及后颅窝伪影最小。

PU-2453

侧颅底少见肿瘤的影像学表现及其分析

李统,孙立新,巩若箴
山东大学附属山东省耳鼻喉医院

目的：探讨侧颅底少见病变的影像学表现，提高影像学对该区域少见病变的诊断准确性，为临床治疗方案的制定提供有价值的影像信息。
方法：回顾性分析 16 例经病理证实的侧颅底少见病变的影像学表现并和病理作对照分析。重点观察病变部位、影像学特点及侵犯特征。

结果：在 16 例侧颅底病变中，颈静脉孔区肿瘤比较少见，存在多种病理类型，其中颈静脉副节瘤 5 例、神经鞘瘤 3 例、脑膜瘤 2 例；桥小脑角区胆脂瘤 2 例，内淋巴囊瘤 1 例；岩尖区软骨肉瘤 1 例，脑膜瘤 2 例。上述肿瘤分别有其相应的好发部位及 CT、MR 表现。
结论：侧颅底区少见病变种类繁多，MRI 及 CT 能准确显示病变的位置和起源；病变 MRI 表现复杂，但多数仍有其特征性，仔细分析其 MRI 及 CT 征象结合其定位，对临床决定手术或放疗前对肿瘤的局部和进展范围及其周围关系的正确判定是非常必要的。

PU-2454
高压氧治疗一氧化碳中毒后迟发性脑病的定量 T2 Mapping 成像

武文婧
陆军军医大学第一附属医院

目的：急性一氧化碳中毒是生活与工作中常见的窒息性中毒气体事件。部分中毒患者经过数天至数周的假愈期后，可能出现迟发性脑病。临床上仅是一氧化碳中毒所导致患者出现缺血缺氧状况，并不能完全解释临床上迟发型脑病临床变化以及相应病理改变情况。也无相应针对病因的治疗方式。现临床上对于一氧化碳中毒之后出现迟发型脑病使用高压氧治疗机制以及疗效并无统一认识。我们对急性一氧化碳中毒迟发性脑病的患者采用高压氧治疗，联合运用磁共振 T2 驰豫时间图（T2 mapping）技术和运动校正的精密算法，利用定量 T2 mapping 技术检测患者有关氧合血红蛋白和去氧血红蛋白的区域变化，检测其脑内缺血性改变的严重程度，区分不可逆转的损伤和潜在能挽救的组织。定量 T2'值是在弥散加权成像病变和灌注受限组织内确定。**材料与方法**：先对 24 例急性一氧化碳中毒迟发性脑病患者（平均年龄 45 岁）行高压氧治疗，每天治疗 1 次，每次时间为 60 min，连续 10 天。然后进行 MRI 检查。 MR 检查包括弥散成像、灌注成像和定量的运动校正的 T2 驰豫时间图。对比正常对照组的达峰时间，用达峰时间的图谱作为不同程度灌注延迟（例如，≥0s，≥2s）的阈值。将存在表观弥散系数降低和灌注损伤脑区的平均 T2'值与对正常对照组比较。**结果**：与正常对照组比较，表观弥散系数降低的区域 T2 值明显减少（85 毫秒与 94 毫秒; P <0.003）。在灌注受限组织，T2 值也明显低于对正常对照组，但均显著更高于表观弥散系数受损区域。灌注损伤的严重程度对平均 T2 值无影响。**结论**：从健康组织到灌注障碍再到弥散受限组织，运动校正的 T2 驰豫时间图显示其值是显著且逐步下降的。目前 T2 驰豫时间图可以区分缺血核心和灌注受损区域，但不能区分半暗带和血量下降组织。利用磁共振技术评估临床治疗一氧化碳中毒迟发性脑病的疗效， 对预后的改善具有积极的意义，也有助于观察一氧化碳中毒迟发性脑病脑部微结构及代谢的改变。

PU-2455
3D_SPACE 序列和 3D_TOF_MRA 序列联合应用于三叉神经的价值

陈孟星
中国科学院大学重庆医院（重庆市人民医院）

目的：三叉神经痛较为常见的疾病，它对人民的健康和生活有着严重的影响，应用西门子磁共振 3D_SPACE 序列及 3D_TOF_MRA 序列对三叉神经及微血管压迫进行检查，以明确诊断和确定治疗方案，在诊疗过程中显得尤为重要
方法：运用西门子磁共振对 13 例三叉神经痛患者进行 3D_SPACE 序列及 3D_TOF_MRA 序列检查，3D_SPACE 序列是从快速自旋回波序列上衍生而来，具有较高的信噪比，组织对比度高，该序列在三叉神经成像上，脑脊液呈高信号，颅神经呈等信号，血管呈底信号，因此在桥小脑池高信号脑脊液的衬托下，脑池段神经自然对比度好，与微血管信号有差异，对比显著。3D_TOF_MRA 序列为三

维时间飞跃法磁共振血管成像序列，三叉神经成像中脑脊液为低信号，三叉神经为中等信号，血流速度快的血管动脉呈高信号，及高信号与中等信号的神经信号形成对比，
结果：13 例三叉神经痛者，9 例发现责任血管压迫，单独使用 3D_SPACE 序列发现责任血管的阳性率 6 例，单独使用 3D_TOF_MRA 序列 5 例，联合应用 8 例，与手术结果完全符合。
结论：3D_SPACE 具有较高的信噪比，表现出重 T2 对比，脑脊液的衬托下，脑池段神经自然对比好，与微血管信号有差异，对比显著，是明确血管压迫性三叉神经痛程度理想的磁共振序列，3D_TOF_MRA 序列具有独特的成像特点，快速流动的小动脉和小静脉等血管一般显示为高信号，而处于静止状态的组织表现为饱和状态为低信号，三叉神经相对于脑脊液为中等信号，脑脊液为低信号，两者联合应用可以相互弥补，对于全面准确的判定血管压迫性三叉神经痛血管接触的部分，受压程度及责任血管的来源的显示具有重要价值。

PU-2456

乙状窦憩室致搏动性耳鸣一例

周成,彭光明,林伟光,罗正益,岳俊生
广州中医药大学祈福医院

目的：探讨乙状窦憩室的临床表现及影像学特征，提高对该病的认识；方法：回顾性分析经临床确诊的一例乙状窦憩室的影像学表现并文献复习；结果：患者右侧搏动性耳鸣 3 年就诊，颞骨 HRCT 平扫+增强显示右侧乙状窦沟外侧壁骨质局部变薄，呈凹陷性改变，前壁骨质局部缺损，与乳突气房直接相邻；增强后乙状窦外侧壁内突起软组织密度影与乙状窦同步强化并延续，符合乙状窦憩室的诊断。结论：乙状窦憩室影像表现有特征性，对于有搏动性耳鸣患者，临床可首选颞骨 HRCT 增强扫描来筛查，大大提高其检出率。

PU-2457

64 层螺旋 CTA 和 3D-DSA 对颅内动脉瘤诊断价值比较的系统评价

吴丹
成都上锦南府医院

目的：探讨 64 层螺旋 CT 血管造影（CTA）在颅内动脉瘤诊断中的应用价值，方法对成都上锦南府医院 2016 年 1 月至 2018 年 12 月收治的疑似颅内动脉瘤患者 40 例的临床资料进行回顾性分析，经 DSA 和 CTA 双重检查，比较 DSA 和 CTA 检查方法颅内动脉瘤的检出情况，计算 CTA、DSA 对颅内动脉瘤的诊断灵敏度、特异度、准确性，分析 CTA、DSA 诊断颅内动脉瘤所得结果与术后病理诊断结果的一致性，比较 CTA 检查、DSA 检查中的颅内动脉瘤体最大径、瘤颈最大径。三维 CT 血管造影(three dimensional computed tomography angiography,3DCTA)在动脉瘤的诊断中显示出独特的优越性。而且 CT 血管造影是一种无创、快捷、安全的颅内动脉瘤诊断方法，可作为颅内动脉瘤筛查及患者手术或介入治疗前的常规诊断方。

PU-2458

全脑动态 CT 灌注成像联合头颈部 CTA 在急性缺血性脑卒中诊断中的价值

何其舟
西南医科大学附属中医医院

目的 探讨全脑动态 CT 灌注成像(CTP)联合头颈部 CT 血管成像(CTA)在急性缺血性脑卒中（AIS）的诊断价值。方法 对我院 78 例临床疑似 AIS 患者行全脑 CTP 和头颈 CTA 检查，比较 CTP 联合 CTA 诊断 AIS 的特异度与灵敏度，测量 CTP 参数 CBF、CBV、MMT 和 TTP，评价头颈部动脉血管的狭窄程度及原因，分析不同病变程度脑组织 CBF、CBV、MMT 和 TTP 变化情况及其与头颈部动脉血管狭窄程度的相关性。结果 78 例患者中最终被确诊为 AIS 64 例(83%)，CTP 联合 CTA 诊断 AIS 的灵敏度和特异度分别为 84.5%和 91.7%；CTA 发现颈内动脉闭塞 6 例，大脑中动脉闭塞 27 例，基底动脉闭塞 2 例，大脑中动脉夹层 2 例；CTP 检查发现明显灌注异常者 56 例，其中梗死灶 51 处、半暗带 48 处，两者同时存在 46 处，且梗死区 CBF、CBV 低于对照区和半暗带，MTT、TTP 高于对照区和半暗带，差异有统计学意义(P<0.05)，半暗带 CBF 低于对照区，MTT 和 TTP 高于对照区，差异有统计学意义(P<0.05)；颈内动脉和颅内动脉狭窄与 CBF、CBV 无明显相关性(P>0.05)，与 MTT 呈负相关(P<0.05)，与 TTP 呈正相关(P<0.05)。结论 全脑动态 CTP 可有效评估脑组织血流动力学变化和缺血程度，并能准确区分梗死区与半暗带，头颈 CTA 则可准确检测颈部与脑动脉血管狭窄部位和程度，以及狭窄原因，两种方法联合应用不仅能够对 AIS 进行准确诊断，同时还能准确评估病情及疗效，为临床治疗方案选择提供精准的影像依据。

右侧 Meckel 腔炎性假瘤误诊一例

刘朝娣
山东省立医院耳鼻喉医院山东省立医院西院(原:山东煤矿总医院)

患者 67 岁男性，因右侧头痛加重 2 周入院。颅底强化 MRI 检查示右侧 Meckel 腔略增大，内见占位性病变，增强扫描呈均匀明显强化，拟诊为脑膜瘤。术后病理提示炎性假瘤。发生于 Meckel 腔炎性假瘤比较罕见，本例病变临床体征及影像学表现极易误诊为脑膜瘤，手术易损伤周围血管及神经造成患者不可挽回的损失，诊断时要扩展思路，做好病例随访积累经验。

PU-2460

蝶颞骨发育程度的影像学研究

张昕越
山东省立医院耳鼻喉医院山东省立医院西院(原:山东煤矿总医院)

目的：观察小耳畸形患者中，卵圆孔与棘孔的解剖特点，分析蝶颞骨发育是否存在相关性。
方法：回顾性分析 25 例小耳畸形的 HRCT 图像，其中 3 例为双侧小耳畸形，10 例为左侧小耳畸形，12 例为右侧小耳畸形。
结果：利用 CT 重建技术，有 6 例表现为卵圆孔与棘孔融合（24%），1 例表现为棘孔缺如（4%）。
结论：蝶颞骨发育程度可能存在一定相关性，应进一步分析研究。

PU-2461

乙状窦憩室致搏动性耳鸣的一站式动态容积 CT 评价

潘宇宁
宁波第一医院

目的 分析导致搏动性耳鸣的乙状窦憩室骨板缺损的一站式动态容积 CT 特征。 **方法** 收集 36 例乙状窦憩室致搏动性耳鸣的病人作为研究组，分析其一站式动态容积 CT 的影像表现，并比较乙状窦沟骨板缺损的位置、范围、数目及伴随征象（包括静脉回流优势、横窦狭窄、高位颈静脉球、颞骨气化、脑灌注参数）。**结果** 36 例乙状窦憩室均发生在静脉窦优势引流侧；21 例垂直方向的乙状窦骨板缺损位于乙状窦沟板骨上部，15 例水平方向上的缺损位于外侧壁。一站式动态容积 CT 直观地显示乙状窦憩室，表现为静脉窦管腔局部呈囊袋样、指状及棘样突起，动态的显示乙状窦局部膨隆的静脉窦经邻近骨壁缺损处疝入邻近的乳突 。患侧脑血流灌注参数脑血流量（CBF）、脑血容量(CBV)、平均通过时间(MTT)均高于对侧(P< 0.0001)。**结论** 一站式动态容积 CT 检查对诊断乙状窦憩室引起的搏动性耳鸣具有特征性的 CT 表现。乙状窦沟骨板缺损可能是由于血管或颅内压异常而产生的，并作为触发搏动性耳鸣感知的常见原因。

PU-2462
颅颈交界区畸形及椎动脉变异与后循环脑梗死的相关性

李艳,程勇,陈澜菁,唐敏,兰永树
西南医科大学附属医院

目的：分析颅颈交界区畸形病人的椎动脉变异率，并探讨颅颈交界区畸形及椎动脉变异与后循坏脑梗死的相关性。**方法：**回顾性分析颅颈交界区畸形病例组 30 例和 100 例对照组均接受头颈部/颈部 CTA 及头颅 CT 或 MR 检查，由两名有经验的放射科医生评价椎动脉变异类型及后循环脑梗死情况，采用配对 t 检验，X^2检验对比两组资料，多因素 logistic 回归分析评估病例组及对照组中椎动脉变异类型与脑梗死相关性，用 Kappa 检验评估两名放射科医生之间的一致性。**结果：**两名放射科医师之间一致性良好（Kappa=0.78）。病例组的椎动脉变异总发生率 93.3%（28/30）高于对照组发生率（70.0%，70/100），差异有统计学意义（X^2=6.86，P=0.009），其中病例组与对照组之间的双侧髙骑跨椎动脉（HRVA）、持续第一节间动脉(PIA)发生率差异有统计学意义[30.0%（9/30）比 15.0%（15/100）、16.7%（5/30）比 2%（2/100）,P均＜0.05]。病例组的脑梗死阳性率 23.3%（7/30）与对照组 23.0%（23/100）相比较，差异无统计学意义（X^2=0.001，P=0.970）。病例组中的双侧髙骑跨椎动脉（HRVA）（OR=17.262，P=0.036）与后循环脑梗死相关，是后循环脑梗死的危险因素。**结论：**颅颈交界区畸形病人椎动脉变异率更高，但后循坏脑梗死阳性率与非颅颈交界区畸形病人无差异。颅颈交界区畸形合并双侧髙骑跨椎动脉是后循环梗死的危险因素。

PU-2463
颅底巨细胞修复性肉芽肿 9 例影像分析

刘从涛,孙立新,巩若箴
山东省耳鼻喉医院

目的：回顾性分析 9 例颅底巨细胞修复性肉芽肿(giant cell granuloma，GCRG)的 CT 和 MRI 表现，并与病理对照，以提高 GCRG 的诊断与鉴别诊断。
方法：回顾性分析本院 2016 年 1 月至 2018 年 12 月经手术或病穿刺理证实的巨细胞修复性肉芽肿 9 例，其中颞骨 5 例；上颌骨 2 例；蝶骨 2 例；行 CT 检查 8 例（其中平扫 7 例，平扫+增强扫描 1 例；）；行 MRI 检查 6 例（其中平扫 1 例，平扫+增强扫描 5 例），分析其骨质破坏方式及病变特征的鉴别影像。

结果：膨胀性生长肿块，广泛性骨质破坏伴有分隔 GCRG 9 例（100%）；病灶邻近骨质硬化 GCRG 5 例（55%）；T1WI 高信号 GCRG5 例（55%）；T2WI 高低混杂信号 GCRG 6 例（67%）；增强扫描轻到中度强化 GCRG 8 例（89%）。
结论：头颈部颅面骨肿块呈膨胀性生长，CT 表现广泛性骨质破坏，伴有邻近骨质硬化，MRI 病灶内可见短 T1 长短混杂 T2 信号，增强扫描轻到中度强化，首先考虑巨细胞修复性肉芽肿；骨巨细胞瘤则表现为膨胀性生长伴多房肿块，无强化或轻度强化，术后复发率高。但是两种病变的影像学表现相似,有时难以区分，应当从发病年龄、发生部位、临床表现、病理组织学及对治疗的反应综合分析后做出诊断。

PU-2464
腮腺肿瘤检查中能谱 CT 虚拟平扫代替 常规 CT 平扫可行性研究

朱小珊[1,2],彭娟[1],李泉江[1]
1.重庆医科大学附属第一医院
2.遵义市第一人民医院

目的 以能谱碘抑制技术（MSI）成像作为虚拟平扫（VNC），探讨腮腺检查中 VNC 代替常规 CT 平扫（TNC）的可行性。**方法** 收集 33 例初步诊断腮腺包块的患者(共 43 个病灶)行颈部常规 CT 平扫和能谱 CT 增强扫描的影像学资料。在 GE AW4.6 工作站 GSI Volume Viewer 软件上，通过碘抑制技术对增强扫描序列数据进行后处理，从而分别得到动脉期虚拟平扫图像和静脉期虚拟平扫图像,比较常规平扫与虚拟平扫图像 CT 值（病灶、腮腺、胸锁乳突肌、椎体、颈动脉窦、颌下腺 CT 值）、诊断效能（病灶、钙化、囊变坏死检出率）、图像噪声、信噪比、图像质量评分及辐射剂量[容积 CT 剂量指数、剂量长度乘积、有效剂量] 。当计量资料符合正态分布时采用配对 t 检验，偏态分布时采用 Wilcoxon 符号秩和检验，计数资料采用 x^2 检验。**结果** （1）CT 值：除 MSIvp 图像上颈动脉窦和颌下腺的 CT 值与 TNC 所测 CT 值差异无统计学意义外（$P>0.05$），其他各组织 CT 值差异均有统计学意义（$P<0.05$），但除椎体差异较大外，其他各组织 CT 值差异均小于 10HU；（2）图像质量：TNC、VNCap 和 VNCvp 的噪声、SNR 中及图像质量评分各组间差异均无统计学意义；（3）诊断效能 TNC、MSIap 和 MSIvp 图像上病灶及瘤内囊变区检出率均为 100%和 4.7%，钙化检出率依次为 36.4%、33.3%和 33.3%，差异无统计学意义（$P>0.05$），（4）辐射剂量 常规三期扫描与单独能谱增强扫描的 CTDIvol、DLP、ED 各组间比较差异有统计学意义，单独双期能谱增强扫描的 CTDIvol、DLP、ED 分别减低了 32.5%、30.7%和 31.1%。**结论** 腮腺检查时 MSI 图像既能达到诊断要求，诊断效能又与 TNC 有较高的一致性，在一定程度上降低了辐射剂量，具有替代 TNC 图像的潜在能力。

PU-2465
Is peak enhancement the best phase for reconstructing arterial and venous phase images: suggestions from the brain CT perfusion study

Yu Bing
The First affiliated hospital of Dalian Medical Univercity

Objective: To explore the optimal reconstruction phases for arteries and veins in brain imaging to reduce their interference by analyzing the images in the whole brain CT perfusion (CTP).
Materials and methods: Thirty-two patients (14 males and 18 females) with unilateral intracranial tumors and vascular diseases underwent the whole brain CTP on a 256-rows Revolution CT (GE healthcare). The CTP protocol included 22 phases with 100kV tube voltage and automatic tube current modulation to achieve noise index of 8HU in each phase. Using the time-density curve, the images for arteries (CT angiography, CTA) were reconstructed from CTP data in two different phases: the conventional (peak) arterial phase (AP), and the phase where the arterial enhancement was greater than 350HU and there was maximum difference in arterial-venous (A-V) CT value. Similarly, the images for veins (CT venography, CTV) were reconstructed in two phases: the conventional (peak) venous phase (VP) and the phase where the venous enhancement was greater than 350HU and there was maximum difference in venous-arterial (V-A) CT value. Image noise, SNR, CNR were measured and the subjective scores reflecting vessel display and interference between arteries and veins were obtained. The measurements of CTA and CTV images at different scan phases were compared.
Result: The optimal reconstruction phases were different between the two methods: at 8^{th} and 14^{th} for arteries and veins in the maximum difference method, respectively and 11^{th} and 13^{th} with the conventional peak enhancement method (all $p<0.001$). Both methods displayed intracranial arteries and veins clearly. There were no differences in SNR and CNR for CTA images and in image noise, SNR and CNR for CTV images between the two methods ($p>0.05$). However, CTA images with the maximum difference method had lower image noise with much reduced venous interference ($P<0.001$). The CTV images with the maximum difference method also showed significantly reduced arterial interference ($p<0.001$).
Conclusion: The scan phases with the maximum CT value difference between arteries and veins provide better CTA and CTV images than the conventional peak arterial and venous phases.

PU-2466

3D T2WI TSE 序列在颅神经成像中的应用

潘奇锋,谢琦
广州市第一人民医院（南沙院区）

目的
探索 3D T2WI TSE 进行颅神经成像，显示颅内段和颅外段神经成像技术。
方法
采用 西门子 MAGNETOM Skyro-3.0T 磁共振成像仪，颅内段神经使用平扫的 3D T2WI TSE，主要扫描参数：TR1000ms，TE136ms，FOV200×200mm，矩阵 384×384，层厚 0.52mm，不抑脂，横轴位扫描。颅外段神经成像：经静脉注入钆对比剂（种类：钆双胺、量：按体重 0.2ml/kg）后 1~3 分钟

用 3D T2 TSE 序列结合 STIR 技术进行颌面部扫描，主要扫描参数：TR3000ms，TE256ms，FOV260×260mm，矩阵 320×320，层厚 0.81mm，抑脂，矢状或冠状位扫描。

结果

颅内段：扫描完得到一组 3D 的水成像图，可以清晰的显示三叉神经和面、听神经。该序列还能做多种后处理，多平面重组（MPR）可以显示内听道内面、听神经之间的关系。

颅外段：结合 STIR 技术进行背景抑制能清晰显示 12 对颅外段神经。利用曲面重建可以将走行迂曲的颅外段神经拉直显示，更能直观地显示神经的走行、形态（图示）。

结论

颅内段神经在 T2WI 上与脑脊液形成良好对比，不进行背景抑制依然能清晰显示其走行、形态。

颅外段神经周围充满了高信号的脂肪组织，采用 STIR 技术能有效抑制扫描范围内的脂肪组织。

颅外段神经周围含有丰富血管、腺体及淋巴结，影响观察。注入钆对比剂能缩短周围组织 T1 值，使得组织 T1 值和脂肪接近，在进行 STIR 技术时，一并被抑制。钆对比剂还能缩短组织的 T2 值，T2W 成像时，背景信号更低，由于血脑屏障，颅神经内膜内液体信号并无衰减，因此更能突显出神经的走行、连续性和形态。

颅神经走形迂曲，难以在同一层面显示，一般采用 3D 成像，进行各向同性体素采集，可以任意方向 MPR 及曲面重建。

PU-2467

Optimization of scan protocols in low-dose combined CTP-CTA of whole brain on 256-rows MDCT

Yu Bing,Yanwei Miao
The First affiliated hospital of Dalian Medical Univercity

Objective: To explore the optimal scan protocol for achieving diagnostic image quality with low radiation dose in the combined brain CT perfusion (CTP) and CT angiography (CTA).

Materials and methods: Forty-five patients (21 males and 24 females, 58.36±11.79 years) with unilateral intracranial occupying and vascular lesions underwent a combined whole brain CTP-CTA with three different scan protocols on a 256-rows MDCT (Revolution CT, GE healthcare). All protocols required 22 scan phases for CTP with 100kV tube voltage and automatic tube current modulation for a noise index (NI) of 8HU except the tenth scan phase where higher tube current was required by using a lower NI value (NI=2.0HU for Group A (n=20) and NI=2.5HU for Group C (n=13)) or a fixed 325mA for Group B (n=12). CTA images were generated using data in the tenth scan phase with higher signal strength. The radiation doses were recorded. The CTA image noise, signal-to-noise ratio (SNR), contrast-to-noise ratio (CNR), and perfusion parameters in different parts of the brain parenchyma and subjective quality scores of the CTA and CTP images were statistically compared among three groups.

Result: There were no significant differences in sex ratio and age among the three groups (P_{sex}=0.442, P_{age}=0.290). Effective doses of the three groups were all low at 3.83±0.53mSv in Group A, 3.46±0.21mSv in Group B and 3.37±0.26mSv in Group C ($p<0.05$). Group C further reduced the effective dose by 12% compared with Group A ($P_{(A-C)}$= 0.001). There was no difference in dose between Group B and C ($P_{(B-C)}$=0.115). No

differences were found in image noise, SNR, CNR and subjective scores for CTA images among the three groups (P_{noise}=0.218, P_{SNR}=0.545, P_{CNR}=0.575, P_{score}=0.900). No differences were found in the perfusion parameters and subjective scores of CTP images among three groups (P>0.05).

Conclusion: The scan protocols of the low dose, combined brain CTP-CTA on a 256-rows MDCT can be further optimized to maintain CTP-CTA image quality while further reducing radiation dose.

PU-2468

Myoepithelial carcinoma of salivary gland: pathological and CT imaging characteristics

Mingli Zhao,Yue Dong
Liaoning Cancer Hospital

Abstract

OBJECTIVES:To summarize the pathological and CT imaging characteristics of myoepithelial carcinoma in salivary gland.

STUDY DESIGN:10 patients with myoepithelial carcinoma of salivary gland underwent enhanced CT scanning, and the pathological and CT imaging features were evaluated, including the pathological type, size, marginal morphology and enhancement pattern of the lesions.

RESULTS: Myoepithelial carcinoma had a multinodular or lobulated outline. The cut surfaces were gray-brown with no or incomplete capsules, as well as visible bleeding in some cases. The pathological cell type of the tumor may be spindle-shaped, clear, plasmacytoid and epithelioid cells, or a mixed type of several cells. Non-enhanced CT imaging showed an irregularly lobulated or multinodular lesion with ill-defined margin and inhomogeneous attenuation, and punctuate calcification in minority of the lesions. Enhanced CT imaging results revealed moderate and intense inhomogeneous enhancement including cystic and slit-like regions with no enhancement, intense nodular enhancement, and small tortuous vessel in the arterial phase.

CONCLUSION:The pathological features and CT imaging findings of myoepithelial carcinoma were characteristic, and familiarity with its imaging findings may help to diagnosis this entity.

颅骨表皮样囊肿的 CT 及 MRI 影像学表现

郭强强
榆林市第二医院

【摘要】 **目的** 探讨颅骨表皮样囊肿（SEC)的 CT 和 MRI 影像学表现，以提高对该病的诊断及认识。 **资料与方法** 回顾性分析 8 例经我院手术病理确诊的 SEC 的 CT 及 MR I 表现。 8 例均行 CT 平扫；其中 6 例行 MRI 检查，包含扩散加权成像（DW I）序列。6 例 MR I 检查中 2 例 MR I 平扫加增强检查，2 例只行 MRI 增强检查。 **结果** 病变均为单发，起自板障， 8 例 CT 平扫示颅

骨呈膨胀性改变,无硬化边缘或可见轻度硬化边缘，其中 3 例病变可见钙化。6 例 MR I 平扫, 4 例以长 T1、长 T2 为主混杂信号, 1 例呈稍长 T1、稍长 T2 信号, 1 例呈等 T1、长 T2 信号。 6 例 DW I 序列中 均呈高信号；2 例 MRI 增强检查呈轻度强化。 **结论** SEC 的 CT 及 MRI 表现具有一定的特征性, 影像学检查有助于其定位及定性诊断。

腮腺腺淋巴瘤 MSCT 多期增强征象再认识

刘啸峰
池州市人民医院

[摘要] **目的：**再认识腮腺腺淋巴瘤（Warthin 瘤）的多层螺旋 CT（MSCT）多期增强影像学征象及诊断价值。**方法：**回顾性分析经手术病理证实的 25 例 Warthin 瘤的临床及 MSCT 资料，所有病例均行 MSCT 平扫及三期增强扫描。**结果：** 25 例共 29 个病灶，单发 21 例，多发 4 例；大部分病灶（23/29）位于腮腺浅叶后下极，为圆形、类圆形或浅分叶，边界均清楚，大部分（24/29）平扫密度不均匀，24 个病灶动脉期实性部分明显强化，静脉期、延迟期逐渐减退，呈“速升速降”的强化方式，3 个病灶动脉期中度强化，静脉期明显强化，延迟期减退，2 个病灶轻度延迟强化，24 个病灶内有囊变区（17 个囊变呈“裂隙状”），其中 15 个囊变边缘伴小结节样影，8 个除囊变不强化区外，可见界于囊实性密度间的低密度延迟强化区域，29 个病灶均见贴边血管征。1 例左侧颌下可见一枚稍大淋巴结。结论： Warthin 瘤的 MSCT 多期增强征象具有一定的特点，本文归纳的部分征象既往文献未有报道，可能具有一定价值，结合临床病史，有助于提高术前对本疾病的诊断准确率。

PU-2471

The feasibility of optimizing scan protocols to further reduce radiation dose in combined brain CTP-CTA by decreasing scanning phases

Yu Bing
The First affiliated hospital of Dalian Medical Univercity

Objective: To explore the feasibility of optimizing scan protocols to further reduce radiation dose by decreasing scan phases in CT perfusion (CTP) without changing perfusion parameters in combined brain CTP-CTA.
Materials and methods: Thirty-two patients (15 males and 17 females, 59.13±12.28years of age) with normal, unilateral intracranial tumors or vascular diseases underwent a combined brain CTP-CTA on a 256-rows Revolution CT (GE healthcare). The original CTP protocol included 22 phases with 100kV tube voltage and automatic tube current modulation to achieve noise index (NI) of 8HU in each phase except the tenth phase where higher signals were required (NI=2HU). CTA images were reconstructed from the tenth-phase CTP data. Five lower dose CTP data sets (Groups B-F) were simulated with the following phases removed from the original set (Group A): Group B, 14th, 16th, 18th, 20th and 22nd phases; Group C, 2nd, 16th, 18th, 20th and 22nd phases; Group D, 2nd, 4th, 6th and 8th phases; Group E, 2nd, 4th, 16th, 18th, 20th and 22nd and Group F,

2nd, 4th ,6th, 14th, 16th, 18th, 20th and 22nd phases. The perfusion parameters CBF, CBV, PS and MTT values in the frontal white matter, caput nuclei caudate, lenticular nucleus, dorsal thalamus, white matter of occipital lobe and cerebellar hemisphere of the left or healthy side were measured and statistically compared among the six groups. Effective doses of six groups were calculated and compared.
Result: Radiation doses (in mSv) of the six groups were 3.72±0.42, 3.21±0.36, 3.20±0.36, 3.31±0.36, 3.00±0.33 and 2.89±0.32. There was no difference in CBV and PS values among the six groups (P>0.05), while CBF and MTT values were significantly different (P <0.05). Only in groups B and C where all 4 parameters were the same as in the original dose group (Group A), and the dose saving was 14%.
Conclusion: It is feasible to appropriately decrease scan phases in brain CTP to further reduce radiation dose without altering perfusion parameters.

PU-2472

唾液腺肌上皮癌：病理和 CT 影像学特征

赵明丽,董越
辽宁省肿瘤医院

目的　总结唾液腺肌上皮癌的病理和 CT 影像学特征。 研究设计　　对 10 例唾液腺肌上皮癌患者进行增强 CT 扫描，并对病理和 CT 影像学特征进行评估，包括病理类型，大小，边缘形态和病变增强模式。 结果 肌上皮癌呈多结节或分叶状，切割表面为灰棕色，没有或不完整的荚膜，有时可见出血。肿瘤的病理细胞类型可以是纺锤形、透明、浆细胞样和上皮样细胞，也可以是多种细胞的混合类型。非增强 CT 表现为不规则分叶状或多结节病变，边缘不清晰，密度不均匀，少数病灶中有点状钙化。增强的 CT 表现为中、重度不均匀性增强，包括囊性、裂隙样无强化区以及动脉期明显的结节性增强和小血管扭曲。 结论　　肌上皮癌的病理特征和 CT 影像学表现是特征性的，熟悉其影像学表现可能有助于诊断该疾病。

PU-2473

鳃裂囊肿少见 CT 表现

吴任国
中山市人民医院

【摘要】
目的　报告鳃裂囊肿的少见 CT 表现，以提高对该病的 CT 诊断水平。
方法　分析 14 例经临床手术及病理证实的鳃裂囊肿 CT 资料。其中男性 9 例，女性 4 例，年龄 11～66 岁，平均 37 岁。8 例行颈部 CT 平扫，其中 4 例平扫后行颈部 CT 增强扫描，6 例直接行颈部 CT 增强扫描，所有病例 CT 扫描后常规行冠状面和矢状面 MPR 重建观察。
结果　13 例为第二鳃裂囊肿，其中 Bailey Ⅰ型 4 例，囊肿位于胸锁乳突肌的前缘或外侧，颈阔肌的深面。BaileyⅡ型 8 例，囊肿位于胸锁乳突肌的前内侧或内侧，颈动脉间隙的外侧，颌下腺后方。BaileyIV 型 1 例，位于右侧颈动脉鞘前内侧、右侧咽旁间隙内侧及右侧咽侧壁外侧，即位于咽粘膜间隙。1 例为第一鳃裂囊肿，位于右侧腮腺内。少见征象有囊肿壁不均匀增厚、壁结节、囊内分隔、多囊状及平扫呈高密度。9 例囊肿壁不均匀增厚，8 例囊肿壁见壁结节向囊腔内突出，平扫壁结节与囊壁等密度，与囊液相比呈稍高密度，增强扫描示增厚囊肿壁及壁结节明显强化，1 例

囊肿内见壁结节和线状分隔，1 例呈多囊状，部分囊之间相通连，2 例平扫囊内呈高密度，其中 1 例呈均匀高密度，增强扫描未见强化，1 例高密度内见 2 处环形低密度影。14 例 CT 诊断均误诊。
结论 囊肿壁不均匀增厚、壁结节、囊内分隔、多囊状及平扫呈高密度为鳃裂囊肿少见的 CT 表现， 当病变出现上述征象时，容易导致误诊，熟悉这些少见征象并结合病变的发生部位，特别是位于胸锁乳突肌的前内侧或内侧，颈动脉间隙的外侧，颌下腺后方，能减少误诊，提高诊断水平。

PU-2474

3.0T 磁共振高分辨率增强 MRI 对 Ramsay Hunt 综合征的诊断价值

马鸣岳,邬小平,刘红生,杨想春,张宏,董季平,杨军乐
西安市中心医院

目的
探讨 3.0T 磁共振高分辨率增强 MRI 对 Ramsay Hunt 综合征的诊断价值。
方法
对 14 例患周围性面瘫并耳周带状疱疹、经临床确诊为 Ramsay Hunt 综合征的患者，行 3.0T 磁共振面神经薄层横断面容积平扫及注射 Gd 对比剂增强扫描，观察患侧面神经的信号改变，对增强扫描横断面图像进行 CPR 后处理，将双侧面神经显示于同一平面之上，分别测量患侧异常强化面神经节段的 MR 信号值与健侧相应节段的面神经 MR 信号值，同时测量面神经根部对应的脑桥 MR 信号值，分别计算患侧、健侧相应节段面神经 MR 信号值与面神经根部对应的脑桥 MR 信号值的差值（DSV），对患侧与健侧 DSV 进行两独立样本 t 检验。
结果 Ramsay Hunt 综合征患者注射 Gd 对比剂增强扫描后，患侧与健侧相应面神经节段 MR 信号的 DSV 存在显著统计学差异（P＜0.05），患侧面神经病变节段以迷路段及膝状神经节多见，少数病变累及面神经鼓室段。
结论 3.0T 磁共振高分辨率增强 MRI 能清晰显示 Ramsay Hunt 综合征患者患侧节段性面神经异常强化，可为临床诊断 Ramsay Hunt 综合征提供可靠的影像学参考依据，Ramsay Hunt 综合征患者面神经病变节段以迷路段及膝状神经节多见。

PU-2475

探讨开源大螺距头颈部 CTA 在临床应用价值

安恒彬,谢瑞刚
华中阜外医院

目的：探讨开源 CT 大螺距扫描模式在头颈 CTA 应用价值。
材料和方法：前瞻性搜集拟诊行头颈部 CTA 患者 60 例，随机分为大螺距扫描组（A 组）和普通序列扫描组（B 组）。由 2 名资深医师对图像质量进行独立主观评分并采用 Mann-Whitney U 秩和检验进行比较。记录每例患儿的 CTDIvol、DLP，采用独立样本 t 检验比较两组有效辐射剂量、升主动脉 CT 值及信噪比（SNR）等指标。
结果：两组主动脉 CT 值及 SNR 等指标差异无统计学意义（p ＜ 0.05）。诊断医师对两组图像质量主观评分高度一致（κ= 0.82 和 0.84）且差异无统计学意义（3.53±0.63 vs 3.57±0.82，Z= -0.05，P = 0.96）。A 组患者的有效剂量（4.12±0.11 mSv）明显低于 B 组（7.2±0.2 mSv，t = -4.98，p ＜ 0.05）；扫描时间明显缩短 A 组（0.31 0.02 s），B 组（0.75 0.15 s），t =16.345，p ＜ 0.05)

目的：开源大螺距在头颈部 CTA 中能保证图像质量和显著降低患者照射剂量

PU-2476

Revolution CT 低剂量头颈部 CTA 联合颅脑 CTP 一站式检查及残余功能达峰时间（TMax）的临床应用

刘海燕,章辉庆
亳州市人民医院

目的：探讨 Revolution CT 低剂量头颈部 CT 血管成像（CTA）联合颅脑 CT 灌注（CTP）一站式检查的可行性及灌注残余功能达峰时间（TMax）伪彩图参数诊断脑缺血的临床价值。方法：前瞻性分析临床诊断脑缺血性病变的 50 例患者，所有患者完成 Revolution CT 低剂量头颈部 CTA 联合颅脑 CTP 一站式检查，计算患者受检 X 线有效辐射剂量；重建头颈部 CTA 及颅脑 CTP 灌注图，统计分析头颈部血管狭窄情况；通过 TMax 伪彩图发现异常与正常灌注区，后通过测量异常与正常灌注区的脑血流量（CBF）、脑血容量（CBV）、达峰时间（TTP）、平均通过时间（MTT）的数据，以确定异常灌注区梗死前期缺血程度（Ⅰ期、Ⅱ期）及急性脑梗死，以及确定残余功能达峰时间（TMax）伪彩图提示异常区域的敏感性；同时测量低灌注兴趣区及正常区域的 TMax 值，通过 ROC 曲线得出诊断Ⅰ期、Ⅱ期与急性梗死期的临界值。结果：颅脑灌注有效辐射剂量为 2.27±0.10mSv，头颈部 CTA 及颅脑 CTP 总辐射剂量为 3.21±0.17mSv。所有 TMax 伪彩图清晰，满足临床诊断，TMax 伪彩图提示异常灌注区敏感性为 95.16%（59/62）。正常区域、Ⅰ期、Ⅱ期及急性脑梗死期的 TMax 值各组间差异均有统计学意义（P=0.000）。诊断Ⅰ期、Ⅱ期、急性脑梗死的临界值分别为 2.12s、3.99s、5.90s； 结论：Revolution CT 头颈部 CTA 联合颅脑 CTP 一站式检查辐射剂量低，能够同时发现血管狭窄及灌注异常，以 TMax 伪彩图发现灌注异常敏感性高，TMax 值的测定对脑缺血低灌注程度有定性的诊断价值。

PU-2477

Imaging Characteristic and Classification of Primary Intraosseous Meningioma

Hai Liao,Danke Su,Yang Zhao
Guangxi Medical University Cancer Hospital

【Abstract】 **Objective** To analyze the imaging characteristic and classification of primary intraosseous meningioma (PIM) in order to improve the understanding of PIM. **Methods** CT and MRI data in 10 pathologically proved PIM were retrospectively analyzed, imaging classification of PIM was based on the way of bone destruction. **Results** All the 10 cases were single lesion in skull, 5 cases were in the frontal bone, 5 cases were in the parietal bone. As to the imaging classification, 6 cases were inflated type, 3 were sclerotic type, and 1 was osteolytic type. The inflated and osteolytic types showed low density on CT scanning. In MRI, the lesions showed equal or slightly lower signal on T1WI, a slightly higher signal on T2WI 3cases with moderate enhancement and 4 cases with obvious uniformity enhancement on enhanced scanning, 6 cases dura mater adjacent to the lesions were found significant enhancement, 3 cases demonstrated the meningeal tail sign; In osteolytic type, the

diseased skull showed a high density with radioactive bone needle sign on CT scan, and the soft tissue mass was found around the diseased skull, it showed equal or slightly lower signal on T1WI, slightly higher signal on T2WI, and the soft tissue mass and dura mater were found significant uniformity enhancement on enhanced scanning. Conclusion PIM has certain characteristic imaging findings, CT and MRI have important clinical value for the diagnosis and imaging classification of PIM.

PU-2478

心电监控 4D-CTA 评估颅内破裂动脉瘤搏动点的研究

顾艳[1],苗重昌[1],刘希光[1],胡春洪[2]
1.连云港市第一人民医院
2.苏州大学附属第一医院

目的：通过观察已破裂颅内动脉瘤在心电监控 4D-CTA 检查中一个心动周期内的搏动情况，探讨搏动点的临床意义.方法:将 102 个破裂动脉瘤病人进行了双源 CT 的心电监控 4D-CTA 检查，将扫描结束后的原始数据进行重建，得出一个心动周期内的时间间隔均为 5%的 20 组数据包，经工作站三维软件处理后，得到 20 幅图像及动态图。将同一部位连续 3 幅及以上图像发现小泡状或小尖状凸起，判定该凸起为搏动点。根据有无搏动点出现分为有搏动点组和无搏动点组，并将两者的临床病史等进行统计分析，并将出现搏动点的动脉瘤与手术结果进行对照。结果: 102 个破裂动脉瘤中 81 个发现有搏动点，有搏动点组和无搏动点组的性别、年龄、部位家族史、有无并发多发动脉瘤、是否合并高血压及有无吸烟史之间比较无统计学意义（p>0.05），而直径以及瘤颈比在两组之间有统计学意义。在 81 例有搏动点的动脉瘤中，其中 66 例进行了夹闭术，并发现 62 例出血的部位与搏动点的部位一致。且有统计学意义.结论:破裂动脉瘤直径和瘤颈比大，更倾向于容易发现搏动点；破裂动脉瘤的搏动点与术中破裂点有较好的一致性,这对破裂动脉瘤的治疗有很大的临床意义。

PU-2479

探讨 CT 及 MRI 在 Madelung 病应用价值

纪元,李春风,王海涛,王丽君
大连医科大学附属第一医院

目的:探讨 Madelung 病的头颈部 CT 与 MRI 表现，提高对该病的诊断水平。
方法：回顾性分析 2012 年 2018 年 11 例 Madelung 病患者的头颈部 CT 与 MRI 表现。
结果：所有患者均表现为头颈部左右对称性皮下和（或 ）肌肉间隙弥漫性脂肪蓄积增厚，CT 值约-60U~-100HU，MRI 扫描 T 1 WI 及 T 2 WI 均为高信号，信号较均匀，脂肪抑制序列信号减低。其中 9 例患者有长期大量酗酒史，5 例具有“马颈圈”、“牛颈”样特征性外貌。
结论：Madelung 病具有特征性的 CT 及 MRI 表现，结合酗酒史可作出明确诊断。

PU-2480

头颈血管能谱 CT 成像水基物质图提高颈椎间盘显示的可行性研究

王艳
河南省人民医院

目的 探讨应用能谱头颈 CT 血管造影（CTA）时物质分离所得水基物质图提高颈椎间盘（IVDs）显示及诊断准确性的可行性。**方法** 对 24 例行头颈 CTA 检查的患者行能谱扫描，重建 70keV 单能量图和水（碘）、水（钙）及水（羟基磷灰石（HAP））基物质图像，分别对 C2-7 椎间盘膨出或突出情况进行评估，结果与 MRI 进行对比，并对图像质量进行主观评分比较。同时测量各组图像中 C2-7 椎间盘的 CT 值和相对水浓度值，计算并比较噪声、信噪比（SNR）和对比噪声比（CNR）。采用卡方检验对四组图像检测到的颈间盘情况进行比较；采用 Friedman 秩和检验对四组图像质量行主观评分比较，两两比较采用 SNK 法；采用配对 t 检验对四组图像测量的颈椎间盘客观参数进行比较。**结果** 水（碘）、水（钙）及 70KeV 图评价 IVDs 的形态没有差异（两两比较 P 值分别为 0.935、0.986、0.909），与 MRI 评价结果差异无统计学意义（P 值分别为 0.154，0.116，0.137）。而水（HAP）图评价 IVDs 的形态与其它各组图像及 MRI 结果均有差异（p 值分别为 0.001，0.001，0.003，0.002）。水（碘）、水（钙）及水（HAP）图对颈椎间盘的显示均优于 70KeV 图（p 值分别为 0.000* 、0.000* 、0.018 、0.046、0.000*），以水（HAP）图像质量最好，水（碘）图和水（钙）图无差异（P=1.000）。除了 C2/3 椎间盘水（碘）与 70KeV 图评分差异无统计学意义（P=0.180），其余椎间盘水（碘）基图主观评分均优于 70KeV 图（P 值分别为 0.011、0.007、0.035、0.003）。与 70KeV 图比较，所有水基图均降低了图像噪声，提高了图像 SNR 和 CNR，差异有统计学意义（P 均＜0.001）。**结论** 能谱成像所得的水（碘）和水（钙）基物质图与 70keV 单能量图像比较能更好的显示 IVDs。

PU-2481
Care Dose 4D 技术在西门子 128 排机型上对头颅 CT 检查的应用价值

高荣慧
四川大学华西医院

目的：探讨 Care Dose 4D 技术在西门子 128 排 CT 机型上对于头颅 CT 检查的辐射剂量和图像质量的影响，并且评价其临床应用价值。方法：在我院由于各种病情需要行 CT 检查的病人 100 例，随机分为 AB 两组，每组 50 例。A 组：采用常规固定管电压（120KV）和固定管电流（280mAs）；B 组：采用常规固定管电压（120kv）和 Care Dose 4D 技术； 。扫描基线均为听框线，采用序列扫描，方向均为从足到头方向。每一例患者结束扫描后记录其辐射计量：容积计量指数（CTDLvol）和计量长度乘积（DLP）并计算图像的噪声（SD）、信噪比（SNR）。A、B 两组头颅 CT 扫描后的图像选择颅底层面、鞍上池及颅顶层面感兴趣区进行 CT 值的计算并计算图像的噪声、信噪比。头颅 CT 的图像质量由两位高年资的影像诊断医师进行盲法评定,根据图像的信噪比，空间分辨率和伪影程度将图像分为优、良、差三个等级。两组扫描方式的辐射剂量及图像信噪比的差异采用 t 检验，图像质量的差异采用卡方检验进行统计学分析。结果：A 组头颅 CT 扫描的平均 CTDLvol39.54mGy，平均 DLP579 mGy；B 组的平均 CTDLvol43.95 mGy，平均 DLP 633mGy。两组的 CTDLvol 和 DLP 的差异均具有统计学意义（p＜0.001）。B 组信噪比略高于 A 组，在颅顶层面和颅底层面两者信噪比差异无统计学意义（p＞0.05），而在鞍上池层面两组信噪比差异有统计学意义（p＜0.05）。两组图像的质量比较，A 组的平均优良率为 96.4%，B 组的为 96.5%，图像质量差异无统计学意义（p＞0.05）。结论：在西门子 128 排 CT 机型上，单独使用 Care Dose 4D 技术并不能明显优化头颅图像质量，同时还会加重患者的辐射剂量。

PU-2482
朗格汉斯细胞组织细胞增生症累及甲状腺、颌下腺和颈部淋巴结 2 例增强 CT 表现

吴任国
中山市人民医院

目的
分析朗格汉斯细胞组织细胞增生症累及甲状腺、颌下腺和颈部淋巴结的 CT 表现，提高对该病认识水平。
方法
回顾性分析 2 例朗格汉斯细胞组织细胞增生症累及甲状腺、颌下腺和颈部淋巴结患者的 CT 资料。患者 1，女，51 岁，发现颈前肿物并缓慢增大 10 余年。患者 2，女 61 岁，颈前区肿大并疼痛 1 年，再发 3 月。2 例均行颈部 CT 直接增强扫描。采用荷兰 Philips Brilliance iCT 扫描仪，管电压 120Kv，管电流 250mAs，螺距 1.0，对比剂采用碘佛醇 300mg I/ml 总量 80～100 ml，注射流率 3ml/s，延迟 45 秒扫描。
结果
甲状腺弥漫性肿大 2 例，密度不均匀减低，其内见多发大小不等低密度结节，部分结节融合，肿大甲状腺边缘强化，强化不连续，内部见迂曲线状、条片状、分隔状强化，甲状腺正常组织大部分消失，病变内均未见钙化灶，病例 1 部分结节内可见囊变，甲状腺内未见钙化。双侧颌下腺肿大 2 例，强化减弱，密度减低，病例 1 颌下腺边缘强化，内部见迂曲线状、分隔状强化影，病例 2 双侧颌下腺内见多个低密度结节，部分融合，肿大颌下腺边缘强化，内部见条片状、分隔状强化，2 例颌下腺内均未见钙化。1 例双侧颈部 2～5 区可见数枚肿大淋巴结，最大者断面大小约 10.9m×7.3mm，部分淋巴结内见线条状强化。1 例双颈 2 区、6 区及左颈 3 区、4 区见肿大淋巴结，最大者约 18.7mm×12.1mm，位于右颈 2 区，中央密度减低，边缘轻度强化。
结论
郎格汉斯细胞组织细胞增生增生症累及甲状腺、颌下腺和淋巴结 CT 表现为甲状腺、颌下腺和颈部淋巴结肿大，甲状腺、颌下腺及淋巴结密度减低，边缘强化，内部呈线状、条带状或分隔状强化，甲状腺、颌下腺及颈部淋巴结内未见钙化。当甲状腺、颌下腺及淋巴结内出现类似病变时，要考虑朗格汉斯组织细胞增生症可能。

PU-2483
颞下颌关节色素沉着绒毛结节性滑膜炎与腱鞘巨细胞瘤的 MRI 特征及其鉴别诊断

张晗
青岛大学医学院附属医院

目的 探讨颞下颌关节色素沉着绒毛结节性滑膜炎与腱鞘巨细胞瘤的 MRI 表现特点，以提高对两种病变的鉴别诊断能力。
方法 回顾性分析经手术病理证实的 17 例（8 例色素沉着绒毛结节性滑膜炎和 9 例腱鞘巨细胞瘤）患者的 MRI 资料，所有病例均经 MRI 检查，其中 9 例（4 例色素沉着绒毛结节性滑膜炎和 5 例腱鞘巨细胞瘤）患者行增强扫描。

结果 色素沉着绒毛结节性滑膜炎 MRI 表现为关节腔内滑膜增生形成绒毛结节或肿块,在 T1WI 上主要呈中等或低信号(8 例），T2WI 上主要呈稍低信号(6 例），5 例病灶呈双低信号（结节内含铁血黄素），增强扫描主要以中等不均匀强化为主(4 例）；腱鞘巨细胞瘤在 T1WI 上均以等信号为主，T2WI 上主要以稍高或高信号为主(9 例），增强扫描均呈中等或明显的欠均匀强化(5 例)，两种疾病的 T1WI、T2WI 信号和强化程度有一定差异。色素沉着绒毛结节性滑膜炎与腱鞘巨细胞瘤均可呈弥漫型或局限型，关节滑膜的增生，骨质破坏和关节间隙的增宽，两种疾病上述征象均无明显差异。
结论 色素沉着绒毛结节性滑膜炎与腱鞘巨细胞瘤的 MRI 信号既有一定重叠又有差异，T1WI、T2WI 信号特点和强化程度对两者的诊断及鉴别诊断具有重要价值。

PU-2484
CT 脑灌注联合 CT 血管成像在急性脑卒中患者中应用

宋佩
新乡医学院第一附属医院

方法：选取 2018 年 7 月至 2019 年 7 月本院收治的 60 例疑似为急性脑缺血的患者作为研究对象,所有患者均行 CT 平扫、CT 全脑灌注及 CTA 检查,并观察检查的图像及相关参数。
结果：CT 全脑灌注联合 CTA 诊断敏感度较 CT 平扫高,差异有统计学意义(P<0.05);ACI（急性脑梗死）患者患侧异常区脑血容量(CBV)、脑血流量(CBF)较健侧对应区域低,平均通过时间(MTT)及达峰时间(TTP)较健侧对应区域高,差异有统计学意义(P<0.05);TIA 患者患侧 MTT 及 TTP 较健侧对应区域高,差异有统计学意义(P<0.05);ACI 患者患侧 CBV、CBF 较 TIA 患者患侧对应区域低,MTT、TTP 较 TIA 患者患侧对应区域高,差异有统计学意义(P<0.05)
结论：CT 脑灌注可准确并及时反应患者脑部缺血程度、缺血位置,并预测其半暗带，可为急性脑缺血患者早期诊断及治疗提供客观依据 ,还可以了解颅脑术后局部脑组织血流灌注情况,并为患者预后评估以及干预措施的制定提供指导,对患者术后病情的预后判断提供帮助,对临床治疗过程中的适时干预具有一定的指导价值。

PU-2485
多层螺旋 CT 后重建技术在颌面部外伤复杂骨折与整形外科治疗中的临床应用价值

成厚丕[1],李彬[2]
1.湖北省孝感市中心医院核磁共振室
2.湖北省孝感市中心医院 CT 室

摘要 目的：探讨多层螺旋 CT（MSCT）三维重建后技术，在颌面部骨折中的临床诊断与整形外科治疗中的临床应用价值。**方法：**对 82 例颌面部骨折的患者进行了多层螺旋 CT 容积扫描检查与三维重建后处理。重建后处理方法包括多平面重建（MPR），表面阴影显示（SSD）和容积再现（VR）。结合轴位影像图像，观察骨折线、撕脱游离碎骨片，分析三种后处理重建图像显示骨折效果；骨折线断裂的方向和程度。**结果：**多平面重建颌面部，多个鼻窦骨折、裂隙骨折及骨折内部情况显示较好；通过 SSD 和 VR 显示，特别是在复杂骨折的游离骨片的空间关系显示更好，有很好的空间立体观。**结论：**MSCT 轴位图像是诊断颌面部骨折的基础，三维重建后处理技术，可多方位三维显示粉碎性骨折有着显著的优势，可清楚地显示病变的空间解剖关系，对患者术前具有重要的临床评估价值。

PU-2486

CT 检查在脑出血诊断中的临床价值

王立明,马湘乔
中国人民解放军北部战区空军医院

摘要：目的探析对脑出血患者应用 CT 影像学手段检查的临床诊断价值。方法取笔者所在医院影像科 2017 年 9 月至 2019 年 3 月诊疗脑出血患者为分析对象,有 72 例,对所有患者应用 CT 影像学手段检查并对其临床数据以回顾性方式进行分析,归纳 CT 检查对脑出血的临床诊断价值。结果接受 CT 扫描患者病灶发生位于基底节区、丘脑、小脑、脑干,其中病灶位于脑干患者死亡率相对最高(P<0.05);不同病灶的脑出血患者存在不同 CT 扫描影像学特征。患者入院一周与入院两周后颅脑 CT 检查结果存在一定差异。结论颅脑 CT 运用于脑出血诊断过程,不仅可以对出血情况作出准确诊断,还可为临床制定治疗方案提供依据,值得临床推广。

PU-2487

颌骨造釉细胞瘤 CT 征象研究

陈翔
福州市长乐区医院

目的：研究颌骨造釉细胞瘤的影像特征，探讨 CT 影像对颌骨造釉细胞瘤的诊断与鉴别诊断的价值。方法：回顾性分析本院自 2015 年至今共 51 例病理证实的颌骨造釉细胞瘤的 CT 图像表现，观察病变的部位、形态内部结构，密度改变、邻近结构侵犯，牙齿吸收等。结果：其中 51 例图像中男性患者 31 例，女性患者 20 例，影像分型上单房型共 28 例，多房型 19 例，蜂窝型 4 例，局部恶性征象型 0 例。其中 45 例病灶有向颊侧膨胀性生长改变，3 例向舌侧膨胀性生长改变，3 例较均匀膨胀性生长改变，17 例病灶呈分叶状，34 例病灶无明显分叶状改变。局部骨皮质中断不完整共 27 例，牙根截断吸收共 29 例，9 例病灶内含有牙齿结构，囊变区 CT 值范围约 10～35HU，平均 22.5HU。结论：颌骨造釉细胞瘤在发生部位、形态、内部结构、邻近结构侵犯及牙齿吸收改变等方面均具有一定的特征性.高分辨螺旋 CT 配合三维重建技术可较直观显示病变的形态、周围骨质破坏、牙根吸收及邻近重要结构改变;二者联合应用对于提高造釉细胞瘤的术前诊断正确率有重要价值。

PU-2488

大涎腺腺样囊性癌的磁共振成像特点及误诊分析

李春炫,潘初
华中科技大学同济医学院附属同济医院

目的 探讨大涎腺腺样囊性癌（Adenoid cystic carcinoma ACC）的 MRI 特点，提高对该病的影像学表现认识，减少误诊。**方法** 回顾性分析经病理证实的 19 例（16 例原发，3 例复发）大涎腺 ACC 患者的 MRI 检查资料并分析误诊原因，其中 13 例行 MRI 平扫检查，4 例行 MRI 平扫和增强检查，2 例行 MRI 增强检查。**结果** 19 例肿瘤中，发生于腮腺 9 例，颌下腺 5 例，舌下腺 5 例。12 例肿瘤形态不规则，呈浸润性生长，边界不清，7 例形态规则，边界清晰。平扫 17 例，12 例呈均匀等 T1WI 信号，5 例信号不均，7 例呈 T2WI 均匀高或稍高信号，10 例呈混杂信号；6 例行 MRI 增强检查，3

例强化均匀，其余 3 例呈不均匀强化。8 例可见筛囊征，3 例病灶周围见 T2WI 低信号假包膜影。4 例发生远处转移，转移至肺、肝脏、椎体及淋巴结等，颌下腺 1 例肿瘤侵及周围骨质。共误诊 13 例，其中误为多形性腺瘤 7 例，炎症 3 例，鳞状细胞癌 1 例，腮腺导管癌、肿大淋巴结各 1 例。**结论** 大涎腺腺样囊性癌 MRI 表现多样，可表现为形态不规则、边界不清，也可表现为边界清晰的类圆形，增强呈均匀或不均匀强化；部分病灶内见筛囊征，本组病例中以舌下腺多见；部分病灶为孤立性囊实性肿块，与周围正常腺体分界清，周围似见低信号完整包膜，称为假包膜型 ACC，增强包膜轻度强化；发生于舌下腺肿瘤可累及颌下腺远段导管，致近段导管增粗或导管末端结构模糊。ACC 影像学表现缺乏特异性，临床上易误诊为涎腺来源的良性肿瘤、炎性病变或其他恶性肿瘤。MRI 增强检查可帮助进一步诊断，弥散加权成像（DWI）中大涎腺 ACC、多形性腺瘤、Warthin’s 腺瘤、粘液表皮样癌、恶性淋巴瘤等肿瘤的 ADC 图像间存在差异，可帮助鉴别诊断[1、2]。密切观察其影像学征象，结合临床特点，并借助 DWI 等功能磁共振成像技术，才能做出正确的诊断，减少误诊，从而为临床诊断及治疗提供更可靠的信息。

PU-2489

椎动脉发育不良与后循环梗死相关性的分析

陈灿,马湘乔
中国人民解放军北部战区空军医院

【摘要】 目的探讨椎动脉发育不良与后循环缺血的关系。方法 收集在我院神经内科住院的患者,选取行头部/颈部 MRA 检查,同时行颅脑磁共振平扫检查的患者 300 例。根据椎动脉发育不良诊断标准,分为椎动脉发育不良组和无椎动脉发育不良组,比较两组间后循环 TIA 及后循环梗死的总发生率,统计分析椎动脉发育不良与后循环 TIA 和后循环梗死的相关性。 结论 .椎动脉发育不良与后循环 TIA 和后循环梗死有明显的相关性,是缺血性脑卒中的危险因素。

CTA 与 MRI 对胚胎型大脑后动脉与脑循环缺血相关性研究

马蕊,马湘乔
中国人民解放军北部战区空军医院

【摘要】目的 探讨胚胎型大脑后动脉与脑循环缺血的相关关系。 **方法** 选取我院预计 200 例 CTA 诊断为胚胎型大脑后动脉的患者及预计 200 例 CTA 诊断无胚胎型大脑后动脉的患者，分析此类患者头部 MRI 平扫是否有脑缺血表现及脑缺血灶的位置，进一步分析胚胎型大脑后动脉与脑循环缺血的具体相关关系。**结论** 胚胎型大脑后动脉与脑循环缺血有一定的相关性。

PU-2491

Value of Care Technique in Skull CT Exam using a 128-row multidetector CT scanner

Hangjia Hu
West China Hospital

[abstract]Purpose:to investigate the value of Care technology in decreasing radiation dose of 128 spiral CT in adult skull scanning.[methods]: 150 patients in our hospital because of various conditions required CT scan were randomly divided into three groups ABC, 50 cases in each group.Roution protocol(120KV and 280 mAs) was usea in group A. Care Dose 4D technology was used in group B. Care Dose 4D technology ang Care kv technology was used in group C.Infraorbital line was used to be the baseline. Effective mAs value,volume CTdose index (CTDLvol)and dose lengh product(DLP) were recorded and signal to noise ratio(SNR) of the CT image were calculated after exam.The image quality at the top,suprasella cistern and base level of the skull was judged and calssified as the three levels(excellent,good,poor) by two deputy chief physicians with double blind method. Differences between the three groups scanning radiation dose and image of SNR using analysis of variance, the difference in image quality using the chi-square test was used for statistical analysis.Results:The mean CTDLvol and mean DLP for group A was 39.54mGy and 579 mGy,those for group B was 43.95mGy and 633 mGy,those for group C was 48.67 mGy and 678 mGy.The difference of CTDLvol and DLP between the three groups were with statistical significant (p <0.001). At the top level and base level of the skull,the difference was with no statistical significant（p＞0.05）,but at the suprasella cistern, the difference was with statistical significant（p＜0.05）.The SNR of image in group C was slightly higher than A,B group.And the SNR of image in group B was higher than that in groupA.For the image quality evaluation, the average fine rate was 96.4% in group A, group B was 96.5%, 97.1% in group C. Image quality was no significant difference (p> 0.05).Conclusion: On the Siemens 128 slice CT models, Care Dose 4D technology alone did not significantly optimize image quality of the head image, but also increase the radiation dose to the patient.And in combination with care kv technique, the image quality has improved, but the radiation dose is increased significantly.So in the head CT scan, especially in patients with requires repeated CT follow-up has important clinical value and significance, is not worth popularization and application.

PU-2492

原发性颅骨内脑膜瘤影像分型及表现

廖海,苏丹柯,赵阳
广西医科大学附属肿瘤医院

【摘要】目的 分析原发性颅骨内脑膜瘤（primary intracranial meningioma，PIM）的影像学表现，以提高对 PIM 认识。**方法** 回顾性分析经病理证实的 10 例 PIM 的 CT、MRI 资料，并根据颅骨骨质破坏方式对 PIM 作影像学分型。**结果** 10 例病灶均单发，5 例位于额骨，5 例位于顶骨；6 例为膨胀型，3 例为硬化型，1 例为溶骨型；膨胀型及溶骨型者 CT 平扫呈低密度，T1WI 呈等或稍低信号，T2WI 呈稍高信号为主，增强扫描 3 例中度强化，4 例明显强化，其中 6 例病灶相邻硬膜明显强化，3 例见脑膜尾征；硬化型者病变颅骨 CT 平扫呈高密度，见放射性骨针，相邻颅骨内外板见软组织肿块影，T1WI 呈等或稍低信号，T2WI 呈稍高信号，增强扫描病变周围软组织肿物及硬膜明显均匀性强化。**结论**: PIM 具有一定的特征性影像学表现，CT、MRI 对 PIM 诊断及分型具有重要的临床价值。

PU-2493

对比增强 MRA 在脊髓血管病变中的临床运用

管川江
重庆三峡中心医院

目的 研究利用增强磁共振成像方式在脊髓血管疾病中的显示作用。
方法 选取 2017 年 6 月～2018 年 12 月在本院就诊的 50 例临床拟诊为脊髓血管病变的患者,均行 CTA 或 DSA 检查。年龄 15～72 岁患者，缓慢起病者多见，亦有间隙性病程患者，部分患者无特殊实验室检查阳性指针，伴下肢无力，跛行。采用西门子 3.0T Vrio 磁共振机，颈部线圈，先行常规脊髓失状位、横断位平扫，扫描参数 TSE T2WI TR3000ms,TE100ms;TSE T1WI TR400ms,TE9ms,层厚 3mm,间隔 0.5mm,FOV220x260mm,矩阵 320X256,采集次数 2～4 次。对比增强 MRA,冠状位成像，利用三维扰相 GRE T1WI 序列，TR3~6ms,TE1~2ms,采用 0.2mmol/kg 使用对比剂，流速 1.5~3ml/s,;利用透视触发技术，采用 K 空间中心优先采集技术，然后再行常规脊髓增强扫描，同平扫。扫描结束，利用设备自带减影软件进行减影，然后使用 MIP、SSD、VR 显示脊髓血管。
结果 MR 所示无明显异常征象 3 例，MR 所示：T2WI 像脊髓周围流空信号血管，范例可见脊髓内畸形血管团，呈花边状，脊髓水肿弥散性增粗，呈等/长 T1、长 T2 信号，增强扫描见扩张静脉表现为高信号，及脊髓内出血、蛛网膜下腔出血征象，边缘含铁血黄素沉积呈低信号-黑环征等，追踪问题患者，对比行 DSA、CTA 检查组患者，CE-MRA 显示病灶能力高，阳性率 94%。
结论 脊髓血管畸形是少见病，占脊髓疾病的 2%-4%，但拥有极高的致残率，进行性加重的脊髓和脊神经损害症状，随着 MR 的临床运用，CE-MRA 在脊髓血管疾病中的作用日趋重要，其优质的软组织分辨率，对脊髓有更好的显示能力，通过对比剂的使用，在血管显示上更加明确，是脊髓血管病变检查信价比最高的检查，而且是脊髓血管畸形治疗后随访的有效方法。

PU-2494

The application of low dose CT perfusion in acute cerebral apoplexy

Tian Tian,Qi zhou He
The Affiliation Hospital(TCM) of Southwest Medical University Abstrect

Objective: To discuss the application of low dose CT perfusion in acute cerebral apoplexy.
Methods: patients with suspected acute cerebral apoplexy who were to receive cerebral CT perfusion (CTP) in our hospital were randomly divided into two groups: group A (t 80 kV, 120 mAs) and group B (100 kV,120 mAs). Image data of 20 patients with no craniocerebral diseases examined by CT were selected from each group, 20 cases in each group. Patients in group A, B two head of frontal lobe paraventricular, caudate nucleus, shell, thalamus, temporal choose interested in occipital area measurement, respectively, measure the interested area value of the cerebral blood flow (CBF), cerebral blood volume (CBV), average value (determined by MTT) over time, two high qualification diagnosis image of doctors on two groups of patients are subjective rating method . CT dose index and CT dose length product were recorded, and the effective dose was calculated to evaluate the radiation d

ose of patients in the two groups. Statistical methods: independent sample t test .
Results: There was no statistically significant difference in perfusion parameters in the region of interest between the two groups (P > 0.05). There was no significant difference in subjective score and objective evaluation of image quality between the two groups (P > 0.05). The CT dose index, CT dose length product and effective dose in group B were all decreased compared with those in group A.
Conclusions: low dose CT perfusion can be used in the examination of acute stroke. On the premise of not affecting craniocerebral perfusion parameters and image quality, the radiation dose can be significantly reduced by selecting the low-kv scanning mode.

PU-2495
基于颅内动脉瘤多模态数模特点探索瘤体破裂的血流动力学机制研究

张德川,杨华,方玉
重庆市中医院

目的：以 HCTA 为数据源，构建动脉瘤的血流动力学模型的，探寻血液在动脉瘤里流动的规律。
方法：以 HCTA 为数据源，采用有限元方法、计算流体力学等计算和分析手段，构建同类型脑动脉瘤有限元模型，计算动脉瘤内相关血流动力学参数，主要研究方法包括：
基于 HCT 数据对脑动脉瘤血流动力学模型的建立采集病人高分辨率脑部 CTA 影像数据（包括术前诊断、术后三天以及术后一年），利用逆向工程软件 Geomagic Studio 对脑动脉瘤进行三维几何模型重建，并对三维模型进行几何拓扑优化。利用超声测定动脉瘤患者颈内动脉（4-5 颈椎水平处）三个心动周期的血液流速波形作为有限元计算的入口边界条件。使用网格划分软件 Hypermesh 对血管三维模型进行网格划分得到最终的有限元计算模型，导入至有限元软件 Ansys 中进行计算分析，获得完整心动周期内的血流动力学参数以及其变化规律。
双向流固耦合 FSI 计算利用 CFX 基于有限体积法的思想求解流体区域，Ansys 求解结构部分，具体实现过程如下：
利用参数化建模软件对脑动脉瘤三维模型 Proe 进行处理生成带壁厚血管三维几何模型。
Ansys 导入血管模型后做填充处理，生成流体域，对流体域划分四面体非结构性网格，边界做分层处理，对结构部分划分六面体结构性网格。
定义入口流速、出口压力、流固耦合面等边界条件，定义流体和结构部分材料属性。
采用时步迭代法进行耦合计算，根据血压脉动参数设置时间步长。通过流固耦合面传递流场压力、流速和界面位移，循环迭代直至满足收敛条件。
结果：以 HCTA 数据源，构建的动脉瘤的血流动力学模型很好的表达了血液在动脉瘤里的运动特性。
结论：可以将 HCTA 数据作为研究动脉瘤的血流动力学模型的数据源。

PU-2496
头颅 CTA 检查技术的临床应用价值

唐小祥

陆军军医大学附属新桥医院放射科

目的：探讨 GE 64 排 CT 在头颅 CTA 检查技术中的临床应用价值。**方法**：仪器：GE 64 排螺旋 CT。资料：我院行头颅 CTA 检查的 50 例患者，其中男性 25 例，女性 25 例，年龄在 30 岁—76 岁之间，所有患者均有不同程度的头痛、头晕、呕吐，部分患者有脑出血、脑梗死等症状。扫描参数：管电压：120KV，管电流 240mAs，螺距 1mm 层厚 0.625mm 对比剂：60-70ml，注射速度 4.5ml/s。被检者仰卧于扫描床，头部正中矢状面垂直于扫描床平面并与床面长轴的中线重合，以听眦线为扫描基线进行螺旋扫描。后处理：多平面重组（MPR）、容积重组（VR）、表面遮盖技术（SSD）、最大密度投影（MIP）。**结果**：颅内动脉狭窄闭塞 33 例，可见斑块形成；大脑前动脉畸形 3 例；动脉瘤 3 例，；烟雾病 1 例;未见明显异常 10 例。**结论**：CTA 在显示血管病变以及疾病诊断方面起到越来越重要的作用，由于其创伤性小，价格低，图像直观清晰、可靠，在较大血管疾病的检查与诊断方面有取代 DSA 血管造影的趋势。

PU-2497

低剂量颅脑 CT 灌注在急性脑卒中的应用

田甜,何其舟
西南医科大学附属中医院

目的：探讨低剂量颅脑 CT 灌注在急性脑卒中的应用
方法：选取我院拟行颅脑 CT 灌注（CTP）的疑似急性脑卒中患者，随机分为 A、B 两组，使用西门子第二代双源 CT 进行扫描，A 组(管电压 80 kV，管电流为 120 mAs），B 组(管电压 100 kV，管电流为 120 mAs）。分别从每组中筛选出 20 例经 CT 检查无颅脑疾病患者的图像数据进行研究，每组 20 例。在 A、B 两组患者头部的额叶室旁、尾状核、壳、丘脑、颞枕叶选取感兴趣区进行测量，分别测量出感兴趣区内脑血流量值(CBF)、脑血容量值(CBV)、平均通过时间值(MTT) ,请 2 位高年资诊断医生对两组患者的图像进行主观评分（五分法）。记录 CT 剂量指数、CT 剂量长度乘积，计算出有效剂量来评价两组患者的辐射剂量。统计学方法采用独立样本 t 检验。
结果：两组患者感兴趣区内的灌注参数值差异无统计学意义（P＞ 0.05）。两组患者图像质量主观评分和客观评价差异均无统计学意义（P＞ 0.05）。B 组患者的 CT 剂量指数、CT 剂量长度乘积、有效剂量较 A 组患者均有所降低。
结论：低剂量颅脑 CT 灌注可运用于急性脑卒中的检查；在不影响颅脑灌注参数值和图像质量的前提下，选择低 KV 扫描方式可以使辐射剂量明显降低。

PU-2498

头颈部恶性间叶源性肿瘤的 MRI 表现

于保婷,丁军,刘硕,管玉瑶,李佟,郑雪微
吉林大学中日联谊医院新民院区

目的 探讨头颈部恶性间叶源性肿瘤的 MRI 表现，提高对该类疾病的认识及诊断准确性。**方法** 回顾性分析吉林大学中日联谊医院 2018 年 5 月至 2019 年 5 月 5 例经病理证实为恶性间叶源性肿瘤的临床及影像资料（包括左颧骨低级别中心型骨肉瘤 1 例、颌骨高分化软骨肉瘤 2 例、颊部高分化弥漫大 B 细胞瘤 1 例、舌黏液相关边缘区 B 细胞淋巴瘤 1 例）。所有患者均进行 MRI 平扫、DWI 及增强检查，根据肿瘤的形态、边界及邻近组织关系、实性或囊性、信号特点、ADC 值等方面进行影像分析。**结果** （1）形态、边界：5 例病灶均形态不规整，边界清晰；（2）临近组织关系：5 例病灶中骨肉瘤及软骨肉瘤均出现骨质破坏，临近软组织出现水肿信号，2 例淋巴瘤均与临近组织分界清

晰；（3）成分：5 例病灶中骨肉瘤及软骨肉瘤均成分复杂，淋巴瘤成分均匀单一；（4）信号特点及强化方式：5 例病灶中骨肉瘤及软骨肉瘤信号复杂，可见囊变、坏死及点状双低信号，实性成分呈等信号，增强后呈明显不均匀强化。2 例淋巴瘤均呈稍高信号，增强后呈轻度均匀强化（5）ADC 值：本文中淋巴瘤 ADC 值均呈明显低值（<0.5），且低于以往研究的头颈部恶性肿瘤 ADC 值。**结论** 头颈部恶性间叶源性肿瘤的 MRI 表现具有一定的特点，尤其是肉瘤对骨质的破坏改变、成分特点及淋巴瘤的低 ADC 值颇为有特征性，可有助于提高诊断和鉴别诊断水平。

PU-2499
磁共振纹理分析在头颈部良恶性肿瘤中的鉴别诊断价值

王雪[1],樊文萍[1],王波涛[1],刘梦琦[1],陈志晔[1,2]
1.解放军总医院海南医院
2.解放军总医院第一医学中心

目的 评估磁共振纹理特征分析在头颈部良恶性肿瘤鉴别诊断中的价值。**方法** 纳入解放军总医院海南医院 30 例头颈部良性肿瘤及 30 例头颈部恶性肿瘤患者，对术前磁共振 T2WI 图像进行灰度共生矩阵纹理分析（纹理参数包括角二阶矩、对比度自相关、逆差距及熵），选取病变实性部位采用感兴趣法进行测量。统计方法采用独立样本 t 检验、Mann-Whitney U 检验、二元 Logistic regression 分析及受试者工作特征曲线（receiver operating characteristic curve，ROC）分析。**结果** 恶性组对比度（18.839±12.291）显著低于良性（40.007±32.238）（T = 3.36，P = 0.002），而恶性组自相关及逆差距[0.017(0.006,0.091)及 0.292±0.101]显著高于良性组[0.008(0.001,0.132)及 0.222±0.096]（Z = 2.706，P = 0.007; T = 2.752, P = 0.008）。两组之间角二阶矩及熵无显著差异（Z = 1.587，P = 0.113 及 T = 1.376, P = 0.176）。对比度、自相关及逆差距的 ROC 曲线下面积分别为 0.722、0.703 及 0.711，其二元 Logistic regression 方程为 Y=-0.05076*Contrast+-31.3318*Correlation+5.4226*IDM+0.5444 (截断值为 0.5)，判断为良性肿瘤的正确率为 50.00%，判断为良性肿瘤的正确率为 73.33%，总正确率为 61.67%，其阳性预测值的 ROC 曲线下面积为 0.758。**结论** 磁共振 T2WI 纹理特征参数对比度、自相关及逆差距可以用来鉴别头颈部良恶性肿瘤。

PU-2500
颈部韧带样纤维瘤的 CT 及 MRI 特征

张德生,何剑,刘东
湖州市中心医院

【摘要】目的 探讨颈部韧带样纤维的 CT 及 MRI 表现特征。方法 回顾性分析经手术病理证实的 10 例颈部韧带样纤维瘤的 CT 及 MRI 表现。其中行 CT 检查 7 例，MRI 检查 3 例，10 例均增强扫描。结果 7 例 CT 平扫为软组织密度肿块，密度等于或略低于周围肌肉，病灶密度较均匀，未见坏死及钙化，增强后呈明显均匀或不均匀强化，病灶与邻近肌肉分界不清，其中 4 例沿解剖间隙浸润性生长，包绕侵犯周围血管神经，2 例累及腮腺，1 例可见邻近骨质受侵犯；3 例 MRI 平扫为边界不清软组织肿块，与周围肌肉信号相比，T2WI 呈不均匀高信号，T1WI 呈等或略低信号，病灶内可见条带状长 T1 短 T2 信号影，增强后病灶明显强化，条带状长 T1 短 T2 信号区未见强化。结论 颈部韧带样纤维瘤的 CT、MRI 表现有一定的影像学特征，具有较高的诊断价值。

PU-2501
不同流率推注生理盐水对头颈部 CTA 图像质量的影响

张雪
西南医科大学附属中医医院

目的：探讨不同流率推注生理盐水对头颈部 CTA 图像质量的影响。
方法：选取我院 于 2018 年 1 月至 2018 年 12 月间收治的 50 例行头颈部 CTA 患者按照随机数字法分为 2 组，两组患者均以流率 4.5ml /s 右肘前静脉注入 30ml 碘帕醇 350mgI/ml 和按对比剂和生理盐水 50%混合的混合液 30ML，对照组 25 例以流率 3.5ml /s 注射 45ml 生理盐水，研究组 25 例以流 率 5ml /s 注射 45 ml 生理盐水。比较两组患者颈动脉分叉区动脉血管及主动脉弓血管平均 CT 值、对比噪声比(CNR) 、信噪比(SNR) 、主观图像质量以及不良反应发生情况。
结果：两组患者颈动脉分叉区动脉血管及主动脉 弓血管平均 CT 值、SNR 比较无显著差异(P ＞ 0. 05) ，研究组颈动脉分叉区动脉血管及主动脉弓血管 CNR 显著高 于对照组(P ＜ 0. 05) 。两组噪声、管腔边缘锐利度比较无显著性差异(P ＞ 0. 05) ，研究组图像清晰度、血管和周围结构对比度评分高于对照组(P ＜ 0. 05) 。两组不良反应发生率比较无显著性差异(P ＞ 0. 05) 。
结论：以流率 5ml /s 追加注射生理盐水相较于流率 3.5ml /s 追加而言，CTA 图像质量更好且安全性好。

PU-2502
能谱 CT 模式扫描降低 HCTA 辐射剂量的研究

张振华
联勤保障部队第 989 医院

目的比较宝石能谱 CT 及 64 排 VCT 头颈部 CT 血管造影检查的辐射剂量，探讨能谱模式扫描在减低辐射剂量方面的应用价值。
方法 60 名受检者随机分成实验组（30 例）和对照组（30 例），实验组（A 组）用宝石 CT 能谱模式扫描，对照组（B 组）用 64 排 VCT 常规扫描，比较两组患者检查后的辐射剂量及图像质量。
结果 实验组较对照组辐射剂量明显减低，差异有统计学意义（P<0.05）；图像质量上，实验组较对照组评分稍高，但差异无统计学意义（P=0.405）。
结论宝石 CT 能谱模式扫描能够在保证图像质量的同时，大幅减少受检者辐射剂量，对减低医源性辐射危害具有重要临床意义

PU-2503
胚胎发育不良性神经上皮肿瘤 1 例报告

韦茜
广西医科大学第一附属医院

目的：胚胎发育不良神经上皮肿瘤(dysembryoplastic neuroepithelial tumor, DNT)是一种罕见的良性脑肿瘤，根据 2016 版 WHO 中枢神经系统肿瘤分类将其归为 I 级神经元-混合神经元肿瘤[1]。典型的组织学特征是特征性的神经胶质及神经元成分。胚胎发育不良性神经上皮肿瘤 1 例报道并文献复习,学习并探讨颅内胚胎发育性神经上皮瘤的 MRI 影像表现。

方法：回顾性分析 1 例我院 2018 年 1 月收治的 DNT 患者的临床、MRI 和组织病理学特征。患儿，男性，10 岁，因行为异常 20 余天肢体，肢体抽搐 5 天于 2018 年 1 月 24 日入院。我院颅脑 MRI 平扫及增强示“右侧颞叶异常信号，胚胎发育不良行神经上皮肿瘤可能性大，未除外星形细胞瘤”。后于我院行“右侧颞叶肿瘤切除术”，术后病理示：诊断符合胚胎发育不良神经上皮肿瘤。WHO Ⅰ级。

结果及讨论：DNT 是一种罕见的神经细胞和胶质细胞混合性肿瘤，该肿瘤多见于儿童或青年，男性略多于女性,通常位于幕上,好发于额叶和颞叶，亦可发生于小脑和脑干，临床主要症状为持续性、顽固性癫痫，一般无颅内压增高症状。无明显神经系统阳性体征。在常规磁共振成像中，DNT 表现为界限清楚的囊性或多囊性病变，T1WI 表现为低信号，T2WI 表现为高信号，FLAIR 表现为高信号[2]，增强扫描多为无明显强化。有研究表示“三角征” 和瘤内分隔也是 DNT 较为典型的 MRI 特征。DNT 主要与神经节细胞胶质瘤、少突胶质细胞瘤、毛细胞型星形细胞瘤、血管母细胞瘤等鉴别。

结论：胚胎发育不良性神经上皮瘤（DNT）是一类少见的脑肿瘤，需与神经节细胞胶质瘤、少突胶质细胞瘤、毛细胞型星形细胞瘤等鉴别，结合临床和影像学表现，可以对 DNT 为临床提供合理的治疗方案，提高患者生存质量，避免不必要的放化疗。

锥形束 CT 图像质量的研究

王菲[1,2],谢晓艳[2],张祖燕[2],李刚[2]
1.上海市口腔病防治院
2.北京大学口腔医院

研究目的：通过主观评价和客观评估的方法研究不同成像参数下 CBCT 的图像质量，分析主观评价和客观评价间的关系。

材料与方法：用 3D Accuitomo 170 的 40 组成像参数（1-10mA，62-90kV）扫描颅骨体模，该体模由一副完整的人颅骨包埋于软组织等效材料中，所得的数据均由 dicom 格式导出并导入 Santa Dicom 软件中，请 5 位医师对图像中 8 个解剖标志的可见性进行独立评分，计算每组图像的平均分。4 周后，随机抽取其中 25 组图像进行再次评分。用同样的成像参数扫描 SEDENTEXCT IQ 图像质量体模，所得的数据由 dicom 格式导出并导入 ImageJ 软件中，计算图像的信噪比。对解剖标志可见性的评分与图像信噪比的关系进行统计分析。

结果：不同管电流、管电压，其他成像参数相同时，各解剖结构的可见性有显著性差异。在相同成像参数下，不同的解剖结构间的主观评分有显著性差异。随着信噪比的不断升高，解剖结构的可见性的变化趋势为首先升高，而后趋于稳定。解剖结构平均分的变点区间为[29.42，36.51]。对不同的解剖结构而言，其可见性趋于稳定的信噪比变点不同。

结论：改变 CBCT 的成像参数在一定程度上可以影响到解剖结构的可见性，不同的解剖结构主观评分对成像参数波动的敏感性不同。解剖结构的可见性随信噪比的升高而升高，直到最后趋于稳定达到最大值。

原发性腮腺恶性淋巴瘤的 CT 诊断

江明祥,邵国良
浙江省肿瘤医院

【摘要】目的 探讨原发性腮腺恶性淋巴瘤（PLP）的 CT 特点，以提高对该少见疾病的影像诊断水平。**方法** 回顾性分析 20 例经病理证实的 PLP 的 CT 资料。20 例 PLP 中女性 12 例，男性 8 例，中位年龄 58 岁(32～76 岁)。对肿瘤的大小、边界、数目、形态、密度、强化方式、周围侵犯、颈部淋巴结肿大等进行分析。**结果** 1）20 例 PLP 中单侧 17 例，双侧 3 例，共 30 个病灶，单发 13 例，双发 5 例，多发 2 例；2）病灶位于浅叶者 18 个，深叶者 9 个，跨深、浅叶 3 个。病灶最大径 *1.3cm～5.8cm*，平均（2.6±0.3）cm；病灶呈类圆形 7 个，椭圆形 17 个，不规则分叶状 6 个；边缘光整 25 个，边缘不光整 5 个，病灶边界清晰 27 个，边界不清 3 个；3）CT 平扫病灶呈低密度 11 个，等密度 19 个；所有病灶均呈实性，未见钙化及出血；肿瘤密度均匀 24 个，密度稍不均匀 6 个；CT 增强病灶呈轻度强化 18 个，中度强化 12 个。4 例伴有颈部淋巴结肿大。**结论** 边缘光整，密度均匀、少见钙化及坏死、乏血供的腮腺实性肿块，可以提示 PLP 的诊断，CT 检查有助于显示肿瘤的范围。

PU-2506
成人外伤性颈内动脉动脉瘤伴颈内动脉海绵窦瘘一例

林文俊
广西医科大学第一附属医院

目的：探讨成人外伤性颈内动脉动脉瘤伴颈内动脉海绵窦瘘的病因及影像诊断的特征。

方法：回顾性分析成人外伤性颈内动脉动脉瘤伴颈内动脉海绵窦瘘的 CTA 及 DSA 诊断，并进行文献复习。

结果：外伤性颅内动脉瘤(Traumatic intracranial aneurysms)是由于颅脑或颈部外伤后，从血管外突出或膨胀形成，外伤性颅内动脉瘤的发生率极低，占颅内动脉瘤总数的不到 1%。外伤性颈动脉海绵窦瘘(traumatic carotid cavernous sinus fistula)是指颈动脉及其分支与海绵窦之间不正常的动静脉交通，常为颅底骨折而致，在颅脑损伤中的发生率约为 2.5%。所以外伤性颅内动脉瘤合并颈内动脉海绵窦瘘的极为罕见。

案例描述：本病例报道一名 41 岁男性患者因“重型颅脑损伤术后，外院查出右侧颈内动脉海绵窦瘘”入院，患者行头颈 CTA 扫描表现为右侧颈内动脉海绵窦段正常结构消失，右鞍旁、鞍内及海绵窦区见不规则囊状、分叶状扩张，范围约 35.7×40.5mm，边缘不光整；主瘤体可见数条增粗血管与直窦相连，动脉期即可见直窦、两侧横窦及乙状窦显影。行 DSA 检查示，右侧颈内动脉虹吸段结构紊乱，动脉早期海绵窦显影其中见多个囊状血管影显示，鞍区见较多粗大、扭曲静脉，两侧横窦、乙状窦、直窦及右侧颈静脉显影。

结论：外伤性颈内动脉动脉瘤伴颈内动脉海绵窦瘘是颅脑外伤罕见的并发症，无论是闭合性头部损伤还是穿透性头部损伤都有可能发生，诊断以 DSA 为金标准，头颈 CTA 亦有重要的诊断价值。

PU-2507
光子 CT 双低扫描在颅内动脉瘤诊断中的应用

孙文悦
1.山东省立医院耳鼻喉医院山东省立医院西院(原:山东煤矿总医院)
2.山东省立医院
3.山东省医学影像学研究所

目的：探讨光子 CT 双低扫描在颅内动脉瘤诊断中的应用价值 方法：根据临床症状疑似颅内动脉瘤的患者或已经确诊为颅内动脉瘤患者 40 例行颅脑 CTA 检查。并且根据扫描方法不同将 80 例患者随机分为 A、B 两组。A 组采用 120kV、50ml 对比剂，注射速率为 5ml/s。B 组采用 80 kV、35ml 对比

剂，注射速率为 3.5ml/s。对两组进行主、客观图像质量评价。A、B 两组大脑中动脉 CT 值分别为 328±58HU、430±72 HU（P＜0.05），SNR 分别为 47±7、43±5（P＜0.05），CNR 分别为 40±8、38±7（P＜0.05）。B 组（双低组）大脑中动脉的平均 CT 值高于对照组，A 组的 SNR 及 CNR 高于 B 组（*P*<0.05），即差异有统计学意义 。甲组图像质量大于等于 3 分的 28 例，乙组 27 例。评分结果的差异无统计学意义（*P*>0.05）。两名医师图像质量评分具有较高的一致性 。两组有效辐射剂量（ED）分别为 0.55±0.4、0.28±0.1（P＜0.05）。B 组（双低组）有效辐射剂量较 A 组降低 49%。所有患者均行 DSA 检查；对照 DSA 结果，分析两组的诊断灵敏度、特异度及准确率。 结果：甲组发现动脉瘤患者 11 例，共 15 个动脉瘤，与 DSA 结果一致；乙组发现动脉瘤患者 9 例，共 12 个动脉瘤，DSA 结果为动脉瘤患者 9 例，共 13 个动脉瘤，CTA 漏检一直径约 1.7mm 动脉瘤。A 组灵敏度、特异度及准确率均为 100%；B 组灵敏度为 92.3%、特异度为 100%、准确率为 98.9%。 结论：综合主、客观图像质量评价，光子 CT 颅脑 CTA 双低扫描对颅内动脉瘤的诊断准确率高，具有较好的临床应用价值。

PU-2508

锥形束 CT 腮腺造影技术在慢性腮腺炎病情评估中的应用

孟杰
第九人民医院

材料和方法：通过对 30 例临床表现为腮腺反复肿胀的患者进行碘海醇腮腺造影结合大视野（14cm*16.5cm）锥形束 CT（Soredex Scanora 3D，Finland）扫描，对结果进行分析。利用 CBCT 定位及测量的优势，将患者按照造影结果表现分为两组。将导管异常扩张范围大于等于整个主导管的 2/3 或导管扩张大于 3mm 归为病重组，导管扩张小于 2/3 且导管扩张小于 3mm 为病轻组。对两组患者均进行每周一次共六周的腮腺导管灌注治疗（糜蛋白酶 4000u:50ml NS）并比较两组的疗效，以分析 CBCT 腮腺造影在慢性腮腺炎病情评估中的作用。

结果：CBCT 腮腺造影在慢性腮腺炎检查中，对导管病变的定位和测量较平片造影有明显优势。依据 CBCT 腮腺造影所作分组中，腮腺炎病轻组患者在对糜蛋白酶腮腺灌注治疗疗效反应上明显优于病重组。

结论：锥形束 CT 腮腺造影技术在对慢性阻塞性腮腺炎患者病情评估及疗效预测中有一定参考价值。

PU-2509

面神经 MRI 增强扫描技术的临床应用

贾荣荣,吕海蓉,白维娴,冀笑笑
西安市第三医院

摘要 目的：探讨 Bell 面瘫及正常面神经各节段强化方式及面神经炎的诊断方法。**方法：**回顾性分析 2016 年 1 月至 2019 年 2 月我院收治的面神经炎患者及正常对照者各 50 例，所有患者均进行面神经增强扫描，分别统计两组患者面神经强化的区域及分布特点，并对其强化程度进行 0-3 级分级，采用秩和检验比较 Bell 面瘫患者与正常对照组间面神经强化区域及强化程度之间的差异，以及 Bell 面瘫患者健侧与患侧面神经面神经强化区域及强化程度之间的差异。**结果：**47 例 Bell 面瘫患者及 48 例正常对照者均获得清晰的面神经增强扫描图像，面瘫组双侧面神经呈单节段或多节

段受累的不对称性异常强化，而正常对照组双侧面神经粗细无明显差异且呈节段性对称性中等程度强化；正常对照组面神经内听道底段、迷路段、膝状神经节段、鼓室段及乳突段与面瘫组各受累节段患侧间强化程度以及面瘫组患侧与健侧间差异均有统计学意义（p<0.05）。**结论：**Bell 面瘫患者患侧较对侧均有不同程度异常强化，而正常面神经均为双侧对称性强化，根据不对称性异常强化可用于诊断面神经炎。

PU-2510
颅内动脉瘤伴血栓致急性脑梗死后有效溶栓治疗一例并文献复习

胡笑含,王春美
吉林大学第一医院

颅内动脉瘤合并瘤体内血栓引起局部脑梗死国内外报道较少，笔者将在吉林大学第一医院神经内科行静脉溶栓治疗，后经头部磁共振黑血成像和颅脑 CTA 证实为颅内动脉瘤合并瘤体内血栓致急性脑梗死的 1 例患者影像资料予以报道，（据我们所知，这是国内第一例），证实存在动脉瘤情况下亦可成功溶栓治疗脑梗死，揭示头部磁共振黑血成像联合颅脑 CTA 可能作为评估动脉瘤内血栓溶栓的安全性，从而显著改善预后。脑梗死发病 4.5 h 内有效静脉应用重组组织型纤溶酶原激活物(recombinant tissue plasminogen activator，rt—PA)溶栓治疗是最主要、最有效的治疗方式。旨在探讨合并颅内动脉瘤的急性脑梗死患者行静脉溶栓治疗的安全性。

PU-2511
颈动脉鞘区神经鞘瘤 25 例临床表现和影像特征

张钰
福建医科大学附属第一医院

目的　研究颈动脉鞘区神经鞘瘤（Schwannoma）的临床表现和磁共振成像（Magnetic Resonance Imaging，MRI）特征。 方法 对例颈动脉鞘区神经鞘瘤患者的临床和 MRI 资料进行回顾性分析。结果 多呈慢性起病，临床上以颈部肿块（16 例）和吞咽困难（8 例）为主要表现，反复头晕（1 例）。MRI 示 6 例 T1WI 呈稍低信号，17 例 T1WI 呈等信号，2 例 T1WI 呈稍高信号，5 例 T2WI 呈稍高信号，20 例 T2WI 呈高信号。静脉注射对比剂 MRI 增强检查 19 例，其中 14 例明显不均匀或均匀强化。结论 颈脉鞘区神经鞘的 MRI 表现较具有特征性，结合临床资料可以做出较明确诊断。

PU-2512
头颈 CTA 预测试改良技术联合低剂量扫描方法的应用研究

莫夏萍
广西中医药大学第一附属医院

目的 探讨改良后低剂量预测试技术联合头颈部 CTA 低剂量扫描方法的应用效果。**方法** 将同时拟行头颈部 CTA 及 DSA 检查的 150 例患者随机均分三组；确定扫描延迟时间（DT）：A 组（传统小剂量预测试技术）： 120kV， 60mA， 5mm，20ml 碘佛醇（320mgI/ml），B、C 组（小剂量预测试改良技术）： 80kV， 20mA，1.25mm，按患者体重 1ml/kg 的 10%计算对比剂用量；正式扫描：A、B 组（常规扫描）： 120kV， 500mA，C 组（低剂量扫描）： 80kV 联合自动管电流调节技术（NI=10，mA=100-300），50% ASIR。记录三组平均 DT、人均碘用量（I）、人均辐射剂量长度乘积（DLP）

及有效剂量（ED），测量、计算三组最终原始图像靶血管平均 CT 值(AA $_{CTValue}$，M1$_{CTValu}$)、噪声（N）、信噪比（SNR）、对比噪声比（CNR），对每组患者头颈部动脉显示情况进行评分，同时各组随机取等数量存在脑血管中度及中度以上狭窄的患者，以 DSA 检查结果为标准，对二级侧枝循环的 CTA 成像情况进行评分。以上三组间各值进行统计学分析，P<0.05 认为差异具有统计学意义。**结果** B、C 组预测的 DT 较 A 组的平均缩短约 0.4s，C 组的靶血管平均 CT 值、N 均高于 A、B 两组，但三组的 DT、图像质量的客观参数（平均 CT 值、N、SNR、CNR）及主观评分（动脉显示情况、狭窄后二级侧枝循环成像情况）均无统计学差异（P ＞0.05），三组的图像质量评分均不低于 3 分；C 组的 DLP、ED 均低于 A、B 组的 DLP、ED（P ＜0.05），平均 ED 分别约为 A、B 组的 24.07%、25.70%；B、C 组的 I 均低于 A 组的 I（P ＜0.05），分别约为 A 组的 82.33%、81.45%（P ＜0.05）。**结论** 预测试改良技术联合头颈部 CTA 低剂量扫描方法是可行的，在保证成像质量的同时，能有效低辐射剂量和对比剂用量。

PU-2513
3.0T 高场磁共振 3D-T1W-VISTA-SPAIR 序列在排出颅内血管病变的应用价值

高明,邬小平,宁文锋,刘红生,马鸣岳,杨想春
西安市中心医院

目的：探讨利用飞利浦 3.0T 高场磁共振 3D-T1W-VISTA-SPAIR 序列在强化中对颅内动脉血管病变的诊断价值，早期诊断血管狭窄病变，为患者尽早治疗提供影像学依据。
方法：选取本院中老年头晕体检患者 20 例，CT、MR 平扫未见明显异常，飞利浦 3.0T 磁共振 32 通道线圈，颅脑普通强化序列扫描未见明显异常后，加扫 3D-T1W-VISTA-SPAIR 序列;参数 TR:425、TE:20、层厚 0.7mm、间隔-0.35mm、NSA:1、Voxel：0.6X0.6X0.7;并对所得图多平面重组（MPR）等后处理技术，重建有变狭窄的血管横截面观察。
结果：普通强化未见明显异常后，加扫 3D-T1W-VISTA-SPAIR 序列 5 例患者一侧大脑中动脉变狭窄（考虑活动性斑块），3 例患者基底动脉变狭窄。
结论：利用 3.0T 高场磁共振 3D-T1W-VISTA-SPAIR 序列加扫在普通强化序列筛查排除血管性病变，能清晰显示颅内血管病狭窄程度及病变，为有病变的患者提早干预治疗提供影像学依据。

PU-2514
双低联合迭代重建技术在全脑 CT 灌注成像中的可行性应用

余飞
西南医科大学附属中医医院

目的：探讨低浓度对比剂、低管电流联合迭代重建技术在急性脑梗死患者全脑灌注成像 CTP 中的可行性应用。方法：选取 2019 年 3 月－2019 年 6 月在我院行全脑 CTP 检查患者 60 例，随机分为 A、B 两组， A 组 30 例管电压 80Kv，对比剂为碘普罗胺（370mgI/mL），滤波反投影重建法（FBP）重建；B 组 30 例管电压 80ｋＶ，对比剂为碘克沙醇（320mgI/mL），迭代重建算法 SAFIRE 3 重建。测量并计算 A、B 两组的大脑中动脉 CT 值、信噪比（SNR）、对比噪声比（CNR）、剂量长度乘积（DLP）、有效辐射剂量（ED）及碘摄入量，并对两组间上述指
标进行统计学分析； 2 名医师对两组图像质量评价的一致性采用 kappa 分析；两组间图像质量主观评价差异采用 x^2检验。结果：A、B 两组间的 CT 值、SNR、CNR、CTP 及 CTA 的图像主观质量评价差异均无统计学意义（P 均＞ 0 .05）；而 B 组（双低剂量组）的 ED、碘摄入量较 A 组低。结论：联

合低管电压和迭代重建技术时，使用低浓度对比剂（320mgI/mL）进行全脑 CTP 检查，在不降低图像质量的同时，还能减少 ED 及碘摄入量，从而降低对比剂肾病（CIN）的风险。

PU-2515
颈动脉易损斑块影像学评估与术后病理及随访及研究

刘小华
徐州医学院附属医院

目的评估颈动脉超声造影对易损斑块识别的准确性。方法本研究为前瞻性临床队列研究。选择 2016 年 11 月至 2019 年 1 月徐州医科大学附属医院 12 例颈动脉狭窄并接受颈动脉内膜剥脱手术的患者。术前常规行颈动脉斑块高分辨核磁成像判断斑块性质是否稳定，颅脑灌注检查观察颅内血管代偿情况，术后 CT 血管造影及颅脑 CT 进展随访观察管腔是否狭窄，是否有新发病灶出现。所有患者行颈动脉内膜剥脱术，完整剥除斑块组织，并行连续病理切片，通过 HE 染色及
分析斑块性质，包括完整性及斑块内是否存在出血/钙化或炎症细胞浸润等。通过病理最终明确斑块性质，并与术前颈动脉斑块的影像学检查结果作对照，
以判定术前颈动脉影像学检查对于易损斑块识别的准确率。结果 12 例患者中，术前磁共振判定均为不稳定斑块，术后病理证实斑块标本中所有病例均可检查出不稳定成分，术后随访病例 CTA 血管无明显狭窄，颅脑 CT 平扫无新发病灶。
结论磁共振对颈动脉斑块稳定性评估的准确性较高，推荐作为颈动脉狭窄术前识别不稳定斑块的可靠检查，对于不稳定斑块及时行颈动脉内膜剥脱能有效预防脑卒中的发生。

DR 在颈椎病诊断中的应用价值

刘文超
安阳市第八人民医院

在医疗技术突飞猛进的年代，医疗设备的更新换代，CT、磁共振的应用，大大提高了医疗诊断技术水平，增加了诊断手段，但其费用是昂贵的。DR 直接数字化 X 线摄影其清晰的影像，廉价的收费，已成为临床医生和患者的需求，通过整理，收集本科近 6 年 206 例颈椎病的 X 线诊断及通过临床治疗情况，综合分析相关资料，论证 DR 直接数字化 X 线摄影在诊断颈椎病的价值。

PU-2517
颈部 3D CE-MRA 信号变化与血管狭窄相关性探讨

亓恒新,韩增泰
章丘区人民医院

目的：探讨。材料与方法：回顾性分析一周内先后行颈部 3D CE-MRA、颈部 DSA 检查的 72 只颈内动脉的影像资料，总结颈部 3D CE-MRA 血管信号强度变化与血管狭窄程度之间的关系。结果：轻、中、重度颈内动脉狭窄组中血管信号强度降低者分别为 1 只、9 只、3 只，占比分别为 4.8%、31%、23.1%。轻、中、重度颈内动脉狭窄组中血管信号缺失者分别为 0 只、12 只、10 只，占比分别为 0%、41.3%、76.9%。颈内动脉闭塞组 9 只，均表现为血管信号缺失，占 100%。结论：①绝大

部分轻度狭窄的颈内动脉信号强度无变化；②随着颈内动脉狭窄程度的增加，3D CE-MRA 血管信号强度降低、缺失的比例增加。

PU-2518

头颈部髓外浆细胞瘤的影像表现及鉴别诊断的再认识

刘顼,韩丹,李浚利
昆明医科大学第一附属医院

目的 分析头颈部髓外浆细胞瘤的 CT 表现，提高对该病的影像诊断及鉴别诊断的认识。
方法 对经病理证实的 10 例头颈部髓外浆细胞瘤的临床（包括病史、年龄、性别、体征、家族史、实验室检查、治疗过程、手术方式、复查时间等）及影像学资料进行回顾性分析。影像学观察包括病变发生部位、病灶最大径、边界（清楚/模糊）、密度（均匀/不均匀）、强化程度（均匀/不均匀，轻度强化/中度强化/明显强化）、肿块及周围迂曲小血管、周围组织、周围骨质情况及有无淋巴结肿大等。
结果 在 10 例病例中 3 例病灶位于左侧鼻腔，1 例位于鼻咽部，2 例位于喉部，2 例位于副鼻窦内，1 例位于右侧眼眶内，1 例位于左侧眼眶、鼻腔及上颌窦内。病灶最大径大于 3cm（8/10 例）、边界清晰（5/10）、密度均匀（8/10），密度不均匀，可见坏死（2/10）。均匀渐进性明显强化（6/9），不均匀渐进性明显强化（1/9），均匀明显强化（2/9）、肿块内及肿块周围可见迂曲小血管（5/10）、周围组织受侵犯（6/10），周围骨质可见侵蚀破坏（8/10）。10 例病例均未见病灶引流区淋巴结肿大。病灶主要表现为体积较大的软组织肿块（最大径多大于 3cm），边界清晰亦可呈浸润性表现；密度均匀，少见坏死。增强扫描多呈均匀强化，强化程度多较明显（渐进性明显强化或早期明显强化），肿块内及肿块周围可见迂曲扩张的小血管影。肿瘤少见远处扩散，但可出现局部侵袭性，对临近组织的侵犯及骨质破坏。
结论 头颈部髓外浆细胞瘤的 CT 表现具有一定特点，但诊断需依靠病理。CT 检查可明确病变范围、周围组织侵犯及骨质破坏情况。

PU-2519

Spinal cord infarction presenting as Brown-Séquard syndrome result from spontaneous vertebral artery dissection

Yangyang Meng,Hongwei Zhou,Le Dou
The first hospital of JiLin University

Objective To study the imaging characteristics of vertebral artery dissection result in spinal cord infarction(SCI) presenting as Brown-Séquard syndrome.
Method Retrospectively analysis of the clinical data and imaging findings of a recent case of vertebral artery dissection in our hospital.
Result An otherwise healthy 40-year-old man presented with acute right-sided body weakness. 6 days before he experienced posterior neck pain witnout obvious inducement, neurologic examination revealed a right Brown-Séquard syndrome. Head Magnetic resonance imaging(MRI) showed normal, Further cervical spine MRI showed right side of SCI at the level of C1-C3, Three-dimensional High-resolusion MRI(3D HR-MRI) T1-VISTA

scan showed evidence of right VAD. The patient was significantly releaved in symtoms and imaging findings after therapy with anticoagulation(AC) and antiplatelet(AP) 6 months.

Conclusions we reported the case of a middle-aged patient without obvious risk factors for atherosclerosis, the possibility of VAD should be considered.Early correct diagnosis and active therapy are crucial to the prognosis.

PU-2520

大脑间变性星形细胞瘤的 CT 及 MRI 表现

张露,胡必富,江广斌,苏大军
随州市中心医院

目的：探讨脑间变性星形细胞瘤的 CT 及 MRI 表现，为临床诊治提供依据。**方法**：对颅脑占位性病变的患者实施 CT、MRI 平扫及增强，选择术后病理证实的间变性星形细胞瘤患者 35 例作为研究对象。结果：CT:病灶呈低、等或混杂密度影，邻近脑白质呈指样改变，水肿明显，边界不清晰，多侵入同侧半卵圆中心，邻近侧脑室受压，中线结构向对侧移位，增强呈不均匀强化；MRI:T1WI FLAIR 以低信号为主的混杂信号，其内可见更低及高信号，代表坏死或出血，T_2WI 呈不均匀高信号，周围水肿表现为 T_2WI FLAIR 低信号，肿瘤和水肿之间可见环状低信号，代表胶质增生，增强：病灶呈斑片状、线条状或结节状强化，坏死或出血区无强化，DWI 病灶呈不均匀高信号，CHO 峰升高，NAA 峰降低，部分可见 LIP 峰，CHO/NAA 比值增大，最佳截断值为 3；术后病理表现为间变性星形细胞肿瘤，内含部分神经胶质纤维，病灶呈浸润性生长，可见片状坏死和出血，血管形成不良，血脑屏障不完整。**结论**：间变性星形细胞瘤是颅内最常见的恶性胶质瘤之一，CT 和 MRI 是首要的检查方法，MRI 增强、 DWI、MRS 等成像技术能为定性诊断提供较大的帮助。并能提供手术定位及较为精准的诊断，关于治疗的问题，术后进行放化疗综合治疗已成为其治疗的标准模式，术后调强放疗同期联合替莫唑胺化疗方法治疗，可以显著提高患者的总生存率。一般认为，由间变性胶质瘤进展到胶质母细胞瘤通常为 1～2 年，因此，尽早确诊，尽早手术格外重要。

PU-2521

脑室内中枢神经细胞瘤的 CT 及 MRI 影像表现

徐亚利
上海市第十人民医院

[摘要]目的:分析中枢神经细胞瘤的 CT 及 MRI 影像学特点，探讨其特征性影像学表现，以进一步提高对该病的认识。方法:回顾性分析 14 例经手术病理证实的中枢神经细胞瘤。男性 8 例，女性 6 例，年龄 21-65 岁，平均年龄（30.3±12.0）岁。14 例均行 MRI 检查，5 例同时行 CT 检查。结果:14 例中枢神经细胞瘤中 10 例位于侧脑室近孟氏孔处，4 例位于其它脑脊液播散部位，包括三脑室、四脑室等；肿瘤平均直径（5.79±1.79）cm。CT 图像上肿瘤多表现为混杂密度病灶，2 例肿瘤表现为完全实性，3 例均可见钙化及囊变成分。MRI 图像上肿瘤多表现为不均匀信号病灶，T1WI 多呈等、低信号，T2WI 呈混杂高信号，囊性部分表现为明显高信号；血管流空呈条形低信号影；12 例可见肥皂泡样表现及血管流空影，8 例均可见针状体连接肿瘤实性部分与波浪形侧脑室壁；增强 MRI 肿瘤多呈不均匀强化。结论:中枢神经细胞瘤在 CT 及 MRI 上有一定的特征性，根据其特征性的影像学表现，尤其是针状体及波浪形侧脑室壁的特点，有助于中枢神经细胞瘤的准确诊断。

PU-2522

少见栓子脑栓塞的影像特点分析

杜思霖
重庆医科大学附属第一医院

目的 分析研究少见脑栓塞的 CT、MRI 特点，提高临床医师对少见脑栓塞影像表现的认识。**方法** 回顾性分析 2016 年 1 月-2019 年 6 月于我院住院诊断为少见脑栓塞患者的一般资料，重点分析患者的 CT、MRI 特点。**结果** 共收集到少见脑栓塞患者 4 例，男、女各 2 例，年龄 30-74 岁。其中脂肪栓塞 2 例，钙化栓子栓塞 1 例，感染性心内膜炎瓣膜赘生物栓塞 1 例。收集到 CT、CTA 及 MRI 图像各 2 组，MRI 分别包括 TIWI、T2WI、FLAIR、DWI 及增强 T1WI。**结论** 脂肪栓塞 DWI 显示为皮质下白质多发点状、斑片状高信号，呈“星野征”，严重者 CT 可显示脑动脉内低密度脂肪栓子；钙化栓子栓塞 CT 平扫表现为大片低密度梗死区内的多发符合钙化 CT 值的点状高密度，呈“咸脆饼征”；感染性心内膜炎瓣膜赘生物栓塞 DWI 表现无特异性，符合一般心源性栓塞表现。

PU-2523

基于对比剂分段注射的颈髓双期 CTA 成像

杨华
重庆市中医院

目的：探讨对比剂分段注射颈髓双期 CTA 检查在颈髓血管中的应用价值。**方法**：对 30 例临床怀疑脊髓型颈椎病拟行头颈部 CTA 检查的患者进行对比剂分段注射颈髓双期 CTA 检查（A 组），先期团注流率为 4mL/s，后期以 2mL/s 的低流率持续注射，先期团注和后期低流率持续注射对比剂剂量的比率为 3:1，采用常规峰值（P1）期和延迟平衡（P2）期双期扫描，P2 期扫描时间为峰值期扫描结束后再延迟 5S。选取性别、年龄相匹配的临床怀疑脑缺血拟行头颈部 CTA 检查的 30 例患者作为对照（B 组），B 组对比剂一次性注射，注射流率为 4mL/s，采用常规 CTA 峰值期扫描。对 A、B 组图像的脊髓前动脉（ASA）及前根动脉（ARA）的显示情况进行评分，对比 P1 期、P2 期及 B 组图像 ASA 的 CT 值及其信噪比（SNR）、对比噪声比（CNR）值。**结果**：A 组 P2 期图像的主观评分高于 P1 期和 B 组，差异有统计学意义（P＜0.05），A 组 P1 期及 B 组 ASA 的显示率分别为 50.0%和 53.3%，A 组 P2 期 ASA 的显示率为 86.7%；P1 期及 P2 期共同的显示率可达 90%。P1 期有 22 例可见 ARA 显示，共计 48 段，P2 期和 B 组显示的例数和段数分别为有 27 例、106 段和 23 例、50 段，P2 期图像 ASA 及 ARA 的显示明显优于 P1 期和 A 组。三组脊髓前动脉 CT 值及其 SNR、 CNR 值差异有统计学意义（P＜0.05），P2 期图像优于 P1 期及 B 组图像。**结论**：对比剂分段注射颈髓双期 CTA 能显著提高 ASA 及 ARA 显影质量，可以作为具有复杂血管网器官的补充 CTA 成像方法。

PU-2524

颅内原发恶性黑色素瘤 1 例并文献复习

党娜,孔钰,程楠,董有文,王寻,高建英
济宁医学院附属医院

目的 提高对颅内原发恶性黑色素瘤的认识。 **方法** 报道一例颅内原发恶性黑色素瘤患者的诊治经过，并对该病影像学表现、诊断及治疗进行文献复习。**结果** 该患者术前行 MR 检查示右侧小脑半球见一类圆形异常信号影，T1WI 呈稍高信号，T2WI 呈等高信号，T2WI-FLAIR 病灶呈高信号，DWI 局部呈稍高信号，行右侧小脑半球肿瘤切除术，术后病理结合免疫组化符合恶性黑色素瘤，建议除外转移，术后全身 PET/CT 检查示右侧小脑半球占位切除术后改变，余未见明显代谢增高肿瘤性病变。**结论** 颅内原发恶性黑色素瘤发病率低，及时行 MR、全身 PET/CT 等影像检查利于早期诊治。

PU-2525

颈部异位性错构瘤性胸腺瘤一例

李晓燕
重庆医科大学附属永川医院

目的:报道 1 例罕见颈部异位性错构瘤性胸腺瘤并通过文献复习以提高对本病的认识。
方法：患者男，19 岁，因“发现右侧颈部包块 10+天”入院。专科查体：右侧颈部胸锁乳突肌前缘中部皮下扪及一大小约 5×6.3cm 的包块，边界清，质中，表面欠光滑，活动度可，与皮肤稍粘连，无压痛，包块无搏动感。彩超提示右侧锁骨上窝偏低回声团块，考虑炎性包块可能。应用增强 CT 检查显示右侧锁骨上窝胸锁乳突肌后方软组织密度肿块，边缘不规则，边界清晰，密度均匀，增强后病灶呈均匀持续强化，结合其病理特殊表现，对其 CT 表现进行评估。
结果：对该病例的 CT 表现进行评估，CT 示右侧锁骨上窝胸锁乳突肌后方软组织密度肿块，大小约 2.6x5.5cm，边缘不规则，边界清晰，密度均匀，平扫及增强动静脉期 CT 值分别值约 31HU、35HU、103HU，邻近右锁骨下静脉受压变窄。术后病理诊断：右侧颈部梭形细胞肿瘤，其中穿插少许脂肪组织及鳞状上皮，周围可见包膜样结构，符合异位性错构瘤性胸腺瘤。
结论：异位错构瘤性胸腺瘤（EHT）是一种罕见的良性肿瘤，含有梭形细胞、上皮巢和脂肪组织，但是这种肿瘤的起源尚不清楚。EHT 其临床及影像学的表现与颈部其他的良性肿瘤存在一些共性。当 CT 显示下颈部皮下的肿瘤含有脂肪和软组织的混合成分时，应考虑到 EHT。但本例含有脂肪成分少，肿块在影像学上主要呈现较为均匀的软组织密度，这与其他肿瘤，如神经鞘瘤、淋巴结或异常脂肪瘤，在鉴别诊断上存在一定困难。目前在全世界对此文献报道较少，在临床上正确识别这种罕见肿瘤很重要。今后需要更多的 EHT 病例进行研究，才能正确进行影像诊断及探究其真正的组织学起源。

PU-2526

Mammary analogue secretory carcinoma: a case report

Wenjing Zhu
Shanghai Ninth People’s Hospital School of Medicine Shanghai Jiao Tong University, Shanghai 200011, China

Background: WHO 2017 defines mammary analogue secretory carcinoma (MASC) as ‘a generally low-grade salivary gland carcinoma characterized by morphological resemblance to mammary secretory carcinoma and ETV6-NTRK3 gene fusion’. The first description of MASC was reported by Skálová et al in 2010. Prior to its recognition, MASC was frequently diagnosed as acinic cell carcinoma and adenocarcinoma, not otherwise specified. The presence of an ETV6-NTRK3 gene fusion is a confirmatory diagnostic criterion for MASC.

Methods: Here we reported a case of a mammary analogue secretory carcinoma of the salivary gland recently identified in our institution, who was a 54 years old male patient presenting with a painless, slow-growing mass in the left parotid-region 3 months prior to examination.

Results: The contrast-enhanced computed tomography (CECT) study showed a partially enhancing and partially cystic mass located in the left superficial parotid gland, with mildly lobulated and well-defined boundary. The lesion size was about 1.2*1.1*1.7cm, with a CT value of 40HU before enhancement and 95HU after enhancement and 73HU in delayed CT scan. The lesion was completely resection by surgery and pathologically diagnosed as MACS which was confirmed by ETV6 translocation fluorescence in situ hybridization study. Immunohistochemical analysis: Vim (+), S100 (+), Mammaglobin (+), STAT5a (+), Dog1 (-), CK7 (+), Calp (-), Ki67 (5% +). Conclusions: MACS exhibit a lobulated growth pattern with fibrous septa and are composed of cystic structures with distinctive luminal secretion. CT can clearly show the solid and cystic components in the lesion, with significantly enhancement of the solid areas.

16 排螺旋 CT 在口腔齿科成像中的应用

单勤星
苏州大学附属第二医院

探讨：16 排螺旋 CT 口腔科全景成像在上下颌骨疾病中的诊断价值及相对于普通 16 排 X 线口腔全景片的优劣势。在 CT 后处理工作站上利用相关重组软件对所获得的数据进行重组重建，对病灶的检出率进行分析，并与普通 X 线口腔全景片进行比较。结果：通过比较，我们发现 16 排螺旋 CT 的口腔全景成像对病变的检出率明显高于普通 X 线口腔全景片。结论：16 排螺旋的口腔全景成像不仅能清晰显示上下颌骨的病变，而且可以对病变的形态、大小、内部结构及其与周围组织的结构关系进行深度剖析，从而对病灶进行定性，同时还提供了多种测量工具对病灶进行精确测量与定位，为临床提供最有价值的影像学依据，有助于临床医生对患者治疗方案的选择，手术计划的制定和实施，对患者以后预后的评估作出有力的依据。

能谱 CT 在颅内动脉瘤闭夹及栓塞术后的应用

李俊,温云
重庆三峡中心医院

目的：利用宝石能谱 CT 能谱成像技术（GSI）和金属伪影消除系统（MAR）减少金属伪影对图像的影响。
方法：收集 2018 年 1 月~2018 年 7 月我院收治的 28 列颅内动脉瘤闭夹及栓塞术后的患者，行宝石 CT 能谱（GSI）扫描。重建 105keV 单能量加 MAR 图像。采用容积再现（VR）、最大密度投影（MIP）及多平面重建技术（MPR）后处理。由两位高级医生对图像质量进行 3 级评价。①优：3

分，颅内血管显示清晰，几乎无金属伪影干扰。②良：2 分，颅内血管显示清晰，少量金属伪影，不影响诊断。③差：1 分，金属伪影严重，闭夹周围血管显示不清。最后进行统计分析。
结果：28 列颅内动脉瘤闭夹及栓塞术后的患者，用宝石能谱（GSI）扫描后重建 105keV 单能量加 MAR 图像，均能得到较好的 CT 图像，能够满足诊断要求。
结论：宝石能谱 CT 特有的能谱成像技术和金属伪影消除系统，能有效的减少金属植入物的线束硬化伪影，为诊断医生及临床提供优质的图像，可为脑血管病的临床随访和疗效评估提供有效的诊断依据。

PU-2529

腮腺良恶性肿瘤影像解剖及诊断

徐占国
天津市第三中心医院

目的： 通过对腮腺解剖与常见肿瘤的影像特征分析，旨在合理应用影
像解剖与检查技术有助于提高常见腮腺肿瘤的诊疗水平，尤其识别血管与神经结构对指导制定手术方案具有重要的临床价值。
材料与方法：
1.解剖要点：面神经、腮腺导管、下颌后静脉与筋膜与脂肪间隙、颈外动脉与静脉血管、淋巴结。
2.病变侵犯范围判断位置，基于间隙脂肪推移判断肿瘤生长方向。
2.技术显示能力
2.1 平片显示骨骼变化与钙化征象
2.2CT 对血管病变的判断及诊断的主要方法:
2.3MRI 对导管与神经性肿瘤转移帮助非常大
2.4 导管造影对于腮腺导管病变诊断，定性及定位帮助大。
3.结果
3.1 诊断与判断：如肿瘤直接征象 、间接征象、周围累及病变范围等；
3.2 合理使用影像技术方法，实现诊断效益的最大化。
结论：识别正常腮腺解剖结构对良恶性肿瘤定位诊断十分重要，观察血管神经，淋巴结侵犯，有助于良恶性肿瘤定性及肿瘤分期，识别影像解剖血管与神经结构，为制定手术方案提供临床指导。

PU-2530

腮腺上皮-肌上皮癌的 CT 表现

王海燕
广西医科大学第二附属医院

目的 分析腮腺上皮-肌上皮癌(epithelial-myoepithelial carcinoma, EMC)的 CT 表现。 **方法** 回顾性分析经病理证实的 9 例 EMC 患者的影像图像。**结果** 9 例病灶均为单侧单发肿块，肿瘤最大径线范围约 1.6～6.5 cm；5 例病灶位于腮腺浅叶，3 例位于深叶，1 例跨叶生长。8 例病灶边界清楚。4 例病灶体积较小（最大径线 1.0～2.9cm），均为类圆形实性肿块；5 例病灶体积较大(最大径线 3.0～6.5cm) ，均为分叶状肿块，其中 4 例呈囊实性肿块，1 例可见点状钙化；1 例囊性肿块，囊壁局部残存较厚。增强扫描：8 例实性或囊实性病灶中，5 例呈中度持续强化，3 例呈重度持续强化；1 例囊性肿块，囊壁中度持续强化。**结论** EMC CT 多表现为腮腺单侧单发、边界清晰、

类圆形或分叶状的肿块影，瘤体钙化少见，当最大径＞3cm 时，病灶呈分叶状且易发生囊变；增强扫描病灶实质区/囊壁呈中、重度持续强化，认识这些征象有助于做出提示性诊断。

PU-2531

头颈 CTA 主动脉达峰时间分析

唐兴星
西南医科大学附属中医医院

目的：探究头颈 CTA 主动脉达峰时间调整对比剂用量，达到用最小剂量的造影剂获得最佳的诊断图像。方法：回顾性分析我院 2018 年的头颈 CTA 未见异常的 300 例患者的扫描参数，采用独立样本 t 检验和单因素相关分析患者的性别、年龄、体重、身高、心率、收缩压、舒张压、体质指数、体重用量及扫描位置对达峰时间的影响。结果：患者头部与颈部达峰时间无明显差异，女性患者头颈 CTA 主动脉达峰时间快于男性患者（$p<0.05$）,头颈 CTA 主动脉达峰时间与患者的体重、身高、舒张压及体质指数呈正相关（$p<0.05$），与患者年龄、心率、收缩压及体重不相关（$p>0.05$）结论：CTA 检查结果未见异常时，患者的性别、体重、身高、舒张压及体质指数是影响患者主动脉达峰时间的主要因素，在对患者进行头颈 CTA 扫描时，可以根据以上适当调整对比剂用量及延长扫描时间，达到最小造影剂用量获得最佳的诊断图像效果。

PU-2532

基于腮腺腺淋巴瘤与腮腺混合瘤影像特征鉴别的 Logistic 回归分析

祁闻,赵红,王龙胜
安徽医科大学第二附属医院

目的 通过 Logistic 回归分析，评估腮腺腺淋巴瘤及腮腺混合瘤 MSCT 影像征象的鉴别诊断价值。

方法 选自安徽医科大学第二附属医院放射科 2016 年 1 月至 2017 年 12 月经手术病理检查或活检病理确诊腮腺腺淋巴瘤 19 例及腮腺混合瘤 32 例，通过观察病人的临床资料（性别、年龄及有无吸烟等）及 MSCT 影像征象（病灶的大小、平扫 CT 值、动脉期 CT 值，静脉期 CT 值，增强 CT 值增幅，有无“贴边血管征”及病灶内有无囊变），对其进行单因素及多因素分析，根据统计学结果建立 Logistic 回归模型。

结果 单因素分析显示病人的性别、年龄及有无吸烟史、病灶的增强 CT 值增幅、有无贴边血管征及病灶内有无囊变等征象对鉴别腮腺腺淋巴瘤及腮腺混合瘤差异是有统计学意义($P<0.05$)；多因素分析显示病灶增强 CT 值的增幅及有无贴边血管症状、病灶内有无囊变、有无吸烟史对诊断腮腺腺淋巴瘤有重要价值。

PU-2533

磁共振检查戊二酸血症Ⅰ型 1 例并文献分析

刘倩
中国科学院大学重庆医院（重庆市人民医院）

目的：本文通过病例回顾、磁共振表现及结合文献复习，以提高影像工作者对戊二酸血症 I 型（GA-1）的认识。
方法：回顾性分析我院的戊二酸血症 I 型 1 例并文献分析。
结果：患者 1 岁男童，以头围增大就诊。磁共振影像所见：双侧大脑半球（额、颞、顶、枕叶）及双侧基底节区多发对称性斑点状、斑条状长 T1、长 T2 信号影，T2flair 为等信号，DWI 序列为高信号，ADC 图为低信号，提示病灶弥散性受限；双侧额颞部颅脑间隙增宽，部分脑裂、脑池增宽，以双侧外侧裂池为显。磁共振提示：双侧大脑实质及脑沟、裂池改变符合临床“戊二酸血症 I 型”诊断。
结论:结合文献，GA-1 是一种罕见的常染色体隐性遗传病，多在婴幼儿期发病（孕期即可有表现），临床大部分以头围增大就诊，影像表现为早期双侧大脑外侧裂及颞极增宽，随着病情进展表现为双侧基底节区 T2 高信号，DWI 水分子扩散受限。治疗包括限制赖氨酸摄入及口服左旋肉碱和维生素 B2 维持代谢，出现急性脑病危象时对症处理避免神经系统并发症的发生。

PU-2534

磁共振检查 Mikulizc 病 1 例并文献分析

刘倩
中国科学院大学重庆医院（重庆市人民医院）

目的：本文通过病例回顾、磁共振表现及结合文献复习，以提高影像工作者及临床医师对 Mikulicz 病的认识，做到早诊断、早治疗，以免延误病情，避免因盲目手术切除涎腺，降低患者生存质量。
方法：回顾性分析我院经病理证实的 Mikulizc 病 1 例并文献分析。
结果：患者中年女性，以左侧泪窝占位就诊。磁共振影像所见：左侧泪窝区一囊实性占位，边界清楚，实性部分呈等 T1、稍长 T2 信号，周围环绕小圆形囊性灶，增强后实性成分明显强化；双侧腮腺信号不均，多发小囊性灶；磁共振提示：左侧泪窝占位及双侧腮腺改变，考虑自身免疫性相关疾病。术后病理证实为 Mikulizc 病。
结论:结合文献，Mikulizc 病多发于女性，血生化见 IgG4 升高，可有眼干、口干等临床表现，其病理学改变属于良性淋巴细胞增生性疾病，患者泪腺和涎腺组织内淋巴细胞弥漫性浸润，并有泪腺导管肌细胞增生，类似良性淋巴上皮损害的一种特殊肿瘤，腺体内有成团的成熟淋巴细胞，上皮细胞增生。影像表现分为结节型、弥漫浸润型，混合型，各型表现各异，诊断时需结合临床表现及实验室检查。鉴别诊断：舍格林综合征、Mikulizc 综合征等。治疗以糖皮质激素治疗为主。

PU-2535

颊脂垫疝病例报道 2 例

李娜,孙文刚,史河水
华中科技大学同济医学院附属协和医院

病例资料
患者 1，女，47 岁，因“涕中带血”来我院检查，鼻窦 CT 平扫 MPR 三维重组冠状位显示双侧眶下裂增宽，左侧约 10.4mm，右侧约 10.5mm，左侧颊脂垫经此疝入眶内（图 1-A 和 B）。

患者 2，女，56 岁，因“耳鸣”来我院耳鼻喉门诊，内耳 MR 平扫显示双侧颊脂垫经眶下裂疝入眼眶，局部呈结节状短 T1 长 T2 信号，与眶内脂肪信号一致，压脂呈低信号（图 1-C 和 D）。
讨论：祥见附件

PU-2536
CT 增强于腮腺潜在恶性肿瘤鉴别中的应用价值

赵茹,赵红
安徽医科大学第二附属医院

目的 分析 CT 增强检查在腮腺潜在恶性肿瘤的鉴别诊断中应用价值。 **方法** 回顾性分析本院经病理证实腮腺多行性腺瘤 72 例，腺淋巴瘤 31 例（36 个病灶），基底细胞腺瘤 15 例 CT 增强后的影像学征象，重点观察病灶内有无“囊变”，“囊变”分布方式，强化特征及强化方式等。 **结果** 腮腺多行性腺瘤增强后以持续上升强化为主，且病灶可见“囊变”中心分布为主及散在点片状及结节状明显强化区，腺淋巴瘤增强后以上升-下降式强化为主，病灶内可见“囊变”并以边缘分布为主，肿瘤内实性成分延迟扫描以均匀强化为主，基底细胞腺瘤病灶以明显强化为主，病灶内可见散在裂隙状“囊变”。 **结论** CT 增强检查可以为腮腺良性肿瘤的诊断及鉴别诊断提供诊断依据。

PU-2537
只能推注左肘静脉的患者在头颈部血管成像过程对比剂注射的最佳方案

游磊
西南医科大学附属中医医院

目的：前瞻性的研究对于只能推注左肘静脉的患者在头颈部血管成像过程中，对比剂注射的最佳方案，提高图像质量。方法：对于只能推注左肘静脉的患者头颈部血管成像 30 例，分为三组，A 组使用传统注射方案，60ml 对比剂，40ml 生理盐水，注射流速均为 4.5ml/s，B 组首先推注 40ml 对比剂，然后推注 20ml 对比剂与 20ml 生理盐水混合液，最后推注 30ml 生理盐水，注射流速均为 4.5ml/s，C 组首先推注 35ml 对比剂，然后推注 10ml 对比剂与 10ml 生理盐水混合液，最后推注 30ml 生理盐水，注射流速均为 4.5ml/s.ABC 三组均使用相同的碘海醇 370 对比剂，其余扫描方案相同。随后进行 VR,MIP,MRP 等重建方式是进行图像处理，重建出颅内血管影像，由两位副主任医师以上的医师进行双盲阅片，评分。结论：C 组对比剂注射方案静脉血管干扰最小，得出的图像质量最好。

PU-2538
磁共振 3D-SPACE 序列对颅颈动脉夹层的诊断价值

雷云
云南省第一人民医院

目的 探讨三维可变翻转角度快速自旋回波（3D-SPACE）序列对颅颈动脉夹层的诊断价值。**方法** 对 12 例（共纳入 60 个血管节段）经本院临床医生确诊为颅颈动脉夹层的患者同时行磁共振 3D-SPACE 与 CTA 成像，由 2 名影像科医生对夹层特征进行双盲分析，评价内容包括双腔征、壁内血肿、内膜瓣。以临床诊断结果作为参考标准，评价两种方法对颅颈动脉夹层的诊断效能，对比分析二者在识别夹层各特征方面的差异。**结果** 3D-SPACE 诊断颅颈动脉夹层与临床诊断一致性较高（Kappa 值=0.856），CTA 诊断结果与临床诊断一致性较差（Kappa 值=0.319），3D-SPACE 诊断正确率、敏感度、特异度均高于 CTA。两种方法对壁内血肿、内膜瓣的阳性检出率比较有统计学差异（P <0.05），对双腔征的阳性检出率比较无统计学差异（P >0.05）**结论** 3D-SPACE 诊断颅颈动脉夹层较 CTA 敏感，且与临床诊断一致性较高，是无创评估颅颈动脉夹层的可靠方法。

PU-2539

颅内结核抗结核治疗前后的磁共振评价

曾善美,文戈,刘恺,吴玉兰,陈梦林
南方医科大学南方医院

目的 评价颅内结核治疗前后的 MRI 动态变化。方法 回顾性分析 2012 年 1 月至 2019 年 3 月 20 例颅内结核患者[男 12 例、女 8 例；年龄 12-63 岁]治疗前后 MRI 资料。结果 根据 MRI 成像特征，治疗前 20 例颅内结核患者中，单纯脑膜炎型 3 例（15%）、单纯脑实质型 6 例（30%）和混合型 11 例（55%）。部分出现继发病变，如脑积水等。经 3 个月左右的抗结核治疗后，16 例病情好转，4 例进展，单纯脑膜炎型为 2 例（10%）;单纯脑实质型 5 例（25%）,其中 2 例术后改变；混合型 13 例（65%）。结论 MRI 可清楚显示颅内结核治疗前后情况，脑结核的治疗和预防需要进一步完善。

PU-2540

骶部巨大黏液乳头型室管膜瘤侵及骶骨 1 例

张鹏
十堰市太和医院

患者，男，49 岁，左侧骶尾部、臀部及大腿后侧困痛伴左下肢无力 2 年，近 2 个月症状加重并出现小便失禁，便秘等症状，严重影响生活。CT：骶 1-4 椎体骨质破坏，边缘呈“扇贝样”压迹，无硬化边，骶骨、椎管内软组织肿块；MRI：骶 1-4 椎体、椎管内软组织肿块，呈 T2WI 稍高信号，内见条状高、低信号，T1WI 等信号，椎间隙无明显受累，考虑脊索瘤。手术：骶 1-4 椎体饼状瘤体，大小约 10×5cm，呈灰白色、暗红色鱼肉样组织，包裹骶管内异常粗大神经。病理：送检肿物可见乳头状结构，部分为粘液，结合免疫组化结果，考虑黏液乳头型室管膜瘤（myxopapillary ependymomas，MPE）。

讨论 室管膜瘤是一种罕见的神经上皮肿瘤，起源于脑室、脊髓中央管表面及终丝的室管膜细胞，占颅内胶质瘤的 5%-6%，脊髓胶质瘤的 60%。MPE 是室管膜瘤的一种罕见亚型，好发于 30-40 岁青中年的脊髓圆锥、马尾及终丝区域的硬膜下，主要症状为腰骶部疼痛。MPE 虽为 WHO Ⅰ型低级别肿瘤，但可能复发或通过脑脊液在神经轴索内播散。MPE 起源于脊髓圆锥呈中心、膨胀性生长，起源于终丝区呈腊肠样、长条状生长，常推移或包裹马尾神经，可沿终丝进入神经孔向髓外和硬膜外生长，常伴有椎间孔扩大，体积较大时，可侵及脊椎，压迫周围骨质呈“扇贝样”破坏；MPE 呈 T1WI 等信号，T2WI 高信号，合并瘤内出血、囊变或粘液中富含蛋白质时，信号强度不均匀，富血供呈明显强化。骶部 MPE 累及骨质主要需与神经源性肿瘤、脊索瘤等鉴别。神经源性肿瘤沿神经生

长可致椎间孔扩大，累及骨质也呈“扇贝样”压迫性破坏，与 MPE 难于鉴别，当 T1WI 增强中强化的区域在 T2WI 图像上为高信号时，倾向 MPE，为等信号时，倾向神经鞘瘤。脊索瘤：多呈溶骨性骨质破坏，软组织肿块内可见斑点状钙化。MPE 的主要治疗手段为手术切除，肿瘤是否能完整切除是影响 MPE 的重要预后因素。

PU-2541

颌面骨青少年骨化性纤维瘤的 CT 表现

陈德华,曹代荣
福建医科大学附属第一医院

目的：分析青少年型骨化性纤维瘤的 CT 表现，提高对本病的诊断水平。
方法：收集本院 2008 年至 2019 年 6 月经病理证实为青少年型骨化性纤维瘤的病例 9 例，回顾性分析其 CT 表现，影像观察包括病灶的个数、位置、大小、有无膨胀、病灶的密度、边界、有无硬边、骨皮质是否完整、有无骨膜反应、邻近牙的牙根吸收情况等。
结果：本组病例男女比例为 4:5，年龄范围 7 岁-16 岁，平均年龄 10.8 岁，发生于下颌骨的 4 例，上颌骨 3 例，右侧筛窦 1 例，右眼眶外侧壁 1 例；所有病例均为单发病灶，病灶直径 2cm-11cm，平均直径 6.1cm；9 个病灶中有 8 个病灶局部骨质膨胀，局部骨皮质变薄，另 1 个病灶位于下颌骨，直径 2cm，局部骨质膨胀不明显；2 例病灶呈磨玻璃密度，7 例病灶为混杂密度，其内可见斑片状钙化或骨化影；所有病灶境界清楚，局部骨皮质连续，无明显骨膜反应及软组织肿块，病灶边缘可见完整或不整的硬化边；7 例颌骨病灶中有 6 例累及牙槽骨，邻近的牙根吸收不明显；4 例下颌骨病灶均位于下颌管上方，局部下颌管受压向下移位。9 例中有 2 例分别术后 0.5 年及 1.5 年复发。
结论：颌面骨青少年型骨化性纤维瘤在 CT 上有一定的特征，认识其 CT 表现有助于提高诊断的准确性。

PU-2542

Madelung 病的认识及诊治现状

吕健,朱西琪,宾精文,黄光仪
广西壮族自治区南溪山医院

前言　Madelung 病也被称为“多发对称性脂肪瘤病（MSL）”、“良性对称性脂肪瘤病（BSL）”、“脂肪颈”、“良性对称性脂肪过多症”、“肥颈综合征（fatlyneck syndrome）”和“Launois-Bensaude（劳诺瓦-本索德）综合征”（13：1～3），是一种罕见的成人发病代谢性疾病，发病年龄多于 30～60 岁发病率为 1:25000，M:F 为 15:1 至 30:1。国内外报道多以个案报道为主。以地中海居民多发，病因尚不清楚，最近的证据表明，MSL 是由棕色脂肪中线粒体的去甲肾上腺素能调节缺陷引起的。但 60%-90%的患者有慢性中重度酒精中毒，其特征是患者颈部、胸部、腹部或四肢有对称的、非包膜的脂肪沉积，严重眼影患者的美观及行为功能，部分颈部 Madelung 病患者甚至因为脂肪压迫导致呼吸困难、睡眠呼吸暂停、吞咽困难、发声困难和头部运动受限等。典型的影像学表现为颈部部、项部、枕部、肩部及背部或附壁、会阴部有弥漫性、对称性增厚的脂肪组织，病变不形成软组织肿块，无明显包膜，分界欠清，邻近肌肉萎缩、肌间隙增宽，可伴或不伴邻近气管受压。某些药物可缓解病情，目前的治疗方法主要有吸脂术和开放性手术，手术不以完全切除为目的，故复发率较高。停止饮酒对疾病的进一步发展没有影响。需要与肥胖症、 Cushing 综合征、淋巴瘤、唾液腺疾病、水囊瘤、甲状腺肿、气管裂囊肿、血管脂肪瘤、神经纤维瘤、多发

性脂肪瘤病等鉴别。正确全面把握该疾病的特征，可极大地减少漏诊及误诊率，最大限度地为患者提供的诊断及科学的治疗方案。本文根据现有最新国内外文献资料，从 Madelung 病的本质、病因、诊断方法、治疗等方面进行了论述。

“室管膜瘤”的临床表现、MRI 特点及鉴别诊断

刘晓华,马湘乔
北部战区空军医院

室管膜瘤是一种生长较缓慢的来源于室管膜细胞的胶质瘤，WHO 分类为Ⅱ～Ⅲ级。好发于儿童及青少年，少数可见于中老年人。室管膜瘤无固定的临床特点，症状取决于肿瘤所在位置。常出现癫痫和颅内压增高。脑室内的肿瘤定位体征少。

PU-2546

基于 ASIR 技术的低管电压 MDCT 头颈部动脉造影的可行性研究

谢鹏
湖北医药学院附属随州医院/湖北省随州市中心医院

目的：探讨基于 ASIR 技术的低管电压 MDCT 头颈部动脉造影的可行性，实现低辐射剂量 CT 扫描。
方法：将 92 例头颈部动脉 CT 造影患者随机分成 A、B 两组，每组 46 例，A 组患者采用 120kV 管电压，FBP 重建算法，B 组管电压为 80kV，40%ASIR 重建算法，管电流均采用 200mA，注射速率均为 5ml/s，并以相同速率追加生理盐水 30ml。对 120kV 组和 80kV 组 CT 图像的客观指标、主观图像质量评分、CT 剂量指数（CTDIvol）和剂量长度乘积（DLP）进行比较。
结果：与 A 组相比，B 组双侧颈内动脉、椎动脉、基底动脉及双侧大脑中动脉 CT 值分别升高 10.2%、9.8%、9.3%、9.1%，B 组双侧颈内动脉、椎动脉、基底动脉及双侧大脑中动脉噪声分别增加 23.8%、26.2%、24.7%、25.2%。80kV 组 SNR、 CNR 均有所下降。2 组双侧颈内动脉、椎动脉、基底动脉及双侧大脑中动脉 CT 值、噪声差异均有统计学意义。A 组图像质量评分为优、良、差的患者例数分别为 40、6、0，B 组图像质量评分为优、良、差的患者例数分别为 38、8、0，2 组间图像质量评分差异无统计学意义。A、B 两组的 CT 剂量指数（CTDIvol）分别为 10.13、3.20，CT 剂量长度乘积（DLP）分别为 1366.09、431.68。与 A 组比，B 组 CTDIvol、DLP 下降 68.4%。
结论：基于 40%ASIR 技术的 80kV 管电压头颈部动脉 CT 造影是可行的，能够在保证图像质量的前提下降低受检者的辐射剂量。

PU-2547

局灶性机化性肺炎的 CT 表现特点分析

马蕾
河南省人民医院

目的：分析局灶性机化性肺炎的 CT 影像学表现。方法：回顾性分析 10 例经手术或穿刺病理学证实的 FOP 的 CT 影像学表现，所有患者均行 64 排螺旋 CT 平扫及增强扫描检查，其中 7 例行双期增强。结果：5 例位于左肺，5 例位于右肺；4 例位于上肺，6 例位于下肺。5 例呈结节状，2 例呈肿块状，3 例呈楔形团片状。边界清楚者 6 例。毛刺 3 例，弓形凹陷征 1 例，彗星尾征 1 例。8 例病灶均呈不均匀强化，其中空泡 3 例，坏死 5 例。增强扫描后，5 例病变内见血管征，延迟强化者 4 例。合并肺门或纵膈肿大淋巴结者 3 例。结论：局灶性机化性肺炎的影像表现多种多样，缺乏特异性，需在高分辨 CT 薄层加多期增强扫描下，认真分析影像学特点并结合临床才能做出正确的诊断。

PU-2548

肺淋巴管肌瘤病的胸部影像学表现

张莉,李向东
中国人民解放军南部战区总医院

目的：探讨肺淋巴管肌瘤病(PLAM)的影像学表现。
方法：报告 3 例 PLAM 病例，结合文献资料对该病病因、临床特点及影像学表现进行讨论。
结果：3 例患者均为育龄期女性，首发症状均为活动后呼吸困难，其中 1 例合并气胸，1 例合并气胸及乳糜胸，1 例合并肺外淋巴管肌瘤。结合文献资料，本病常发于育龄期女性，临床表现依次为

呼吸困难、咯血、气胸、乳糜胸等。本病 X 线片常呈非特异改变，CT 较具特异性，主要表现为多发均匀分布囊状影，伴有间隔线，呈网格状改变，同时出现液气胸和淋巴结肿大，肺外也可有多发相关改变。肺功能测定常伴有阻塞性通气功能障碍。结论：CT 检查对 PLAM 具有诊断价值。对育龄期妇女发生的渐进性呼吸困难、咯血、自发性气胸应及时进行胸部 CT 检查，并应常规进行腹部和盆腔影像学检查以了解患者是否合并肺外淋巴管平滑肌瘤。

PU-2549
兔煤工尘肺模型高分辨率 CT 表现与血清转化生长因子β1 表达水平相关研究

刘岚
太原市第三人民医院太原市传染病院

目的研究兔煤工尘肺模型在高分辨率 CT(HRCT)上的基本形态和血清转化生长因子β1(TGFβ1)表达。方法用≤5μm 煤尘悬液建立煤工尘肺(CWP)兔动物模型,以 0.9%氯化钠注射液作为对照组。于 2 周、1、2、3、5 个月 2 组兔行 CT 扫描,同时抽取各组兔血清用免疫组织化学法观察 TGFβ1 在肺组织中的表达。结果 CWP 兔模型肺 HRCT 早期表现为磨玻璃及实变影,中晚期出现肺间质纤维化并见微结节影及支气管扩张;TGFβ1 在 CWP 兔肺组织各细胞中的表达明显高于对照组(P<0.01),其表达数量与 HRCT 表现的肺纤维化程度一致。结论兔煤工尘肺模型成功,TGFβ1 在尘肺中有所表达,且其 HRCT 表现与 TGFβ1 密切相关。

3.宁夏医科大学总医院放射科

【摘要】目的：通过 MSCT 对慢性阻塞性肺疾病（COPD）患者肺气肿 CT 定量分析，进而评估肺气肿定量参数与 COPD 严重程度之间的相关性。**方法**：选取我院呼吸科收治的 COPD 患者 72 例作为试验组，按照 COPD 全球倡议（GOLD）将患者分为 1～4 级，其中 GOLD1 级为 12 例，GOLD2 级为 23 例，GOLD3 级为 23 例，GOLD4 级为 14 例，同时选取同一时期健康志愿者（无相关肺疾病）17 例作为对照组。所有研究对象均进行配对呼吸双相 CT 扫描及肺功能检查，采用 CT 后处理软件对总肺体积（TLV）及总肺气肿体积（TEV）进行定量分析，TLV、TEV 与 COPD 分级之间的相关性分析，与肺功能参数［第 1 s 用力呼气容积（FEV1）、用力肺活量（FVC）及其比值（FEV1/FVC）］之间关系的相关分析。 **结果**：TLV、TEV 在健康对照组与 GOLD 1 级之间差异均无统计学意义（$P>0.05$），与 GOLD2～4 级之间差异有统计学意义；TEV 在 GOLD 4 级 与 GOLD 1 级、GOLD 3 级之间差异均有统计学意义（均 $P<0.05$）；TLV 在 GOLD 1 级、GOLD 2 级 与 GOLD 4 级 患者之间差异有统计学意义（$P<0.05$）；对照组、GOLD1 级、GOLD2 级、GOLD3 级以及 GOLD4 级的 FEV1、FEV1 /FVC 呈逐渐下降趋势，差异均有统计学意义(均 $P<0.05$) 。**结论**：MSCT 可对慢性肺阻塞性肺疾病患者 TEV、TLV 可准确定量分析，可客观评价肺气肿，且与肺功能指标之间有良好的相关性，因此，CT 定量评估对于 COPD 患者具有一定的临床价值。

基于 GOLD 分级慢性阻塞性肺疾病患者 CT 定量参数与肺功能参数相关性分析

邱海静[1],陈勇[2],高知玲[3],王一帆[3],高雨佳[1],杨冠华[1],邓林[1],任涛[1],孙文杰[1]
1.宁夏医科大学
2.宁夏医科大学总医院放射介入科
3.宁夏医科大学总医院放射科

目的 根据慢性阻塞性肺疾病（COPD）的严重程度评估 CT 定量参数与肺功能检测（PFT）参数之间的相关性，并确定 CT 参数是否可以作为 COPD 患者的肺功能预测因子。**方法** 收集临床诊断为 COPD 患者 75 例，按照慢性阻塞性肺病全球倡议（GOLD）I-IV 标准，将患者根据疾病严重程度分为四组（GOLD1、GOLD2、GOLD3、GOLD4），招募健康志愿者 25 例定义为健康对照组（GOLD0）。所有 COPD 患者及志愿者均采用 SOMATOM Definition 64 排螺旋 CT 行完全吸气末、呼气末胸部扫描，且在 CT 检查后一周内行肺功能检测。使用自动分割软件测量所有志愿者肺气肿指数（EI），即深吸气时双肺 CT 值＜-950 HU 的区域百分比。采用单因素方差分析（*One-Way ANOVA*）比较不同 GOLD 分级 COPD 患者及志愿者的临床参数（年龄、体质指数 BMI、吸烟状况、6 分钟步行试验）、PET 结果（FVC、FEV_1、FEV_1/FVC）及 EI 结果，P<0.05 具有统计学意义。采用 *Pearson* 相关对 COPD 患者的 BMI、6 分钟步行试验、EI 与 PFT 结果进行相关性分析。**结果** 各组年龄、吸烟状况组间差异均无统计学意义（P>0.05）；BMI 差异具有统计学意义（P<0.05），且 BMI 随着 GOLD 分期的增加而下降；各组 6 分钟步行试验、PET 结果及 EI 组间差异均具有统计学意义（P<0.05），同样随着 GOLD 分期的增加而恶化、加重。BMI、6 分钟步行试验结果及 EI 与 PET 结果之间存在线性相关关系（P<0.05）。**结论** COPD 患者的 BMI、6 分钟步行试验及 CT 定量参数 EI 随着 COPD 的严重程度而变化，可以用于预测 COPD 患者的肺功能。

PU-2552
基于双气相 CT 的右肺支气管壁厚对慢阻肺通气受限诊断的价值

高小燕[1],曹宪宪[1],梁志冉[2],金晨望[1],郭佑民[1]
1.西安交通大学第一附属医院
2.天津医科大学肿瘤医院

目的 基于计算机辅助评估慢性阻塞性肺疾病（chronic obstructive pulmonary disease,COPD）患者吸、呼双气相支气管参数与通气受限的相关性。**方法** 收集行吸、呼双气相胸部 CT 扫描及肺通气功能检查（PFT）的慢阻肺患者，双气相 CT 图像导入“数字肺”分析软件进行处理，支气管定量分析获取两肺 3-9 代支气管壁厚（Wall thickness，WT）、管壁面积百分比值（Wall area ratio，WA%）。采用 Pearson 相关或 spearman 秩相关分析评价此支气管参数在吸气相、呼气相、双气相差值法及比值法下分别与肺功能中 FEV1%、FEV1/FVC 的相关性，并分析 WT 与 WA%的相关性。利用偏相关分析排除 WT 与 WA%潜在影响。**结果** 最终纳入 89 例慢阻肺患者。支气管壁厚（WT）在吸气相下右肺中下叶第 4 代、中叶第 7 代、下叶第 5 代及左肺上叶第 7 代与肺功能相关（右肺 r=0.23~0.34，左肺 r=-0.26，P＜0.05）；在双气相差值法及比值法下右肺第 4 代、中叶 5-7 代、下叶第 6 代及左肺上叶 4-5 代、下叶第 7 代与肺功能有关（右肺 r=0.23~0.62；左肺 r=0.27~0.46，P＜0.05）；在呼气相下与肺功能不相关。其中 WT 在吸气相下右肺下叶第 4 代，差值法及比值法下右肺第 4 代、中下叶第 6 代及左肺上叶第 4 代与管壁面积百分值（WA%）相关（P＜0.05）。控制以上支气管的 WA%行偏相关分析，WT 在吸气相下右肺下叶第 4 代、差值法及比值法下右肺中上叶第 4 代、中下叶第 6 代与肺功能相

关（吸气相 r=0.26，双气相 r=0.24~0.53，P＜0.05）。WA%在单、双气相下基本与肺功能不相关。**结论** 基于定量 CT 的慢阻肺患者在评估通气受限时支气管壁厚优于管壁面积百分比值，右肺优于左肺，且右肺支气管壁厚与肺功能独立相关性较好。双气相优于单气相，差值法与比值法无明显差异。

PU-2553
基于 KARL 迭代算法对 COPD 低剂量 CT 扫描条件下肺气肿定量测量的影响

黄晓旗,朱彦瑾,王雷,王剑,姬星,郭佑民
延安大学附属医院

目的 探讨 KARL 迭代重建算法在低剂量与常规剂量扫描条件下对慢性阻塞性肺疾病（COPD）患者肺气肿指数定量的影响。**方法** 前瞻性收集我院 2019 年 1 月～2019 年 3 月符合肺功能诊断的 COPD 患者 30 例，其中男性 25 例，女性 5 例。采用联影 uCT-760 128 排螺旋 CT 对 30 例患者进行常规剂量（120kV,150mAs）与低剂量（120kV,80mAs）扫描，常规剂量采用滤波反投影（filtered back projection ,FBP）重建，低剂量采用 FBP 与 KARL 迭代算法重建，计算有效辐射剂量（ED），在肺动脉分叉层面计算升主动脉 CT 值与噪声（SD 值）并计算信噪比（SNR）。将 3 组扫描原始数据导入“数字肺”检测及分析平台，计算出肺气肿指数（EI）、全肺容积（LV）及全肺平均肺密度（MLD）。采用配对样本 t 检验分析图像 CT 值、SD、SNR 与 CT 定量指标差异。Bland-Altman 分析计算肺气肿平均测量偏差。P＜0.05 差异具有统计学意义。**结果** 常规剂量和低剂量有效辐射剂量分别为 6.91±0.53mSv 和 3.71±0.28mSv，下降约 47%。常规剂量 FBP 组与低剂量 FBP 组 LV、MLD 及主动脉 CT 值差异无统计学意义（P＞0.05），EI、SD 与 SNR 差异有统计学意义（P＜0.05），常规剂量 FBP 组与低剂量 KARL 迭代重建组各定量指标差异均无统计学意义（P＞0.05）。与常规剂量 FBP 组相比，低剂量 FBP 组 EI 高估 4.1%，KARL 迭代重建组 EI 高估 1.7%。 **结论** KARL 迭代重建的低剂量 CT 可用于 COPD 患者定量测量，KARL 迭代重建技术在降低噪声、提高 SNR 的同时一定程度上提高了 CT 定量测量 EI 的准确性。

PU-2554
肺癌合并 COPD 及单纯性肺癌的影像学和临床特征差异分析

李一鸣[1],付蓉[2]
1.天津市人民医院
2.江苏省扬州市江都人民医院

目的 采用 MSCT 扫描对 COPD 患者行影像学表型诊断，探讨 COPD 影像学表型与肺癌分型的关系。**材料与方法** 回顾性分析从 2013 年 2 月到 2017 年 12 月期间在扬州大学附属医院诊断为肺癌并且合并有 COPD 的患者 99 例及同期收治的单纯性肺癌患者 62 例，所有患者均进行多层螺旋 CT 检查及 PFT 肺功能检查，分析两组间原发肿瘤的发生部位、性别、年龄、吸烟史、吸烟指数、肺功能指标及肺癌的病理类型等资料的相关性。测量并比较病例组和对照组多层螺旋 CT 定量测量指标及肺功能指标的差异，观察肺癌合并 COPD 患者多层螺旋 CT 定量测量指标与肺功能指标的相关性。采用 SPSS20.0 软件对结果进行统计学分析。计数资料比较采用卡方检验，计量资料的比较采用 t 检验，以 P<0.05 为差异有统计学意义。以 P<0.05 为差异有统计学意义。肺癌合并 COPD 患者多层螺旋 CT 定量测量指标与肺功能指标进行相关性分析。P＜0.05 为差异有统计学意义。

结果 在肺癌合并 COPD 组中的患者一般以男性、吸烟及中央型肺癌为主，病理学分型以鳞状细胞癌为主；而在单纯肺癌组的患者则以女性、不吸烟及周围型肺癌常见，病理学分型以腺癌多见，二者之间存在明显统计学差异，但是在年龄之间无明显统计学差异。COPD 组深吸气末全肺容积(V)明显高于对照组，差异具有统计学意义(P＜0.05)；COPD 组用力肺活量(FVC)、第 1 秒用力呼气量(FEV1)、第 1 秒用力呼气量与用力肺活量百分比(FEV1/FVC)均明显高于对照组，残气量(RV)、肺总量(TLC)、残气量与肺总量百分比(RV/TLC)均明显低于对照组，差异均有统计学意义(P＜0.05)。

结论 COPD 合并肺癌与单纯肺癌为相互独立的疾病，CT 表现及临床特征的差异有助于二者之间的鉴别诊断，为疾病的疗效及预后的判断提供相关依据。

PU-2555
基于多层螺旋 CT 图像对 COPD 患者肺小血管改变的特征性分析

杨琴[1],苏彤[1],朱力[2]
1.宁夏医科大学
2.宁夏医科大学总医院

目的 评价 COPD 患者肺小血管横断面积占肺血管总面积百分比（%CSA）与其疾病严重程度的相关性。

方法 收集我院临床确诊的 COPD 患者 124 例（男 80/女 44）；健康人 106 例（男 48/女 58）。两组均行 CT 及肺功能检查，测量 FEV1、FVC、FEV1/FVC%及 FEV1%，按照 PFT 结果将 COPD 组分为 3 个亚组：GOLD I 为轻度组，GOLD II 为中度组，GOLD III、IV 为重度组。使用 Image J Version 软件测量升主动脉、降主动脉、气管分叉处三个层面亚段（CSA<5mm^2）、亚段以下（CSA5-10mm^2）肺小血管面积，并计算%CSA<5mm^2、%CSA5-10mm^2。

结果 COPD 组与对照组总体$\%CSA_{<5}$、$\%CSA_{5-10}$ 均存在差异（t=-8.46/-5.87，P<0.05）；COPD 患者轻、中、重度组$\%CSA_{<5}$、$\%CSA_{5-10}$ 均显著小于对照组（P<0.05），且随着 COPD 严重程度增加而逐渐减小。COPD 患者轻、中、重三组间%CSA5、%CSA<5-10 有显著差异（F=34.91、25.21；P<0.05），轻度组与重度组、中度组与重度组间有显著差异（P<0.05），而轻度组与中度组无显著差异（P>0.05）；$\%CSA_{<5}$及$\%CSA_{5-10}$ 两个参数的 ROC 曲线下面积分别为 0.765、0.752，敏感度分别为 78.3%、61.3%，特异度分别为 34.7%、23.7%；COPD 组$\%CSA_{<5}$、$\%CSA_{5-10}$ 与 FEV1、FVC、FEV1/FVC%、FEV1%均呈正相关（r=0.249、0.462、0.431、0.456；0.18、0.342、0.384、0.408，P<0.05）。

结论 COPD 患者$\%CSA_{<5}$ 及$\%CSA_{5-10}$ 随疾病严重程度增加而减小，且与肺功能有相关性，肺小血管截面积（%CSA）可作为评估 COPD 患者严重程度的新方法。

PU-2556
慢性阻塞性肺疾病 CT 定量分析气流受限与肺功能相关性研究

朱占英,陈兴灿,郗玉珍,刘淼,陈清勇
中国人民解放军联勤保障部队第 903 医院（原中国人民解放军第一一七医院）

目的：研究 CT 定量分析肺气肿和 3-5 级支气管相关参数，评估其与气流受限和肺功能的相关性以及临床应用价值。**方法** ：收集 2017 年-2019 年就诊慢性阻塞性肺疾病（COPD）患者，35 例为研究组，35 例健康者为对照组。均常规行临床肺功能检查和呼吸双相胸部 CT 平扫。应用后处理软件测

量呼吸双相肺容积（LVi、LVe）,容积比(LVe/Vi)；并设研究组肺气肿体素指数 $LAA_{950}E$（%）、$LAA_{950}I$（%），$LAA_{910}E$（%）、LAA_{910} E-I（%）。利用气道分析软件测量左右肺上叶尖段或前段，左右肺下叶后基底段 3-5 级支气管中点处气道参数，包括壁厚度(WT)、腔面积（LA）、壁面积比值百分比(WA%)、腔面积百分比（AI%）等；比较两组之间参数差异性；再将其分别与临床肺功能指标进行相关性分析。**结果**：1、两组肺功能指标有差异（P<0.05）；研究组全肺肺气肿体素指数、肺容积参数与对照组存在差异（P<0.05）。且研究组肺气肿体素指数、肺容积参数与肺功能指标均有不同程度相关性，LVe、LVe/LVi 与 FEV1%、FEV1/FVC 之间呈不同程度正相关（r=0.492-0.963,P 均<0.05）。$LAA_{950}E$（%）、$LAA_{910}E$（%）、LAA_{910} E-I（%）呈不同程度负相关（r=-0.472--0.755,P 均<0.05）。2、两组气道参数指标部分有差异（P<0.05），具有统计学意义。呼气相 LA 、WA% 、AI%与肺功能的相关性高于吸气相，相关系数随着管腔变小而增加；第 5 级支气管 AI% 、WA%与 FEV1%、FEV1/FVC 呈明显正相关（r=0.346-0.413,P 均<0.05）。**结论**：CT 定量分析肺气肿和气道相关参数，与肺功能指标均有良好的相关性。可以准确、直观反映气流受限程度，气道重构和肺功能受损程度。可作为 COPD 患者进行分级和预测一种有效途径，具有较高的临床应用价值。

PU-2557
基于 CT 双气相扫描对 COPD 患者肺容积定量研究

王雷[1],赵凡惠[1],李建龙[1],黄晓旗[1],郭佑民[2]
1.陕西省延安市延安大学附属医院
2.陕西省西安市西安交通大学第一附属医院

目的 基于数字肺测试平台对吸、呼双相 CT 肺容积定量分析，探讨 CT 肺容积定量测量在正常人与慢性阻塞性肺疾病（chronic obstructive pulmonary disease，COPD）中的临床应用价值。**方法** 初步收集我院 2016 年 11 月至 2018 年 2 月，正常人 91 例和慢性阻塞性肺病患者 61 例的双气相胸部 CT 数据。采用 128 层螺旋 CT 进行双气相胸部扫描，所得图像导入数字肺测试平台进行分析，统计分析软件采用 SPSS20.0。**结果** 慢阻肺双气相肺容积差异具有统计学意义，p ＜0.01，且吸气相肺容积（LVin）＞呼气相肺容积（LVex）。慢阻肺与正常人双气相肺容积差异具有统计学意义，p ＜0.01，且正常人肺叶容积明显小于 COPD 患者。定量分析正常人与 COPD 患者各肺叶双气相肺容积结果显示：无论吸气相或呼气相肺容积差异均以左肺上叶变化最显著（吸气相肺容积差约 506.57±119.39ML，呼气相差约 468.74±111.2ML），变化最小的是右肺中叶（肺容积差约 115.45±36.07ML）。**结论** CT 定量测量可判断各肺叶病变的严重程度，一方面对 COPD 患者有一定的临床诊断价值，同时呼气相可辅助吸气相评价 COPD 病变程度；另一方面，对肺减容手术的评估提供有效的临床价值。

PU-2558
慢性阻塞性肺疾病合并重度肺动脉高压患者肺小血管区的 CT 评价

华奇峰
中国科学院大学宁波华美医院

目的：严重肺动脉高压在慢性阻塞性肺疾病中是很少见的,一种独特的表型已经被假设。我们的目的是评估 CT 能否测量肺小血管。

材料与方法：COPD 患者在稳定期行肺功能检查、胸部 CT 平扫及右心导管(RHC)检查。在 105 例患者中，20 例 COPD 合并重度 PH(平均肺动脉压>35 mmHg)与 20 例 FEV1 匹配、年龄匹配的 COPD 伴轻度或不伴 PH(mPAP<35 mmHg)进行比较。CT 检查测量肺面积(%CsA<5)、5~10mm2(%CSA5~10)、平均横断血管数(CSNS)、支气管壁厚度(WT)小于 5mm2 的总横截面积百分比，并进行组间比较。通过接受者操作特征分析，比较 PAW 评分结合 PaO2 和 CT 参数与 mPAP 的相关性，预测 COPD 重度 PH。
结果：重度 PH 组 CsA 和 CSN 值均高于无重度 PH 组，差异有显著性(P<0.0 5)。多元回归分析显示，%CsA<5 和 WT 分别为重度 PH 和非重度 PH 患者 mPAP 的最佳预测因子。综合%CsA<5、PaO2 和 WT 能更好地预测 COPD 患者的重度 PH。
结论：COPD 合并重度 PH 时，小血管的 CT 测量支持明显的血管相关表型，结合动脉血氧饱和度(PaO2)和野值(WT)，可为 RHC 的选择提供一种非侵入性的工具。

PU-2559

多层螺旋 CT 对于 COPD 肺气肿进展期患者气道壁厚度及肺小血管相关性的诊断价值研究

华奇峰
中国科学院大学宁波华美医院

目的：
近年随着多层螺旋 ct 的日益广泛应用，copd 患者的影像学资料愈加齐全及完备。多层螺旋 ct 能探测与肺气肿相关的肺组织的丢失情况；并且能获得气道壁的厚度及壁面积的百分比。肺小血管（横截面小于 5mm^2）的百分比值目前被认为是表达肺灌注的一个技术参数。本文旨在分析这些影像学数值的变化对于 copd 肺气肿加重患者的解剖结构的改变。
方法：
我们对 58 名患者均进行了肺功能测试，多层螺旋 ct 检查和 copd 评估。我们分析了 ct 的各项指数，检查了 copd 加重患者的影像学结构的变化。
结果：
copd 评价表和第一秒用力呼气容积在两年的随访中没有明显的改变。肺气肿的参数变化值明显增加。另一方面远端气管壁的百分比明显下降或趋于下降，同时肺小血管的百分比在此段时间轻微或明显上升，特别是前吸烟者。在 copd 急性加重期间患者或终止吸烟患者肺气肿参数改变更加明显，相比较而言，支气管壁厚度与肺小血管百分比并不随着肺气肿的进展而呈比例性改变。
结论：
远端支气管管壁厚度比与肺小血管百分比并不与肺气肿的低密度区在同一时期呈平行改变。我们假设气道病变及肺血管重建在某种程度上是可逆性的，通过终止吸烟或适当的治疗。合理的处置对于肺血管病和气道病变比早期的 copd 的肺实质破坏有更佳的作用。
创新点：关于 COPD 患者的健康状态及肺功能的研究已经报道过很多了。但 COPD 的肺部结构异常改变没有被清楚地解释。肺气肿变化进程的研究也被报道过，但是对于气道变化和肺小血管重组的改变是很稀少的。肺泡的破坏、气道病和肺血管改变还是未知的。而且，COPD 患者加重期和吸烟终止者的结构数据没有被建立过。
所以，本次研究是通过多排螺旋 CT 对 COPD 患者的肺部结构异常进行动态随访；并且去区分肺气肿、气道病及肺血管病的分类、分级；并可以对于 COPD 患者急性加重期患者或吸烟终止者的肺结构的变化。

PU-2560

双源 CT 肺小结节分析对早期肺癌的诊断价值

刘倩倩
川北医学院附属医院

【摘要】目的：探讨双源 CT 肺小结节分析对早期肺癌的诊断价值。方法：收集 2018 年 1 月-12 月经病理活检证实的肺小结节患者 49 例，男性 29 例，女性 20 例，行 SOMATOM Definition 双源 CT 增强扫描，扫描后经西门子副控制台计算机及 mmwp4661 工作站处理，显示结节与血管关系，实性结节工作站自动测量最大层面直径、正交直径、体积，部分实性或磨玻璃结节手动勾画边缘测量最大层面直径、正交直径、体积；采用西门子后处理工作站 snygo.via 中双能量模块后处理测量结节碘浓度。结果：49 例病例共 62 个小结节，其中恶性 51 例，良性 13 例，实性结节 18 例，混合实性结节 31 例，纯磨玻璃结节 13 例。1）良恶性肺结节在大小方面无明显差异（t=0.329，P>0.05）。2）良恶性结节在体积方面差异具有统计学意义（t=0.0117，P＜0.05）。3）良恶性结节在碘浓度方面差异具有统计学意义（t=0.023，P＜0.05）。结论：双源 CT 肺小结节分析中体积分析、碘浓度分析能增加 CT 诊断早期肺癌的诊断效率。

PU-2561
多层螺旋 CT 低剂量灌注扫描对中晚期非小细胞肺癌化疗疗效的评价研究

高德培
1.云南省肿瘤医院
2.昆明医科大学第三附属医院

目的： 探讨多层螺旋 CT 低剂量灌注扫描对中晚期非小细胞肺癌化疗疗效的评价，旨在及时有效地确认化疗方案的有效性，便于最大效能使用化疗方案或修订化疗方案，减少患者无效化疗的时间、减少无效化疗药物对患者的损害、减轻患者及家属对无效化疗药物的经济支出。
材料与方法：35 例经病理确诊的非小细胞肺癌，男性 20 例，女性 15 例，年龄 35-75 岁，中位年龄 56 岁。其中腺癌 25 例，T3 期 10 例，T4 期 15 例；鳞癌 10 例，T3 期 3 例，T4 期 7 例。15 腺癌的治疗方案为标准的化疗,10 例腺癌的治疗方案为靶向治疗；鳞癌的治疗方案为标准的化疗方案。35 例中晚期非小细胞肺癌患者均在化疗方案实施前、化疗方案实施两个疗程、四个疗程后进行多层螺旋 CT 低剂量灌注扫描，将灌注数据通过肿瘤灌注分析软件进行灌注分析，主要分析肿瘤大小、BFD、BVD、TMAXD 及 FED 的前后变化。将数据进行统计分析，并进行 X^2 检验。
结果：35 例非小细胞肺癌在第二个化疗疗程结束后 20 天，10 例肿瘤大小无明显变化，25 例肿瘤大小有轻度缩小；第四个化疗疗程结束后 20 天，在第二个化疗疗程结束后 20 天后肿瘤体积无明显变化的 10 例患者中出现 6 例患者肿瘤体积有缩小，25 例肿瘤体积有轻度缩小的患者肿瘤体积继续缩小。在 BFD、BVD、TMAXD 及 FED 方面，31 例患者的肿瘤 BFD、BVD、TMAXD 及 FED 在第二、四个化疗疗程结束后 20 天后出现不同程度持续下降，4 例患者的肿瘤的 BFD、BVD、TMAXD 及 FED 在第二、四个化疗疗程结束后 20 天出现持续上升，同时肿瘤体积在第四个化疗疗程结束后 20 天后复查时肿瘤体积增大。
结论：多层螺旋 CT 低剂量灌注扫描能够有效判断非小细胞肺癌的化疗疗效，尤其是两个疗程后就可以早期判断非小细胞肺癌对化疗疗效的敏感性，能够及时指导化疗医师制定和调整化疗方案。

PU-2562

探讨 DL-CAD 对肺结节的定性诊断价值及良恶性肺结节的影像表现

刘礼健,刘周,罗德红
深圳市肿瘤医院

摘要：目的　探讨 DL-CAD 对不同病理类型肺结节的检出率及良恶性预测价值，并总结不同类型肺结节在多排 CT（MDCT）的影像特征。方法：回顾性分析我院 2017 年 1 月-2019 年-6 月有确切术后病理的肺结节（共 155 个病灶）多排螺旋 CT 影像资料，把病灶分为浸润性癌组 87 个病灶，微小浸润性癌组 11 个病灶，浸润前组（不典型腺瘤样增生+原位癌）39 个病灶，良性病灶组 18 个病灶，用 DL-cad 对 4 组病灶进行分析并记录病灶的检测情况及对病灶良恶性的预测值，再由 2 名放射医师对 4 组病灶的大小，实性成分（实性结节、混合密度结节、纯磨玻璃结节），瘤肺界面（清晰光整、模糊）、空泡征、毛刺、血管集束征、胸膜凹陷及病灶形态（圆形或类圆形）等进行对比分析。
结果：CAD 对肺结节的检出率为 99.3%，诊断符合率为 81.2%。分叶、血管集束、胸膜凹陷、不规则形在肺癌组与良性病变组比较，差异有统计学意义。ROC 曲线分析显示曲线下面积为 0.821，二者敏感度和特异度分别为 84.7%和 66.7%，
结论：CAD 系统检出率和诊断正确率较高，可以辅助放射科医生，此外通过 CT 征象的全面分析，可以有效提高肺结节定性正确率。

健康体检人群肺亚实性结节发病率的低剂量螺旋 CT 研究

郭家川[1],刘英[2],蒲红[1]
1.四川省医学科学院·四川省人民医院
2.四川省骨科医院

目的　应用低剂量螺旋 CT 对健康体检人群进行研究，探讨国人肺亚实性结节的发病率及年龄分布特点，使早期肺腺癌防治更有针对性。

方法

1.1　一般资料

选取 2017 年 1 月～2017 年 12 月来我院体检中心进行胸部低剂量螺旋 CT 检查的健康体检者。纳入标准：①在我院体检中心进行胸部低剂量螺旋 CT 检查者；②直知情并同意进行健康随访。剔除标准：①年龄＜18 岁；②既往已确诊为肺癌或其它部位肿瘤的患者；③图像质量差。按照纳入和剔除标准，共中 52995 例检查者进入研究，男 32212 例，女 20783 例，年龄范围 18～97 岁。将所有体检者按年龄不同分为 7 组：18～29 岁组；30～39 岁组；40～49 岁组；50～59 岁组；60～69 岁组；70～79 岁组；80 岁以上组。

1.2　CT 检查方法、步骤及图像分析

德国西门子 SOMATOM Definition AS+ 128 层螺旋 CT 扫描仪。扫描前对受检者进行呼吸训练，常规行胸部低剂量螺旋 CT 扫描，管电压 120kV，30～50mAs，重建层厚 1.25mm。由我科中级职称以上医师对图像进行观察。

1.3　统计学方法

运用 PSS17.0 统计进行统计学分析。计数资料以例数和百分率表示，率的比较采用卡方检验进行分析，$P<0.05$ 为差异具有统计学意义。

结果

2.1　无因图像质量差而剔除检查者。

2.2 健康体检人群亚实性结节的发病率为 2.11%，女性的发病率为 3.91%，明显高于男性（1.6%），$P<0.05$.
2.3 女性亚实性结节发病率随着年龄增长有升高趋势，男性 70 岁以前发病率有升高趋势，随后发病率降低。

结论 健康体检人群亚实性结节的发病率为 2.11%，女性的发病率明显高于男性，且随着年龄增长有升高趋势，应该注重中老年女性的健康体检。低剂量螺旋 CT 能准确的发现亚实性结节，有利于早期肺腺癌防治。

PU-2564
1.5T 磁共振弥散加权成像在肺部良恶性肿块鉴别诊断中的应用价值

刘小艳
南通大学附属医院

本研究运用 1.5T 磁共振成像仪得出受检者肺部 DWI 图像，对肺部肿块的 DWI 信号强度及 ADC 值特点作统计分析，得出成像最优 b 值，为良恶性肺部肿块的鉴别诊断提供帮助。方法 选取 18 例恶性病灶和 22 例良性肿块，应用 GE signa HDX t 1.5T 磁共振成像仪和 Torso 相控阵表面线圈进行横断面 DWI 成像，在 ADW4.5 工作站上，利用 Functool 软件生成 DWI 图和 ADC 图。在 DWI 横断面上以胸髓的信号作为参照，选取病灶实性成分最大层面，病灶在 DWI 上的信号强度，分成四个等级：低（低于相应平面肌肉的信号）、稍低（介于相应平面肌肉的信号和胸髓信号之间）、等（等于胸髓的信号）和高（大于胸髓的信号）。在横断面 ADC 图上选择感兴趣区，避开坏死、出血区域，放置三个面积大致相同的感兴趣区，面积 70-100mm2，计算出平均 ADC 值，以均数±标准差(s)作为记录的方式。应用 SPSS17.0 统计学软件进行数据处理，采用单因素方差分析比较不同 b 值组病灶良、恶性病变 ADC 值。采用受试者操作特征曲线（receiver operating characteristic, ROC）分析不同 b 值组 ADC 值对肺良、恶性病变进行鉴别诊断的效能，以 $p<0.05$ 为差异有统计学意义。**结果** 本研究中肿块信号以相应层面胸髓作为参照物，大多数肺部恶性肿块在 DWI 上都呈等、高信号，大多数良性肿块呈低、等低信号。可见，评价病灶信号强度有助于良恶性肿块的鉴别诊断。此外，本研究结果显示，以 500 s/mm2 为最佳弥散系数时，恶性病灶中 2 例鳞癌、1 例腺癌呈等信号，与多数良性肿块信号相似。良性肿块中 1 例结核性肉芽肿、1 例非特异性炎性肉芽肿病变呈高信号。**结论** 磁共振 DWI 及 ADC 值对肺部良恶性肿块的鉴别诊断价值较高，且 ADC 值对肺癌的分类有一定价值，一定程度上可以反映肿块内细胞密度情况。

PU-2565
能谱 CT 定量分析对孤立性肺结节诊断价值

潘晓宇
广西医科大学第一附属医院

目的　　探讨能谱 CT 定量分析对孤立性肺结节的诊断价值。方法　收集我院 33 例行双期能谱 CT 扫描的孤立性肺结节患者影像学资料，根据术后病理将 33 例病例分为恶性结节组（24 例）、良性结节组（9 例）。分别测量两组结节的动静脉期 40~70KeV 能谱曲线斜率、动静脉期碘（水）浓度、动静脉期水（碘）浓度、动静脉期标准化碘（水）浓度等定量指标。应用 SPSS17.0 统计学软件，对两组病例动静脉期 40~70KeV 能谱曲线斜率、动静脉期碘（水）浓度、动静脉期水（碘）浓度及动静脉期标准化碘（水）浓度采用独立样本 t 检验。　结果　动脉期 40~70KeV 能谱曲线斜率、静脉期 40~70KeV 能谱曲线斜率、动脉期碘（水）浓度、动脉期水（碘）浓度、静脉期水（碘）浓度、动脉期标准化碘浓度、静脉期标准化碘浓度均无统计学意义（P＞0.05），静脉期碘（水）浓度具有统计学意义（P＜0.05）。结论　静脉期碘（水）浓度在一定程度上可以为鉴别良恶性孤立性肺结节提供依据，动脉期 40~70KeV 能谱曲线斜率、静脉期 40~70KeV 能谱曲线斜率、动脉期碘（水）浓度、动脉期水（碘）浓度、静脉期水（碘）浓度、动脉期标准化碘浓度、静脉期标准化碘浓度等能谱定量指标仍需扩大样本量后，进一步探讨其诊断效能。

PU-2566
超高分辨率 CT（Ultra-HRCT）靶扫描对肺孤立性磨玻璃结节的诊断价值研究

董浩[1],尹乐康[2],马永红[2],叶剑定[2],楼存诚[1]
1.杭州市萧山区第一人民医院
2.上海市胸科医院

目的　探讨超高分辨率 CT（Ultra high resonance CT， Ultra-HRCT）靶扫描对肺孤立性磨玻璃结节的诊断价值。 **方法**　回顾性性分析 2017 年 6 月-2018 年 6 月于上海市胸科医院及杭州市萧山区第一人民医院进行 Ultra-HRCT 靶扫描的 70 例孤立性磨玻璃结节患者的影像及病理资料。肺结节平均直径为（11.0±4.2）mm。70 个结节进行手术切除后病理结果显示其中 1 个为良性结节（结核）、1 个为非典型腺瘤样增生(atypical adenomatous hyperplasia，AAH)、11 个为原位癌(adenocarcinoma in situ，AIS)、29 个 为微浸润腺癌(minimally invasive adenocarcinoma，MIA)，28 个为浸润性腺癌(invasive adenocarcinoma，IAC)。70 个病例均行常规 CT 扫描和 Ultra-HRCT 靶扫描， 由 2 名高年资放射科医师阅片，评价图像质量、 判断结节类型、给出诊断结果， 并对阅片结果进行统计学分析。 **结果** Ultra-HRCT 靶扫描在显示肺结节在显示空泡征、支气管征、胸膜凹陷征及实性成分方面优于常规 CT 检查（ P<0.05）， 尤其在显示实性成分上方面两者有非常显著统计学差异(P<0.01)。与常规 CT 比较， Ultra-HRCT 靶扫描的诊断正确率增高（c2=5.909,P<0.05）。 **结论** Ultra-HRCT 靶扫描可以更清晰地显示肺磨玻璃结节边缘结构及内部特征，尤其是对实性成分的显示具有较明显的优势。对通过常规 CT 检查难以确诊或需重点隔期复查的肺磨玻璃结节，建议采用 Ultra-HRCT 靶扫描进一步检查。

PU-2567
DWI 在鉴别肺部肿块与阻塞性肺不张中的应用

乔香梅,周科峰
南京大学医学院附属鼓楼医院

目的 探讨 3.0T 磁共振 DWI 技术在 CT 难以鉴别的肿块与阻塞性肺不张中的应用价值。**方法** 对 33 例 CT 疑似肿块合并阻塞性肺不张患者（由临床或 PET-CT 确诊）行磁共振 T1W-FFE、T2W-TSE 及 DWI-EPI 扫描，观察肿块与肺不张在各序列的信号特征，并于 b=800s/mm^{2}的 DWI 图像上测量肿块与

阻塞性肺不张区域的表观弥散系数（ADC）及二者的信号强度（SI）并进行比较。**结果** T1WI、T2WI、DWI 和 T2WI+DWI 能区分肿块与阻塞性肺不张的比例分别为 12 例(36.36 %) 、24 例(72.73 %)、30 例(90.91%)、30 例(90.91%)。在鉴别能力上，DWI>T2WI>T1WI(P<0.05)；联合应用 DWI+T2WI 鉴别能力与单独运用 DWI 无显著性差异（P>0.05）。肿块的 ADC 值低于阻塞性不张(P <0.05) ，二者[1]分别为(1.15±0.14)′1 0^{-3} s/ mm^2、(1.74±0.15) ′1 0^{-3} s/mm^2 ，在 DWI 相，肿块信号强度高于阻塞性不张(P<0.05) 。 **结论** 3.0T MRI DWI 技术在鉴别肿块与阻塞性肺不张鉴别中具有重要价值，可鉴别常规 CT 及 T1WI 及 T2WI 无法鉴别的部分病例。

PU-2568
MSCT 灌注联合 MVD 测定对孤立性 NSCLC 病理分级的临床价值研究

王宗盛
连云港市第一人民医院

摘要　目的：探讨多层螺旋 CT（Microvessel-slice spiral CT，MSCT）灌注成像参数联合微血管密度(Microvessel density MVD)测定对孤立性非小细胞肺癌（NSCLC）患者病灶分化程度的诊断价值。方法：回顾经病理证实的 46 例肺部孤立性 NSCLC 患者治疗前的病灶 MSCT 灌注结果，统计其灌注测定参数，与术后 MVD 测定值比较，分析肿瘤组织不同病理分化程度之间差异。结果：全部患者中，血容量（BV）在 NSCLC 的高、中、低分化程度鉴别中及毛细血管通透性（PS）在高、低分化鉴别中差异具有统计学意义（P<0.05），其中以 BV 值差异最大；不同分化程度的 NSCLC 患者 MVD 差异存在统计学意义，血流量（BF）、BV、PS 与 MVD 呈正相关，平均通过时间（MTT）无明确相关性。结论： MSCT 灌注成像可定量反映活体肺部病变血管生成状况，对术前判断 NSCLC 病灶分化程度具有参考价值。

PU-2569
传统 CT 形态学特征对 NSCLC 患者 EGFR 基因突变状态的预测价值

涂文婷[1],范丽[1],方梦捷[2],董迪[2],刘士远[1]
1.海军军医大学第二附属医院（上海长征医院）
2.中国科学院自动化研究所分子影像重点实验室

目的：探讨传统 CT 形态学特征预测非小细胞肺癌（NSCLC）患者 EGFR 基因突变状态的诊断价值，并联合临床特征构建 EGFR 基因突变预测模型。
方法：回顾性分析病理证实为 NSCLC 并行 EGFR 基因检测的 243 例患者的影像学资料，其中突变型有 112 例，突变率为 46.1%，野生型有 131 例。比较分析两组患者的 5 个临床特征（性别、年龄、临床分期、CEA 水平及吸烟情况）和 17 个传统 CT 形态学特征（最大直径、密度、形状、分叶、胸膜凹陷征等）。将 EGFR 基因突变状态作为因变量、有差异的特征作为自变量进行多因素 Logistic 回归分析，并对回归预测概率和各单独特征进行 ROC 曲线分析。
结果：单因素分析显示，性别、临床分期、最大直径、密度、纵隔或肺门淋巴结肿大、位置、空泡征及 CT 支气管征在两组间的差异具有统计学意义（P＜0.05）。多因素 Logistic 回归分析显示，性别、密度和病灶位置是 EGFR 突变型的独立预测因素，对回归预测概率进行 ROC 曲线分析后，AUC 为 0.693(P＜0.05)。对各单独特征进行 ROC 曲线分析后，性别、密度和病灶位置的 AUC 分别为 0.608、0.631 和 0.579。
结论：在 NSCLC 患者中，性别、病灶密度和病灶位置与 EGFR 基因突变密切相关，女性患者、亚实性密度以及周围型肺癌可提示 EGFR 基因突变阳性。

PU-2570

肺神经内分泌肿瘤的影像诊断与病理对照

何亚奇
中山市人民医院

目的

分析肺神经内分泌肿瘤的 CT 表现，并与病理分型对照，提高对该病的认识。

方法

回顾性分析本院 2003 年 8 月至 2018 年 12 月间诊治的 53 例肺神经内分泌肿瘤病例，对照分析 CT 表现与病理分型。

结果

53 例肺神经内分泌肿瘤包括 6 例典型类癌、10 例不典型类癌、18 例大细胞神经内分泌癌、19 例小细胞肺癌。其中男 37 例、女 16 例，均年龄 56 岁; 中央型 23 例、周围型 30 例; 肿瘤平均直径(35. 021 ± 9.23) mm，分叶征 23 例(43.3%) ，密度均匀 33 例(62. 3%) ，增强扫描 CT 值增高(45. 134 ± 9. 621) HU; 合并纵隔及肺门淋巴结转移 31 例。

结论

肺神经内分泌肿瘤的 CT 表现与其病理特性相对应，典型类癌及不典型类癌影像表现有一定特点，大细胞神经内分泌癌及小细胞肺癌缺乏特征性影像表现，确诊最终依赖病理。

PU-2571

肺原位腺癌与不典型腺瘤样增生的影像诊断

何亚奇
中山市人民医院

目的

探讨肺腺癌浸润前病变的 MSCT 影像学特征。

方法

回顾性分析２０１１年３月－２０１８年１２月经手术病理证实的 75 例肺腺癌浸润前病变患者的临床和ＣＴ资料，其中不典型腺瘤样增生（ＡＡＨ）25 例、原位癌（ＡＩＳ）50 例，主要分析指标包括病灶分布、大小、密
度、分叶征、毛刺征、空泡征、充气支气管征、肿瘤微血管成像征和胸膜凹陷征。

结果

55 例表现为纯磨玻璃密度结节、20 例为部分实性成分磨玻璃密度结节；ＡＡＨ组和ＡＩＳ组中病灶直径分别为（１０．７５±2. 53）和（１2. 08±3. 14）ｍｍ，平均ＣＴ值分别为（－571±32. 23）和（－451. 9±107. 63）ＨＵ，两组间差异均无统计学意义（Ｐ＞０．０５）。ＣＴ征象中以肿瘤微血管成像征最多见（出现率为 70. 1%），其次是分叶征、空泡征（均为 27. 3%），充气支气管征最少见（3. 2%）；两组间各征象的差异均无统计学意义（Ｐ＞０．０５）。

结论

肺腺癌浸润前病变的ＣＴ 征象中肿瘤微血管成像征具有一定特异性，ＣＴ 形态学征象并不能准确鉴别不典型腺瘤样增生和原位癌。

PU-2572

AIDS 合并肺癌 CT 表现

凌洲焜
广州市第八人民医院

目的　探讨获得性免疫缺陷综合征合并肺癌的 CT 表现与 $CD4^{+}T$ 计数的关系。方法：分析经病理证实的 25 例获得性免疫缺陷综合征合并肺癌患者的临床及 CT 表现。结果 25 例获得性免疫缺陷综合征合并肺癌患者中 20 例为非小细胞癌，其中腺癌 15 例、鳞癌 5 例，5 例为小细胞癌；17 例发生在右肺、8 例发生在左肺；20 例合并纵隔及肺门淋巴结肿大、12 例出现胸腔积液、6 例出现胸膜或肺内转移、3 例出现阻塞性肺炎、3 例合并空洞，15 例合并其他感染。结论：获得性免疫缺陷综合征合并肺癌的 CT 表现具有一定特点，CT 检查及相关的临床检查、实验室检查对其诊断及鉴别诊断具有一定的价值。

PU-2573

多层螺旋 CT 对囊腔类肺癌的诊断价值

王忠平
十堰市太和医院

目的：回顾性分析囊腔类肺癌的 CT 影像学特征，进一步提高对本病的认识。
方法：收集 2014 年 3 月至 2019 年 3 月经手术或病理结果证实的囊腔类肺癌患者 15 例，并对其影像表现及病理类型进行分析。
结果：本组 15 例患者影像表现为囊腔壁厚薄不均一者 12 例，病灶边缘可见短毛刺征者 7 例，病灶边缘呈分叶征者 9 例，有壁结节者 10 例，邻近胸膜有改变者 7 例，囊腔内壁不光滑者 14 例，囊腔内示血管穿行者 4 例。病灶内示囊腔影者 5 例，囊腔影伴周围磨玻璃密度结节者 2 例，囊腔影与磨玻璃密度结节、实性软组织密度影混合者 3 例，囊腔影伴周围实性软组织密度者 5 例。随访结果显示 2 例磨玻璃结节影内出现囊腔，3 例囊腔逐渐增大并囊壁不规则增厚，1 例囊腔缩小并实性软组织密度影增多。15 例患者术后病理证实为腺癌 14 例，鳞癌 1 例。
结论：囊腔类肺癌病理表现多为腺癌，影像表现为囊壁厚薄不均一、邻近胸膜凹陷不平、短毛刺征、壁内结节形成等征象时较为典型。通过对这些征象的认识，可进一步提高对于此类肺癌的诊断准确率。

PU-2574

肺部结节筛查的优化

刘广月
南京大学医学院附属鼓楼医院

【目的】探讨肺部小结节最佳检查方法。

【材料与方法】选取 100 例被检者，分成甲乙 2 组，每组 50 人。每组男女各 25 例，年龄 41 岁-78 岁。对每一位被检者进行肺部容积扫描，然后进行 CT 图像重建。甲组采用 1 毫米层厚进行 CT 图像重建；乙组采用 5 毫米层厚进行 CT 图像重建。请 1 位副主任医师、2 位主治医师、2 位住院医师对扫描图像进行观察。
【结果】结果如下：1 毫米层厚进行 CT 图像重建的小结节检出率高于 5 毫米层厚进行 CT 图像重建。2 者有显著性差异。但前者的工作量是后者的 5 倍，过小的结节没有任何临床治疗意义，反尔会造成被检者精神负担。
【结论】建议采用 5 毫米层厚进行 CT 图像重建。

PU-2575
CT 重建技术与 AI 肺结节筛选系统的联合应用在肺内小结节定性中的诊断价值

李卫星,贾祯,孙兴智
新乡市中心医院

目的:探索肺癌患者肺内小结节应用 CT 重建与 AI 肺结节筛选系统的联合应用在肺内小结节定性中的诊断价值。方法:选取我院胸瘤科 2018 年 7 月-2019 年 5 月收治的肺孤立小结节患者 87 例为研究对象,肺内小结节直径≤3cm,对全部患者均取得病理，且术前进行 CT 扫描,统计 CT 重建后人工判断与 AI 系统筛查对扫描在结节良恶性鉴别的价值。结果:87 例患者经 CT 检测 AI 对肺内小结节检出率 100%,人工检出率为 92%，5 例人工未能检出，均为<8mm 磨玻璃结节。AI 判断良性病例 31%，恶性病例 69%，人工判断良性病例 28.7%，恶性 65.5%，未检出者占约 5.7%。病理证实良性 29.8%，恶性 70.1%。AI 对肺结节特异性为 85.2%，有 15 例假阳性结节，人工判断肺结节特异性 100%。结论:肺内孤立小结节经 CT 检查后，AI 肺结节筛查系统对肺结节检出率高，特别对于较小磨玻璃结节的检出有优势，但存在假阳性，需要与 CT 后重建人工判读结合，这样可以提高对肺结节判断的敏感度与特异性。

PU-2576
多排螺旋 CT 低剂量检查技术在肺部小结节诊断中的价值研 究

陈昊
陆军军医大学附属新桥医院放射科

目的：对比多排螺旋 CT 中常规剂量 CT 检查与低剂量 CT 检查对肺部小结节的诊断价值。**方法**：收集在我院进行肺部常规剂量螺旋 CT 平扫（下称常规平扫）中检出肺部≤3mm 小结节的患者 283 例，组织其同意 3 个月后进行肺部低剂量螺旋 CT 平扫（下称低剂量平扫）复查者 100 例，对两次检查结果进行比较。**结果**：在复查的 100 例低剂量平扫中，检出肺部≤3mm 小结节的患者共 98 例，对两组不同剂量检查下肺部小结节诊断结果进行比较，差异无统计学意义（P>0.05）。**结论**：低剂量平扫在对肺部小结节的诊断中与常规平扫具有相当的检出率，同时可以减
少患者接受的辐射剂量，相比常规平扫具有更高的诊断价值。

PU-2577

Study of relative CT values to evaluate the invasiveness of pulmonary ground-glass nodules in patients with emphysema

Bowei Zhang,Jinwei Qiang
Jinshan Hospital, Shanghai Medical College, Fudan University

【Objective】To investigate the ability of relative CT (rCT) values to evaluate the invasiveness of pulmonary ground-glass nodules (GGNs) in patients with emphysema.
【Materials and Methods】Targeted high resolution (HRCT) of 187 pulmonary GGNs in 175 patients with emphysema confirmed by surgery and histology were retrospectively reviewed. Among them, 107 nodules appeared as a pure ground-glass nodule (pGGN), which includeds (7 atypical adenomatous hyperplasia (AAH), 12 adenocarcinoma in situ (AIS), 38 minimally invasive adenocarcinomas (MIAs) and 50 invasive adenocarcinomas (IACs); the remaining 80 nodules appeared as a mixed ground-glass nodule (mGGN), which included 10 MIAs and 70 IACs.The mean maximal diameter, mean CT values of GGN and background lung were measured. The rCT values of 1 (nodule CT value - lung CT value), 2 (nodule CT value / lung CT value) and 3 ((lung CT value - nodule CT value) / lung CT value)) of GGN were calculated. The differences of the mean and rCT values among different invasive GGNs were identified. The performance of the CT values between pre-invasive and invasive lesions was evaluated using a receiver operating characteristic (ROC) curve. The intraclass correlation coefficient (ICC) was used to evaluate the agreements in measuring quantitative parameters.
【Results】The mean CT value of the background lung was -907.82 ±27.53HUi. Significant differences were found in rCT values of 1, 2 and 3 between pGGNs with different levels of invasiveness, in rCT values of 1, 2 and 3 of the ground-glass area (GGA) and in mean CT of the solid area of mGGNs between MIA and IAC (all $P < 0.05$). The mean diameter was significantly different between pGGNs with different invasiveness ($P < 0.05$). The cutoff rCT values of 1, 2 , 3 and mean diameter for differentiating between the pre-invasive and invasive pGGNs were 293.82 , 0.68, 0.32 ; and 1.10 cm respectively. The measurement agreements were good for CT values of pGGN, GGA and SA of mGGN, CT value of lung, and mean diameter of GGN.
【Conclusion】In patients with emphysema, the mean diameter can be helpful for distinguishing the invasiveness of pGGN. The rCT values are more useful than the mean CT value for differentiating between GGNs with different invasiveness and can be valuable biomarkers for evaluating the invasiveness of GGNs.

PU-2578

MR 压脂 T2 加权与弥散加权成像在合并肺不张的中心型肺癌中的应用

贺帅
辽宁省肿瘤医院

摘要： 目的 探讨 MR 压脂 T2 加权与弥散加权成像在合并肺不张的中心型肺癌中的应用及价值.方法选取 2016 年 5 月至 2018 年 5 月于本院就诊的 35 例合并肺不张的中心型肺癌患者为研究对象,行 MR 检查,测量压脂 T2WI、DWI 图像中感兴趣区信号强度及背景噪声,计算肺癌与肺不张组织的信号强度比(Signal Intensity Ratio,SIR)、噪声比(Contrast-to-Noise Ratio,CNR),观察压脂 T2WI、DWI、两者联合图像对肺癌及肺不张组织边界的显示情况.比较单纯压脂 T2WI、DWI 及联合图像的图像质量和诊断效能.结果 DWI 图像的 SIR 和 CNR 均高于单纯的压脂 T2WI 图像,压脂 T2WI 联合 DWI 图像区分肺癌组织与不张肺组织边界的阳性率高于压脂 T2WI,差异均具有统计学意义.结论压脂 T2WI 联合 DWI 能显著提高压脂 T2WI 对肺癌与肺不张的鉴别能力,压脂 T2WI 能为 DWI 图像提供更多的解剖信息,两者互为有力补充

PU-2579
MSCT 在肺孤立性磨玻璃结节鉴别诊断中的价值

熊廷伟
陆军军医大学第二附属医院（新桥医院）

目的探讨多层螺旋 CT(Multi-slice spiral CT,MSCT)在鉴别良恶性肺孤立性磨玻璃结节(sp GGO)中的价值。方法回顾性分析 2015 年 1 月至 2017 年 7 月间经 MSCT 检查有肺孤立性磨玻璃结节的 44 例患者的 MSCT 资料,根据病理结果将所有病例分为良性、恶性两组,其中良性结节有 13 例,包括 9 例不典型腺瘤样增生(AAH),4 例慢性炎症;恶性结节有 31 例,均为腺癌。观察肺孤立性磨玻璃结节的 CT 征象特点,包括病灶形态、大小、边缘、实性成分、空气支气管征、空泡征、胸膜凹陷征、瘤肺界面、毛刺征、分叶征、血管集束征,对照病理结果,统计分析 CT 征象与肺磨玻璃结节良恶性的相关性。结果肺孤立性磨玻璃结节的病灶形态、大小、边缘、实性成分、空泡征、胸膜凹陷征、毛刺征、分叶征、血管集束征与 sp GGO 的良恶性有相关性,结果具有统计学差异(P<0.05),而两组 sp GGO 的空气支气管征、瘤肺界面没有统计学差异(P>0.05)。结论 MSCT 对肺孤立性磨玻璃结节的良恶性鉴别诊断具有重要价值。

PU-2580
胸膜下孤立结节病变的 320 排 HRCT 双入口容积灌注描的诊断价值

孙继锋,李扬,王晓冬,史展
河南科技大学第一附属医院

目的 探讨不同病理类型及不同分化程度肺癌的双循环(肺循环及体循环)灌注特点，以期为临床诊断 及预判提供指导。 方法 对 116 例肺癌患者进行前瞻性容积灌注扫描，最后经病理证实腺癌 44 例，鳞癌 32 例，小 细胞癌 18 例，良性者 22 例;其中病理得到分化程度 53 例。采用双入口模式对其进行后处理分析分别得到病灶的肺 动脉血流量(PF)、支气管动脉血流量(BF)及血流灌注指数 [PI = PF/(PF + BF)] 。采用 LSD 两两比较考察不同病 理类型肺癌各灌注值之间的差异有无统计学意义，采用 Spearman 相关分析探究肺癌的分化程度与各灌注值之间的 相关性。 结果 腺癌与鳞癌之间的灌注值 PI 差异有统计学意义(P ＜0. 05)，灌注值 PF、BF 差异均无统计学意义;

腺癌与小细胞癌，鳞癌与小细胞癌之间灌注值 PF、BF 及 PI 差异均无统计学意义。Spearman 相关分析结果显示:灌 注值 PI 与肺癌的分化程度呈负相关(相关系数为 －0. 680， P ＜ 0. 05)，即随肺癌分化程度的降低，灌注值 PI 呈增高 趋势。灌注值 PF 及 BF 与肺癌的分化程度无相关性。 结论 肺腺癌与肺鳞癌的 PI 值差异有统计学意义，腺癌 PI 值高于鳞癌;肺癌的分化程度与其灌注 PI 值呈负相关。双入口灌注技术对肺癌的病理分型及分化程度的临床预

PU-2581
能谱 CT 在肺动脉、肺静脉与肺结节融合成像中的应用探讨

余娜
重庆医科大学附属第三医院（捷尔医院）

目的：通过对比分析探讨 CT 能谱技术在肺动脉、肺静脉与肺结节融合成像中的临床价值。方法：本院 56 例直径小于 3 cm 的肺磨玻璃（ground glass nodule，GGN）结节术前行肺血管与结节融合成像的患者，随机分为对照组和观察组，每组 28 例；对照组使用 CT 常规扫描，观察组使用 CT 能谱扫描及能谱后处理技术，对比分析 2 组血管成像图像质量的优劣，另外观察组内用能谱扫描的数据分别生成一组 60 keV 和 74 keV 的单能量数据，进行组内对比。结果：28 例 60 keV 单能量成像观察组肺动脉、肺静脉及肺结节全部清晰显示，利用融合成像技术能明确展示三者的关系。对照组有 7 例不能完整显示远端供血及回流血管与肺结节的联系，另外 21 例虽能显示三者关系，但远端血管结构显示清晰度均不及 60 keV 单能量成像观察组，通过 CT 值、信噪比(signal noise ratio，SNR)的客观评价和主观评分，观察组 60 keV 和对照组比较，及观察组内的 60 keV 和 74 keV 比较，差异均具有统计学意义（P<0.05）。结论：能谱 CT 60 keV 单能量成像在肺动脉、肺静脉与肺结节融合成像中效果优于常规 CT 扫描。

PU-2582
孤立性肺结节的 CT 肺灌注扫描与病理对照分析

马蕾
河南省人民医院

目的：应用 CT 肺灌注成像技术对孤立性肺结节的进行诊断及良恶性鉴别诊断。方法：对近 2 年收治的 76 例孤立性肺结节患者的 CT 灌注参数 BV、BF、MTT、PS 进行分析，所有患者最终均手术或穿刺病理证实。结果：本次病例恶性肿瘤占比例约 89.5%（68/76），其中以腺癌居多。恶性病变中 55 例为真阳性，13 例为假阳性。恶性肿瘤的 BF、MTT、BV、PS 与良性病变相比明显偏高，有统计学意义，其中以 BV、PS 更为显著。结论：CT 灌注扫描可对孤立性肺结节进行血流灌注分析，从而更早期更灵敏的鉴别肺结节的良恶性。

PU-2583
基于深度学习人工智能软件在胸部 CT 肺结节检测中应用价值

蒋小锋,马旭阳
延安大学咸阳医院

【摘要】 背景与目的 肺结节高精确检测是实现结节发现早诊断、早随访、早干预的基础。人工智能在肺内结节检测领域发展迅速，对其效能进行验证是促进其应用于临床的前提。本研究旨在评估

基于深度学习人工智能软件在胸部计算机断层扫描（computed tomography, CT）结节检出中的价值。

方法 从 PACS 系统中随机抽取 100 例胸部 CT 数据，排出弥漫性肺病、乱肺、间质性病变及严重呼吸伪影患者，采取 1mm 薄层图像导入肺结节人工智能软件识别系统，记录软件自动识别结节，并与原始影像人工报告结果进行对比，部分病例包含病理证实的肺癌及定期随访结节病例，人工智能软件及阅片者检测到的结节由 2 名胸部专家进行评估并记录其大小及特征。计算灵敏度、假阳性率评估人工智能软件及医师的结节检测效能对比。

结果 100 例胸部多层螺旋 CT 人工智能软件共检出非钙化结节 635 例，其中实性结节 353 例，磨玻璃结节 165 例，混合结节 34 例，假性结节 83 例，其中小于 5mm 结节 104 例；放射科医师检出结节 487 例，其中实性结节 327 例，磨玻璃结节 135 例，混合结节 25 例，其中小于 5mm 结节 78 例。人工智能软件结节检测灵敏度明显高于放射科医师。人工智能总体假阳性率为每例 CT 0.83 个。

结论 人工智能软件能实现肺结节的无漏诊检出，具有较医师更高的结节检出灵敏度，在排除微小结节后可降低假阳性率。

能谱 CT 在鉴别中央型肺癌与肺不张中的价值

何小群,李琦,罗天友,霍继文
重庆医科大学附属第一医院

目的 探讨能谱 CT 在鉴别中央型肺癌与肺不张中的应用价值。 **方法** 回顾性分析 2014 年 5 月-2019 年 5 月我院收治的经纤维支气管镜活检证实的中央型肺癌合并肺不张 42 例患者的能谱 CT 影像资料，利用能谱 CT 优化对比噪声比（CNR）技术重组出最佳单能量图像（BMI）与最佳单能量-碘基物质融合图像（BMI&ICM）。统计增强各期中肿瘤与不张肺组织优化 CNR 的最佳单能量值，比较：①PI 与 BMI 的图像质量。根据瘤-肺交界面显示情况建立 4 分制主观评分标准，并规定 1-2 分为检出率（-），3-4 分为检出率（+），比较：②动脉期、静脉期和延迟期混合能量图像（PI）、BMI 与 BMI&ICM 对瘤-肺交界面的主观评分与检出率；③肿瘤与不张肺组织的碘浓度值差异。 **结果** ①增强各期中，肿瘤与不张肺组织在 56KeV 时取得最佳对比噪声比，此条件下 BMI 的图像质量明显优于 PI，差异有统计学意义（P＜0.001）。②增强各期中，BMI & ICM 的瘤-肺交界面评分最高，BMI 次之，PI 最低，差异有统计学意义（P 均＜0.05）；增强各期中 BMI 及 BMI & ICM 的瘤-肺交界面检出率均显著高于 PI（P 均＜0.001），但 BMI 与 BMI & ICM 的瘤-肺交界面检出率差异无统计学意义（P＞0.05）；PI 在增强各期瘤-肺交界面评分及检出率均无统计学意义（P 均＞0.05），BMI 与 BMI & ICM 动脉期及静脉期瘤-肺交界面评分及检出率均高于延迟期，差异有统计学意义（P 均＜0.05），但动脉期与静脉期之间差异无统计学意义（P＞0.05）。③增强各期中，肺癌的碘浓度值均低于不张肺组织，差异有统计学意义（P＜0.001）。**结论** 能谱 CT 对中央型肺癌与肺不张具有较好的鉴别能力，值得在临床中应用推广。

2cm 以下肺部磨玻璃影 HRCT 特征及其病理基础的研究

许尚文
中国人民解放军联勤保障部队第九〇〇医院(原福州总医院)

目的 探讨 2 公分以下肺部磨玻璃影（GGO）HRCT 特征与病理分类的联系。
方法 回顾性分析直径 2cm 以下的肺部磨玻璃影 152 例病灶，所用病灶均是手术切除后经病理证实的。图像评价分析内容包括：病灶位置、大小和密度、边缘（分叶、长短毛刺）、内部（空泡征、细支气管造影征）、病灶实性成分的大小和密度、所占的比例（大小、密度）、胸膜凹陷征、病灶与血管的关系。采用统计方法对资料进行分析。
结果 不同病理组的病灶的大小有统计学差别（P<0.001），病灶大小浸润组（MIA+IAC）＞浸润前组（AAH+AIS）＞炎性病变组（INF）。不同病理组病灶的密度、实性成分的密度有统计学差异，病灶密度 IAC、MIA 组最高，INF、AAH 病灶密度最低。INF、IAC 的实性密度最高。不同病理组病灶的边缘（分叶、短毛刺、长毛刺）有统计学差异（P<0.001），其中 MIA、IAC 组中的分叶征象较 INF 组更常见（P<0.005）；MIA、IAC 组中的短毛刺征象较 AIS 组更常见，AIS 组短毛刺征象较 INF、AAH 组更为常见（P<0.001）；不同病理组病灶内部（空泡征、细支气管造影征）有统计学差异（P<0.001），MIA 组中的空泡征较 AIS 组中更常见；IAC 组出现细支气管造影征的可能性最大（P<0.005）。AIS、MIA、IAC 组较 INF、AAH 组出现胸膜牵拉征的可能性更大（P<0.005）。五组病理类型中，病灶与血管关系类型是有差异的（P<0.001）， INF、AAH 组以Ⅰ、Ⅱ型与血管关系为主，AIS、MIA 组以Ⅲ、Ⅳ型与血管关系为主，IAC 组则以Ⅳ、Ⅴ型与血管关系为主。
结论 病灶位置、大小和密度、边缘（分叶、长短毛刺）、内部（空泡征、细支气管造影征）、病灶实性成分的大小和密度、所占的比例（大小、密度）、胸膜凹陷征、病灶与血管的关系类型对病理分类有预测价值。

CT 引导下带钩钢丝定位术在肺部孤立性磨玻璃密度结节胸腔镜手术中的价值分析

高才良,乐暾,曾文兵
重庆三峡中心医院

目的：探讨 CT 引导下带钩钢丝（Hook-wire）定位术在肺部孤立性磨玻璃密度结节（solitary ground glass nodule, sGGN）胸腔镜手术中的应用价值。**方法**：对 48 例患者的 sGGN 于术前行 CT 引导下带钩钢丝定位，然后施行电视胸腔镜手术（video assisted thoracic surgery, VATS）楔形切除术，根据术中冰冻病理结果决定下一步治疗方式。统计定位准确率、并发症发生率、VATS 肺楔形切除手术成功率、中转开胸率以及 sGGN 病理分型等。**结果**：Hook-wire 定位成功率为 100%，咯血 1 例需要处理，术中 Hook-wire 脱落 1 例(2.08%)，VATS 肺楔形切除手术成功率为 97.9%，中转开胸 1 例。**结论**：采用 CT 引导下 Hook-wire 定位术在肺部孤立性磨玻璃密度结节胸腔镜手术中的应用价值理想，诊断准确率高、方法可靠，并发症少，具有很好的临床推广价值。

PU-2587
7 例原发性肺黏液腺癌误诊的影像表现及文献复习

陈瑾,程明斌,徐冰,李辉
北京市顺义区医院

目的 回顾性分析 7 例误诊为肺炎性病变的原发性肺黏液腺癌(PPMA) 的影像表现，结合相关文献复习，提高对 PPMA 的影像诊断准确率。方法 回顾性分析 2014 年 12 月至 2019 年 7 月误诊为肺炎性病变经病理证实的 7 例 PPMA 的临床及影像学表现。结果 7 例患者，2 例临床表现为典型的咳白色泡沫痰，7 例肿瘤标志物均升高，5 例影像表现为肺炎型，2 例表现为结节肿块型，伴“枯树枝征”5 例，近心端磨玻璃影 3 例，多发囊腔影及“蜂窝”影 4 例，肺叶膨隆征 4 例，“血管造影征”4 例，分叶征 2 例，全部经穿刺活检或手术切除明确病理。结论 PPMA 的影像表现多样，极易与肺炎性病变相混淆，当发现 CT 值低于一般肺炎性实变的病灶出现肺叶膨隆、“枯树枝征”、近心端磨玻璃对诊断 PPMA 具有重要价值。

PU-2588
320 排容积 CT 单、双入口联合模式全瘤灌注参数对肺内孤立性结节诊断价值探析

冯再辉[1],罗艳芬[1],杨艳红[1],张雅斌[1],葛冰[1,2]
1.红河州第三人民医院/红河州肿瘤医院
2.佳能医疗临床应用培训部

摘要 目的 探讨 320 排容积 C T 单、双入口联合模式下，全瘤灌注参数对孤立性肺结节良恶性的鉴别价值，并尝试探索诊断界值。**方法** 对我院 2016 年月至 2017 年 10 月初诊为肺内孤立性结节病变，进行灌注扫描。对所有数据进行回顾性研究。所得数据全部由 Vital 工作站进行后处理，全部获得双入口模式（DI-CTP）下的：支气管动脉血流量（AF）、肺动脉血流量（PF）、肺动脉灌注指数（PI，PI=PF/AF+PF)；单入口模式(SI-CTP)下的：等效血容量（E.BV）、血流萃取率（FE）、动脉血流量（S-AF）。所有数据使用 SPSS19.0 统计软件进行统计学分析。**结果** （1）肺内结节良、恶性组的 AF、PI、E.BV、FE、S-AF 差异有统计学意义。（2）肺内良、恶性结节统计上有显著性差异的全瘤灌注参数 ROC 曲线下面积分别为：AF，0.771；E.BV,0.906；FE，0.772；S-AF，0.775；PI,0.889。①ROC 曲线下面积比较：E.BV＞PI＞S-AF＞FE＞AF。②各参数诊断界值：E.BV=5.00，敏感性 0.909，特异性 0.857；PI=43.24，敏感性 0.905，特异性 0.121； S-AF=69.65，敏感性 1.000，特异性 0.714； FE=39.85，敏感性 0.636，特异性 1.000； AF=54.20，敏感性 0.879，特异性 0.667。（3）多参数联合，结合形态学诊断阳性预测值达到了 93.97%，阴性预测值达到了 95.24%，诊断效能明显高于单纯形态学诊断及单一灌注参数诊断。**结论** 320 排容积 C T 全瘤灌注参数对肺内孤立性良恶性结节鉴别具有实际应用价值，且有较大帮助。多个灌注参数中，以 PI、E.BV、FE 诊断效能突出。多参数联合，结合传统形态学诊断，可达到更高诊断符合率。具体各参数诊断界值尚待探索，亟待统一研究标准。

AI 辅助软件对疲劳状态下放射科规培医生肺结节检测效能的研究

许迪,孙丹丹,王亮
大连大学附属中山医院

目的：对疲劳状态的放射科规培医师在 AI 肺结节检测软件辅助下对肺结节诊断效能提升的研究。**方法：**收集西门子双源 CT 扫描的胸部病例 182 例。放射科规培医师分别三种模式下进行阅片，即正常状态下（A 组）、疲劳状态下（即一天日常工作满 8 小时以上）独立阅读（B 组）、疲劳状态

使用 AI 软件进行阅片（C 组），三种阅片模式均间隔洗脱期（大于 15 天），并记录结节位置、大小、数目。最终，将 3 次肺结节检测结果与金标准（由 2 名从事影像诊断工作 8 年及以上的医师结合 AI 辅助软件共同阅片，意见不同时由第 3 名从事影像诊断工作 15 年及以上的医师进行会诊，最后做出一致诊断）进行比对，记录正确、误诊、漏诊结节数，用敏感度及假阳性率评价三种模式的检测效能。

结果：试验共纳入 1281 个结节，三组检出真阳性结节数为；591、517、995，假阳性数为 299、232、167，三组均有统计学差异(p＜0.05），三组敏感性分别为 46.1%、40.3%，77.7%,假阳性率分别为 1.64/CT、1.27/CT、0.92/CT (p＜0.05）；B 组（疲劳状态）比 A 组（正常状态）肺结敏感性降低了 5.78%(p<0.05)，C 组疲劳结合 AI 状态下敏感度最高（77.7%），假阳性率最低（0.92/CT）。

结论：疲劳降低了放射科规培医师对肺结节检测效能，然而，在 AI 软件辅助下，疲劳状态下的放射科规培医师能够达到比正常状态下更高的肺结节检测效能，有助于应对日益增长的工作量，且明显提高了结节的敏感性。

PU-2590

能谱 CT 对局灶性机化性肺炎与周围型肺腺癌的鉴别诊断

柯晓艾,周俊林
兰州大学第二医院

目的：评价能谱 CT 对局灶性机化性肺炎与周围型肺腺癌的鉴别诊断价值。

材料与方法：回顾性分析经手术病理证实的 25 例周围型肺腺癌患者（肺癌组）和 16 例局灶性机化性肺炎患者（肺炎组）的能谱 CT 资料，对所有图像均采能谱软件处理，获得病灶在动脉期、延迟期不同能量水平（40-140keV）的 CT 值、能谱曲线、基物质对浓度（水-碘）定量参数，采用独立样本 t 检验分析能谱特征参数，并用 x^2 检验定性分析其形态学表现。

结果：肺癌组病灶边界清晰、短毛刺征、深分叶征、钙化、纵隔淋巴结肿大占比均显著高于肺炎组（P<0.05），而肺炎组支气管充气征、长毛刺征、液化坏死及邻近胸膜肥厚占比显著高于肺癌组（P<0.05）。肺炎组动脉期及延迟期在 40-70 keV 范围内单能量 CT 值及碘浓度均高于肺癌组（P<0.05），且单能量越低，CT 值之间的差异越大；二者间水浓度无统计学差异（P> 0.05）。二者增强双期能谱曲线均呈下降型，动脉期肺炎组能谱曲线斜率（2.55±0.32）与肺癌组（2.00±0.84）有统计学差异（p <0.05）；延迟期肺炎组能谱曲线斜率（2.17±0.27 ）与肺癌组（1.76±0.56）有统计学差异（p <0.05）。

结论：局灶性机化性肺炎与周围型肺腺癌具有不同形态学特征及单能量 CT 值、能谱曲线和能谱特征物质含量等定量特征。能谱 CT 为鉴别局灶性机化性肺炎与周围型肺腺癌提供了一种多参数的方法。

PU-2591

Pertinence of CT and Clinic Characteristics on Epidermal Growth Factor receptor Mutation in lung adenocarcinoma

jiwen huo
The first affiliated hospital of ChongQing Medical University

Perpose:To explore the pertinence of CT and Clinic Characteristics on Epidermal Growth Factor receptor Mutation in lung adenocarcinoma.Methods:We identified 1095 patients with isolated lung adenocarcinoma,excluding that whose boundary cannot be determined.A total of 803 cases were included.Results:①EGFR gene mutation status: among 803 patients,426 had EGFR mutation while 377 had EGFR wild-type mutation. Among 422 mutant patients, the EGFR gene exon 19-del deletion mutation accounted for 39.1%, the exon 21 L858R and L861Q deletion mutation accounted for 51.7%, and the others accounted for 9.2%.②Correlation between clinical features and EGFR gene mutation: the female with EGFR mutation were significantly higher than those with wild-type and the non-smoking patients with EGFR mutation were significantly higher than those with wild-type EGFR, and the mutation rates were 69.5% and 69.3% ,respectively(p=0.000).③Correlation between CT image features and EGFR gene mutation: Maximum diameter, Ground Glass Opacity(GGO), air bronchogram , burr,lobulation, pleural retraction, pleural effusion, necrosis,vascular convergence,lymph node metastasis,multiple bilateral lung metastasis in EGFR-mutation group were statistically significant than EGFR-wild group.Logistic regression showed that the clinical characteristics of women , non-smoking and imaging characteristics of GGO,lobulation,pleural retraction and vascular convergence,multiple bilateral lung metastasis could be used as independent predictors of EGFR mutation status in isolated lung adenocarcinoma. The Receiver Operating Characteristic curve analysis found that the area under the curve curve(AUC) was 0.762(p=0.016) and the sensitivity and specificity of the predicted therapeutic efficacy of NSCLC were 62.68% and 78.72% respectively.Conclusion:Female,non-smoking,GGO,pleural,retraction,lobulation,vascular convergence and multiple bilateral lung metastasis could be independent predictors of EGFR mutation lung adenocarcinoma .

PU-2592

成人 B55 型腺病毒肺炎胸部 CT 表现分析

游涛[1],刘丹[2]
1.中国人民解放军中部战区总医院
2.湖北省肿瘤医院

目的 总结成人 B55 型腺病毒肺炎的胸部 CT 特征性表现，提高对该病的诊断能力。**方法** 选择在本院 2015 年 2-3 月间住院确诊的腺病毒肺炎患者 76 例，均为男性，平均年龄 19.2 岁，回顾性分析其胸部 CT 图像，总结肺部病变的 CT 征象及特点。**结果** 主要表现为不同程度的发热、咳嗽、扁桃体肿大以及其他非特异性全身毒血症状。86%的患者白细胞未见明显升高；其中 39 例以磨玻璃病灶为主，26 例以实变为主，11 例患者仅表现为肺部少许条片影、小片状或结节样密度增高影；大部分病灶边缘清晰，部分膜玻璃病灶或实变灶呈云絮状，较有特征性。临床治愈出院时及近期复查

时绝大部分病灶消失，个别表现为病变区细条索影或胸膜粘连。**结论** 腺病毒肺炎的主要胸部 CT 表现为肺部单发或多发的叶段性或斑片状磨玻璃密度影、实变或间质性改变，病变分布多位于两肺下叶。

PU-2593

初治与复治耐多药肺结核的 CT 表现分析

杨佳
重庆市公共卫生医疗救治中心

【摘要】 目的 探讨初治与复治耐多药肺结核 CT 表现。**方法** 搜集 2016 年 1 月至 2019 年 1 月我中心 186 例耐多药肺结核患者，初治组患者 80 例；复治组患者 106 例。对比两组患者 CT 表现进行统计学分析。**结果** 初治组肺毁损 6.3%、病灶范围≥3 叶 71.3%、病灶中叶及舌段发生率 72.5%、条索影 23.8%、钙化灶 10%、支气管扩张 31.3%发生率少于复治组[分别为 20.8%、90.6%、85.8%、54.7%、27.4%、77.4%]，差异均有统计学意义（X^2值分别为 7.730、11.656、5.098、18.021、8.621、39.670，*P*均＜0.05）；初治组胸廓塌陷 5.0%、纵膈移位 7.5%、胸膜增厚 53.8%发生率少于复治组[分别为 21.7%、35.8%、78.3%]，差异均有统计学意义（X^2值分别为 8.943、20.288、12.576，*P 均*＜0.05）。初治组空洞发生率 56.3%(45/80)、空洞≥3 个 23.8%(19/80)、厚壁空洞 51.3%(41/80)、薄壁空洞 12.5%(10/80)、虫蚀样空洞 16.3%(13/80)、空洞呈簇聚集 16.3%(13/80)、空洞内壁不光滑 7.5%(6/80)均少于复治组[分别为 83%(88/106)、59.4%(63/106)、70.8%(75/106)、40.1%(43/106)、40.6%(43/106)、40.6%(43/106)、20.8%(22/106)]，差异有统计学意义（X^2值分别为：16.034、23.551、7.390、17.626、12.810、12.810、6.264，*P*均＜0.05）。**结论** 初治耐多药肺结核肺毁损、纤维钙化灶、多发空洞、虫蚀样空洞、支气管扩张等典型耐多药肺结核影像表现的发生率均较低，复治者则与典型的耐多药肺结核 CT 表现相似。

PU-2594

白血病患者化疗期间肺部真菌感染的 CT 影像特征及抗真菌感染相关性回顾性研究

苏丽平
重庆医科大学附属永川医院

目的：白血病是血液系统恶性肿瘤性病变，患病率逐年上升。由于白血病对自身免疫系统的破坏，以及白血病化疗药物造成的骨髓抑制进一步加重机体免疫功能的下降，让白血病患者感染罹患率明显增加，肺部是感染最主要的靶器官，肺部真菌感染致死性病因之一，临床症状和体征缺乏特异性，因此难以明确诊断、及时治疗。痰培养耗时、且阳性率不高，鉴别诊断困难。笔者分析总结我院一组病例,探讨白血病患者肺部真菌感染的影像学表现和诊断。

方法：回顾性分析 53 例白血病合并肺部感染（真菌感染 27 例、细菌感染 25 例）的胸部 CT 影像资料，对肺部感染分布特点、肺部病灶影像特征以及肺部病灶特征与抗真菌治疗相关性进行统计分析。

结果:27 例 1 确诊真菌感染患者，肺真菌感染的影像学表现多种多样，11 例均有结节、磨玻璃状的渗出、实变性病变，2 例呈结节、斑片影，2 例结节周围有晕征，5 例实变侧胸腔积液， 27 例病人

接受抗真菌治疗后，23 例患者病灶痊愈、好转或有吸收，4 例无效。25 例患者肺部出现类似病灶，抗细菌治疗遂好转，未作抗真菌治疗。

结论:1.白血病患者治疗病程中，肺部真菌感染的罹患率明显上升，加重患者经济负担，增加死亡率。2.真菌感染的胸部影像学征像随临床症状而出现，表现多种多样，多缺乏特征。3.多发结节、实变合并磨玻璃病变，是真菌感染的较为特征性的表现，具有提示诊断价值。4. CT 是在诊断白血病患者合并肺部真菌感染、评价抗真菌感染疗效具体重要价值。

PU-2595

原发性肺肉瘤样癌的 MSCT 表现及病理基础

何其舟
西南医科大学附属中医医院

目的 探讨原发性肺肉瘤样癌（PSC）的多层螺旋 CT（MDCT）的表现特征及病理学基础，以提高对该病的影像诊断。方法 回顾性分析经临床手术病理证实的 22 例肺癌肉瘤的 CT 表现，并与病理结果进行对照分析；所有患者均行平扫加增强扫描。结果 22 例中周围型 19 例，主要表现为肺外围实性肿块，直径大小 3.0-9.2cm，瘤-界光整 8 例，模糊 2 例，呈分叶状 4 例，毛刺 2 例；中央型 3 例，表现为肺门支气管周围肿块，大小 2.5-6.7cm，支气管受压变窄，均合并阻塞性肺炎。22 例 CT 增强扫描肿瘤均呈不均匀强化，部分呈厚薄不均环形强化；7 例侵及胸膜，5 例肺门和（或）纵膈淋巴结肿大，3 例有远处转移；结论 原发性 PSC 的 CT 平扫表现无明显特异性，具有肺癌和肉瘤的双重特性，典型表现为伴有分叶或毛刺的较大类圆形肿块，增强后呈厚环状强化，对其初步诊断具有一定临床价值。

PU-2596

肺奴卡菌病的影像学表现

滕跃,李勇刚
苏州大学附属第一医院

肺部奴卡菌感染是一种少见疾病，男多于女（男女比例约 2:1-3:1）。奴卡菌感染的易感因素为器官移植、恶性肿瘤、糖尿病、酗酒、使用激素、HIV 感染和应用免疫抑制剂等，特别是因艾滋病或移植相关的细胞免疫功能受损的患者，但有大约三分之一的奴卡菌病患者免疫功能正常。奴卡菌可以累及全身多个器官，其中最多见的受累器官是肺部和中枢神经系统。
大多数奴卡菌感染始于肺部，通过直接吸入奴卡菌发生，占感染患者的 2/3。肺部奴卡菌病可以是急性，亚急性或慢性起病，常有复发和缓解交替的表现。患者症状没有特异性，包括胸痛，咳嗽，痰中带血，出汗，发冷，虚弱，纳差，体重减轻以及呼吸困难或劳累，咯血和腹痛相对少见。急性或亚急性起病者症状类似肺炎，而慢性病程的患者症状与肺结核类似。
肺奴卡菌病是一种非特异性感染，其影像学表现无特异性。主要表现包括：
（1）肺实变：肺实变可能是肺奴卡菌最有特征性的表现。实变可以累及单个或多个肺叶，后者多见。若实变内部密度减低，通常提示脓肿形成。约 30%的病灶内有空洞形成；
（2）肺结节或肿块：实性结节多见，实性结节多于磨玻璃结节，部分病灶周围可以出现“晕征”，但是相对少见；
（3）胸膜增厚、胸腔积液和脓胸：约三分之一的患者出现胸腔积液；当病灶累及胸膜腔时可出现脓胸；

（4）根据奴卡菌在肺部播散途径不同，可有不同的影像学表现。经支气管播散的患者常可见空洞形成，其更特征性的表现是小的小叶中心结节，常伴有支气管壁增厚和支气管内小碎片影。而经血行播散的肺奴卡菌病灶表现为多发大小不等结节。
该病目前诊断较为困难，本文结合近年来国内外对肺部放线菌病的报道和研究，为该病的诊疗提供参考和借鉴。

PU-2597

MSCT 结合临床病史对双肺多发实性结节病变鉴别诊断价值的评价

孟繁杨
吉林大学第一医院

目的： 探讨 MSCT 结合临床病史对双肺多发实性结节病变的鉴别诊断价值。方法：对我院 2017.4-2019.6 收治的 5 例双肺多发实性结节病变患者的临床资料进行回顾性分析,总结相应的 MSCT 特征和临床病史。结果： 5 例患者均表现为双肺多发大小不等结节影，4 例伴有空洞，单纯依靠影像难以鉴别，结合临床病史：1 例 pANCA 阳性，双肺结节较大病灶位于双肺下叶，部分结节见晕轮征和供养血管征，空洞内见液气平面，激素治疗后病灶及空洞体积均减小，诊断为肺韦格氏肉芽肿；1 例结肠癌化疗后病史，痰真菌核酸检测阳性，空洞表现为新月形，抗真菌治疗好转，诊断为肺真菌感染；1 例肿瘤标志物升高，较大结节边缘见分叶及毛刺，牵拉胸膜，空洞小且偏心分布，穿刺找到腺癌细胞，诊断为肺腺癌；1 例结核感染 T 细胞斑点试验阳性，结节位于上叶后段及下叶背段，多为薄壁空洞，局部洞壁见钙化，诊断为双肺结核；1 例原发性肺癌病史，双肺结节边缘光滑锐利，未见空洞，诊断为双肺多发转移瘤。结论：MSCT 结合临床病史对双肺多发实性结节性病变鉴别诊断有价值.

PU-2598

关于肺部类鼻疽感染的探讨

黎海燕,张猛,麦盛始
三亚市人民医院

目的 分析类鼻疽肺炎临床特点及影像学表现，提高人们对类鼻疽感染的认识。
方法 总结本院 2012 年 2 月至 2018 年 10 月经细菌、血液、脑脊液等培养证实的 22 例类鼻疽肺炎患者，探讨其临床特点及影像学表现。
结果 类鼻疽肺炎症状表现：发热(100%)、咳嗽和咳痰(40%)等；血象：大多贫血，白细胞和中性粒细胞比例及 c 一反应蛋白和血糖大多明显升高（95%）；类鼻疽伯克霍尔德杆菌(血培养阳性占 90%，痰培养阳性占 20%)；Strauss 反应阳性（占 95%）；血清学检测：间接红细胞凝集试验效价在 1:40 以上，补体结合试验效价在 1:8 以上（占 98%）。胸部影像学表现常累及多个肺叶，散在分布，多形态，常累及胸膜，以浸润性病变为主(80%)，多发大小不等结节(40%)、胸腔积液(30%)、空洞(20%)也常见。

结论 在糖尿病、肝硬化等（ 95 % ）为主要基础疾病， 出现发热、胸痛、咳嗽等临床表现；肺部影像学表现以浸润病灶为主的多形态病灶， 经过一次或多次血培养出类鼻疽伯克霍尔德菌。应考虑到类鼻疽感染可能，应及时行微生物培养

PU-2599

肺毛霉菌病的 CT 表现及动态随诊

周红俐[1],宋兰[2]
1.南充市中心医院/南充市肿瘤医院
2.北京协和医院

目的 探讨肺毛霉菌病(pulmonary mucormycosis，PM)的 CT 特征，包括其随诊动态变化，以提高对该病的认识。方法 回顾性分析 9 例经病理证实的 PM 患者的胸部 CT 及临床资料。所有患者均行 MSCT 平扫，5 例行增强扫描。结果 PM 主要为双侧分布，肺叶、肺段分布无规律。2 例为大片实变，7 例以肿块、结节、实变的组合形式出现。病灶出现液化坏死 7 例，晕征 6 例，毛刺征 5 例（长毛刺为主），空洞及空泡征各 4 例，气液平、反晕征、分叶征（浅分叶为主）及点状钙化各 2 例，空气半月征 1 例。5 例实性成分轻中度强化，支气管受侵 6 例，淋巴结肿大 5 例，胸腔或心包积液 6 例，胸膜凹陷征 4 例。抗真菌治疗约 1～2 周病灶扩大，继而出现液化坏死及空洞，治疗约 3～4 周后逐渐好转，停药后病变进展 3 例。结论：PM 基线 CT 表现形式多样，常伴晕征，强化程度低，易侵犯支气管，可出现类似肺癌的恶性征象，反晕征少见。PM 治疗初期易出现影像学加重的假象，停药可致病变进展。

PU-2600

CT 低剂量检查在儿童肺炎复查的应用

宋鹏,王文燕,胡婧
河北医科大学第二医院

目的：在满足诊断的前提下依据体重指数（BMI，Body Mass Index）采用部分迭代技术降低儿童胸部 CT 辐射剂量。方法，测量儿童肺 CT 复查患者的体重指数，根据个体差异前瞻性给予不同技术参数设为对照组，与首诊无差别的技术参数常规组相比较，图像质量主观评价评分、客观数据统计分析，分析辐射剂量对照组相对常规组容积剂量指数(CTDIvol)、剂量长度乘积(DLP)，计算有效剂量（effective dose，ED）。结果：通过体重指数采用迭代技术制定儿童差异性 CT 参数能够有效地降低 X 线辐射剂量，BMI<15.0kg/m^2辐射剂量降低约 %，15.0≤BMI<18.5kg/m^2辐射剂量降低约 %，18.5≤BMI≤24.9 kg/m^2辐射剂量降低约 %，24.9<BMI<30 kg/m^2辐射剂量降低约 %，对照组较常规组降低辐射剂量 %，主客观评价图像质量无统计学意义，均能满足影像诊断。讨论：儿童肺炎复查运用部分迭代技术根据患者体重指数制定 CT 不同扫描方案，降低儿童受辐射剂量，减少生物学随机效应不良发生的概率，规范个体扫描参数。

PU-2601

表现为肿块样改变的肺结核与周围型肺癌的鉴别诊断

王月波

四川省医学科学院·四川省人民医院

目的：对比周围型肺癌的 CT 平扫及增强表现，分析肿块样肺结核的误诊原因，以提高对肿块型肺结核的认识及诊断准确性。方法：收集术前误诊为肺癌经手术病理或经穿刺活检为肺结核的肿块 40 例，分析病变的部位、形态、大小、密度、内部空洞的形态及部位、内部钙化数量及形态、卫星灶有无、增强程度、胸膜凹陷、纵膈淋巴结形态及密度、胸水有无等表现，分析误诊原因。同时收集 40 例经病理或穿刺活检证实的周围型肺癌，对两组病例按照上述特点进行对比。结果：40 例肿块型肺结核中边缘欠光整 35 例，5 例边缘光滑；浅分叶 30 例，深分叶 10 例；短小毛刺 5 例，细长毛刺 13 例；7 例可见点状或结节状钙化；11 例可见小空洞，边缘光滑，并位于近肺门侧；14 例周围可见数量不等卫星灶；28 例周围胸膜增厚；轻度强化 28 例，中度强化 9 例，显著强化 3 例；纵膈淋巴结肿大 18 例，其中 2 例可见钙化；7 例可见胸水。40 例肿块型结核与肺癌相比，深分叶征、短毛刺、空洞征、胸膜凹陷、卫星灶、强化程度在 2 组间差异有统计学意义（$P<0.05$），以上征象（深分叶、短毛刺、空洞、胸膜凹陷）出现越多、越典型提示肺癌可能性大；卫星灶出现越多提示结核可能性大；空洞越靠近肺门、边缘光滑强烈提示肺结核，空洞远离肺门端、边缘欠光滑更倾向于肺癌；轻度强化提示肺结核，显著强化提示肺癌。结论：在对肿块型病变进行分析诊断时，不要一味考虑肿瘤占位性病变，结核表现多种多样，要充分结合以上影像表现及临床特征进行分析，除对肿块型病变的常规毛刺、分叶、胸膜凹陷、血管集束等方面仔细分析时，同时更要注重空洞形态及位置、周围卫星灶、强化程度等方面予以重视，以提高对肿块型结核的诊断准确性，为其治疗提供科学依据。

PU-2602
异基因造血干细胞移植受者真菌性肺炎的 ＣＴ 表现及动态变化

刘灶松
广州市第一人民医院

目的 探讨异基因造血干细胞移植 （ａｌｌｏｇｅｎｅｉｃ ｈｅｍａｔｏｐｏｉｅｔｉｃ ｓｔｅｍ ｃｅｌｌ ｔｒａｎｓｐｌａｎｔａｔｉｏｎ， ａｌｌｏ-ＨＳＣＴ）受者真菌性
肺炎的发病时间 ＣＴ 表现及动态发展变化。 方法 回顾性分析 ２８ 例 ａｌｌｏ-ＨＳＣＴ 受者真菌性肺炎的 ＣＴ 表现及临床资料。
结果 ２８ 例真菌性肺炎，发生在移植后 ３０ 天内 ４ 例，３１ ～１００ 天 ８ 例，１０１ ～３６５ 天 ６ 例，３６５ 天以后 １０ 例。 ２４ 例 ＣＴ 主要
表现为结节和（或）团块状影，其中７ 例伴晕征； １６ 例病程中出现空洞，其中１１ 例空洞出现分隔征； １１ 例出现气腔实变； １０
例出现磨玻璃密度； ６ 例出现局限性支气管扩张； ６ 例出现网织状改变。 经抗真菌治疗后， １７ 例病变吸收，其中 １０ 例患者
病变吸收过程中出现空洞伴分隔征。 结论 ａｌｌｏ-ＨＳＣＴ 受者真菌性肺炎可发生在移植后各个时间段，其 ＣＴ 表现多种多
样，主要表现为结节、团块及空洞；空洞伴分隔症可能是病变吸收的表现

PU-2603
平扫薄层 CT 结合窗技术对肺动脉栓塞的显示

李一鸣, 宫毅, 杨淑杰
天津市人民医院

目的：探讨平扫 CT 薄层肺窗影像在肺动脉栓塞（PE）患者的表现及诊断价值。 方法：回顾性分析 2016.7-2019.7 我院住院患者经肺动脉 CTA 检查 735 例，其中 CTA 检查前行胸部 CT 平扫 253 例，以肺动脉 CTA 为对照，对比常规纵隔窗（层厚：8mm，WW:350HU,WL:35HU）和薄层肺窗（层厚：2mm,WW:80HU,WL:35HU）影像上，PE 的表现及阳性率。统计学分析采用卡方检验。 结果：经肺动脉 CTA 检查确诊 PE 的 62 例，年龄 31-87 岁，下肢深静脉血栓患者 53 例（85.48%），D 二聚体均升高，平扫 CT 检查均未给予疑似 PE 诊断。肺动脉 CTA 上，PE 发生于肺动脉Ⅰ级 1 例，Ⅱ级 24 例，Ⅲ级 40 例，Ⅳ级 51 例，Ⅴ级 33 例。在平扫 CT 上，与非病变血管密度相比，PE 可表现为高密度影（>45HU）或低密度影（<20HU）；常规纵隔窗阳性为 14.51%，薄层肺窗影像阳性率为 40.32%，差异有统计学意义，P<0.05；薄层肺窗影像上，Ⅲ级以上阳性率为 38.46%，高于Ⅲ、Ⅳ级阳性率 6.15%，P<0.05。结论：平扫 CT 薄层肺窗影像对肺动脉栓塞的显示优于常规纵隔窗影像，对于高危人群应细致观察，有助于及早行肺动脉 CTA 检查以进一步确诊。

PU-2604

2D-PC MRI measurement of pulmonary artery blood flow and left atrial function in smokers: a correlational research

Shuangchun Ma,Zhiyong Li,Ailian Liu
The First Affiliated Hospital of Dalian Medical University

Purpose To investigate the correlation between main pulmonary artery blood flow and left atrium functional parameters in smokers using two-dimensional phase contrast magnetic resonance imaging (2D-PCMRI). **Method** Twenty-two smokers (all men, mean age: 39.6±7.3 y years) were enrolled in this study. All of them underwent main pulmonary artery 2D-PC and cardiac scan at 3.0T MR from December 2017 to February 2018. Blood flow parameters include Peak Positive Velocity (PPV) (cm/s), Peak Negative Velocity (PNV) (cm/s), Average flow (AF) (ml/beat), Average Positive Flow (APF) (ml/beat), and Average Negative Flow (ANF) (ml/beat). The correlation between main pulmonary artery blood flow and left atrial functional parameters was analyzed. **Result** There is a statistically correlation between pulmonary artery PPV and left atrial active ejection fraction (LAEFa) (p=0.016, r=0.509), and left atrium total ejection fraction (LAEFt) (p=0.011, r=0.531) respectively. Similarly, there is a statistically correlation between pulmonary artery AF and LAEFt (p=0.009, r=0.545). There is a statistically correlation between APF and LAEFt (p=0.045, r=0.431).**Conclusion** There is a positive correlation between the main pulmonary artery blood flow and left atrium function in smokers. It is helpful in further to understand and reveal the effect of smoking on the cardiovascular system.

CT 诊断成人右肺动脉起源于升主动脉(AORPA)合并动脉导管未闭 1 例并文献复习

母德睿

云南省第三人民医院

目的：通过总结 1 例 CT 检查提示右肺动脉异常起源于升主动脉患者诊疗经过。 方法：回顾性分析 2018 年 12 月收治的一例肺动脉起源异常患者的临床资料并复习相关文献，探讨其疾病临床特点、影像学表现；结果 男 1 例 32 岁 体重为 42kg，影像诊断为右肺动脉异常起源于升主动脉并合并动脉导管未闭。结论：一侧肺动脉异常起源于主动脉极为罕见 术前影像诊断易漏诊，合并肺动脉高压患者手术困难。

PU-2606

双能 CT 碘图灌注技术评价肺动脉栓塞的价值

乔国庆,黄新平
中国人民解放军南部战区总医院

目的：探讨双能量 CT 扫描技术对肺动脉栓塞的诊断及肺灌注评价价值。
方法：回顾性研究 2019 年 1 月至 2019 年 7 月，可疑肺栓塞患者共 35 例，均行双源 64 层螺旋 CT（Siemens Definition）扫描。采用双能肺栓塞扫描方式，球管 A：管电压 140kV，管电流 55mA；球管 B：管电压 80kV，管电流 210mA。准直宽度为 64×1.2mm，螺距 0.5，旋转时间 0.33s，层厚 1.5mm，层间隔 1mm。所有患者行肘静脉穿刺，采用 MEDRAD 双筒高压注射器，采用三联注射方案：碘帕醇 20mm，3ml/s，碘帕醇 40mm，4ml/s，生理盐水 50mm，4ml/s，即先慢速注射 20ml 对比剂，立即跟注 40ml 碘帕醇，再推注 50ml 生理盐水。检测肺动脉干，100HU 触发扫描程序，延时 8S 后双能量一期扫描。然后，讲薄层数据传输至后处理工作站行 CTA 重建、双能量分析。
结果：双能量扫描方式，一次扫描可以得到 CTA 数据和肺血流灌注数据，可评价血管栓塞位置、数量、及影响范围。双能量特有的碘图能够分析肺血流灌注范围。
讨论：1.采用双源 CT 扫描较单源 CT 有更多优势，双能量扫描数据得到 CTA 的同时，能够得到碘对比剂在肺实质内的灌注的分布图，从灌注情况可以印证栓塞的责任血管和影响程度。无论是诊断新发梗塞，还是评价治疗后肺功能恢复情况，均有较高的影像价值；2.采用三联注射方案，触发探测程序注射较慢的速率，能够节约对比剂用量，也降低人体对比剂反应发生；3.部分使用单源 CT 的同行采用的是两期扫描，该扫描方案采用一期扫描，可得到 CTA 及肺实质灌注碘图，可减少对患者的辐射剂量，缩短扫描时间。延时 8s 时间，能够使碘对比剂通过肺泡，此时扫描，可以得到肺实质的灌注情况，太早期的扫描可能因为肺实质本身的灌注不均，造成栓塞存在的误诊，太晚会错过肺 A 的血管器，至 CTA 显示不佳。

PU-2607

Pulmonary Artery Size Measurements: a Comparison Study between Electrocardiographic-gated and Non-electrocardiographic-gated Computed Tomography

Xin Tang
The Affiliated Hospital of Xuzhou Medical University

OBJECTIVE. The aim of this study was to determine the differences in pulmonary artery size when measured from electrocardiographic-gated CT and non-electrocardiographic-gated CT.

MATERIALS AND METHODS. Electrocardiographic-gated CT coronary angiography and non-electrocardiographic-gated CT were performed in 279 patients suspected of having coronary artery disease. Maximum and minimum main pulmonary artery, right pulmonary artery and ascending aorta diameters were measured on the end-diastolic and end-systolic phase of pulmonary artery with electrocardiographic-gated CT. Mean main pulmonary artery and right pulmonary artery measurements were also obtained in this study. Correlation between electrocardiographic-gated CT and non-electrocardiographic-gated CT parameters were explored. Further validation of the correlation between the electrocardiographic-gated and non-electrocardiographic-gated CT was performed by using linear regression, respectively.
RESULTS. There was a significant difference in maximum and minimum pulmonary artery diameters between electrocardiographic-gated CT and non-electrocardiographic-gated CT, while mean pulmonary artery measurements showed no statistically difference. The ratio of maximum main pulmonary artery to ascending aorta diameter was slightly larger in electrocardiographic-gated CT. The correlation of the electrocardiographic-gated CT measurements showed a strong positive correlation with non-electrocardiographic-gated CT, which was confirmed in the validation data set.
CONCLUSIONS. There was a significant difference in pulmonary artery size between electrocardiographic-gated CT and non-electrocardiographic-gated CT. Electrocardiographic-gated CT measurements demonstrate a high level of correlation with non-electrocardiographic-gated CT.

PU-2608

MSCT 后处理技术在肺隔离症中的应用价值研究

刘红生,高明,宁文锋,邬小平,杨军乐
西安市中心医院

目的 探讨 MSCT 后处理技术在肺隔离症中的应用价值。
方法 选取我院 2012 年 2 月一 2019 年 6 月收治的肺隔离症患者 13 例，收集其临床资料、影像学资料等，分析、总结 13 例肺隔离症患者 CT 平扫及在不同后处理技术中的影像学表现。所有患者均行平扫及增强扫描，对图像采用最大密度投影（MIP）、容积再现(VR) 重建技术，由两名诊断医师独立观察病灶具体部位、外观形态特点、直径、密度、病变范围等情况。
结果 MSCT 平扫显示病变均位于下肺后基底段，发病部位：左肺 9 例，右肺 4 例；疾病类型：叶内型 10 例，叶外型 3 例。CT 平扫 9 例显示为囊实性混合肿块，实质性成分内出现多个囊性区合并有气体，增强后未见明显强化，其中 3 例伴有支气管扩张；病灶呈实性肿块者 4 例，伴有明显强化，边缘清楚。经 MIP、VR 后处理，13 例患者均可发现来自体循环的供血动脉，9 支由胸主动脉供血，引流入肺静脉系统，1 支由腹主动脉上段供血，1 支由腹腔干直接参与供血。
结论 MSCT 扫描结合后处理技术可清晰显示肺隔离症的外观形态、血管分布情况，为临床制定手术方案提高可靠影像学资料

PU-2609

ANCA 相关性血管炎临床及影像分析

郑慧

武汉大学中南医院

目的：抗中性粒细胞胞浆抗体相关血管炎(AAV)是一组以中小血管炎受累为主、ANCA 阳性为特征的系统性疾病。主要包括显微镜下多血管炎（MPA）、肉芽肿性多血管炎（GPA）和嗜酸性粒细胞性多血管炎（EGPA）。间接免疫荧光法(IIF)和酶联免疫吸附试验(ELISA)是此类疾病常用的实验室检测方法；本研究旨在分析 AAV 患者在实验室检查分类亚型中临床及影像特点，以提高临床医生对此疾病进一步认识。方法：检索并回顾性分析 2012 年 1 月至 2019 年 3 月武汉大学中南医院诊断为 ANCA 相关性血管炎的患者。胸部 CT 由 2 名影像科医生诊断核实，临床资料（包括患者基本病例资料，实验室检查）由 1 名肾病内科医生核实。IIF 和 ELISA 联合检验分类，统计分析两种 ANCA 亚型患者是否存在差异。结果：ANCA 相关性血管炎临床表现多样且无特异性，本研究的 69 名患者中合并肺部表现的患者有 35 例，其中主要表现为咳嗽、咳痰（32 例，46.4%），肾脏损伤（64 例，92.7%）是主要的肺外表现，包括血尿、蛋白尿、肌酐及尿素氮升高等症状；共有 59 人有肺部 CT 影像资料，以斑片状稍高密度影及肺间质改变为主。PR3-ANCA 组的患者更易表现为双肺多发结节[5/10（50%）vs 7/48（14.6%），P=0.037]。尽管不具有统计学意义，但仍可以发现肺部斑片状稍高密度影及间质性肺炎是 MPO-ANCA 更易出现的影像学表现。实验室检查中，PR3-ANCA 组的患者血沉指标升高比 MPO-ANCA 组明显（中位数：44mm/h vs 91mm/h，P=0.026）。结论：ANCA 相关性血管炎是多系统受累的一类疾病，临床表现以肺部和肾脏受损为主，ANCA 血清学检测对该疾病诊断积有极作用，在两组亚型中 PR3-ANCA 患者影像学表现更具特异性。

PU-2610

ANCA 相关性血管炎的胸部 CT 表现

黄德成
中山市人民医院

目的

研究抗中性粒细胞胞浆抗体（ANCA）相关性血管炎（AASV）在肺部疾病的临床表现及胸部 CT 表现。

方法

回顾性分析 2016 年 1 月至 2019 年 2 月于中山市人民医院经血清学确诊的 8 例 AASV 患者的临床资料及胸部 CT 表现。

结果

8 例患者中，男 3 例，女 5 例，年龄 35~79 岁（平均 48）岁。p-ANCA 均为阳性，其中合并有肾功能不全 2 例，合并有结缔组织病 3 例。胸部 CT 主要表现为实质型（肺泡毛细血管炎）及间质型（肺间质性病变），间质性肺炎 5 例，斑片状磨玻璃影 3 例，胸膜增厚 2 例，支气管扩张 5 例，支气管充气征 2 例，空洞 1 例，胸腔积液 2 例，蜂窝肺 1 例。

结论

AASV 的发病率逐渐增高，胸部 CT 表现无特异性，其临床症状与体征常与感染、恶性肿瘤、血栓性疾病及结缔组织病相重叠，易误诊为感染性肺炎、肺水肿、肺结核等。当患者血红蛋白降低，且有血尿、蛋白尿，肾功能减退，出现不可解释的双肺炎性渗出影像学改变时，应警惕 AASV。

PU-2611

320 排 CT 肺血管减影成像（DSCTPA）在肺栓塞（PE）诊断中的应用

朱乐,雷子乔,杨明
华中科技大学同济医学院附属协和医院

目的 探讨 320 排 CT 肺血管减影成像(DSCTPA) 在肺栓塞(PE) 诊断中的价值。 方法 79 例临床怀疑 PE 患者行 DSCTPA，先进行 CT 平扫，后立即行 CT 肺动脉血管造影(CTPA) ，并将两组图像加载到 Sure-SubtractionLung 软件进行处理，得到两组视图模式图像: Tissue 模式为碘分布图融合肺动脉血管像(CTPA+碘图) ，Vessels 模式为减影后肺动脉血管图像(CTPA+血管像) 。由 2 名医师采用双盲法对 2 组图像和 CTPA 图像进行分析，肺动脉血
管按肺动脉干，叶、段、亚段及以下，分别记录各患者栓子的数目与位置。研究图像显示方法诊断 PE 的敏感度、特
异度、假阴性率及假阳性率。 结果 每个病例减影后处理平均耗时 3. 5 min，按标准测得血栓共 326 个，其中位于
主干 35 个，叶肺动脉 76 个、段肺动脉 133 个、亚段及以下 82 个。CTPA 图像、CTPA+血管像以及 CTPA+碘图 3 组显
示 PE 总栓子数的灵敏度、特异度及假阴性率和假阳性率分别为 87. 7% /91. 7% /96. 6%、82. 9% /85. 2% /83. 7%、12.
3% /8. 3% /3. 4%和 17. 1% /14. 8% /16. 3%。CTPA、CTPA+血管像、CTPA+碘分布图三种方法在各肺段栓子检出率为
肺叶动脉 96. 1% /97. 4% /98. 7%，肺段动脉 85. 7% /92. 5% /97. 0%和肺亚段动脉及以下 76. 8% /81. 7% /92. 7%。 结论
DSCTPA 成像一次减影可同时得到 2 组模式图像，有助于提高对周围肺动脉的显示能力和反映碘剂在肺实质的
分布。CTPA 图像结合碘分布图和血管减影图，不仅提高了亚段及以下段 PE 栓子的诊断检出率，而且可评价肺动
脉栓塞后肺实质血流灌注的变化，为制定临床治疗方案提供参考。

PU-2612
640 层容积 CT wide-volume 模式在肺动脉成像中的应用价值

杨飞[1],王大伟[1],刘怀军[2],崔书君[1],朱月香[1],郭亚哲[1]
1.河北北方学院附属第一医院
2.河北医科大学第二医院

目的 探讨 640 层容积 CT 回顾性心电门控 wide-volume 模式在肺动脉成像中的可行性及其应用价值。**资料与方法** 收集本院行 640 层容积 CTPA 的病例，随机分为常规非心电门控螺旋扫描组（非门控组）、回顾性心电门控螺旋扫描组（门控组）、回顾性心电门控 wide-volume 模式扫描组（wide-volume 组），每组 30 例。比较各组患者基本资料及辐射剂量、图像质量评分、呼吸运动伪影及心脏大血管搏动伪影。**结果** ①扫描时间：非门控组、wide-volume 组及门控组依次增加（P<0.05）。心率：wide-volume 组（82.7±14.1）次/分显著高于门控组（68.1±12.1）次/分（P<0.05）。②图像评分：门控组及 wide-volume 组评分明显优于非门控组（P<0.05）；门控组与 wide-volume 组评分无统计学差异（P<0.05）。三组 CTPA 图像在心脏搏动伪影之间有显著统计学差异（P<0.05），采用心电门控 CTPA 能有效消除心脏搏动伪影，提高图像质量。③辐射剂量：非门控组、wide-volume 组及门控组有效辐射剂量依次增加（P<0. 05）。**结论** 640 层容积 CT 回顾性心电门控 wide-volume 扫描模式应用于 CTPA 检查具有可行性，可以在并不大幅度增加患者辐射剂量的前提下，减少心脏大血管搏动伪影，明显改善肺动脉图像质量。

PU-2613
低对比剂碘量支气管动脉 CTA 成像质量分析及其在咯血介入栓塞治疗中的应用价值

江帆,储森林,徐快乐
中国科学技术大学附属第一医院/安徽省立医院

【摘要】目的：探究低对比剂碘量支气管动脉 CTA 成像质量分析及其在咯血介入栓塞治疗中的应用价值。**方法：**选取 2018 年 6 月至 2019 年 6 月我院呼吸内科收治的因咯血介入栓塞治疗的患者 110 例进行分析，随机分分为 A、B 两组各 55 例，对 A 组行 CTA 检查注射对比剂 60ml，采用滤波反投影重建法（FBP）进行后期处理；对 B 组行 CTA 检查并注射对比剂 80ml，采用 FBP 进行后期处理。记录两组的背景噪声（SD）值、对比噪声比（CNR）、背景噪声判断值（SNR），对两组成像结果进行主观比较，按 5 分评价图像总体质量。**结果：**A 组的成像质量在 3 分以上（5 分 24 例、4 分 21 例、3 分 6 例）共有 51 例，B 组的成像质量在 3 分及 3 分以上（5 分 13 例、4 分 11 例、3 分 14 例）共有 38 例，差异具有统计学意义（$p<0.05$）；结果显示 A 组的背景噪声（SD）值（8.42±1.32）明显低于 B 组（19.24±5.64），A 组的对比噪声比（CNR）、背景噪声判断值（SNR）（51.80±5.28、45.62±4.32）明显高于 B 组（25.38±3.68、22.42±5.84）。**结论：**60ml 低对比剂碘量对支气管动脉 CTA 成像质量明显高于 80ml 低对比剂碘量，因此在不影响图像质量的情况下，低对比剂碘量对在咯血介入栓塞治疗中有良好的临床应用价值，值得推广并广泛应用于临床。

应用 80kV 联合 ASIR-V 迭代算法行超低对比剂量和低辐射剂量左心房和肺静脉 CT 血管造影的可行性分析

宋婷妮,李真林
四川大学华西医院

目的：评价应用 80kV 联合自适应统计迭代重建(ASIR-V)在 16 cm 宽体探测器 CT 上实现左心房(LA)和肺静脉(PV) CT 血管造影(CTA)超低对比剂量和低辐射剂量检查的可行性。
方法: 前瞻性收集 60 例房颤患者，在计划射频消融术前接受 16cm 宽体探测器 LA 及 PV CTA 检查，使用前瞻性心电门控，患者均自由呼吸。随机分为 A 组(n=30)，80kVp，对比剂剂量为 0.4ml/kg, 75%对比剂和 25%生理盐水混合溶液，80%ASIR-V 图像重建;B 组(n=30) ，120kVp，对比剂剂量为 0.9ml/kg, 50%ASIR-V 图像重建。测定 LA、PV、PA 的 CT 值(HU)。并计肺动脉与肺静脉的差值 ΔHU:ΔHU = HU_{LA}-HU_{PA}。采用 5 分法进行主观评分。比较两组患者的有效辐射剂量(ED)
结果: A 组与 B 组患者性别、年龄、体重及 BMI 无显著差异(p>0.05)。A 组辐射剂量(mSv)下降 69.8%(1.10±0.21 vs. 3.64±1.01,p<0.001)，对比剂量(gI)下降 57.9%(9.47±1.34 vs. 22.48±3.15,p<0.001)，碘流率(gI /s)下降 36.2%(1.18±0.15 vs. 1.8, p<0.001)。两组患者左心房及肺静脉强化良好。LSPV、LIPV、RSPV、RIPV 的 CT 值无明显差异(p>0.05)。A 组左心房 CT 值(HU)高于 B 组(568.98±129.57 vs. 501.07±62.15,p=0.02)。A 组的 ΔHU 高于 B 组(364.27±107.34 和 186.79±131.97,p < 0.05),肺动脉对肺静脉的干扰较小。A 组与 B 组主观评分无明显差异(4.33±0.55 vs. 4.21±0.77)。
结论:在宽体探测器 CT 上采用低管电压和迭代重建技术，可以在较低的辐射和对比度剂量下获得高质量的 LA 和 PV CTA 图像。

PU-2615

GE Revolution CT 肺静脉及冠脉联合成像研究

杨江华,赵卫东
山西医科大学第二医院（山西红十字医院）

目的：作为治疗心房颤动的主要方法之一，射频消融肺静脉电隔离术要求临床医师能准确评估患者冠脉情况，左心房情况及肺静脉开口位置、数量、开口直径等信息。在满足临床影像诊断需求的前提下，肺静脉与冠脉的联合成像不仅降低了扫描次数，也减少了造影剂用量，从而降低患者经济与生理上的负担。本文即以 GE Revolution 256 排 CT 为检查工具，探讨不同 BMI 下肺静脉与冠脉联合成像的可行性。
方法：选取我院需进行肺静脉与冠脉成像的病人 27 例，其中 BMI≤23 者 9 例，BMI≥28 者 9 例，BMI 在 23-28 之间者 9 例，行肺静脉与冠脉联合成像。造影剂选取碘帕醇 370（370gI/ml），经肘正中静脉注射，流速 5.0ml/s，用量为：BMI≤22 者，注射 50ml，BMI≥28 者,注射 60ml，BMI 在 23-28 之间者，注射 55ml。扫描为动态触发双期扫描方式。第一期为冠脉轴扫，第二期为由肺尖到肺底的螺旋扫描。电压均为 100KV，采用 SmartmA 技术（450-600mA）。冠脉扫描期相为自动推荐。检查数据均由 GE ADW4.6 工作站处理。图像评价为三分法：1 分为优（肺静脉及左房显示清晰，各冠脉显影良好）2 分为良（肺静脉、左房显影较差或冠脉显影较差，但满足诊断需求）3 分为差（肺静脉、左房或冠脉有任一显影差，不满足诊断需求）。辐射剂量采用自动计算 DLP，K 取 0.014。数据均以均数±标准差显示，采用方差分析进行统计学处理，以 p≤0.05 为差异有显著性。
结果：27 例肺静脉与冠脉联合 CT 成像均满足诊断需求，其图像质量为 1 分 21 例，2 分 6 例，3 分 0 例,不同 BMI 组别之间强化程度无差异（p≥0.05）。有效辐射剂量为 6.33±0.84mSv。
结论：应用 GE Revolution 256 排 CT 进行肺静脉与冠脉联合扫描可为不同 BMI 患者提供满足临床诊断需求的影像参数，是一种有效的影像技术平台。

Pulmonary Artery Lymphomatoid Granulomatosis :CT Findings

Xiaomei Ma,Gang Huang
Gansu provincial Hosptai

Introduction:
Lymphomatoid granulomatosis (LG) is an angiocentric lymphoproliferative disease.At present most of the reported cases are in the lungs, followed by skin, central nervous system, spleen, liver, lymph nodes and peripheral nerve, and pulmonary lymphomatoid granulomatosis mainly invaded the small pulmonary artery,there have been no reports of cases that the main trunk of the pulmonary artery been violated.In this report, we describe a case of pulmonary artery lymphomatoid granulomatosis.

Through a case report,To summarize the imaging features of lymphomatoid granuloma when it occured in pulmonary artery,and adds to the medical literature for the particular clinical presentation of this rare disease.

Case presentation:

A 46-year-old man was treated for chest tightness and shortness of breath for more than half a year.CTA examination showed pulmonary hypertension, irregular filling defect in pulmonary trunk,,and left pulmonary artery,and right pulmonary artery occlusion (Fig1a-1c), right atrium and right ventricle enlargement.Biopsy suggested lymphomatoid granulomatosis, and symptoms improved significantly after stent implantation sequentially,CTA examination showed:stenting can be seen in the left and right pulmonary trunk,and they also had more distant branches than before (Fig2a-2c,3a-3c).

Conclusions:

Lymphoma-like granulomatosis, which is mainly characterized by pulmonary artery invasion, is rare.The CTA examination is mainly characterized by progressive thickening of the pulmonary artery wall, narrowing of the lumen,and its diagnosis depends mainly on histological examination.but it is not easy to identify with lymphoma. This case report adds to the medical literature for the particular clinical presentation of this rare disease.

增强 CT 扫描及后处理技术对肺隔离症的 诊断价值

谢明汛
陆军军医大学新桥医院

目的：探讨增强 CT 扫描及其后处理技术在肺隔离症中的诊断价值。方法回顾分析 18 例经手术和病理证实的肺隔离症患者胸部增强 CT 及后处理图像。结果其中叶内型 16 例(89%) ，叶外型 2 例(11%) ; 14 例位于左下肺(78%) ，4 例位于右肺(22%) ; 实性肿块 3 例，囊实性肿块 11 例，囊性病灶 1 例，血管增粗及条索影 3 例; 供血动脉 2 例来自腹主动脉上段，另外 16 例来自胸主动脉下段，其中多支供血动脉 3 例，单支供血动脉 15 例， 16 例引流至同侧肺静脉，1 例引流至半奇静脉，1 例为双重静脉引流(肺静脉、奇静脉) ; 18 例均能完整地显示异常供血动脉及引流静脉的全貌。结论增强 CT 扫描及其后处理技术能清晰显示病灶内异常供血动脉及引流静脉，对肺隔离症的诊断具有重要的临床应用价值，可以取代血管造影作为诊断该病的最佳检查方法。

PU-2618

新诊断为慢性血栓栓塞性肺动脉高压患者的 HRCT 表现

李霞
重庆医科大学附属永川医院

目的

探讨新诊断为慢性血栓栓塞性肺动脉高压（Chronic thromboembolic pulmonary hypertension，CTEPH）的 HRCT 表现。

方法
收集我院 2016 年 1 月-2019 年 1 月临床新诊断为 CTEPH 的 60 例患者，回顾性分析 HRCT 扫描评估血管的 CT 表现，在 HRCT 轴位上测量右心室、左心室、右心房、左心房（dRV、dLV、dRA、dLA）的直径，升主动脉（dAA），左、右肺动脉（drPA、dlPA）和主肺动脉（dPA）的直径。采用 Philips256 层螺旋 CT，扫描范围从胸廓入口至肋膈角。
结果
大多数慢性血栓栓塞性肺动脉高压患者 HRCT 表现为马赛克灌注，肺段血管大小差异，肺实质密度，支气管扩张和支气管壁增厚。慢性血栓栓塞性肺动脉高压 HRCT 表现无明显差异。平均 PAP 显示与 dRV / dLV，dRA，dRV，dPA 和 dPA / dAA 比率 CT 指标显著相关，与中心血栓评分无相关性。通过后向线性回归，dPA / dAA 比率与 mPAP 独立相关。
结论
大多数新诊断为慢性血栓栓塞性肺动脉高压患者在 HRCT 扫描时表现为马赛克灌注，肺段血管大小差异，肺实质密度，支气管扩张和支气管壁增厚。HRCT 可为慢性血栓栓塞性肺动脉高压的诊断提供重要的信息，可作为常规筛查检查方法。

PU-2619

Dual energy Dual source CT scanning in the diagnosis of pulmonary embolism value

Hang qiang Z
Affiliated Hospital of Beihua University

Objective :Explore the dual-energy dual-source CT pulmonary angiography scan (CTPA) the accuracy of the diagnosis of pulmonary embolism and pulmonary perfusion imaging (DEPI), evaluate the value of dual-source dual-energy CT scanning in the diagnosis of pulmonary embolism .
Methods: For between November 2012 -2014 Feb. 96 cases in our hospital patients with suspected pulmonary embolism dual-source dual-energy CT examination , 55 patients diagnosed with pulmonary embolism as an object of study, to get a complete picture and CTPA and DEPI data , and collect finishing surgical pathology or clinical outcomes for patients . CTPA and were evaluated using DEPI situation around the pulmonary artery, pulmonary lobe , segment and sub- segment pulmonary emboli , using statistical software evaluation both diagnostic sensitivity of pulmonary embolism .
Results:55 cases of pulmonary emboli in patients with a total of 226 , of which 30 involved about pulmonary emboli , 69 involved lobe pulmonary artery, pulmonary segments involving 84 , 43 involving subsegmental pulmonary artery. CTPA emboli were detected in 197 , DEPI detect emboli 208 . Dual-source dual-energy CT imaging of lung filling 55 cases of pulmonary embolism in patients with diagnostic accuracy was 92% , higher than the diagnostic accuracy of CTPA is 87%; (P <0.05), two methods for accurate diagnosis of pulmonary embolism the difference between the rate was statistically significant. In which the left pulmonary artery , CTPA diagnosed 28 , DEPI found 30 , CTPA diagnostic accuracy was 93.3% ; diagnostic accuracy was 100%, (P> 0.05), the difference was not statistically significant. In leaf pulmonary artery , CTPA diagnosed 63 , the diagnostic accuracy was 91%, DEPI diagnosed 67 , the diagnostic accuracy was 97%, (P> 0.05), the difference was not statistically significant. In paragraph pulmonary artery , CTPA diagnosed 72 , the diagnostic

accuracy was 86%, DEPI diagnosed 75 , the diagnostic accuracy was 89%, (P <0.05), both statistically significant. In Asia pulmonary artery , CTPA diagnosed 32 , the diagnostic accuracy was 74%, DEPI diagnosed 36 , diagnostic accuracy was 83%. The statistical units (P <0.05), both statistically significant.

Revolution CT 在胸痛三联征一站式检查中两种扫描方案的探索

许艳红
上海市第一人民医院

目的 比较 Revolution CT 两种扫描方案在胸痛三联征（Triple-Rule-Out，TRO）CTA 一站式检查中的图像质量、辐射剂量及临床价值。**方法** 选取 2017 年 10 月－2018 年 4 月有胸痛症状的 40 例病人，随机分为两组，其中 20 例病人采取第一种 TRO-CTA 的扫描方法，首先采用 15mL 碘普罗胺注射液(碘浓度 370mg/ml) 以 5ml/s 的速度注射进行小剂量测试得到肺动脉达峰时间与主动脉达峰时间的时间间隔差，采用碘普罗胺注射液(碘浓度 370mg/ml) 40ml 经手背静脉或肘静脉注射，接着以 5ml/s 的速度注射生理盐水 30ml，然后以肺动脉为感兴趣区，首先螺旋扫描肺动脉范围接着轴扫冠状动脉范围。另外 20 例病人采取第二种 TRO-CTA 方法，以降主动脉为感兴趣区，监测 CT 值达到 70HU 即自动触发扫描，采用碘普罗胺注射液(碘浓度 370mg/ml) 40ml 注射，接着继续以 2.5ml/s 的速度注射碘普罗胺注射液 25ml，然后以 2.5ml/s 的速度注射生理盐水 30ml，然后以降主动脉为感兴趣区，连续轴扫肺动脉及冠状动脉范围。**结果** 第一组病人中肺动脉达峰时间与主动脉达峰时间的时间间隔为 6-14s。两组病例中肺动脉根部 CT 值分别为（481±36.5HU，410±33.7HU），两组主动脉根部 CT 值分别为（409±34.2HU，440±28.4HU），均没有统计学差异。第一种 TRO-CTA 方法肺动脉与主动脉的 CT 值比值明显高于第二种方法（P<0.001）。第一种 TRO-CTA 方法造影剂用量低于第二种方法。 第一种 TRO-CTA 方法辐射剂量高于第二种方法（4.6±0.8mSv，2.0±0.6mSv， P<0.001），两组之间图像质量无统计学差异（P>0.05）。**结论** 本研究中，两种扫描方法均可行。

PU-2621
肺静脉造影扫描方法

白建
甘肃省人民医院

目的 利用碘对比剂 CT 造影对肺静脉 左心房 左心室 及升主动脉和主动脉瓣的正常解剖和病变类型进行研究。
方法 运用小螺距回顾性心电门控扫描方法 （使用心电门控抑制心脏搏动产生的运动伪影）肘正中静脉置管 造影剂注射方法 静脉团注 造影剂使用量与体重 1:1 。患者需配合呼吸指令减少呼吸伪影。监测触发阈值为 100 监测位置置于左心房内 触发方式为手动出发，触发扫描前延迟时间 5 秒。
结果 肺静脉 左心房 左心室 升主动脉内造影剂均匀充盈，肺动脉右心房 右心室内无造影剂填充。可以对肺静脉数量 位置 分型及变异进行分析，便于观察左心房左心室的形态腔内结构。扫描图像分为收缩期和舒张期 两期图像便于观察主动脉瓣形态以及打开和关闭后状态。

高分辨率 CT 诊断异常体循环动脉供血正常左肺下叶 1 例

韦小梅,邓德茂
广西中医药大学第一附属医院

[摘要]目的：汇报高分辨率 CT 诊断异常体循环供血正常左肺下叶病例 1 例，为同行提供影像资料及参考。方法：结合患者的临床资料及影像学资料，分析该病例的 CT 表现特点，并确定其归类。结果：CT 平扫示左肺下叶基底段见异常粗大的血管影，最大径约 1.2cm，其周围血管分支增粗，近端走行扭曲，并在胸 7/8 椎体盘水平与降主动脉左前壁相连；该肺段密度稍增高，似见磨玻璃影；左下叶各基底段支气管及其分支形态、走行正常，管腔通畅。增强扫描，左肺下叶基底段肺动脉缺如，多层面 CT 三维重建及血管成像示异常增粗、扭曲的动脉起自降主动脉左前壁，呈“乙”字形走行，其分支与相应支气管伴行，分布至左肺下叶各基底段。左肺下叶基底段静脉显影，回流至左心房，并与上述畸形血管不相通 。
结果：异常体循环供血正常左肺下叶属于肺血管畸形，与叶内型肺隔离症不同；高分辨率 CT 对本病的诊断具有重大价值。

Comparative study between anomalous systemic arterial supply to the basal segments of the lung and lung sequestration in adult by computed tomography angiography

Xiaoqian Lu,Dianbo Cao
The First Hospital of Jilin University

Objective: Anomalous systemic arterial supply to the basal segments of the lung and lung sequestration are often confused due to their nonspecific presentations and similar imaging findings. Our study is to summarize the distinguishing variations between two disease entities in adult with MSCT angiography and further provide reliable evidence for clinical diagnosis and subsequent treatment.

Materials and Methods: This study was conducted from December 2013 to January 2019 in our center. Medically diagnosed cases of two diseases lung sequestration and anomalous systemic arterial supply to the basal segments of the lung (n=65) were enrolled in this study. We reviewed 42 patients with lung sequestration and 23 patients with anomalous systemic arterial supply to the basal segments of the lung on the basis of clinical features (age, gender, symptoms like hemoptysis, exertional dyspnea, persistent dry cough) as well as CT imaging findings (location of the lesion, origin of the blood vessel, vascular diameter, increased lung markings, solid or ground glass shadow, vacuoles or cavitation sign or emphysema). The chi-square test, fisher exact test and t-test were applied to compare different CT features of two different diseases.
Results: In this study, a total of 65 patients diagnosed with lung sequestration (n=42) and anomalous systemic arterial supply to the basal segments of the lung (n=23) were

systemically retrospected. There was no significant statistical difference observed in the setting of the age (p=0.376) and gender (p=0.229) between two groups. However, regarding symptoms significant statistical differences were found between two diseases (p=0.000). Concerning the characteristics found on the basis of CT findings, there were no significant statistical differences found between them according to the location of lesion (p=0.966) and origin of blood vessel (p=0.133). Meanwhile, it was demonstrated that there were significant statistical differences on the vascular diameter (p=0.000), increased lung markings (p=0.000), solid or ground glass shadow (p=0.000) and vacuoles or cavitation sign or emphysema (p=0.000).

Conclusion: As a rare variety of two different diseases of the lung including anomalous systemic arterial supply to the basal segments of the lung and lung sequestration, multi-sliced CT angiography can accurately pinpoint the differences between them and help in providing future treatment planning.

PU-2624

肺硬化性血管瘤 MSCT 表现特征及病理学基础

殷灿,陈自谦
中国人民解放军联勤保障部队第九〇〇医院(原福州总医院)

目的 探讨肺硬化性血管瘤(pulmonary sclerosing hemangioma,PSH)的 MSCT 表现特征和病理基础,以提高对该病的进一步认识。
方法 回顾性分析 13 例经穿刺或手术病理证实为肺硬化性血管瘤患者的 MSCT 表现及相关病理。
结果 10 例为单发实性边界清晰类圆形结节或肿块,仅 1 例多发,2 例病灶周围可见"晕征"。11 例直径小于 3cm,最大病灶直径约 10cm,最小者直径约 0.8cm。强化情况,明显强化 6 例,其中 3 例不均匀强化,另 4 例为渐进性强化,1 例未见明显强化。
结论 肺硬化性血管瘤 MSCT 表现具有很多种特征性,再加上 MSCT 的 MPR 技术的运用,不仅能更好地显示病灶的形态学特征及其与邻近血管、支气管的关系,而且病灶动脉期的高度强化可以反映 PSH 的特征性病理学特点,有利于该病变的诊断。

PU-2625

肺泡弥漫毛细血管瘤病一例

李静
贵州省第二人民医院(原:贵州省安宁医院)

目的：报道一例肺毛细管瘤病，对该病的诊断以及影像学特点进行总结，提高各科医生对这一罕见病的认识。
方法：采用高分辨力 CT 薄层+增强扫描，结合病理进一步确诊。
结果：冷冻活检符合肺毛细血管瘤病。
结论：通过对此疾病的 CT 影像特点总结，能够为各科医生诊断此疾病提供影像学支持。

PU-2626

对比度用于增强磁共振肺动脉成像中栓子与截断伪影的鉴别

富青
华中科技大学同济医学院附属协和医院

目的　探讨运用对比度（CR）定量测值的方法辅助鉴别对比增强磁共振肺动脉成像（CE-MRPA）中肺动脉栓子与截断伪影（肺动脉血管腔中心血液信号降低影）的可行性。 资料与方法　收集 CE-MRPA 疑似肺栓塞并行 CT 肺动脉成像（CTPA）患者 30 例，两位高年资磁共振医师观察 CE-MRPA 图像并记录肺动脉横断面中心疑似栓子的低信号影的信号强度及其周围正常肺动脉血液信号强度，计算二者对比度 CR。以 CTPA 为标准将 CE-MRPA 疑似栓子影分为栓子组和截断伪影组。结果　CTPA 证实为栓子组 CR 6.6±5.5，截断伪影组 CR 1.3±0.2，两组 CR 相比 P<0.0001。ROC 显示 CR 最佳诊断临界值为 1.8，敏感度为 92.3%，特异度为 100.0%。 结论 以 CR 为定量参数，通过这种定量测值的方法可以辅助鉴别 CE-MRPA 中的截断伪影与肺动脉栓子

PU-2627

Application study for differentiation pulmonary embolism from truncation artifacts in contrast-enhanced pulmonary MRA

Qing Fu
Department of Radiology, Union Hospital, Tongji Medical College, Huazhong University of Science and Technology, Wuhan 430022, China

Objective On the enhanced pulmonary MR angiography (CE-MRPA), truncation artifacts could cause signal intensity drop in the center of vascular lumen. We aimed to discuss the application study of quantitative measurement of the contrast ratio (CR) to assist in the differentiation of pulmonary embolism (PE) from truncation artifacts.
Methods Thirty patients with CT pulmonary angiography (CTPA) and CE-MRPA were enrolled. Two radiologists read CE-MRPA images together and reached a consensus. The location and signal intensity drops(SI_D)within pulmonary arteries, signal intensity of surrounding pulmonary arteries(SI_{vessel})were measured; contrast ratio (CR= SI_{vessel}/ SI_D) was calculated. Results of CE-MRPA were divided into PE group and truncation artifact group by using CTPA as reference standard. CRs of two groups were compared by Mann-Whitney U test. The optimal cutoff value, sensitivity and specificity were analyzed by ROC.
Results CTPA confirmed PE group:CR was 6.6±5.5, CTPA confirmed truncation artifact group: CR was 1.3±0.2. The comparative values of two groups were statistically significant. ROC showed the optimal diagnostic cutoff values of CR was 1.8 with 92.3% sensitivity,100.0% specificity.
Conclusion CR can be used to calculate the quantitative contrast between the central signal drop and surrounded pulmonary arteries, which can be used as an auxiliary method to differentiate PE from truncation artifacts on CE-MRPA.

PU-2628

CT 与 IMA、D-D 水平在急性肺栓塞患者病情评估中的应用

纪律
上海交通大学医学院附属第九人民医院北院

目的：探讨 CT 与缺血修饰白蛋白（IMA）、D-二聚体（D-D）水平在急性肺栓塞（APE）患者病情评估中临床应用价值。**方法：**选取 2017 年 6 月-2019 年 6 月间本院收治的疑似 APE 患者 130 例作为研究对象，进行 CT“金标准”检查，确诊 100 例 APE 患者为 APE 组，其中高危组 48 例，低危组 52 例，同时期进行体检的 90 例健康志愿者为对照组，采用双抗体夹心酶联免疫吸附试验（ELISA）检测血清 IMA 水平，免疫比浊法检测血浆 D-D 水平，利用 ROC 曲线获分析 IMA、D-D 对 APE 疾病的诊断价值。**结果：**APE 组的 IMA、D-D 水平显著高于对照组（$P<0.05$）；高危组患者的 IMA、D-D 水平显著高于低危组（$P<0.05$）；以入院后 CT 检查为诊断 APE 疾病金标准，ROC 曲线表明，D-D 和 IMA 水平诊断 APE 的 AUC 分别为 0.88 和 0.73，对应的敏感度为 90.6%和 93.3%，特异度为 52.5%和 95.2%，IMA+D-D 水平联合诊断 APE 的 AUC 为 0.82，敏感度为 95.0%，特异度为 77.6%，D-D 和 IMA 水平诊断高危 APE 的 AUC 分别为 0.95 和 0.91，敏感度为 97.2%和 93.9%，特异度为 31.5%和 76.9%。IMA+D-D 水平联合诊断高危 APE 的 AUC 为 0.95，敏感度为 96.3%，特异度为 76.8%；对比 CT 检查结果，100 例确诊 APE 患者中，IMA 处于阴性水平的患者有 5 例，D-D 处于阴性水平的患者有 7 例，对照组样本检测 IMA 和 D-D 水平均处于阴性水平。**结论：以** CT 检查结果为参考，IMA 联合 D-D 水平诊断 APE 具有良好的敏感度和特异度，可有效提高 APE 疾病的确诊率，为临床快速可靠的检测和治疗 APE 疾病提供重要依据。

PU-2629

探索 64 排肺动脉 CTA 小剂量测试的最低剂量

张鸣燕
复旦大学附属中山医院青浦分院

目的：通过对比不同造影剂剂量的肺动脉 CTA 检查，在图像质量满足肺动脉栓塞疾病诊断的前提下，探索患者使用的最低剂量

方法：采用美国 GE Light Speed VCT 64 排螺旋，患者取仰卧位，足先进，双上肢上举。扫描范围为肺尖到肺底，扫描方向从足至头。对比剂：碘克沙醇，浓度为 320mg/ml。对照组和实验组均采用小剂量团注法，注射速率为 4ml/s，追加等速率 30ml 生理盐水。监测层面在肺动脉主干，在定位像上位于支气管分叉下 1~2cm,延迟时间设为 4s,扫描时间和间隔时间均设为 1s,单层重复扫描。

1、分组

A 组：造影剂 40ml

B 组：造影剂 30ml

C 组：造影剂 20ml

D 组：造影剂 15ml

2、根据时间密度曲线，计算相应检查的时间进行扫描，将采集的数据均进行薄层重建，层厚、层间距均设置为 0.625mm，将薄层重建图像传至 GE AW4.5 后处理工作站，采用 VR、MIP 进行后处理，多方位显示肺动脉主干及其各级分支血管解剖结构。

3、图像质量评价：主观和客观评价对四组图像质量进行评价

4、进行统计学分析

结果：1、A、B、C 组没有统计学意义

2、A、B、C 组与 D 组均有统计学差异，且 D 组图像质量不满足肺栓塞疾病诊断的要求

结论：64 排肺动脉 CTA 小剂量测试检查的最低剂量选用 20ml，其图像质量满足肺栓塞疾病诊断，大幅度减少了对比剂的用量，减少了患者肾功能损害的风险，降低了患者对比剂肾病的发病率，具有临床意义。

PU-2630

双源 CT 肺动脉血管成像对肺动静脉瘘的诊断价值

刘姝兰
西南医科大学附属中医医院

目的：探讨双源 CT 肺动脉血管成像对肺动静脉瘘的诊断价值。方法：回顾性搜集 52 例临床疑诊断肺动静脉瘘并行双源 CT 肺动脉血管成像的病例，且所有病例均有肺动脉 DSA 造影为参考标准，将 CT 诊断结果与 DSA 结果进行对照。 结果：双源 CT 肺动脉血管成像诊断肺动静脉瘘 33 例，其中囊型 30 例,弥漫型 3 例。DSA 诊断肺动静脉瘘 36 例，其中囊型 30 例，弥漫型 6 例，双源 CT 肺动脉成像诊断肺动静脉瘘准确度 94.2%，敏感度 91.7%，特异度为 100%，阳性预测值为 100%，阴性预测值 84.2%，弥漫型肺动静脉瘘受累肺叶磨玻璃病灶内同时包含增粗的小肺动脉及小肺静脉两种血管。结论：双源 CT 肺动脉血管成像诊断肺动静脉瘘与 DSA 对比具有较高的准确性，其中 CT 对囊型肺动静脉瘘诊断与 DSA 一致，并可直观显示囊型肺动静脉瘘的位置、个数、大小、供血肺动脉及引流肺静脉的情况，而弥漫型肺动静脉瘘应排查肺叶内是否有同时包含增粗的小肺动脉及小肺静脉的磨玻璃影，以避免漏诊。

PU-2631

70kV 联合超级“双低”对比剂模式在低体质量患者肺动脉 CT 成像的可行性探索

张小勇,李文航,伍瑶斌,崔学龙,王超,谢光友,曾宪春
贵州省人民医院

目的：探讨 70kV 管电压条件下，采用超级“双低”对比剂模式在体质量小于 60KG 的患者行肺动脉 CTA 检查的可行性。**方法**：收集 2019 年 1 月-6 月临床怀疑动脉栓塞，体质量小于 60KG 的患者 80 例，随机分入 A、B 两组行肺动脉 CT 成像。A 组：40 例，年龄 64-88 岁，体重 35-50KG，平均 42.4±6.58KG，采用管电压 70kV，参考管电流 500mAs，ADMIRE3 级迭代重建，对比剂总量 10ml，流率 2ml/s。B 组：40 例，年龄 49-83 岁，体重 40-59KG，平均 47.6±7.82KG，管电压 100kV，参考管电流 150mAs，采用 FBP 重建，对比剂总量 30ml，流率 5ml/s。对两组图像主、客观图像质量以及两组患者接受的辐射剂量和对比剂用量进行统计学分析。**结果**：A 组（70kV/ADMIRE 组）肺动脉平均 CT 值为 285.2±51.9HU，略低于 B 组（100kV/FBP）组 385.9±79.4HU，差异有统计学意义（P=0.045）。A、B 两组图像的 SD、SNR、CNR 分别为：（13.2±2.38）&（31.1±2.12）、（22.4±8.0）&（10.8±2.0）、（32.3±9.1）&（15.3±2.6），差异均有统计学意义（P<0.05）。两组图像主观评分分别为 4.50&4.33，差异无统计学意义（P>0.05）。与 B 组比较，A 组 CTDI、DIP 分别降低约 49.9%、45.7%差异均有统计学意义（P<0.001）。A 组的对比剂用量与 B 组相比，减少约 66.6%，有显著的统计学差异（P<0.001）。 **结论**：与对照组 100kV/FBP 相比，70kV/ADMIRE 条件下，采用超级“双低”对比剂模式也可获得满足诊断的肺动脉 CTA 图像，并且可以显著减少对比剂用量和辐射剂量。对于年老、低体重以及血管条件不理想的患者，可尝试采用这种模式进行肺动脉 CTA 成像。

咯血患者肺外体循环动脉供血的 CTA 研究

龚军伟,李琦,罗天友
重庆医科大学附属第一医院

目的 探讨咯血患者肺外体循环动脉供血的 CT 血管造影 （computed tomography angiography，CTA）表现及其与胸膜增厚的关系。**方法** 回顾性分析 233 例因反复或大量咯血患者的影像学资料，首先通过数字减影血管造影（digital subtraction angiography，DSA）明确咯血责任血管的来源、数量，然后分析咯血患者肺外体循环供血动脉的 CTA 表现及其与胸膜增厚的关系。**结果** 233 例咯血患者中，参与供血的肺外体循环动脉共 318 支，平均 3.8 支/例，包括肋间后动脉 171 支，锁骨下动脉分支 56 支，胸廓内动脉分支 47 支，腋动脉分支 23 支，腹主动脉分支 21 支，CTA 表现为管径增粗、走行迂曲，发出分支至病灶区域参与供血，部分侧枝可与肺动脉或供血支气管动脉相互吻合形成丰富的血管网。84 例有肺外体循环动脉供血，其中 82 例（97.62%）伴有靶胸膜增厚，149 例无肺外体循环动脉供血，其中 90 例（60.40%）伴有靶胸膜增厚。靶胸膜增厚与肺外体循环动脉供血率之间存在统计学差异（c^2=36.60，P<0.01），且肺外体循环供血动脉来源与靶胸膜增厚部位之间存在对应关系。**结论** 肺外体循环动脉是重要的咯血责任血管，其数目、来源与病灶位置及胸膜增厚密切相关，CTA 能够帮助术者全面了解咯血患者肺外体循环动脉供血情况，指导相关介入治疗。

PU-2633

假性肺栓塞患者的 CTPA 研究

龚军伟,李琦,罗天友
重庆医科大学附属第一医院

目的 探讨假性肺栓塞患者的 CTPA 影像表现及其与肺部疾病、D-二聚体水平和双下肢深静脉血栓形成的关系。**方法** 回顾性分析 59 例误诊为肺栓塞患者的影像学资料，分析、归纳其影像表现；同时将其设为病例组，选取同期肺栓塞患者 300 例，设为对照组，两组患者均行 CTPA 检查，并至少追加扫描一个延迟期，分别比较两组患者肺部疾病、D-二聚体水平和双下肢静脉彩超等结果之间的差异，并使用 SPSS 21.0 统计学软件对结果进行统计学分析。**结果** 1. 假性肺栓塞的 CTPA 表现：39 例（66.10%）表现为肺动脉管腔内部分或完全充盈缺损，边界模糊，以肺动脉主干及双肺下叶分布为主，15 例（25.42%）表现为肺动脉内完全充盈缺损，边界清楚，以双肺上叶分布为主，且多（12 例/15 例或 80%）发生于双肺上叶肺动脉主干及其分支内；5 例（8.47%）表现为条状、孤立充盈缺损，边界清楚，与肺动脉管壁分界清楚；2. 病例组和对照组的肺部病变数量差异无统计学意义（p>0.05）；3. 病例组 D-二聚体水平明显低于对照组，两组差异有统计学异常（p<0.05）；4. 病例组患者双下肢深静脉血栓发生率明显低于对照组，两组差异有统计学异常（p<0.05）。**结论** 1.对疑诊肺栓塞的患者，行 CTPA 检查时应至少追加一个延迟期的数据采集，从而最大程度排除假性肺栓塞；2. D-二聚体水平及双下肢深静脉血栓形成可作为鉴别真假肺栓塞的重要指标。

PU-2634

Rheumatoid Mitral Valve Stenosis: Quantification of Severity with Magnetic Resonance Imaging: Initial Experience

Long Cao,Xiao-Chun Zhang
Zhongnan Hosipital of Wuhan University

PURPOSE: To evaluate whether retrospectively electrocardiographic (ECG)-gated magnetic resonance imaging (MRI) can quantify severity of pure rheumatoid mitral stenosis (PRMS) in comparison to transthoracic echocardiography (TTE).
MATERIALS AND METHODS: Fifty-three patients with PRMS(29 men, 24 women; mean age, 49±9) were underwent both MRI and TEE in the present study. Right ventricular end-systolic volume (RV-ESV), stroke volume (RV-SV), and ejection fraction (RV-EF), cardiac output (RV-CO), wall mass (RV-Mass), and left ventricular end-diastolic volume (LV-EDV), transmitralvalvular peak velocity (TMV-PV), transmitralvalvular peak gradient (TMV-PG), transmitralvalvular net flow (TMV-NF), LV-Peak filling rate (LV-PFR) were measured with dedicated cardiac analysis software on MRI. Severity of mitral stenosis was classified by (TMV-PG) with TEE and MRI. .
RESULTS: RVSV, RVEF, RVCO, RVMass, LVEDV, TMV-NF, and LV-PFR were significantly lower in patients with severe PRMS (n=15) than in patients with moderate (n=21, P<0.001) and mild PRMS (n=17) (P<0.001). RVESV, TMV-PV and TMV-PG were significant higher in severe group than in patients with moderate and mild PRMS (P<0.001).RV-ESV, RV-SV, RV-EF, RV-CO, RV-Mass and LV-EDV correlated well with TMV-PG (r= 0.82, -0.93, -0.94, -0.91, -0.96, and -0.94; P<0.001).
CONCLUSION: Measurement of right ventricular systolic and left ventricular diastolic function with ECG-gated MRI could quantify severity of patients with PRMS.
CLINICAL APPLICATION: The retrospectively ECG-gated magnetic resonance imaging (MRI) allows a reliable assessment of severity in patients with rheumatoid mitral stenosis.

探讨冠状动脉 CT 血管成像（CTA）对左心房憩室的诊断价值及临床应用

武辽军
陕西省榆林市第二医院

目的 探讨冠状动脉 CT 血管成像（CTA）对左心房憩室的诊断价值，以及对心房颤动合并左心房憩室患者的临床处理方案的指导意义。**方法** 对我院 2019 年 1 月至 2019 年 6 月，经我科室飞利浦 256 iCT 冠状动脉 CTA 检查所得的 669 例患者进行回顾性分析，分析左心房憩室的影像学表现，判定憩室的位置、大小、形态等指标。**结果** 共发现左心房憩室患者 213 例，发病率为 31.8%，其中 176 例单发，37 例多发（2 个及 2 个以上）。共检出憩室 261 个，囊状 218 个，管状 43 个，囊状明显多于管状。位于左心房前上壁 93 个，前下壁 66 个，后上壁 41 个，后下壁 57 个，内侧壁 3 个，另有 1 例（单个）患者憩室位于左心耳内侧缘。**结论** 冠状动脉 CTA 可以准确诊断左心房憩室，分析其位置、大小、形态等指标，为临床医生对心房颤动患者的电生理治疗提供术前指导。

PU-2636
基于 CT 钙化积分图像测量心外膜脂肪特征与左右心室重构的关系

陆旸
南通市第一人民医院（南通大学医学院第二附属医院）

目的：利用 CT 钙化积分（CACS）图像测量心外膜脂肪（EAT）体积和密度，探究 EAT 体积和密度与左右心室结构和功能的相关性。
方法：连续收集 2019 年 4 月～7 月临床疑诊冠心病行冠状动脉 CTA 的患者 183 例。利用 Volume 软件在 CACS 图像上半自动测量 EAT 体积与密度；重建 CCTA 0%-100%全期相 R-R 间期图像，利用后处理 Cardiac Function 软件获得左右心室解剖结构图像并测量左室舒张末内径（LVEDD）、室间隔舒张末期厚度（IVST-ED）、左室后壁舒张末期厚度（LVPWT-ED）及左右心功能数据[包括左右心室射血分数（LVEF、RVEF）、左心室质量（LVMM）、左右心室收缩和舒张末期容积（LVESV、LVEDV、RVEDV、RVESV）、左右心室每搏输出量（LVSV、RVSV）]。
结果：高 EAT 体积（≥122cm^3）组和高 EAT 密度（≥-81HU）组的 LVMM、LVESV、LVEDV、RVEDV、LVEDD、IVST-ED 分别高于低 EAT 体积（<122cm^3）组与低 EAT 密度（＜-81HU）组（P<0.05）。单因素回归分析后，EAT 体积与 LVMM、LVESV、LVEDV、RVEDV、LVEDD、IVST-ED 均呈正相关（β 值分别为 0.21、0.17、0.20、0.18、0.30，0.146，P<0.05），EAT 密度与 LVMM、LVESV、LVEDV、RVEDV、LVEDD、IVST-ED 均呈正相关（β 值分别为 0.29、0.31、0.24、0.30、0.32、0.30，P<0.05）。在多因素回归分析之后，EAT 体积和密度与 LVMM、LVESV、LVEDV、RVEDV、LVEDD、IVST-ED 仍有相关性（P<0.05）。
结论：EAT 体积和密度均能独立反映左右心室重构的严重程度，可作为左右心室重构危险分层的指标。

PU-2637
基于双层探测器光谱 CT 多参数成像技术诊断房颤病人射频消融术前左心房血栓

李家开[1],祁磊[1],侯小明[1]
1.中国人民解放军总医院海南医院
2.中国人民解放军总医院第一医学中心

目的：探讨双层探测器光谱 CT 在房颤病人射频消融术前诊断左心房血栓的价值。**方法**：回顾分析 26 例房颤病人射频消融术前的左心房和肺静脉 CT 血管成像的影像表现和临床资料，以经食管超声内镜诊断结果为金标准，分析左心房血栓在双层探测器光谱 CT 50keV 虚拟单能级（MonoE）成像、有效原子序数值、碘密度图和能谱曲线的表现特点和量化结果，统计分析新型光谱 CT 诊断左心房血栓的敏感性、特异性、准确性、阳性预测值和阴性预测值。**结果**：Likert 量表法定性分析显示，光谱 CT 50keV MonoE 图像质量明显优于传统增强 CT，软组织对比度明显提高。血栓的有效原子序数为 7.8±0.07，周围充盈造影剂的心房的有效原子序数为 12.9±0.06，两者差异显著。血栓组织碘含量很低，碘密度为 0.3mg/ml±0.07。血栓的能谱曲线走形低平，斜率较小，不同于血液与造影剂混合不均的大血管或心腔。综合光谱 CT 多参数成像特征，诊断左心房血栓的敏感性、特异性、准确性、阳性预测值和阴性预测值分别为 100%、95%、96.3%、83.3%和 100%。**结论**：采用基

于双层探测器的新型光谱 CT 多参数成像能够准确诊断房颤病人左心房血栓，可代替经食管超声内镜检查。

室间隔罕见血肿样病变的 CT 诊断及文献复习

王艳
河南省人民医院

室间隔血肿样病变非常罕见，且大多是通过超声心动图诊断的。心脏 CT 在心血管疾病中的应用已经很广泛，但室间隔血肿样病变因为罕见且不被认识常常被漏诊或误诊。笔者报道了两例 CT 表现室间隔血肿样异常的病例，经过手术证实一例是冠状窦的破裂延伸至室间隔形成血肿，另一例是室间隔缺损伴假性膜部瘤。通过对比其 CT 征象的异同点并总结以往的文献报道，笔者认为 CT 因空间和软组织分辨率的限制，对诊断室间隔血肿样病变有一定的难度，多个心动周期图像对比、多角度观察可以帮助诊断。

PU-2639

Anatomical characteristics of double superior vena cava: quantitative assessment with CT and clinical implications for interventional procedures

Gong-Hao Ling,Xiao-Chun Zhang
Zhongnan Hosipital of Wuhan University

Background: Presence of double superior vena cava (DSVC) may exacerbate technical difficulties in some intervention procedures (PICC, catheterization, radiofrequency ablation, pacemakers or filter implantation) or complicate the procedures. It is important to confirm existence of DSVC, drainage pattern and anatomical characteristic for the successful intervention procedures.
Methods: DSVC were documented on CT reports of 129 cases. According to drainage approach of left side superior vena cava and presence or absence of left brachiocephalic vein, all cases were divided into Group A (A1, A2) and B (B1, B2). Lengths of left/right side superior vena cava (L/RSVCL), diameters and areas of origin of L/RSVC(RSVCD/A), diameters of coronary sinus orifice(CSOD), lengths and areas of coronary sinus(CSL/A) were measured and compared retrospectively among the groups and Group control (Group C, n=109).
Results: LSVCL of Group A were longer than those of Group B (p=.00 to .24). RSVCD/A of Group A1and GroupB1 were shorter than those of Group A2 and Group B2 (p=.003 to .048), LSVCD/A of Group A1and GroupB1 were longer than those of Group A2 and Group B2 (p=.003 to .048). CSOD, CSL and CSA of Group A1were larger than those of Group A2 and Group C (p=.000 to .032), no significant differences was in the values of Group B and Group C. RSVCD/A of 129 cases were less than those values of Group C (p=.000). RSVCL were shorter than LSVCL in the same group (p=.000).
Conclusions: CT can accurately confirm the presence of DSVC, drainage patterns and anatomical characteristic values of DSVC.

PU-2640
Pure Rheumatic Mitral Stenosis: Quantitative Assessment with DSCT

Yingting Zeng,Xiaochun Zhang,Lu Song,Haibo Xu
ZhongNan Hospital， Wu Han University

PURPOSE: To evaluate whether DSCT can assess right ventricular (RV) systolic and left ventricular (LV) diastolic function and quantify the severity of pure rheumatoid mitral stenosis (PRMS) in comparison to the transthoracic echocardiography (TTE)
MATERIALS AND METHODS: Fifty-three patients with PRMS (26 men, 27 women, mean age, 46±8 years) were enrolled in this study. All patients underwent ECG-gated DSCT and TTE for assessing LV diastolic and RV systolic function. Left ventricular end-diastolic volume (LV-EDV), maximal mitral valve area(MVA) and maximal mitral valve annular area(MVAA), as well as Right ventricular end-systolic volume (RV-ESV), stroke volume (RV-SV), ejection fraction (RV-EF), cardiac output (RV-CO) and wall mass (RV-Mass) were measured with dedicated cardiac analysis software on DSCT. The severity of mitral stenosis was classified by MVA with TTE and DSCT. All the data were reviewed retrospectively.
RESULTS: LV-EDV, MVA, MVAA, RV-SV, RV-EF, RV-CO, and RV-Mass were significantly lower in patients with severe PRMS (n=15) than those in patients with moderate (n=21) and mild PRMS (n=17, p<0.001). RV-ESV was significant higher in severe PRMS than that in patients with moderate and mild PRMS (p<0.001). LV-EDV, MVAA, RV-ESV, RV-SV, RV-EF, RV-CO, and RV-Mass correlated well with MVA (r=0.95, 0.97, 0.97, 0.94, 0.87, 0.93, and-0.96, respectively; p<0.001).
CONCLUSION: The ECG-gated DSCT may provide an accurate, noninvasive imaging technique for assessing ventricular function and quantifying the severity of PRMS.

PU-2641
右室双出口的 320 排 CT 动态容积扫描技术与诊断

梅文铭
陆军军医大学附属新桥医院放射科

目的 分析 320 排 CT 动态容积扫描技术在复杂性先天性心脏病右室双出口（DORV)中的诊断价值。方法收集 陆军军医大学新桥医院经手术证实的 DORV 78 例，A 组病例 36 例，行 320 排 CT 动态容积扫描，采用心脏节段分析法分析 CT 图 像，B 组病例 42 例，行传统 64 层 CT 扫描；比较两种方法的诊断准确率。**结果** 320 排 CT 动态容积扫描诊断 36 例右室双出口， 与手术结果一致。43 例对照组 B 组的诊断准确率为 90. 7%,与 A 组比较差异无统计学意义 P>0. 05)。78 例 DORV 均合并有 室间隔缺损，合并肺动脉狭窄 56 例，房间隔缺损 34 例，肺动脉高压 21 例，动脉导管未闭 16 例，主动眯缩窄 9 例。**结论** 320 棑 CT 动态容积扫描对诊断先天性心脏病 DORV 具有重要的价值。

PU-2642
先天性心脏病 CT 扫描中原始数据域迭代重建技术的应用及其临床意义分析

艾科奇
陆军军医大学附属新桥医院放射科

目的 探索先天性心脏病 CT 扫描中原始数据域迭代重建技术（SAFIRE）的应用及其临床意义分析。**方法** 选取 2016 年 12 月－2018 年 12 月收治的 260 例先天性心脏病患者。随机分为 2 组，各 130 例。2 组均行 CT 检查，其中观察组采用原始数据 SAFIRE，对照组采用滤波反投影重建技术（FBP）。比较 2 组图像的升主动脉和肺动脉的 SNR 与 CNR、图像质量评分 3～5 分的占比、辐射剂量参数 $CTDL_{vol}$、DLP、ED。**结果** 2 组患者升主动脉和肺动脉的噪声比和信噪比组差异无统计学意义（P ＞ 0.05）。2 组图像质量评分 3～5 分患者的占比分别为 79.23%与 72.31%，差异无统计学意义（P ＞ 0.05）。2 组患者辐射剂量参数 $CTDL_{vol}$、DLP、ED 差异有统计学意义（P ＜ 0.05），观察组辐射剂量显著低于对照组。 **结论** CT 扫描中原始数据域迭代重建技术可以有效降低患者辐射剂量的接受，且对图像质量无明显影响，对于先天性患儿临床诊断和治疗具有重要指导意义。

PU-2643
双源 CT 三维成像在主动脉瓣膜置换术前评估中的临床应用

李晓明,汪登斌
上海交通大学医学院附属新华医院

目的：主动脉瓣环由主动脉瓣膜三个瓣叶最低点所在平面左室流出道围绕而成。选择合适的人工主动脉瓣膜型号要求准确测量主动脉瓣环径线。本研究探讨双源 CT 三维成像在主动脉瓣膜置换术前评估中的临床应用价值。**方法**：应用双源 CT 对 27 例主动脉瓣膜狭窄/关闭不全患者进行术前检查，男性 17 例，女性 10 例，平均年龄(73.44±6.22)岁。测量主动脉瓣环周径、直径及左、右冠状动脉开口距离主动脉瓣环高度。所有患者在双源 CT 检查后 1 周内行主动脉瓣膜置换手术。**结果**：27 例主动脉瓣膜置换患者中 6 例主动脉瓣狭窄，13 例主动脉瓣关闭不全，8 例主动脉瓣狭窄合并关闭不全。主动脉瓣狭窄组瓣环周径 72.76±7.42mm，瓣环直径 23.15±2.36mm，左冠状动脉开口距离主动脉瓣环高度 10.33±3.34mm，右冠状动脉开口距离主动脉瓣环高度 13.87±2.00mm。主动脉瓣关闭不全组瓣环周径 81.31±7.84mm，瓣环直径 26.00±2.54mm，左冠状动脉开口距离主动脉瓣环高度 13.21±2.56mm，右冠状动脉开口距离主动脉瓣环高度 15.22±3.38mm。主动脉瓣狭窄合并关闭不全组瓣环周径 78.35±6.64mm，瓣环直径 24.94±2.12mm，左冠状动脉开口距离主动脉瓣环高度 13.76±2.68mm，右冠状动脉开口距离主动脉瓣环高度 14.39±2.95mm。**结论**：双源 CT 三维成像能够清晰显示主动脉瓣环位置及邻近解剖结构，在主动脉瓣膜置换术前评估中起着重要作用。

Assessment of severity of rheumatoid mitral valve stenosis with MRI

Lin Zhang[1], Xiao-chun Zhang[2]
1.Department of Cardiology, ZhongNan Hospital, WuHan University
2.Department of Radiology, ZhongNan Hospital, WuHan University

PURPOSE: To evaluate whether retrospectively electrocardiographic (ECG)-gated magnetic resonance imaging (MRI) can quantify severity of pure rheumatoid mitral stenosis (PRMS) in comparison to transthoracic echocardiography (TTE).
MATERIALS AND METHODS: Fifty-three patients with PRMS(29 men, 24 women; mean age, 49±9) underwent both MRI and TEE in the present study. Right ventricular end-systolic volume (RV-ESV), stroke volume (RV-SV), and ejection fraction (RV-EF), cardiac output (RV-CO), wall mass (RV-Mass), and left ventricular end-diastolic volume (LV-EDV), transmitralvalvular peak velocity (TMV-PV), transmitralvalvular peak gradient (TMV-PG), transmitralvalvular net flow (TMV-NF), LV-Peak filling rate (LV-PFR) were measured with dedicated cardiac analysis software on MRI. Severity of mitral stenosis was classified by (TMV-PG) with TEE and MRI.

RESULTS: RVSV, RVEF, RVCO, RVMass, LVEDV, TMV-NF, and LV-PFR were significantly lower in patients with severe PRMS (n=15) than in patients with moderate (n=21, P<0.001) and mild PRMS (n=17) (P<0.001). RVESV, TMV-PV and TMV-PG were significant higher in severe group than in patients with moderate and mild PRMS (P<0.001).RV-ESV, RV-SV, RV-EF, RV-CO, RV-Mass and LV-EDV correlated well with TMV-PG (r= 0.82, -0.93, -0.94, -0.91, -0.96, and -0.94; P<0.001).
CONCLUSION: Measurement of right ventricular systolic and left ventricular diastolic function with ECG-gated MRI could quantify severity of patients with PRMS.
CLINICAL APPLICATION: The retrospectively ECG-gated magnetic resonance imaging (MRI) allows a reliable assessment of severity in patients with rheumatoid mitral stenosis.

冠状动脉 CTA 诊断卵圆孔未闭的临床价值

曾莹婷,张笑春,宋璐,徐海波
武汉大学中南医院

目的:探讨冠状动脉计算机断层扫描血管造影（CTA）诊断卵圆孔未闭（PFO）的临床价值。
方法：回顾性分析 2019 年 2 月至 2019 年 8 月期间在武汉大学中南医院进行冠状动脉 CTA 检查，且怀疑有卵圆孔未闭的患者 186 例，对其冠脉 CTA 中以下参数进行评估：左向右分流束的存在、左心房开口位置、左心房开口直径以及 PFO 隧道长度。
结果：186 例患者中，34.4%(64/186)的患者存在左向右的分流，65.6%(122/186)的患者仅表现为房间隔小袋。开口位置以左心房房间隔侧前上份多见，占 55.4%（103/186）。分流存在与左心房开口直径（P=0.324）之间，或分流存在与 PFO 隧道长度之间没有观察到显著的关系。
结论：冠状动脉 CTA 可以准确评估 PFO 的分流存在、开口位置、开口直径以及隧道长度，能很好地指导临床工作。

PU-2647
能谱 CT 鉴别左房内血栓和血流瘀滞的初步研究

张飞飞
华中阜外医院

目的：初步探索能谱 CT 鉴别左房内血栓和血流瘀滞的可行性及其价值。
方法：127 例因房颤行开源心脏 CT 双期增强扫描的患者纳入研究，其中动脉期为能谱扫描（90kv、Sn150kv），静脉期为常规 FLASH 扫描。将动脉期能谱 CT 扫描图像定义为实验组组，将双期 CT 图像（动脉期能谱 CT 扫描图像＋静脉期 FLASH 扫描图像）定义为对照组，规定对照组不能使用能谱 CT 后处理工作站进行数据分析；由两位高年资放射科医师分别对两组图像结果进行判读，以双期心脏 CT 图像结果为参考标准，评价能谱 CT 检测左房内血栓的诊断效能。
结果：127 例患者中，88 例均被实验组、对照组诊断为正常，26 例均被诊断为血流瘀滞，5 例均被诊断为血栓；另有 8 例患者由对照组诊断为血流瘀滞，而实验组诊断为血栓。以双期心脏 CT 图像为参考标准，能谱 CT 诊断左房内血栓的灵敏度为 1，特异度为 76.45%，两种检出方法的一致性较高。
结论：能谱 CT 检出左房内血栓的敏感性高，并可供提供碘浓度等定量指标，减少双期扫描引起的辐射剂量增加，是一种很有前景的新方案。

PU-2648
复杂型先天性心脏病合并下腔静脉肝静脉回流异常 MDCT 分析

汪卫中,茹欢孟
上海远大心胸医院

复杂型先天性心脏病合并下腔静脉肝静脉回流异常 MDCT 分析上海远大心胸医院放射科 汪卫中 茹欢孟 吴平平 范雅茹 吴晏 胡军 周晓杰 【摘要】 目的：探讨 MDCT 对复杂型先天性心脏病改良 Fontan 术前下腔静脉肝静脉回流异常评估的价值。方法：回顾分析 41 例复杂型先天性心脏病下腔静脉肝静脉回流异常，心外管道 Fontan 术前常规 MDCT 扫描和心脏彩色多普勒检查，按照年龄分成婴幼儿组（10 例）、少年组（23 例）、成人组（8 例），三位有经验的医师根据后处理图像分析下腔静脉与肝静脉回流情况，并对心脏大血管 MDCT 的扫描范围、扫描期相、对比剂注射部位对下腔静脉肝静脉回流的影响做出评估。结果：（1）肝段至肾上段下腔静脉缺如，下腔静脉延续为奇静脉通过上腔静脉回流至心房 25 例，其中肝静脉汇合成单一开口于心房 17 例（68%），肝静脉汇成 2 支分别开口于两个心房或冠状窦 7 例（28%），肝静脉汇成多支开口于心房 1 例（4%）。（2）

肝段下腔静脉存在，肝静脉部分汇入下腔静脉开口于右侧心房，另一支 9 例（56%）直接开口于左侧心房，2 例（12.5%）经半奇静脉通过永存左侧上腔静脉引流入冠状窦，1 例（6.2%）右下肺静脉汇入左肝静脉再入冠状窦。4 例（25.3%）肝静脉汇成一支与下腔静脉分别回流至单一心房。（3）成人组、婴幼儿组图像质量优良率高于少儿组，扫描两期成功率高于单次扫描，扫描范围包括肾静脉有利于下腔静脉畸形的判断。从上肢或下肢注射对比剂不影响下腔静脉与肝静脉回流的判断。结论：MDCT 扫描能较好地显示下腔静脉与肝静脉回流异常，有助于制定复杂型先天性心脏病改良 Fonton 手术方案。

PU-2649
MRI 测量 TAPSE 及 RVFS 评价成人房间隔缺损右室功能的应用研究

韩曙光,胡春峰
徐州医科大学附属医院

目的 应用 MRI 三尖瓣环位移幅度（TAPSE）及右心室轴缩短率（RVFS）定量评估成人房间隔缺损患者的右心室功能，探讨其与肺动脉压收缩压及右室射血分数的相关性研究。
方法 38 例经我院 TTE 诊断为房间隔缺损的患者，依据 DSA 右心导管所测肺动脉平均压(mPAP)将病例分为 2 组：房间隔缺损不伴 PAH 组(mPAP<25mmHg，n=21)、房间隔缺损伴 PAH 组(mPAP≥25mmHg，n=17)，另选 17 例健康成年人作为对照组(n=17)。三组均行四腔心电影 MRI 测得三尖瓣环右室游离壁处相对于右室心尖部的收缩期峰值位移（TAPSE）及校正后右心室轴缩短分数（RVFS），比较三组间各位移的差异并分析与肺动脉收缩压（PASP）及右室射血分数的相关性。
结果 1. 对照组、ASD 不伴 PAH 组、ASD 伴 PAH 组的 TAPSE 测值不具有统计学差异(P>0.05)；ASD 伴 PAH 组 RVFS 明显低于对照组及 ASD 不伴 PAH 组，差异具有统计学意义(P<0.05)；ASD 伴 PAH 组与对照组、ASD 不伴 PAH 组相比 RVEF 值显著降低(P<0.05)。
2. TAPSE 及 RVFS 均与 RVEF 呈正相关(r 值为 0.74/0.85)，以 RVFS 的相关性较好；TAPSE 及 RVFS 与 PASP 在病例组呈显著负相关(r 值为-0.70/-0.79，P<0.05)；RVEF 与 PASP 亦呈显著负相关(r 值为-0.84，P<0.05)。
结论 MRI 测量 TAPSE 及 RVFS 评价房间隔缺损患者右室功能省时、准确；随着肺动脉高压的出现，RVFS 显著降低，可作为临床无创评估患者右心室功能、判断预后的可靠指标。

PU-2650
心房颤动患者左心耳形态解剖学特征及功能的双源 CT 成像分析

陈鑫
1.泰康同济（武汉）医院
2.武汉科技大学医学院

目的：探讨基于双源 CT 血管成像技术的房颤患者左心耳形态学特征及功能特点，为指导左心耳封堵术前规划提供详实的影像学资料。方法：分析 2016-1-1 至 2018-12-31 拟行左心耳封堵手术的 126 例 AF 患者 CTA 影像资料，扫描图像行多种三维后处理并进行左心耳解剖形态分型及参数测量。结果：①左心耳形态学分型：鸡翅型（31 例，25.4%，其中反鸡翅型 5 例，4.0%）、菜花型（29 例，23.0%）、风向标型（41 例，32.5%）、仙人掌型（24 例，19.0%）。②左心耳与左上肺静脉位置关系分型：左心耳口位置高于、平行于、低于左上肺静脉平面分别为 3 例（2.3%）、99 例（79.1%）、24 例（18.7%）。③左心耳口形态学分型：左心耳口形态分型：椭圆形（115 例，

91.3%）、类圆形（6 例，4.9%）、水滴形（3 例，2.6%）、足形（1 例，0.8%）、三角形（1 例，0.8%）。④解剖参数分析：左心房容积(108.1±29.8)ml^3、左心耳容积(10.5±4.5) ml^3、左心耳口面积(293.2±113.7)mm^2、左心耳口长、短径(24.3±5.3)mm、(15.6±4.4)mm。其中 118 例成功进行左心耳封堵术，8 例患者因为左心耳形态异常或左心耳口径较大而封堵失败。结论：双源 CT 可作为测量及评价左心房、左心耳相关指标，明确左心耳周围组织结构的有效检查手段；对房颤患者术前准确评价其左心耳形态和左心耳口大小以选择合适封堵器及其型号很有帮助。

PU-2651

双源 CT 在先天性心脏病诊断中的应用价值

罗道首,李向东
中国人民解放军南部战区总医院

目的 探讨双源 CT 在先天性心脏病诊断中的应用价值。**方法** 采用西门子 Siemens Somatom Definition DSCT 增强扫描检查先天性心脏病 66 例，扫描均采用心电门控扫描模式，所有病例均行心脏超声检查且经手术或 X 线心血管造影证实，其中 52 例经手术证实，14 例经血管造影证实。本组病例以手术或 X 线心血管造影结果为标准，比较双源 CT 和心脏超声的诊断准确率。**结果** 经手术或 X 线心血管造影证实的上述 66 例先心病例，含单纯房间隔缺损 4 例、单纯室间隔缺损 5 例、主动脉弓离断 2 例、单心室 6 例、单心房 4 例、肺静脉异常引流 3 例、法洛三联症 7 例、法洛四联症 12 例、单纯动脉导管未闭 8 例、完全型大动脉错位 3 例、肺动脉起源异常 5 例、冠状窦无顶综合征 2 例、主动脉缩窄 5 例。其中心内畸形 63 处，双源 CT 和心脏超声诊断准确率分别为 95.52%和 96.32%；心外畸形 48 处，双源 CT 和心脏超声诊断准确率分别为 95.89%和 88.56%；双源 CT 诊断准确率高于心脏超声。**结论** 双源 CT 对比增强扫描对先天性心脏病心外畸形的诊断准确率高于心脏超声，且图像直观明了，便于观察，二者联合可进一步提高对先天性心脏病的诊断准确率。

PU-2652

双源 CT 对肺血减少类复杂先心病肺动脉发育的研究

张莉,李向东
中国人民解放军南部战区总医院

目的：探讨 CT 对肺血减少类复杂先心病肺动脉发育的术前评估准确性。
方法：选择 2009 年 2 月至 2011 年 2 月在我院术前行 CT 和超声检查的肺血减少类复杂先天性心脏病患者 79 例，CT 检查完成后选择收缩末期图像进行多种方法重建，在后处理工作站上分别从轴位、冠状位和矢状位观察肺动脉发育情况、体肺侧支的检出及发育情况，计算 McGoon 指数、主-肺动脉比值、肺动脉指数，结合超声、手术结果评价 CT 对肺动脉发育的诊断准确性。
结果：1.79 例患者手术结果共发现肺动脉主干 49 个，左肺动脉 76 个，右肺动脉 79 个，其中 CT 全部正确检出，超声共漏误诊 3 例,两种检查方法测得值与手术结果之间差异无统计学意义，所测得值之间亦无统计学差异。2.手术结果共发现主-肺动脉间侧支共 31 例，其中 CT 准确诊断 30 例，漏诊 1 处降主动脉中部发出体肺侧支,超声准确诊断 25 例，共漏误诊 6 例,两种检查方法对主-肺动

脉间侧支的检出差异有统计学意义,CT 的检出率相对较高；对固有肺动脉直径（包括肺动脉主干和左右肺动脉）及升、降主动脉直径的测量结果与手术实测值之间有较高相关性，三者间差异不具统计学意义,CT 所测平均值及手术实测值之间相关性更好。两种检查方法对固有肺动脉直径及升、降主动脉直径的测得值之间差异无统计学意义，但 CT 所测平均值均较超声测得值大；两种检查方法测得的 McGoon 指数、主-肺动脉比值、肺动脉指数之间相关性良好（r=0.740/0.832/0.785），差异不具统计学意义，但 CT 所得 McGoon 指数、肺动脉指数均比超声所得值偏大，而其所得主-肺动脉比值则较超声所得值偏小。

结论：CT 在对肺血减少类复杂先心病患者的诊断方面有其技术优势，其对固有肺动脉及其分支的测量准确度较高，其测得的 McGoon 指数、主-肺动脉比值、肺动脉指数能准确反映肺动脉的发育情况，可作为术前评估肺动脉发育的主要检查手段。

PU-2653

心上型完全性肺静脉异位引流一例

印惠,王小宜,胡康新
湘雅常德医院

患者，男，25 岁，5 天前于当地医院体检发现心脏杂音，超声提示房间隔缺损、右心大、三尖瓣中度返流；为求进一步诊治，来我院就诊；体查患者口唇和四肢末梢轻度紫绀，左前胸壁明显隆起；胸骨左缘第 2/3 肋间可闻及 3/6 级收缩期杂音，余正常。胸片示肺血多，右心房心高比稍大，右心房稍大，主动脉结较小，肺动脉段明显突出；左心缘圆隆，右心室大；正位片呈“雪人征”，符合肺静脉异位引流。肺血管 CTA+CTV 示双肺静脉及其分支明显增粗，右肺静脉及左下肺静脉于左心房下方处汇合，汇合从纵隔左侧上方走行，途中左上肺静脉汇合，经无名静脉与左头臂静脉汇合后汇入右心房；异常引流肺静脉全程未与左心房相通，肺内静脉及远端分支未见充盈缺损。左心房、左心室体积增大，房间隔局部造影沟通。肺动脉及分支稍扩张，左心房、左心室体积较小，主动脉全程管腔缩小。诊断为完全性肺静脉异位引流（Ⅰa 型）。术中见右房右室明显增大，左心发育偏小，上下腔静脉增宽，主动脉直径约 2cm，肺动脉直径:主动脉直径=2:1。三尖瓣瓣环三指半，中度返流。后行完全性肺静脉异位引流矫治+三尖瓣成形术+房间隔缺损修补术。结扎无名静脉，将肺静脉与左心房吻合，闭合房间隔缺损，并适当将左房成型扩大，最后三尖瓣 kay’s 成形。术后恢复良好。

讨论：肺静脉异位引流分为完全性和部分性。根据引流部位的不同又可分为心上型、心内型、心下型及混合型。其中心上型根据引流途径不同，又可分为Ⅰa 型及Ⅰb 型，本例为Ⅰa 型，是指全部或部分肺静脉连接于无名静脉后自上腔静脉汇入右房，本例同时合并右心扩大、肺动脉高压及房间隔缺损，能存活至 25 岁者少见。CT 血管成像可全方位显示肺静脉的走行，容积再现能显示心脏大血管的整体及肺静脉的引流途径、各房室的大小及连接关系，通过任意角度旋转及剪切，能将肺静脉走行整体剪辑出来。对肺静脉异位引流的诊断及合并的其他复杂血管畸形诊断上有重要价值。

Partial absence of the pericardium leads to tricuspid regurgitation

Guanmin Ren[1],Y.-H. Juan[2],Hongwen Fei[3],Qiongwen Lin[3],Paul Schoenhagen[4],Jingjing Wang[1],Rui Chen[1],Hui L[1]

1.Department of Radiology， Guangdong General Hospital， Guangdong Academy of Medical Sciences， Guangzhou， Guangdong Province， China
2.Department of Medical Imaging and Intervention， Chang Gung Memorial Hospital， Linkou， Chang Gung University， Taoyuan， Taiwan
3.Department of Cardiology， Guangdong General Hospital， Guangdong Academy 10 of Medical Sciences， Guangzhou， Guangdong， China，
4.Case Western University Cleveland Clinic Lerner College of Medicine， Cleveland， OH 44195， USA

Congenital absence of the pericardium (CAP) is an uncommon finding, It is usually diagnosed incidental, as most patient with CAP are asymptomatic. There are only a few symptomatic cases published where pericardial defects were associated with herniation or ischemia of the heart, compression of coronary vessels , undue torsion or strain on the great vessel, or tricuspid regurgitation which maybe need further management. we present a case of partial Congenital absence of the pericardium leading to enlargement at the base of the right ventricle and tricuspid regurgitation due to band-like rim of remaining pericardium restricting the blood flow by using multi-modality imaging.

高浓度对比剂结合低 KV 技术在心衰患者冠脉 CTA 中的研究

任蔺
西南医科大学附属中医院

【摘要】目的:探讨高浓度对比剂结合低 kv 技术在心衰患者冠脉 CTA 检查的可行性。资料和方法：选取 2018 年 9 月至 2019 年 3 月在我院临床怀疑心衰行冠脉 CTA 检查的患者共 100 例，年龄 50—80，其中男性 52 例，女性 48 例，随机分成 A、B 两组,A 组为对照组 50 例，其中男 28 例，女 22 例，B 组为实验组 50 例，其中男 24 例，女 26 例，A、B 两组均使用西门子二代双源 CT 前瞻性扫描模式，均使用迭代重建技术，A 组:320 对比剂，65ml，4ml/s，120kv，B 组 370 对比剂 65ml，5ml/s，100kv。两组注射完对比剂后均注射 50ml 生理盐水。根据美国心脏协会 (American Heart Association, AHA)标准，将冠状动脉分为 15 段,分级评分标准：I 级 4 分，图像质量优，血管 显示良好，边界清晰，管腔连续完整；n 级 3 分，图像质量良好，血管边界稍模糊，或有轻度伪影，但不影响诊断；m 级 2 分，图像质量一般，边界模 糊，有重度伪影，尚可以诊断；W 级 1 分，图像质 量差，血管显示不清，有严重阶梯状伪影，不能作 出诊断。由两位经验丰富的影像医师分别对 15 段冠 脉血管图像分四级进行评分，分别统计两组各段血管得分情况，分别计算两种模式下病人吸收辐射剂量。
结果：两组之间图像质量有统计学意义（$p<0.05$）,两组之间辐射剂量有差异（$p<0.05$）。**结论**：高浓度对比剂结合低 KV 技术可提高心衰患者冠脉 CTA 的图像质量，同时降低患者的辐射剂量。

PU-2656
Revolution 256 排 CT 冠状动脉成像联合胸腹主动脉 CTA 成像在诊断突发性胸背部疼痛的优势。

黄纯自
重庆医科大学附属第三医院

目的：探讨基于 Revolution 256 排 CT，冠状动脉成像联合胸腹主动脉 CTA 扫描对快速诊断突发性胸背部疼痛中的优势，以及临床意义。
方法：选取突发性胸背部疼痛患者 20 例，在询问病史、体格检查及相关血生化检查后，排除 CT 扫描禁忌症，立即予以冠状动脉成像联合胸腹主动脉 CTA 检查，选用机器：GE Revolution 256 排 CT，造影剂选取 370mgI/ml 非离子型对比剂（注射造影剂方案：65ml，5ml/s）；扫描方法：Group1:14/16cm 轴扫，自动触发；Group2:8/4cm 螺旋扫描，对冠状动脉轴扫结束后自动移床并立即启动螺旋扫描；成像顺序：冠脉 CTA→胸腹主动脉 CTA。扫描结束后用 GE aw4.7 工作站进行后处理，选取层厚为 0.625mm 的动脉期组图，使用 VR 中 tree VR、Big Vessels 及 Small Vessels 重建出冠状动脉及胸腹主动脉；再重建出 MIP 图像，调整合适窗宽窗位；最后使用 MPR 后处理技术，从多角度观察血管情况，并对冠状动脉做血管分析。分析 Revolution 256 排 CT 冠状动脉成像联合胸腹主动脉 CTA 扫描图像的优越性及其诊断突发性胸背部疼痛相关疾病的优势。
结果：20 例突发性胸背部疼痛患者中，主动脉夹层 6 例，冠状动脉粥样硬化性心脏病 2 例，冠状动脉粥样硬化性心脏病合并主动脉夹层 1 例。图像能同时且清晰显示患者冠状动脉及胸腹主动脉的情况，可在 GE aw4.7 工作站中运用 VR、MIP、MPR 等后处理技术，清晰直观的显示病变情况。
结论：Revolution 256 排 CT 冠状动脉成像联合胸腹主动脉 CTA 扫描在诊断突发性胸背部疼痛患者中较以往运用 64 排螺旋 CT 分别行冠状动脉成像及胸腹主动脉 CTA 成像对快速给出临床诊断及图像质量有很大的优势。运用 GE aw4.7 工作站重建出的 VR 图像更能清晰直观反应病变情况。

PU-2657

Assessment of ventricular wall motion with cardiac MRI in acute myocardial infarction after PCI

Lihua Wang,Minming Zhang,Jiangzhong Sun,Xinfeng Yu
The Second Affiliated Hospital of the Medical College of ZheJiang University, China

Purpose: To find out changes in segmental ventricular wall motion and value of prognostic predication with cardiac MRI in acute myocardial infarction after PCI.
Material and method: 18 consecutive patients with acute myocardial infarction underwent routine medical and PCI therapy. All 18 patients were performed baseline, 6 months follow-up with cardiac MRI. 12 patients fulfilled 12 months follow-up. Scan sequences used short-axis left ventricular view in FIESTA. The ventricular wall motion was described by maximal expansion velocity (temporal max), maximal contraction velocity (temporal max), expansion velocity at peak filling rate (PFR), contraction velocity at peak ejection rate (PER), maximal wall-thickness (temporal max), mean end diastole wall-thickness, mean end systole wall-thickness, wall-thickening, fractional wall-thickening and myocardial volume. Statistics procedure used SPSS 13.0, including T-test and correlation analysis.
Result: 18 patients were studied including 14 male and 4 female, media age was 59yr. All infarction zones belong to left coronary artery supply and located in 7-15 segments. In SEGMENT the margin of myocardium were depicted automatically and revised manually. The motion data were calculated. Statistics analysis revealed maximal expansion velocity (temporal max) of infarct segments in 6 months follow-up was larger than that in baseline, which indicated the wall compliance decreased. Maximal contraction velocity (temporal max), expansion velocity at PFR and contraction velocity at PER of infarct segments in baseline all showed significant decrease compared with non infarct segments in 6 months follow-up, which may suggest the pump function impaired. Maximal wall thickness (temporal max) between infarct and non

infarct segments existed significant difference in 6 months follow-up. In 12 months follow-up expansion velocity at PFR was lower in infarct than non infarct segments. Myocardial volume decreased continuously in follow-up duration, the trend was more obvious in infarct than non infarct segments.
Conclusion: Quantitive evaluation of ventricular wall motion with cardiac MRI in acute myocardial infarction after PCI is available. Contraction and expansion velocity may be sensitive indicators for pump function impairment evaluation

PU-2658
Revolution CT 一站式冠脉联合上腹部增强扫描应用价值研究

李莹[1],查云飞[1],高剑波[2],吕培杰[2]
1.武汉大学人民医院
2.郑州大学第一附属医院

目的：探讨 256 排宽体探测器联合多模型迭代重建技术（ASiR-V）在一站式冠脉联合上腹部增强扫描中应用的可行性。
方法：前瞻性收集需要行冠脉 CT 血管扫描（CCTA）及上腹部增强扫描的患者 75 例，采用通过一次造影剂注射，一站式前瞻性心电门控扫描联合上腹部增强扫描。测量并记录图像的客观评价指标[升主动脉根部（AA）、左冠主干（LMA）、前降支近段（LAD-p）、左回旋支近段（LCX-p）及右冠近段（RCA-p）的 CT 值，图像噪声 SD、SNR 及 CNR；肝脏、胰腺、主动脉、门静脉的 CT 值、CNR 及图像噪声 SD]及辐射剂量，主观评价冠状动脉可判读节段数百分比（美国心脏学会 15 分段以 4 分法进行评价，≤3 为可判读）、上腹部图像质量（5 分制，≥3 分符合临床诊断需求）。
结果：冠脉 AA、LMA、LAD-p、LCX-p 和 RCA-p 的 CT 值分别是（443.9±84.9）HU、（421.1±92.5）HU、（410.8±88.1）HU、（401.7±86.5）HU 和（418.9±92.2）HU；冠脉图像噪声 SD、SNR、CNR 分别为 32.3±5.9、14.1±2.9 和 17.2±3.4。全组共 925 段冠状动脉纳入被评价范围，其中 67.6%（625/925）图像优秀，21.8%（202/925）图像质量良好，9.2%（85/925）图像质量中等，1.4%（13/925）图像质量差。75 例患者所有上腹部图像均能达到诊断要求。
结论：一站式冠脉联合上腹部增强扫描在 Revolution CT 宽体探测器上可行，明显减少患者对比剂用量，同时多模型迭代重建技术可在较低辐射剂量条件下完成联合扫描，并获得较高质量的冠脉及上腹部图像。

Additional Diagnostic Improvements of Coronary CT Angiography on Calcified Coronary Stenosis Using a Dual-Layer Spectral Detector CT: Validation by Invasive Coronary Angiography

Cheng Xu[1],Yan YI[1],Shenghui Yu[2],Zheng yu Jin[1],Yining Wang[1]
1.Peking Union Medical College Hospital
2.Senior CT Demo Specialist Philips Healthcare

Objectives: The objective of this study was to explore the optimal spectral based images reconstruction approach and the incremental diagnostic value for calcified and mixed plaques stenosis evaluation on dual-layer spectral detector CT.
Materials and Methods: 72 consecutive patients with known or suspected CAD who underwent both coronary CTA and ICA were enrolled. The conventional 120kVp images, 8 different virtual monoenergetic keV images (VMI) (70 to 140keV, with increment of 10 keV), the effective atomic number images and iodine no water images were reconstructed, respectively. Invasive coronary angiography was used as the reference standard. Subjective and objective evaluation were performed on each lesion for all keV levels. Optimal qualitative keV level was selected. Bland-Altman analyses were used to assess agreement of the data between different monochromatic series and ICA. The sensitivity, specificity, positive predictive value, negative predictive value and diagnostic accuracy were calculated and compared among all the different approaches.
Results: There were 122 vessels in 72 patients （49 men and 23 women; 63.7±10.2years） finally enrolled for analysis. The qualitative optimal keV was selected at 100 keV (52%) and 90 keV (39%) for most cases. Among 8 monochromatic keV levels, Bland-Altman analyses yield best agreement between the stenosis assessment under 100keV and the result of ICA. The sensitivity, specificity, positive predictive value (PPV), negative predictive value (NPV) and diagnostic accuracy of 100 keV VMI, the effective atomic number images, iodine no water images and conventional 120kVp to identify stenosis ≥ 50% were 83%, 80%, 74%,73% and 78% respectively; 92%, 58%, 76%,83% and 80%,respectivly; 86%, 66%, 78%,77% and 78% respectively and 88.9%, 44%, 70%, 73% and 70%. The sensitivity reached 97.2% when combining 100keV VMI with the effective atomic number images (the degree of stenosis ≥50% on both images.
Conclusion: Our study shows that virtual monochromatic reconstruction at 100keV has optimal diagnostic performance of coronary stenosis evaluation for calcified plaques on DLCT. The sensitivity to detect coronary artery diseases improve significantly when combining 100keV VMI with the effective atomic number images.

PU-2660
血透患者上肢血管通路 CTA 诊断研究（附 26 例报告）

郑永基[1],吴少平[2]
1.德阳市人民医院
2.成都医学院第一附属医院（原：中国人民解放军第四十七医院）

目的：分析不同扫描技术下血透患者上肢内瘘血管通路 CT 血管造影（CTA）肯定性、干扰性表现，提高此类患者 CTA 诊断水平。**方法：**回顾性逐例分析 26 例血透患者上肢血管通路 CTA 检查技术参数及影像表现，归纳其中有价值的诊断信息和干扰信息，提出诊断要点。**结果：**26 例 35 人次患者，扫描体位、扫描范围、打药部位、阈值设定位置及触发时间、扫描期限等技术参数均不一，以双手上举（n=28）、完整包含上肢血管通路（n=30）、对侧打药（n=22）、阈值设定胸主动脉（n=20）、平均 150HU 触发延迟 12 秒一期扫描，20 秒二期扫描多见。肯定性阳性表现包括狭窄 26 例（吻合口狭窄 11 例，引流静脉狭窄 8 例，中心静脉狭窄 7 例）、引流静脉增粗 14 例、瘤样扩张 12 例、血栓 11 例、侧枝循环 8 例、钙化 4 例、肱动脉下段假性动脉瘤 1 例、肘正中静脉纤细+多发小瘤样扩张 1 例、腋静脉支架置入后闭塞+多发侧枝循环 1 例。干扰诊断或假阳性表现包括左头臂静脉假阳性狭窄 3 例、锁骨下静脉假阳性狭窄 5 例、头静脉假阳性狭窄 8 例、假阳性血栓 1 例，结合检查技术参数后综合分析可以鉴别；另有 3 例血管不显影或模糊显影和 1 例血管造影剂充盈不

均与血栓鉴别困难。**结论：**血透患者上肢 CTA 技术缺乏规范客观现实；对狭窄、引流静脉增粗、瘤样扩张、侧枝循环、钙化等显示具有优势；分期或多次扫描可鉴别假阳性狭窄；血管不显影或显影不佳与血栓鉴别困难。

PU-2661

Feasibility of Coronary CT Angiography in Patients with Atrial Fibrillation Using a Wide Detector CT Scanner

Xiao ying Zhao,Xingwang Wu,Jian Song,Dandan Du,Xiaohu Li,Bin Liu
First Affiliated Hospital of Anhui Medical University

Objectives: We aim to evaluate the image quality and radiation dose of wide detector CT coronary angiography (CCTA) in patients with atrial fibrillation (AF). **Methods:** We retrospectively analyzed the CCTA images from 43 patients with AF (group 1) and compared them with CCTA images from 58 patients without arrhythmia (group 2). All of the patients underwent a prospective electrocardiogram (ECG) trigger of CCTA. We evaluated image quality, coronary evaluability, heart rate, irregular heartbeat, and effective dose (ED). **Results:** In the segment-based analysis, the coronary evaluability was 98.7% and 98.8% in two groups, and there was no significant difference between the two groups (p = 0.21). Scanning times, heart rate, heart rate changes, and irregular heartbeats were significantly higher in group 1 than in group 2 (p = 0.001). Mean ED was similar in both groups (p = 0.52). **Conclusion:** CCTA using a wide detector CT scanner can evaluate the coronary artery in patients with AF. Although heart rate is variability, the image quality and radiation dose are similar to those of normal rhythm patients.

个体化注射对比剂软件 Medrad P3T 在双源 CT 冠脉 CTA 成像中对心脏结构显示的初步探讨

陈帅[1],杨亚英[2]
1.云南省第一人民医院
2.昆明医科大学第一附属医院

目的 评价双源 CT 采用个体化对比剂注射软件 Medrad P3T 行冠脉 CTA 成像的图像质量，探讨个体化对比剂注射方案的可行性，推广低剂量注射方案的应用。方法 回顾性分析在本院行双源 CT 联合 P3T 个性化注射方案冠状动脉成像的 76 例患者及同时期采用经验性传统双筒注射方案进行冠状动脉成像 76 例患者图像，比较 2 组方案的图像质量及各处测定 CT 值。结果 ①Medrad P3T 个性化注射组左心室与右心室 CT 值较传统注射组有明显差异，具有统计学意义(P <0 .05)，而升主动脉 、降主动脉 、肺动脉的感兴趣区 CT 值差异无明显差异，不具有统计学意义(P >0 .05)。 ②采用 Medrad P3T 个性化注射组室间隔显示情况明显优于传统注射组，具有统计学意义(P <0 .05) 。③采用 MedRadP3T 个性化注射方案注射所用对比剂量比传统方案使用对比剂量减少约 5.7%～28.7%。结论 Medrad P3T 个性化注射方案与传统注射方案均可获得良好的冠脉图像质量以满足临床诊断需求，但 Medrad P3T 个性化注射方案能提高心室结构的显示及冠脉各段均匀性显示，尤其对合并室

间隔缺损等心脏、大血管疾病患者能基本能达到“一站式”扫描，即冠状动脉和心脏大血管结构均可得到良好显示，避免重复扫描以减低辐射剂量及减低对比剂用量，值得临床借鉴及推广应用。

PU-2663

冠状动脉钙化积分在冠心病诊断中的价值

陶俊利
重庆市肿瘤医院

目的：探讨冠状动脉钙化积分冠心病诊断中的价值。
方法：对 117 例可疑冠心病患者行 CT 检查，一个月内行冠状动脉造影（ICA）检查。以 ICA 显示冠状动脉狭窄≥50％为 CAD 诊断金标准，用受试者工作特征（ROC）曲线评价 CACS 对 CAD 的诊断效能，并获得 CACS 诊断 CAD 的最佳界值；计算 CACS 诊断 CAD 的灵敏度、特异度、准确度、阳性预测值、阴性预测值.
结果：
（1）以 ICA 显示冠状动脉狭窄≥50％为 CAD 诊断标准，117 例可疑冠心病患者诊断为 CAD72 例，非 CAD45 例，CAD 组 CACS 明显高于非 CAD 组[（535.7±103.7）vs. （38.1±16.0）]，差异具有统计学意义（t=4.73，P<0.05）。
（2）CACS 诊断 CAD 的 ROC 曲线下面积为 0.73，依据 ROC 曲线获得 CACS 诊断 CAD 最佳界值为 96.4 分，据此计算灵敏度、特异度、准确度、阳性预测值、阴性预测值分别为 61.1％（44/72）、95.5％（43/45）、74.4％（87/117）、95.6％（44/46）、60.5％（43/71）。
结论：CACS 诊断 CAD 最佳界值为 96.4 分，CACS 诊断 CAD 有较高的特异性及阳性预测值，但其灵敏度较低，CACS＜96.4 分甚至为 0 分，不能排除微钙化及非钙化性斑块所致 CAD

PU-2664

双源 CT Flash 模式正弦迭代重组技术结合“双低”扫描在胸痛三联检查中的应用研究

戴志军,吴小红
宁夏回族自治区人民医院

目的 通过比较二代光子双源 CT Flash 模式下“双低”扫描联合正弦迭代重组技术(SAFIRE)与双源 CT 传统扫描技术联合常规滤波反投影重组(FBP)技术对胸痛三联病变的显示能力，评估双源 CT Flash 模式下结合“双低”扫描在急性胸痛患者中应用的优势及可行性，以期显著减低患者的辐射剂量及对碘摄入量。**方法** 将临床初步筛查需要行胸痛三联检查的 40 例满足实验条件的患者随机分为实验组和对照组两组，分别使用双源 CT Flash 模式下“双低”技术联合正弦迭代重组(SAFIRE)法和常规的胸痛三联序列（DS Chest Pain ECG)进行扫描，对两组图像质量分别进行主观评价和客观评价，对比两组辐射剂量并进行统计学分析。 **结果** 两组图像质量的主观评价无明显差异（P＜0.01），两组图像质量客观评价血管 CT 值均大于 300HU，完全满足临床诊断需求。两组辐射剂量 CTDI 、DLP 及 ED 均有显著统计学差异，（P＜0.01），其中实验组 ED 为 1.04±0.03 mSv，对照组 ED 为 18.17±8.21mSv，有效辐射剂量较对照组降低 94%～95%。**结论** 双源 CT Flash 模式结合“双低”扫描联合正弦迭代重组技术(SAFIRE)不但可以获得满足诊断条件的图像，更重要的是显著降低了辐射剂量和对比剂摄入量，具有广泛的应用前景。

PU-2665
探讨 128 层螺旋 CT 胸痛“三联”CTA 结合迭代重建技术在胸痛病人临床中的应用价值

杨帆
川北医学院附属医院

目的：探讨应用 128 层螺旋 CT 胸痛“三联”CTA 结合 iDose 技术在胸痛患者病因诊断中的临床应用价值。材料及方法：收集川北医学院附属医院 2018 年 1 月-2019 年 1 月期间符合纳入及排除标准的胸痛患者，随机分为 A、B 两组，A 组为常规组，B 组为 iDose 组，每组 60 人，采用飞利浦 128 层螺旋 CT 进行扫描，两组心率均控制在 75 次/分之下。然后记录分析上述各组的噪声、SNR、CNR 及辐射剂量、以及图像质量（运用 1-5 分评价各组总体图像质量），同时以冠状动脉及主动脉造影为金标准，来探讨胸痛“三联”CTA 结合 iDose 技术在胸痛患者病因诊断中的临床应用价值。结果：与 A 组相比，B 组辐射剂量明显减低，差异有统计学意义（P＜0.05）。结论：128 层螺旋 CT 胸痛“三联”CTA 结合 iDose 技术可以根据不同病人设置个性化方案并大大减少辐射且保证足够的图像质量，为临床监测胸痛患者及治疗方案的选择提供科学依据。

PU-2666
冠状动脉 CT 斑块稳定性分析与冠心病中医辨证分型的相关性研究

曾国飞,杨华
重庆市中医院

目的 探讨冠心病患者冠状动脉 CTA 斑块分析结果与中医辨证分型间的关系，为冠心病中医辨证防治及高危患者筛查提供客观指标。
方法 对 307 例冠心病患者分别行冠状动脉 CTA 检查及中医辨证分型，分析不同证型与斑块的性质及稳定性的关系。
结果 冠心病基础证型以血瘀证（38.56%）和痰浊证（24.07%）最常见，复合证型以心血淤阻证（35.5%）与痰浊壅塞证（24.76%）最常见；基本证型及复合证型与斑块性质均存在相关性（x^2=162.712，p<0.05、x^2=55.818，p<0.05），相依系数示两种辨证方法均存在低度关联（0.310、0.241），基本证型及复合证型与斑块稳定性均存在相关性（x^2=125.994，p=<0.05、x^2=57.971，p<0.05），相依系数示两种辨证方法均存在低度关联（0.276、0.243）；对比两种辨证分型方法中不稳定性斑块的分布特点，痰浊壅塞证中不稳定性斑块比例最高。
结论 冠心病不同证型与斑块的性质及稳定性存在一定相关性，复合证型中痰浊壅塞证最易出现不稳定性斑块，需要临床高度关注。

PU-2667
不同类型的心包脂肪与心血管危险因素及冠状动脉粥样硬化的关系

梁春晓,余建群,李爽,刘莹
四川大学华西医院

目的 研究不同类型心包脂肪与各种心血管危险因素及冠状动脉粥样硬化的关系。**方法** 回顾性收集我院 2018 年 1 月至 2018 年 12 月行双源 CT 冠状动脉造影（coronary computed tomography angiography, CCTA）检查的 276 例住院患者的临床资料，根据排除标准最终纳入 203 例，测量从左心耳上缘到心尖 CT 值为-200HU 到-30HU 的心包内脂肪容积（epicardial fat volume, epi-FV）、心包外脂肪容积（paracardial fat volume, para-FV）及心脏周围脂肪容积（pericardial fat volume, peri-FV），分析患者冠状动脉 CTA 资料及各类型心包脂肪量与年龄、性别、BMI、空腹血糖、血脂、血压以及各心包脂肪指数与冠状动脉斑块累及节段及其管腔、Gensini 评分等的关系。**结果** 男性、糖尿病及血脂异常患者均具有较高的 epi-FV、peri-FV 及 para-FV，吸烟患者有较高的 peri-FV、para-FV，而高血压患者的 epi-FV 及 peri-FV 高于血压正常者。相关性分析显示年龄、BMI、血糖及甘油三酯与 epi-FV、peri-FV 及 para-FV 均呈正相关，peri-FV，para-FV 与高密度脂蛋白呈负相关。在冠状动脉粥样硬化分析中，存在冠状动脉斑块者具有较高的心包内及心脏周围脂肪指数，且两指数均与斑块累及节段数目及 Gensini 评分呈正相关，危险斑块者较稳定斑块者具有较高的心包外脂肪指数（所有 P<0.05）。**结论** 心脏周围脂肪体积包括心包内脂肪体积及心包外脂肪体积均与心血管危险因素相关。心包内及心脏周围脂肪指数与冠状动脉粥样硬化斑块形成及累及范围有关，而心包外脂肪指数与斑块稳定性相关。

PU-2668
Revolution CT 低管电压血管成像在胸痛三联征的临床运用

邓建涛,黄倩,李勇
遂宁市中心医院

目的：探讨 GE Revolution CT 低电压血管成像在胸痛三联征的临床应用。方法：选取遂宁市中心医院 2018 年 6 月至 2019 年 6 月疑似胸痛三联征患者 50 例随机分为观察组与对照组，每组各 25 例。其中观察组扫描肺动脉成像 PE 设为 80KV 管电压，冠脉动脉成像 CCTA 设为 100KV 管电压，胸主动脉成像 AAA 设为 80KV 管电压，对照组扫描肺动脉成像 PE 设为 100KV 管电压，冠脉动脉成像 CCTA 设为 120KV 管电压，胸主动脉成像 AAA 设为 100KV 管电压，各组患者按实验要求接受胸痛三联 CTA 成像检查。比较两组患者的图像成像质量，分别测量两组患者的肺动脉干、升主动脉、降主动脉及冠状动脉开口 CT 值，计算两组患者图像的 SNR、CNR 和辐射剂量。结果：观察组与对照组两组患者资料比较，图像质量主观评分无统计学差异（P>0.05），；升主动脉图像 SNR 无统计学差异（P>0.05）；肺动脉干、升主动脉、降主动脉及冠状动脉开口处的 CT 值和 CNR，肺动脉干、降主动脉及冠状动脉开口处的 SNR，患者的剂量长度乘积 DLP 和有效辐射剂量 ED 均具有统计学差异(P<0.05)。胸痛三联 CTA 平均曝光时间（3.12±0.41）s，肺动脉成像 PE 平均曝光时间（1.14±0.19）s，冠状动脉成像 CCTA 平均曝光时间 0.4s，胸主动脉成像 AAA 平均曝光时间（1.35±0.22）s。结论：GE Revolution CT 利用低管电压技术行胸痛三联血管成像检查，在保证图像质量的同时，可降低患者有效辐射剂量，具有较高的临床应用价值。

PU-2669
探讨宽探测器 CT 心脏三维重建在 TAVR 术前评估的应用价值

程巍
四川大学华西医院

目的 探讨宽探测器 CT 心电门控心脏三维重建技术在经心尖经导管主动脉瓣置换术治疗高龄高危主动脉瓣关闭不全的应用价值。**方法** 回顾性分析 2016 年 6 月至 2018 年 8 月于我院因主动脉瓣关闭不全欲行 TAVR 手术来我科做 CT 增强心脏三维重建的 69 例患者的临床资料，其中男 45 例，女 24 例，平均年龄 75.8±4.2 岁，术前均采用 CT 心电门控三维重建技术对主动脉瓣膜区域及心脏大血管进行全面评估，包括主动脉起始部 CT 值，对比度噪声比（CNR），记录所有患者剂量长度乘积（DLP），并计算有效辐射剂量（ED），观察主动脉瓣膜形态，测量主动脉瓣环直径、冠状动脉开口距主动脉瓣环高度、升主动脉直径、左心室主动脉夹角、三维容积图像分析最佳造影投射角度。依据测量数据筛选适合手术的病例，并制定理想的手术策略例如选择最佳瓣膜尺寸，选择造影投射角度以及心尖部入路等。适宜患者采用第二代人工生物瓣膜-J-Vavle 杂交手术。 **结果** 所有患者均成功完成 CT 心脏成像。CT 报告显示，瓣膜全部为三叶式，均无左心室壁瘤。主动脉根部 CT 值 409±27HU，CNR 平均 17.7±5.8，DLP 64.98±7.27，有效辐射剂量 0.91±0.35 mSv,。根据测量结果，9 例患者瓣环直径大于 29mm（6 例为男性），60 例瓣环直径小于 29mm 的患者中，1 例的冠脉开口距瓣环直径小于 10mm，此 10 例患者转为外科开胸瓣膜置换术，其余 59 例患者均成功完成 TAVR 手术。手术成功的 59 例患者中，CT 测量平均瓣环径 27.7±3.5mm，其中 55 例患者瓣膜无钙化，4 例患者瓣膜轻度钙化。依据术前三维全容积三维图像准确预测 94.9% （56/59）患者术中造影最佳角度。**结论** 宽探测器 CT 心电门控心脏三维成像技术对 TAVR 术前评估有关键作用，对于手术可行性，手术器材和手术方式的选择，均有重要指导意义，而且辐射剂量小，适合在临床推广运用。

PU-2670

320 排容积 CT 冠状动脉成像的初步研究

余蒙蒙
上海交通大学附属第六人民医院

目的 通过与冠脉 DSA 造影的比较，研究 320 层螺旋 CT 评估冠状动脉 III 级 IV 级狭窄的准确性。**方法** 收集 2012 年 7 月—2013 年 2 月于我院行 320 排螺旋 CT 和冠状动脉造影的 100 例患者影像学资料，评估 320 排螺旋 CT 诊断冠状动脉中度以上狭窄的准确性。 **结果** 320 排螺旋 CT 评估冠状动脉≥51% 、≥76%狭窄性病变特异性分别为 94.3%、86.0%，敏感性分别为 95.5%、95.3%， 阳性预测值分别为 78.0%、73.5%，阴性预测值分别为 99.0%、97.4%。**结论** 320 排螺旋 CT 作为一种无创性检查手段，评估冠状动脉中重度狭窄有较高的准确性，可以作为冠心病患者可靠的筛查方法。

PU-2671

128 层螺旋 CT 冠状动脉造影对冠状动脉少见疾病的诊断价值

陆靖
上海交通大学附属第六人民医院

目的：探讨多层螺旋 CT 冠状动脉造影检查多冠状动脉少见疾病的诊断价值，提高对其少见病的认识和掌握。
方法：搜集 2011-5-1 至 2013-5-1 间 8 例少见冠状动脉病人的资料，包括 4 例冠状动脉瘘，2 例冠状动脉瘤，2 例冠状动脉夹层动脉瘤。均经 DSA 造影或临床症状，体征确诊。男性，6 例，女性，2 例，年龄 53-81 岁，平均年龄 68 岁。采用西门子螺旋 CT，层厚 0.625mm，扫描范围心脏上缘至膈顶，经肘静脉注射对比剂，平静吸气后屏气扫描，采用心电门控技术，观察冠状动脉分布，走形，病变情况。

结果：4 例冠状动脉瘘病人，1 例为右冠状动脉-肺动脉瘘，2 例为左回旋支-肺动脉瘘，1 例为左前降支-肺动脉瘘，可见多发扭曲呈蚯蚓状血管位于异常瘘血管之间，128 层螺旋 CT 可以清晰显示瘘口血管情况以及发生血管。2 例为冠状动脉瘤病人，1 例为右侧冠状动脉瘤形成，1 例为右冠状动脉瘤形成，伴右冠状动脉狭窄。2 例为冠状动脉夹层动脉瘤形成，位于右侧冠状动脉近中段，左冠前降支中段，128 层螺旋 CT 可清晰显示破裂口形态。
结论：128 层螺旋 CT 可明确诊断冠状动脉少见疾病，包括冠状动脉瘘，冠状动脉瘤，冠状动脉夹层动脉瘤等，可以清楚了解沟通血管的起源，可以直观显示动脉瘤管腔内情况。能为临床提供切实，有效地帮助，制定最佳治疗方案。同时由于其安全、无创，可作为 DSA 冠状动脉造影检查的有效补充，甚至替代。

PU-2672
64 层螺旋 CT 冠状动脉血管成像诊断冠状动脉变异的价值

张佳胤
上海交通大学附属第六人民医院

目的 评价 64 层螺旋 CT 冠状动脉血管成像诊断各种类型冠状动脉变异的价值和临床应用。 **资料与方法** 回顾性分析 617 例接受 64 层螺旋 CT 冠状动脉血管成像患者中冠状动脉变异的检出率，并根据 CT 结果对冠状动脉变异进行分类。 **结果** 64 层螺旋 CT 冠状动脉血管成像共检出冠状动脉变异 78 例（12.64%，78/617），其中右冠状动脉起自主动脉左窦者 9 例、左冠状动脉起自主动脉右窦者 2 例、右冠状动脉开口高位者 2 例、多开口变异者 2 例（并行左主干）、心肌桥者 59 例、前降支－肺动脉瘘者 2 例、左右冠状动脉－肺动脉瘘者 1 例、右冠状动脉－左室瘘合并右冠状动脉瘤者 1 例。 **结论** 64 层螺旋 CT 冠状动脉血管成像能准确评估冠状动脉变异，并清晰显示各类病变的细节，可作为无创性诊断冠状动脉变异的首选方法。

PU-2673
Coronary plaque characteristics on baseline CT predict the need for late revascularization in symptomatic patients after percutaneous intervention.

Mengmeng Yu
Shanghai Jiao Tong University Affiliated Sixth People's Hospital

OBJECTIVES: To assess pre-procedural plaque characteristics as determined by coronary CT angiography (CCTA) and their associations with late revascularization in symptomatic post-procedural patients. METHODS: Symptomatic patients with pre-procedural CCTA were prospectively enrolled and referred for invasive coronary angiography (ICA). Plaque characterization was performed on the basis of baseline CCTA data. Multivariate logistic regression analysis with a stepwise selection method was performed to identify independent predictors of late revascularization. RESULTS: Seventy-eight patients with 134 lesions were included. Late revascularization was performed to treat 15 ISRs and 22 de novo lesions. Lesions with late revascularization showed higher prevalence rates of low-attenuation plaque (LAP) and positive remodelling (PR) (70.3% vs. 23.7% and 86.5% vs. 30.9%; both $p < 0.001$) at baseline

CCTA. However, the incidence of spotty calcification or napkin-ring sign (NRS) was not significantly different between the subgroups. According to ROC curve analysis, PR and LAP showed the largest AUC values for diagnosing lesions with late revascularization (AUC = 0.78 and 0.73, both p < 0.001). In multivariate analysis, LAP and PR (odds ratio = 6.30 and 13.94; both p < 0.05) were revealed to be independent predictors for late revascularization. CONCLUSIONS: LAP and PR observed by baseline CCTA independently predict late revascularization caused by ISR or progression of de novo lesions. KEY POINTS: * LAP and PR observed by baseline CT are predictors of late revascularization. * NRS and spotty calcification are not associated with late revascularization. * CT plaque characterization is useful in identifying lesions at high risk of late revascularization.

PU-2674
双源 CT 100Kv 管电压冠状动脉血管成像诊断冠心病的临床研究

章辉庆
亳州市人民医院

目的： 探讨在 100Kv 管电压下双源 CT 冠状动脉成像对诊断冠状动脉狭窄的临床诊断价值。方法：收集我院 93 例行冠状动脉 CT 血管成像（CCTA）与冠状动脉数字减影血管造影（DSA）检查的冠心病患者的影像学资料，以 DSA 结果为金标准，共分析评价 1400 支节段冠状动脉。结果：CCTA 显示冠状动脉狭窄 0～Ⅳ级分别为 945 节段、155 节段、 104 节段、183 节段和 13 节段；DSA 诊断冠状动脉狭窄 0～Ⅳ级分别为 988 节段、112 节段、125 节段、153 节段、22 节段。CCTA 诊断冠状动脉狭窄的敏感性为 94. 67%（284/300），特异性为 97.45%（1072/1100），阳性预测值为 91.03%（284/312），阴性预测值为 98.53%（1072/1088），准确率为 96. 86%（1356/1400）。CCTA 与 DSA 诊断冠状动脉狭窄的一致性检验 Kappa 值为 0.72。结论：双源 CT 100Kv 管电压冠状动脉成像对诊断冠状动脉狭窄具有较高的敏感性、特异性，能够显示狭窄病因，可做为疑似冠心病患者的首选检查方法。

PU-2675
不同管电压技术对双下肢血管造影图像质量和辐射剂量的影响研究

吕国兵
湖北医药学院附属随州医院（随州市中心医院）

目的 本文拟对需要行双下肢血管造影检查（CTA）的患者，采用不同的管电压进行检查，观察不同管电压对双下肢动脉的图像质量以及患者的辐射剂量的影响，寻找低辐射剂量且高影像图像质量的影像学检查方法。

方法 招募某三甲医院 2015 年 06 月~2016 年 12 月间，行双下肢动脉造影检查的患者。随机分为三组，A 组（120kV）、B 组（100kV）、C 组（80kV），每组 40 例。比较三组患者双下肢各支血管的 CT 值、信号噪声比（SNR）、对比噪声比（CNR）、噪声（SD），以描述图像质量评分；采用 CT 剂量指数（CTDIvol）和剂量长度乘积（DLP），分析辐射剂量；同时对重建图像质量、血管边缘形态等进行对比和统计分析。

结果 A、B、C 三组颈动脉血管造影图像质量的主观评分均在 6 分以上，满足主观诊断的要求。与 A 组相比，B 组和 C 组的各支双下肢动脉平均 CT 值分别降低 3.27%和 19.70%，具有统计学意义（P<0.05）。与 A 组相比，B 组和 C 组的容积 CT 剂量指数（CTDIvol）分别低 33.88%及 53.97%，差异具有统计学意义（P<0.05）。与 A 组相比，B 组和 C 组的剂量长度乘积（DLP）分别降低 33.74%和 63.83%，具有统计学差异（P<0.05）。

结论 双下肢动脉 CT 血管造影（CTA）扫描时，采用 100 kV 低管电压扫描所得图像，其质量与 120kV 相似，但辐射剂量明显减少。采用低管电压 80 kV，虽可明显减少辐射剂量，但图像质量有所下降。本研究提示，双下肢动脉 CTA 检查降低管电压至 100 kV 可行。

PU-2676
腹主动脉瘤腔内修补术后瘤体体积的变化与内漏发生的关系

郝云秀,王客非,王国蓉,房玥,王志伟,薛华丹,金征宇
中国医学科学院北京协和医院

目的 探讨腔内修补术(endovascular aneurysm repair,EVAR)后，腹主动脉瘤体积变化与内漏的关系。**方法**：回顾性分析了 2014 年 7 月至 2019 年 2 月在北京协和医院就诊的腹主动脉瘤患者 54 例（男性 47 名，女性 7 名，平均年龄 67.7±9.1 岁），所有患者均行腹盆 CTA（computed tomography angiography）检查，分别测量术前、术后 4 个月及术后 12 个月时腹主动脉瘤体积（V_0、V_1、V_2）及轴位最大径（D_0、D_1、D_2），同时记录患者发生内漏的情况。通过计算动脉瘤 V_1/V_0、V_2/V_0及 V_2/V_1的比值，分析 EVAR 后动脉瘤体积的变化及其与内漏的关系，并且也探究了瘤体轴位最大径变化与体积变化的相关性。**结果** 54 例患者在第一次随访时，11 例存在内漏，43 例无内漏。存在内漏的 11 例患者中有 8 例又进行第二次随访，其中 5 例发生内漏，3 例无内漏；无内漏的 43 例患者中有 15 例进行了第二次随访，其中 1 例发生内漏，14 例无内漏。术后第一次随访，有内漏者与无内漏者的瘤体体积变化有统计学差异（P=0.007）；术后第二次随访，有内漏者与无内漏者的体积变化无统计学差异（P=0.476）。术后第 1 次随访的和术前的瘤体体积变化与最大径变化之间呈中等程度相关（ r=0.5，P<0.001）；术后第 2 次随访的和术前的瘤体体积变化与轴位最大径变化之间呈强相关（ r=0.8，P<0.001）。**结论** 在腹主动脉瘤腔内修补术后，动脉瘤体积的变化不能完全反应是否发生内漏；动脉瘤体轴位最大径的变化与瘤体体积变化呈较强相关性

PU-2677
青年冠心病患者冠状动脉计算机断层摄影术征象及相关危险因素分析

顾敏,李康
中国科学院大学重庆医院（重庆市人民医院）

目的：量化≤45 岁青年患者冠状动脉计算机断层摄影术成像（CCTA）的冠心病检出率，并初步探讨其影像学特征及相关危险因素。

方法：选择我院接受 CCTA 检查的≤45 岁青年患者 2 099 例，分析≤45 岁青年人群中冠心病发病的危险因素，并且对≤20 岁、21~30 岁、31~40 岁及 41~45 岁 4 组不同年龄段患者冠心病发病率及病变特征进行分析比较，观察图像并记录有无冠状动脉斑块及其性质和狭窄程度。

结果：2 099 例患者中，男性、吸烟、血脂异常、高血压、糖尿病及家族史在冠心病阳性患者中所占比率均高于冠心病阴性患者（P 均<0.05~0.001）。CCTA 检出冠心病患者 229 例，总检出率为 10.9%（229/2 099）；其中≤20 岁检出率为 3.1%（1/32），21~30 岁检出率为 6.2%（11/177），

31~40 岁检出率为 9.7%（79/818），41~45 岁检出率为 12.9%（138/1 072），随着年龄的增加，发病率逐渐升高，差异有统计学意义（F=11.4，P<0.001）。单支病变患者发生率 72.5%（166/229）显著高于多支病变患者发生率 27.5%（63/229），差异有统计学意义（P<0.001）；323 支病变血管中，非钙化斑块 183 支（56.7%），其中低密度斑块 39 支（12.1%）；混合斑块 54 支（16.7%）；钙化斑块 86 支（26.6%），其中斑点状钙化斑块 72 支（22.3%）。重度狭窄及其以上 158 支（49.0%）。

结论：青年≤45 岁疑似冠心病患者 CCTA 图像上冠心病的检出率为 10.9%，其影像学特征多表现为单支病变和

非钙化斑块。对于临床怀疑冠心病的≤45 岁青年患者，尤其具有吸烟、高血压、高血脂等危险因素且相关症状典型的 30~45 岁男性患者，可建议行 CCTA 检查。

PU-2678

基于体重指数个性化注射对比剂冠脉 CTA 成像的研究

郭睿
中南大学湘雅三医院

【摘要】目的：探讨 256 排螺旋 CT 基于体重指数乘以注射系数对比剂注射方案冠脉 CTA 成像的可行性。方法：300 例有胸痛症状行冠脉 CTA 成像的患者，随机分成 A,B,C 三组。A 组，注射速率为 0.15×BMI(ml/s)；B 组，注射速率为 0.20×BMI(ml/s) ；C 组，注射速率为 0.25×BMI(ml/s)，按注射速率×9 计算对比剂用量。扫描完后主观评估图像质量及测量主动脉根部，左前降支（left anterior descending coronary artery, LAD），左冠状动脉回旋支（proximal portion of the left circumflex artery, LCX），右冠状动脉（the right coronary artery, RCA）三支冠脉开口内造影剂浓度。结果：图像质量评价结果显示 B 组优良率明显高于另外两组。三组不同方案主动脉及冠状动脉三个主要分支（LAD 近端、LCX 近端及 RCA 近端）CT 值对比有明显差异（P＜0.001）。而三组方案噪声无明显差异（P＞0.05），其信噪比及对比噪声比依次递增。结论：基于体重指数乘以注射系数调整对比剂注射速率与用量的冠脉 CTA 成像方法可以满足临床诊断，并且可以大大降低对比剂的用量。

肺动脉及冠状动脉 CTA 扫描中扫描时机选择的讨论

李强,窦文广,王鹏鸣,岳军艳
新乡医学院第一附属医院

【摘 要】**目的**：研究注射小剂量对比剂扫描时机的选择，在肺动脉及冠脉联合扫描成像中的应用价值。**方法**：1、对 20 例肺动脉及冠状动脉联合扫描的病人，进行小剂量测试测得时间密度曲线。通过分析上述病例的时间密度曲线，初步判断不同年龄、心率、BMI、体重的患者不同的时间密度曲线中扫描时间的分布的参数。2、通过以上参数对 30 例肺动脉冠脉联合扫描的患者不进行时间密度曲线的监测扫描，直接进行肺动脉进行智能追踪扫描并对冠脉进行延时扫描。**结果**：通过对 30 例联合扫描进行监测并延时扫描，得到符合诊断要求的 CTA 图像，经高年资医师判定，其中 23 例肺动脉及冠脉显示良好，肺静脉不显影；3 例肺动脉显示良好，冠脉显示欠佳；4 例肺动脉、肺静脉同时显影，冠脉显示良好。**结论**：这种直接对肺动脉进行监测的联合扫描方案，能够满足对肺动

脉及冠脉扫描的日常需要。既能保证图像质量不影响诊断，又能实现“双低剂量”，减少了对患者的伤害，是一种经济、环保、快捷的检查方法，具有较好的临床应用价值。

PU-2680
冠状动脉能谱成像最佳剂量对图像质量及冠脉斑块的检测和定性

李可
徐医附院

目的：评价不同重建算法改善图像噪声，斑块特征及量化斑块成分冠状动脉 CT 血管成像图像质量的效果，筛选最佳重建算法。
方法：对 60 例疑似冠状动脉粥样硬化患者应用第三代双源 CT（SOMATOM Force, Siemens Healthcare）进行扫描,用三种不同的重建算法：a.常规虚拟单能图像；b.线性混合图像；C.噪声优化的虚拟单能；进行图像重建,并测量钙化斑块和非钙化斑块冠脉的图像噪声、碘信号噪声比(SNR)和对比度噪声比 CNR)，并对图像质量进行定性读数。客观图像质量指标包括平均 CT 值、图像噪声、信噪比(SNR)、对比度噪声比(CNR),主观图像质量评价由两名具有 10 年以上诊断经验的影像医师对图像质量及斑块进行双盲评分。将三种重建方法进行了比较。1)将原始低能图像和高能图像线性混合，得到混合图像，加权比为 0.6 近似于传统的单源 120 kV CT 图像。2)光子能量为 40~150 keV 的常规虚单能图像，并以 20keV 为间隔。3）噪声优化的虚拟单能重建，光子能量为 40~150 keV，以 20keV 为间隔。
结论：SNR/CNR：100~150 keV 噪声优化的虚拟单能图像比混合图像具有更低的图像噪声。在 40 keV 噪声优化图像中，碘信噪比最高，比混合图像高 42.9%。从 40~70 keV 噪声优化虚拟单能图像和 70 keV 虚拟单能图像相比，冠状斑块 CNR 明显改善。对于混合图像和 70 keV 噪声优化的虚拟单能图像，冠状动脉斑块的定量相似.低能量(40 KeV)图像显示钙化斑块体积增加 81.6%，而非钙化斑块体积比混合图像低 38.7%。高能(100 keV 和 130 keV)噪声优化图像分别比混合图像低 14.7%和 22.1%。低能量(40~70 keV)虚拟后处理的双能冠状动脉 CTA 图像可使冠状动脉斑块 CNR 提高 20.2%~22.7%。使用现有的斑块量化软件，40 keV 图像产生不同的冠状动脉斑块体积。

PU-2681
冠状动脉——肺动脉瘘的 CT 血管造影诊断

杨雪君,徐霖,陈伦刚
十堰市太和医院

目的：分析冠状动脉一肺动脉瘘（CPF）的 CT 血管造影的影像表现，以期提高对该种冠脉异常的认识。
方法：回顾性分析十堰市太和医院 2018 年 1 月—2019 年 7 月经 CCTA 检查确诊的 15 例 CPF 患者的临床资料,采用多平面重组、曲面重组及 VR 技术观察冠状动脉异常分支(瘘血管)的起源、数目、冠状动脉有无斑块及狭窄,瘘口位置、大小以及瘘管形态、大小、继发改变等。
结果：15 例 CPF 患者，其中 5 例见右冠脉圆锥支供血，8 例左冠脉供血，其中 7 例相当于左圆锥支位置；双侧性供血 2 例。病灶在肺动脉表面形成迂曲、显著强化的血管网，其中仅 2 例形成较为明显的小动脉瘤，13 例可见明确的“射血征”，全部位于肺动脉瓣上方。1 例异常血管网可疑与支气管动脉交通。
结论：冠状动脉一肺动脉瘘并不少见，但绝大多数较小，没有明显血流动力学影响。该瘘有典型 CTA 表现，多起自冠状动脉的圆锥支，在肺动脉起始段表面形成血管网，有典型“射血征”。CTCA

具有无创性,可提供 VR 图像,能够清楚地表现出血管变异的空间关系,能够提供更多的影像学信息,可作为首选影像学检测方法。

PU-2682
Philips Brilliance iCT Elite 冠脉 CTA 低剂量扫描的研究与探讨

胡安宁
南京大学医学院附属鼓楼医院

目的：评价冠脉 CTA 低剂量结合 iDOSE 重建与常规剂量 FBP 重建图像的图像质量，探讨 Philips Brilliance iCT Elite 冠状动脉成像中降低 KVP 对减低辐射剂量的程度。**方法**：筛选 73 例行回顾性门控轴位扫描的患者，分成 A 组、B 组、C 组、D 组。分别 A 组采用常规剂量 120KVP,B 组、C 组、D 组分别采用 100KVP，应用软件 idose^{4}分别降噪，观察降低剂量的效果。**结果**：应用 Philips Brilliance iCT Elite 的 idose^{4}迭代重建可以显著改善图像的质量，在 CTDI 较常规剂量降低 50%的条件下仍可以得到与常规剂量 FBP 重建相当甚至更好的图像，在非选择性人群中，其冠状动脉 CTA 辐射剂量降至 55%是可行的。**结论**：通过降低 KVP 可以显著降低冠状动脉成像扫描的辐射剂量。CT 低剂量技术的应用和研究要遵循最优化（as low as reasonably achievable.ALARA）原则，即在保证获得良好的 CT 图像质量（满足临床诊断的需求）的同时，尽可能合理地降低受检者的检查剂量，飞利浦公司（iDose4）其核心特征是双空间多模式，通过在双空间——投影空间和图像空间进行基于噪声模型系统和解剖模型系统的迭代运算消除低光子伪影，降低图像噪声，提升图像分辨率，且不改变图象质地。据文献报道：一次冠脉 CTA 的辐射剂量为 20-25msv，远远高于其他胸部 CT 检查（3-9mSv），而通过降低 KVP 应用 iDose4 迭代重建可以显著降低辐射剂量，这是因为降低管电压扫描后，会因为光电效应增加，康普顿效应降低，导致血管腔内碘对比剂密度显著升高。另外辐射剂量与管电压的平方成正比,管电压降低,辐射剂量以平方的关系降低。

PU-2683
Feasibility of "One-stop" Myocardial Computed Tomography Perfusion Imaging in Coronary Artery Disease using 16-cm wide detector CT

Keling Liu,Kaiyue Diao,Chunchao Xia,Zhenlin Li
West China Hospital, Sichuan University

Purpose To investigate the feasibility of “one-stop”myocardial computed tomography perfusion imaging (CTP) in coronary artery disease (CAD) using 16-cm wide detector CT, compared with conventional coronary CT angiography (CCTA).
Materials and Methods Totally 104 participants (64 males (61.5%), 60.0±9.7 years) with suspected CAD were randomly divided into group A(n=52; routine CCTA examination) and group B(n=52; “one stop”CTP and manually triggered by a small-dose bolus test). Heart rate was not controlled and a 0.7ml/kg contrast dosage was applied. Contrast noise ratio of coronary artery relative to fat (CNR_{a-fat}) was used for objective image quality evaluation and a 4-point system was used for subjective evaluation. Scan time and effective dose of two groups were recorded. Transmural perfusion ratio (TPR) ,

defined as sub-endocardial/ sub-epicardial myocardial blood flow ,and left ventricular ejection fraction (LVEF) were measured on a commercially post-processing software (Ziostation2, Minato-ku™, Tokyo, Japan, version2.4.0.2).
Results The scan time was 72±29.5(s) longer in group B than A without increasing radiation dose (A vs B: 3.3±0.5 vs 3.4±0.6 mSv, P=0.593). Both the subjective and objective scores showed no difference between the two groups (A vs B: CNR_{a-fat} of LAD (28.7±7.0 vs 27.1±6.3, P=0.392); LCX (28.4±7.6 vs 26.9±5.7, P=0.424) and RCA (30.3±7.0 vs 28.2±7.8, P=0.317). For group B, there was a negative correlation between coronary artery stenosis degree and myocardial perfusion indexes. And patients with coronary arteries stenosis showed decreased LVEF (45.7±5.0%) compared with patients with normal coronary arteries(58.1±7.1%),P＜0.0001.
Conclusion Compared with conventional CCTA, “one-stop” CT myocardial perfusion imaging can simultaneously assess myocardial perfusion, coronary stenosis and left ventricular cardiac function, without increasing radiation dose and contrast medium volume.

PU-2684
不同对比剂注射方案对冠脉 CTA 图像质量的影响的对比研究

余飞,何其舟
西南医科大学附属中医医院

目的探讨二代双源 CT 冠状动脉(CCTA)前瞻性心电门控扫描中不同对比剂注射方案对图像质量的影响。方法：前瞻性收集 CCTA 检查患者 200 例，随机分为对照组（A 组）和实验组（B 组），每组 100 例。两组患者采用不同的注射方案，A 组注射流率=[体重（Kg）×0.8]/10s，先注射对比剂 10s，再注射生理盐水。B 组以相同的流率先注射 7s 对比剂，后将对比剂和生理盐水按 3：7 比例注射，注射混合液 6s，再注射生理盐水。记录两组患者升主动脉根部、冠脉各支血管近、中、远段 CT 值，所有数据的统计采用 SPSS18.0 分析，并进行方差分析和 Levene 检验。结果：两组间患者的一般资料之间没有显著差异；B 组对比剂用量较 A 组减少 12%；A、B 两组间升主动脉根部、右冠近段、左主干、左前降支近段、回旋支近段 CT 值组间比较，无统计学意义 $P>0.05$。两组间右冠中、远段，前降支中、远段，回旋支中、远端，组间比较，均有统计学意义 $P<0.05$。B 组冠脉各支中、远段血管 CT 值均高于 A 组；B 组冠脉强化程度标准差较 A 组低，表明 B 组 冠脉强化程度的组内差异最小。结论：CCTA 前瞻性心电门控扫描中，采用对比剂混合注射方案能使用较少的对比剂获得冠状动脉均一的强化效果，整体提高图像质量，降低对比剂肾病(CIN)的风险，值得推广

PU-2685
冠脉病变采用 64 排螺旋 CT 血管成像的诊断观察

陆智晟
苏州大学附属第二医院

目的：观察冠脉病变采用 64 排螺旋 CT 血管成像的诊断价值。方法：选取我院诊治的 80 例冠脉病变患者作为研究对象，均行 64 排螺旋 CT 血管成像与冠脉造影检查，以冠脉造影检查结果为标准，分析 64 排螺旋 CT 血管成像诊断的符合率。结果：80 例患者经 64 排螺旋 CT 血管成像共显示 1006 个冠脉节段图像，其中包括血管正常 498 个，轻度狭窄 165 个，中重度狭窄 343 个；以冠脉造影检

查结果为标准，64 排螺旋 CT 血管成像诊断血管正常、轻度狭窄、中重度狭窄的符合率分别为 98.2%、95.8%、99.4%。结论：冠脉病变采用 64 排螺旋 CT 血管成像的诊断价值高，属于无创检查，具有定位精准、操作简便等优势，值得推广。

PU-2686

双源 Flash 扫描模式在高心率屏气不良患者 CT 冠状动脉成像中的可行性研究

胡仕北
四川省肿瘤医院

目的 探讨双源 Flash 扫描模式在高心率屏气不良患者 CT 冠状动脉成像（CTA）中的可行性，并评估图像质量和辐射剂量。
方法 选择 40 例高心率屏气不良需行 CT 冠状动脉成像的受检者纳入研究。检查前均不给予降心率药。根据受检者平均心率的不同分为 2 组，A 组（70 次/分≤心率≤80 次/分）20 例、B 组（80 次/分<心率<100 次/分）20 例。所有受检者均采用 Flash 双次扫描模式行 CT 冠状动脉成像。根据双次扫描获得的图像综合评估冠状动脉主观图像质量（4 分法），并分析 2 组的辐射剂量($CTDI_{vol}$、ED)。
结果 两组冠状动脉图像质量主观评分均>2 分，满足临床诊断要求，A、B 组的图像主观评分分别为（3.5±0.4）、（3.3±0.5）分，差异无统计学意义(P>0.05)。A、B 组的平均心率分别为（73.6±2.6）、（85.8±4.5）次/分，差异有统计学意义(P<0.05)。A、B 组的 $CTDI_{vol}$ 分别为（4.56±0.55）、（5.07±0.63）mGy，有效剂量分别为（1.14±0.12）、（1.09±0.10）mSv，差异均无统计学意义(P<0.05)。
结论 应用双源 Flash 扫描模式在高心率屏气不良患者 CT 冠状动脉成像（CTA）中具有可行性，能以较低的辐射剂量获得满足诊断要求的图像质量。

PU-2687

Force CT Turbo Flash 模式主动脉 CTA 扫描联合 ADMIRE 的临床研究

张磊
徐州医科大学附属医院

目的: 探讨 Force CT Turbo Flash 模式行主动脉 CT 血管造影（CTA）扫描联合高级建模迭代重建（ADMIRE）算法的临床应用价值。方法: 疑诊主动脉疾病患者 62 例随机分为观察组与对照组，每组 31 例。观察组采用 Force CT Turbo Flash 模式主动脉 CTA 扫描联合 ADMIRE 图像重建，对照组采用常规 Body Angio 模式扫描和滤波反投影重建算法（FBP）图像重建。比较两组的扫描范围、扫描时间、图像质量、辐射剂量差异。结果: 两组的扫描范围、噪声、信噪比（SNR）、对比噪声比（CNR）比较差异无统计学意义（P>0.05），但观察组的扫描时间显著短于对照组（P<0.05）。观察组无主动脉根部伪影，与对照组的 51.61%比较差异有统计学意义（P<0.05）。观察组的图像主观质量评分显著高于对照组（P<0.05），而有效剂量（ED）显著低于对照组（P<0.05）。结论: Force CT Turbo Flash 模式主动脉 CTA 扫描联合 ADMIRE 技术能够获得满足主动脉病变诊断的优质图像，且可缩短扫描时间并降低辐射剂量。

PU-2688

A patient-specific study of computational fluid dynamics models for type B aortic dissection: causes of false lumen expansion

Yueying Pan
Huazhong University of Science Tongji Hospital, Tongji Medical College

Purpose:

This study has performed computational fluid dynamics (CFD) simulations for follow-up data of type B aortic dissection and expect to provide some valuable information for clinical strategy from a different perspective.

Materials and Methods:

The rare data was from a 68-year-old male patient who had been diagnosed with a type B aortic dissection. 3D Models were reconstructed based on the CT images with in-plane resolution of 0.759 mm and slice thickness of 1 mm. The mass flow and pressure waveform were applied to inlet and outlets of the rigid wall model respectively. The fluid was assumed to be incompressible and Newtonian with a dynamic viscosity of 0.0035 Pas and a mass density of 1060 kg/.

Some parameters including velocity, pressure and wall shear stress (WSS) were extracted to evaluate hemodynamic environment. Time-averaged wall shear stress (TAWSS) and oscillatory shear index (OSI) were calculated from the results of the middle cardiac cycle. OSI is a non-dimensional index to assess the oscillatory nature of blood flows with an upper bound of 0.5. The higher value means more oscillatory flow.

Results:

False lumen (FL) with a single tear was rapidly developed from penetrating aortic ulcer at T1. And FL remarkably enlarged at follow-up compared to baseline. It could be found that low-velocity flow entered the false lumen and formed vortex here in both systolic and diastolic periods at T1 and T2. High-velocity flow appeared in the narrowed aortic true lumen (TL). And the pressure imbalance (2.28 mmHg at systolic phase of T1) was found between TL and FL, the increased pressure in the FL might elevate the risk of expansion of FL and more vicious clinic events.

WSS in whole FL was in a lower level, while it is higher in the relative regions of TL owing to the high velocity. The lower WSS might be relevant with the expansion of FL. Significant high OSI (> 0.48) was observed in the distal portion of FL where there was an obvious extension found at T2.

Conclusion:

Significant vortex with low-velocity dominated flow patterns in the FL. Higher pressure and lower WSS were observed in the FL, which might elevate the risk of expansion of FL.

640 层容积 CT 对左冠状动脉解剖结构与左前降支狭窄关系的研究

郝娟
锦州医科大学附属医院

目的 运用 640 层容积 CT 测量结果探讨左冠状动脉解剖结构与左前降支狭窄程度的关系。
方法 对 116 例行冠状动脉 CT 血管造影（CTA）及冠状动脉造影（CAG）的左冠状动脉多发斑块患者情况进行回顾性分析，测量左冠状动脉解剖结构：左主干（LM）长度、左前降支与左回旋支（LAD—LCX）夹角、左主干与左前降支（LM—LAD）夹角。根据左前降支（LAD）是否显著狭窄（冠状动脉造影为准）分为两组，LAD 显著狭窄组（LAD 狭窄≧50%）和 LAD 非显著狭窄组（LAD 狭窄<50%）。并纳入年龄、性别、血压、血糖、血脂各临床指标，分析 LM 长度、各夹角及各项临床指标与 LAD 狭窄的关系。对以上有统计学意义的因素运用 Logistic 回归分析。
结果 单因素分析显示，LAD 显著狭窄组的 LM 长度、LAD—LCX 夹角、LM—LAD 夹角明显大于 LAD 非显著狭窄组（$P<0.05$）。Logistic 回归分析显示 LAD 显著狭窄的独立预测因素为 LM 长度（OR=6.98，95%CI：1.98~24.69，P=0.003）和 LAD—LCX 夹角（OR=12.61，95%CI：3.03~52.52，$P<0.001$）。
结论 较长的 LM 长度、较大的 LAD—LCX 夹角能用来鉴别冠心病(CAD)的风险等级。

PU-2690
RevolutionCT 对冠心病患者左心收缩功能与冠脉狭窄程度关系的应用分析

李俊
重庆三峡中心医院

目的：探索和研究 RevolutionCT 对冠心病患者左心收缩功能与冠脉狭窄程度关系的应用价值
方法：回顾性分析我院近年来接受 RevolutionCT 冠脉造影（冠脉 CTA）患者 156 例，其中冠脉狭窄 53 例(包括轻中重度狭窄)，正常 123 例。查阅临床病史，对比分析冠脉狭窄程度及左心室收缩末期容积（ESV）、左心室输出量（SV）、左心室射血分数（EF）等指标的关系。
结果：冠脉轻中度狭窄与冠脉正常者左心收缩功能对比无统计学差别，冠脉重度狭窄左心收缩功能明显下降，有统计学意义。
结论：RevolutionCT 冠脉 CTA 能精准反映冠脉狭窄程度与左心收缩功能关系，具有重要的临床意义。冠脉狭窄>50%时，左心收缩功能不同程度下降，冠脉狭窄程度>70%时，左心收缩功能明显下降。

PU-2691
IQonCT 平均原子序数图在评价主动脉粥样硬化斑块中的应用

牡丹,李冉,余鸿鸣,陈文萍,梁静
南京大学医学院附属鼓楼医院

目的：光谱 CT 利用不同物质对高低能量的 X 射线的吸收不同成像，比普通单源 CT 有更好的物质分辨能力。本研究拟分析光谱 CT 的平扫原子序数成像在显示主动脉粥样硬化斑块的比例及影响因

素。**方法：**我们收集了 2019-5 至 2019-8 期间，在我院行头颈部、腹部、胸部光谱增强 CT 的患者资料。我们收集了 37 个患者的 116 个主动脉粥样硬化斑块，分析了平扫 CT 的原子序数成像图、增强 CT 的图像，分别测量主动脉腔内血管面积、血管面积、血管壁面积、斑块面积等，统计平扫 CT 可以显示主动脉斑块的比例，并将增强 CT 显示的斑块大小作为基准，分析影响斑块显示程度的因素。**结果：**通过与增强 CT 图像进行对比，大约有 65%的斑块在 CT 平扫中可以显示，但大部分斑块（93%）较增强 CT 显示的面积小。CT 平扫显示斑块的大小与斑块的 CT 值相关，而血管腔内面积、血管面积、血管壁面积、斑块面积等并不影响斑块显示的程度。**结论：**光谱 CT 平扫，利用平均原子序数图可以显示部分非钙化的主动脉斑块，而无需增强。对造影剂过敏、肝肾功能严重受损及胸痛等急症进行平扫检查的患者可以通过平扫即可以发现动脉壁的情况。

腔内治疗腰椎间盘术后医源性髂动静脉瘘：病例报道及文献复习

严高武[1],严高武[1],杨国庆[1],李勇[1],付泉水[1],赵林伟[1],陈洪[1],周庆[1],吴镭[1],蒋永明[1]
1.遂宁市中心医院
2.遂宁市中心医院

目的 回顾本院及国内外文献中腰椎间盘术后医源性髂动静脉瘘（Iliac arteriovenous fistula，IAVF）患者的临床资料，提高对其认识。**方法** 系统检索国内外主要数据库中腰椎间盘术后医源性 IAVF 相关文献并回顾本院病例，收集临床资料。**结果** 共纳入 31 篇中英文文献，包括 44 名患者。椎间盘受累以 L4-L5 和（或）L5-S1 水平最常见（62%），多数患者在术后数月至数年出现临床症状（63.6%），并大多数患者（88.6%）可经覆膜支架置入术治疗。**结论** 腰椎间盘术后医源性 IAVF 虽然罕见，但应给予足够重视，以便正确地诊断及恰当地治疗。

PU-2693
双源 CT 采 脏单扇区算法的前瞻性 ECG 触发序列扫描模式和电 控螺旋扫描对婴幼 先 病 CTA 检查的辐射剂量对研究

吕倩瑶
陆军军医大学附属新桥医院放射科

的： 较双源 CT 采 脏单扇区算法的前瞻性 ECG 触发序列扫描模式和 电 控扫描对婴幼 先 病 CTA 检查的辐射剂量 。 法 ：连续收集我院 2016 年 1 —2019 年 8 临床疑先 病需 脏 CTA 检查且 率《65 次/分的婴幼 患者 100 例,根据扫描模式的不同，随机将 50 例(A 组)临床先 病婴幼 患者进 采 单扇区算法的前瞻性 ECG 触发序列扫描模式扫描，再随机将 50 例(B 组)进 电 控扫描，然后由 2 名有经验的影像医师对 2 组图像质量进 评分并记录测量值和辐射剂量。应 参数检验和两独 样本的 f 检验 较 2 组患者的辐射剂量 。**结果** ：A 组采 脏单扇区算法的前瞻性 ECG 触发序列扫描模式的平均辐射剂量为(1.49 ±0.38)mSv,B 组采 电 控扫描模式的平均辐射剂量为(2.79±0.54) mSv,即采 单扇区算法的前瞻性 ECG 触发序列扫描模式约为采 电 控扫描模式的 1/2，且前者低于后者，2 组差异有统计学意义(t=13.677,P＜0.05）。**结论** ：双源 CT 采 单扇区算法的前瞻性 ECG 触发序列扫描模式在不影响

图像质量的情况下 采 电 控螺旋扫描的对先 病婴幼 的辐射剂量低，对先 病婴幼 患者 脏 CTA 有较好的临床优势。

小剂量团注测试法在宝石冠状动脉 CTA 中的应用价值

梁改琴
甘肃省中医院

【摘要】目的：探讨小剂量对比剂团注测试（test bolus）的扫描方案在宝石 CT 冠脉成像中的应用价值。**方法**：将 100 例行冠脉 CTA 检查者分为实验组和对照组，每组各 50 例。实验组:用 15mL 对比剂及 20mL 生理盐水团注测试，根据造影剂所达到兴趣区峰值计算时间，再进行扫描；对照组:采用传统团注追踪程序自动触发技术，于气管分叉下 1-2cm 处行监控层面扫描，并于降主动脉内设置兴趣区，触发阈值 120HU，达到阈值后延迟 5s 扫描。分别测量主动脉根部、左主干、左前降支、左回旋支、右冠状动脉、右冠状动脉至后降支的强化 CT 值；采用双盲法，由两名有经验的放射科诊断医师进行图像质量评分，比较两组图像质量有无差异。**结果**：实验组目标血管强化 CT 值为 348-396HU，对照组目标血管强化 CT 值为 256-356HU，差异有统计学意义；冠状动脉各分支主观评分没有显著性差异，$P>0.05$。**结论**：在冠脉造影检查中，应用小剂量对比剂团注测试法可以更准确地把握扫描时机，从而获得良好的血管成像质量。

PU-2695

感染性腹主动脉瘤的 CT 诊断价值

王振平,袁利,罗是是
海南省人民医院

感染性腹主动脉瘤（infectious abdominal aortic aneurysm，IAAA）发病率较低，由 Osler 于 1885 年首次报道，约占所有腹主动脉瘤（abdominal aortic aneurysm，AAA）的 0.7%~3.0%，但病情凶险，临床表现各异、并发症多、预后差，死亡率可高达 70%，死因主要为 AAA 破裂及脓毒血症。IAAA 的临床治疗不同于非感染性腹主动脉，原位主髂动脉重建术后吻合口并发症和移植血管感染率较高。而近年来，腔内隔绝术应用于本病治疗疗效尚有争议，文献报道其用于 iAAAs 的治疗术后因感染死亡率高达 23%-40%。腹膜后解剖外血管旁路术治疗 IAAA，安全且临床疗效满意，因此认识感染性腹主动脉的 CT 特征对 IAAA 患者的临床治疗方案至关重要。

目的 探讨感染性主动脉瘤的 CT 表现.**方法** 回顾性分析 2009 年 6 月至 2019 年 6 月期间 12 例感染性腹主动脉瘤患者(其中 11 例经外科手术确诊,1 例为腹主动脉支架术后并感染)的临床及 CT 检查资料，总结感染性腹主动脉瘤的 CT 特征。**结果** 12 例患者动脉瘤均位于腹主动脉肾下段，动脉瘤处管腔呈瘤样扩张,管壁增厚见钙化，腔内见不规则充盈缺损，2 例瘤腔内伴有散在气体影，增强扫描延迟期瘤体外周见不规则片絮状及环状强化；2 例瘤体破裂者，瘤壁不完整，部分中断。3 例患者伴肠瘘，2 例合并腰大肌脓肿。本组 11 例 iAAA 患者均采用腹膜后解剖外血管旁路术重建主髂动脉. 血管重建完成后再行瘤腔清创；1 例支架后合并感染患者目前内科抗感染治疗中。**结论**：感染性腹主动脉瘤及其周围组织在 CT 增强扫描上表现为斑片状及环状强化, 瘤腔内或瘤体周围有积气、积液是区别于常见动脉瘤的典型表现, CT 显示主动脉周围腹膜后脓肿或炎性包块等，高度提示感染性腹主动脉瘤的诊断，CTA 联合延迟期扫描是感染性腹主动脉首选影像检查方法。

PU-2696

Comprehensive Evaluation of Intramural Hematoma Associated with or without Other Aortic Diseases by DSCT

Gong-Hao Ling,Xiao-Chun Zhang
Zhongnan Hosipital of Wuhan University

Purpose:
To describe CT features of intramural hematoma（IMH） associated with or without other aortic diseases.
Materials and methods:
We consecutively evaluated CT features in 258 patients with documented intramural hematoma for the location, shape, depth, density, aorta shape, intimal calcification, and complication.
Results: 258 patients with IMH, there were type B IMH (186, 76%) and type A IMH (72, 24%). Associated aneurysm(143,55.4%), penetrating atherosclerotic(PAU: 64,24.8%), and aortic dissection(AD:18,7.0%) and pure IMH（33,12.8%）were revealed in 258 cases. Of the 143 cases with aneurysm, type B perianeurysm hematomas（102,71.3%）, type A IMH associated type B aneurysm(39,27.3%), type B IMH associated isolated type B aneurysm （2,0.01%）were seen. Of the 18 cases with AD, type A IMH and isolated type B AD(5,27.8%), type B IMH and isolated type B AD（13,72.2%）were revealed. Without contrast scanning, annular or crescent（253,98.1%）high-attenuation IMH along the compressed or dilated aorta and multiple intimal calcification were showed, with contrast scanning, no rise of CT value was detected in IMH. Larger depth of IMH and more complication were revealed in patients with IMH associated other aortic diseases than pure IMH.
Conclusion:
DSCT could comprehensive assess CT features in patients with IMH.
Clinical application: DSCT could provide information essential to make an accurate diagnosis, choose optimal treatment, and make a timing evaluation of prognosis in patients with IMH for cardiac physicians or surgeons.

PU-2697

冠状动脉 CTA 评估左前降支中段心肌桥与临床缺血症状及动脉粥样硬化的关系

张祥林,孟祥龙,吕晓虹,刘磐石
锦州医科大学附属第一医院

目的
评估左前降支中段心肌桥冠状动脉 CT 成像（CTA）征象与临床缺血症状及动脉粥样硬化发生的关系。
方法
回顾性分析自 2018 年 3 月至 2019 年 5 月于锦州医科大学附属第一医院行 CTA 检查且诊断为左前降支中段心肌桥者 131 例，分为单纯性心肌桥组（74 例）与心肌桥合并粥样动脉硬化组（57 例），

再将单纯心性肌桥者根据患者有临床缺血症状（胸痛、胸闷、心前区疼痛、ST-T 改变等）分为无症状组（39 例）和有症状组（35 例）。探究左前降支中段心肌桥的 CTA 征象（心肌桥分型、心肌桥长度及厚度、壁冠状动脉（MCA）压缩程度）与临床缺血症状及粥样硬化发生的关系，统计数据结果采用卡方检验及独立样本 t 检验。所有患者采用回顾性心电门控冠脉成像。

结果

有症状组的心肌桥厚度、长度、MCA 舒张期压缩率、MCA 收缩期压缩率均大于无症状组，差异均有统计学意义（t=2.17、t=2.04、t=2.70、t=3.04，P均<0.05）；纵深型心肌桥较表浅型更易出现临床缺血症状（ x2=9.59，P<0.05）。心肌桥合并粥样硬化组心肌桥厚度、MCA 收缩期压缩率均大于单纯性心肌桥组，差异均有统计学意义（t=2.84、t=2.68，P均<0.05）；心肌桥长度、MCA 舒张期压缩率，两组对比差异均无统计学意义（t=2.03、t=1.44，P均>0.05）；纵深型心肌桥较表浅型更易形成斑块（ x2 =12.96，P<0.05）。收缩期 MCA 狭窄程度 0%~50%的 91 例患者中，粥样硬化发生率为 47.92%，收缩期 MCA 狭窄程度 50%~75%的 36 例患者中，粥样硬化发生率为 79.44%，MCA 狭窄程度>75%的 4 例患者中，粥样硬化发生率为 100%，提示随着 MCA 收缩期压缩程度加重，粥样硬化的发生率明显增高。

结论

CTA 对心肌桥厚度、长度、MCA 压缩率方面的测量、评估能在预示心肌桥患者出现临床缺血症状及冠脉粥样硬化发生提供重要的指导信息。

PU-2698

成人左冠状动脉异常起源于肺动脉个案报道及文献复习

郑茹梦,杨家虎,张建军
浙江医院

目的 研究成人左冠状动脉异常起源于肺动脉的 CT 表现、临床资料与治疗，加深对左冠状动脉异常起源于肺动脉的认识，提高对该变异的影像诊断能力。

方法 回顾性分析 1 例我院成人左冠状动脉异常起源于肺动脉的 CT 表现，结合文献复习，探讨成人左冠状动脉异常起源于肺动脉的 CT 影像学特点。

结果 患者女，38 岁，因于与家人说话时突发晕厥，伴小便失禁，无抽搐，无喷射性呕吐，家人拨打 120，途中行心肺复苏术。后到达我院急诊室，床边心电监护提示心率、血压、氧饱和度测不出，立即予人工心肺复苏，并气管插管接呼吸机辅助通气，后患者发作室颤、室速。查血气提示严重代酸、高乳酸血症、呼吸衰竭，收住我院 ICU，予以 ECMO 辅助循环呼吸等治疗，患者病情好转。超声心动图提示左右冠状动脉起始部增宽，左心室饱满，结合临床，三尖瓣轻度返流。心脏冠状动脉 CTA 提示冠脉弥漫性增粗伴大量侧枝形成，局部瘤样扩张，心肌增厚，左冠状动脉异常起源于肺动脉。开胸术后复查，心脏冠状动脉 CTA 提示左冠状动脉与升主动脉左前壁吻合，吻合口无明显狭窄。

结论 成人左冠状动脉异常起源于肺动脉是从肺动脉起源的一种罕见的先天性心脏病，心脏冠状动脉 CTA 检查能清晰展示心脏血管的异常改变和血管分支细节，对临床诊治具有指导作用。

PU-2699

Free-breathing coronary CT angiography using 16-cm wide-detector for patients referred for transcatheter aortic

valve replacement: comparison with invasive coronary angiography

Tao Shuai
west china hospital of sichuan university

Objectives: To detected the performance of free-breathing coronary computed tomography angiography (CCTA) with 16-cm wide-detector CT for patients referred for transcatheter aortic valve replacement.
Methods:A total of 124 patients with severe aortic stenosis underwent both free-breathing CCTA and ICA were included. Two reviewers evaluated coronary arteries on the per-segment (using 16-segment model), per-vessel and per-patient basis for image quality using a four-point scale and stenosis degree. CCTA results were compared with invasive coronary angiography to calculate the diagnostic accuracy, sensitivity, specificity, positive predictive value (PPV) and negative predictive value (NPV).
Results: Out of 1984 total segments, 62(3.1%) were less than 1.5mm in diameter and were excluded in CT, 14(0.7%) with calcification and motion artifacts and were considered positive in CT. 1908segments (96.1%) were evaluated both on CCTA and ICA and 44(2.2%) segments had stenosis ≥50% on ICA. The diagnostic accuracy, sensitivity, specificity, PPV, and NPV of CCTA were 97.3%, 70.4 %, 97.2%, 37.3% and 99.3% on a per-segment basis; and 82.3%, 83.3%, 82%, 52.6% and 95.3% on a per-patient basis.

PU-2700
典迈伦 400 联合第 3 代双源 CT Turbo Flash“三低”成像前瞻性应用研究

张湘敏,吕梁,宋巍,刘兴利,杜自宏,杨净松
云南省第一人民医院

目的：初步评价最新一代对比剂典迈伦 400 联合第 3 代双源 CT Turbo Flash 行低 kV、低对比剂用量和低注射流速（三低）冠脉成像的可行性。方法：前瞻性收集云南省第一人民医院 2019 年 3-5 月因临床诊断需求行 CCTA 患者 120 例。随机分为 A 组（Turbo Flash 模式）和 B 组（前瞻性心电门控序列，断层扫描模式）各 60 例,均采用第 3 代双源 CT 扫描及 3 级 ADMIRE 迭代重建成像。采用 5 分制李克特量表评价主观图像指标（图像显影、噪声、运动伪影），应用卡方分析比较两组图像质量评分。应用两独立样本 t 检验分析比较两组年龄、BMI、心率、辐射剂量、客观图像指标（CT 值、SNR、CNR）。结果：A、B 两组患者的年龄、BMI、心率均无统计学差异。A、B 两组平均有效辐射剂量分别为（0.47±0.13）mAs 和（2.86±1.98）mAs，差异有统计学意义（t=-6.577，P＜0.001）。A 组右冠状动脉图像噪声（ 2=4.282，P=0.039）及左回旋支图像运动伪影（ 2=4.862，P=0.027）评分均优于 B 组，余主观图像质量评分无统计学意义。两组各动脉段客观图像指标（CT 值、SNR、CNR）之间无统计学差异。结论：典迈伦 400 联合第 3 代双源 CT Turbo Flash 模式行低 kV、低对比剂用量及低注射流速（三低）冠脉成像扫描能够获得等同于甚至优于前瞻性心电门控断层扫描的图像质量，同时有效辐射剂量及对比剂剂量明显降低，并尽可能减少对比剂外渗、对比剂不良反应、对比剂肾病等对比剂不良事件的发生。

PU-2701
2 型糖尿病心肌细胞外间质改变的心血管磁共振成像研究

尚永宁
陆军军医大学第一附属医院（西南医院）

目的本研究的目的是使用心血管磁共振和 ECV 评价 2 型糖尿病患者左室心肌细胞外间质改变情况及其与糖尿病病程的关系。**材料与方法**本研究纳入 2015 年 6 月至 2018 年 3 月我院住院的 60 名 T2DM 患者和 45 名健康志愿者，排除掉图像质量差、乳头肌太小不能勾画 ROI 的受试者，最终有 38 名健康志愿者和 53 名 T2DM 患者。根据病程不同，将 T2DM 组分为短病程组（<5 年，n=18）和长病程组（>5 年，n=35）。所有受试者扫描增强前和后 T1 mapping 以及电影序列，测量受试者的增强前和后 T1 值结合 HCTm 计算 ECV、LV 心肌质量指数、ECV 结合 MMi 计算细胞外间质的总体积指数以及心肌细胞的总体积指数。比较对照组、T2DM 短病程组和长病程组的 ECV、MMi、ECMVi 和 CVi 之间的差异。**结果**对照组、T2DM 短病程组和长病程组之间的心肌 ECV 有显著性差异（对照组：26.7 ± 2.7% vs. T2DM 短病程组：28.4 ± 2.9% vs.T2DM 长病程组：28.8 ± 3.6%，p=0.018）。对照组、T2DM 短病程组和长病程组之间的心肌 ECMVi 有显著性差异（对照组：13.3 ± 2.8 ml/m^2 vs. T2DM 短病程组：15.4 ± 2.9 ml/m^2 vs.T2DM 长病程组：15.6 ± 3.8 ml/m^2，p=0.008）。对照组、T2DM 长病程组和短病程组之间的心肌 MMi 和 CVi 没有显著性差异。对照组、T2DM 长病程组和短病程组之间的心肌和血液 native 和 post-contrast T1 值都没有统计学差异。**结论** T2DM 患者疾病早期即存在心肌细胞外间质扩张，且随病程进展。此外 ECMVi 可能比 ECV 更加敏感地反应 T2DM 心肌细胞外间质改变。

PU-2702
主动脉瓣狭窄钙化的 CT 表现及 TAVI 术后瓣周漏的相关性初探

彭志远,徐承义
武汉亚洲心脏病医院

【目的】探讨主动脉瓣狭窄钙化的 CT 表现与 TAVI 术后瓣周漏相关性。【方法】对本院 2018 年 25 例主动脉瓣狭窄患者 TAVI 手术前后的 CT 和超声影像资料回顾性分析。男 16 例，女 9 例，62-87 岁，平均 74.5 岁。使用飞利浦 64 层及 256 层螺旋 CT 和西门子双源 CT，重组成像及 VR 三维重建。超声设备是：Philips iE33 超声诊断仪。【结果】25 例主动脉瓣狭窄病例，钙化评分 0 分 2 例，1 分 4 例，2 分 6 例，3 分 13 例。术后并发主动脉瓣瓣周轻度反流 8 例（钙化评分 3 分 8 例，），中度反流 2 例（钙化评分 1 分 1 例，3 分 1 例），重度反流 1 例（钙化评分 3 分 1 例）。【结论】成年人单纯主动脉瓣狭窄的常见原因是退行性主动脉瓣钙化。其次风湿性主动脉瓣的病变。再就是主动脉瓣二瓣畸形(BAV)等先天性心脏病也常常出现瓣膜钙化。主动脉瓣膜钙化程度分级评分，其标准为：0 分（无钙化）为瓣膜无钙化；1 分（轻度钙化）为瓣膜轻度增厚，局灶性点片状钙化；2 分（中度钙化）为瓣膜增厚，主动脉窦部可见弥漫性斑点状及针状钙化，瓣环多呈灶状钙化；3 分（重度钙化）为瓣膜明显增厚，瓣叶间粘连，主动脉窦内结节状钙化，瓣环区域钙化灶融合成“C”形，或钙化累及周围心肌组织。术后瓣周漏是 TAVI 术后并不少见，约 25%的患者发生在早期开展的 TAVI 术后。主要潜在原因为：原有瓣膜的严重钙化；瓣膜过小；置入瓣膜位置不正；人工瓣膜与原瓣环贴附不良。其中，瓣膜钙化是一个重要的原因，这种钙化瓣环为置人瓣膜留下一个不平整的平面。多层螺旋 CT 能清楚显示瓣膜的钙化程度、分布及瓣膜粘连。钙化灶多分布在瓣叶边缘及瓣环周围，位于瓣叶的钙化灶易在瓣膜释放后遮蔽冠状动脉开口，导致急性冠状动

脉综合征。瓣环周围的钙化灶易引起术中瓣环撕裂及术后瓣周漏等并发症。因此，术前常规多层螺旋 CT 检查，全面了解瓣膜的钙化情况，有助于 TAVI 术后并发症的预防。

PU-2703

Histological validation of cardiac magnetic resonance T1 mapping for evaluating the extent of myocardial injury after myocardial infarction.

Lu Zhang
West China Second University Hospital， Sichuan University

Purpose:
Current cardiac magnetic resonance(CMR) T1 mapping is a quantitative imaging technique allowing the characterization of injured myocardium after myocardial infarction, and further assessment the severity of myocardial damage. However, a key limitation of present work is the lack of histopathological confirmation of these findings. Our aims are to 1) detect whether the measurement of pre-contrast T1 and ECV by 3T CMR would be sufficient to detect extent of myocardial injury 2) evaluate the relationship between ECV and pre-contrast T1 against myocardial fibrosis by histopathology.
Materials and Methods:
A total of 14 myocardial infarct pigs were induced successfully with left anterior descending coronary artery ligated. Then CMR with cine, Late gadolinium enhancement (LGE) and modified Look-Lock inversion(MOLLI) T1 mapping were serially performed at 24h, 7 days, 3 months. CMR characteristics were compared with histological findings after hematoxylin-eosin and Masson trichrome staining. In clinical study, STEMI patients were serially scanned at 2 days,7 days and 3 months. To compare CMR in STEMI patients and pigs, the same scanning protocol was used. LGE and MOLLI T1 mapping were used to assess infarct area and pre-contrast T1 and ECV values in infarct and remote zones at different time points, respectively.
Results:
In post-MI pigs, ECV in the infarct myocardium increased with time and pre contrast T1 values were highest at day 7 after MI. The similar trend of the evaluation of these findings was found in clinical study. Furthermore, both of pre contrast T1 and ECV significantly correlated with histological findings in experimental model.
Conclusions:
The study shows that T1 mapping provides a non-invasive and comprehensive methods for quantification of the extent of myocardial injury in MI. Further studies are needed to study the effect of other factors on these variables.

PU-2704

“三低”扫描方案用于慢性肾病患者冠状动脉 CT 成像的可行性分析

李强[1],潘昌杰[2],王涛[2],许金山[1],伍满香[1]
1.宁波市鄞州人民医院

2.南京医科大学附属常州二院

目的 评估低电压、等渗低浓度和低容量（“三低”）碘对比剂检查方案用于慢性肾病患者冠状动脉 CT 成像的可行性。**方法** 共 36 例临床怀疑冠状动脉疾病而准备行冠脉 CTA 检查的慢性肾病患者随机分为 A、B 两组：A 组 13 例为对照组，使用常规管电压高浓度碘对比剂 63-85ml， FBP 重建；B 组 23 例为实验组，使用低电压 SAS 扫描 100 Kv（BMI≥25kg/m^2或 80 kV（BMI＜25kg/m^2）管电压，等渗低浓度碘对比剂 45 ml，迭代算法重建。两组患者扫描时均开启自动管电流调制（4D CareDose）。对照评估两组的冠脉图像质量、辐射剂量、总碘量和肾功能变化。**结果** 32 例患者顺利完成检查，两组的冠脉图像质量主观评分差异无统计学意义（t=0.479；P=0.202）；平均信噪比差异无统计学意义（t=-0.963，-0764 和-0.474；P= 0.343，0.451 和 0.646）；对比噪声比差异均无统计学意义（t=-0.554，-0.937 和-0.941；P=0.584，0.356 和 0.354）。B 组平均辐射剂量降低了 61.75%。平均碘摄入量降低 54.70%。72h 内血清肌酐清除率下降差异有明显统计学意义（c^2=9.004，P=0.003）。**结论** 双源 CT“三低”扫描方案可以用于慢性肾病患者的冠状动脉成像检查，患者接受的辐射剂量、总碘量均大幅度降低，对肾功能影响小，但图像质量仍可满足诊断，推荐临床使用。

PU-2705
等渗低浓度对比剂冠状动脉 CT 低剂量成像在房颤患者中的应用

潘宇宁
宁波第一医院

【摘要】**目的：**评价 100 kV 管电压、270mgI/ml 等渗低浓度对比剂联合迭代重建算法对房颤（AF）病人冠状动脉图像质量及诊断冠心病（CAD）的准确性。**方法：**连续前瞻性纳入临床 68 例怀疑冠心病的 AF 病人行冠状动脉 CTA 检查，采用随机数字表法分为两组，每组 34 例，对照组使用 370mgI/ml 对比剂，以常规 120 kV 扫描，重建采用传统滤过反投影法（FBP）；试验组使用 270mgI/ml 对比剂，以 100 kV 扫描，重建采用第三代适应性迭代降噪算法（AIDR-3D）。两名医师对两组图像质量进行双盲法评分，比较观察者评分的一致性。比较两组患者的图像质量主观评分、图像质量客观评价[包括平均 CT 值、图像噪声(N)、信噪比（SNR）、对比信噪比（CNR）、图像优良指数（FOM）]、有效剂量（E）和总碘量。**结果：**两组冠状动脉图像质量主观评分差异无统计学意义（P>0.05），两名医师评分的一致性较高（Kappa=0.82，P<0.05）。两组图像平均 CT 值、N、SNR 和 CNR 差异无统计学意义（P>0.05），试验组的 FOM 明显高于对照组（P>0.05）。试验组的有效剂量 E 为（4.72±1.19）mSv，较对照组（10.76±3.76）mSv 明显降低（t=-8.434，P<0.05）。试验组总碘量低于对照组（t=4.534，P<0.05）；以冠状动脉段为单位，对照组诊断冠脉狭窄的灵敏度、特异度、假阳性及假阴性率为 91.2%、98.5%、88.6%、98.8%，试验组诊断冠脉狭窄的灵敏度、特异度、假阳性及假阴性率为 89.2%、97.4%、83.3%、98.7%，两组没有统计学差异（P>0.05）。**结论：**采用 320 排 CT，使用等渗低浓度对比剂结合低管电压冠状动脉检查对于房颤患者具有可行性，可以在不降低图像质量的前提下，大幅度减低辐射剂量和碘摄入量，并且对冠心病的诊断具有较高的准确率。

PU-2706
IQon 光谱 CT“双低”扫描技术在心脏一站式成像中的应用探讨

林海涛,段丽,孙琳,夏彦奇,叶进湖
泰州美好医院

目的：心脏一站式 CT 成像在诊断先天性冠状动脉发育异常、冠心病、探测冠状动脉粥样硬化斑块、评估冠状动脉支架、搭桥血管通畅性及心肌活性等方面具有较高的临床实用价值。而检查中辐射剂量过高诱发癌症的风险以及碘对比剂的不良反应等问题受到业内的广泛关注，采用“双低”技术即低辐射剂量及低对比剂用量扫描,在满足诊断图像质量的前提下尽可能减少辐射剂量和碘对比剂不良反应的风险是目前研究的热点,也是将来的发展方向。**材料与方法：**1、设备：飞利浦 IQon Spectral CT。2、造影剂：碘海醇 350，30ml（因体重或个体差异需微调）。3、使用低造影剂量同时结合迭代技术行心脏扫描，如有怀疑心肌坏死患者需增加一期延迟扫描来评估心肌碘对比剂延迟强化。**结果：**IQon 光谱 CT 心脏一次打药扫描，可重建出虚拟平扫、单能级图像、无水碘图、碘密度图、有效原子序数图等图像。1、常规图像分析血管解剖结构。2、光谱 40keV 图像、碘密度图、有效原子序数图分析斑块的物质成分、心肌缺血、坏死等。**结论：**光谱 CT“双低”技术在心脏成像方面有独特优势，常规 CT 只能从密度、解剖及形态学角度判定冠脉狭窄程度，而光谱 CT 在此基础上还可以提供冠脉斑块的定量分析，心肌活性等诸多信息，并且只需一次扫描，即可显示冠脉的解剖结构、冠脉斑块的物质成分和心肌血液灌注信息。

肺血栓栓塞症影像与临床

刘芳
重庆医科大学附属永川医院

肺血栓栓塞症（PTE）是一种发病凶险的致死性心肺疾病，其发病率逐年升高，临床表现缺乏特异性，临床医生在面对此类危急重症病人时，容易出现误诊、漏诊和过度诊断。及时选择合适的影像学检查，对疾病做出正确的影像诊断，能够为临床治疗提供必要的帮助，降低疾病的死亡率。目前，应用于疑诊 PTE 患者的影像检查有：CT 肺动脉造影（CTPA）、肺通气灌注（V/Q）扫描、MR 肺动脉造影(MRPA)等。本文总结了 PTE 的流行病学、病理生理表现、临床表现、各种影像检查的适用范围及影像表现，旨在为诊断提供帮助。

PU-2708

迭代重建结合优化卷积核对冠脉支架内再狭窄的诊断价值

王晓瑜,祁荣兴,黄胜
南通市第一人民医院（南通大学第二附属医院）

目的 评估第三代双源 CT 迭代重建结合优化卷积核对冠状动脉支架植入术后支架内再狭窄的应用价值。

方法 收集 2017 年 12 月至 2018 年 9 月期间接受冠脉检查的冠心病金属支架植入患者 32 例（男性 24 例，女性 8 例），所有患者均于 2 周内行 ICA 检查，共计 53 根支架，支架实际内径≥3mm 的有 36 根，支架内径＜3mm 有 17 根。采用第三代双源 CT 机扫描，管电压采用 CARE kV 自动调节（参考管电压 100kV），开启实时动态剂量调节自动曝光 Care Dose 4D（参考管电流 300mAs/rot）。高级迭代重建算法（ADMIRE 3）结合优化的卷积核值（Bv49）对不同内径大小的支架（＜3mm 和

≥3mm）进行重建评估。ICA 为参考金标准，对支架的通畅情况及再狭窄的程度进行评估，ISR 阳性定义为支架内膜增生、血栓形成等造成支架内再狭窄≥50%。
结果 CCTA 诊断 ISR 阳性有 11 根，ISR 阴性有 42 根。ICA 诊断 ISR 患者 8 例；ISR 支架阳性有 8 根，ISR 阴性有 45 根。以 ICA 为金标准，基于患者分析，CCTA 诊断 ISR 阳性的灵敏度、特异度、阳性预测值、阴性预测值、准确性分别为 100%、87.5%、72.73%、100%、90.63%；以 ICA 为金标准，基于支架分析，CCTA 诊断 ISR 阳性的灵敏度、特异度、阳性预测值、阴性预测值、准确性分别为 100%、93.33%、72.73%、100%、94.34%。内径≥3mm 的支架中，CCTA 诊断 ISR 阳性的灵敏度、特异度、阳性预测值、阴性预测值、准确性分别为 100%、96.77%、83.33%、100%、97.22%；内径＜3mm 的支架中，CCTA 诊断 ISR 阳性的灵敏度、特异度、阳性预测值、阴性预测值、准确性分别为 100%、85.71%、60%、100%、88.24%。
结论 第三代双源 CT 迭代重建结合优化卷积核对 ISR 有很好的诊断价值，特别是内径≥3mm 的支架。

PU-2709
MSCT 评估 Stanford B 型急性主动脉夹层动脉弹性的初探

赵晓莹,孙勇
昆明医科大学第二附属医院

摘要：目的：初步探讨 MSCT 评估 Stanford B 型急性主动脉夹层（AAD）患者动脉弹性的应用价值。资料与方法：回顾性对比分析 40 例 Stanford B 型 AAD 病例及 40 例对照组的 MSCT 影像资料，分析其动脉弹性及相关病史、实验室指标的差异。结果：Stanford B 型 AAD 病例及对照组经 MSCT 检查后均成功测出了动脉弹性相关指标，且在两组患者之间具有显著差异（AD、AC、ASI 的 P 值均＜0.05）。两组间的高血压 3 级患者数（P=0.000,P＜0.05）、吸烟者人数（P=0.004,P＜0.05）也存在显著差异。结论：利用 MSCT 测定 Stanford B 型 AAD 患者动脉弹性数值是可行的，且是有实际意义的，吸烟及高血压 3 级是 AAD 的危险因素，今后的研究可以利用 MSCT 进一步探究动脉弹性对 AAD 患者治疗、预后的价值。

PU-2710
MSCTA 用于动脉弹性评估的临床应用及研究进展

赵晓莹,孙勇
昆明医科大学第二附属医院

摘要：动脉弹性是反映动脉舒张和收缩功能的指标，它取决于动脉腔径大小、管壁硬度和可扩张性，其量化指标主要有：可扩张度(AD)，顺应性 (AC)及僵硬度 (ASI)。动脉弹性降低即动脉硬化，是心血管疾病独立的死亡预测因子。近年来，MSCTA 检查有报道应用于动脉弹性的评估，其相比于其他评估手段有自身的独特优势，本文就 MSCTA 在评估动脉弹性方面的临床意义及应用，论述国内外学者的研究进展。

绝对时相冠脉成像方法探讨

王振邦
广东省人民医院

探讨冠脉成像常规的扫描及重建方法与绝对时相的扫描及重建方法在心率不齐的患者中成像的差异。**方法** 收集进行冠状动脉检查心率不齐的患者 30 例，随机分为 A 组用常规方法进行扫描共 15 例和 B 组用绝对时相法共 15 例，比较组间冠状动脉的图像质量，图像评价参考张楠等[3-4],比较组间出现错层的情况。检查方法 使用 siemens somatom definition flash 双源 CT 机，CT 双筒高压注射器，采用自适应前瞻性门控的扫描方法。A 组重建最百分比的佳舒张期，百分比的最佳收缩期，45%，75%，B 组重建绝对时相的最佳舒张期，绝对时相的最佳收缩期，300ms，360ms。**结果** 常规组和绝对时相组，冠脉评分分别为[（3.6±0.49）和（2.5±0.5），P 值＜0.004]，其差异具有统计学意义。错层出现情况 A 组 10 例，B 组 3 例。**结论** 对心率不齐的患者进行冠脉 CT 检查时，常规法图像质量不如绝对时相法，出现错层的的机率也比较高，绝对时相法改善了这类病人的图像质量满足的诊断要求，值得临床推广应用。

不同重建模式在冠状动脉含钙性斑块 CTA 中的应用价值

王生海,张振显,韩宏生,刘鹏,田楠
延安市人民医院

目的：探讨 stent 重建在冠状动脉含钙性斑块 CTA 中的应用价值。**方法：**采用标准重建模式、stent 重建模式以及减影重建模式分别对 38 例冠脉动脉含钙性斑块狭窄程度进行评估，其中 32 例经介入性冠状动脉血管造影。**结果：**我们发现以介入性冠状动脉血管造影诊断狭窄程度为金标准；①相较标准重建模式，stent 重建模式在冠脉孤立斑块钙化评分小于 300 中，诊断信心、诊断准确性均明显提高，而在冠脉孤立斑块钙化评分大于 300 中，诊断信心和诊断准确性相较不同重建模式无统计学意义；②相较标准重建模式，减影重建模式在冠脉孤立斑块钙化评分无论大于 300 还是小于 300，诊断信心和诊断准确性均明显提高，但是减影重建对含钙性斑块形态及性质无法分析。**结论：**stent 重建模式适用于钙化评分小于 300 的冠脉含钙性斑块，减影重建模式可能更适用于钙化评分大于 300 的冠脉含钙性斑块。

PU-2713

The value of MDCT cardiac function assessment in the diagnosis of coronary stenosis in coronary heart disease

Jun Wang
Tianjin medical university institute and cancer hospital

Objective To research the value of MDCT cardiac function assessment in the diagnosis of coronary stenosis in coronary heart disease. **Method** From March 2018 to February

2019, 200 patients with suspected coronary heart disease underwent multi detector row spiral CT (MDCT), echocardiography in our hospital were selected as the subjects of study. The left ventricular function parameters of CHD patients measured by MDCT and echocardiography were compared, and the left ventricular function of CHD patients with different degree of coronary stenosis were compared.
Result The levels of left ventricular ejection fraction (LVEF), stroke output (LVSV), left ventricular myocardial mass (LVMM) measured by MDCT were slightly lower than those measured by echocardiography. Levels of left ventricular end-diastolic volume (LVEDV) and left ventricular end-systolic volume (LVESV) were slightly higher than those measured by echocardiography. There was no significant difference between groups (P>0.05). By MDCT examination, the levels of LVEDV, LVESV and LVMM in patients with different degrees of coronary stenosis were significantly higher than those in the control group, and the levels of LVEF and LVSV were significantly lower than those in the control group. At the same time, the higher the severity of coronary stenosis, the higher the levels of LVEDV, LVESV and LVMM, the lower the levels of LVEF and LVSV, the difference was statistically significant (P<0.05). **Conclusion** MDCT can accurately assess coronary artery stenosis and left ventricular function in patients with coronary heart disease at the same time. It can provide reliable basis for clinical diagnosis and treatment of CHD patients, and is worthy of active promotion in clinical practice.

双源 CT 冠状动脉成像对钙化斑块导致的冠状动脉狭窄的研究

何其舟
西南医科大学附属中医医院

定性、定量分析钙化斑块对双源 CT 冠状动脉造影诊断准确性的影响。方法回顾性分析双源 CT 冠状动脉造影诊断为冠心病，后一个月内行选择性冠状动脉造影的患者 204 例，共 315 处明显狭窄病变，其中 221 处为钙化病变。分析钙化斑块的程度、钙化斑块形态、钙化斑块长度、钙化斑块处血管直径和钙化斑块血管分布对 CT 冠状动脉成像诊断冠状动脉狭窄度的准确性影响。**结果** 对轻中度钙化斑块和重度钙化斑块，CT 分别高估管腔狭窄度 6.1%(P=0.0026)和 18.2%(P<0.0001)，且高估狭窄度在重度钙化斑块中更为明显(P<0.05)。
对结节型和螺旋形钙化斑块，CT 分别高估管腔狭窄度 3.2%(P=0.0026)和 15.2%(P<0.0001)，且高估狭窄度在螺旋形钙化斑块中更为明显(P<0.05)；对于分布冠脉管径较小和管径较大的钙化斑块，分别高估管腔狭窄度 6.8%(P=0.0023)和 17.1%(P<0.0001)，且高估狭窄度在血管直径较大时更明显(P<0.05)。对不同长度的钙化斑块，双源 CT 的诊断准确性未见差异(P=0.73)。结论 斑块钙化使双源 CT 高估冠状动脉管腔狭窄,且钙化程度重和血管直径较大时更易出现。

PU-2715
Computed tomography angiography and Perfusion to assess coronary artery stenosis causing perfusion defects by single photon emission computed tomography

Yuru Lin,Weifeng Guo
Zhongshan Hospital Affiliated to Fudan University

Purpose: To investigate the diagnostic power of integrating static CT stress myocardial perfusion (CTP) with computed tomography angiography (CTA) in detecting obstructive coronary artery disease (CAD) defined as a flow limiting stenosis causing a corresponding perfusion defect by single photon emission computed tomography (SPECT).
Methods and results: 48 patients (74 vessels) with suspected coronary artery disease from a single planned. We conducted a single-center study to evaluate the accuracy of integrated CTA-CTP for the identification of patients with flow-limiting CAD defined by ≥50% stenosis by invasive coronary angiography (ICA) with a corresponding perfusion deficit on stress single photon emission computed tomography (SPECT/MPI). Forty-eight (74 vessels) patients were enrolled who underwent research indicated combined CTA-CTP and SPECT/MPI prior to conventional coronary angiography. All four image modalities were analyzed in blinded independent core laboratories. Logistic regression and the net reclassification index (NRI) were used to evaluate incremental differences in CT-derived FFR or CTP compared with CCTA alone. The prevalence of obstructive CAD defined by combined ICA‐SPECT/MPI was 33%. Per-vessel sensitivity and specificity were 88 and 47% for CCTA, 81 and 86% for combined CTA and CTP, respectively. The diagnostic performance of CCTA (AUC = 0.78) was improved by combining it with CTP (AUC = 0.88, P = 0.04, NRI = 0.32).
Conclusion: Static stress CTP combined with CCTA provides an incremental diagnostic improvement over CCTA alone in identifying patients with flow limiting CAD defined as ≥50 stenosis by ICA causing a perfusion defect by SPECT/MPI.

320 排螺旋 CT 心肌灌注技术在冠心病心功能评价中的应用价值

张枢书
陆军军医大学第二附属医院（新桥医院）

目的探讨 320 排螺旋 CT 心肌灌注技术在冠心病心功能评价中的应用价值。方法选取 2013 年 1 月至 2014 年 10 月来第三军医大学新桥医院就诊的 30 例出现可逆性心肌缺血的冠心病患者作为研究对象，并选取同期进行体检的 30 例健康人作为对照组。采用 320 排螺旋 CT 心肌灌注扫描评价两组研究对象多巴酚丁胺负荷前后心功能指标的变化情况。结果负荷试验前后，两组研究对象的每搏输出量（SV）、收缩末期容积（ESV）、舒张末期容积（EDV）以及射血分数比较，差异均有统计学意义（P ＜ 0.05）；负荷后，对照组的 SV、ESV、EDV 较负荷前显著降低［（58.0 ± 5.2）mL 比（62.2 ± 5.2）mL；（48.8 ± 3.8）cm3 比（51.8 ± 4.6）cm3；（51.8 ± 4.6）mL 比（112.5 ± 7.3）mL］（P ＜ 0.05），而射血分数无显著变化［（65.0 ± 4.0）%比（64.9 ± 3.8）%］（P ＞ 0.05），而冠心病组患者的 SV、ESV、EDV 与负荷前比较差异无统计学意义（P ＞ 0.05）［（66.9 ± 5.4）mL 比（66.8 ±5.2）mL；（61.7 ± 4.2）cm3 比（61.8 ± 4.5）cm3；（133.0 ± 6.7）mL 比（133.1 ± 6.1）mL］，而射血分数较之前显著降低［（53.5 ± 5.4）% 比（56.6 ± 5.3）%］（P ＜ 0.05）。结论 320 排螺旋 CT 心肌灌注技术能够评价冠心病缺血心肌的心功能受损程度，为冠心病的临床诊治提供参考依据。

冠状动脉 CTA 在 H 型高血压冠状动脉病变的临床应用

孙秋德
解放军 970 医院

【摘要】 **目的** 目前对 Hcy 与心脑血管疾病的研究，基本上采用血管插管造影的方法（如冠状动脉动脉造影，CAG）。我们采用 64 层螺旋 CT 对 Hcy 高血压与非 Hcy 高血压患者冠状动脉病变的对比研究，探讨 H 型高血压患者冠状动脉病变与冠状动脉 CT 血管成像(CTA) 的临床价值。**方法** 98 例符合标准的原发性高血压患者，按照同型半胱氨酸(Hcy) 水平分为 H 型高血压组(HH 组) 和非 H 型高血压（NHH 组）。所有患者均行 Hcy 及冠状动脉 CTA 检查。**结果** HH 组冠心病发病率 77.4%， NHH 组 47.2%（17/36）；HH 组冠状动脉受累情况 87.1%，NHH 组 63.9%； Gensini 积分 HH 组（45.2±9.6），NHH 组（22.5±6.4），HH 组冠状动脉重度狭窄占 37.1%，NHH 组 22.2%，差异均有统计学意义（P<0.05）。**结论** Hcy 和高血压与冠状动脉硬化的程度及受累情况相关，64 层螺旋 CT 对 Hcy 高血压与非 Hcy 高血压患者冠状动脉病变的对比研究，取得和 CAG 相同的结论，但 CAG 为有创伤检查，受设备及操作者的技术熟练程度等影响，且费用较高，不易为患者所接受，并不推荐作为临床常规应用。而 CTA 具有无创、操作简单、费用相对低、安全可靠及成功率高的优势，不但能够准确判断冠状动脉受累分支数目、狭窄程度进行准确评估，完全可以取代 CAG 进行初步的评估，最重要的是 CTA 还能鉴别冠状动脉硬化斑块性质，对 H 高血压合并冠心病的患者，重视硬化斑块的性质更有预防价值，有助于加强干预力度。因此，对高血压合并 Hcy 水平增高的患者，CTA 应当成为评价冠状动脉病变的的重要手段和首先方法。

PU-2718
双源 CT 对复杂型先天性心脏病的诊断价值分析

赵刚
陆军军医大学第二附属医院（新桥医院）

目的探究双源 CT 对复杂型先天性心脏病的诊断价值。方法选取 2016 年 5 月至 2017 年 5 月本院收治的怀疑为复杂型先天性心脏病患者 290 例为研究对象,采用随机数表法将其分为双源 CT 组与超声心动图组,每组各 145 例。比较双源 CT 与超声心动图对心脏内部畸形、心脏与大血管连接处畸形、心脏外部大血管畸形的检出率,以及两种检查方法的诊断符合率。结果 290 例患者经手术证实均为复杂型先天性心脏病。双源 CT 组患者复杂型先天性心脏病的检出率明显高于超声心动图组(97.24%：79.31%,P<0.05)。双源 CT 组患者心脏内部畸形、心脏与大血管连接处畸形的检出率分别为 95.12%和 95.00%,超声心动图组分别为 100.00%和 90.00%,组间比较差异均无显著性(P_均>0.05);双源 CT 组患者心脏外部大血管畸形的检出率明显高于超声心动图组(98.81%：64.94%,P<0.05)。结论双源 CT 是一种无创、安全、经济、便捷的高质量客观影像检查方式,对复杂型先天性心脏病的诊断具有较高价值,能够弥补超声心动图在心脏外部畸形诊断方面的不足。

Assessment of the image quality and the radiation dose of the third generation of dual-source CT used for the diagnosis of coronary heart disease

徐峰
宿迁市第一人民医院

Objective: The third generation of dual-source CT (T-DSCT) has an advantage over scanning speed. We aimed to evaluate the image quality, and radiation dose of the third generation of dual-source CT (T-DSCT) used for the diagnosis of coronary heart disease (CHD).
Methods: These patients were randomly divided into control group and observation group, with 55 cases in each group.
Results: The CT Volume Indexes in observation group was 7.58±2.10 mGy, which was significantly decreased when compared with that of the control group (8.98±2.21 mGy) ($p<0.05$); The DLP in observation group was 99.73±20.15 mGy′cm, which was significantly decreased when compared with that of the control group (118.24±21.25 mGy′cm) ($p<0.05$).
Conclusion: The current study demonstrated that T-DSCT technology has high image quality and low radiation dose as compared to the conventional CT.

IgG4 相关性疾病致冠状动脉病变 CT 表现 1 例报告

杨峰
襄阳市第一人民医院

IgG4 相关性疾病（IgG4-related disease,IgG4RD）是一种与 IgG4 淋巴细胞密切相关的慢性、进行性自身免疫性疾病。其主要特征为：血清 IgG4 水平升高和病变组织 IgG4+浆细胞浸润。多见于经常患有变态反应性疾病的老年人，常有胰腺、唾液腺和泪腺、肺、腹膜后间隙、肾、蛛网膜、垂体等受累。虽然 IgG4RD 疾病谱广泛，但其致冠状动脉病变的相关报道甚少，本文就 1 例 IgG4RD 致冠状动脉病变患者的 CT 表现进行报告。

1 临床资料

患者男，58 岁，因“胸骨后不适半月”于 2016 年 10 月 08 日入院。患者半月前开始无明显诱因出现活动后胸骨后及心前区不适，呈闷胀感，行走及其他体力活动可诱发，经休息后症状可以缓解，不向它处放射，每次持续约半小时后可自行缓解，无心慌、胸痛、气喘、头痛、头晕、发热、咳嗽、咯血、腹痛、腹胀、恶心、呕吐等症状。

既往史：6 年前行腹部 MRI 检查（胰腺异常改变考虑为自身免疫性胰腺炎，并多发假性囊肿形成，并致胰头段以上胆总管明显扩张、胰管轻度扩张）及免疫球蛋白检查，诊断为“自身免疫性胰腺炎、胆管炎”，而后间断发作，行激素治疗后可缓解；有“冠心病 不稳定心绞痛”病史，间断行冠心病二级预防治疗；有“腰椎病变及右侧腹股沟淋巴结肿大”10 余年，未行特殊处理，否认其他病史。

2 CT 表现：

冠状动脉呈均衡型分布，左前降支（LAD）及回旋支（LCX）直接起自左冠窦；LAD、LCX 及右冠状动脉（RCA）近段管壁明显环形增厚，最宽处约 9mm，管壁少许钙化斑块及非钙化斑块，管腔轻度狭窄，中段可见错层伪影。
CT 诊断：LAD、LCX、RCA 近段改变多考虑为：血管炎性改变，结合临床考虑有 lgG4 相关疾病冠状动脉损害可能。
3 讨论：(略)
3.1 IgG4RD 致冠状动脉病变的机制：
3.2 IgG4RD 致冠状动脉病变临床特点：
3.3 IgG4RD 致冠状动脉病变的 CT 特点：

PU-2721
人工智能冠状动脉 CT 血管成像在冠状动脉狭窄诊断的应用

李佳
北京大学深圳医院

目的
探讨人工智能(AI)冠状动脉 CT 血管成像(CCTA)在诊断冠状动脉狭窄程度的准确性。

方法
选取 2019 年 5 月-2019 年 7 月期间来我院就诊并同期行 CCTA 和冠状动脉造影检查(CAG)的冠心病患者 25 例，女性 10 例，男性 15 例，年龄 47～90 岁，平均年龄（64±9.35）岁。
CCTA 采用 GE Revolution CT 进行扫描，采用前瞻性心电门控技术，管电压 100 kVp，自动毫安 600—720 mA，阈值 300 HU，非离子碘对比剂(碘帕醇 370 mgI / mI)。
将获取的图像数据同时上传至 Sigovia 工作站及数坤冠状动脉 AI 辅助诊断工作站。将冠状动脉分成 9 个节段，狭窄程度分为非中重度狭窄（≤50%）和中重度狭窄（>50%）。AI 组由冠状动脉 AI 辅助诊断工作站自动识别血管和病变生成报告；医生组由一名有 5 年以上心血管影像诊断经验的医生借助 Sigovia 冠状动脉分析软件对图像进行后处理，分析各节段有无斑块及狭窄； AI+医生组由 AI 辅助诊断工作站自动识别血管和病变后，由一名有 5 年以上心血管影像诊断经验的医生进行复核并生成报告。所有病例均经医生组、AI 组、AI+医生组分别进行图像后处理及诊断，并记录所需时间，以 CAG 为标准，评价各组诊断冠状动脉狭窄的准确性。

结果
所有 CCTA 后处理图像均能清晰显示冠脉主干及主要分支血管，医生后处理及诊断时间平均约 13min，AI 平均时间约 10s，AI+医生平均时间约 5min。CGA 显示 25 例患者共有 91 个节段狭窄，AI、医生、医生+AI 分别正确诊断出 68、77、80 个，诊断准确率分别为 75%、85%、88%；其中共有 41 个节段狭窄≤50%，诊断准确率分别为 76%、87%、92%；共有 50 个节段狭窄>50%，诊断准确率分别为 74%、82%、86%。

结论
冠状动脉 AI 能显著减少医生后处理及诊断时间，医生与 AI 联合诊断可明显提高对血管狭窄程度的诊断准确率。

PU-2722

Revolution CT 低剂量扫描联合 ASIR-V 重建算法在冠脉 CTA 成像中的应用研究

胡兰花,查云飞,杨文兵,彭宙锋,陆雪芳
武汉大学人民医院

目的：评估正常体质量指数的患者在 revolution CT 100kVp、120kVp 不同管电压条件下结合不同权重 ASIR-V 重建算法冠状动脉 CTA 的图像质量和辐射剂量，并获取最佳重建参数。**方法：**搜集 120 例冠状动脉 CTA 检查的正常体质量指数患者，随机分为两组，在 100kVp、120kVp 管电压条件下分别进行 FBP 及 20%，40%，60% 和 80% ASIR-V 算法重建，比较图像质量主观评价指标、客观评价指标(噪声、信噪比、对比噪声比)及辐射剂量。**结果：**（1）100kVp 管电压条件下不同权重 ASIR-V 重建算法下图像质量主观评分在 2 分及 2 分以上，40%及 80%两者间 ASIR-V 重建算法差异无统计学意义，其余有统计学意义，其中 60%重建算法评分最高；图像客观评价指标 SD、SNR、CNR 差异均有统计学意义(P＜0.05)（2）60% ASiR-V 重建两组间冠状动脉近段管腔 CT 值具有统计学差异(P＜0.05)，且 100kVp 组近段管腔 CT 值＞350Hu，两组 LAD、LCX 及 RCA 的图像质量主观评价、客观评价指标比较差异均无统计学意义；（3）100kVp 组的有效辐射剂量 1.46±0.12 mSv 较 120kVp 组 2.16±0.12 mSv 降低约 32.4%，两组间患者所受的 ED 差异具有统计学意义(P＜0.05)。**结论：**revolution CT 100kVp 管电压扫描能够有效降低辐射剂量且联合 60% ASIR-V 重建算法可以获得最佳图像质量。

冠状动脉疾病报告与数据系统在疑似冠心病患者及排除阻塞性冠脉疾病患者中的临床应用

黄增发,王翔,肖建伟,张树桐,李祚钦
武汉市中心医院

目的：探讨冠状动脉疾病报告与数据系统在疑似冠心病患者及排除阻塞性冠脉疾病患者中的临床应用。
方法：回顾性分析我院行 CCTA 和 ICA 的患者，应用冠状动脉疾病报告与数据系统结构化报告判断阻塞性冠脉疾病，与 ICA 结果对照，判断两者的一致性。
结果：基于冠状动脉疾病报告与数据系统的 CCTA 判断非阻塞冠脉疾病患者与 ICA 具有较高的一致性；而判断阻塞性冠脉疾病患者与 ICA 具有一定的一致性。
结论：冠状动脉疾病报告与数据系统在排除阻塞性冠脉疾病患者中具有较高的临床价值。

PU-2724

冠脉 CT 成像技术在冠心病诊断中的应用价值研究

申国强
吉林市人民医院

摘要：目的：研究冠脉 CT 成像技术在冠心病诊断中的应用价值。方法：从来我院诊治的疑似冠心病患者中选择 104 例作为研究对象，分别行 256 层螺旋 CT 冠脉成像技术与冠脉造影， 256 层螺旋 CT 冠脉成像技术以 DSA 冠脉造影为金标准，对比两种技术在病支检出率及动脉分级结果一致性，

通过统计学处理，判断 CT 冠脉造影在诊断冠心病的敏感度及特异度。结果：两种方法的病支检出率与动脉分级结果均未有明显差别（P > 0.05）；256 层螺旋 CT 冠脉成像技术具有较高敏感度与特异度。结论：冠脉 CT 成像技术在冠心病诊断中具有高敏感度、高特异度、高准确率的特点。

PU-2725

双源 CT 对先天性肺静脉异位引流的诊断价值

王善涛,徐丰林,肖国强,王静,李建国
新疆心脑血管病医院

摘要：目的 探讨双源 CT 血管造影在先天性肺静脉异位引流中的诊断价值，以提高对该病的认识并为临床手术提供更为全面的影像参考。**方法** 回顾性分析 67 例先天性心脏病肺静脉异位引流患者的双源 CT 图像，在工作站上行多平面重建（MPR）,最大密度投影（MIP）,和容积再现（VRT）等后处理资料，观察分析其位置、形态及分型、合并的其他心脏畸形，并对其手术治疗的 CT 诊断与手术结果进行比较。**结果** 双源 CT 对诊断肺静脉异位引流的先心病（包括各种分型）与手术结果完全相符合。**结论** 双源 CT 结合多种重建方法不仅能够明确诊断肺静脉异位引流，还可以准确的分型，具体引流位置。还可以对伴有其他先心病做出明确诊断，是其有效、安全、准确的检查方法。

PU-2726

CCTA 评分准确评价冠心病的可行性分析

吕云罡,王攀英,吴光耀
深圳大学总医院

目的：探讨冠状动脉 CT 血管造影狭窄评分（CCTA-SS）用于准确评价冠心病（CAD）的可行性。
材料与方法：对 228 例疑似冠心病患者行冠状动脉造影（CCTA），左前降支病变 1 例，一周内行有创冠状动脉造影（ICA）。将两组患者随机分为 A 组（直径狭窄组）和 B 组（CCTA-SS 组），随访 6 个月。使用专用软件进行定量 CT 测量。分析两组之间的数据。以 ICA 为金标准，比较其与 ICA 的相关性和诊断准确性。对服从正态分布的独立样本数据进行 t 检验或单因素方差分析。非参数数据采用卡方分析或 Fisher's 精确概率法。P 值<0.05 被认为具有统计学意义。
结果：两组患者的基线数据、斑块特征和区域性心肌功能（RMF）无统计学差异（P>0.05）。两组的前壁和侧壁 RMF 差异有统计学意义（P<0.001）。以 ICA 为金标准，CCTA 的 r 值明显低于 CCTA-SS（0.4612 vs 0.9001）。以 50%直径狭窄为阈值，CCTA 的 AUC 低于 CCTA-SS（0.803 vs 0.906，Z=1.578，P=0.1146）。以 70%直径狭窄为阈值，CCTA 的 AUC 明显低于 CCTA-SS（0.673 vs 0.903，Z=4.722，P<0.0001）。CCTA-SS 的诊断准确率明显高于 CCTA（P<0.001）。经过 6 个月的随访， CCTA-SS 组进行血运重建治疗的患者明显多于接受 CCTA 组（X^2 = 13.027，P < 0.015）。
结论：CCTA-SS 来源于 CCTA，并结合与心肌缺血相关的功能指标，可提高 CCTA 诊断冠心病的准确性，优化临床策略。

PU-2727

双源 CT 冠状动脉造影对冠状动脉起源变异的诊断价值

张艳丽,何其舟,王思凯, 余飞
西南医科大学附属中医医院

目的：探讨双源 CT 冠状动脉造影对冠状动脉起源变异的诊断价值。 **方法**：回顾性分析我院 2014 年 12 月-2018 年 12 月期间行双源 CT 冠状动脉造影检查的影像资料，利用曲面重组、多平面重建和容积再现等后处理技术，观察冠状动脉起源变异的形态学特征及其三维空间关系。 **结果**：在 4892 例冠脉 CTA 检查中共检出冠状动脉起源异常者 78 例，其中右侧冠状动脉起源于左冠状窦 25 例，左侧冠状动脉起源于右冠状窦 2 例，左侧冠状动脉起源于无名窦 1 例，回旋支起源于左冠状窦 12 例，回旋支起源于右冠状窦 1 例，冠状动脉起源高位 37 例（右侧冠状动脉起源高位 15 例，右侧冠状动脉起源高位 19 例，双侧冠状动脉起源高位 3 例）。 **结论**：双源 CT 冠状动脉造影可以准确、清晰显示冠状动脉起源变异的解剖细节，与常规血管造影相比，它对冠脉起源变异的检出率更高，可以更准确地显示异常起源及血管走行，且容积重建能更直观、立体的展现起源变异血管的三维空间关系，能为临床决策提供理论依据。

PU-2728
高级迭代重建算法对低剂量冠状动脉 CT 血管成像图像质量及管腔狭窄 诊断准确性的研究

杨晓莹,谢丽响,徐凯
徐州医科大学附属医院

目的 评价不同强度高级迭代重建(ADMIRE 1-5)算法与传统滤波反投影(FBP)算法在低剂量冠状动脉 CT 血管成像（CTA）中对图像质量的影响及对管腔狭窄程度诊断的准确性。
方法 收集 30 例一周内同时进行低剂量冠状动脉 CTA 及冠状动脉造影（CAG）的病例。所有病例行 CTA 图像重建时均采用六种重建算法(FBP、ADMIRE 1-5)，并对获得的图像进行主、客观评价，采用单因素重复测量方差分析比较六组间图像主观评分、图像噪声、图像信噪比（SNR）、对比噪声比(CNR)，两两比较采用 LSD 法检验。以 CAG 为金标准，通过一致性检验（Kappa 检验）比较六种重建算法对冠状动脉狭窄程度诊断的准确性。
结果 图像噪声高低排序为 FBP>ADMIRE 1>ADMIRE 2>ADMIRE 3>ADMIRE 4>ADMIRE 5（$P<0.05$），图像 SNR 及 CNR 高低排序为 ADMIRE 5>ADMIRE 4>ADMIRE 3>ADMIRE 2>ADMIRE 1>FBP（$P<0.05$），主观评分高低排序为 ADMIRE 4>ADMIRE 5>ADMIRE 3>ADMIRE 2>ADMIRE 1>FBP（$P<0.05$）。以 CAG 为金标准，不同强度 ADMIRE 对狭窄管腔诊断准确性高于 FBP（$P<0.05$），且以 ADMIRE 4 最优（Kappa 值为 0.956），其他各组从高到低依次为 ADMIRE 3，5，2，1，FPB（Kappa 值分别为 0.812，0.844，0.914，0.956，0.904）。
结论 在冠脉 CTA 低剂量扫描中，相比 FBP 算法，ADMIRE 算法能大幅度降低图像的噪声，提高图像质量，其中以 ADMIRE 4 重建算法所得图像质量较优。以 CAG 为金标准，ADMIRE 算法重建图像对冠状动脉狭窄程度的诊断准确性明显高于 FBP 算法，且 ADMIRE 4 诊断准确性最高。

PU-2729
高级迭代重建算法在双低主动脉 CTA 中的应用研究

许晨阳
河南省人民医院

目的 探讨双源 CT 迭代重建算法在双低主动脉 CTA 中的应用潜能。**方法** 采用随机分组法将 108 例临床要求行全主动脉 CTA 扫描的患者分为实验组（A）和对照组（B），A 组（n=52）：采用 80kV，造影剂用量为 0.7 ml/kg， B 组（n=56）：采用 100kV，造影剂用量为 1.0 ml/kg，余扫描条件相

同。两组图像均应用迭代重建（SAFIRE）与滤波反投影重建（FBP）两两比较，并对各组图像质量进行主观和客观评价：由两名高年资医师分别测量主动脉四个不同层面感兴趣区（ROI）的 CT 值、噪声（SD），对比噪声比（CNR）并对图像质量进行主观评分。**结果** A 组 SAFIRE 重建图像 CT 值、噪声、CNR 优于 B 组 FBP 重建有统计学意义（P<0.05）；而主观评分高于 B 组 FBP 重建无统计学意义（P>0.05）；B 组 SAFIRE 重建图像 CT 值、噪声、CNR 优于 A 组 SAFIRE 重建有统计学意义（P<0.05），而主观评分高于 A 组 SAFIRE 重建无统计学意义（P>0.05）；B 组 SAFIRE 重建主观评分略高于 B 组 FBP 重建无统计学意义（P>0.05）。A 组 DLP（1.81±0.64）mGy.cm 较 B 组 DLP（5.48±0.23）mGy.cm 辐射剂量减少 67%，A 组造影剂用量（48.54±12.04）ml 较 B 组用量（67.02±13.47）ml 减少 28%。**结论** 低电压联合迭代重建算法能够减少图像噪声，提高图像质量，降低辐射剂量、减少造影剂用量。

心脏磁共振组织追踪技术结合小剂量多巴酚丁胺评估大鼠心肌缺血再灌注损伤存活心肌的实验研究

何博[1],陈榆舒[1],夏睿[2],刘小新[1],王磊[1],郜发宝[1]
1.四川大学华西临床医学院
2.重庆医科大学第一附属医院放射科

目的：探讨心脏磁共振组织追踪技术(Cardiovascular magnetic resonance tissue tracking, CMR－TT)结合小剂量多巴酚丁胺检测大鼠急性心肌缺血再灌注后局部存活心肌的应用价值。**材料与方法：**24 只大鼠分为实验组和假手术组，各 12 只。结扎大鼠左冠状动脉前降支，闭塞 30 分钟后再通造成心肌缺血再灌注模型。再灌注后第 24h 和第 3 天分别进行静息态及低剂量多巴酚丁胺负荷态[10 μg/（kg·min）]Cine 电影序列和 LGE 延迟强化序列 MR 扫描。采用 CVI^{42}后处理软件 CMR-TT 技术进行心肌应变分析和心功能分析。每次扫描结束后两组分别安乐死 6 只大鼠，取心脏病理组织进行伊文思蓝-TTC 染色，测定心肌梗死、水肿以及存活心肌面积。**结果：**实验组静息及负荷态整体径向、环向及纵向应变峰值（GPCS、GPLS）均显著低于对照组（31.49±8.96% VS 33.64±6.68%、-17.68±3.86% VS -18.75±2.52%、-15.68±4.00% VS -16.65±3.24%），且差异均有统计学意义。24h 后实验组负荷态左室径向应变峰值（PRS）及左室环向应变峰值（PCS）高于静息态（70.76±12.59% VS 68.66±11.71%、11.78±13.31% VS 6.86±24.28%），且差异有统计学意义（P<0.05）。MR 扫描低剂量多巴酚丁胺负荷前后，实验组左室射血分数（LVEF）、舒张末期容积（EDV）、收缩末期容积（ESV）以及搏出量（SV）均升高。相关性分析显示 GPRS 与 EDV、ESV 值呈正相关（r=0.596；r=0.597，P <0.05）、GPCS 与 ESV 值呈负相关（r=0.604，P<0.05）。**结论：**心脏磁共振组织追踪技术结合低剂量多巴酚丁胺负荷可用于评价急性短暂缺血再灌注损伤心肌损伤程度，早期准确识别缺血再灌注损伤后心肌活性。

用双能量冠脉 CTA 检查验证低剂量冠脉 CTA 成像是否会漏诊低密度斑块

彭坤[1],李军[2]
1.解放军第九八八中心医院
2.河南省郑州大学第一附属医院医学影像及核医学科

对比 15 名受试者的冠脉 CTA 扫描数据在不同 keV 条件下单能量算法重建图像中非钙化性斑块检出率的差异。以每名受试者的冠脉 CTA 扫描数据由线性混合算法重建出的双能量图像为标准，分别对比 40 至 120keV（以 10keV 为间隔）条件下的虚拟单能量算法重建出图像中的非钙化性斑块检出率，结果表明较低剂量条件下冠脉 CTA 成像很可能漏诊非钙化性斑块。

多层螺旋 CT 心电门控扫描在诊断主动脉夹层及评估主动脉弹性中的应用与研究进展

孔黎阳,孙勇
昆明医科大学第二附属医院

主动脉夹层是一种危及生命的心血管疾病，是由于主动脉内膜、中膜病变或外伤等原因导致的主动脉内膜破裂，血液经内膜撕裂口进入主动脉中层，造成主动脉中层沿长轴分离，形成真假两腔的一种病理状态[1]，病死率非常高。动脉弹性是指在单位压力作用下动脉壁的功能学反映,如血管直径、横截面积、体积的变化等。动脉弹性可以作为反映大血管功能的指标，有研究证实大动脉顺应性是心血管疾病死亡率的独立预测因素[2]，在无临床症状的心血管疾病早期，血管弹性功能就已发生改变。研究[3]显示，动脉壁硬度增加与主动脉瘤、主动脉夹层形成和破裂有关。因此检测主动脉弹性对于心血管事件高危患者的发现与确定具有重要意义。随着影像学技术的发展，对于动脉弹性功能评价的无创性检查方法受到重视。目前可应用超声、MRI、CT 血管成像(CTA)测量动脉血管弹性。国内外文献对于主动脉弹性的研究多局限于超声[4-5]。 超声检查费相对较低，在临床中被广泛应用，但易受操作者技术水平的影响。MRI 软组织分辨率高，近年来逐渐用于测量主动脉弹性，但受扫描时间及空间分辨率的影响，且费用较高，在临床普及受限。CTA 方法简单易行、空间分辨力高，在进行主动脉弹性测定方面起着重要的作用。多层螺旋 CT(multi—Slice Computed Tomography，MSCT)结合心电门控技术能够通过血管直径及面积变化准确反映大动脉的弹性功能[6]。本文就目前多层螺旋 CT 心电门控技术评估主动脉夹层动脉弹性的临床应用、研究进展以及未来该项技术的展望等方面做一综述。

PU-2733
双源 CT 肾灌注成像在评估 Debakey Ⅰ型主动脉夹层围手术期急性肾损伤中的价值

李萌
河北医科大学第四医院

目的：探讨双源 CT 肾灌注成像在评估 DebakeyⅠ型主动脉夹层围手术期发生急性肾损伤的价值，寻求可以评估主动脉夹层肾血流动力学变化的无创性检查。**方法：**收集 2013 年 10 月至 2014 年 12 月间在本院心血管外科确诊并且接受手术治疗的 20 例 DebakeyⅠ型主动脉夹层患者的临床资料，术前当日行双源 CT 经肾门层面行肾灌注扫描，经后处理系统获取患者两侧肾皮质的时间-密度曲线（time-density curve, TDC），并计算得到患者两侧的肾灌注值。分别以术前 1 小时、术后 1 小时、术后 24 小时和术后 48 小时为时间点持续监测患者血肌酐水平，根据 KDIGO 急性肾损伤诊断标准，对比患者 48 小时内血肌酐升高情况，判定患者是否发生术后急性肾损伤（acute kidney injury, AKI）。将所有患者术前 CT 肾灌注值和围手术期血肌酐水平进行 Spearman 相关性检验，检验水准 $\alpha=0.05$，$P<0.05$ 为无统计学意义，研究 CT 肾灌注值与肾损伤之间是否存在相关性。**结**

果：两组患者间肾灌注水平和血肌酐水平存在统计学意义（*P*>0.05）**结论：**患者术前肾灌注值与围手术期血肌酐水平存在相关性，且呈现高度负相关性，说明 CT 肾灌注扫描可在一定程度上对急性主动脉夹层患者术后肾损害进行评估。

PU-2734
冠脉 CT 成像技术在冠心病诊断中的应用价值 研究

申国强
吉林市人民医院

摘要：目的：研究冠脉 CT 成像技术在冠心病诊断中的应用价值。方法：从来我院诊治的疑似冠心病患者中选择 104 例作为研究对象，分别行 256 层螺旋 CT 冠脉成像技术与冠脉造影， 256 层螺旋 CT 冠脉成像技术以 DSA 冠脉造影为金标准，对比两种技术在病支检出率及动脉分级结果一致性，通过统计学处理，判断 CT 冠脉造影在诊断冠心病的敏感度及特异度。结果：两种方法的病支检出率与动脉分级结果均未有明显差别（P > 0.05）；256 层螺旋 CT 冠脉成像技术具有较高敏感度与特异度。结论：冠脉 CT 成像技术在冠心病诊断中具有高敏感度、高特异度、高准确率的特点。

PU-2735
Typical Clinical and Imaging Manifestation of Loeys-Dlietz Syndrome: A Case Report

Xiaobing Zhou
Guangdong Provincial People's Hospital

Background: First described in 2005 by Loeys and Dietz, Loeys-DIietz Syndrome （LDS） is an autosomal dominant connective tissue disorder characterized by cardiovascular and skeletal involvement. In order to further deepen the understanding of this disease, this paper reported a case of a child who visited our hospital。

Method: A 3-year-old child was brought to hospital for the assessment of his gradually expanding aortic sinuses and ascending aorta as usual ,who born with patent foramen ovale. The child also manifested inguinal hernia、hyperextension of both knee joint and growth retardation .We reviewed his imaging findings and clinical procedures

Result: Imaging findings of the echocardiography demonstrated bulbous dilatation of the aortic extending from the Sinuses of Valsalva to the ascending aorta , in addition to moderate regurgitation of the aortic valve; The enlarged aortic sinuses and ascending aorta was also obviously seen in the volume rendering reconstruction of the heart and cardiac vessels. The abdominal aorta also showed dilatation of the superior mesenteric artery, which measured 6.2mm in width . Head and neck CTA with anteroposterior projection and right oblique posterior view demonstrated tortuous dilatation or worm-like appearance of the carotid and vertebral artery. Due to suspicion of LDS, an autosomal-dominant connective tissue disorder first characterized by aortic aneurysms and generalized arterial tortuosity, the patient received a

molecular test, which revealed transforming growth factor-β receptor type 2 (TGFBR2) gene mutation, which confirmed the diagnosis of type 2 LDS.

Conclusion: LDS is a recently discovered autosomal dominant disease involving multiple systems.At the same time, LDS often cause aortic dissection and aneurysms. Therefore, active clinical intervention is very necessary.

成人主动脉弓离断 CTA 表现

周林[1,2],彭涛[2],张绍金[1]
1.成都市郫都区人民医院
2.成都大学附属医院

目的 分析成人主动脉弓离断 CTA 影像特征及临床价值。**方法** 回顾分析 1 例成人主动脉弓离断患者的临床资料及影像学表现，并复习相关文献。 **结果** 患者以无诱因胸痛起病，既往有难治性高血压，CTA 显示患者升主动脉于发出左锁骨下动脉后成尾状缩窄、中断，并见多发扩张侧枝循环与降主动脉相通，降主动脉借开放动脉导管与肺动脉相通，伴左向右分流。 **结论** 成人主动脉弓离断有典型 CTA 表现，CTA 在确诊该病及确定临床分型、观察体循环侧枝循环及分流情况、有无合并症等方面有重要价值，结合后处理及 3D 打印技术可以为临床手术方案的选择以及手术路径设计提供帮助，可以辅助介入治疗术中评估手术效果。

优化对比 CE-SSFP 序列在急性心肌梗死患者检查流程中的应用

张秋杭,孙峥,赵欢,刘志,杨旗
首都医科大学宣武医院

目的 本文旨在提供一种对比增强自由稳态平衡进动电影序列在急性心肌梗死患者影像检查流程中的优化应用方案。**方法** 对临床确诊的 38 例急性心肌梗死患者行 SSFP 和 CE-SSFP 序列，对比在造影剂注射前后其心功能 EDV、ESV、EF 以及图像成像质量 SNR 和 CNR 的差异，再定量评估 CE-SSFP 和 LGE 对心肌梗死面积的显示。**结果** 注射造影剂前后， 3 8 例患者 EDV：147.61±36.8 VS 135.84±39.7；ESV：56.74±23.5 VS 52.21±28.8；EF：61.5±9.1 VS 60.2±8.6，P＝0.066、0.248、0.059 大于 0.05，无统计学差异；CE-SSFP 与 LGE 在 ST 段抬高组别一致性较高，R^2=0.92，P<0.0001；；非 ST 段抬高组别，R^2=0.81，P<0.0001；Bland-Altman 分析显示两种方法间具备较低偏差，分别为 0.4±0.9，0.54±0.96。**结论** CE-SSFP 可用于急性心肌梗死患者的 CMR 检查流程中，可为临床提供一种优化的检查方案，此方案可减轻患者的不耐受程度，为临床提供安全的检查环境，对未来更深入研究提供时间成本上的支持。

双源 CT 对于冠状动脉狭窄与左心室功能的相关性研究

赵来鑫
北华大学附属医院

目的：探讨双源 CT 冠状动脉成像技术在评价冠状动脉主要分支（左前降支、右冠状动脉）不同程度狭窄时的左心室功能的变化。**材料及方法：**收集我院行双源 CT 冠脉检查的 454 例患者相关信息，其中冠状动脉狭窄患者 324 例在冠状动脉存在不同程度狭窄的 324 例患者中有 24 例于两周内行 CAG（冠状动脉造影）检查，将两种检查方法的结果进行对比分析。利用双源 CT 工作站心功能分析软件分别计算出单纯冠状动脉左前降支及右冠状动脉在不同程度狭窄时所对应的心功能参数，主要包括：左室舒张末期容积(EDV)、左室收缩末期容积(ESV)、每搏输出量(SV)、射血分数(EF)、心肌质量（MM）。随机抽取 30 例正常患者作为对照组。**结果：**1.双源 CT 对于冠状动脉狭窄程度的诊断与 CAG 诊断结果比较，具有很高的一致性。2. EF、MM 两个指标项轻度狭窄组与重度狭窄组相比较、中度狭窄组与重度狭窄组相比较，均有显著差异性。 3. 冠状动脉左前降支和右冠状动脉同为重度狭窄时两组间比较，并分别与正常组比较，EF、MM 两个指标项左前降支组与右冠状动脉组相比有显著差异性，左前降支组与正常组相比有显著差异性。**结论：**1. 双源 CT 对冠状动脉狭窄程度的诊断结果与 CAG 诊断结果相比较，两者具有很高的一致性，这一结果与国内外已完成的一些研究结果相一致。2. 冠状动脉左前降支和右冠状动脉轻或中度狭窄时对左心功能均无显著影响，这可能与人体自身的代偿机制有关，导致轻、中度狭窄对左心功能影响较小。3. 左冠状动脉前降支和右冠状动脉同为重度狭窄，左前降支重度狭窄对左心功能影响明显大于右冠状动脉，这可能与两者对心肌的供血范围不同有关。

PU-2739
冠状动脉 CT 血管成像对血压等危险因素与冠状动脉狭窄关系的研究

李岩
北华大学附属医院

目的 通过收集疑似冠心病并行冠状动脉 CTA 检查的患者的临床资料，进而探讨血压等危险因素与冠状动脉狭窄的关系的相关性，从而更好的控制冠状动脉病变的发生。**方法** 通过收集自 2012 年 9 月至 2014 年 1 月期间，我院疑似冠心病并行冠状动脉 CTA 检查的患者的临床资料 763 例，其中在短时间内同时行 DSA 检查的患者 32 例，经冠状动脉 CTA 确诊冠状动脉存在不同程度狭窄的患者 494 例，正常的患者 269 例。测量血压，取空腹静脉血，检测 TG、TC、LDL-C、HDL-C、FPG，并记录年龄，吸烟史等临床资料。根据冠状动脉正常组与冠状动脉狭窄组中，各因素的数据进行对比分析，筛选影响冠状动脉病变的相关危险因素，并以血压为主要因素进行单独分析，按血压水平分组，并以合并其他危险因素，来探讨不同血压水平合并危险因素的情况与冠状动脉狭窄的关系的相关性研究。**结果** 1. CTA 与 DSA 两者在评价冠状动脉的病变方面，检查结果相符率高，没有明显差异（P＞0.05），差异无统计学意义。2. 关于危险因素的分析：与冠状动脉正常组比较，冠状动脉狭窄组的相关因素：男性、高血压、糖尿病及吸烟的比例增大（P＜0.05），年龄及血清 TG、TC、LDL-C 水平升高（P＜0.05），而血清 HDL-C 水平降低（P＜0.05）。3. 在不同级别的血压组中，冠状动脉狭窄与合并其他的危险因素有线性正相关。**结论：**DSCT 的冠状动脉 CTA 与 DSA 的检查结果有较良好的一致性。高血压是冠状动脉狭窄发生的重要的独立危险因素，而男性、高龄、血脂异常、糖尿病及吸烟史等其他相关因素，也是不可忽略的危险因素，尤其在多重的相关危险因素的协同作用下，冠状动脉狭窄发生的危险性更高。

PU-2740

Revolution CT 低剂量低造影剂用量联合基于多模型的迭代重建算法在超重和轻中度肥胖患者冠状动脉 CTA 中的应用价值

杜静波,任阿红,李振武,冷琦,郭小会,王秋斌,王征
北京市大兴区人民医院

目的 与传统的 100kVp 扫描相比，探讨对超重和轻中度肥胖患者采用 80kVp 联合基于多模型的迭代重建算法(ASiR-V)进行前瞻性心电门控冠状动脉 CTA 检查的价值。材料方法 利用 16cm 宽体探测器 Revolution CT，对 60 例超重和轻中度肥胖患者(25≤BMI<35 kg/m2)前瞻性纳入低剂量扫描组采用 80kVp 进行冠状动脉 CTA 扫描和 60%ASiR-V 进行图像重建。匹配 60 例超重和轻中度肥胖患者纳入常规剂量扫描组采用 100kVp 进行 CTA 扫描和 60%ASiR-V 进行重建。造影剂采用浓度为 350 mgI/ml 的碘海醇。冠状动脉 CTA 图像均由一名有 15 年工作经验的放射科医师在 GE ADW4.7 工作站上进行图像后处理和重建。所有图像分别由 2 名具有 5 年以上工作经验的放射科医师单独进行测量和评价。图像评价包括对图像质量和每段冠状动脉血管的主观评价和客观评价。比较常规剂量组和低剂量组的图像质量、辐射剂量和造影剂用量。结果 常规剂量组和低剂量组患者的一般资料之间没有明显的统计学差异(P>0.05)。两组患者的冠状动脉 CTA 图像的信噪比和对图像质量的主观评价结果在两组之间无明显的统计学差异(P>0.05)。但低剂量组患者接受的辐射剂量(1.59±0.20 mSv)比常规剂量组(3.06±1.40 mSv)明显减低(P<0.001)，同时低剂量组患者所采用的造影剂用量(22.18±6.24 ml)比常规剂量组(47.23±3.87 ml)明显减低(P<0.001)。结论 在 16cm 宽体探测器 CT 上对超重和轻中度肥胖患者进行前瞻性心电门控触发的冠状动脉 CTA 成像时，相对于采用常规 100kVp 扫描，采用 80kVp 进行扫描和 60%的 ASiR-V 进行图像重建可以获得满足诊断要求的图像，同时可以明显减低患者接受的辐射剂量和造影剂用量。

PU-2741

Calcification Remodeling Index Characterized by Cardiac CT as a Novel Parameter to Predict the Use of Rotational Atherectomy for Coronary Intervention of Lesions with Moderate to Severe Calcification.

Mengmeng Yu
Shanghai Jiao Tong University Affiliated Sixth People's Hospital

OBJECTIVE: To assess the feasibility of calcification characterization by coronary computed tomography angiography (CCTA) to predict the use of rotational atherectomy (RA) for coronary intervention of lesions with moderate to severe calcification.

MATERIALS AND METHODS: Patients with calcified lesions treated by percutaneous coronary intervention (PCI) who underwent both CCTA and invasive coronary angiography were retrospectively included in this study. Calcification remodeling index was calculated as the ratio of the smallest vessel cross-sectional area of the lesion to the proximal reference luminal area. Other parameters such as calcium volume, regional Agatston score, calcification length, and involved calcium arc quadrant were also recorded.

RESULTS: A total of 223 patients with 241 calcified lesions were finally included. Lesions with RA tended to have larger calcium volume, higher regional Agatston score, more involved calcium arc quadrants, and significantly smaller calcification remodeling index than lesions without RA. Receiver operating characteristic curve analysis revealed that the best cutoff value of calcification remodeling index was 0.84 (area under curve = 0.847, $p < 0.001$). Calcification remodeling index $\leq$ 0.84 was the strongest independent predictor (odds ratio: 251.47, $p < 0.001$) for using RA.

CONCLUSION: Calcification remodeling index was significantly correlated with the incidence of using RA to aid PCI. Calcification remodeling index $\leq$ 0.84 was the strongest independent predictor for using RA prior to stent implantation.

多模型迭代算法 ASIR-V 联合 100kVp 在头颈冠脉一站式扫描可行性研究

胡智军
西安长安医院

【摘要】：目的　探讨**多模型迭代算法 ASIR-V 联合 100kVp 在头颈冠脉一站式扫描可行性。材料与方法** 前瞻收集头颈冠脉 CTA 检查的患者 40 例。随机分 A、B 两组，每组 20 例。A 组对照组管电压为 120KV，FBP 重建。B 组实验组管电压为 100KV，Pre-ASIR50%，Pos-Asir-V80%。两组均采用：冠脉 CTA 心脏（Cardiac）轴扫，探测器宽度 140mm，头颈 CTA 螺旋扫描，探测器宽度 80mm，两组对比剂用量及打药方案均采用分段注射：碘流率（25mgI/kg/s），注射时间为 14s（心脏 10s，4s 低流速（3.0ml/s））维持量。测量主动脉根部、RCA 近段、LAD 近段、LCX 近段、左右颈总动脉起始部、颈内动脉起始部、大脑中动脉 M1 段、椎动脉 V4 段管腔的 CT 值、SD 值，并记录 CNR、CTDI、DLP、并计算有效辐射剂量 ED 进行统计学分析。客观评价：采用独立样本的 t 检验比较两组图像动脉的 CT 值及图像背景噪声 SD 统计学分析。主观评价：Kappa 对两名医生一致性评价，采用 Mann-Whitney U 检验对两组图像统计学分析。**结果**　A、 B 两组年龄、BMI 无统计学差异（P>0.05）;客观评价：两组 CT 值、CNR 差异性无统计学意义（P>0.05），两组有效辐射剂量 ED 分别为：A（3.48±1.36）、B（1.59±0.65）,两组具有统计学差异（P＜0.05），且 B 组较 A 有效辐射剂量降低了 54.3%。主观评价：两者图像质量差异性具无统计学差异（P>0.05）。**结论　多模型迭代算法 ASIR-V 联合 100kVp 在头颈冠脉一站式扫描可行，**图像质量满足临床诊断，且可以有效降低辐射剂量。**临床相关于与应用：**临床推荐使用**多模型迭代算法 ASIR-V 联合 100kVp 在头颈冠脉一站式扫描可行性的，值得临床借鉴与推广应用。**

冠脉减影 CT 血管成像对高心率患者的临床应用价值

周碧
中国科学院大学重庆医院（重庆市人民医院）

目的
应用患者个体特异性血流动力学信息，优化冠脉减影 CT 血管成像（减影 CCTA）扫描方案，探讨在减影 CCTA 未控制心率患者中的临床应用价值。
方法
选取 49 例（男 47 例，年龄 37-84 岁，平均 61.34±11.26 岁）欲行冠脉 CTA 检查的患者，按心率≧70 与<70 分为高、低心率组，高心率组 26 人，低心率组 22 人，两组患者体重指数、心率及年龄无差异。两组患者均行优化后减影 CCTA 扫描方案：于升主动脉根部进行监测，绘制个人特异性的时间-密度曲线，记录升主动脉对比剂到达时间 t1 及峰值时间 t2。正式扫描时平扫及增强触发时间为：平扫为(t1-3)s，增强扫描时间根据心率调整（心率 65 次/分以下为 t2+4.5s，心率 65~80 次/分时为 t2+4s，心率 80 次/分以上时为 t2+3.5s），嘱患者屏气，于一个屏气相内完成两期扫描。对比高、低心率组冠状动脉平扫、增强序列血管对比剂充盈情况。将冠状动脉造影证实的 18 例减影 CCTA 患者（25 支支架节段与 15 支重度钙化节段）分为高、低心率两组，对比减影在两组

间 CCTA 图像质量提高的应用价值，研究减影 CCTA 对高心率患者冠脉中、重度狭窄（狭窄程度>50%）的诊断效能。

结果

优化后减影 CCTA 扫描方案在高、低心率患者平扫序列升主动脉根部、冠状动脉未见对比剂充盈，增强序列血管获得明显强化。冠脉左主干、左前降支近段及左回旋支近段 CT 值在两组间差异无统计学意义（P<0.05）。经减影 CCTA 图像质量及诊断敏感度、特异度、阳性预测值、阴性预测值均提高（P<0.05）。高、低心率组间减影 CCTA 对图像质量提高及冠脉中、重度狭窄的诊断特异度、阳性预测值、正确率差异无统计学意义。

结论

应用个人特异性血流动力学信息，相针患者不同心率调整扫描时机，首次证实减影 CCTA 对高心率患者图像质量、诊断效能提高的应用价值，为冠脉减影 CTA 的临床广泛实施提供基础。

PU-2744

256 排 CT 对胸痛三联征的诊断价值。

钱勇
南通瑞慈医院扬州大学第四临床医学院

目的 探讨 256 排 CT 对胸痛三联征的诊断价值。

方法 对我院自 2018 年 12 月份至 2019 年 4 月份临床怀疑胸痛三联症的 23 例患者进行回顾性分析，其中男性患者 20 例，女性患者 3 例，平均年龄 35 岁~75 岁，均采用美国 GE 公司的 RevolutionCT 对胸痛患者进行 CTA 检查，肺动脉扫描范围为胸廓入口至膈顶；心脏扫描范围为气管隆突下 1cm 至心脏下缘 2cm，扫描左右范围使心脏图像显示整个视野的中心，以便提高空间分辨率；主动脉上界包括锁骨下动脉，下界包括所有腹主动脉。扫描方式在采用一次注射注射造影剂下，按照肺动脉 CTA 加冠脉 CTA 加主动脉 CTA 的扫描顺序进行扫描，采用阈值触发方式启动扫描，触发层面选择在肺动脉层面，感兴趣区阈值为 50HU，肺动脉扫完后延迟扫描冠脉，冠脉扫描结束后立即扫描主动脉，肺动脉与主动脉扫描采用 80mm 探测器，0.28s 旋转速度螺旋扫描，冠状动脉采用 160mm 的探测器，0.28s 旋转速度轴扫，采用碘佛醇 350 非离子型造影剂 70 毫升，对比剂首先采用 4.5~5ml/s 的速度注射 50ml，然后再以 2.5~3ml/s 的速度注射 20ml 的药，以相同的速度注射 30ml 的生理盐水，整个扫描过程中无需患者屏气，扫描完成后，冠脉根据不同的心率选择最佳时相采用冠脉运动冻结技术（SSF）进行回顾性心电门控重建，采用 AW4.7 工作站立即进行曲面重组（CPR）、最大密度投影（MIP）、多平面重组（MPR）、容积再现（VR）等对冠状动脉、肺动脉、主动脉及肺部等进行观察，快速作出影像学的诊断。

结果 23 例患者均完成检查，肺动脉、冠脉、主动脉图像均满足临床诊断要求，特别冠状动脉各支显示连续可辩。

结论 急性胸痛的病因复杂，起病急，发病快，症状缺乏特异性，病情进展迅速，患者死亡率高，较早和确定诱因，及早对症处理治疗，对患者与临床有着至关重要的意义。

心脏 CT 平扫与 CTA 定量评价心外膜脂肪对比研究

程凯,查云飞
武汉大学人民医院

目的：对比研究基于心电门控的心脏 CT 平扫（NCT）与冠状动脉 CTA 定量评价冠心病患者心外膜脂肪体积（EFV）的一致性。方法：回顾性分析本院临床诊断冠心病同期行心脏 CT 平扫和冠状动脉 CTA 检查患者 40 例。心外膜边界由 2 位具有丰富心血管 CT 临床工作经验的医师（观察者 1、2）采用 GE AW4.7 工作站自动软件自动勾勒心外膜轮廓，EFV 结果由软件自动计算生成。采用线性回归分析、Bland-Altman 分析法及组内相关系数（ICC）评价两观察者间的一致性。结果：NCT 和冠状动脉 CTA 测得 EFV 分别为 99.43±43.78cm^3、93.66±48.49cm^3，两者差异无明显统计学意义（$P > 0.05$）。观察者 1 在 NCT 和 CTA 的重复系数（CR）误差分别为 10.01cm^3、7.83cm^3；观察者 2 在 NCT 和 CTA 的 CR 误差分别为 11.05cm^3、7.58cm^3。NCT 的 CR 为 8.05cm^3；CTA 的 CR 为 7.13cm^3。各组 ICC 均大于 0.96。结论：基于心电门控的心脏 CT 平扫和冠状动脉 CTA 均可用于 EFV 的评估。

轻中度冠心病风险患者冠状动脉 CTA 的诊断效能分析

邓以川[1,2],张冬[1]
1.陆军军医大学第二附属医院（新桥医院）
2.重庆康华众联心血病医院

背景：近期计算机断层扫描（CT）血管造影（CTA）技术可以减少疑似冠心病（CHD）患者的血管造影需求，但仍需要验证。
目的：比较双源 CT、640 层容积 CT 对冠心病轻中度危险的诊断能力。
方法：对 1 月份到第三军医大学附属新桥医院心内科就诊的疑似冠心病患者进行回顾性研究。2010 年和 2018 年 1 月。所有患者均接受冠状动脉造影（CAG）双源 CTA（n=224）或 640 层容积 CTA（n=218）。敏感性、特异性、阳性预测值、CTA 检测>50%狭窄的 Ct 值（PPV）和阴性预测值（NPV）按每个血管和患者水平计算。
结果：在 HR<65 bpm 和 65~70 bpm 的患者中，三种方法的诊断价值无显着性差异。在 HR>70 bpm 的患者中， 双源 CTA 和 640 层容积 CTA 具有较好的敏感性(89%和 91%比 43%，P<0.001)、特异性(73%和 73%比 20%，P=0.001)、PPV(80%和 84%比 43%，P=0.002)和 NPV(85%和 84%)。 20%，P<0.001)。双源 CTA 与 640 层容积 CTA 无明显差异.
结论：双源 CTA 和 640 层容积 CTA 对轻中度冠心病的诊断价值无明显统计学差异。

Diagnostic performance in the assessment of coronary artery stenosis: comparison between 96-row detector dual source CT and 256-row multidetector CT

Wen Qian[1],Wangyan Liu[1],Yinsu Zhu[1],Jun Wang[1],Xiaohan Yuan[1],Guanyu Yang[2],Yi Xu[1],Xiaomei Zhu[1]
1.Department of Radiology， The First Affiliated Hospital of Nanjing Medical University
2.Laboratory of Image Science and Technology， School of Computer Science and Engineering，Southeast University， 2 Sipailou

Background: Both 96-row detector dual source CT (DSCT) and 256-row multidetector CT (256-row MDCT) have been used in clinical practice for assessment of coronary artery stenosis, however, no one has compared the diagnostic performance of two scanners.

Methods: Eighty patients who underwent both coronary computed tomography angiography (CCTA) and CAG were enrolled. Among them, forty-three underwent DSCT scan, while thirty-seven underwent 256-row MDCT scan. The image quality of coronary arteries was divided into four grades (score 1-score 4). A cut off point of 70% diameter stenosis was used to define significant stenosis. The diagnostic accuracy and constituent ratio of excellent image quality (score 4) of two scanners were compared using McNemar test.
Results: Both DSCT and 256-row MDCT presented a comparably high diagnostic accuracy at patient/vessel/segment-level, while 256-row MDCT demonstrated higher diagnostic accuracy than DSCT significantly on segment-level (91.85% vs 95.40%, P=0.020). The sensitivity, specificity, positive predictive value (PPV) and negative predictive value (NPV) of 256-row MDCT in detecting stenosis at segment-level was 87.07%, 98.07%, 93.52% and 95.95%, respectively. The corresponding values of DSCT were 77.52%, 95.98%, 84.75% and 93.68%. The constituent ratio of excellent image quality (score4) of DSCT was higher than that of 256-row MDCT significantly at all levels (all P<0.001).
Conclusion: Both DSCT and 256-row MDCT could obtain high diagnostic accuracy in detecting coronary artery stenosis, with slight superiority of 256-row MDCT at segment-level. An advantage in obtaining excellent image quality of DSCT over 256-MDCT could not enhance the diagnostic performance in determining coronary artery stenosis.

PU-2748
Clinical application of "one-stop" low dosage imaging of chest pain

Dou Li, Zhijun Hu, Donghong Wei, Jiang Guo
Shanxi xi'an Changan hospital

Objective: To evaluate the clinical value of "one stop" low dosage imaging of revolution CT in the triple examination of chest pain. **Methods:** We selected 60 patients with chest pain as the main symptom and chest pain triplet CTA examination from November 2016 to December 2017 in our hospital and randomly divided them into two groups, 30 cases in each group. The inclusive criteria were: Patients with sudden chest pain, acute face, ultrasound and electrocardiogram can not accurately determine the cause of the diseases. The two groups of scanning conditions are as follows: the voltage of the fixed tube is 100kVp, the pre ASIR-V is 60%, the rear ASIR-V is fixed to 80%, the noise index is 35, and the automatic tube current technology is used. In the controlled group, the cardiac scan mode of the coronary artery combined with the pulmonary artery and the aorta spiral (Helical) scan mode was used in the controlled group A by bolus monitoring (Time Bolus), peak scan monitoring layer is at 1-2cm, then start scanning injection of small dosage of contrast agent of 15ml and 35ml saline flush, observe the image on a screen, when the descending aortic concentration of contrast fades, scanning may be terminated. In the same level of pulmonary artery stem and descending aorta were placed in ROI1 and ROI2, respectively calculating the interested peak time of T1 and T2 according to the time density curve of the pulmonary artery scan delay time for T1 (2n+2) s (n monitoring points, if

each exposure interval is 2S, coronary artery scan delay time T2 (2n+6) s. Group B was a one-stop scan, which consisted of two axial scan (Axial) splicing scans. ROI was set at the descending aorta at the 1-2cm level below the tracheal carina, and the threshold reached 220HU automatic triggering. The coronary artery, pulmonary artery and aorta were scanned once. The CT values and SD values of RCA, LAD, LCX, left pulmonary artery, right pulmonary artery, aortic arch, left aorta and right aorta were measured, and CNR were also calculated. **Results:** there is no significant difference in age and body mass index between the two groups (P>0.05). There is no significant difference in the objective measurement between the two groups (P>0.05), and there is no statistically significant difference in subjective scores (P>0.05). The average radiation dosage in group A is (4.65 + 1.14) mSv, the average radiation dose in group B is (2.21 + 0.82) mSv, and the radiation dosage between two groups is statistically significant (P=0.000 < 0.05). **Conclusion:** In the Revolution CT chest pain triplet examination, one-stop scan can not only get excellent images of pulmonary artery, coronary artery and aorta, but also can reduce the radiation dose by about 53%.

复查 CT 对 A 型主动脉壁内血肿不良事件的预测价值

陈远
中国医学科学院阜外医院

目的 探究复查 CT 对诊断 A 型主动脉壁内血肿患者发生严重的主动脉相关不良事件的意义。**方法** 连续入选 2009 年 9 月到 2018 年 6 月于我院确诊为 A 型主动脉壁内血肿并至少进行过一次 CT 复查的患者，收集患者的临床和影像资料并进行随访，随访终点为主动脉相关不良事件，建立主动脉相关不良事件的预测模型并对随访结果作生存分析。**结果** 共纳入 103 例患者，其中男性 59 例（57.3%），女性 44 例（42.7%），平均年龄 56.8±9.9 岁。中位复查时间为 14（8，37）天，中位随访时间为 482（28，1600）天，随访期间有 52 例（50.5%）患者发生终点事件。基线资料中的高脂血症（OR=3.85，P=0.004）、最大管径≥50mm（OR=3.14，P=0.020）和内膜破裂（OR=3.08，P=0.015）以及复查资料中的最大血肿厚度增加（OR=1.32，P＜0.001）是主动脉相关不良事件的独立危险因素，联合预测模型（AUC=0.85）的诊断效能优于基线预测模型（AUC=0.72）。此外，有高

脂血症、内膜破裂和最大血肿厚度增加的患者无事件生存时间更短。**结论** 对于初始进行药物治疗的 A 型 IMH 患者，高脂血症、最大管径≥50mm、内膜破裂和最大血肿厚度增加与主动脉不良事件相关，定期影像复查能为临床治疗策略的选择提供更多的帮助。

精准胸痛“三联征”CTA 一站式检查的研究

贾广生,王海波,李金平
哈尔滨医科大学附属第二医院

目的：探讨 GE Revolution CT 在胸痛“三联征”精准 CTA 一站式检查中的应用价值。
方法：对不明原因急性胸痛患者，使用 GE Revolution CT，采用小剂量对比剂峰值测试肺动脉、升主动脉峰值时间，一次性注射对比剂，行胸痛“三联征”精准 CTA 一站式检查，评价肺动脉、冠状动脉、主动脉成像情况及患者的辐射剂量。
结果：使用 GE Revolution CT 在胸痛“三联征”精准 CTA 一站式检查可以得到的肺动脉、冠状动脉及主动脉的精准清晰的影像信息，同时辐射剂量在合理范围。
结论：使用 GE Revolution CT 在胸痛“三联征”精准 CTA 一站式检查能够得到的肺动脉、冠状动脉及主动脉的精准清晰的影像信息，明确了胸痛病因、提高检出效率、提高诊疗水平，具有很高临床应用价值。

“双低”技术在双源 CT 冠状动脉成像中的临床研究进展

张湘敏,吕梁,刘兴利,杜自宏
云南省第一人民医院

冠状动脉疾病的发病率和死亡率在全球位居高位。冠状动脉计算机断层扫描血管造影是无创性检查冠状动脉病变的重要方式，其病变的检出率和准确率与冠状动脉血管数字减影术相当。然而随着该技术的普及，患者面临高剂量辐射损伤和对比剂不良反应的双重风险。在低剂量双源 CT 研究中，低管电压（kV）联合低剂量对比剂的“双低”技术研究较为成熟。众多学者基于“双低”技术探索不同 kV 与对比剂剂量优化方式，并结合不同浓度对比剂、BMI 值、迭代重建研究的方案在降低辐射剂量和对比剂用量方面发挥了重要作用。本文就“双低”技术在冠状动脉成像中研究进展作一综述，这对于双源 CT 冠脉疾病患者扫描的临床应用有一定指导意义。

PU-2753

Stanford B 型主动脉夹层腔内隔绝术后（TEVAR）再干预危险因素预测

阙丽凤,黄美萍
广东省人民医院广东省心血管病研究所

目的：探讨 Stanford B 型主动脉夹层（TBAD）腔内隔绝术后（TEVAR）再干预危险因素。
方法：回顾性分析 2011 年-2019 年 192 例经 CTA 确诊 Stanford B 型主动脉夹层并接受 TEVAR 术的患者基本人口学资料、临床资料、术前及术后的影像学资料及 TEVAR 术中造影资料。

结果：68 例（35.4%）TBAD 患者 TEVAR 术后需要进行再干预，多因素 logistic 回归模型分析发现年龄＞66.5 岁（OR，8.162 ；95% CI，2.468-26.999；P=0.001）、距左锁骨下动脉层面主动脉直径＞38.5 mm（OR， 4.297；95% CI，1.882-9.810； P =0.001)、假腔最大层面假腔直径＞29.5mm （OR，3.124；95% CI，1.355-7.201；P =0.008)、术中造影即刻内漏 （OR，3.734；95% CI， 1.711-8.149； P=0.001)和裸支架植数量 （OR，5.610； 95% CI， 2.061-15.27；P =0.001)是再干预的危险因素。ROC 曲线下 AUC 为 0.831（P＜0.000；95% CI，0.770-0.892），敏感度、特异度分别为 69.1%，83.9% 。

结论：TBAD 患者 TEVAR 术后再干预的发生率较高，确定再干预的危险因素，有助于提醒高危患者建立定期随访计划以便及时观察主动脉的变化情况，及时调整监测时间和治疗方案。

双源 CT 血管成像对小儿冠状动脉瘘的诊断价值

唐思诗[1],彭礼清[2],付兵[1]
1.成都市第五人民医院
2.四川大学华西医院

目的：评价双源 CT 血管成像在小儿冠状动脉瘘（CAF）中的诊断价值。

方法：选择双源 CT 诊断证实为 CAF 的 15 例患儿为研究对象，所有患儿均行心导管造影检查及手术治疗。所有图像均用多平面重建（MPR）、容积再现（VR）、最大密度投影（MIP）、曲面重组（CPR）等方法进行重建，观察瘘的起源、走行、瘘口的位置及伴发心血管异常。此外，起源动脉、瘘口等最大径被测量。

结果：①15 例 CAF 患儿中，14（93.3%）例为单侧冠状动脉起源,其中 8（53.3%）例起源于右冠状动脉，6（40%）例起源于左冠状动脉。1（6.7%）例为双侧冠状动脉起源。所有患儿起源动脉的最大径平均为 0.63±0.25。②瘘口位于右心房者 6（40%）例，右心室 4（26.6%）例，肺动脉 3（20%）例，左心室 1（6.7%）例，冠状静脉窦 1（6.7%）例。所有患儿瘘口的平均大小为 0.46±0.19cm，2 例患儿瘘管成“喷射状”进入瘘口。③4（26.6%）例患儿瘘管末端并动脉瘤形成，动脉瘤的平均最大直径为 1.90±0.82。④伴发心血管异常最常见为心脏增大、肺动脉增粗、房间隔缺损等。⑤8（53.3%）例患儿行手术矫治治疗，7（46.7%）例患儿行介入封堵术治疗。⑥双源 CT 诊断结果与心导管造影、手术诊断结果完全吻合。

结论：双源 CT 血管成像能对小儿冠状动脉瘘进行准确诊断，并可对其瘘管的起源、走形、瘘口、伴发心血管异常、起源动脉、瘘口等最大径等进行准确评估，为临床术前提供了丰富的影像学资料。

Association Between Coronary Artery Plaques and Chronic Kidney Disease as Assessed by CT Angiography

Wen Deng
West China hospital， Sichuan university

Purpose: The purpose of this study is to determine the characteristics of coronary artery injury and the correlations with clinical features in patients with chronic kidney disease(CKD).

Methods and materials: Sixty-seven patients with CKD who underwent coronary CT angiography(CTA) were retrospectively analyzed. The extent, distribution and types of plaques and grading of stenosis were evaluated. The imaging characteristics were compared between dialysis and non-dialysis group. In dialysis group ,the imaging characteristics were compared between diabetes and non-diabetes patients in further.
Results: In total, 152 coronary vessels (2.3±1.3 per patient)and 306 segments (4.6±3.5per patient) were found to have plaques. The most common diseased coronary vessel was the left anterior descending(LAD) artery (34.9%). The most common involved coronary artery segment was the middle segment of LAD artery (14.1%). Calcified plaque (65.9%) and minimal stenosis (55.8%) were the most frequently detected plaque type and grading of stenosis, respectively. The length of plaque in dialysis group was longer than non-dialysis group, furthermore, it increased gradually with the dialysis duration. In dialysis group, the length of plaque in diabetes patients is shorter than in non-diabetes patients.
Conclusion: CKD patients had a high plaque burden in coronary artery with characteristics of non-obstructive calcified plaque involving long segment of vessels. Dialysis may aggravate vascular calcification injury with the length of involved vessels increased along the duration of dialysis.

PU-2756
3 2 0 排螺旋 CT 评估 升主动脉弹性与冠 状动脉狭窄的相关 性

陈阿梅
广州市第一人民医院

【摘要】目的 利用 320 排螺旋 CT 评估升主动脉弹性指标与冠状动脉狭窄程度的相关性。方法 搜集我院拟诊冠心病并行 320 排螺旋 CT 冠状动脉造影 138 例患者(正常组 31 例，狭窄组 107 例)，其中狭窄组
分为轻度狭窄组及中重度狭窄组，比较不同组间升主动脉弹性指标及与 Gensini 评分的相关性。结果 升主动脉弹性指标[膨胀性(AoD)及僵硬度(AoS)]在冠状动脉狭窄组与正常组间及不同狭窄程度组间的弹性指标差异均具有统计学意义(P<0.05)。ROC 曲线评估 AoD、AoS 预测冠心病的价值，曲线下面积(AUC)分别为 0.94、0.89。结论 升主动脉弹性与冠状动脉狭窄与否及狭窄程度有密切相关性，有可能可以作为冠心病的独立预测因子。

PU-2757
P3T 自动触发扫描技术在 CT 冠状动脉造影检查中的可行性研究

李浚利,黄益龙,蔡雅倩,闵蕊,韩丹
昆明医科大学第一附属医院

目的 探讨 MedRad P3T 心脏模块采用自动触发扫描技术行 CT 冠状动脉血管成像（CCTA）检查的可行性。**方法** 前瞻性收集心功能 NYHAⅡ级以内并行 CCTA 检查患者 80 例，随机分为 T 组（采用小剂量团注测试扫描，通过小剂量测试获取主动脉根部达峰时间，达峰时间加 3 秒为延迟扫描时间）及 B 组（采用自动触发扫描，监测层面位于主动脉根部，触发阈值为 100HU），采用西门子第二代双源 CT 前瞻性心电门控序列扫描模式进行扫描，两组扫描参数完全一致。T 组通过在 P3T 心脏软

件中输入患者体重、对比剂浓度、心脏平扫时间、主动脉根部达峰时间及 CT 值峰值获取对比剂注射方案，B 组通过在 P3T 心脏软件中输入患者体重、对比剂浓度及心脏平扫时间获取对比剂注射方案。分别对比两组冠脉近中远段 CT 值（采用美国心脏协会 15 节段分法）、冠状动脉三大分支近段的 SNR 及 CNR、 冠状动脉节段可诊断率、对比剂用量、对比剂注射流率、扫描时间（T 组扫描时间为从开始小剂量测试到完成扫描的时间，B 组扫描时间为从开始自动检测到完成扫描的时间）。**结果** ①两组冠状动脉近中远段 CT 值、冠脉三大分支近段 SNR 及 CNR 值差异无统计学意义（$P>0.05$）；②T 组冠状动脉可诊断率 97.8%（579/592），B 组冠状动脉可诊断率为 97.1%（572/589），差异无统计学意义，差异无统计学意义（$P>0.05$）。③T 组、B 组对比剂流率差异无统计学意义（$P>0.05$）；T 组、B 组对比剂用量分别为 75.04±7.20ml、56.06±7.01ml，差异具有统计学意义（$P<0.05$）。④扫描时间 B 组较 T 组平均减少 27.40±3.96s（$P<0.05$）。**结论** 对心功能 NYHAⅡ级以内的患者，采用 MedRad P3T 心脏模块以自动触发检查方法行冠状动脉血管成像，快速、简便、减少了对比剂用量，并保证了冠状动脉图像质量，在临床上具有可行性。

PU-2758
高压注射器双流技术在急性胸痛患者中的运用价值

甘宁
贵州省铜仁市印江土家族苗族自治县人民医院放射科

目的：探讨低流速联合双桶高压注射器“双流”推注技术行胸痛三联征检查的运用价值。方法：选取 2018 年 1 月—6 月江口县人民医院行胸痛三联征检查患者 60 例，按就诊时间先后顺序分为 A、B 两组；A 组 30 例，使用美德瑞达双桶高压注射器“双流”推注技术，推注方法为：第一步 10ml 生理盐水以 4ml/s 试管；第二步 40ml 造影剂以 4ml/s 推注；第三步造影剂与生理盐水混合推注，混合比 50%造影剂与 50%生理盐水以 3ml/s 推注，总量为 30 ml；第四步以 4ml/s 推注 40ml 造影剂冲管。B 组 30 例，常规推注，第一步以 5ml/s 推注 16ml 生理盐水试管；第二步以 5ml/s 推注 80ml 造影剂，第三步以相同速率推注 40ml 生理盐水冲管。A、B 两组均选用西门子 128 层螺旋 CT 回顾性心电门控扫描模式。比较 A、B 两组肺动脉主干、左、右肺动脉干、升主动脉、降主动脉、左、右冠状动脉 CT 值、造影剂用量、流速及主观图像质量平分。结果：A、B 两组感兴趣区 CT 值比较差异无统计学意义（P>0.05）；A 组较 B 组造影剂用量平均减少约 50%，差异有统计学意义（$P<0.05$）；A 组使用较小流速能保证图像质量，满足临床诊断，在一定程度上降低了因高流速造成造影剂渗漏的风险。A 组主观图像评分均高于 B 组，上腔静脉及右心房无高密度条索状伪影。结论：低流速双通高压注射器“双流”推注技术行胸痛三联征检查在保证图像质量的同时显著减少了造影剂用量，降低了造影剂肾病的发生率及血管渗漏的风险，值得临床推广运用。

PU-2759
实影渲染技术在动态心脏 CTA 成像中的价值

丁晓青[1],赵喜[2],龚志刚[1],詹松华[1]
1.上海中医药大学附属曙光医院
2.西门子医疗

传统的容积重建算法采用单点光源，光线投射仅考虑沿光线的能量发射和吸收来计算 3D 图像，使用局部渐变着色模型对散射效果进行建模。这种传统方法忽略了具有多个散射图案以及消光的复杂光路，这可能导致较少的伪影以及可能不太准确的 VR 图像，图像缺少足够的细节与深度。

实影渲染技术受到电影技术的启发，图像运算过程中采用了多个光源，这样更符合我们肉眼观察的习惯。与传统的 VR 方法相反，实影渲染技术解决了多维和非连续渲染方程，以整合沿光线从所有可能方向散射的光。因此，在 CT 中使用的路径追踪集成了大量的光线，每个光线具有不同的路径以形成渲染图像的每个像素。
本研究尝试将 cVRT 技术用于心脏 4D CTA 成像。
首先将多期重建的冠脉数据导入 syngo.via （软件版本 VB20A，Siemens Healthineers，Forchheim，Germany）工作站，使用 CT 心脏工作流程打开。使用 cVRT 重建数据，将图像保存后进行主观评估。
研究发现，与传统渲染方法（如 VR）中使用的合成光源相比，实影渲染技术采用高动态范围（HDR）渲染光照图用于照明，这导致渲染数据的照明更自然。因此，基于物理的虚拟现实方法 CR 实时计算了照明效果的复杂物理特性，重点是增强深度和形状感知。多光源的另一个好处是，不同部位不同角度对光的反射、折射和散射都有区别，经过这种相互作用，这就产生了与现实解剖人体几乎难以区分的影像。使用 cVRT 重建可以获得更逼真的图像数据，空间位置关系更显著，对于指导临床工作可能有一定价值。

磁共振评价冠状动脉非阻塞型心肌梗死的应用价值

王晓琰
上海交通大学医学院附属第九人民医院

目的：冠状动脉非阻塞性心肌梗死（MINOCA）是一种潜在多病因综合征，心脏磁共振（CMR）可以寻找 MINOCA 潜在的发病原因，本文旨在探讨 CMR 在 MINOCA 病因诊断和鉴别诊断中的价值。
方法：回顾性研究 2017 年-2019 年 26 例急性胸痛伴血肌钙蛋白升高的患者，冠状动脉造影未见明显阻塞或狭窄＜50%，临床诊断为 MINOCA。所有患者冠状动脉造影后行心脏磁共振扫描，分析磁共振图像特点，观察心脏结构、功能及有无灌注异常和延迟强化。
结果：26 例 MINOCA 中 CMR 诊断心肌梗死 15 例（57.7%）、心肌炎 3 例（11.5%）、Takotsubo 心肌病 3 例（11.5%），有 4 例（15.4%）CMR 检查未见明显异常，1 例（3.8%）无法明确具体病因，根据磁共振特征归为非缺血性心肌病。CMR 最终确诊 26 例 MINOCA 中 21 例，诊断率 80.8%。
结论：心脏磁共振一站式成像对于诊断 MINOCA 有独特作用，能够鉴别心肌炎、Takotsubo 心肌病与急性心肌梗死等不同病因引起的 MINOCA。

Diagnostic contributions of cardiac magnetic resonance in patients with myocardial Infarction with non-obstructive coronary arteries

Xiaoyan Wang
Department of Radiology, Shanghai Ninth People's Hospital, Shanghai Jiaotong University School of Medicine

Objective: Myocardial infarction with non-obstructive coronary arteries (MINOCA) is a syndrome with underlying many causes. Cardiovascular magnetic resonance (CMR) imaging

has the potential to clarify the underlying pathology in patients with MINOCA. The objective of this study was to investigate the diagnostic value of CMR imaging in this group of patients.
Methods: From 2017 to 2019 we examined 26 patients with clinical suspicion of angiography (the patients were considered to have significant angiographic disease only a 50% stenosis was detected in any of their coronary arteries). Of these, all were underwent CMR imaging. The role of CMR with the late gadolinium enhancement was evaluated.
Results: Final diagnoses included acute myocardial infarction (15 cases), acute myocarditis(3 cases) and Takotsubo cardiomyopathy (3 cases). The remaining patients (5 cases) had either nonspecific findings or could not be classified.
Conclusions: One-stop CMR allowed for the identification of an etiology in most of the patients in this study. CMR imaging may help to differentiate between MINOCA with myocarditis, acute myocardial infarction, Takotsubo cardiomyopathy and myocarditis.

320 排 CT 冠脉成像缩窄采集时间窗的可行性研究

彭睿,方正
重庆医科大学附属第二医院

目的　通过分析 320 排 CT 冠脉成像图像质量与重建时相及心率的关系,探讨前瞻性心电门控缩窄采集时间窗的可行性。**方法**　回顾性分析了 2018 年 5 月至 2018 年 12 月心率 65～95bpm 的 90 例患者 261 支冠脉血管，按血管的图像质量评分结果，确定血管和患者的最佳时相；分析患者最佳时相与心率的关系，找出最佳时相转移的临界心率；根据临界心率和患者最佳时相，分别分析并确定采集时间窗能够缩窄的范围。对比分析缩窄采集时间窗前后的图像质量以及辐射剂量。**结果**　患者最佳时相转移的临界心率为 70bpm。心率 65～70bpm 时采集时间窗可缩窄为 R-R 间期的 72%～80%；心率 65～95bpm 时则可缩窄为 40%～50%。缩窄采集时间窗后的最佳时相与预设时相的图像评分差异有统计学意义（P=0.00），图像质量明显提高。缩窄采集时间窗前后的有效辐射剂量（ED）差异有统计学意义（P=0.00），辐射剂量明显降低。**结论**　根据不同心率进一步缩窄采集时间窗，既可提高图像质量，又能明显降低辐射剂量，值得临床应用和推广。

PU-2764

第三代双源 CT 冠脉造影静脉通路与 400 对比剂用量的前瞻性研究

杜自宏,吕梁
云南省第一人民医院

目的 研究贵要静脉通路与头静脉通路在 CCTA 中的差异，以及 Force CT 冠脉造影对比剂用量的优化。**方法** 前瞻性纳入患者 100 例，记录 CCTA 检查中对比剂注射位置、起始时间，左冠窦上缘升主动脉出现对比剂时间、经历心动周期数，主动脉达触发阈值 100Hu 时间和心动周期数，对比剂注射后左、右冠状动脉近段、中段、远段显影经历的时间、CT 值、心动周期数。将纳入患者依据静脉通路分贵要静脉组和头静脉组，对比两组各指标的差异。将纳入患者依据对比剂用量分≤25ml 组，28ml 组和≥30ml 组，对比两组指标的差异。**结果** 贵要静脉组对比头静脉组，对比剂注射后左冠窦上缘阈值触发点、右冠状动脉及左冠状动脉近段、中段、远段的显影时间、CT 值、经历心动周期数没有统计学差异（P>0.05）。对比剂用量分组结果除外≤25ml 组与 28ml 组中右冠近段、远段理想显影 CT 值没有统计学差异（P>0.05），右冠远段显影时间有统计学差异（P＜0.05）。≤25ml 组分别与 28ml 组、≥30ml 组对比显示对比剂注射后，升主动脉达阈值经历时间、CT 值没有统计学差异（P>0.05），左、右冠近、中、远段显影时间无统计学差异（P>0.05），CT 值有统计学差异（P＜0.05）。回归分析右冠中段 CT 值影响因素，体重、身高、BMI、均值心率、脏横径、心脏高度、管电流、碘总量、对比剂用量、水注射量、注射总量没有统计学意义。管电压、心脏扫描时间、延迟时间有统计学意义。**结论** 贵要静脉与头静脉在上臂是不同通路，但 CCTA 在左、右冠状动脉近、中、远段强化是一致的，他们可以被认为是相同的通路来选择。与 28ml 及≥30ml 对比剂对比，≤25ml 对比剂（23.39±2.47ml）对于 Force CT 冠脉造影是可行的，足以达到理想冠脉强化，但仍然不是最理想的最小对比剂用量。管电压、心脏扫描时间、延迟时间是影响右冠中段 CT 值的重要因素，给出回归方程。

PU-2765

IVIM-DWI 诊断陈旧性心肌梗死

相世峰,杨素君
邯郸市中心医院

目的 研究体素内不相干运动扩散加权磁共振成像(IVIM-DWI)技术在鉴别陈旧性心肌梗死及正常心肌中的应用价值；探讨基于 IVIM-DWI 的成像参数对陈旧性心肌梗死心肌纤维化的诊断价值。
方法 选取 35 例陈旧性心肌梗死患者和 12 例健康志愿者，所有入组实验者均行多扩散敏感因子（b 值）DWI 序列及延迟强化检查，采用双指数模型对采集到的 DWI 数据进行重建。以 LGE 图像为参考，在心脏短轴位上分别对 LGE 阳性陈旧性梗死心肌和健康志愿者正常心肌室间隔前部、后部及侧壁的进行测量，得到陈旧性心肌梗死组、正常志愿者组的扩散系数（D 值）、灌注系数（D^*）和灌注分数（f值）。应用秩和检验检验比较正常心肌、陈旧性心肌梗死心肌各参数值的差异，并采用受试者工作特征（ROC）曲线评价不同参数值的诊断价值。
结果 12 例健康志愿者所有层面正常心肌平均 D 值、D^*值和 f值与 35 例心肌梗死心肌比较，差异有统计学意义（Z=-5.028、-5.582、-5.257，P<0.05），D 值、D^*值和 f值曲线下面积分别为 0.939、0.988 和 0.959，健康志愿者组和心肌梗死组的敏感度和特异度分别为 84.6%、 88.9%，100%、94.4%和 84.6%、93.1%。
结论 IVIM-DWI 技术通过提供心肌的扩散状态及血流灌注状态信息，对于无法打药病人陈旧性心肌梗死的诊断具有较大的应用价值。

PU-2766
冠状动脉管腔密度梯度相关参数预测心肌桥收缩压迫程度的价值

张极平[1],王敏[2]
1.济宁医学院临床学院
2.济宁市第一人民医院

目的 探讨基于冠状动脉 CT 血管成像（coronary CTA，CCTA）所测得左前降支管腔内密度梯度相关参数预测前降支心肌桥对壁冠状动脉收缩压迫程度的诊断价值。**资料与方法** 回顾性研究 81 名经 CCTA 证实有心肌桥的患者，测量并计算左前降支血管腔内密度梯度（transluminal attenuation gradient，TAG）及其校正值（TAGstandardized,TAGs）、校正后壁冠状动脉强化值（corrected mural coronary opacification，CMCO）之差、心肌桥长度、心肌桥深度，分析其在预测心肌桥收缩压迫壁冠状动脉程度中的诊断效能。**结果** TAG、TAGs、CMCO 之差在显著压迫组、轻度压迫组、无压迫组中的差异均具有统计学意义（P＜0.05），而心肌桥长度、深度不具有显著性差异（P＞0.05）。ROC 分析 TAGs、CMCO 之差及其联合诊断指标曲线下面积在显著收缩压迫组分别为 0.81、0.83、0.89。**结论** TAG、TAGs、CMCO 之差与心肌桥收缩压迫程度有关，且在心肌桥具有显著收缩压迫时有较好的诊断价值，TAGs 和 CMCO 之差联合指标的诊断价值高于单一指标，因此可通过这些参数间接判断心肌桥是否具有显著收缩压迫。

PU-2767
Brilliance256 层 iCT 冠脉斑块分析对急性冠脉事件发生风险的预测价值

朱兆兴,王丽,吴锋泽,李敬,段凤霞,安国华
酒钢医院

摘要:目的 探讨 Brilliance256 层 iCT 冠脉斑块分析对急性冠脉事件发生风险的预测价值。**方法** 研究 24 例发生急性冠脉事件(ACS)的病例和 25 例稳定型冠心病(SAP)的病例，2 组均进行冠脉 CTA、选择性冠状动脉造影检查(SAG)，以 SAG 结果作为“金标准，利用冠脉斑块色彩编码，对其冠脉斑块的类型、性质及成分进行对照分析，比较两组间斑块类型、斑块性质、斑块成分及斑块引起的狭窄的差异。**结果** 49 例患者共检出斑块 85 个。ACS 组 39 个斑块中Ⅱ、Ⅲ型斑块 29 个，Ⅰ型斑块 10 个， 软斑块 82.05%，硬斑块及混合斑块 17.95%，脂质成分占 69.70%，纤维成分占 26.18%，钙化成分占 4.12%。 SAP 组 46 个斑块中Ⅰ型斑块 27 个，Ⅱ、Ⅲ型斑块 19 个，硬斑块及混合斑块 82.61%，软斑块 17.39%，钙化及纤维成分占 72.68%，脂质成分占 27.32%。两组间斑块类型、斑块性质、斑块的成分差异均有统计学意义(P<0.05)。**结论** Brilliance256 层 iCT 冠脉斑块分析，能够有效分辨斑块的类型、性质及成分，评价斑块的稳定性，具有在 ACS 人群中预测发生急性冠状动脉事件风险的价值。

PU-2768
猪急性心肌梗死模型中血清缺血修饰白蛋白与左室射血分数相关性的初步研究

李文佳,吕梁,王罡
云南省第一人民医院

目的 血清缺血修饰白蛋白（IMA）水平反映疾病的严重程度，因此可能是评估急性心肌梗死(AMI)预后的一个有价值的指标。本研究旨在确定猪 AMI 模型中血清 IMA 水平变化的时间进程，并探讨血清 IMA 水平与左室射血分数（LVEF）的相关性。**方法** 采用球囊介导的左前降支永久性闭塞术诱导滇南小耳猪 AMI。采用第三代双源 CT(DSCT)对 AMI 诱导前后 30 天内 LVEF 动态变化进行评价，同时测定血清 IMA 水平，并进一步确定血清 IMA 水平与 LVEF 的相关性。**结果** 血清 IMA 水平在 AMI 后 1 小时明显升高，于 6~12 小时达到峰值，此后逐渐下降，30 天后恢复至基线水平。早期血清 IMA 水平与 LVEF 呈显著的负相关（r=-0.41～-0.80，P<0.05）。30 天血清 IMA 水平与各时间点 LVEF 无统计学差异（P>0.05）。**结论** 猪 AMI 模型早期循环中 IMA 水平与 LVEF 呈显著负相关，支持血清 IMA 水平可能作为早期预测 AMI 患者临床不良预后具有价值的生物标志物的假设。

PU-2769
应用 CT 评估腹部脂肪相关参数与冠脉病变严重程度的关系

高亚婷
昆明市延安医院

目的：应用腹部平扫 CT 评估腹部脂肪相关参数与冠状动脉病变严重程度的关系。
方法：同期行腹部平扫 CT 及有创冠脉造影患者纳入分析，测量并分析纳入者腹部脂肪相关参数，包括腹部内脏脂肪、腹部皮下脂肪、腹部内脏脂肪与皮下脂肪比及传统心血管危险因素，评估腹部脂肪相关参数与冠状动脉病变严重程度的关系，应用多元 logistic 回归分析预测冠状动脉病变严重程度的危险因素。
结果：共 223 名患者纳入分析（冠心病组，n=117；非冠心病组，n=106））。结果显示冠心病组腹部内脏脂肪与皮下脂肪比明显高于非冠心病组（0.95±0.33 vs 0.70±0.25, P<0.001）；冠心病组患者较非冠心病组患者更倾向于合并非酒精性脂肪肝（P=0.002）；冠心病组腹主动脉钙化分数高于非冠心病组（P<0.001）。多元 logistic 回归分析显示腹部内脏脂肪与皮下脂肪比（OR 10.492，P<0.001）、非酒精性脂肪肝（OR 2.807，P=0.025）、腹主动脉钙化分数（OR 1.964，P<0.001）及糖尿病（OR 2.572，P=0.019）是发生冠脉明显狭窄的独立危险因素；利用回归模型联合四种因素预测冠脉明显狭窄的曲线下面积（AUC）为 0.85，相较这四种因素的独立预测能力，差异具有统计学意义（P<0.05）。
结论：包含了腹部内脏脂肪与皮下脂肪比、非酒精性脂肪肝、腹主动脉钙化分数及糖尿病等在内的预测模型可以帮助筛选未来发生冠脉明显狭窄的患者，如果在影像学检查及临床资料获取当中发现了此类患者，有助于患者疾病的早期发现、干预和治疗，当然还需要更多进一步的研究论证。

PU-2770
双源 CT 自适应前瞻性心电门控在自由心率的老年冠心病患者冠脉成像中的运用价值

黄涛,张艳丽,梁卡丽,余飞
西南医科大学附属中医医院

【摘要】 目的：探究双源 CT 自适应前瞻性心电门控应用于自由心率老年冠心病患者冠脉成像（CTCA）的价值。**方法：**选取在本院行 CTCA 检查的临床疑诊老年冠心病自由心率患者 102 例，根据双源 CT 扫描时心率分为低心率组 32 例、中等心率组 37 例、高心率组 33 例。比较三组冠脉节段可评价率、图像质量、辐射剂量；以冠脉造影（CAG）检查为金标准，分析 CTCA 对不同心率组冠脉狭窄的诊断价值。**结果：**102 例患者 1594 个冠脉节段中 1528 个满足诊断要求，可评价率 95.86%，可评价率在心率由低到高组（以下顺序同此）分别 96.43%（486/504）、95.72%（537/561）、95.46%（505/529），三组差异无统计学意义（*P*>0.05）。三组冠脉节段图像质量评分（4.12±0.89、4.07±0.85、4.06±0.81）差异亦无统计学意义（*P*>0.05）。随心率增高，CTDIvol、DLP、ED 降低（*P*<0.05）。CTCA 诊断冠脉狭窄的灵敏度、特异度、阳性预测值、阴性预测值为：低心率组 89.61%、95.84%、80.23%、98.00%，中等心率组 88.51%、96.22%、81.91%、97.74%，高心率组 86.75%、95.73%、80.00%、97.35%；三组各项比较差异无统计学意义（*P*>0.05）。Kappa 检验显示，CTCA 与 CAG 在三组中的诊断一致性均较好（Kappa 值=0.816、0.821、0.798，$P_{均}$<0.05）。CTCA 诊断冠脉狭窄 AUC 为：0.927、0.924、0.912，均诊断准确性较高。**结论：**双源 CT 自适应前瞻性心电门控应用于 CTCA 检查对老年冠心病自由心率患者均可获得较高图像质量，尤其对高心率患者可降低辐射剂量，但不影响图像质量；同时对不同心率患者冠脉狭窄度的诊断效能、准确性均较高。

PU-2771

双能量 CT 单能谱技术在显示冠状动脉支架中的应用价值

谢丽响,徐凯
徐州医科大学附属医院

目的：评价西门子第三代双源 CT 双能量扫描单能谱技术对冠状动脉支架图像质量的影响。
材料与方法：使用西门子第三代双源 CT 对 15 例（共计 21 枚支架）冠状动脉支架植入术后的患者采用双能量扫描，获得的两种不同能量(90 及 150 kV)数据采用单能谱技术重建处理，分别得到 40～190 keV(间隔 10 keV)图像及线性融合 120 kV 图像，共 17 组图像。图像评价包括（1）主观评价，由 2 位有经验医生进行双盲评估。采用 5 分制，1 分最差，5 分最佳。（2）客观评价，评价内容包括支架内径、支架长度、支架腔内衰减值、支架内噪声、支架内信噪比、支架内对比信噪比及冠状动脉图像噪声、冠状动脉图像信噪比、冠状动脉图像对比信噪比。分析上述指标各组间差异性，P＜0. 05 为差异有统计学意义。
结果：
（1）所有患者均顺利完成检查，其中男 13 例，女 2 例，平均年龄(64.13±11.82)岁，BMI 值为 26.24±1.76kg/m2，平均辐射剂量为 5.58±1.35mSv。
（2）支架腔内主观评价：两名影像医师主观评分一致性良好(kappa=0.80)，80keV 组主观评分最高。
（3）支架图像质量客观评价：支架内径、支架长度组间比较均无统计学差异（P 分别为 0.97 和 1.00）；支架腔内衰减值组间比较有统计学差异（P=0.00），40keV 组最高，190keV 组最低；支架内噪声组间比较有统计学差异（P<0.01），40keV 组最高，100keV 组最低；支架内信噪比组间比较有统计学差异（P<0.05），线性融合 120 kV 组最高，其次是 80keV 组；支架内对比信噪比组间比较有统计学差异（P<0.05），线性融合 120 kV 组最高，其次是 80keV 组，180keV 组最低；
结论：较传统 120kV 融合图像，双源 CT 双能量单能谱技术 80keV 能级图像重组能显著降低支架内噪声，获得更好的支架主客观图像,可用于 PCI 患者术后随访。

PU-2772

Revolution CT 冠脉 CTA 屏气扫描与自由呼吸扫描对检查结果的影响

任幕之
南通瑞慈医院扬州大学第四临床医学院

目的 探讨屏气与自由呼吸两种不同方式下行冠状动脉 CT 血管造影(Coronary CT Angiography,CCTA)扫描时对检查结果的影响。
方法 选取在我院行 CCTA 检查的患者 100 例，按照是否能配合呼吸分为 A、B 两组，对 A 组 63 例较能配合患者进行呼吸训练，要求检查时吸气后屏气完成扫描，对 B 组 37 例由于各种原因无法配合呼吸的患者不进行要求，自由呼吸完成扫描（仍使用相同参数进行检查，语音提示不关闭）。扫描完成后对原始数据使用 Smart phase 自动选择最佳时相，对仍存在少许伪影的图像利用运动追踪冻结技术（SSF）处理，进一步降低时间分辨率，优化图像。
使用 GE Revolution CT 进行扫描，其具有 16CM 宽探测器及最快 0.28s/r 的机架旋转速度，可在 1s 内完成全心脏扫描，最低时间分辨率为 140ms，而使用 SSF 技术后时间分辨率可降至 29ms。由于扫描速度快，可适当降低对呼吸的要求。
结果 63 例屏气扫描的患者都能经后处理得出符合诊断要求的冠脉图像，37 例自由呼吸扫描的患者中 28 例可处理出符合诊断要求的图像，另有 7 例在使用 SSF 技术之后达到诊断要求，1 例由于患者自身运动误触发提前扫描导致冠脉内药物浓度不够，1 例由于呼吸幅度较大导致无法明确诊断。
结论 以往使用中低端 CT 检查冠脉时，需扫描多次心动周期，进行多扇区重建，需患者屏气 15s 甚至 20s 以上，经常出现扫描后段由于患者屏气不佳导致图像错层，从而检查失败。使用 Revolution CT，在一个心动周期内科完成检查，仅需采集单扇区数据，加快了扫描速度，语音提示开始至扫描结束在 10s 以内，减少了患者屏气时间。虽然自由呼吸扫描成功率也较高，但仍难以避免有失败的情况产生，在工作中仍应尽量训练患者屏气，以达到更高成功率，为患者负责。

PU-2773
Revolution CT 冠脉 CTA 检查时不同心率对最佳时相选择的研究

任幕之
南通瑞慈医院扬州大学第四临床医学院

目的 探讨冠状动脉 CT 血管造影(CCTA)检查时不同心率患者最佳时相选择的差异。
方法 选取在我院行 CCTA 检查的患者 100 例，按心率分为 A 组（<65 次/分）、B 组（65~75 次/分）、C 组（>75 次/分）、D 组（心律不齐，最高与最低心率相差 20 次以上）四组。检查时设置扫描区间为绝对时相 150-800ms，扫描完成后对原始数据使用 Smart phase 自动选择最佳时相。
使用 GE Revolution CT 进行扫描，其具有 16CM 宽探测器及 0.28s/r 的机架旋转速度，可以在任意心率及心律条件下，在一个心动周期内完成冠脉 CTA 检查。
结果 心率不同，Smart phase 自动选择最佳时相也不同，A 组 14 例在 300-400ms 区间内，22 例在 700ms 左右甚至以上区间内（部分慢心律患者将采集区间延长至 1000ms）；B 组有 11 例在 300-400ms 区间，19 例在 600-700ms 区间；C 组 15 例在 300-400ms 区间，6 例在 500-700ms 区间；D 组视扫描时心率变化，自动选取的最佳时相也有变化，其中 8 例在 200-400ms 区间，3 例在 400-600 区间，2 例在 600-700 区间。
结论 A 组最佳时相应为 R-R 间期的 70%-80%，即是绝对时相为 700ms 左右及以上区间。C 组最佳时相应为 R-R 间期的 40%-50%，即是绝对时相为 300-400ms 区间。B 组一般选取双期扫描绝对时相为 300-400ms 及 700-800ms，或全期扫描 200-800ms。D 组一般推荐选择绝对时相 200-400ms。

以往冠脉检查都需要采集全期数据，作回顾性重建以寻找最佳时相来诊断，费时费力且患者接受辐射剂量大；应用 Smart phase 后，减少了医师从全部图像中筛选最佳时相的时间，但并未减少患者接受的辐射剂量；根据不同心率定制个性化的检查方案，可有效减少患者接受的辐射剂量。

ForceCT 冠状动脉血管成像对冠状动脉瘘的诊断价值

陈成,李丹云,杨家虎,陈尧,张建军
浙江医院

目的：探讨 ForceCT 冠状动脉血管成像对 CAF 的诊断价值。方法：回顾性分析我院 2018 年 4 月到 2019 年 4 月在 ForceCT 行冠状动脉血管成像的患者图像，并通过曲面重建（CPR）、容积再现（VR）等重建方法对 CAF 进行观察。结果：3462 名患者中共检出 CAF14 例，检出率为 0.4%，其中男性 8 例，女性 6 例；年龄 49-86 岁，平均 65.4 岁。CAF 同时从双侧冠状动脉发出 3 例（21.4%）；单侧 11 例（78.6%）。单侧发出的 CAF 起自右冠状动脉 3 例（21.4%）；CAF 起自左冠状动脉 8 例（57.1%）。CAF 瘘入肺动脉 11 例（78.6%）；右心室 1 例（7.1%）；上腔静脉 1 例（7.1%）；肺静脉 1 例（7.1%）。瘘血管发生迂曲、形成丛状改变 1 例（7.1%），部分瘘血管扩张粗大 2 例（14.3%）。结论：ForceCT 冠状动脉血管成像的图像，在经过多种重建后可清晰直观的展示出 CAF 的起源、走行以及瘘口位置和形态，为 CAF 的诊断提供了便利，有助于患者 CAF 的早期检出，对临床的后续治疗具有指导价值。

PU-2775
GE RevolutionCT 冠脉追踪冻结技术（SSF）对不控制心率受试者冠脉成像质量探讨

袁肖
重庆三峡中心医院

目的:评估冠脉追踪冻结技术（SSF）对不控制心率受试者 CT 冠脉成像质量的影响。
方法:筛选 21 名疑似冠心病患者在不控制心率的前提下在 revolution CT 上行 CT 冠脉成像扫描，所有患者均采用标准算法及 SSF 两种方法进行重建。然后由两名有经验的医师对两种方法重建图像质量进行评价，对整体图像质量及各分支细小血管显示等方面分别进行评分。
结果:经 SSF 重建图像质量普遍优于标准算法重建图像质量，且两者差异存在统计学意义。
结论:与标准算法相比，在不控制心率条件下 SSF 能够明显提升冠脉图像质量。

PU-2776
64 排双源 CT 血管成像技术和后处理技术在主动脉 CTA 中的应用

何小华,李向东
中国人民解放军南部战区总医院

目的 探讨 64 排双源螺旋 CT 血管造影技术和后重建技术对主动脉 CTA 的显示以及诊断价值。**方法** 收集急诊 65 例行主动脉 CTA 检查患者的 CT 影像资料，其中男性 50 例，女性 15 例；年龄 30 ～ 85 岁，平均年龄 60.2 岁。分析其 64 排双源 CT 征象，原始数据采集层厚为 0.75mm，层间隔 0.75 mm。分别采用多平面重建(MPR)、 曲面重建(CPR) 、最大密度投影(MIP) ，应用 VR 和 inspace 软件重建出立体三维图像。**结果** 经 CTA 检查: 正常 10 例，主动脉夹层 35 例，其中伴瘤样扩张的 5 例，（DeBakey Ⅰ型 12 例，Ⅱ型 10 例，Ⅲ型 10 例（Stanford 分型法：A 型 25 例，B 型 10 例）），主动脉夹层壁间血肿型（1）3 例，主动脉瘤 12 例，穿透性粥样硬化性主动脉溃疡〔1〕3 例，主动迂曲扩张 5 例。MPR 能直观显示主动脉及其主要分支的走形及形态、钙化，对夹层真假腔、内膜片和内膜初始破口的显示甚好。VR 立体感强，能清晰显示病变的全程及与分支血管的空间关系。**结论** 64 排双源螺旋 CT 的血管成像技术及后重建功能可准确反映主动脉异常状况，并对病变进行分类，在急诊中能快速得到结果并为术前规划提供更加重要、详细的信息。

超高端 CT 在体检中的优势分析

李建蓉
重庆三峡中心医院

目的：探讨超高端 CT 在体检冠状动脉健康状况检查中的应用优势。
方法：选取 2019 年 1 月至 6 月来我院接受体检的 350 例体检者作为研究对象，排除未成年体检者和有造影剂过敏史的体检者，应用超高端 CT 对体检者实施冠状动脉 CTA 检查，造影剂为碘普罗胺（370mgI/ml），使用高压注射器经肘静脉注射，速度 5ml/s，注射总量 40~60ml。先进行胸部平扫，确定心脏位置，然后进行增强扫描，扫描过程中详细记录体检者心电信号。扫描结束后将源图像上传至工作站，使用图像后处理软件对源图像进行曲面重建、最大密度投影、容积再现等处理，获得高质量影像学资料。将最后得到的影像学资料交由 2 名工作经验丰富的医师共同进行评价及诊断。
结果：350 例体检者均获得高质量冠状动脉 CTA 影像学资料，共 243 例体检者影像学资料提示冠状动脉存在问题，所占比例为 69.43%，其中男性共 165 例，所占比例为 67.90%，女性共 78 例，所占比例为 32.10%，平均年龄（61.30±4.01）岁。冠状动脉存在问题的 243 例体检者中，14 例体检者影像学资料提示冠状动脉变异，所占比例为 5.76%，其中 9 例体检者显示冠状动脉起始部狭窄，5 例体检者左右冠状动脉起字相应冠状窦的上缘。其余存在冠状动脉问题体检者中，51 例体检者有冠状动脉斑块，所占比例为 20.99%。92 例体检者存在冠状动脉心肌桥，构成比为 37.86%，分型：浅表型 56 例；深在型 33 例；混合型 3 例。存在冠状动脉问题的体检者中，最少有 1 支病变，为左前降至病变，最多有 4 支病变，为前降支、回旋支、右冠状动脉和第一对角支病变，1 例体检者的管腔狭窄程度>50%，其余均低于 30%。
结论：超高端 CT 冠状动脉 CTA 作为一项无创检查技术，具有成像清晰、影像学资料质量高的应用优势,在急性冠状动脉综合征的预防中发挥着重要作用，可作为体检常用冠状动脉病变筛查方法。

Force CT 冠状动脉 CTA 对冠状动脉走形异常的诊断价值

李丹云,陈成,杨家虎,张建军
浙江医院

目的： 探讨 Force CT 对冠状动脉走行异常的诊断价值。 方法： 回顾性分析我院 2018 年 5 月到 2019 年 7 月在 Force CT 行冠状动脉 CTA 检查的共 3496 病例资料，对所有图像进行容积再现(VR) 、曲面重组(CPR)等处理，从各种角度观察冠状动脉的起源、走行及其形态。 结果： 所有受检者中共发现存在冠状动脉走行变异 1639 例。男性 983 例，女性 651 例。年龄 15-93 岁，中位数 62 岁。检出率为 46.9%，其中起源变异合并走行异常 27 例（1.6%），存在心肌桥 1634 例（98.3%），其中 1516 例（92.3%）患者心肌桥都发生在左前降支中段；发生在左回旋支有 13 例（0.8%）；发生在对角支有 19 例（1.2%）；发生在钝缘支有 15 例（0.9%）；发生在中间支 15 例（0.9%）；发生在右冠的病例仅有 2 例（0.1%）。同时存在 2 支心肌桥 15 例（0.9%）；同时存在 3 支及以上心肌桥 7 例（0.4%）。 结论： Force CT 可从多角度、全方位显示冠状动脉的变异，明确其起源、走行及其与周围血管、心脏之间的解剖学关系，可作为常规检查手段用于冠状动脉异常的临床筛查，从而为临床提供高质量的影像诊断，具有临床指导意义。

The comparison between reference point selections when using automated computer-aided detection of stenosis severity in CCTA

Sixian Hu,Wanlin Peng,Zhenlin Li
West China Hospital，Sichuan University

OBJECTIVES: This study sought to compare the accuracy between proximal reference point and double reference point when automated computer-aided detection (CAD) software was used to detect 70% stenosis in coronary computed tomography angiography (CCTA).
METHODS: Retrospective included 57 patients who both underwent CCTA and invasive coronary angiography. All CCTA data sets were analyzed using AW4.6 product, a stand-alone image analysis and review station. The proximal and double reference points were selected and corresponding reference diameter values were obtained. Finally, the

performance of the two references was compared. The invasive coronary angiography was the reference standard. **RESULTS:** Of the 57 patients, 178 vessels were analyzed. For patient-based analysis, the proximal reference yielded 91.67% sensitivity, 85.71% specificity, 91.67% positive predictive value (PPV), and 85.71% negative predictive value (NPV) while those of double reference were 88.89% sensitivity, 90.48% specificity, 94.12% PPV, and 82.61% NPV. On per-vessel analysis, the sensitivity, specificity, PPV and NPV were 83.08%, 94.69%, 90.00% and 90.68% in proximal reference and 84.62%, 94.69%, 90.16% and 91.46% in double reference. There was no significant difference in the two reference selections (All P > 0.05).
CONCLUSION: When using automated computer-aided detection to analysis 70% stenosis in CCTA, there was no difference between the proximal reference and double reference selection both in patient-based and vessel-based evaluation.

PU-2781
冠状动脉 CTA 在急性冠脉综合征中的应用价值

刘宁
锦州医科大学附属第一医院

摘要：目的：探索冠状动脉 CT 血管造影(CTA)评价急性冠脉综合征(ACS)患者行冠状动脉介入治疗术前及术后的应用价值。**方法：**回顾性分析 118 例行冠状动脉介入治疗术的 ACS 患者资料，以数字血管减影造影(DSA)作为评价金标准，分析 CTA 诊断 118 例 ACS 患者介入术前冠状动脉狭窄程度分级准确性；并根据介入治疗术后 6 个月内是否发生支架内再狭窄(ISR)情况分为 ISR 组(n=18)及对照组(n=100)。评价冠状动脉 CTA 诊断术后 ISR 分型的准确性，并对比两组冠状动脉 CTA 定量参数的差异性。**结果：**118 例 ACS 患者介入治疗术前经 DSA 确诊 236 支粥样硬化冠状动脉，CTA 对冠状动脉狭窄程度分级诊断准确率为 88.56%(209/236)，对介入治疗术后 ISR 分型诊断准确率为 86.44% (102/118)。介入治疗术后 ISR 组管腔内密度衰减梯度—校正值(TAG-CCO)水平以及 CT 血流储备分数(FFRCT)均明显低于对照组，差异均具有统计学意义($P<0.05$)。**结论：**冠状动脉 CTA 对 ACS 患者介入治疗术前血管狭窄程度能够进行准确分级，并对于 ISR 患者在术后随访中能够作出早期定量与定性的评价。对于临床科室制定合理介入治疗方案、改善患者预后提供重要的影像资料。

不同浓度对比剂在能谱 CT 冠状动脉成像中的对比研究

雷子乔,杨明,余建明
华中科技大学同济医学院附属协和医院

目的 利用能谱 CT 探讨冠状动脉 CT 血管成像（CCTA）不同浓度对比剂对冠状动脉管腔内 CT 值高低，冠状动脉图像质量，以及冠状动脉斑块局部显示的影响。
方法 将临床怀疑或诊断为冠状动脉性心脏病的连续病例 90 例随机分为 A、B、C 三组，每组 30 例；所有病例都用能谱 CT 进行 CCTA 检查，所用对比剂总量按 1.0ml/kg体重计算，对比剂流速依据患者静脉血管情况使用 3.5~5.0ml/s，采用智能触发曝光技术扫描，管电压均为 100kV，采用智能管电流技术，A 组病例使用对比剂浓度为 270mgI/ml，B 组为 300mgI/ml，C 组为 350mgI/ml。利用能谱后处理工作站分别测量每例病例冠状动脉的最佳对比噪声比（CNR），得到最佳单能量点(keV)；分别在最佳单能量图像上的升主动脉根部、左主干以及右侧冠状动脉近段的三个不同水平

及冠脉斑块设置感兴趣区（ROI），测量上述各处冠脉管腔内平均 CT 值、图像噪声（SD）、信噪比（SNR）以及斑块局部图像质量（SNR、CNR），并对≥1.5 mm的冠脉节段图像质量进行评分。
结果 对 90 例病例共 1152 个冠脉节段进行了图像质量评分，其中 1146 段（99.5%）满足诊断要求，共发现不同性质斑块 382 处（A 组 140 处，B 组 98 处，C 组 144 处），其中钙化斑块 313 处（A 组 112 处，B 组 103 处，C 组 98 处），非钙化斑块 69 处（A 组 26 处，B 组 22 处，C 组 21 处）；与 B、C 组相比，A 组的对比剂浓度分别降低了 10.0%、22.9%；三组间最佳单能量点、最佳 CNR、管腔 CT 值、SD、SNR、图像质量评分、斑块局部显示质量差异均无统计学意义（$P>0.05$）。
结论 冠状动脉 CT 能谱成像时，应用 270mgI/ml 对比剂浓度，不仅可以降低患者对比剂肾病的发生率，而且可以保证冠脉管腔增强效果以及冠脉图像质量。

PU-2783

Age difference in association of coronary atherosclerosis progression and cardiac events stratified by age: evaluation by CT angiography in patients with suspected coronary artery disease

Hui Gu[1], Xianshun Yuan [1], Yang Gao[2], Shifeng Yang[1], Shuo Zhao[1], Ximing Wang[1], Bin Lu[2]
1. Shandong Provincial Hospital
2. Fuwai Hospital

Background and aims: We sought to investigate the age difference in predictive value of coronary atherosclerosis progression for major adverse cardiac events (MACE), assessed by serial coronary CT angiography (CCTA).
Methods: In this IRB-approved retrospective study, we investigated 1062 patients (63.0% male; mean age 54.1 ± 9.7 years) with suspected coronary artery disease (CAD) who had undergone repeat CCTA. Average time between CCTA scans was 2.4 years. Coronary atherosclerosis was semi-quantitatively assessed by 1) calcified plaque score, 2) non-calcified plaque score, 3) mixed plaque score, 4) total plaque score describing plaque distribution and extent. Incidence of MACE was assessed. Statistical analysis was performed using Cox proportional hazard models.
Results: The mean patient follow-up period was 5.0 ± 1.2 years. MACE as a composite endpoint of cardiac death, nonfatal myocardial infarction, hospitalization due to unstable angina, and coronary revascularization occurred in 148 (13.9%) patients. There were plaque progression in calcified plaque, non-calcified plaque, mixed plaque and total plaque in all patients . The progression of non-calcified plaque score (HR = 3.92, $p < 0.001$) and mixed plaque score (HR = 1.23, $p = 0.043$) were independently associated with MACE. There were having statistically significant associations in all age group between the progression of non-calcified plaque score and incidence of MACE (all $p < 0.005$).
Conclusions: Coronary atherosclerosis progression as assessed by repeat CCTA had difference in age, and had predictive value for MACE and might aid in risk stratification and management of patients with CAD.

PU-2784

Relationship of the Duke jeopardy score combined with minimal lumen diameter as assessed by computed tomography angiography to the hemodynamic relevance of coronary artery stenosis.

Mengmeng Yu
Shanghai Jiao Tong University Affiliated Sixth People's Hospital

Objectives: To study the diagnostic performance of the ratio between the Duke jeopardy score (DJS) and the minimal lumen diameter (MLD) (DJS/MLDCT ratio) as assessed by coronary computed tomographic angiography (CTA) for differentiating functionally significant from non-significant coronary artery stenoses, with reference to invasive fractional flow reserve (FFR).

Methods: Patients who underwent both coronary CTA and FFR measurement during invasive coronary angiography (ICA) within 2 weeks were retrospectively included in the study. Invasive FFR measurement was per- formed in patients with intermediate to severe coronary stenosis. DJS/MLDCT ratio and anatomical parameters were recorded. Lesions with FFR ≤0.80 were considered to be functionally significant.

Results: One hundred and sixty-one patients with 175 lesions were included into the analysis. Diameter stenosis in CT, area stenosis, plaque burden, lesion length (LL), ICA-based stenosis degree, DJS, LL/MLD4 ratio, DJS/MLA ratio as well as DJS/MLD ratio were all significantly different between hemodynamically significant and non-significant lesions ($p < 0.05$ for all). ROC curve analysis determined the optimal cut-off value for DJS/MLDCT ratio to be 1.96 (area under curve = 0.863, 95 % confidence interval = 0.803 - 0.910), yielding a high diagnostic accuracy (86.9%, 152/175).

Conclusions: In coronary artery stenoses detected by coronary CTA, the DJS/MLD ratio is able to predict hemodynamic relevance.

IBR 技术纠正冠脉 CTA 血管飘移伪影与冠脉 DSA 对比研究

黄建宁
南宁市第二人民医院

目的：分析宝石能谱 64 排螺旋 CT 冠状动脉 CTA 血管成像中冠状动脉飘移伪影纠正后与冠脉 DSA 的影像对比研究。
方法：选取我院 2014 年 4 月到 2019 年 4 月行冠状动脉 CTA 检查均有冠状动脉飘移伪影的 50 例患者，全部患者后续均行 DSA 检查，按冠脉 CTA 图像质量评分标准分组，狭窄程度与 DSA 进行比较分析。
结果：CTA 显示血管 200 支（693 节段），运动伪影血管 66 支（108 节），运动伪影 155 处；CTA 判读重度狭窄 2 处，中度狭窄 5 处，轻度狭窄 11 处，轻微狭窄 17 处，无狭窄 120 处。

结论：IBR 技术对各种原因引起不同程度的运动伪影均有良好且可靠的修复能力，纠正后狭窄程度与 DSA 判读无显著差异。

PU-2787
下腔静脉肝段缺如伴奇静脉回流、主动脉后型左肾静脉复杂畸形一例

宋幸鹤,陈明哲
永康龙川家医院

患者女，56 岁，因早期肺癌筛查于我院行低剂量胸部 CT 检查，发现奇静脉异常扩张，继而行胸腹部联合 CT 增强扫描。既往体健，查体无明显胸闷、气急、紫绀等症状，曾因脊柱侧弯行腰椎内固定术，无其他胸腹部手术史。

MSCT 增强示下腔静脉肝段缺如，下腔静脉收受肾静脉血后，连接右侧明显扩张的奇静脉，沿脊柱右缘于上腔静脉入右心房前，开口于上腔静脉；三支肝静脉汇合后直接汇入左心房；左侧肾静脉走行于腹主动脉后方汇入下腔静脉，管腔略受压；肾静脉水平以下腔静脉走行正常、管腔增粗；胃后方、左肾外侧见 6 个软组织结节，并可见自每个结节发出的独立血管与门静脉汇合；胰腺体尾部发育不良。本院心脏超声提示左室舒张功能下降，二、三尖段轻度返流。

影像诊断：下腔静脉肝段缺如伴奇静脉回流、主动脉后型左肾静脉复杂畸形，合并多脾、短胰。

讨论 先天性下腔静脉畸形相当少见，其发病率约为 0.2%-0.5%。目前多数文献将其分为 6 类：（1）下腔静脉肝段缺如；（2）环主动脉左肾静脉；（3）主动脉后左肾静脉；（4）双下腔静脉；（5）左位下腔静脉；（6）腔静脉后输尿管或环下腔静脉输尿管；多种畸形可联合发生。本例就是下腔静脉肝段缺如伴奇静脉回流、主动脉后型左肾静脉联合畸形，并且合并有多脾、短胰多脏器发育畸形。下腔静脉肝段缺如，奇静脉系统因引流腹部和下肢的血流导致增粗，突出的奇静脉弓在 X 线平片上易被误诊为纵隔占位，并且该畸形存在深静脉血栓和肺栓塞的高风险；主动脉后型左肾静脉可造成左肾静脉受压、回流受阻，产生后胡桃夹症状；均需特别警惕。另外，临床上很多患者因无明显症状容易被忽视，但是在外科手术时，尤其是涉及心脏、肝脏、下腔静脉的手术，需要特别注意这些畸形的存在，准确了解解剖关系，以避免灾难性后果的发生。MSCT 清晰显示下腔静脉及分支的畸形并准确诊断尤为重要，对临床诊疗具有积极指导意义。

PU-2788
主动脉夹层累及右侧第 3 肋间后动脉与右支气管动脉共干

弓莉,杨瑞
河南省胸科医院河南康复中心医院

患者男，64 岁，以突发胸背疼痛 8 小时来我院就诊，无明显诱因突然出现胸部撕裂样疼痛。既往史：11 年前曾因“瓣膜病”行主动脉瓣置换术，10 年前因“升主动脉夹层”行升主动脉置换术；全程 CTA 扫描示：升主动脉冠窦宽约 58mm，窦管交界宽约 41mm，升主动脉中段宽约 39mm，主动脉于头臂干分叉以远至双侧髂总动脉管腔呈双腔样改变；假腔较大，

密度较低，较大破口位于主动脉弓左侧壁，宽约 12mm，距离左锁骨下动脉开口月 25mm。头臂干及左锁骨下动脉受累及呈双腔改变，于主动脉弓降部右侧壁见一血管影（右侧第 3 肋间后动脉与右支气管动脉共干）管腔呈双腔改变，以远管腔沿脊柱向上走行，较远管腔未见明显显示，近端管腔局限性略增粗，直径约 8mm。

CTA 诊断示：Ⅲ型主动脉夹层，弓上三大分支受累及，右侧第 3 肋间后动脉及右支气管动脉共干受累及并夹层形成。

我院收住院主动脉夹层病人数千例，均未见肋间动脉及支气管动脉共干受累及呈双腔夹层改变，以往主动脉 CTA 检查，右侧第 3 肋间后动脉及右支气管动脉共干很少显示，或显示未见受累及，很多情况是：支气管动脉起始部以远的肋间隙动脉起始部局限性血池改变，复查部分可吸收。

PU-2789
心脏磁共振评价化疗药物所致心脏毒性的研究进展

陈秋智
重庆市肿瘤医院

化疗药物很大程度的延长了癌症患者的生存期，但是其导致的心脏毒性改变不容忽视。心脏磁共振（Cardiovascular Magnetic Resonance Imaging，CMR）是评估心脏毒性的金标准，它不仅能早期发现心肌功能的异常，并能识别癌症幸存者治疗相关的心脏毒性的过程，还能全面评估心血管功能的改变。越来越多的新技术应运而生，如：心肌形变成像（Myocardial Strain，MS）可在心室射血分数出现明显异常之前观察到整体和局部的早期心肌功能异常；相位对比-CM 能通过测量脉冲波速度和主动脉扩张性无创的评估主动脉的流速及僵硬程度；早期强化可识别化疗引起的早期的心肌炎及心肌水肿，延迟强化可无创的识别心肌纤维化；T1 mapping 和细胞外容积分数（EVC）直接量化心肌纤维化的范围以及程度；T2 mapping 不仅能反映由如心肌水肿或铁离子沉积引起的横向弛豫时间的改变，还能区别视觉上不敏感的水肿；T2*WI 可能能够非侵入性的监测由化疗等引起的心肌的铁过载。上述磁共振技术联合临床指标（如肌钙蛋白及脑利钠肽）可以准确的评估心脏功能早期的异常改变及程度，指导临床早期干预治疗，降低癌症患者心脏毒性的发病率，延长患者的有效生存期。

PU-2790
CMR-PSIR MOCO 序列在扩心病患者中的诊断价值

王思梦,程巍,孙家瑜,夏春潮,李磊,何帅
四川大学华西医院

目的：探讨心脏磁共振心肌延迟强化序列（PSIR-MOCO）在扩心病患者中的诊断价值
方法：纳入 2018 年 2 月~2019 年 5 月在我院行心脏磁共振检查的心衰患者 57 例，按标准扫描方案，在完成心肌首过灌注 12~20 分钟后行心肌延迟扫描。所有患者均行 PSIR-MOCO 和常规节段采集心脏延迟增强(segmented-PSIR)完成左心室短轴扫描。比较两种序列图像的质量，采用国际心脏 17 节段分析法，比较两种序列图像心肌显示的一致性。
结果：所有患者均成功完成所有扫描。PSIR-MOCO、segmented-PSIR 的信噪比分别为 55.23±12.35,41.38±17.64，两种序列采集的心肌延迟强化图像对比度噪声比差异有统计学意义（$P<0.05$）；主观评分分别为 4.25±0.48、3.39±1.58；差异有统计学意义（$P<0.05$）；心肌纤维化评价中，16 例 segmented-PSIR 图像由于运动伪影无法诊断，其余 41 例患者的纤维化评价两者的一致性差异无统计学意义。

结论：PSIR-MOCO 序列在评价心肌纤维化程度时与常规的分段采集（segmented—PSIR）有高度一致性，且图像质量高于 segmented-PSIR，可以避免 segmented—PSIR 容易产生的运动伪影，图像稳定性高；在扩心病患者的磁共振扫描中尤其明显。

PU-2791

IQon Spectral CT 心肌灌注虚拟单能图像与 SPECT 心肌灌注显像的对照研究

常俊琦
山西医科大学第一医院

目的：能谱 CT 可以得到虚拟单能图像，由于更准确地诊断心肌缺血；由于以往 CT 在低能级图像时信噪比较低，而 IQon Spectral CT 可以在 40kev 虚拟单能图像中有较高的信噪比及对比噪声比，提升了图像质量。在本次研究中，我们通过比较 SPECT 心肌灌注显像作为参考标准来评估光谱 CT 在心肌缺血中的诊断价值。
方法：回顾性分析 23 例心脏静息灌注发现显著狭窄并在 1 个月内接受 SPECT 心肌灌注的患者。评估 40kev 虚拟单能图像对于诊断心肌缺血的诊断价值。
结果：IQon Spectral CT 心肌灌注虚拟单能图像诊断心肌缺血的灵敏度、特异度、阴性预测值、阳性预测值和总体准确度分别为 91%, 67%, 67%, 91% 和 86%（P<0.05）.
结论：以 SPECT 心肌灌注作为参考标准，CT 心肌灌注虚拟单能图像诊断心肌缺血有良好的诊断效能。

PU-2792

A Comprehensive Mapping and Strain Assessment in Idiopathic Inflammatory Myopathies Patients with Preserved Left Ventricular Ejection Fraction

Yue Wang,Qian Wang,Jian Cao,Xiao Li,Lu Lin,Wei Chen,Yi-Ning Wang,Zheng-Yu Jin
Peking Union Medical College Hospital

Purpose: *The aim of the study was to evaluate the role of comprehensive cardiac magnetic resonance (CMR) mapping and strain analysis in the early diagnosis of cardiac involvement in idiopathic inflammatory myopathies (IIM) patients with preserved left ventricular ejection fraction (LVEF).*
Methods: *Thirty-eight consecutive IIM patients who underwent CMR examination at our institution were retrospectively included. Twenty-three age-matched healthy individuals served controls. Parameters including native T1, extracellular volume (ECV), T2 mapping, global radial strain (GRS), global circumferential strain (GCS), global longitudinal strain (GLS) were measured semi-automatically using a dedicated processing software. All the mapping and strain parameters were compared between patients and controls.*
Results: *LGE was only present in IIM patients (n=17, 44.7%). IIM patients showed higher native T1 (1346ms vs 1269ms, p*<0.001), expanded extracellular volume (ECV) (31.1% vs 27.4%, *p*<0.01), T2 (44.4ms vs 39.2ms, *p*<0.001) values and lower global

radial strain (GRS) (36.7% vs 46.9%, p<0.001), global circumferential strain (GCS) (-21.2% vs -24.1%, p<0.01), and global longitudinal strain (GLS) (-13.6% vs -15.6%, p<0.05) values as compared with controls. The alteration of all the mapping and strain values were independent of the LGE status. The most of abnormal values beyond the 95% percentile of controls was observed for T2 value (73.6%).

Conclusions: *IIM patients demonstrated higher T1, ECV, T2 values and lower GRS, GCS, GLS values compared with healthy controls, independent of LGE status. T2 showed to be the most useful in the early detection of myocardial involvement in IIM patients.*

PU-2793

心脏磁共振 T1 mapping 和特征追踪技术定量评价肥厚型心肌病患者心肌纤维化和形变的初步研究

崔越,史河水
华中科技大学同济医学院附属协和医院

目的：探讨心脏磁共振（CMR）T1 mapping 和特征追踪（FT-CMR）技术定量肥厚型心肌病（HCM）患者心肌纤维化和心肌形变的诊断价值及其相关性。

方法：本研究共纳入 25 名 HCM 患者和 28 名健康志愿者行 1.5-T 心脏磁共振检查。CMR T1 mapping 扫描采用改良的 Look-整体纵向（GLS）、周向（GCS）和径向（GRS）心肌收缩应力。比较 HCM 组和对照组的 T1 值、ECV 值和心肌收缩应变的差异，并分析其相关性。

结果：HCM 患者的左室整体心肌平均初始 T1 值和 ECV 值均高于对照组，差异有统计学意义[初始 T1 值：（1047.3±43.7）ms vs.（1013.8±26.9）ms，p=0.001；ECV 值：（28.2±4.7）% vs.（24.0±1.9）%，p<0.001]。HCM 患者的左室 GLS 和 GCS 均低于对照组，差异有统计学意义[GLS：（-13.6±3.7）% vs.（-16.9±1.9）%，p<0.001；GCS：（-16.3±4.8）% vs.（-19.2±2.7）%，p=0.011]。多变量回归分析显示 HCM 患者性别和 GRS 与左室心肌 ECV 均存在独立相关性（性别：标准化β=0.429，p=0.012；GRS：标准化β=-0.471，p=0.007）。与初始 T1 时间和心肌应力相比，ROC 曲线分析示心肌 ECV 对 HCM 诊断价值最大（AUC=0.846，p<0.001），ECV 诊断 HCM 的敏感性、特异性、阳性预测值（PPV）和阴性预测值（NPV）分别为 80.0%、85.7%、83.3%和 82.8%。

结论：HCM 患者的心肌初始 T1 值和 ECV 增高，与心肌弥漫性纤维化有关。HCM 患者与对照组比较 EF 正常而 GLS 和 GCS 降低，提示心肌应力比 EF 能更早地反映心功能受损。HCM 患者的心肌纤维化与性别和 GRS 相关。相对于初始 T1 时间和心肌应力，心肌 ECV 诊断 HCM 的价值较大。

PU-2794

食管癌伴心肌及骨骼肌转移：病例报道

王丽华,王启苑,周琦晶,张敏鸣
浙江大学医学院附属第二医院

男，41 岁，进食梗噎感 3 周，外院胃镜显示距门齿 25-33cm 食管鳞状细胞癌，右锁骨上淋巴结穿刺活检证实为转移性浸润性低分化癌。SCC：1.7ng/ml。

胸部增强 CT 发现食管旁 8 组淋巴结肿大伴中央坏死，同时发现室间隔及右室心尖部壁增厚呈团块样，奇静脉可疑侵犯，继续随访，20 天后行第 4 次辅助化疗，出现乏力头晕，化疗结束后 20 天，诉右小腿肿块约 6cm*4cm 大小肿块，部位较深，质硬，活动性较差，有压痛。行 MRI 检查发现比目鱼肌内结节，随后行软组织穿刺活检，心脏超声及 MRI 检查显示心肌肿块增大伴大量心包积液，放

弃治疗出院，超声显示右侧小腿后外肌层内低回声团块伴液化及钙化，MRI 增强扫描右小腿中段外侧比目鱼肌内肿块，T2WI 成不均匀高信号，T1WI 显示少许不成熟钙化及坏死，增强后肿块明显不均匀强化并见与肌肉分界清晰，筋膜少许水肿。随后行超声引导下右小腿肿块穿刺，病理提示转移性鳞状细胞癌。PET-CT 示食管癌放化疗后，食管壁糖代谢未见明显增高；纵隔淋巴结转移（累及右胸膜）、右小腿肌肉转移；左心室区低密度灶、糖代谢异常增高，考虑转移可能大，心包少量积液；右肺下叶转移结节。心脏 MRI 增强显示室间隔前下部约 4.1cm×4.7cm 肿块，T1WI 黑血序列成等低信号，T2WI 抑脂序列成不均匀稍高信号，灌注增强显示肿块内少许持续灌注强化，范围逐渐扩大，延迟后成等信号，肿块与心肌分界不清，压迫双室心尖部致充盈不良，患者无相应症状。室间隔内肿块于半年内明显增大，体积增加至 4 倍。文献报道食管癌心肌转移罕见，骨骼肌内转移偶见报道，超声检查可明确肿块部位，心脏磁共振检查对于肿块与心肌及心包的关系显示更清晰。

Remodeling of Left Atrial in Hypertrophic Cardiomyopathy Patients Influenced by Atrial Fibrillation, a polit study

Shuangchun Ma,Zhiyong Li,AIlian Liu
The First Affiliated Hospital of Dalian Medical University

Purpose

To evaluate remodeling and dysfunctional of left atrial (LA) in hypertrophic cardiomyopathy (HCM) patients influenced by secondary atrial fibrillation (AF), and identify the diagnostic value of LA remodeling and dysfunction to AF.

Materiel and methods

We retrospectively enrolled 46 HCM patients (mean age 59.02±11.99 years) including 13 patients who were diagnosed with atrial fibrillation and 23 healthy people (mean age 53.78±10.40 years). All of them underwent CMR imaging on 3.0T. All data was indexed to body surface area.Diagnostic value of LA parameters to atrial fibrillation was performed by ROC curve analysis.

Results

1. LAVmaxi, LAVpre-Ai, LAVmini were greater in HCM patients than healthy volunteers (57.91±19.90ml/m^2 vs 41.05±12.96ml/m^2; 46.81±19.83ml/m^2 vs 27.44±9.41ml/m^2; 31.86±19.02ml/m^2 vs 17.09±7.07ml/m^2), while LAEF-T, LAEF-P, LAEF-A were lower in HCM patients (45.30±14.78% vs 58.34±9.05%; 20.91±10.56% vs 32.70±10.51%; 30.96±14.81% vs 38.22±9.39%).

2. Patients with atrial fibrillation showed greater LAVmini (58.83±47.94ml/m^2 vs 27.49±16.41ml/m^2,) but lower LAEF-T and LAEF-A (34.36±16.60% vs 49.52±12.68%,; 21.83±15.02% vs 35.30±14.00%,). ROC curve showed excellent diagnostic value of LAVmini, LAEF-T, LAEF-A to atrial fibrillation, area under the curve is 0.78, 0.77, 0.75 respectively.

Conclusion

This study evaluated multi-paremeters of LA in HCM patients, showed the feasibility of CMR to evaluate LA remodeling and dysfunction comprehensively and precisely, and this study also showed the remodeling and dysfunction of LA in HCM patients was influenced by secondary atrial fibrillation. There is a good clinical application prospect of study in LA by CMR.

PU-2796
联合 TPAT 单次屏气心脏电影序列在增强后扫描的应用价值初探

张雅颖[1,2],陈锢锢[2],金航*[2]
1.海军军医大学第一附属医院（上海长海医院）
2.复旦大学附属中山医院

目的：1.探讨增强后的 SSFP 电影结合 TGRAPPA 技术在测量左心室功能上的准确性及图像质量。2.研究增强 SSFP 电影结合 TGRAPPA 技术出现早期强化的节段与出现延迟强化的节段的相关性。
材料与方法：收集行增强心脏 MR 检查的患者 75 名，所有患者均行增强前 SSFP 结合 TGRAPPA 技术全心短轴位电影检查和延迟增强检查。随机选取其中 29 名患者测量并比较 SSFP 电影结合 TGRAPPA 技术增强前后的左心室射血分数、舒张末期容积指数、收缩末期容积指数及心搏量的变化。选取乳头肌水平图像进行图像质量评价、图像信噪比 SNR 及 CNR 分析。采用配对 t 检验分析增强前后 TGRAPPA 测量的心功能指标、SNR 及 CNR 的变化。采用 Wilcoxon 符号秩和检验分析增强前后的图像质量评分。筛选心脏磁共振相位敏感反转恢复序列中出现延迟强化的病例 65 例，根据发病机制分为非缺血性心肌病、心肌炎、急性心肌梗死 3 组，将 TGRAPPA 序列中出现早期强化节段数和 PSIR 中出现延迟强化的节段数行 kappa 一致性分析。
结果：1.SSFP 电影结合 TGRAPPA 技术在增强前、后测得的左室功能参数如 EF、EDVI、ESVI、SV，经统计学分析，各指标在增强前后无明显统计学差异。图像质量分析中，心肌和血池的 SNR 增加，心肌和血池之间的 CNR 下降。图像质量评分中，增强后图像的伪影变化不明显（P>0.05），增强后的图像仍然具有诊断价值。2.在强化节段 kappa 一致性分析中，病人全体、非缺血性心肌病、心肌炎、急性心肌梗死组的 kappa 值分别是 0.705、0.601、0.807、0.923。
结论：1.增强后 SSFP 电影序列结合 TGRAPPA 可以准确完成左心功能的定量分析。2.增强后 SSFP 电影序列结合 TGRAPPA 中出现的早期强化征象对出现延迟强化的节段有提示作用，可指导针对性扫描。

PU-2797
The performance of First-Pass Myocardial Perfusion MR Image Sequences with motion correction reconstruction

Wanlin Peng,Zhenlin Li,Chunchao Xia
West China Hospital of Sichuan University

Objective

Our study is to investigate the clinical value of combining nonrigid motion correction reconstruction method with CMR first-pass myocardial perfusion by assessing quantitative parameters and image quality.

Materials and methods

A dynamic-contrast-enhanced magnetic resonance imaging consists of many frames were acquired with contrast injection. A automatic reconstruction algorithm was applied to

generate motion corrected perfusion images. The noise, contrast-to-noise ratios (CNRs) and signal-to noises (SNRs) of MR perfusion images with (moco) and without (nonmoco) motion correction were measured and compared. The distance of lateral and longitudinal movement of interventricular septum, as well as quantitative perfusion parameters (including slope, Timemax and maxSI) in moco and non-moco images were recorded and compared, respectively. All the frames and time-intensity curves from moco and nomoco images were subjectively evaluated.
of moco and non-moco images from automatical tracking and expert drawn

Results
A dataset comprising 60 slices images from 10 patients were included ($n_{nomoco}=n_{moco}=30$). There was no significant difference in SNRs and CNRs between moco and nomoco images(all $p>0.05$). The distance of lateral movement of IVS in moco images were significantly higher than this in non-moco images (6.24±3.22mm vs. 3.68±1.42mm, $p<0.05$). When using motion correction reconstruction, there was no significant difference in TimeMax ($p=0.069$) and MaxSI ($p=0.055$) between automatical tracking and expert drawn methods. As well as, motion artifacts due to diaphragmatic drift and the patient’s inability or non-compliance to hold breath are eased obviously, and quality of time-intensity curves were significantly improved. But quantitative perfusion parameters were significantly different in nomoco images when expert drawn methods was used.

Conclusions

MR perfusion image combining with motion correction reconstruction could generate accurate parameters by automatical tracking without relying on expert drawn, it is convenient and reliable tool to quantitatively evaluate myocardial perfusion. .

The Application Value of Multi-modal MRI in Assessment of Myocardial Edema in Patients with End-stage Renal Disease

Wanlin Peng,Zhenlin Li,Chunchao Xia
West China Hospital of Sichuan University

PURPOSE

ESRD patients are highly prevalent cardiovascular risk. ME occurred in various cardiovascular disease and precipitate myocardial fibrosis and arrhythmia in ESRD patients, and ultimately lead to heart failure or cardiac death. The study is to compare the effectiveness of native T1 mapping、T2 mapping and conventional T2-weighted imaging (T2WI) in the detection of myocardial edema in patients with end stage renal disease, and further explore clinical value of ME in early diagnosis of myocardial injury.

METHOD AND MATERIALS

Seventy hemodialysis ESRD patients and 16 age- gender-matched healthy volunteers were prospectively enrolled and underwent CMR. All the parameters from CMR, including native T1 values,T2 values, T2 SI ratio, were measured (cmr42; Circle Cardiovascular Imaging Inc.; Calgary; Canada) and compared. Receiver operating characteristic analysis was performed to determine whether T2 values could be used in discriminating myocardial edema between ESRD patients and normal subjects.

RESULTS

The global T2 and native T1 values of ERSD patients were higher than normal controls (all P<0.05). But there was nosignificant difference in T2 SI ratios between two groups (p=0.146). The myocardial native T1 and T2 values of ESRD patients with preserved and decreased LVEF were both higher than those of normal controls (p<0.05), but there was no significant difference between the two groups in native T1 and T2 values. There was no significant difference between the three groups in T2 SI values (p=0.366). Moreover, the global T2 values of patients with MF and without MF were higher than normal controls (43.69±3.62, 41.82±3.43 v.s 38.79±3.69ms, respectively, all P<0.05). The global T1 values of ERSD patients with MF was highest among three groups (1286.12±52.60 v.s 1321.02±56.65, 1356.79±40.08ms, respectively, all P<0.05),but no statistical difference were found between normals and patients without MF. There were no significant difference in T2 SI ratios among three groups (p=0.311). In ESRD with MF , the proportion of left ventricular dysfunction (19, 52.8%) was higher than that in the ESRD without MF (8, 23.5%). By ROC analysis, T2 values exhibited a higher diagnostic accuracy for detecting ME than did native T1 or T2 SI values (0.83 vs. 0.67 and 0.63,all p<0.05). A cutoff value for global myocardial T2 of >= 41.94ms provided a sensitivity and specificity of 73.5% (52.0-85.8%) and 87.5% (61.7-98.4%) for ME in ESRD patients, respectively.

CONCLUSION

The myocardial pathological changes in patients with end stage renal disease were complex. The multiple cardiac magnetic resonance sequence demonstrated that myocardial edema exited in patients with ESRD patients. The CMR T2 mapping technique has a higher accuracy in quantifying the myocardial edema in patients with end stage renal disease compared with native T1 mapping and conventional T2WI.

PU-2799

心脏磁共振技术评价老年 2 型糖尿病无合并症患者各冠状动脉区域左心室肌 T2*值定量研究

杨智[1],李睿[2],付兵[1],李春平[2],王忠[1],王文斌[1]
1.成都市第五人民医院
2.川北医学院附属医院

目的 采用心脏磁共振（cardiac magnetic resonance, CMR）定量评价老年 2 型糖尿病（type 2 diabetes mellitus, T2DM）无合并症患者各冠状动脉供血区域左心室肌 T2*值的临床研究。方法 前瞻性搜集老年 T2DM 无合并症患者（年龄≥60 岁，男性 7 例，女性 10 例）、非老年 T2DM 无合并症患者（年龄＜60 岁，男性 18 例，女性 19 例）、以及健康老年对照组（年龄≥60 岁，男性 5 例，女性 7 例），并记录老年 T2DM 无合并症患者的糖尿病病程及体重指数，采用 CMR T2*Mapping 序列对上述纳入对象进行左心室短轴位扫描。比较上述 3 组纳入对象之间左前降支、左回旋支、右冠状动脉供血区域左心室肌 T2*值的差异，并分析左心室各冠状动脉供应节段心肌 T2*值与糖尿病病程及体重指数有无相关性。结果 老年 T2DM 组左回旋支供应区域左心室肌 T2*值低于健康老年对照组，差异有统计学意义（P=0.017），其余老年 T2DM 组与非老年 T2DM 组、健康老年对照组左前降支、右冠状动脉动脉供血区域左心室肌 T2*值差异无统计学意义（P＞0.05）；老年 T2DM 无合并症患者左心室肌 T2*值与糖尿病病程及体重指数无相关性（P＞0.05）。结论 老年 T2DM 组左回旋支供应区域心室肌 T2*值降低，提示心肌可能缺血缺氧。

基于冠状动脉 CTA 的影像组学列线图预测心肌缺血的应用价值

舒震宇
浙江省人民医院

目的：基于冠状动脉 CTA 图像，建立并验证一种预测心肌缺血的影像组学列线图。
方法：回顾性分析 261 例同时行冠状动脉 CTA 及 ATP 负荷-静息门控心肌灌注显像检查的患者资料，将所有患者分为训练组（n=143）和验证组(n=33)。选取每例患者冠脉 CTA 的原始增强横断面图像导入 GE 公司的 CQK 软件进行全心肌自动切割并提取纹理特征，然后对训练组数据使用最小绝对收缩与选择算子算法（LASSO）进行降维后建立影像组学标签，结合临床相关因素，使用多变量逻辑斯回归构建心肌缺血预测模型并生成可视化影像组学列线图，列线图的诊断准确性在训练组中使用 ROC 曲线评估并在验证组中进行验证，最终基于训练组和验证组数据使用列线图计算预测值并与心肌灌注显像结果进行统计学分析以验证临床实用性。
结果：从冠状动脉 CTA 动脉期图像中共提取了 328 个纹理特征，使用 LASSO 算法降维后筛选出 9 个价值较大的特征，其中共生矩阵 4 个、游程矩阵 3 个、形态学特征 2 个。使用多因素逻辑斯回归构建包含了管腔狭窄度和影像组学标签的预测模型并制作列线图，列线图预测心肌缺死的准确率在训练组和验证组中分别为 0.893 和 0.835，评估列线图、影像组学标签和管腔狭窄度在所有患者中的准确性分别为 0.873、0.801 和 0.683。基于列线图区分的高风险组与低风险组中的心肌缺血患者数差异无统计学意义（P>0.05）
结论：基于冠脉 CTA 图像构建的影像组学列线图是一种无创性预测心肌缺血工具，可以对心肌缺血具有良好的预测准确性

PU-2801
The Value of Low-Dose Dynamic Myocardial Perfusion CT for Accurate Evaluation of Microvascular Obstruction in Patients With Acute Myocardial Infarction.

Mengmeng Yu
Shanghai Jiao Tong University Affiliated Sixth People's Hospital

OBJECTIVE. The purpose of this study was to investigate the diagnostic performance of quantitative parameters generated from dynamic myocardial perfusion CT for assessment of acute myocardial infarction (AMI) and microvascular obstruction (MVO) using cardiac MRI as a reference standard. SUBJECTS AND METHODS. Patients who underwent successful reperfusion treatment within 1 week after AMI between January 1, 2018, and May 31, 2018, were prospectively enrolled. All patients were referred for cardiac MRI and dynamic myocardial perfusion CT on the same day. Various quantitative parameters and late iodine enhancement (LIE) were analyzed for the evaluation of AMI and MVO using cardiac MRI findings as a reference standard. RESULTS. Twenty-seven patients with 442 vascular segments were ultimately included in the analysis. The mean radiation doses +/- SD for dynamic myocardial perfusion CT and LIE were 3.3 +/- 1.1 mSv and 2.0 +/- 0.6 mSv, respectively. Myocardial blood flow (MBF) was significantly lower in segments with MVO than in those without MVO and in reference segments (23.08 +/- 7.95 mL/min/100 mL vs 44.60 +/- 14.97 mL/min/100 mL and 75.07 +/- 7.34 mL/min/100 mL; $p < 0.001$). According to ROC curve analysis, MBF had the largest AUC of all parameters for identifying AMI with and without MVO as determined by late gadolinium enhancement (LGE) (AUC = 0.941 and 0.996; $p < 0.001$). The diagnostic accuracy of MBF-based assessment for identifying MVO was 99.2%, which outperformed other quantitative parameters and LIE. We found good correlation between the AMI area and MVO area estimated by MBF and LGE ($r = 0.95$ and 0.99; $p < 0.001$). CONCLUSION. MBF derived from dynamic myocardial perfusion CT is accurate and outperforms other quantitative parameters and LIE in diagnosis of AMI and MVO. Area of AMI and MVO can also be accurately estimated using MBF.

PU-2802
心肌 T1、T2 mapping 及细胞外容积在急性心肌梗死诊断中价值

赵细辉
贵州省人民医院

目的 探讨心肌 T1、T2 mapping 技术和细胞外容积在急性心肌梗死中的诊断价值。**方法** 采用西门子 1.5TAera 磁共振扫描仪对 12 例急性心梗的患者行心肌 T1、T2 mapping 序列和延迟灌注检查，将扫描图像输入到 syng MR D13 后处理工作站，在 T1 、T2mapping 图手动画取延迟强化节段(梗死核心区)兴趣区并计算强化前后 T1 、T2 值及血池增强前后 T1 值，以临近层面相应节段未强化区域为对照组，同样方法计算该域强化前后 T1 值及血池 T1 值，计算两组的细胞外分数，采用 t 检验和 ROC 曲线进行分析。
结果:阳性节段区域初始 T1 值(1320.0±28.4)ms 大于阴性节段区域初始 T1 值(1196.8±27.0)ms（P<0.001），阳性节段区域 T1 值下降较阴性节段更明显，两者细胞外容积分别为(38.7±2.1)%、(24.8±2.5)%（P<0.001）；阳性节段 T2 值为(93.3±6.6)ms 大于阴性节段 T2 值(80.7±6.7)ms（P<0.001）；各参数值 ROC 曲线下面积（AUC）分别为 0.812、0.840、0.875、0.819 和 ，均具备较好的灵敏度、特异度和准确度。从 ROC 曲线图中可看出 ECV 值对于心肌梗死的诊断效能较其他参数值高。
结论 心肌 T1 、T2mapping 技术和细胞外容积在识别及定量急性心肌梗死具有较高价值。

PU-2803

三尖瓣下移畸形 MRI 影像学表现

梁红琴
陆军军医大学第一附属医院（西南医院）

目的：观察罕见病三尖瓣下移畸形（Ebstein's anomaly，EA）在心脏 MRI 成像中的影像学表现。
材料与方法：回顾性分析 5 例经手术证实的 EA 患者的磁共振成像（MRI）资料，总结其临床及磁共振影像学特征。
结果：5 例 MRI 共同特征是右心房扩大，与房化右心室连为一体，三尖瓣隔叶或后叶下移，功能右心室减小，右心室收缩功能减低。其中 4 例合并房间隔缺损，1 例合并肺静脉异位引流，1 例合并右心室流出道狭窄；延迟强化后 3 例出现房化右心室近室间隔线样、斑片状延迟强化高信号影。
结论：MRI 心脏成像对于三尖瓣下移畸形的诊断有明显的优势，不但可以动态观察右心房、房化心室及功能心室的运动情况，对下移瓣膜的形态及程度、房化心室大小及形态、功能性右心室大小及功能、右心室流出道是否狭窄，而且可以对心肌是否纤维化做出准确评估，对患者临床治疗方法的选择及预后做出提示。

PU-2804

心脏 MRI 组织追踪技术评估军事训练对学员心脏力学运动影响的初步研究

梁红琴
陆军军医大学第一附属医院（西南医院）

目的：研究常规军事训练包括力量训练及耐力训练对军队学员心脏功能及心肌组织应变力的变化规律，探讨心脏磁共振早期预警训练强度对学员心脏损伤的可行性。**材料与方法：**于 2018 年 6 月份至 10 月份，随机抽取重庆市某部队大四学员 40 名作为试验组，地方大学正常志愿者大四学生 26 名作为对照组，进行 3TMRI 平扫检查，将心脏短轴电影及左室长轴两腔、四腔心电影数据导入心脏后处理 CVI42 软件上，通过 3D 组织追踪技术进行半自动定量分析，半自动计算左心室整体收缩峰值径向应力（Err）、周向应力（Ecc）和纵向应力（Ell）。应用 SPSS19.0 统计软件进行数据分析，通过独立样本 t 检验比较各测量值差异， $P<0.05$ 认为差异有统计学意义。**结果：**（1）两组在心功能参数上：舒张末期容积 EDV（132.9±19.2vs104.9±15.2，$P<0.05$）；收缩末期容积 ESV（53.4±10.0 vs37.7±8.2，$P<0.05$）；每搏输出量 SV（79.5±13.0 vs67.2±10.7，$P<0.05$）射血分数 EF（59.7±4.7vs64.1±5.5，$P<0.05$）；心率 HR（65.1±7.3vs70.3±10.5，$P<0.05$）及心肌质量 Myo Mass（107.0±21.9vs73.3±16.2，$P<0.05$）差异有统计学意义。（2）两组在左室整体收缩峰值径向应力 Err（38.4±6.7vs43.9±11.3，$P<0.05$），差异有统计学意义；周向应力 Ecc（20.7±2.0vs21.8±2.7，$P>0.05$），差异无统计学意义；纵向应力 Ell（19.0±2.8vs19.3±2.3，$P>0.05$），差异无统计学意义。**结论：**军队生在心脏功能参数射血分数（EF 值）及径向应力较地方生偏低，说明军事训练可以使心脏组织结构首先在径向力学方向上产生适应性变化，并对心脏收缩功能造成不利影响。

PU-2805

Late-gadolinium enhancement and CMR longitudinal strain, in the risk stratification for idiopathic dilated cardiomyopathy and end-stage heart failure subgroup

hang Fu[1],Lingyi Wen[1],Hui Liu[1],Yingkun Guo[1],Zhigang Yang[2]
1.West China Second University Hospital
2.West China Hospital, Sichuan University

Background: Myocardial strain based on cardiac magnetic resonance (CMR) feature tissue trackinghas been proven to provide more details of the cardiac function and prognostic value incremental to late-gadolinium enhancement (LGE). Although several studies have explored the prognostic value of global longitudinal strain and LGE in idiopathic dilated cardiomyopathy (IDCM), but their results were contradictive.

Purpose: Our study aimed to evaluate the predictive value of CMR-derived global longitudinal strain, LGE for main adverse cardiac events (MACEs) in IDCM, as well as in subgroup divided by end-stage heart failure (HF) and non-end-stage HF for further.

Methods: Totally 150 IDCM patients were retrospectively enrolled. The MACEs was defined as a combination of cardiac death, heart transplantation, implantation of ICD, and rehospitalization due to heart failure. Myocardial strain was derived by CMR feature tissue tracking. Prognostic value was evaluated by Kaplan–Meiermethod and Cox regression.

Results:During a median follow-up of 31 months, 47 (31.3% or 34.8%) patients experienced MACEs, including 10 deaths, 1 heart transplantation, 1implantation of ICD, and 35 rehospitalizations due to severer heart failure. There were 72 patients in subgroup of end-stage HF and 83 patients in non-end-stage HF. Multivariate Cox shown that global longitudinal strain(GLS; HR=1.017, p=0.833) was not associated with prognosis of IDCM(HR=1.017, p=0.833). LGE and LnBNP were independent predictors of MACs in IDCM(HR=2.176,p=0.024 and HR=1.498, p=0.012 respectively). LGE and LnBNP provide important information for risk stratification in subgroup of end-stage HF (Log-Rank=3.663, p=0.056 and Log-Rank=4.566, p=0.033)and non-end-stage HF(Log-Rank=3.897, p=0.048 and Log-Rank=7.538, p=0.006).

Conclusion: LGEis an independent and reliable predictor of MACs in IDCM. GLS does not show satisfied prognostic value for risk stratification in IDCM.

PU-2806

3.0T 磁共振评价右心功能对肥厚型心肌病和高血压性心肌病鉴别诊断价值

黄楠[1],曲晓峰[2],程绍玲[2]
1.十堰市太和医院
2.大连医科大学附属第二医院

[摘要]**目的：**探讨 3.0T 磁共振评价右心室功能对肥厚型心肌病和高血压性心肌病鉴别诊断的应用价值。**方法：**连续收集 2013 年 2 月—2018 年 12 月在大连医科大学附属第二医院行心脏核磁共振扫描，诊断为肥厚型心肌病（HCM）患者 87 例。收集同期诊断为高血压性心肌病（HHD）患者 42 例，无症状正常志愿者 42 例。将所有患者图像导入 Cvi42 心脏功能分析软件，由三名放射科医师分别进行相关数据测量并取平均值，最终获得左、右心室的舒张末期容积（EDV）、收缩末期容积（ESV）、射血分数（EF）、每搏输出量（SV）、心输出量（CO）、舒张末期心肌质量（MM）、室间隔厚度（IVST），右心室半定量指标三尖瓣环收缩期位移（TAPSE）、右室纵轴缩短分数（RVFS）、右室面积变化分数（RVFAC）、右室中段短轴变化分数（FMDC）。两组数据间的差异性比较采用独立样本 t 检验。**结果：**HCM 患者组 LVEF、IVST 均值较 HHD 组、正常志愿者组增高；LV Mass 均值较正常志愿者组均值明显增高，*P*值均<0.05，差异具有统计学意义，与 HHD 组比较差异无统计学意义；LVESV、RVEDV、RVESV 均值较 HHD、正常志愿者组减低；半定量指标 RVFAC、FMDC 均值均较正常志愿者组明显增高，*P*值均<0.05，差异具有统计学意义。HHD 患者组 LVEDV、LVESV 较 HCM 组及正常志愿者组均增高，LV Mass 均值较正常志愿者组增高，较 HCM 组无统计学差异，IVST 均值较正常志愿者组增高，低于 HCM 组，RV Mass 均值较 HCM 组及正常志愿者组均值增高，半定量指标 TAPSE、RVFS 均值低于 HCM 组及正常志愿者组，RVFAC 均值低于 HCM 患者组，*P*值均<0.05，差异具有统计学意义。
结论：对室间隔厚度、右心室容积、右心室心肌质量及右心室收缩功能的评估有助于 HCM 与 HHD 的鉴别诊断。

PU-2807
采用 Mapping 技术识别临床可疑心肌炎儿童 “正常”心肌中潜在损伤

王海鹏
山东省立医院

目的：心脏磁共振的 Mapping 技术已证实可以显著提高表现为局限性心肌损伤心肌炎的诊断准确性。本研究的目的是去验证 T1、T2 Mapping 技术能否识别临床可疑心肌炎儿童 “正常”心肌中潜在的弥漫性心肌损伤，并评估弥漫性心肌损伤同心功能的相关性。
方法：本研究纳入 46 位受试者：20 名急性心肌炎患者、11 名亚急性/慢性心肌炎患者及 15 名健康志愿者。对比三组“正常”心肌的 T2 值、初始 T1 值和细胞外容积（ECV）；评估弥漫性心肌损伤同心功能的相关性。
结果：同健康志愿者相比，亚急性/慢性心肌炎患者“正常”心肌的 ECV 值显著提高(30.1±2.8 VS 27.0±2.4, P=0.004)。急性心肌炎患者“正常”心肌的 T1、T2 值同健康志愿者未见明显差异。亚急性/慢性心肌炎患者“正常”心肌的 ECV 值同左心室射血分数具有显著相关性(P<0.05)。
结论：亚急性/慢性心肌炎患者“正常”心肌中存在弥漫性心肌损伤，并同左心室射血分数相关。Mapping 技术能够提高临床可疑心肌炎儿童心肌内弥漫性心肌损伤的敏感性。

PU-2808

Optimizing Myocardium T2 Star Mapping based on a Novel Multi-Dimensional Integrated (MDI) Reconstruction Algorithm

Wenbo Sun[1], Lan Lan[1], Junpu Hu[3], Yongquan Ye[2], Jingyuan Lyu[2], Jian Xu[2], Haibo Xu[1], Xiaochun Zhang[1]
1. Department of Radiology, Zhongnan Hospital of Wuhan University, Wuhan, China,
2. United Imaging of Healthcare America Inc., Houston, TX, USA
3. Shanghai United Imaging of Healthcare, Shanghai, China

Aim: Traditional myocardium T2 star mapping methods, such as curve fitting, suffer from flow artifacts, motion artifacts, low SNR caused by the iron deposition, and poor reproducibility [1][2]. A novel multi-dimensional integrated (MDI) reconstruction algorithm could solve the least square problem for extracting an overall complex signal ratio, by simultaneously integrating both dimensions of echoes and channels [3]. This study aimed to propose a myocardium T2 star mapping method based on the MDI algorithm, and optimize the SNR and sensitivity in the myocardium T2 star mapping.
Method: The MDI algorithm was compared with traditional curve fitting method based on SOS and ACC algorithm [4]. Twenty subjects with myocardiopathy were recruited in this study. A 2D dark blood multi-echo GRE sequence was collected on a 3.0T scanner (uMR 790, UIH, Shanghai) with a 24-channel body coil, using following parameters: 6 echoes with monopolar readout. Myocardium T2 star mapping were reconstructed using MDI, SOS and ACC algorithm, respectively. The image quality and diagnose sensitivity of each method were accessed by three experienced radiologists. One-way ANOVA was used with $p<0.05$.
Results: For radiologist 1, the image quality score were 3.89±1.21, 3.22±0.97, 3.44±1.03, and the diagnose sensitivity score were 2.26±0.84, 1.97±0.74, 1.97±0.71; For radiologist 2, the image quality score were 4.14±0.32, 3.25±0.76, 3.53±0.50, and the diagnose sensitivity were 2.84±0.28, 2.07±0.57, 2.39±0.45; For radiologist 3, the image quality score were 4.00±0.23, 2.65±0.23, 3.06±0.22, and the diagnose sensitivity score were 2.86±0.35, 2.58±0.44, 2.81±0.24.
Conclusion: Compared with traditional curve fitting method, the MDI algorithm could offer better significantly SNR and sensitivity, and minimize mapping bias of the myocardium T2 star mapping. Our T2 star mapping method based on MDI might provide more accurate measurements for myocardial iron content.

心脏 MR 室间隔脂肪瘤

王启苑
浙江大学医学院附属第二医院

研究目的：心脏脂肪瘤临床少见，多见于心包和心房。心脏脂肪瘤可引起恶性室性心律失常、心肌梗死和血栓等心血管事件。本文报道了一例罕见的室间隔全层脂肪瘤，并讨论了治疗方案的选择。

研究方法：患者男，48 岁。因被人撞击胸部后感心前区不适检至当地医院就诊，心脏超声检查提示“左室后间隔节段性增厚，占位性病变待排”，遂于来我院诊治。心脏超声和经食道心脏超声检查提示室间隔及下壁中段近后内侧乳头肌处可见一个偏高回声区，主要位于心肌内，浸润心肌全层，部分凸向左室腔，略见活动及变形。左心声学造影显示室间隔中下段偏强回声团块内未见明显血流信号，乏血供表现。 CT 示室间隔内异常密度，测其 CT 值为-31.3Hu，提示为脂肪组织密度，增强后病灶未见强化，诊断为脂肪来源肿瘤，脂肪瘤考虑。心脏磁共振增强扫描示 FIESTA 序列显示后室间隔-左室下壁见一混杂高信号“小核桃”样大小肿物，T2WI 上为高信号，Triple IR 序列上病灶全部为低信号，提示为纯脂肪成分，病变周围可见低信号环，提示为化学位移伪影，病变质地较软，边界尚清楚，电影序列可见病灶柔软摆动，并随心动周期形态改变，局部突入左心室，舒张末期测量大小约 25mm*19mm*36mm，灌注序列见灌注确实，延迟增强未见强化，拟诊为心脏脂肪瘤。

研究结果及结论 心脏肿瘤较为少见，且继发性占绝大多数。原发性心脏肿瘤发病率为 0.0017%- 0.033%，可见于任何性别与年龄，以 40-49 岁发病率最高，良性肿瘤和恶性肿瘤比例约为 3:1。心脏肿瘤中脂肪瘤和脂肪肉瘤均为罕见，好发于心包和心外膜下。肿瘤形态、血供是否丰富和代谢是否活跃是鉴别脂肪瘤和脂肪肉瘤的重要依据。

心脏脂肪瘤可引起的不良后果有：心律失常、心肌缺血、心腔梗阻、心力衰竭、血栓和瘤栓栓塞。患者接受了详细的相关评估，以充分揭示该脂肪瘤可能对患者造成的短期和长期风险。

心脏 MR 多参数联合对主动脉瓣狭窄（AS）患者左心室重构的诊断及评估价值

李听雨
广东省人民医院

目的：本研究通过对重度 AS 患者进行心脏磁共振多参数成像，以评估重度 AS 患者继发左心室重构的心肌组织特征和功能改变，初步探讨心脏 T1-mapping 和 Feature-tracking 技术对 AS 继发左心室重构的诊断及评估价值。

方法：本研究分别纳入 29 例重度 AS 和 20 例正常志愿者为病例组和对照组，分别行心脏电影、改良 MOLLI 序列扫描，并进一步利用 Medis 软件对心脏电影及 T1-mapping 图像进行后处理分析。首先对重度 AS 组及对照组进行常规心功能参数（LVEDMi、LVEF 及 LVEDVI 等）、T1 mapping 来源参数（ECV）及 Feature-Tracking 来源参数（GLS、GCS 和 GRS）的差异性分析；然后进一步对病例组进行左心室重构指标（LVEDMi）与各心脏磁共振新技术指标（ECV、GLS、GCS 及 GRS）的相关性分析；最后对病例组各心脏磁共振新技术指标（ECV、GLS、GCS 及 GRS）两两间进行相关性分析。

结果： 重度 AS 组的 LVEDMi、LVEF、LVEDVI、ECV 和 GLS、GCS 与无症状对照组间差异有统计学意义（$p<0.05$），部分值如下：LVEDMi（192.52±77.13 vs. 36.09±6.97）； ECV（29.51±3.40 vs. 26,51±2.34）；GCS（-15.54±5.41 vs. -24.59±3.53）;GRS 并未表现出显著差异性。通过进一步分析，发现左心室重构指标（LVEDMi）与 ECV、GLS、GCS 及 GRS 均有良好的相关性（$p<0.05$）；而 ECV 值与 GLS、GCS 及 GRS 均无相关性。

结论：重度主动脉瓣狭窄患者继发的左心室重构改变可用心脏磁共振新技术 T1-mapping 和 Feature-tracking 进行评估，ECV 联合 GLS 更能早期对左心室重构发生的心肌组织特征和应力改变进行探测，这有助于我们及时对重度 AS 患者进行临床干预和治疗。

磁共振心肌首过灌注成像评估经皮冠状动脉腔内成形术对心肌微循环障碍疗效的研究

梁仁容
重庆市中医院

目的 探讨磁共振心肌首过灌注成像早期评估经皮冠状动脉腔内成形术（PTCA）对心肌微循环障碍疗效的价值。
方法 收集行 PTCA 治疗的患者 30 例，PTCA 术前、术后 1 周内均行心脏磁共振（CMR）心肌首过灌注检查，将右冠状动脉、左前降支、回旋支作为独立血管，测量各供血区域的灌注参数（达峰时间 T、峰值信号强度 SI、心肌信号强度最大上升斜率 Smax），以 PTCA 治疗前、后的溶栓治疗临床试验（TIMI）评分分为微循环正常组（3 分）、轻度障碍组（2 分）、重度障碍组（1 分）及无复流组（0 分）等四组，对比研究各组灌注参数的差异性以评估 CMR 对心肌微循环障碍的诊断能力；再以手术血管为研究对象，将 PTCA 治疗前、后 TIMI 血流分级变化特点分为微循环恢复组、未变组及加重组，对比研究各组灌注参数差值的差异性以评估 CMR 对 PTCA 治疗微循环障碍疗效的价值。
结果 30 例患者，手术血管共计 47 支； PTCA 治疗前后共 180 支冠脉 TIMI 血流分级示 3 分者 93 支,2 分者 63 支，1 分者 24 支，0 分者 11 支，各评分级组的 CMR 心肌首过参数 T、SI、Smax 值均有显著差异（P＜0.05）；对比手术血管 PTCA 治疗前、后 TIMI 评分变化特点，评分增大者 21 支，评分未变化者 15 例，评分减小者 11 例，以评分级变化分组的 CMR 心肌首过参数 T、SI、Smax 术后与术前差值均有显著差异（P＜0.05）。
结论 磁共振心肌首过灌注成像能及早发现 PCI 术所致的心肌微循环障碍，且无创、特异性高，可作为 PCI 术疗效评估的方法。

一例重症病毒性心肌炎心脏磁共振报道

阮啟超
绵阳市第三人民医院

患者病史简介：患者张 XX, 女 ， 29 岁 MRI:12967495、住院号：80087842，确诊重症病毒性心肌炎后 2 月；行心脏 MRI 检查。
包含以下内容：
检查机型、增强设备；
注射方案；
扫描方案；
影像表现；
结果分析；
总结。
（正文请见附件）

PU-2813

Quantification of right ventricular strain and strain rate using cardiac magnetic resonance feature tracking in hypertrophic cardiomyopathy subjects with preserved ejection fraction

Kezheng Wang,Liping Yang
PET-CT/MR Department of Cancer Affiliated Hospital , Harbin Medical University

Objectives: We aimed to evaluate the feasibility and reproducibility of using CMR-FT for analysis of bi-ventricular global and regional strain and strain rate (SR) in HCM patients as well as to explore the correlation between RV and LV deformation.
Methods: A total of 60 HCM patients and 48 controls were recruited in this study. Global and segmental peak values of LV and RV longitudinal, circumferential, radial strain and systolic SR were analyzed. Pearson analysis was performed to investigate the correlation of RV and LV deformation. Intra-observer and inter-observer reproducibility were also assessed.
Results: Left ventricular mass in the HCM group was significantly higher than that in the control group. Left ventricular end-systolic volume, Left ventricular end-diastolic volume ,right ventricular end-systolic volume,
right ventricular end-diastolic volume in the HCM group were significantly lower than the correlated parameters in the control group ($P<0.001$, respectively), whereas there was no statistical difference between the two groups in terms of ejection fraction ($p>0.05$, respectively). Global longitudinal strain (GLS), global longitudinal strain rate (GLSR), global circumferential strain (GCS), global circumferential strain rate (GCSR), global radial strain (GRS) and global radial strain rate (GRSR) of the LV and RV were all significantly lower ,compared with the control group,segmental strain and SR were also true($p<0.001$, respectively). Bi-ventricular strain and SR measurements were highly reproducible at both intra- and inter-observer levels. Additionally, Pearson analysis showed RV GCS, GLS, GRS positively correlated with LV GCS, GLS, GRS ($r=0.713$, $p<0.001$; $r=0.728$, $p<0.001$; $r=0.730$, $p<0.001$, respectively).
Conclusions: CMR-FT, as a promising novel approach for myocardial deformation assessment, may be used to analyze impairment of global and segmental myocardium deformation in HCM patients non-invasively and quantitatively, with good intra- and inter-observer reproducibility. Additionally, the systolic dysfunction of RV is correlated with LV to great extent demonstrating the global nature of pathology in HCM patients.

PU-2814
一例广泛心肌钙化表现的爆发性心肌炎个案分析

王静
河南省人民医院

患者，男，15 岁，入院 9 天前受凉后出现咳嗽， 2 天前发热，体温达 38℃，伴胸闷、胸痛、乏力，在当地诊所输液治疗，具体不详，夜间突然出现恶心、呕吐一次，伴胸闷、胸痛，当地县医院

考虑“病毒性感冒”，未予特殊治疗。1 天前患者胸闷、胸痛加重，伴恶心、呕吐，呕吐 2 次，呕吐物为胃内容物。急诊心电图考虑“急性心肌梗死”，给予溶栓治疗，溶栓后胸闷症状较前好转，于当地市级医院行冠脉造影检查，提示冠脉无异常。住院查心肌酶：乳酸脱氢酶 1529μ/L，肌酸激酶 6828μ/L，肌酸激酶同工酶 478.35μ/L，羟丁酸同工酶 1529μ/L，肌红蛋白 1651.5μg/L，患者出现血压下降，心率明显增快，持续胸闷、胸痛，面色苍白、出汗，诊断为爆发性心肌炎。
实验室检查：肌酐 149μmol/L，尿酸 523μmol/L，钙 1.67μmol/L，磷 4.38μmol/L；白细胞 9.68×10^{9}/L;谷丙转氨酶 400U/L，谷草转氨酶 1054 U/L；凝血酶原时间 24.8s，D-二聚体 3.77mg/L。
入院当天查体：体温 36.9℃，心率 91 次/分，呼吸 19 次/分，血压 92/44mmHg（多巴胺、去甲肾上腺素应用），意识间断丧失，急性病容。
入院 CT 示：心脏增大，左右心室壁广泛絮状致密影。
讨论　爆发性心肌炎是心肌炎最为特殊和严重的类型，以起病急骤，进展迅速为特点，很快出现血液动力学问题以及各种恶性心律失常。心肌炎的病理生理学改变主要为心肌细胞水肿、毛细血管渗漏、缺血及纤维化。CT 对心肌炎组织学敏感性低。本例为左右心室广泛心肌钙化，较为罕见。心肌钙化分营养不良性和转移性钙化。营养不良性钙化主要见于陈旧性心肌梗死、感染性心内膜炎等；转移性钙化常见于慢性肾衰竭和甲状旁腺功能亢进。本病例虽然肌酐值升高，钙磷代谢紊乱，但需与转移性钙化鉴别。因此患者除肾脏功能损伤外，呼吸系统、肝功能、凝血功能均受影响。

PU-2815
磁共振特征追踪技术定量评估急性 STEMI 患者早期左室应变的研究

邹锦森,徐坚民,胡根文,魏晓婷,钟淑媛
深圳市人民医院

目的
探索心脏磁共振组织特征追踪技术在定量评估急性 ST 段抬高型心肌梗死患者早期左室应变的诊断价值。
资料与方法
纳入 2017 年 10 月至 2018 年 12 月深圳市人民医院 78 例急性 STEMI 患者，患者于 24h 内行急诊 PCI，并在术后 2-6d 内行 CMR 检查并收集完整临床资料。通过 CVI42 后处理获得左室整体及节段心肌应变指标、左室心功能、左室梗死体积分数和微血管阻塞体积分数。根据心肌梗死及微血管阻塞（MVO）发生与否、透壁程度（≤50%或>50%）进行分组，组间定量资料比较采用 Mann-Whitney U 检验。应变指标对透壁性心肌梗死及 MVO 发生的诊断效能采用 ROC 分析。
结果
GPS、GTTP 无法区别透壁性与非透壁性心肌梗死（P>0.05）；PRS、PCS、PLS、TTPr、TTPc、TTPl 在非梗死组及梗死组间具有统计学差异（TTP1，P=0.002，其余参数 P<0.001）；
PRS（P=0.002）、PCS（P<0.001）在透壁与非透壁心梗组间存在统计学差异，PRS 值为 24.45 时，其识别透壁性心梗的敏感性与特异性分别为 70.3%与 77.8%，PCS 取-16.55%，敏感性与特异性分别为 74.5%、70.3%；
GPS、GTTP 在 MVO 组与无 MVO 组间均无统计学意义（P>0.05）；PRS、PCS、PLS 在 MVO 组与无 MVO 组间存在统计学差异（P<0.05），PRS 取 24.65%时对节段心肌 MVO 检出的敏感性为 89.0%，特异性为 60.6%，PCS 取-14.05%时敏感性和特异性分别为 75.7%、75.9% 。
结论
节段峰值应变 PRS、PCS 有助于区分梗死心肌及非梗死心肌，并可较准确地识别 MVO 和透壁性心肌梗死的发生，为肾功能不全的 STEMI 患者评价左室结构和功能改变提供较为可靠的新途径。

PU-2816
压缩感知单次屏气 CMR 与标准多次屏气技术对心功能评价的比较研究

崔亚东[1],张旻[1],陈敏[1,2]
1.北京医院放射科，国家老年医学中心
2.北京协和医学院研究生院

目的：本研究旨在评估压缩感知单次屏气 CMR 与标准多次屏气技术对心功能评价的比较。
材料与方法：本研究回顾性收集 2018 年 11 月至 2019 年 4 月于我院进行心脏磁共振检查的 53 名患者和 17 名健康志愿者。扫描序列包括短轴压缩感知单次屏气电影序列和标准多次屏气电影序列。压缩感知电影序列扫描参数： TE/TE=1.4/3.2；FOV=350cm；矩阵=208×166；时间分辨率=40ms；翻转角=31~42°；扫描时间平均 18s。标准多次屏气电影序列扫描参数： TE/TE=1.4/3.2；FOV=350cm；矩阵=208×166；时间分辨率=40ms；翻转角=42~52°；扫描时间平均 2min30s。将短轴电影图像导入西门子 Argus 后处理软件进行心功能分析，左心室心内膜和心外膜轮廓由软件自动追踪，之后经过手动矫正，得到左心室容积及功能参数，包括左心室舒张末期容积（left ventricular end-diastolic volume, LVESV）、收缩末期容积（left ventricular end-systolic volume, LVESV）、每搏输出量（stroke volume, SV）、心肌质量以及射血分数（left ventricular ejection fraction, LVEF）。采用 SPSS 20.0 软件进行统计学分析。选择配对样本 t 检验或 Wilcoxon 符号秩检验，比较两种方法测得心功能参数的差异。应用线性回归评估两种方法测得心功能参数的一致性。
结果：压缩感知电影序列测得 LVEDV、LVESV、LVSV、LVEF 均显著低于标准电影序列（$p<0.001$）。而两种方法测得心肌质量无显著统计学差异（$p=0.788$）。两种方法测得心功能参数一致性良好（$r>0.87$, $p<0.001$）。
结论：压缩感知单次屏气 CMR 对心功能评价准确性高，有望替代标准多次屏气技术。

PU-2817
磁共振在原发性肥厚型心肌病诊断及其分型中的价值

王晓琰
上海交通大学医学院附属第九人民医院

目的 探讨心脏磁共振（CMR）在原发性肥厚型心肌病诊断分型及心肌功能方面的临床应用价值。
方法 回顾性分析 2017 年-2019 年在我院就诊的 40 例原发性肥厚型心肌病患者，所有患者均行心脏磁共振检查，采用亮血电影序列、首过灌注序列、延迟增强序列，分析图像质量，观察心肌受累节段，从形态学上对肥厚型心肌病的进行分型，测量心肌厚度、心室容积、射血分数；观察室壁运动和首过灌注情况，评价心肌活性，判断是否存在心肌微循环障碍及纤维化。
结果 40 例患者心脏磁共振符合原发性肥厚型心肌病诊断。根据心肌肥厚形态特点，将肥厚型心肌病分为 4 型。心尖肥厚型心肌病 11 例、室间隔型 19 例、向心性 4 例、心室中部型 6 例。CMR 检查确诊 31 例出现心肌延迟强化，表现为肥厚心肌内斑片样强化，占心肌肥厚患者的 77.5%。2 例发现心尖室壁瘤。
结论 心脏磁共振一站式成像对于诊断原发性肥厚型心肌病有独特作用，多平面电影序列能充分显示肥厚心肌节段、范围，有无流出道梗阻，并且可动态观察室壁运动情况，首过灌注及对比剂延迟强化，能提示心肌活性，判断心肌纤维化，对临床治疗和预后有指导意义。

PU-2818

Application Value of Magnetic Resonance Diagnosis in Hypertrophy Cardiomyopathy and its Classification

Xiaoyan Wang
Department of Radiology, Shanghai Ninth People's Hospital, Shanghai Jiaotong University School of Medicine

Objective: To analyze cardiac magnetic resonance of hypertrophy cardiomyopathy (HCM) and its phenotypic expression in order to achieve better understanding of this disease.
Methods: 40 patients with HCM were retrospectively analyzed from 2017 to 2019 in our hospital. All patients underwent cardiac magnetic resonance imaging (CMR). The myocardial involvement segments were observed. EDV, LVEF, end diastolic ventricular wall thickness of various segments, and the late gadolinium enhancement (LGE) was evaluated.
Results: CMR showed hypertrophic in all the patients. According to the morphological characteristics, HCM was divided into 4 types: apical (11 cases), midventricular(6 cases), septum(19 cases) and concentric type(4 cases). 2 patients had apical aneurysms. All patients underwent myocardial contrast enhancement scanning, 31 patients presented late gadolinium enhancement.
Conclusions: CMR is best diagnostic modality for HCM. LGE plays an important role in the natural history of HCM, which indicates myocardial fibrosis. In particular, the presence of abnormal LGE is associated with clinical symptoms and increased wall thickness.

PU-2819

单能量与多组重建技术在左心室流入道系统中成像效果的研究

徐雅静[1,2],黄华[1,2],谭碧雯[1,2],周斌[1,2]
1.深圳大学总医院
2.深圳大学临床医学科学院

目的：通过能谱 CT 扫描，对左心室流入道系统成像质量的综合评价和对比分析，寻找最佳单能量成像、最佳对比信噪比以及多组重建技术的最优显示，有利于左心室流入道系统的精确诊断。
方法： 采用超高端 GE Revolution 256 排螺旋 CT 扫描，回顾性分析左心室流入道系统共 30 例（体质指数 BIM<30）资料，可获取 40~140keV 间距为 10keV 的 11 组单能图像，分别对 11 组图像进行同层面肺静脉、左心房、左心室 CT 值和 SD 值、背景噪声（BN），计算并比较各组单能量图像的最佳对比信噪比（CNR）的峰值、良好的噪声比（CNR）以及辐射剂量（PDFI），并比较相应的心腔与肺静脉的强化程度，以降主动脉平均 CT 值和增强度为标准，由两名放射副主任医师对图像进行主观评价、评分，对结果进行统计学分析。
结果：(1)肺静脉干最佳单能量平均 CT 值高于降主动脉(P＜0.05)，两心腔显影最佳单能量左心室和右心室平均 CT 值高于降主动脉(P＜0.05)，左心室系统图像质量评分高于降主动脉(P＜0.05)，均具有统计学意义。(2)左心耳增强扫描 CT 值、碘值、增强与平扫 CT 值的差值、纯肺静脉增强前

后 CT 值的差值以及左心室外侧壁增强扫描的噪声、SNR、CNR 在不同单能量间的差异均无统计学意义(P 值均>0.05)。(3)左心室系统显影效果好，最佳对比信噪比单能量为 67kvp。(4)将左心室流入道系统影像图像数据利于工作站合成三维图像，并设定成为不同的透明度，同时利用虚拟照明效应，运用后处理 VR、Mip 以及伪彩融合技术（含多对象组合显示方式、多对象透明度的融合方式以及伪彩色条方入道系统更加美观、立体化，利于临床术中精准定位。

结论：能谱 CT 与多组重建技术有利于最佳对比信噪比单能量的选择，对两心腔、肺静脉血管显影最佳，减少因个体循环功能差异及心脏、血管结构异常对左心室流量的影响,有利于左心室流入道系统的精确诊断和临床术中价值。

PU-2820
不同抑脂技术结合 T2WI 黑血技术在心肌水肿诊断价值的对比研究

曾国飞,杨华
重庆市中医院

目的　对比分析 STIR 技术和 SPAIR 技术在心脏磁共振成像中评价心肌水肿方面的优缺点。材料和方法　回顾性分析临床确诊病毒性心肌炎、且行心脏磁共振检查的患者 34 例，所有患者在心肌参数扫描时分别使用 STIR 技术和 SPAIR 技术行左心室 T2WI 黑血序列。通过肉眼评分及 CNR 值测量，按心律情况分组，应用重复测量方差分析及简单效应分析进行统计。结果　对于心律齐的患者，两种评价方法 SPAIR 技术所获图像质量均优于 STIR 技术所获图像，简单效应分析差异有统计学意义，p＜0.05，在心律不齐短轴位的检测中，肉眼观察提示 STIR 技术得分高于 SPAIR 技术，长轴位上无差异，CNR 评价长轴位和短轴位检测中 STIR 技术得分均低于 SPAIR 技术，简单效应分析差异有统计学意义，p＜0.05。结论　对于怀疑心肌水肿的患者，为了获得清晰满意的左心室壁的 T2WI 抑脂序列, 应优先采用 SPAIR 技术扫描，STIR 技术可作为补充。

PU-2821
心血管磁共振成像在急性心肌炎中的应用进展

曾国飞,梁仁容
重庆市中医院

急性心肌炎临床症状具有不典型、多样性等特点，轻者可无症状，重者可出现心源性休克甚至猝死，早期明确诊断对患者的治疗与预后具有重要的临床价值。心血管磁共振成像（Cardiac magnetic resonance imaging，CMR）独特的显示心肌水肿、瘢痕和其他组织异常的能力，已成为急性心肌炎患者的主要非侵入性诊断工具。目前推荐的急性心肌炎诊断标准为 2009 年制定的路易斯湖标准，其诊断准确性较高而特异性不高，随着磁共振检查技术的发展，特别是 T1 mapping、T2 mapping 的应用，可进一步提高诊断价值。本文论述了心血管磁共振成像在急性心肌炎诊断的最新进展，以指导急性心肌炎的诊断与研究。

PU-2822

从新角度探究肥厚型心肌病 ——CMR 分形分析技术对左室心肌小梁复杂性分析

张鑫
南昌大学第二附属医院

目的：
通过 CMR 分形分析（fractal analysis）和特征追踪技术（feature tracking），分别对肥厚型心肌病患者（Hypertrophic cardiomyopathy ，HCM）和健康志愿者的左室心肌小梁的复杂性和左室心肌应变进行定量分析并比较， 从新角度分析 HCM 左心室过度小梁化程度。
方法：
收集 HCM 患者 52 例(HCM 组)及健康志愿者 30 名(对照组)。所有受检者均接受心脏 MR 检查，扫描序列包括心室短轴、二腔心、四腔心层面快速平衡稳态进动序列(FIESTA)。通过后处理软件测量左心室心肌小梁的全心平均分形维数（mean global FD）及心室不同部位最大或平均 FD。测定心肌整体的径向应变峰值(GPSR)、环向应变峰值(GPSC)、纵向应变峰值(GPSL)以及心室不同部位(心尖部、心室中部和基底部)的径向、环向和纵向应变峰值(PSR、PSC 和 PSL)。
结果：
HCM 组与对照组的全心 FD 值存在明显差异性（P<0.001），并呈明显增高趋势。两组的心尖部最大 FD 及室中段平均 FD 差异均有统计学意义(P 均*<0.001)*。HCM 组与正常组的 GPSR、GPSC 和 GPSL 差异均有统计学意义(P 均*<0.001)*。除 EDV 两组间差异无统计学意义外，HCM 组与正常组的 ESV、SV、LVEF 差异均有统计学意义（P 均<0.05），HCM 组的 LVEF 属于正常范围内。全心 FD 与 GPSR、GPSL 均呈负相关（*r =-0.557, P<0.001*；r = -0.622, P<0.001），和 GPSC 存在正相关（r = 0.542, P<0.001）。心尖部最大 FD、室中段平均 FD 均与对应心室部位的 PSL 相关性最好（r = 0.459, r = 0.543, P 均<0.001）。
结论：
CMR 分形分析技术能在早期对 HCM 的心腔内小梁化进行定量分析，且 HCM 的小梁复杂程度与心肌形变存在明显相关性，特别是纵向心肌形变程度。

PU-2823

Quantitative assessment of double ventricular strain in patients with dilated cardiomyopathy using Cardiovascular magnetic resonance feature tracking techniques : a preliminary clinical study

Xiaoqing Liu,Heshui Shi
Department of Radiology， Wuhan Union hospital， Tongji medical college， Huazhong University of Science and Technology

Purpose: Dilated cardiomyopathy (DCM) can cause structural and functional changes in the left/double ventricle. The purpose of this study was to assess the double ventricular myocardial systolic strain in patients with DCM using cardiac magnetic resonance feature tracking (MR-FT) and their underlying relationships with clinical parameters.

Methods: We recruited 73 patients with DCM and 40 healthy volunteers to undergo CMR examinations. Then we used the routine cine images and MR-FT to analyze the double ventricular myocardial global systolic strain and the strain rates. Before the CMR examination, we collected the baseline clinical and biochemical indices.
Results: The values of LVGLS、LVGCS、LVGRS and RVGLS were significantly lower in the DCM group than those in control group [LVGLS：（-4.7±2.5）%:（-14.4±2.4）%; LVGCS：（-6.1±2.6）%:（-21.8±2.3）%; LVGRS：（7.7±4.0）%:（39.2±9.0）%; RVGLS：（-9.9±6.5）%:（-19.5±3.7）%; P<0.01]. The left and right ventricular EF values were lower in the DCM group than those in control group [LVEF：（16.2±7.2）%:（58.0±5.5）%; RVEF：（19.9±11.8）%:（43.7±8.6）%; P<0.01]. In DCM group, the LVGRSR-D and RVGLSR-S values were correlated with the troponin I (TNI) levels (P<0.05) ; the LVGRS、LVGCS and LVGCSR-S values were associated with the Lactate dehydrogenase (LDH) levels (P<0.05) ; the RVGLSR-S value was correlated with the creatine kinase (CK) level (P<0.05).
Conclusion: Our results suggested that the left and right ventricular systolic function and systolic strain were impaired in DCM patients. We also found that there was a correlation between the myocardial enzyme spectrum and the left and right ventricular strain in patients with DCM.

PU-2824
心脏磁共振评价左室心肌致密化不全弥漫性心肌纤维化及与应变相关性

姜孟春,曾牧,刘辉,刘军,郭杨钰,谢幸芷,邹志敏
中南大学湘雅二医院

目的：利用心脏磁共振（cardiac magnetic resonance, CMR）评估左室心肌致密化不全（Left ventricular non-compaction, LVNC）患者弥漫性心肌纤维化，并探讨其与应变的相关性。方法：回顾性分析 2016 年 8 月至 2019 年 2 月在中南大学湘雅二医院行 CMR 检查并临床确诊的 LVNC 患者 37 例，将 40 名正常人作为正常对照组，应用 T1 mapping 序列获得心肌细胞外容积（myocardial extracellular volume fraction, ECV），利用 Tissue Tracking 技术获得左室心肌整体及各水平（基底部、中间部、心尖部）径向应变（RS）、周向应变（CS）、纵向应变（LS），对数据进行统计学分析。结果：①LVNC 组整体及各水平 RS、CS、LS 均较对照组减低（P<0.001），整体及各水平 ECV 值均较对照组升高（P<0.001）；②LVNC 组基底部-心尖部 CS、LS 梯度较对照组明显下降（P<0.001），LVNC 组基底部-心尖部 ECV 梯度较对照组明显升高（P<0.001）。③LVNC 组整体 RS、CS、LS 与 ECV 值均有一定的相关性（r = 0.412、0.403、0.413，p = 0.011、 0.013、0.007）。结论：ECV 能较敏感的检测出 LVNC 患者弥漫性的心肌纤维化，并且这种弥漫性病变以心尖部最为明显。ECV 与心肌各个方向的应变均有一定的相关性，即对于 LVNC 患者心肌纤维化在一定程度上参与心肌运动功能障碍的发展。心脏磁共振新技术可以提供心肌组织学及功能改变的定量参数，为疾病的临床评估提供更全面的信息。

Application of cardiac magnetic resonance to evaluate strain abnormalities in preclinical and overt apical hypertrophic cardiomyopathy

Xingzhi Xie,Mu Zeng,Jun Liu
The Second Xiangya Hospital of Central South University

Objective The aim of this research was to evaluate and explore correlations between strain and other functional parameters in apical hypertrophic cardiomyopathy (AHCM) patients.
METHODS Cardiac magnetic resonance imaging was performed in 21 overt AHCM, 22 preclinical AHCM, and 54 normal patients. CVI42 software was used to measure global and regional (basal, medial, apical) peak, epicardial, and endocardial circumferential strain. Functional parameters were measured by SIEMENS work station. Functional parameters and strain value were analysed.
RESULTS Compared to the control group, overt and preclinical groups had greater apical left ventricular wall thicknesses, higher ejection fraction, and decreased apical angle. The apical circumferential strain in both overt and preclinical groups was decreased compared to the control group. The differences between epicardial and endocardial circumferential strain (cTSD) were also apparent. Both overt and preclinical groups had decreased epicardial stain and elevated endocardial circumferential strain. The cTSD was also elevated in both groups compared to the controls.
CONCLUSION CMR strain analysis can distinguish normal participants from AHCM patients and accurately determine disease stages. This method may become a promising diagnostic parameter.

PU-2826

Aortic remodelling after thoracic endovascular aortic repair for acute and subacute type B aortic dissection

Yi Zhou[1,2],Lin Yang[1],Xiaoming Zhang[1]
1.Affiliated Hospital of North Sichuan Medical College
2.People's Hospital of Deyang City

Purpose: To investigate aortic remodelling after thoracic endovascular aortic repair (TEVAR) for acute and subacute Stanford type B aortic dissection (AD) patients.
Methods: Clinical data of 38 Stanford type B AD patients who received TEVAR treatment in our hospital between July 2012 and December 2017 were retrospectively analysed. The maximum diameters of the aorta, the mean diameters of the true lumens (TLs) and the false lumens (FLs) of the aorta in the dissection range before and after TEVAR treatment were measured. Comparisons of all diameters between different groups or in the same group before and after therapy were subjected to analysis of nonparametric test. Count data were examined using the χ^2 test.
Results: These 38 patients were 31-82 years old with a mean age of 57.0 ± 11.0 years, and the group included 31 men and 7 women, with 22 cases in the acute phase and 16

cases in the subacute phase. Among the 38 patients included in this study, seven patients had endoleak (18.4%) after treatment. No perioperative deaths occurred. Analyses of computed tomography angiography measurement results showed that the baseline levels of the maximum diameters of the aorta, TLs and FLs before TEVAR between the acute and subacute group were not different significantly ($p=0.193$, $p=0.301$ and $p=0.067$, respectively). After TEVAR treatment, the maximum diameters of the aorta and the diameters of the FLs between the two groups were different evidently ($p=0.005$ and $p=0.012$), but the diameters of the TLs were not ($p=0.069$). Both the diameters of TLs increased, and the FLs decreased significantly in the acute and subacute group after TEVAR ($p<0.001$, $p=0.00438$, $p<0.001$ and $p=0.007$, respectively); the maximum diameters of the aorta decreased significantly in the acute group ($p<0.001$), but they did not change obviously in the subacute group ($p=0.121$). **Conclusion**: TEVAR offers satisfactory results for treating type B AD. Acute AD can achieve better aortic remodelling than subacute AD after TEVAR.

PU-2827

MSCT 精确评估气胸、液气胸肺压缩比的临床应用价值

梁文娇,贾喆
榆林市第二医院

【摘要】 **目的** 探讨 MSCT 后处理技术精确评估气胸、液气胸肺压缩比的临床应用价值。 **方法** 885 名气胸/液气胸患者，先后行常规 X 线胸片及胸部 CT 扫描，将患者胸部 CT 图像导入 Philips EBW4.05 工作站，利用 Tissue Segmentation（组织分割）及 Lung Density（肺密度）技术分别精确测定胸腔内气体、液体及同侧胸腔体积，准确计算出肺压缩比，与胸部 X 线评估结果进行比较。 **结果** 利用 Tissue Segmentation 及 Lung Density 技术，我们可以精确测出胸腔内气体体积（G）、液体体积（E）及该侧胸腔体积（L），利用公式 G / L 或 G+E / L，准确计算出肺压缩比。 **结论** 利用 MSCT 后处理技术能够精确计算出肺压缩比，可以有效指导临床进行治疗，帮助临床大夫更好地确定治疗方案。

The performance of cine-MRI sequence for central venous catheter-related thrombosis in ESRD patients

Wanlin Peng,Zhenlin Li
West China Hospital of Sichuan University

PURPOSE
To evaluate diagnostic value of non-contrast cine MRI sequence in the assessment of thrombosis associated with tunneled hemodialysis central vein catheters (TCCs) as compared to computed tomography venography (CTV).

METHOD AND MATERIALS
31 patients withtunneled hemodialysis central vein catheters dysfunction were continuously included and underwent CTV and cine-MRI examination. The range of CTV is

from the root of neck to the lateral phrenic angles. The contrast diluted by 30% saline was used to avoid the superior vena cava is too ligh. The 8-mm-thick cine transverse images was obtained with breath holding in end-expiration combined with electrocardiographic gating. The sensitivity, specificity, PPV, NPV and accuracy regarding CTV as reference standard were calculated.

RESULTS

CTV and cine-MRI imaging were successfully completed in all patients. 24 thrombosis were found in both CTV and cine-MRI. The sensitivity, specificity, positive predictive value, negative predictive value and accuracy of cine-MRI in the diagnosis of central venous thrombosis were 83.3% (20/24), 73.3% (11/15), 83.3% (20/24), 73.3(11/15), 79.5 (31/39), respectively. There was no significant difference between Cine-MRI and CTV (P>0.5). In addition, cine-MRI can also show whether there is abnormal position of central venous catheter.

CONCLUSION

The cine-MRI could achieve almost same accuracy in the diagnosis of catheter-related thrombosis in ESRD patients with hemodialysis, it could be an effective alternative to CTV examination under certain circumstances.

PU-2829
表观扩散系数值在食管癌放化疗疗效评估中的应用价值研究

任基伟,张旭婷,张瑞平,靳宏星
山西省肿瘤医院

目的：探讨表观扩散系数值在食管癌放化疗疗效评估中的应用价值。方法：回顾性分析 30 例经病理证实的食管癌患者，根据 RECIST 标准将其分为缓解组与未缓解组，比较食管癌患者放化疗前后病灶的长度值、厚度值、ADC 值，比较缓解组与未缓解组的患者放化疗前后病灶的长度差值及变化率、厚度差值及变化率、ADC 值差值及变化率，绘制 ROC 曲线，得出相应的的阈值及诊断的灵敏度与特异度。结果：食管癌治疗后病灶的长度、厚度均缩小，ADC 值升高。治疗前后病灶的长度、厚度及其变化不能作为疗效预测指标。治疗前后病灶的 ADC 值差值及变化率可作为疗效预测指标：ADC 值的差值和变化率为 $0.630\times10^{-3}mm^2/s$ 和 0.559 是诊断病变缓解的阈值，其灵敏度和特异度分别为 81.3%、85.7%，87.5%、85.7%。结论：DWI 可以用于食管癌患者放化疗疗效的评估，且 ADC 值可对疗效评价进行量化分析。

PU-2830
探讨 MSCT 的 MSCT 下肢血管 CTA 的临床应用意义

王雪
大庆龙南医院

目的：探讨 MSCT 的 MSCT 下肢血管 CTA 的临床应用意义，提高下肢动脉疾病诊断率
方法：仅需静脉内注射造影剂，同时掌握好扫描时机即可获得完整的靶血管图像信息，具有操作简便、时间短、费用较低等优点。64 排螺旋 CT 具有多种重建方式和三维显示功能，可以重复使用，并从各个方位、各个角度来观察受检的血管，为临床制定手术方案提供了重要的参数。

应用 64-MSCTA 技术对患者行腹主动脉下端上水平至足背动脉水平的大范围联合扫描，不仅可以快速、高效率的完成多部位、多节段血管成像，而且观察病变全面、连续性好，为手术入路的选择和手术方案的制定提供了有效的影像学信息，并且能够准确判断下肢动脉狭窄的级别。
结果：对于动脉瘤和血管瘤的应用：动脉瘤在 CTA 上表现为动脉管腔的局部异常扩大，对比剂充盈于瘤腔内，部分病例可见瘤壁出现附壁血栓。血管瘤在增强扫描时，在动脉期及静脉期都能见到强化的血管团和供血动脉。应用 VR 及 MIP 等重组方法还可提供动脉瘤的大小、范围，MPR 还可以观察动脉瘤与周围肌肉邻近组织的关系，有利于协助外科医生制定手术计划。

64-MSCTA 可用于血管搭桥术及血管内支架术后血管通畅性的评价。下肢血管病变行支架及血管搭桥术后行 MSCTA 复查，运用 VR 及 MIP 技术进行血管三维重建，均能显示搭桥血管或支架的位置、走行、吻合口及远侧段血管情况，间立体感强，可显示重叠血管间的复杂关系。
结论：64-MSCTA 技术在显示血管病变方面具有独到的优势，而且其操作简便、安全、无创，扫描速度快，覆盖范围大。

PU-2831

PET/CT 对肺内结节诊断及治疗的临床价值

刘寒冰
徐州医科大学附属医院

【摘要】**目的** 探讨 PET/CT 显像对肺内结节诊断和治疗的临床应用价值。**方法** 因肺内结节行 18F-FDG PET/CT 检查且得到临床或病理证实的患者 30 例，其中结节性质不明者 2 例，临床或病理确诊为肺癌者 18 例。结合其 PET/CT 检查结果和临床诊断、治疗资料进行分析。患者禁食 6h 以上，检查当日禁止做剧烈运动。检查前查血糖，测身高、体重。显像剂注射剂量 5.5MBq/kg，注射后 40~60min 进行全身扫描。PET：层厚 4.25mm，矩阵 128×128，采集时间 4~6min/床位。重建条件：迭代重建，子集 28，迭代次数 2。重建层厚 4.25。**结果** (1)28 例诊断结果与临床随访或病理诊断结果符合，总诊断符合率 93.3%。2 例结节性质不明者经 PET/CT 检查诊断为良性病变 2 例，恶性 0 例。21CT 显示单结节病灶，PET/CT 单病灶显影 19 例，8 例除肺内病灶显影外，还可见肺外其他组织显影，4 例确诊为有肺外转移，3 例肺内单结节病灶系转移灶。(2)PET/CT 检查后，30 例患者中，27 例改变了原治疗方案，继续观察 4 例，抗炎 5 例，手术 10 例，局部放疗 3 例，单纯化疗 54 例，综合治疗 1 例。(3)根据 10 例手术治疗患者的 PET/CT 融合图像确定手术路径及切除范围，术后病理结果显示，手术切口边缘及切除淋巴结均未见癌细胞累及和浸润。**结论** （1）对于肺内结节性质，PET/CT 较单纯 CT 更容易做出鉴别诊断。PET/CT 检查能够更加准确地反映肺癌的临床分期，并辅助临床确定正确的治疗方案。PET/CT 融合图像能够指导放疗生物靶区的精确定位和确定外科手术方案及切除范围。

夹层累积头颈血管和主动脉 CTA 扫描方案

王紫薇
四川大学华西医院

目的：利用多层螺旋 CT 联合头颈血管和夹层一站式扫描，解决夹层患者需多次进行检查的问题。
方法：比较头颈血管和夹层分开扫描与一站式扫描的图像质量。分析两组图像是否存在差异。

结果：两组图像均能满足诊断需求，头颈血管一站式扫描患者图像客观评分低于分次扫描，但能满足诊断需求。夹层主动脉扫描两组图像无明显统计学差异。
结论：对于夹层累积头颈血管及大动脉患者，可以采用头颈血管与主动脉一站式扫描。

肺癌双能量 CT 碘参数与 CT 灌注成像灌注参数的相关性研究

邹红烨,左敏静,张照涛,周建忠,江菲,严辉峰,刘颖
南昌大学第二附属医院

目的 比较 CT 灌注成像灌注参数与双能量 CT 碘相关参数评价肺癌血流灌注状态的相关性。
方法 前瞻性收集 28 例肺癌患者（鳞癌 15 例，腺癌 12 例，小细胞肺癌 1 例）的 CT 灌注成像及双能量 CT 数据，勾画病灶最大截面感兴趣区（region of interest, ROI）并测量 CT 灌注成像的灌注参数及双能量 CT 的碘相关参数，分析灌注参数与碘参数的一致性，并比较两种检查方案的辐射剂量。应用 Spearman 相关系数分析肺癌的灌注参数与碘相关参数的相关性。
结果 动、静脉期碘浓度（iodine concentration, IC）与各灌注参数均无统计学相关；动脉期标化碘浓度（normalized iodine concentration, NIC）与血流量（blood flow, BF）、血容量（blood volume, BV）、表面通透性（permeability surface, PS）均呈正相关（r=0.26~0.34，P＜0.05），静脉期 NIC 仅与 BV 呈正相关（r=0.34，P＜0.05）；动脉期 K 值与 BF、BV、PS 均呈正相关(r=0.25~0.31，P＜0.05)，静脉期 K 值与 BF、BV 呈正相关(r=0.29~0.30，P＜0.05)。NIC、ICt、K 值的观察者间一致性好（r=0.90~0.93，P＜0.05）；灌注成像所有参数的观察者间一致性中等（r=0.31-0.78，P＜0.05）。双能量 CT 辐射剂量（4.23±0.66 mSv）显著低于 CT 灌注成像的分别为（7.45±0.02 mSv），差异具有统计学差异（P＜0.05）。
结论 肺癌患者的 CT 灌注成像灌注参数与双能量 CT 碘相关参数的参数相关性较好，双能量 CT 的扫描辐射剂量更低，且观察者间一致性优于 CT 灌注成像。

PU-2834
增强 CT 在食管癌术前 TN 分期的价值

程凡容
重庆市肿瘤医院

目的：探讨增强 CT 图像分析在食管癌术前分期的临床应用中的应用价值。方法：127 例食管癌患者为研究对象，均予以术前增强 CT 检查和手术病理检查，以病理结果为金标准。所有患者术前均行 MSCT 单期增强检查，参考国际抗癌联盟—美国癌症联合委员会标准，以增强 CT 图像观察食管癌病灶最大厚度、长度、浸润深度、病灶与周围组织（如气管、主支气管、主动脉等）的关系、病灶强化程度及均匀情况，淋巴结强化程度、最大短径、边缘模糊或毛刺等征象对食管癌术前 T、N 分期的准确性。由我院影像科两位均从事 3 年以上的影像医师采用双盲法，利用多平面重组结合横断面、冠状面及矢状面图像综合分析图像并记录结果，结果不一致时经协商达成一致。结果：病理结果：127 例患者均经食管镜病理证实确诊为食管癌，其中 81 例手术病理检查，均为鳞状细胞癌：T_1 期 10 例、T_2 期 12 例、T_3 期 45 例、T_{4a} 期 14 例；N_0 期 39 例、N_1 期 15 例、N_2 期 18 例、N_3 期 9 例。增强 CT 对食管癌术前 T 分期诊断的准确性为 72.8%（59/81）；对 N 分期诊断准确性为 68%（55/81）。结论：增强 CT 在食管癌术前评估及治疗方案及手术方式选取临床工作中具有一定的参考价值，对患者的临床治疗方案的决定具有指导意义。

PU-2835
支气管囊肿的临床分析及 CT 表现（附 17 例报告并文献复习）

梁丰丽,黄刚
甘肃省人民医院

目的：探讨支气管囊肿的临床表现及影像学特点。
方法：回顾性分析我院经手术、病理证实的 17 例支气管囊肿的临床表现、影像学特征及预后。其中 11 例行 CT 平扫及增强检查，6 例仅行 CT 平扫检查。
结果：17 例支气管囊肿，男性 11 例，女性 6 例，发病年龄 18 至 70 岁，平均年龄 44.1 岁。患者多为体检或偶然发现。17 例支气管囊肿中，包括肺内支气管囊肿 2 例，纵隔支气管囊肿 14 例（前纵隔 9 例，中纵隔 1 例，后纵隔 4 例），肺外支气管囊肿 1 例（骶前）。典型者 CT 表现为薄壁、单房、类圆形或椭圆形囊性占位，边缘光滑，密度均匀，CT 值可达 0-80Hu，增强扫描囊壁均匀强化，囊内未见明显强化。部分病灶囊内合并出血、钙化，需要与肿瘤性病变鉴别。随访后，所有病例均未发现恶变。
结论：支气管囊肿多中年发病，男性多于女性；纵隔型占多数，囊肿可发生在纵隔的任何部位，容易误诊为肿瘤；病灶呈圆形或类圆形，可有浅分叶，CT 上无强化的软组织密度囊肿为多数支气管囊肿的特征性表现。

PU-2836
128 层螺旋 CT CARE kV 联合 SAFIRE 技术在肺动脉成像质量与辐射剂量中的应用研究

赵洁,雷子乔,余建明
华中科技大学同济医学院附属协和医院

目的：探讨 128 层螺旋 CT CARE kV 技术联合 SAFIRE 算法，对 CTPA 的辐射剂量和图像质量的影响。方法：选取本院行 CTPA 检查的患者 60 例，均采用 128 层螺旋 CT 进行扫描。随机分为两组，各 30 例。对照组：管电压 120kV，开启 Care Dose4D，参考管电流 150mAs。试验组：开启 CARE kV，参考管电压 120kV，参考管电流 150mAs。对照组图像采用 FBP 重组，获得 A 方案图像；试验组图像分别采用 FBP 和 SAFIRE 重组，获得 B 方案和 C 方案图像。记录每位患者的 $CTDI_{vol}$ 和 DLP，并计算 ED。测量肺动脉强化 CT 值，椎旁肌 CT 值及背景噪声，计算 SNR 和 CNR。由两名工作 10 年以上的影像学专家采用双盲法，根据肺动脉强化程度、肺及纵隔结构的显示情况用 5 分法对图像质量综合评分。比较两组的辐射剂量和 A、B、C 三种方案图像的 CT 值、背景噪声、信噪比、对比噪声比，并比较 3 种重组后图像的主观评分。结果：试验组和对照组 ED 差异具有统计学意义，前者较后者下降约 31.03%。A 和 B 方案图像的主观评分及背景噪声的差异均无统计学意义，而 A 与 C 比较，B 与 C 比较，差异均有统计学意义。A、B 方案之间及 A、C 方案之间的肺动脉主干及其分支 CT 值差异均有统计学意义，而 B、C 方案图像 CT 值的差异均无统计学意义。A、B、C 方案图像的肺动脉主干及其分支 SNR 和 CNR 差异均有统计学意义，其中 C 方案图像的 SNR 和 CNR 均最高，B 方案次之。结论：与常规 120kV 扫描模式相比，采用 CARE kV 扫描技术联合 SAFIRE 重组算法不仅能有效降低 CTPA 检查的辐射剂量，又能显著提高图像质量。

PU-2837
中国正常人群中 IVIM 参数的一致性研究

李世兰,宋清伟,刘爱连,李智勇
大连医科大学附属第一医院

目的 探讨中国正常人群 IVIM 参数的一致性研究。 **材料与方法** 纳入 2015 年 3 月至 2019 年 2 月在大连医科大学附属第一医院行 3.0T 心脏磁共振检查的 80 例正常志愿者，年龄范围 8-76 岁，其中，男 44 例（35.23±13.11 岁），女 36 例（38.61±17.94 岁），所有纳入对象均接受 3.0T 心脏电影成像以及使用多 b 值 (0, 20, 50, 80, 100, 120, 200, 300, 500 s/mm^2)于左心室的心尖、中间和基底层完成短轴 CMR-IVIM 扫描，选择图像质量最好的一层进行 IVIM 参数的数据测量。应用 Reportcard 后处理软件获得左心室结构和功能参数，应用 Functool 9.4.05a 后处理软件测量左心室心肌慢速表观扩散系数（ADC_{slow}）、快速表观扩散系数（ADC_{fast}）、快速扩散成分所占比例（f）。使用 ICCs 和 Bland-Altman 检验分析 IVIM 参数的一致性情况。**结果** IVIM 参数有较好的组内、组间一致性（均 ICCs>0.75），Bland-Altman 分析显示 ADC_{slow}、ADC_{fast}、f 差异百分比±1.96 标准差分别为(1.61%，-1.37%)、(74.55%，-59.08%)、(0.16%，-0.14%)。 **结论** IVIM 参数具有较好的一致性。

PU-2838
异位胸腺瘤：CT 表现及临床特征 8 例回顾性分析

周青,周俊林
兰州大学第二医院

目的 分析异位胸腺瘤的 CT 影像特征及临床特征，熟悉本病的 CT 诊断。
材料和方法 回顾性分析 2013 年 9 月至 2019 年 6 月经病理证实的 8 例异位胸腺瘤的 CT 影像资料，临床资料及病理资料。
结果 8 例胸腺瘤，中纵隔 3 例（B1 型、C 型、C 型），心包 2 例（B3 型、B3 型），肺 1 例（B1 型），胸腔 1 例（AB 型），右心房 1 例（B2）；8 例中男性 4 例，女性 4 例，年龄 36 岁-70 岁。临床表现为胸闷、气短咳嗽，1 例有重症肌无力表现。8 例中 6 例 CT 误诊。CT 影像表现如下：肿瘤长径 4.2cm-19.5cm，形态为椭圆形或者类圆形，1 例心房内异位胸腺瘤塑形生长，密度均匀 2 例，不均匀 6 例，边界清晰 3 例，不清晰 5 例，8 例中，3 例伴胸腔积液，2 例伴心包积液，3 例存在钙化，CT 增强轻度强化为主。
结论 异位胸腺瘤罕见，常因位置的异常而造成误诊，但是其 CT 影像表现与前上纵隔胸腺瘤同样具有特征性。

多层螺旋 CT 及后处理技术在肺隔离症诊断中的应用

戴文静
吉林市人民医院

【摘要】 背景：肺隔离症是一种少见的先天性肺发育异常，近年来随着医学影像学技术的快速发展，CT 三维重建技术日渐成熟，肺隔离症的检出率呈增高趋势。**目的：**探讨多层螺旋 CT 及后处理技术在肺隔离症诊断中的应用价值。**材料与方法：**收集经手术及病理证实的 19 例肺隔离症患者资料进行回顾性分析。所有检查采用多层螺旋 CT 扫描机，先行 CT 平扫，再行双期增强扫描，将图像传至工作站，进行 MPR、MIP 及 VR 重建。**结果：**17 例为肺叶内型，2 例为肺叶外型；其中 1 例位于

右肺上叶，14 例位于左肺下叶，4 例位于右肺下叶。多平面重建可清晰显示病灶内部结构，血管重建可清晰显示异常供血动脉（1 例来自支气管动脉、1 例来自右锁骨上动脉，14 例来自胸主动脉，1 例来自腹主动脉上段，2 例来自腹腔干），并清楚显示其起源、走行、分支和分布；1 例由异常血管回流至左房，1 例引流至奇静脉，1 例引流至半奇静脉，1 例引流静脉未确切显示，其余均引流至肺静脉。**结论：**多层螺旋 CT 增强及三维重建技术对肺隔离症的诊断有重要的临床价值，是诊断肺隔离症理想的非创性方法。

Stanford B 型主动脉夹层 TEVAR 术后 MSCTA 的分析评估

李琳
华中科技大学同济医学院附属协和医院

目的 探讨 Stanford B 型主动脉夹层患者经胸主动脉腔内修复术（TEVAR）治疗后血管重塑形态。方法 回顾性分析 69 例接受 TEVAR 术治疗的 Stanford B 型主动脉夹层患者的手术前后临床及影像学资料，分析术后 30 天内、1-6 个月及 6 个月后主动脉各段真假腔内径变化及假腔血栓化的情况。结果 TEVAR 术后胸主动脉真腔增大、假腔缩小，与术前比较差异有统计学意义（P＜0.05），腹主动脉管径真腔和假腔变化较术前无统计学差异（P＞0.05），腹部重要分支动脉血供情况较术前改善。结论 Stanford B 型主动脉夹层患者 TEVAR 术后 MSCTA 分析评估证实其近中期效果明确。

PU-2841

术中超声在肺小结节临床诊疗中的应用

王文慧
1.辽宁省肿瘤医院
2.中国医科大学肿瘤医院

背景：肺癌是如今全球发病率及死亡率最高的恶性肿瘤，手术切除是肺癌的主要治疗手段。术中超声具有精确定位、无创、实时监测肿瘤与血管的关系、提高肿瘤的切除率等优势。得益于医学影像设备硬件和软件技术的日益进步，肺小结节诊断、治疗与随诊的影像学检查水平一直在不断地提高。
目的：本文就当前肺小结节的研究热点，综合评价定位肺小结节的各种技术手段，着重于术中超声在肺小结节临床诊疗中的应用作一综述，并对其临床意义进行客观性评价。
结果：研究表明亚甲蓝灌注是肺结节的有效标志物；然而定位深部结节时，在肺表面上无法观察。目前有报道采用 CT 引导下注射医用胶联合亚甲蓝在肺小结节胸腔镜术前定位。Hook-wire 定位法是应用最早也是最为广泛的结节定位方法。然而钩丝脱落仍然是 Hook-wire 定位失败的主要原因。微弹簧圈通常用于选择性血管栓塞。1994 年 Asamura 首次报道应用微弹簧圈进行肺结节的定位。与常用的 Hook-wire 定位法相比，可保留在患者体内不易脱落。随着超声设备硬件和软件技术的革新，众多学者报道了超声定位在肺部手术的应用。过去，超声检查在肺部疾病的诊断方面具有很大的局限性。在一项 86 枚肺结节的研究中，经术中超声检查明确其确切位置者 78 枚（90.7%），平均操作时间 7.3min，与其他方法相比用时较短。还有学者在达芬奇手术中应用术中超声进行了肺小结节的定位与定性研究：术中超声检查作为“触摸”的“替代手指”可以找到肺结节的准确位置，尤其是混合磨玻璃结节。电磁导航支气管镜（ENB）是近年来新出现的一项微创诊断技术，已经证明在评估外周小病变时具有很大的实用性。

结论：随着超声新技术的更新，其价值将不仅限于实时定位、肺组织切缘情况和肿瘤的大小、深度等方面，同时有利于医生在手术中重复多次多角度探查。综上，肺小结节的每一种定位方法都有其优缺点。

PU-2842
螺旋 CT 多平面重组技术（MPR）在食管癌术前评估中的意义

于金玉
山东省医学影像学研究所

目的 探讨螺旋 CT 的多平面重组技术（MPR）对于食管癌术前评估的意义。
方法 收集分析 37 例经内镜病理证实的食管癌患者术前 CT 增强扫描图像，由两组同年资医师分别应用多平面重组技术（multi-plane reformation ，MPR）及常规轴位图像对 37 例食管癌患者的癌灶基本情况（癌灶大小、周边侵犯及脏器累及情况）、纵膈内淋巴结（No.105 组、No.106 组(No.106rec、No.106tb、No.106pre)、No.107 组、No.108 组、No.110 组、No.111 组）情况进行评估（其中转移淋巴结评判标准为：淋巴结短径大于 7mm 或淋巴结有不均质强化或淋巴结之间相互融合）。依据术后病理结果对比分析 MPR 重建图像与常规轴位图像对于食管癌癌灶周边基本情况及纵膈内淋巴结情况的敏感性、特异性、阳性预测值、阴性预测值。（淋巴结分组参考日本食管癌协会第十版指南）
结果 37 例患者中术中癌灶切除 35 例，2 例因黏连转肿瘤中心继续治疗；37 例患者中切除共清理肿大淋巴结 366 枚，其中转移淋巴结 72 枚。MPR 重建图像中标记癌灶侵犯周边情况 3 例，标记转移淋巴结 80 枚，正确诊断 60 枚；常规轴位图像中标记癌灶侵犯周边情况 1 例，标记转移淋巴结 76 枚，正确诊断 42 枚。MPR 重建图像评估食管癌癌灶周边侵犯的敏感性及特异性分别为 100%、97%，转移淋巴结的敏感性、特异性、阳性预测值、阴性预测值分别为：83.3%、93.1%、75%、95.8%；常规轴位图像评估食管癌癌灶周边侵犯的敏感性及特异性分别为 50%、100%，转移淋巴结的敏感性、特异性、阳性预测值、阴性预测值分别为：58.3%、88.4%、55.2%、89.6%。
结论 CT 多平面重组技术（MPR）的运用对评估食管癌癌灶侵犯及检出转移淋巴结有更好的敏感性和特异性，对食管癌术前影像评估及术中淋巴结清扫有重要临床意义。

PU-2843
隆突性皮肤纤维肉瘤的 CT 诊断及鉴别诊断

黄晖
中山市人民医院

目的
探讨螺旋 CT 对隆突性皮肤纤维肉瘤的诊断和鉴别诊断价值。
方法
回顾性分析经手术病理证实的 6 例隆突性皮肤纤维肉瘤患者的 CT 平扫及增强图像。
结果
6 例患者，男 4 例，女 2 例。发生在背部 2 例，腹股沟区 2 例，颈肩部及上胸壁各 1 例。5 例术后原位复发，其中 1 例为术后多次原位复发。CT 表现病变多发生于体表，向体外隆起。平扫多呈稍低密度软组织肿块，边界清楚，增强呈明显强化。手术后易复发，多是由于对此病缺乏足够的认识，常误诊为良性肿瘤而行单纯局部的切除，忽略了其具有侵袭性的特点。较少发生远处转移。隆

突性皮肤纤维肉瘤需与以下病变相鉴别：1、皮肤癌、基底细胞癌：均为发生于皮肤的恶性肿瘤，其 CT 表现为皮肤的不规则片状增厚，皮下脂肪层受侵时主要表现为脂肪层密度增高模糊，多无明显的软组织肿块形成。2、黑色素瘤：以躯干、头颈多见，皮损多呈蓝黑色，多发生于富含黑色素细胞的表皮与真皮交界处，出血、囊变、坏死多见。3、神经鞘瘤：多位于深层肌肉间隙，沿神经干走行，且与神经关系密切，易囊变使肿瘤密度不均，强化多不均匀。4、真皮纤维瘤：单发或多发，多发生于四肢各部位，常伴表皮组织的增厚。5、血管瘤：多发生于四肢肌肉的无痛性软组织肿块，多可见静脉石，增强明显强化。

结论

隆突性皮肤纤维肉瘤具有单发，病灶边界清楚，均匀明显强化等影像学特征，结合临床资料及影像学特点可以做出明确的诊断。

PU-2844

非小细胞肺癌 CT 征象与 EGFR、Ki-67 基因突变的差异性研究

崔婷婷
锦州医科大学附属第一医院

目的：探讨非小细胞肺癌 EGFR 阳性组与阴性组、Ki-67 阳性组与阴性组间影像表现的差异。
方法:选取经病理确诊为非小细胞肺癌，并进行 Ki-67 及 EGFR 基因检测的患者共 69 例，记录影像学特征，包括毛刺征、分叶征、空泡征、血管集束征、支气管充气征，并与 EGFR、Ki-67 检测结果进行差异性分析。结果：EGFR 阳性组与阴性组间，毛刺征、分叶征、空泡征差异具有统计学意义（P<0.05），血管集束征、支气管充气征的差异不具有统计学意义。Ki-67 阳性组与阴性组间毛刺征、分叶征、血管集束征差异具有统计学意义（P<0.05），空泡征、支气管充气征的差异不具有统计学意义。结论：毛刺征、分叶征、空泡征能为临床预测非小细胞肺癌 EGFR 突变提供一定依据，具有上述征象的患者更有可能发生 EGFR 的突变，毛刺征、分叶征、血管集束征能为临床预测非小细胞肺癌 Ki-67 突变提供一定依据，具有上述征象的患者更有可能发生 Ki-67 的突变。

the application value of wide detector CT electrocardiograph gating three dimensional reconstruction of the heart in transapical transcatheter aortic valve replacement in the treatment of elderly and high-risk aortic valve insufficiency.

Yongchun You
West China Hospital of Sichuan University

Abstract to explore the application value of wide detector CT electrocardiograph gating three dimensional reconstruction of the heart in transapical transcatheter aortic valve replacement in the treatment of elderly and high-risk aortic valve insufficiency.**Methods** a retrospective analysis in June 2016 to August 2018 in our hospital because of aortic valve insufficiency to TAVR surgery for CT enhanced heart 3d reconstruction of the clinical data of 69 patients, 45 cases of male, female 24

cases, mean age 75.8± 4.2 years, adopt preoperative CT heart switch control 3 d reconstruction technology of aortic valve area and heart vessels have to conduct a comprehensive assessment, including the aorta initial CT value, contrast to noise ratio (CNR), records of all patients dose length product (DLP), and calculate the effective radiation dose (ED), observation for the shape of the aortic valve,The diameter of aortic valve ring, the height of coronary artery opening from aortic valve ring, the diameter of ascending aorta, the included Angle of left ventricular aorta, and the optimal imaging projection Angle of 3d volume images were measured.Appropriate surgical cases were selected based on the measured data, and ideal surgical strategies were developed, such as selecting the optimal valve size, imaging projection Angle, and the apical approach.The second generation of artificial biological valve -J-Vavle hybrid surgery is suitable for patients.**Results** CT cardiac imaging was successfully performed in all patients.The CT report showed that the valves were all three-lobed and no left ventricular aneurysm was found.CT values of aortic root were 409±27 HU,CNR 17.7±5.8, DLP 64.98±7.27, and effective radiation dose was 0.91±0.35 mSv.According to the measurement results, the diameter of valve ring was greater than 29mm in 9 patients (6 males), and the diameter of coronary valvulotomy ring was less than 10mm in 1 of the 60 patients with the diameter of valve ring less than 29mm. These 10 patients were converted to surgical thoracic valve replacement, and the remaining 59 patients successfully completed TAVR surgery.Among the 59 patients with successful operation, the mean ring diameter of valve was measured by CT. Among them, 55 patients had no calcification of valve, and 4 patients had mild calcification of valve.The best intraoperative imaging Angle of 94.9% (56/59) patients was accurately predicted according to the preoperative three-dimensional full-volume three-dimensional image.**Conclusion** the wide detector CT electrocardiograph gating 3d imaging technology plays a key role in the preoperative evaluation of TAVR, and has important guiding significance for the feasibility of surgery, the selection of surgical equipment and surgical methods, and the radiation dose is small, which is suitable for clinical application.

PU-2846

Increase detection of pulmonary arterio-venous malformation on CT scans after the 2nd decade of life

Albaqali Samar
Sir Run Run Shaw Hospital

Pulmonary arterio-venous malformation was considered as a heritable disease, it is when the pulmonary arteries and veins in the lung join together (pulmonary and systematic circulation) causing left to right shunt between the circulations. PAVM is a rare inherited malformation seen 80% in patients with Hereditary hemorrhagic telangiectasia knows as Osler- Weber syndrome. Patients who has the disease it mostly diagnosed at a younger age , and these patients usually present with symptoms of nose bleeding, stroke, brain abscess, shortness of breath or chest pain. The non in hereditary disease is usually called the secondary/acquired type of malformation is usually asymptomatic and is not found due to the fistula/malformation is small and

only tend too increase later years in life, due to the growth and expand of the lungs and other environmental factors that could affect the fistula. Most of the secondary type of fistula are detected accidentally can be detected on Chet CT scans when patients are more required for the diagnosis of CT Scans to different approach in the medical health check up. The Male to Female ratio of PAVM is 1:1. PAVM in a pregnant female increases the risk for increase in size of the malformation, pulmonary hemorrhage and stroke, hence due to the hormonal influence of estrogen on pregnancy to the vessels.

PU-2847

Askin 瘤的 CT 表现分析

程念岚,李邦国
遵义医科大学附属医院

目的 探讨胸壁及肺 Askin 瘤的 CT 表现特点及其诊断价值。**方法** 回顾性分析经病理证实的 6 例 Askin 瘤，男 3 例，女 3 例。全部行 CT 平扫，其中 3 例行增强扫描，从 CT 图像上分析肿瘤的位置、数量、形态、大小、密度、强化程度及方式、周围侵犯及远处转移等。**结果** 5 例为胸壁来源，1 例为左肺来源，均为单发肿物。4 例呈类圆形，2 例呈分叶状，大小从 56×52×32mm 到 130×111×92mm 不等。1 例密度均匀，5 例均密度不均，见不同程度坏死区。3 例行增强扫描者均呈不均匀强化，2 例有延迟强化。所有病例均侵及邻近组织，包括 5 例肋骨受侵，5 例胸膜受侵，1 例后纵隔及椎管受侵。均未见淋巴结及远处转移征象。**结论** Askin 瘤为好发于年长儿及青少年的一种恶性度极高的肿瘤，其 CT 表现具一定特征性，肿瘤内坏死多见而钙化少见，增强扫描不均匀强化并有延迟强化，易侵犯邻近结构，淋巴结及远处转移少见，以上征象有助于 Askin 瘤的诊断和鉴别诊断。

基于深度神经网络进行 CMR 自动心室分割的初步研究

曹玉坤,史河水
华中科技大学同济医学院附属协和医院

目的：手动勾画心脏轮廓进行心功能分析在临床工作中耗时耗力，本研究应用 2D U-Net 方法进行心脏磁共振双室自动分割，提高心室分割精准度。
方法：回顾性收集 50 例正常人、50 例肥厚型心肌病、50 例扩张型心肌病、50 例心肌梗死患者心脏磁共振电影图像。选取 80%数量作为训练组进行人工手动勾画每一层电影左右室轮廓，20%数量作为测试组。通过 CNN-LSTM 模块对于 2D 图像的前后时间点的影像进行利用，使用空洞卷积，在中间层加入不同大小的空洞卷积从而利用不同层次的图像信息进行训练学习。使用 Dice 系数评估分割的精度。
结果：正常人心室分割整体 DICE 值为 0.928，左室、右室及左室心肌分别分割 DICE 值分别为 0.943、0.892、0.943；肥厚型心肌病患者割整体 DICE 值为 0.891，左室、右室及左室心肌分别分割 DICE 值分别为 0.922、0.903、0.877；扩张型心肌病患者割整体 DICE 值为 0.893，左室、右室及左室心肌分别分割 DICE 值分别为 0.966、0.887、0.903；心肌梗死患者割整体 DICE 值为 0.870，左室、右室及左室心肌分别分割 DICE 值分别为 0.956、0.825、0.866。

结论：基于 2D U-Net 能够进行自动心室分割，该方法具有较高的精准度，未来拟应用 3D U-Net 作为基础框架进行开发，将组件做成 3D，并进行精度实验。

探究根据 BMI 标准选择低剂量条件在 16 排螺旋 CT 肺结节筛查中的应用价值

蔡舒,温晓玲,余飞雪,杨玉翔,余先超
四川大学华西第四医院

目的：探究根据身体质量指数（BMI，Body Mass Index）选择低剂量条件在 16 排螺旋 CT 肺结节筛查中的应用价值。
方法：共收集肺结节患者 150 例，根据 BMI 分为 20mAs 组（偏瘦）、30mAs 组（正常）、40mAs 组（超重）、50mAs 组（偏胖）、60mAs 组（肥胖）。采用 16 排螺旋 CT 对患者进行常规条件及低剂量条件两次扫描。对图像进行图像质量双盲法评价并对肺结节进行测量分析。
结果：常规剂量组和低剂量组图像均能满足临床诊断需求，图像优良率差异无统计学意义（P >0.05）；低剂量组参数毫安秒、CTDI、DLP 均低于常规剂量组，两组差异有统计学意义（ P <0.05）；两组肺结节检出率、病理检查符合率差异无统计学意义（P >0.05）。
结论：在临床肺部疾病 CT 筛查中，根据 BMI 标准选择低剂量条件体现了患者个体差异化，在满足临床图像要求和疾病诊断的基础上明显降低患者受照剂量。

PU-2850
基于第八版非小细胞肺癌 TNM 分期的 CT 与 MRI 对照研究

魏蕾,周莹
连云港市第一人民医院

目的 以第八版肺癌 TNM 分期为标准，对比分析 CT 和 MRI 在非小细胞肺癌 TN 分期中的应用价值。**方法** 回顾性分析 2018 年 6 月～2019 年 4 月经手术、穿刺活检及病理证实的非小细胞性肺癌患者 40 例，术前均行 CT 增强、MRI 平扫及 MRI 动态增强扫描，由 2 名高年资影像诊断医师采用双盲法阅片，分别评估 CT 和 MRI 对非小细胞肺癌治疗前的 TN 分期及胸部 M 分期。采用配对卡方检验，以临床分期为金标准，对非小细胞肺癌 CT、MRI 检查的 T 分期和 N 分期的准确性进行组间差异性分析，采用 kappa 值对 CT、MRI 的 T 分期和 N 分期结果进行一致性分析。**结果** 40 例非小细胞肺癌中，34 例 CT T 分期与临床分期符合，6 例不符合；32 例 MRI T 分期与临床分期符合，8 例不符合。25 例 CT N 分期与临床分期符合，15 例不符合；36 例 MRI N 分期与临床分期符合，4 例不符合。MRI 在 N 分期上总体符合率高于 CT，CT 与 MRI 在 T 分期上的差异没有统计学意义（P=0.754），CT 与 MRI 在 N 分期上的差异有统计学意义（P=0.007）。CT 与 MRI 在 T 分期结果上的一致性较高（kappa=0.634），在 N 分期上的一致性中等（kappa=0.479）。在胸部 M 分期上，MRI 显示 3 例胸椎及 1 例肋骨转移，而 CT 呈阴性表现。**结论** CT 和 MRI 对非小细胞肺癌在 T 分期上的准确率较为一致，在 N 分期上，MRI 的准确率高于 CT，在胸部 M 分期上，MRI 对早期胸椎、肋骨的转移敏感性优于 CT。

PU-2851
CT 肺动脉成像低剂量扫描研究

李海烈,王闽
四川省肿瘤医院

目的 探讨管电压和管电流对 CT 肺动脉成像图像质量和辐射剂量的影响。**方法** 将 100 名怀疑肺动脉栓塞需行 CT 肺动脉成像的患者随机分成五组，分五种方案扫描。方案 1 至 5 管电压、管电流分别为 120 KV、200 mAs，120 KV、150 mAs，120 KV、100 mAs，100 KV、200 mAs，80 KV、200 mAs。对各组图像进行主观评价，包括图像质量、噪声和锐利度评分；进行客观评价，测量肺动脉 CT 值和噪声，计算性噪比（SNR)和对比性噪声比(CNR)，记录 CT 剂量容积指数（CDTIvol）和剂量长度乘积（DLP）。采用非参数 *Kruskal-Wallis* 检验比较不同扫描方案下的图像评分，采用方差分析比较不同扫描方案下肺动脉 CT 值、噪声、SNR 和 CNR，。**结果** 五种方案图像主观评分均≥3 分，差异无统计学意义（*P*>0.05)。五种扫描方案图像 5 肺动脉 CT 值最大，方案 3 最小。噪声最大，性噪比和对比性噪声比差异不明显，辐射剂量最小。**结论** 降低一定管电压或管电流，图像质量均能满足诊断要求，辐射剂量降低。降低管电压可更明显强化肺动脉血管，更大降低辐射剂量。

PU-2852
成人 PICC 导管末端定位在胸片及 CT 中的一致性研究

王佳丽
徐州医科大学附属医院

目的：经外周静脉置入中心静脉导管 (peripherally inserted central catheter, PICC),是指经外周静脉穿刺置入导管,使其头端位于中心静脉内。PICC 头端位置与导管的安全留置和使用密切相关。本文目的回顾性分析 PICC 末端位置在胸片及 CT 检查中的一致性。方法：回顾性分析 160 例 PICC 置管患者的胸片及一周内的胸部 CT 检查，分别测量并记录 PICC 管到气管隆突、T6 椎体下缘、右侧胸锁关节下缘、右支气管角的垂直距离（直接距离）,数值单位 mm，精确到小数点后 1 位；并测量 T6 椎体单元高度，就算相对距离=直接距离/T6 椎体单元高度。将所得数据进行统计分析。采用 SPSS 18. 0 软件包对数据进行分析，用 Bland－Altman 法和 95%可信区间来评价两组数据的一致性。以 P ＜ 0. 05 为差异有统计学意义。结果 ：胸片组 PICC 管到气管隆突、T6 椎体下缘、右侧胸锁关节下缘、右支气管角的垂直距离（直接距离）分别为 44.5mm，26.1mm，85.8mm，36.9mm，相对距离分别为 1.94，1.14，3.74，1.61；CT 组患者的 PICC 管到气管隆突、T6 椎体下缘、右侧胸锁关节下缘、右支气管角的垂直距离（直接距离）分别为 27.7mm，12.9mm，87.7mm，33.0mm，相对距离分别为 1.28，0.59，4.04，1.52。与 CT 组相比，PICC 管到气管隆突、T6 椎体下缘的直接距离在胸片上位置偏下约 15mm 左右，相对距离约 0.6 个 T6 椎体单元高度；PICC 管到右侧胸锁关节下缘、右支气管角的直接距离在胸片上位置偏下约 5mm 左右，相对距离约 0.3 个 T6 椎体单元高度。结论 ：在 PICC 管定位时应充分考虑患者的体位，检查方法等影响因素。

PU-2853
ASIR-V 在提高低剂量条件下胸部 CT 图像质量中的价值

辛水利,胡智军,王琦,魏东红,李豆
长安医院

目的 探讨基于多模型的自适应统计迭代重建（ASIR -V）技术在降低胸部 CT 辐射剂量中的价值。**方法** 将 60 例拟行胸部 CT 平扫的患者随机分为 A、B 两组，每组 30 例，两组患者均采用自动管电

流调制技术进行扫描。常规剂量组 A 组预设噪声指数(NI=10)，采用滤波反投影算法（Filtering Back-Projection，FBP）重建，低剂量组 B 组预设噪声指数(NI=14)，设定权重为 0%，10%，20%，30%，40%，50%，60%，70%，80%，90%，100%多模型的迭代重建算法（ASIR -V）重建图像，测量胸廓入口平面、支气管分叉平面及肺底平面竖脊肌、胸壁脂肪、胸主动脉的 CT 值及 SD（标准差）值;方差分析及组间配对 t 检验比较噪声。**结果** A 组 CTDIvol 为 13.23±4.51mGy，DLP 为 462.1±158.08mGy.cm,ED 为 6.47±2.21mSv。B 组 CTDIvol 为 8.49±2.39 mGy，DLP 为 301.02±84.4mGy.cm,ED 为 4.21±1.18mSv。B 组较 A 组的辐射剂量降低了约 37.9%。相比于常规剂量 FBP 重建，权重 70%ASIR -V 低剂量组噪声低，但 FBP 及 20%～40%ASIR -V 低剂量组噪声高，差异均有统计学意义（P＜0.05）。两名医师主观评价图像噪声、肺内结构、纵隔结构一致性好（Kappa 值＞0.7），低剂量 60%ASIR -V 和 80%ASIR -V 主观评分大于常规剂量 FBP 重建，但 FBP 及 20%～40%、100%ASIR -V 低剂量组主观评分小于常规剂量 FBP 重建，差异均有统计学意义（P＜0.05）。**结论** ASIR -V 有利于提高低剂量条件下胸部 CT 图像质量，可减少约 38%辐射剂量。

PU-2854

早期肺癌影查方法像筛的选择

牟利
陆军军医大学附属新桥医院放射科

【摘要】 **目的** 比较分析早期肺癌影像筛查 DR、CT、MRI 对其诊断的临床价值。**方法** 对我院 96 例有胸部数字化 X 线胸片和经螺旋 CT 扫描发现肺部有小于 30.0mm 结节的患者影像资料进行回顾性分析。采用柯达公司生产的数字 X 线摄影机常规摄取正侧位片。采用双源 CT 行胸部低剂量扫描和 ADW4.5 工作站队图像进行薄层后处理。**结果** 胸部数字平片：96 例患者中 13 例患者可见 11～30mm 结节，83 例可见小于 10mm 的实性小结节，或磨玻璃结节在平片上均未能清晰显示。螺旋 CT 智能化毫安低剂量扫描：96 例中，除平片所见的 13 例较大结节外，其余 83 例均为 10mm 内的实性（21 例）或磨玻璃密度结节（62）例。于 1.0mm 层厚图像上清晰可见小病灶为单纯磨玻璃密度结节或磨实两种不同密度成分组成的磨实性结节，部分还可清晰显示伸入结节内的供应，血管及结节周围的毛刺和分叶征像。为病灶定性诊断提供了有力依据。20 例患者同时进行了高分辨 CT 检查，所得影像资料与螺旋 CT 薄层重建图像所见无异。**结论** 肺部筛查早癌，可常规先摄 DR 胸部正侧位片，如胸片未发现病灶，可于 3 月内行胸部低剂量 CT 扫描，低剂量 CT 扫描是今后值得推广的胸部筛查项目。

PU-2855

胸腺原发黏膜相关淋巴组织淋巴瘤的 CT 诊断

吴艳玲
南京医科大学第一附属医院

目的 探讨胸腺原发性黏膜相关淋巴组织淋巴瘤（MALToma）的 CT 表现和诊断价值 。**方法** 回顾性搜集本院经病理证实的胸腺原发 MALToma 共 7 例。观察胸腺 MALToma 的 CT 特征，并与 6 例胸腺癌及 6 例胸腺弥漫大 B 细胞淋巴瘤的 CT 表现进行对照。**结果** 7 例 MALToma 患者中 2 例为男性，5 例为女性，年龄<40 岁者 5 例（5/7），与胸腺癌（0/6）相比（P<0.05），而与弥漫大 B 细胞淋巴瘤（6/6）比较无统计学差异；胸腺 MALToma 所有病灶均呈单侧生长（7/7），与弥漫大 B 细胞淋巴瘤（1/6）比较（P<0.05），而与胸腺癌（5/6）比较无统计学意义；所有 MALToma 病灶均呈囊实性肿块（7/7），囊变区呈小而多发，囊与囊之间分界清楚，囊壁光滑，胸腺癌囊变多呈单个大片坏死（4/6），边缘欠清，弥漫大 B 细胞淋巴瘤囊变较少见（2/6，P<0.05）；所有 MALToma 病灶均无

纵隔淋巴结肿大（0/7），胸腺癌中 2 例出现淋巴结肿大（2/6），两者比较无统计学差异，而弥漫大 B 细胞淋巴瘤均有纵隔淋巴结肿大（6/6，P<0.05）；所有 MALToma 病灶均未出现周围大血管侵犯（0/7），与弥漫大 B 细胞淋巴瘤（5/6）比较（P<0.05），而与胸腺癌（2/6）比较无统计学差异。**结论** CT 表现在胸腺原发性 MALToma 的诊断中具有一定价值。

Phantom Study on the Influence of Low Dose and Reconstruction Algorithm on Cardiac Calcification Score

Yukun Pan[1,2],MingHua Sun[2],JiaJia Wang[1,2],RuiGang Xie[2],ZhiPing Guo[2],YingHui Ge[2]
1.People's Hospital of Zhengzhou University
2.Central China Fuwai Hospital

Objectives: *To study the effects of different reconstruction algorithms combined with dose reduction protocol on calcium scoring in a thoracic phantom and confirm suitable calcium scoring correction factors between low dose protocols and reference protocol if possible.*
Methods: *The thorax phantom embedded in cylinders with different proportions of hydroxyapatite was scanned with the reference protocol (120 kv, 80 mAs, FBP) and dose reduction protocol (120 kV, 100 mAs-20 mAs, 5 mAs interval) with 256-slice scanner. Row data was reconstructed with different levels of different reconstruction algorithms. Calcifications were quantified calculating. The Agatston and volume scores, quantitative image quality parameters and CTDIvol were obtained on technical software (Philips Healthcare, Cleveland, OH, USA). Linear regressions analysis was performed, whose slopes were as correction factors.*
Results: *Overall qualitative image quality significantly improved with iDose as compared to FBP, and further improved with IMR ($p < 0.05$ all). The Agatston and volume area scores with IMR were decreased as compared to FBP ($P < 0.05$ all), they were similar when data were reconstructed with iDose and FBP ($P > 0.05$ all). At decreasing tube current, the Agatston and volume scores decreased with IMR(τb= 0.849 and 0.882 respectively, $P < 0.05$ all), however the Agatston scores increased with iDose and FBP(τb= -0.523 and -0.5, $P < 0.05$ all). the Agatston scores were similar with the lowest dose protocol (120kv, 20mAs) with iDose7 and with reference protocol and the Agatston scores with the lowest dose protocol with IMR2 need correction factors to match the Agatston scores with reference protocol, correction factors were 1.10. Dose reduction was 74.7%.*
Conclusions: *the Agatston scores with the lowest dose protocol with IMR2 and iDose7 could match the Agatston scores with reference protocol after corrected by correction factors with dose reduction up to 74.7%, correction factors for IMR2 were 1.10.*

胸膜孤立性纤维性肿瘤良恶性的 CT 影像学特征

廖蕤堃,黄显龙
中国科学院大学重庆医院（重庆市人民医院）

目的：回顾性分析 20 例经病理证实的胸膜纤维瘤（SFTP）的计算机断层扫描（CT）特征。**方法**：回顾性分析 20 例经手术及病理证实的胸膜纤维瘤的术前 CT 图像。记录患者图像病变特征，包括大小、边界、强化程度、胸腔积液和钙化等方面，并与病理组织学诊断相关联。回顾影像学和临床表现以除外复发。影像结果由两位高年资胸部影像诊断经验的放射科医师评估。统计学分析采用 SPSS17.0 统计软件进行统计评价，结果采用单因素方差分析，P ＜ 0.05 代表差异具有统计学意义。**结果**：20 例患者中，女性 11 例，男性 9 例，良性 12 例，恶性 8 例。良性肿瘤和恶性肿瘤的平均年龄分别为 55.1±18.9 和 63.7±10.4 年，差异不具有统计学意义（P＞0.05）。恶性肿瘤的中位（四分位范围）直径为 4.79（3.0-7.2）cm，恶性肿瘤为 9.4（6.1-14.5）cm，恶性肿瘤直径高于良性肿瘤，其差异具有统计学意义（p＜0.05）。肿瘤边缘分叶征，良性肿瘤 41%例（5/12），恶性肿瘤 80%例（8/10），恶性肿瘤分叶征检出率高于良性中， 差异具有统计学意义（p＜0.05）。良性肿瘤与恶性肿瘤强化程度相比，差异不具有统计学意义（P＞0.05）。钙化发生在良性肿瘤 33%例（4/12）和恶性肿瘤 87%例（7/8），恶性肿瘤钙化检出率高于良性肿瘤，差异具有统计学意义（p＜0.05）。恶性病变胸腔积液检出率高于良性病变(良性胸腔积液 8%例（1/12），恶性病变 50%例（4/8）)，差异具有统计学意义（p＜0.05）。术前抽吸活检仅 1 例病理诊断为 SFTP。随访数年（1～10 年，平均 3 年），10 例良性 SFTP 患者中 5/10 例（50%）发生局部复发。**结论**：没有明确的影像学特征以区分良性和恶性 SFTP。肿块的大小，边缘分叶状，钙化及同侧胸腔积液是预测恶性肿瘤的 CT 影像特征。在疑似病例中，应进行穿刺活检，从而取代细针穿刺。

PU-2858

螺旋 CT 支气管重建成像技术的临床应用

谷卓玉
陆军军医大学附属新桥医院放射科

目的：螺旋 CT 气管支气管树成像的方法是指在螺旋 CT 薄层容积数据采集的基础上，利用计算机的后处理技术做气道的立体重建，可重建成各种不同的二位（2D）和三维（3D）气管支气管像，将病变真实地显示出来。气管支气管 CT 重建后，可对支气管异物、新生物及气管狭窄等病变的显示和诊断提供准确的依据。**方法**：1.一般资料：随机抽取临床疑有气管支气管病变，且经支气管重建成像的 40 例患者，另选 30 例健康体检志愿者进行参照对比。2.设备和 CT 扫描条件：应用 GE Light speet VCT64 排螺旋 CT 机扫描系统，扫描范围自胸廓入口至第 12 肋骨最低点下 1cm。3.图像后处理：轴位扫描后进行矢状、冠状位由 GE Advantage Window4.5 计算机工作站进行三维重建。**结果**：1.正常支气管像：30 例中 28 例支气管影像无异常改变。SSD 表现为依所取 CT 域值的范围和高低不同，可分别获得三种 3D 图像。2.异常支气管像：40 例异常支气管像表现，腔内占位表现为 MPR 直接显示病灶；SSD 表现视支气管阻塞程度而异；MinIP 表现为气道低密度投影不延伸；CTVE 表现为腔内高密度灶。腔外肿块压迫或管壁肿瘤侵犯为 MPR 和 MinIP 均能显示狭窄并可见移位但管壁规则；SSD 表现为狭窄变形表面见弧形压迹；MPR 除显示气道不规则狭窄外；CTVE 见管腔变形或闭塞。支气管异物可清晰显示其直接征象，支气管扩张可见囊状、椭圆形、柱状含气或含气液结构，支气管狭窄可在轴位、冠状位与矢状位上清晰显示狭窄段气管或支气管的长度和狭窄程度。**结论**：胸部螺旋 CT 扫描的图像后处理，可获得各种效果的气管支气管像。MPR、SSD、MinIP、CTVE 各处理技术的配合运用，可全面了解气管支气管的外表、内壁和官腔，对于研究正常和异常支气管影像学特性有着重要价值。

多层螺旋 CT 及多平面重建在气管支气管异物诊断中的应用

王晓霞
重庆市肿瘤医院

目的探讨多层螺旋 CT 及多平面重建在气管支气管异物不同时期的诊断价值。**方法**经纤维支气管镜确诊气管支气管异物的患者 93 例，术前行多层螺旋 CT 扫描及多平面重建，根据病程长短分为：I 组（0-24 小时）；II 组（1-7 天）；III 组（7 天以上）。分别记录年龄、性别、病史、症状、体征和 CT 检查异物大小、位置及肺内继发征象。**结果** 93 例患者 3 岁以下 72 例，突然咳嗽 39 例，呼吸困难 29 例；CT 提示 42 例嵌顿于右支气管内，24 例嵌顿于左支气管内；I 组较 II 组及 III 合并肺气肿患者比例更高（p＜0.05），II 组和 III 组较 I 组及 II 组发热及合并肺炎患者比例更高（p＜0.05）。**结论**多层螺旋 CT 扫描及多平面重建技术能够准确直观地显示不同时期异物的大小、位置及其肺内继发征象，具有重要的临床应用价值。

肺结核误诊肺癌

何平[1,2],欧阳林[1,2],陈懿[1,2]
1.厦门弘爱医院
2.联勤保障部队第 909 医院

[摘要] 目的 探讨引起邻近骨质破坏的肺结核误诊为肺癌的原因。方法 对 2009 年 1 月至 2016 年 12 月我院收治的 6 例引起骨质破坏的肺结核患者 CT 影像表现进行回顾性分析研究，由 3 名主治医师及 2 名副主任医师对其 CT 表现进行分析，探究影像被误诊的原因。结果 在 6 例患者中，病灶均靠近肋骨或脊柱，并引起相邻骨质破坏，肋骨破坏骨质以内侧为重，呈虫蚀状或斑片状，范围较广，边缘轻度硬化，椎体破坏边缘呈小囊状破坏，边缘不同程度硬化，其中 4 例肺结核呈不规则软组织肿块型，2 例呈肺实变型，6 例患者均误诊为肺癌并邻近骨质侵犯，6 例患者行纤支镜或病理穿刺均为结核，治疗后出院。结论 引起骨质破坏的肺结核属于不典型肺结核，表现和肺癌类似，容易误诊，临床医生在对其诊断过程中要认真结合临床资料进行诊断与鉴别诊断，无法确诊时要尽早进行病理活检，以减少误诊误治。

双源 CT 双低剂量结合大螺距扫描在肺动脉 CTA 的应用价值

张雪
西南医科大学附属中医医院

目的:探讨双源 CT 双低剂量结合大螺距扫描在肺动脉 CTA 中的临床应用价值。
方法:选取 2017 年 1 月到 2018 年 10 月期间在本院接受肺动脉 CTA 扫描的其中 40 例患者作为本次临床试验研究的观察和分析对象。根据双源 CT 扫描管电压、对比剂剂量和螺距的不同将这 40 例患者分为对照组和观察组各 20 例的两组患者,对照组的 20 例患者以 100kV 管电压和 370mgI/mL 对比剂进行扫描,螺距 1.0；观察组的 20 例患者以 80kV 管电压和 320mgI/mL 的对比剂进行扫描,螺距 3.2。对观察组和对照组两组患者的肺动脉栓塞诊断结果、肺动脉 CTA 图像质量的评分和辐射剂量、CNR 以及 SNR 等图像参数情况进行观察和对比。

结果:观察组和对照组两组患者在肺动脉栓塞的诊断准确度、灵敏度和特异性等方面均无明显的差异,P>0.05,差异不具有统计学意义;观察组患者的肺动脉 CTA 图像质量评分 zong'f 为 134 分,平均分 4.65±0.39,对照组患者的肺动脉 CTA 图像质量评分为 120 分,平均分 3.96±0.42,P<0.05,差异具有统计学意义;观察组患者的辐射剂量、CNR 以及 SNR 三项图像参数均比对照组患者的图像参数低,P<0.05,差异具有统计学意义。
结论:采用双源 CT 双低剂量结合大螺距进行肺动脉 CTA 的扫描在不影响肺动脉栓塞诊断准确率的情况下,能够有效提高肺动脉 CTA 扫描的图像质量,减少患者的辐射剂量、CNR 和 SNR 等图像参数,降低对比剂引发的肾病情况,值得在肺动脉栓塞的临床诊断和治疗中进行推广应用。

PU-2862

双源 CT 在肺结节病影像学诊断中的应用价值分析

牛丹
陆军军医大学附属新桥医院放射科

目的:分析双源 CT 在肺结节病影像学诊断中的应用价值。**方法**:回顾性分析我院 2018 年 4 月—2018 年 6 月撷取的 50 例肺结节病患者，所有肺结节病患者均存在发热、咳嗽、咯痰、胸痛等症状，排除精神病症者、不配合检查者，所有患者均通过胸腔镜纵隔淋巴结活检，激素治疗后反复对比复查。选择双源 CT 设备检查，层厚为 5.0mm，实行连续性扫描，扫描范围为肺底至肺尖区域。针对难以鉴别的患者，可通过 CT 增强扫描进行处理，采用动态观察，给予 70ml 碘海醇，进行静脉注射,注射速率为 3.5ml/s。完成造影后，分别对动脉期、静脉期 进行 CT 值检测，所得数据进行分析。**结果**:肺内改变者 29 例,均为肺内结节影像改变,包括 18 例胸膜下多发结节者、肺内散在结节改变者、6 例肺内单发结节改变者、5 例磨玻璃样改变者。50 例肺结节病患者中,胸部淋巴结无明显肿大者 8 例、淋巴结肿大者 42 例。42 例淋巴结肿大者中，主动脉弓旁淋巴结肿大者、气管前腔静脉后间隙淋巴结肿大者各占 71%（30/42）、80%（34/42）。**结论**:肺结节病检查中,使用双源 CT 检查,不会出现数据采集位置和时间差,对肺结节的检出具有重要的临床应用价值。

The Diagnostic Value of Multi-detector CT Angiography for Catheter-related Central Venous Stenosis in Hemodialysis Patients

Letian Yang,Yuliang Zhao,Ping Fu,Tianlei Cui
West China Hospital of Sichuan University

Objectives: Central venous stenosis (CVS) is a common complication in hemodialysis patients, especially those who are dialyzed through a central venous catheter (CVC). The objective of our study was to assess the diagnostic value of Multi-detector CT angiography (MDCTA) for catheter related-CVS compared with conventional digital subtraction angiography (DSA) in hemodialysis patients.
Methods: Between October 1, 2012 and September 30, 2018, hemodialysis patients admitted to our center for suspected catheter related-CVS who received both MDCTA and DSA were retrospectively enrolled. We compared the sensitivity, specificity, accuracy, diagnostic odds ratio (DOR), positive predictive value (PPV), negative predictive value (NPV), positive likelihood ratio (PLR) and negative likelihood ratio (NLR) for

MDCTA as an alternative to DSA. Cohen’s kappa coefficient (κ) was calculated to assess inter-test agreement.
Results: A total of 1533 vascular segments in 219 patients were analyzed. Among the 280 lesions identified by DSA, 156 were correctly identified by MDCTA. MDCTA had a high specificity (96.73%) but a low sensitivity (55.71%). The accuracy, DOR, PPV, NPV, PLR and NLR were 89.24%, 37.20, 79.19%, 90.72%, 17.03, 0.4578, respectively, with a moderate inter-test agreement (κ=0.5930). In stratified analyses of vascular segments, the specificities of MDCTA were 89.93% (superior vena cava), 98.95% (left innominate vein), 95.33% (right innominate vein), 99.53% (left subclavian vein), 97.61% (right subclavian vein), 97.13% (left internal jugular vein), and 95.86% (right internal jugular vein), while the sensitivities were 90.00%, 65.52%, 66.67%, 87.50%, 40.00%, 20.00% and 8.11%, respectively.
Conclusions: MDCTA was a reliable imaging technique with high specificity in being able to diagnose catheter related-CVS in hemodialysis. However, the low sensitivity in some vascular segments diminished its value as a screening test. MCDTA seemed to have better diagnostic value for CVS in more “central” segments, such as the superior vena cava and innominate veins.

PU-2864

VEGF 及αvβ3 在恶性胸膜间皮瘤中的表达

谢晓洁,韩丹,江杰,吴莉,赵雯,赵迅冉,何波
昆明医科大学第一附属医院

目的 研究血管内皮生长因子(vascular endothelial growth factor ,*VEGF*)及整合素αvβ3 在恶性胸膜间皮瘤（malignant pleural mesothelioma, MPM）患者及大鼠中的表达情况，揭示 MPM 与血管生成之间的关系。**方法** 收集经病理确实 MPM 患者组织标本 32 例，行胸膜腔染尘法诱发 MPM 大鼠 30 只，取材后制备成石蜡切片，采用免疫组化法分别检测人及鼠 VEGF 及αvβ3 表达情况。**结果** 32 例人 MPM 中上皮型 13 例（40.63%），纤维肉瘤型 9 例（28.13%）和混合型 10 例（31.25%）。人 VEGF 免疫组化染色阳性表达率为 53.13%，其在纤维肉瘤型中表达最高，为 66.67%，其次为混合型 60.00%及上皮型 38.46%，三者表达情况差异无统计学意义。人αvβ3 阳性表达率为 28.13%，以纤维肉瘤型中表达最高，为 44.44%，其次为混合型 30.00%及上皮型 15.38%，三者表达情况差异无统计学意义。人 MPM 中 VEGF 与αvβ3 表达呈中度一致性。30 只大鼠 MPM 中纤维肉瘤型所占比例最大（63.33%），其次为上皮型（30.00%）及混合型（6.67%）。鼠 VEGF 免疫组化染色阳性表达率为 50.00%，其中混合型 100%，上皮型 80.00%及纤维肉瘤型 30.00%，三者表达情况差异无统计学意义。鼠整合素αvβ3 免疫组化染色阳性表达率为 30%，鼠混合型 2 例，均为阳性表达，上皮型 44.44%及纤维肉瘤型 21.05%，三者表达情况差异无统计学意义。鼠 VEGF 与αvβ3 表达呈中度一致性。人与鼠 VEGF 及αvβ3 表达无统计学差异 。**结论** VEGF 及αvβ3 在人和鼠 MPM 肿瘤组织中都有一定程度的表达，血管生成在 MPM 肿瘤组织生长中发挥着重要作用。

PU-2865

双向法 CT 深静脉造影技术的应用

王绍娟[1],王利伟[2]

1.南京中医药大学附属医院，江苏省中医院
2.南京市第一医院

目的 探讨双向法下肢静脉血管造影（CTV）诊断髂静脉受压综合征（IVCS）的临床应用价值。**方法** 共 43 例临床疑似 IVCS 的患者进行了 CTV 检查，其中 22 例实施了双向法 CTV 检查，21 例实施了常规间接法 CTV 检查。双向法 CTV 是经肘静脉快速注入未稀释的对比剂碘佛醇（320mg/ml，江苏恒瑞医药公司，中国）80ml，注射速率 4ml/s，在注射开始后 1 分钟时经足背静脉注入已稀释的对比剂 60ml，速率 1.5ml/s。对比剂稀释配比为 1:5。踝关节上方扎止血带，在第 1 次注射对比剂 2.5 分钟后启动下肢静脉扫描。在 CT 检查完成后通过左下肢手工注射 5ml 小分子肝素进行预防性抗凝。**结果** 两种 CTV 方法均能直接诊断 IVCS，而且能够诊断无症状的轻度髂静脉受压情况。CTV 共诊断 IVCS 患者 32 例。27 例 IVCS 伴有下肢深静脉血栓形成（DVT），左侧髂总静脉平均直径为 3.23±1.45mm，平均受压率为 67%。伴有 DVT 的 IVCS 患者、不伴有 DVT 的 IVCS 患者与非 IVCS 患者的左侧髂静脉平均直径大小两两比较的差异均有显著性意义。双向法 CTV 的图像质量评分高于间接法，差异有显著性意义。**结论** 双向法 CTV 是一种可行的新型静脉造影方法，图像质量优于常规间接法 CTV 检查，有可能成为 IVCS 检查的主要标准。

PU-2866

SSF 技术在冠状动脉 CTA 中的应用

马佳佳
安徽医科大学第三附属医院

目的 探讨冠状动脉追踪冻结技术（snapshot freeze,SSF）在冠状动脉 CTA 中的应用价值。 方法 连续收集 69 例疑似冠心病患者行冠状动脉 CTA 检查，选取最佳重建时相应用标准算法和 SSF 算法将图像进行重建。分别测量出应用标准算法和 SSF 算法图像中右冠状动脉中段血管轴截面移动伪影以及附近脂肪组织的 SD 值，计算移动伪影指数（MAI）值；采取双盲法由两位高年资主治以上医师按照冠状动脉 15 段分段法，采用 5 分制评分法评价两组图像质量。对两组算法图像的 MAI 值和质量评价进行比较和量化分析。 结果 标准算法组 MAI 高于 SSF 组 MAI，差异有统计学意义（$p<0.05$）;图像质量评分 SSF 组在右冠状动脉、左前降支及左旋支血管评分高于标准算法组（p 均<0.05）；左主干差异无统计学差异（$p>0.05$）。 结论 与标准算法相比 SSF 算法技术可消除移动伪影，改善图像质量，具有较好的应用价值。

PU-2867

胸膜少见肿瘤的 CT 表现分析

吴硕,李邦国
遵义医科大学附属医院

目的 分析胸膜少见肿瘤的 CT 表现，提高对该类疾病的认识和诊断水平。
方法 回顾性分析本院 2012 年 1 月-2019 年 3 月经病理证实的 24 例胸膜少见肿瘤的临床、影像及病理资料，总结 CT 表现特征。
结果 24 例胸膜少见肿瘤中，孤立性纤维瘤 7 例，肿块平均最大径约 11.9cm，5 例 CT 平扫密度不均匀，5 例增强扫描“地图样”强化，3 例渐进性强化；原始神经外胚层肿瘤 5 例，4 例肿块平均

最大径约 6.7cm，1 例表现为双侧胸壁软组织不均匀增厚，4 例 CT 平扫密度不均匀，3 例增强扫描部分边缘延迟强化，4 例伴肋骨转移；神经鞘瘤 4 例，肿块平均最大径约 4.9cm，CT 平扫密度范围约 10-30HU，增强扫描轻度强化；淋巴瘤 3 例，CT 主要表现为胸膜不均匀增厚，增强扫描轻度强化；畸胎瘤 2 例，肿块平均最大径约 11.2cm，CT 表现为胸腔内含有脂肪、钙化及水样密度的肿块，增强扫描不均匀强化，1 例可见双侧内乳动脉供血；滑膜肉瘤 2 例，肿块平均最大径约 9.8cm，CT 平扫密度不均匀，增强扫描明显不均匀强化；脂肪肉瘤 1 例，右侧胸腔巨大软组织密度肿块，最大径约 15.4cm，密度不均匀，增强扫描轻度不均匀强化。

结论 胸部 CT 检查是发现和诊断胸膜少见肿瘤的重要手段，部分胸膜肿瘤 CT 表现具有一定的特征性，结合肿瘤的形态、密度、强化特点及与周围结构的关系有助于提高术前诊断的准确性。

PU-2868
低剂量与超低剂量 CT 条件下对计算机辅助检测系统肺容积定量的影响

朱彦瑾,黄晓旗,王雷,赵凡惠,李建龙,郭佑民
延安大学附属医院

目的：
探讨低剂量与超低剂量扫描条件下计算机辅助检测系统（computer-aided detection ，CAD）对肺容积定量的影响。

方法：采用联影 128 排 CT 对 58 例患者分别进行低剂量（120KV,40mA），超低剂量（120KV,3mA）扫描，参数设置：准直 40mm，螺距 1.0875，转速 0.5s/r，扫描层厚 5mm。低剂量组采用 FBP 重建，超低剂量组采用 FBP 和 Karl 迭代重建，重建算法为骨算法，层厚 1mm，FOV35mm，矩阵 1024x1024。在肺动脉分叉层面计算肺动脉主干图像噪声（SD 值），将数据导入“Dexin-Fact”3D 数字肺检测及分析平台，并定量测量全肺容积。两名放射科医生 5 分法主观评价图像质量（5：优秀，图像质量清晰，无噪声，对比度好；4：良好，图像质量好，噪声不明显，对比度良好；3：一般情况下，图像质量在 2-4 之间；2：不好，图像质量较差，噪声大，结构对比较差。1：图像质量差，噪声大，结构不能识别）。采用单因素方差分析比较各组肺容积、噪声值及主观评分间的差异，P＜0.05 差异具有统计学意义。

结果：
低剂量和超低剂量有效辐射剂量分别为 1.70±0.13mSv 和 0.13±0.01mSv，下降约 92%。低剂量组、超低剂量组 FBP 重建及超低剂量组 Karl 迭代重建相比较，图像噪声及图像主观评分差异具有统计学意义（P〈0.05）；肺容积差异无统计学意义（P=0.99）。

结论：与低剂量相比，超低剂量胸部 CT 扫描的辐射剂量可减低约 92%。超低剂量 CT 可用于胸部肺容积的定量研究。Karl 迭代重建技术在进一步降低图像噪声提高图像质量前提下不影响肺容积定量。

PU-2869
不同噪声指数联合迭代重组算法对不同体质量指数患者行冠状动脉成像的图像质量和辐射剂量的影响

李俊,温云
重庆三峡中心医院

目的 探讨采用不同噪声指数（NI）联合迭代重组算法对不同体质量指数（BMI）患者行冠状动脉成像的图像质量和辐射剂量的影响。

方法 收集 80 例疑似冠心病患者，根据 BMI 将患者分为 A 组(16kg/㎡≤BMI≤23kg/㎡)和 B 组（24kg/㎡≤BMI≤31kg/㎡）,每组 40 例，再将 A,B 组患者随机分为 4 个亚组，每个亚组 10 例。80 例患者均应用 256 层 CT 以前瞻性心电门控技术单个心动周期扫描结合冠状动脉追踪冻结技术（SSF）行冠状动脉 CT 成像，管电压 100KV,采用自动管电流调节技术，A、B 两组 4 个亚组 NI 分别设定 17、20、23、26，采用权重为 60%的迭代重组算法进行重组。对图像质量进行客观评价（信噪比和对比噪声比）和主观评价，并记录辐射剂量。采用方差分析或 Kruskal-Wallis 比较各组图像质量和辐射剂量的差异。

结果 A 组各亚组的图像质量评分差异有统计学意义（P＜0.05）。A 组 NI=26 亚组图像的信噪比和对比噪声比与其他各组差异有统计学意义（P＜0.05），其余 3 组间的差异无统计学意义（P＞0.05）。A 组 NI=23 与 NI=26 亚组的有效剂量（ED）差异无统计学意义（P＞0.05），其余各组两两对比差异有统计学意义（P＜0.05）。B 组各亚组的图像质量评分差异有统计学意义（P＜0.05）。B 组 NI=23 组的信噪比和对比噪声比与其他各组差异有统计学意义（P＜0.05），B 组 NI=20，NI=23 与 NI=17 亚组的有效剂量（ED）有统计学意义（P＜0.05）。

结论 在保证图像质量不影响诊断的前提下，根据 BMI 设置不同 NI 并联合迭代重组算法能够有效降低冠状动脉成像的辐射剂量。对于 16kg/㎡≤BMI≤23kg/㎡的患者推荐采用的 NI 值为 23；对于 24kg/㎡≤BMI≤31kg/㎡的患者推荐采用的 NI 值为 20。

MRI 扫描和上消化道造影测量食管癌病变长度的价值及与实体肿瘤长度的符合程度

汪颖姝,曲金荣,王昭琦,刘翠翠
河南省肿瘤医院

目的：探讨 MRI 扫描和上消化道造影测量食管癌病变长度的价值及与实际病变长度的符合程度。

方法：回顾性分析经手术病理确诊的 60 例食管癌患者的临床及影像资料。所有患者术前均采用 MRI 扫描和上消化道造影检查，MRI 扫描序列包括 T2WI 矢状位扫描和 T1WI 增强扫描。以食管癌病理标本收缩比回推至人体内实际长度为标准，采用 Pearson 相关性检验分析各检查方法测量食管癌病变长度与实体肿瘤长度的相关性。采用 x^2 检验比较各检查方法测量食管癌病变长度与实体肿瘤长度符合程度的差异。

结果：食管癌平均收缩为术中长度的 90%±10%，患者的实体肿瘤平均长度为（33.87±14.34）mm。上消化道造影、MR T2WI 矢状位扫描、MR T1WI 增强扫描测得食管癌病变平均长度分别（44.58±14.95）mm、（46.25±14.65）mm、（46.77±14.13）mm，与实体肿瘤长度的相关性均较高（r 值分别为 0.732、0.729、0.708，P 均＜0.05）。对于侵及深肌层或外膜的食管癌病变，MR T2WI 矢状位扫描及 MR T1WI 增强扫描测量食管癌病变长度与实体肿瘤长度的符合程度均高于上消化道造影，差异均有统计学意义（x^2=5.740、4.413，P 均＜0.05）。

结论：MRI 扫描和上消化道造影测量食管癌病变长度均较准确，对于侵及深肌层或外膜的病变，MR 测量食管癌病变长度与实体肿瘤长度的符合程度高于上消化道造影。

PU-2871
采用 256 层螺旋 CT 对房颤患者肺静脉及左心房解剖变异的分析

田伟伟,李彩英,卓利勇,袁迎芳,陈琛,杨兰
河北医科大学第二医院

目的:通过 256 层螺旋 CT 在射频消融术前获得房颤病人的肺静脉及左心房的解剖变异，指导射频消融的进行。
方法:
对 180 例房颤患者（男性 113 例，女性 67 例，平均年龄为 60.67±10.45 岁）和 180 例非房颤患者（男性 96 例，女性 84 例，平均年龄为 59.14±9.77 岁）行 256 层螺旋 CT 检查，分别测量并评价肺静脉的数目、变异、左心房体积及左心房憩室/副心耳，分析肺静脉及左心房解剖变异与房颤发生的关系。
结果:
房颤组与对照组总的肺静脉解剖变异发生率为 52 例（28.89%）和 44 例（24.44%），两者之间没有统计学差异(P>0.05)。房颤组所有变异中，发生率最高的为左侧肺静脉短共干（14.44%）,其次为右中副肺静脉（10.56%）。
房颤组与对照组相比左心房体积明显扩大（111.43±41.52mm^3 vs 82.15±21.13mm^3，P< 0.001）。
两组左心房憩室及副心耳的发生率（30.56%和 25.00%，P=0.24），（6.11%和 9.44%,P=0.24）相似。左心房憩室/副心耳均在左心房在右前上壁更常见，且常为单发，两组之间均无明显统计学差异（P=0.42、P=0.93）。
结论：
肺静脉变异常见，个体差异大；256 层螺旋 CT 能为房颤射频消融提供详细的肺静脉及左心房的解剖学信息，有助于电生理学家安全有效地进行射频消融手术。

上海中医药大学附属上海市中西医结合医院

【摘要】 目的:探讨下肢动脉管腔内密度衰减梯度（TAG）值测量技术的优化方案，并分析优化后的 TAG 值在下肢动脉硬化闭塞症（ASO）临床分级中的价值。**方法**:回顾性分析上海中医药大学附属上海市中西医结合医院 2016 年 1 月至 2018 年 8 月病例资料完整的 ASO 患者 53 例，总计 88 条股浅动脉入组。ASO 患者 88 条动脉中，Fontaine 分级：Ⅰ级 22 条、Ⅱ级 12 条、Ⅲ级 10 条、Ⅳ级 44 条。所有病例均在入院 0～14 天（平均 3 天）行下肢动脉 CTA 检查。由两名有经验的医师利用 CT 后处理软件将股浅动脉开口处（腹股沟韧带中点深面）至末端（股骨内外髁上缘）划定为分析区域，分别以 10mm、20mm、30mm 为间隔测量计算 TAG 值（ROI3.0mm^2），然后以 ROI 为 1.0mm^2、3.0mm^2、4.0mm^2（10mm 间隔）测量计算 TAG 值，分别对不同间隔及不同 ROI 的 TAG 值行一致性分析。结合临床其他因素选出最优测量方案，并用方差分析比较优化后的 TAG 值在下肢动脉硬化闭塞患者 Fontaine 分级的差别。**结果**:①3 组不同间距测得的 TAG 值一致性较好（r=0.963，p<0.001；r=0.914，p<0.001）。②3 组相同层面不同大小 ROI 测量计算出的 TAG 值一致性良好（r=0.999，p<0.001；r=0.933,p<0.001 ）。③比较不同 Fontaine 分级的 TAG 值，差异有统计学意义。组间比较，Ⅰ级与Ⅳ级之间差异具有统计学意义（P<0.05），其余组间差异无统计学意义（P>0.05）。**结论**: 结合实用性、可重复性及可操作性等综合因素，下肢 TAG 技术推荐 20mm 间距，1.0mm^2ROI 为

最优测量方案，优化后的 TAG 值能较好地反映股浅动脉不同的临床分级，可为临床治疗提供参考价值。

PU-2873

Compared with left atrium, left atrial appendage function and myocardial remodeling play a greater role in recurrence of AF after radiofrequency ablation

Xin Tian,Caiying Li,Yingfang Yuan
The second hospital of Hebei Medical University

Objective: To quantitatively measure the left atrial and left atrial appendage function with 256-slice spiral CT, including the volume strain, and to evaluate the role of left atrium and left atrium appendage in the recurrence of atrial fibrillation (AF) after radiofrequency ablation.
Methods: 63 patients with AF who underwent radiofrequency ablation for the first time were enrolled in this study. The average age was 59.43 (+10.67), BMI was 25.99 (+3.60 kg/m2), and 38 (60.3%) males. The median follow-up time was 19 (4-24) months, and 20 (31.7%) recurred. According to the recurrence of AF after radiofrequency ablation, the patients were divided into recurrence group (n = 20 cases) and non-recurrence group (n = 43 cases). All patients underwent 256-slice spiral CT examination before operation. The original image was reconstructed from 5% to 95% of the cardiac cycle and the interval was 10%. The maximum volume of left atrial appendage (LAAVmax), minimum volume of left atrial appendage (LAAVmin), left atrial appendage emptying fraction (LAAEF), and left atrial appendage ejection volume (LAAEV), left atrial appendage volume strain (LAA-VS), maximum volume of left atrium (LAVmax), minimum volume of left atrium (LAVmin), left atrial emptying fraction (LAEF), left atrial ejection volume (LAEV), and left atrial volume strain (LAVS) were measured and calculated during the whole cardiac cycle. They were processed by statistical methods.
Results: The CHA2DS2-VASc score of recurrence group was higher than that of non-recurrence group ($P < 0.05$). According to the analysis of clinical data, the proportion of patients with persistent atrial fibrillation and heart failure in recurrence group was higher than that in non-recurrence group ($P<0.05$).

The LAAVmax, LAAVmin, LAVmax and LAVmin in the recurrence group were higher than those in the non-recurrence group ($P < 0.05$), while LAAEF, LAEF and LAA-VS in the recurrence group were lower than those in the non- recurrence group ($P < 0.05$). There was no difference of LA-VS between the recurrence group and the non- recurrence group. Multivariate Cox proportional hazard regression analysis showed that LAAEF was an independent predictor of recurrence after radiofrequency ablation of AF (HR: 0.790 95% CI: 0.657-0.950 $P = 0.012$). ROC curve analysis showed that LAAEF < 44.68% had the highest predictive value for recurrence after radiofrequency ablation (area under curve 0.817), sensitivity was 90%, specificity was 67.4%.
Conclusion: LAAEF is a predictor of recurrence after radiofrequency ablation of atrial fibrillation. Compared with left atrial volume strain, left atrial appendage volume strain which represented fibrosis of left atrial appendage, is more useful in

evaluating myocardial remodeling associated with recurrence of atrial fibrillation after radiofrequency ablation.

右侧肾上腺静脉 CT 平扫和增强的显示率

谢瑞刚,张飞飞,张辉,孙明华,安恒彬,林青,葛英辉
阜外华中心血管病医院 河南省人民医院心脏中心

背景：右侧肾上腺静脉短而细，在肾上腺静脉取血术中右侧较左侧难以显示，CT 影像可显示右侧肾上腺静脉。
目的：评价右侧肾上腺静脉 CT 平扫和增强的显示率。
材料与方法：收集我院 2018 年 7 月~2019 年 6 月肾上腺区 CT 扫描者 100 例，男 56 例，女 44 例，年龄 11~72 岁，平均 40.5 岁，CT 平扫 32 例（男 18 例），CT 增强 28 例（男 16 例），CT 平扫加增强 40 例（男 22 例），CT 扫描设备为西门子 Force，自动 kV，自动 mAs，对比剂为优维显 370g/dL，对比剂注射剂量为 1.0ml/kg，流率为 4.0ml/sec，CT 增强扫描的 CT 值监测平面为腹主动脉腹腔干水平，触发阈值为 100HU，扫描后延迟约 30sec 重复扫描，CT 平扫和增强扫描后，由 2 位医师分别对 CT 平扫和 CT 增强图像进行分析，评价右侧肾上腺静脉的显示率。
结果：右侧肾上腺静脉 CT 平扫的显示率为 43/72（17（男 10 例）/32，26（男 16 例）/40），CT 增强的显示率为 58/68（24（男 13 例）/28，34（男 19 例）/40），CT 平扫显示右侧肾上腺静脉者，CT 增强均同时显示右侧肾上腺静脉。
结论：右侧肾上腺静脉 CT 增强的显示率较高，高于 CT 平扫。

PU-2875

镜像右位心与正常人心功能指标的比较研究

李妍姣
深圳大学总医院

目的 研究对比静息状态下镜像右位心与正常人的心功能指标的差异，为相应镜像右位心患者心功能退化和心衰的发生发展提供参考。 方法 回顾性分析厦门大学附属东南医院 2006 年 2 月至 2018 年 7 月经超 声心动图及胸片诊断为镜像右位心且不合并其他异常畸形的患者 30 例（ 其中男 18 例，女 12 例）临床资料，与 30 例正 常心志愿者对比分析左心室射血分数（ EF）、左心室缩短分数（ FS）、心率（ HR）、每搏输出量（ SV）、每分输出量（ CO）等心功能指标，比较两者间是否存在明显差异。
结果 镜像右位心患者的心率、左室射血分数、左心室缩短分数、每搏输出量、每分输出量分别为（ 80±11. 32）次/min、（ 0. 57±0. 42）、（ 0. 37±0.20）、（ 54. 43±10. 90）mL 和（ 5.03±0. 35）L/min，正常人分别
为（ 77. 57±9.83）次/min、（ 0.60±0. 32）、（ 0. 32±0. 3）、（ 59. 63±10.27）mL 和（ 4. 20±1. 13）L/min。2 组人群比较，心率、左室射血分数、左心室缩短分数、每搏输出量、每分输出量差异无统计学意（ P＞0. 05）。
结论 镜像右位心患者与正常心人群心功能指标无明显区别。

PU-2876

采用 256 层螺旋 CT 对不同分型房颤患者肺静脉形态及开口方 向的定量研究

田伟伟,李彩英,袁迎芳,卓利勇,杨兰,陈琛
河北医科大学第二医院

目的：通过 256 层螺旋 CT 在消融术前获得不同类型房颤患者的肺静脉形态结构及开口方向，分析其与房颤发生发展的关系。

方法：

入选 131 例房颤患者（其中阵发性房颤 84 例，持续性房颤 47 例），阵发性房颤组男性 45 例，女性 39 例，平均年龄为 59.86±11.41 岁；持续性房颤组男性 34 例，女性 13 例，平均年龄为 62.79±9.32 岁；收取 90 例窦性心律者作为对照组，男性 56 例，女性 34 例，平均年龄为 59.42±9.10 岁，行 256 层螺旋 CT 扫描,分别测量并评价肺静脉径线、椭圆度、从开口到第一分叉的距离及开口方向，比较不同类型房颤患者之间的差异。

结果：

与正常组相比，房颤组右上肺静脉开口的短径及截面积、左上肺静脉开口短径、双下肺静脉开口短径均显著增大($P<0.05$)，而副肺静脉及肺静脉共干的开口径线及截面积两组无差异($P>0.05$)。且持续性房颤组四支主肺静脉的长短径及截面积、肺静脉共干的长径及截面积均较阵发性房颤组增大($P<0.05$)。此外，房颤组副肺静脉的长短径均小于四条主肺静脉，肺静脉共干的长短径均大于四条主肺静脉，且有统计学意义（$P<0.001$）。

不同分型房颤患者肺静脉的椭圆度及第一分支到肺静脉口的距离两组之间均无统计学差异($P>0.05$)。汇入左心房右侧的肺静脉口部较左侧更接近于圆形（$P<0.001$）。肺静脉共干患者肺静脉口部更接近于卵圆形（$P<0.05$）。

每个患者肺静脉走向变异范围较大，房颤组中双上肺静脉向上向前走行，双下肺静脉向后向下走行。不同性别房颤患者肺静脉的走向没有统计学差异（$P>0.05$）。

结论：

不同分型房颤患者各肺静脉之间的径线、形态、走向变异较大；256 层螺旋 CT 左心房肺静脉成像可以对左心房及肺静脉提供详细的解剖形态学信息，为临床治疗方案制定提供影像依据。

A Comparative Study of Ventricular Myocardial Strain in Hypertensive Heart Disease by MR Tissue Tracking Technique

Mengyao Hu,Sisi Yu,Jingyang Wen,Tian Zheng,Lianggeng Gong
The Second Affiliated Hospital of Nanchang University

Objective: To explore the differences and elucidate the effect of hypertension Of left and right ventricular strain and remodeling in patients with hypertensive heart disease (HHD) by MR tissue tracking technique .

Methods:36 HHD patients and 20 healthy volunteers were grouped according to left ventricular ejection fraction (LVEF≥50%,LVEF<50%), left ventricular diameter (LVD)[whether LVD was enlarged (female LVD > 54mm, male LVD > 59mm)divided to centripetal or centrifugal remodeling group] and atrium area(atrial area > 24 cm^2:the bilateral atrium was normal, only the left atrium was enlarged,the bilateral atrium was enlarged), respectively.
Results: Overall 36 HHD patients were finally analyzed,the global radial, circumferential and longitudinal peak strain(GRPS,GCPS,GLPS) of left and right ventricle were lower than those in normal group, and with the decrease of ejection fraction,all showed decreasing trends (P<0.05).LV concentric remodeling changed to acentric remodeling,LV GRPS25.23±6.85%vs.11.37±4.03%,GCPS-12.71±3.82% vs.-6.94±3.08%; RV GRPS 21.06±5.06%vs.11.02±4.80%,GCPS-9.89±2.96%vs.-4.55±2.13%, GLPS-16.11±4.71%vs.-9.98±3.80%(P<0.05).According to atrium area, LV GRPS27.20±6.80 vs.22.19±6.60%,10.58±4.56%,GCPS-13.53±4.86%vs.-10.85±2.84%,-7.13±1.53% ;RV GRPS23.38±5.33%vs.17.43±4.71%, 11.04±3.59%,GCPS-11.30±4.07% vs.-7.54±3.17%,-4.78±1.75%(P<0.05).ROC curve showed that GLPS is more sensitive to assess ventricular remodeling.The cut-off values were - 13.43% and - 16.74% respectively,with a sensitivity of 89% and 82%, a specificity of 90% and 89 % (AUC = 0.90 and 0.86, respectively).
Conclusions: Hypertensive heart disease not only affects the left ventricle, but also contributes to right ventricular remodeling. There are differences in left and right ventricular remodeling and synergy in the evolution process. The degree of bilateral ventricular remodeling can be determined from the perspectives of ejection fraction retention, left ventricular configuration and atrial involvement. MR myocardial strain quantification, as a sensitive index of functional remodeling, especially longitudinal strain, can provide earlier and more accurate information for ventricular remodeling in HHD.

PU-2878

17 例囊腔型肺癌影像学误诊分析

古健炜,王小平,林艺凯,刘端一
厦门大学附属第一医院

目的
肺癌是发病率最高的恶性肿瘤，近年来囊腔型肺癌的发现逐渐增多，作为肺癌的少见类型，临床误诊率较高，误诊常延误治疗，预后较差。本文对 17 例囊腔型肺癌的进行了误诊分析，旨在提高对于该疾病的影像诊断水平。
方法
收集本院 2016.06.01-2019.04.30 术前/初次检查误诊，后经手术、病理证实为囊腔型肺癌的 17 例病例，用基本统计学方法分析归纳其临床特征、误诊情况及影像学特征，分析其影像学表现、误诊原因，并将误诊疾病与该疾病进行对比分析。检索 PubMed、CNKI 和万方数据库，收集囊腔型肺癌的个案报道及综述文章，进一步分析。
结果
临床资料：17 例中男性 12 例，女性 5 例，平均年龄 54.4 岁。所有病人均经手术病理证实为囊腔型肺癌。11 例患者有重度吸烟史，6 例有肺大疱病史，4 例既往有肺癌病史。

误诊统计：误诊为肺气囊/肺大泡 9 例（52.9%）；肺结核空洞 5 例（29.5%）；真菌感染 2 例（11.9%）；支气管囊肿 1 例（5.7%）
影像学表现：初次检查平均直径 17mm，6 例有连续观察，4 例有增大，5 例有壁增厚。11 例位于上肺；圆形/类圆形 15 例，不规则型 2 例；边缘分叶状 5 例，短毛刺 10 例，长毛刺 3 例；瘤肺界面毛糙/模糊 13 例（76.4%）；单腔 13 例（76.4%），多腔 4 例；内壁不光滑 10 例(58.8%)，壁结节 6 例（35.2%）；胸膜凹陷征 9 例(52.9%)，卫星灶 0 例。增强扫描壁强化 5 例(29.4%)。
结论
囊腔型肺癌虽然具有一定的 CT 特征，但总体仍缺乏特异性表现。易误诊的疾病主要是肺气囊/肺大泡、肺结核空洞。连续定期观察是最可靠的确诊办法，囊腔体积增大、囊壁增厚、出现壁结节都支持囊腔型肺癌的诊断。此外，囊腔内/外界面粗糙、短毛刺、壁强化具有一定的提示作用，卫星灶的出现具有一定的排除意义。因此仔细分析 CT 征象、连续定期观察，对于囊腔型肺癌的诊断有重要意义。

PU-2879
肺泡蛋白沉积症的高分辨 CT 诊断分析

刘国芳
陆军军医大学第二附属医院（新桥医院）

目的探讨肺泡蛋白沉积症的高分辨 CT(HRCT)的影像表现,提高对该疾病的认识及诊断;因其治疗方法特殊,因此 HRCT 准确诊断对临床十分必要。方法回顾性分析 2009 年 1 月至 2018 年 1 月期间 20 例经病理证实的肺泡蛋白沉积症患者的肺部 HRCT 表现,归纳其特征。结果肺泡蛋白沉积症分布肺内随机,无肺段叶、肺野分布规律。HRCT 主要影像表现有以下五点:磨玻璃影(GGO ground glass opacity) 20 例,"铺路石征"17 例,"地图样改变"13 例,气管走行自然、管腔清晰的空气支气管征 3 例,蜂窝状片状影 2 例。另外,双侧胸膜轻度增厚且无胸腔积液 11 例,纵隔可见淋巴结但淋巴结不肿大 5 例。结论 PAP 的 HRCT 表现有一定特征,肺内分布随机,主要以边界清晰的 GGO 为基本表现,"铺路石征""地图样表现"常见,发展较重或合并其它类型感染时可出现支气管走行自然的"空气支气管征"及"蜂窝状影"; PAP 有可能累及胸膜出现轻度胸膜征像;纵隔淋巴结不肿大支持其诊断。

双源 CT 对猪急性心肌挫裂伤的左心功能评价及实验研究

欧陕兴[1],张莉[1],华黎电[1],欧舒斐[2],彭光明[1]
1.中国人民解放军南部战区总医院
2.中国人民解放军南部战区空军医院

目的：探讨双源 CT 评价猪急性心肌挫伤及心功能损伤程度。
1 材料与方法
1.1 实验材料 健康雌性巴马小型猪 16 头，日龄 150-180 日，体重 15-26KG，平均体重 18.64KG；身长（耳根至尾根）60-72cm，平均 64.57cm。监测生命体征变化（心跳、呼吸、平均动脉压）。BIM-Ⅱ型水平撞击器，制作创伤模型，驱动力 7.01KN，截面半径 1.9cm，胸壁内压缩 4cm。创伤即刻、2h、4h、8h 进行 CT 分析。10%KCl 处死动物，沿左室短轴剖面切开，切面厚度 5mm，TTC 组织染色。
1.2 心功能与统计学分析

左室射血分数(LVEF)，左室收缩期/舒张期长轴、短轴长径，左室短轴短缩率（LVFS），左室舒张期/收缩期室壁厚度变化值（测量撞击点），所测数据以均数±标准差表示，SPSS 软件行单因素方差分析。
2.结果
2.1 平均动脉压创伤 创伤后即刻时最低，2h、4h、8h 逐渐升高。局部明显肿胀、CT 密度减低，5 例少量心包积液。撞击后 2H，左心室舒张和收缩功能较撞击前减低。（结果见表格 1）.
2.2 EF：创伤后即刻、2H、4H、8H 的 EF 值下降，分别约 10.47%、17.68%、13.14%、0.82%（P＜0.05）；创伤后 4H、8H 的 EF 值（P>0.05）
2.3 创伤前后各时间点短缩率，分别为 17.14%、12.02%、15.17%、13.03%、16.42%（P>0.05）。
2.3 左室舒张期/收缩期室壁厚度变化值：创伤前室壁厚度差平均 0.47cm，创伤后即时、2H、4H、8H 各时间点室壁厚度差，分别 0.34cm、0.21cm、0.32cm、0.41cm，其中创伤后 2H 室壁厚度差与创伤前之间存在显著性差异（P＜0.01）。
结论：双源 CT 能准确评价猪急性心肌挫伤及左心功能损伤。
*2012 年国家自然基金（编号 61273249）：基于多模医学图像信息融合的心脏创伤自动评价。

PU-2881

Evaluation of cardiac function in patients of acute chest pain with non-gated triple rule-out CTA using 16 cm detector CT

Chen Wang
Xuanwu Hospital, Capital Medical University

Purpose: To validate the feasibility of measuring cardiac function with free breathing non-gated triple rule-out CTA in patients of acute chest pain using a 16 cm detector CT.
Materials and methods: Study protocol was approved by the institutional review board. Non-gated Triple rule-out CTA were performed with a 16cm detector CT scanner (GE revolution), on patients of acute chest pain. The CTA protocol includes a sequential one heartbeat cardiac CTA without ECG gating under free breathing and a spiral scan from the heart to the top of thorax. 1.25 mm axial images of the heart were reconstructed at each 5% R-R interval of the simulated ECG for cardiac function evaluation, including the ejection fraction of left ventricle (LVEF), left atrium (LAEF) and right ventricle (RVEF). 0.625 mm images at the best phase were also reconstructed for CTA evaluation, as well as the axial images of the thoracic aorta and pulmonary arteries regions. Cardiac function data was measured automatically by the work station and semi-automatically by two independent observers. The accuracy of target phases determination and cardiac function evaluation of the work station was evaluated. The objective image quality score (4 points) of CTAs of coronary arteries, and the mean CT value and contrast to noise ratio (CNR) of thoracic aorta and pulmonary arteries were also evaluated.
Results: Totally 24 patients received triple rule-out CTA. Cardiac function measurements were successful in all the cases, with a mean LVEF of 56.77±12.27, LAEF of 42.07±11.82, and RVEF of 46.21±12.65. The accuracy of end-diastole and end-systole determination was 100%. The average image quality score of all coronary

segments was 3.04±0.43. The mean CT value and CNR of thoracic aorta, pulmonary arteries were 487.11±77.59Hu, 549.76±92.26Hu and 16.93±3.88，19.40±5.70 respectively. The total DLP of the CTA scan was 358.67±50.96 mGy*cm.
Conclusion: Cardiac function can be measured using the scan data from non-gated triple rule-out CTA, providing additional information for acute chest pain patient management.
Clinical relevance: Coronary artery, cardiac chamber and cardiac function evaluation with non-gated triple rule-out CTA can be useful for emergent management and prognosis prediction of patients with acute chest pain, especially those suspected of patients with abnormal heart functional changes.

64 排螺旋 CT 肺动脉 CTA 扫描技术的探讨

伍希,李征,吴蓉,马绍文
湘雅常德医院

目的：探讨 64 排螺旋 CT 肺动脉 CTA 的扫描技术。
方法：选择本院 30 例需行肺动脉 CTA 检查的患者为研究对象，均予 64 排螺旋 CT 进行扫描，扫描时均用 35ml 碘海醇，流速为 5ml/s，扫描区域为肺尖至膈水平，将 ROI 感兴趣区放置上腔静脉，监测法与目测法同时进行，当上腔静脉出现造影剂立即启动扫描。将扫描完后的数据进行三维重建，然后对肺动脉图像进行分析。
结果：30 例患者肺动脉图像均显示良好，无肺静脉及其他血管影干扰。
结论：64 排螺旋 CT 肺动脉 CTA 扫描，采用流速为 5ml/s，低浓度（35ml）碘海醇，将 ROI 感兴趣区放置上腔静脉，监测法与目测法同时进行的扫描技术,能够抓住最佳扫描时间，可以提供无其他血管污染的优质的肺动脉图像，为临床提供清晰可靠的影像学资料。

PU-2883

Observer variability for CAD-RADS categorization based on coronary stenosis severity in subjects with stable chest pain : impact on patient management

Liping Yang,Kezheng Wang
PET-CT/MR Department of Cancer Affiliated Hospital , Harbin Medical University

Objectives: The aim of the study was to evaluate inter-observe variability among multiple readers for CAD-RADS categorization of coronary stenosis severity in subjects with stable chest pain and their potential effect on patient management.
Methods: A prospective study was carried out upon 102 patients with coronary artery disease, who underwent coronary computed tomography angiography(CTA).The images were categorized using the Coronary Artery Disease-Reporting and Data System(CAD-RADS) proposed by the society of Cardiovascular Computed Tomography based on coronary stenosis severity. For per-patient analysis, agreement of seven radiologists was analysed by using Cohen k statistics. Discrepancies were correlated with risk

evaluation and patient management. For affected per-coronary analysis, multivariate analysis variance was performed to assess the effect of coronary stenosis characteristics and image quality on observer disagreement.
Results: Pair-wise inter-observer agreement was moderate(mean k 0.64,95%CI 0.60-0.72).A discordant CAD-RADS categorization was found in 27%(578 of 2142) by taking all possible reading pairs into consideration(21 possible combinations of observer pairs x 102 patients).Nearly one third of these discrepant readings(186 of 578) would have potentially led to substantial patient management. Additionally, extensive calcification (calcium score 101~400 and > 400),diffuse stenosis(>3cm) and location in the distal third of coronary artery significantly reduced observer agreement on assessment of coronary stenosis severity.
Conclusion: Inter-observer agreement for CAD-RADS categorization based on coronary stenosis severity is moderate in this prospective study. Discrepancies in stenosis severity categorization were associated with extensive calcification, location and length of coronary stenosis, which may resulted in different patient management.

PU-2884
左心耳解剖结构与心房颤动射频消融术后复发的关系

袁迎芳,李彩英,田伟伟,卓利勇,杨兰,陈琛
河北医科大学第二医院

目的 采用 256 层螺旋 CT 定量评价左心耳解剖结构与房颤射频消融术后复发的关系。
方法 研究纳入 83 例首次进行射频消融术的房颤患者，平均年龄 60.36±10.11 岁，男性 49 例（59%）。所有患者术前均行 256 层螺旋 CT 检查，测量左心房体积、左心耳体积、左心耳开口周长、短径、长径、深径并收集患者临床资料。83 例房颤患者行射频消融术后中位随访时间 19（4-24）月，27 例（32.5%）患者复发。根据有无复发分为复发组（n=27 例）和未复发组（n=56 例）。
结果 对临床资料进行分析，复发组持续性房颤患者及心衰患者较未复发组比例更高，CHA_2DS_2-VASc 评分更高（P＜0.05）；对左心耳解剖结构分析，左心房体积、左心耳体积、左心耳开口周长、短径、长径、深径，以上参数复发组均大于未复发组（*P*＜0.05）；多因素 Cox 比例风险回归分析显示较大的左心耳体积是房颤复发的独立预测因子（HR：1.160 95%CI：1.095-1.229 *P*＜0.001）；左心耳体积＞9.25ml 对射频消融术后复发具有一定预测价值，敏感性 85.2%、特异性 67.9%、曲线下面积 0.82，房颤复发率较高（*P*＜0. 001）。
结论 房颤会造成心脏结构重构，左心耳各解剖径线明显增大可能是影响房颤射频消融手术成功率的原因，并且发现左心耳体积增大是房颤射频消融术后复发的独立预测因子。

PU-2885
256 排 Revolution CT 对快慢不同心率患者行胸痛三联扫描的图像质量分析

徐秋贞,郭文文
东南大学附属中大医院

目的 探讨使用 256 排 Revolution CT 宽体探测器对不同心率患者行胸痛三联扫描的临床应用
方法 收集 2016 年 8 月至 2018 年 10 月就诊于我院的 75 名胸痛患者患者。根据心率分为 A（心率≤70 次 / 分）、B（70 次 / 分＜心率＜85 次/分）、C（心率≥85 次/分）三组，每组 25 人。使用

256 排 Revolution CT，分别对三组患者进行三联扫描成像，测量各组图像的 CT 值、噪声，计算图像的信噪比并对比其噪声比，记录机器生成的剂量长度乘积，计算辐射剂量。胸主动脉及肺动脉的 CT 值>200HU 作为满足诊断条件的标准，由两名放射科医生对冠脉图像质量进行主观评价。连续变量采用单因素方差分析或非参数检验，等级资料比较采用 Kruslal-wallis H 检验，p＜0.05 表示差异具有统计学意义。

结果 三组患者的性别、年龄、体重指数无明显差异，三组患者的肺动脉、胸主动脉及右冠脉的信噪比（20.0（6.0）vs 19.2±3.0 vs 19.3±5.2，14.7（4.1）vs 14.3±3.8 vs 13.4（6.1），13.5（5.5）vs 13.5±3.1 vs 13.6±3.5，p=0.194，0.148, 0.941）及对比噪声比（24.5（16.0）vs 23.7±5.6 vs 22.0±9.5，17.3（5.1）vs 16.5±6.7 vs 13.2±9.6，19.9±5.1vs 18.3（4.1）vs 18.9（5.7）p=0.295,0.053,0.622）无明显差异，三组患者的主观评分无明显差异（1.67±0.70 vs 1.78±0.69 vs 1.72±0.66，p=0.105）。

结论 256 排 Revolution CT 对不同心率患者行胸痛三联 CTA 具有可行性，快心率者亦得到好的图像质量。

PU-2886
扩散加权成像与动态增强磁共振成像在乳腺病变定性诊断中的应用

薛翔文
广西民族医院

目的：评价 3.0T 扩散加权成像(DWI)和动态增强 MRI(DCE-MRI)在乳腺病变定性中的应用价值。材料与方法：采用常规成像(乳房 X 线、超声)BI-RADS 分级为 4 级或 5 级的患者纳入本研究。所有患者均接受了 3.0T 乳腺 MRI 检查，包括扩散加权成像(DWI)和与动态增强 MRI(DCE-MRI)。最终诊断由组织病理学确诊。两名有经验的放射科副主任医生(R1，R2)独立判读病变，包括病变大小、表观扩散系数和时间信号曲线等。结果：88 例(平均年龄 52±12)共检出恶性病变 56，良性病变 32 例，扩散加权成像联合动态增强磁共振成像应用在乳腺病变定性诊断中的敏感性（93%）、特异性（90%）及准确性（92%）明显提高。结论：扩散加权成像联合动态增强 MRI(DCE-MRI)应用对乳腺病变具有较高的诊断性能。

PU-2887
肺局灶性磨玻璃结节与肺腺癌病理亚型的相关性分析

李凤,黄洪磊
南平市第一医院

目的 探讨局灶性磨玻璃结节的 CT 征象与肺腺癌病理亚型的相关性，为临床术前评估和判定预后提供必要的影像学依据。

方法 回顾性分析我院 2015 年 12 月 ～2018 年 12 月经手术及病理证实的 189 例肺纯磨玻璃结节患者的影像学资料。其中浸润性腺癌组 88 个、微浸润腺癌组 34 个、浸润前腺癌组 67 个。CT 征象包括病灶部位、大小、分叶征、毛刺征、支气管气相、胸膜凹陷征、血管集束征、病灶形态和密度、瘤肺界面等进行分析。

结果 ①3 组患者病灶部位、病灶形态、支气管气相征比较差异无统计学意义(P＞0. 05) 。但是病灶分叶征、毛刺征、胸膜凹陷征、血管集束征、密度及瘤肺界面在三组间差异具有统计学意义(P＜0. 05) 。结节大小:浸润前组＜微浸润组＜浸润性组(P＜0. 05)。②二元 logistic 回归分

析显示肺局灶性磨玻璃结节的直径和空气支气管征是预测浸润前组与浸润性组（IA+MIA）的重要因素。
结论：肺局灶性磨玻璃结节的 CT 征象有助于术前预判肺腺癌的浸润性， 从而可指导临床合理选择治疗或随诊方案。

PU-2888
探讨肺磨玻璃结节与支气管关系对肺腺癌浸润程度预测与鉴别诊断的临床研究

李凤,黄洪磊
南平市第一医院

目的：旨在研究肺磨玻璃结节(GGN)与相关支气管关系及其类型，旨在提高 GGN 恶性程度诊断准确率。
方法：回顾性分析有明确诊断结果的 192 例直径≤3cmGGN(其中浸润前腺癌组 70 例、微浸润腺癌组 57 例、浸润性腺癌组 65 例)。 将 GGN 与支气管的关系分为以下 5 型： Ⅰ 型， GGN 中支气管走行截断； Ⅱ 型， GGN 实性成分中支气管走行扭曲、 扩张； Ⅲ型， GGN 磨玻璃成分中支气管走行扭曲、 扩张； Ⅳ型， GGN 内支气管走行正常； Ⅴ 型： 支气管在 GGN 旁绕行。 采用 SPSS22.0 软件进行统计学分析。 计数资料采用 Pearson χ^2检验； 计量资料采用独立样本 t 检验； 以 P<0.05 为差异有统计学意义。
结果 ： 本次研究显示肺磨玻璃结节与支气管关系：浸润前腺癌组表现为 Ⅰ~Ⅴ型分别 6、 6、9、35、 14 个； 微浸润腺癌组分别占 0、 5、 25 、19 、8 个；浸润性腺癌组 12、 33、14、3、 3 个。 支气管各分型在三组间差异均具有统计学意义(P＜0.05)。其中浸润前腺癌组多见于Ⅳ型； 微浸润腺癌组多见于Ⅲ型；浸润性腺癌组常见于Ⅱ型。
结论： GGN 与邻近支气管的关系及分型对三组不同病理类型 GGN 的浸润性的诊断及鉴别具有重要的实用价值。

PU-2889
HRCT 对肺纯磨玻璃结节侵袭性的诊断价值

李凤
南平市第一医院

目的 探讨高分辨率 CT（HRCT）对肺纯磨玻璃结节侵袭性的诊断价值。 方法 回顾性分析我院析 2013 年 12 月 ～2018 年 12 月经手术病理证实的 98 例肺纯磨玻璃结节患者的资料。分析包括：年龄、性别、大小（最大界面积）、密度（CT 值）、毛刺征、分叶征、血管集束征、空气支气管征象、胸膜凹陷征等。探讨 HRCT 肺纯磨玻璃结节影像表现对肺腺癌侵袭性诊断价值。采用 SPSS 22.0 进行统计学数据分析，计量资料采用均数±标准差表示，采用单因素方差分析，计数资料采用率或百分比表示，采用 χ^2检验，P＜0.05 为差异有统计学意义。 结果 患者年龄、性别在非典型腺瘤样增生(AAH) 、原位腺癌(AIS) 、微浸润腺癌(MIA) 、浸润性腺癌(IA) 组四组间差异无统计学意义（P＞0.05）； 但是纯磨玻璃结节的密度、大小、分叶征、毛刺征、血管集束征在

AIS 组与 AAH 组差异无统计学意义（P＜0.05），但在 IA 组与 MIA 组差异有统计学意义（P ＞0.05）；且两者均高于 AIS 组、AAH 组（P＜0.05）。空气支气管征象在 AAH、AIS、MIA 三组间发生率比较差异无统计学意义（P＜0.05），但是 IA 组发生率显著高于 AAH、AIS 和 MIA 组（P＜0.05）。胸膜凹陷征在 IA 与 AAH、AIS、MIA 组差异具有统计学意义（P＜0.05），且 MIA 组与 AAH 组差异也具有统计学意义（P＜0.05），MIA 组与 AIS 组发生率比较差异无统计学意义（P ＞0.05）。结论　肺纯磨玻璃结节密度、大小、分叶征、毛刺征、血管集束征、胸膜凹陷征可以较好地预测其侵袭性，有利于临床诊断鉴别以及治疗。

PU-2890
利用基于深度学习的人工智能改善放射科住院医师对急诊外伤肋骨骨折诊断效能

赵艳红,张晓文,陈大治,曹永佩,哈若水
宁夏回族自治区人民医院

目的：探讨基于深度学习的人工智能（AI）诊断系统对放射科住院医师诊断急诊外伤肋骨骨折准确性及时间的影响。
资料与方法：收集急诊胸部外伤的 76 例患者，层厚 1.25mm 及 1mm 进行重建，由一名住院医师在 LUNG 算法下进行肋骨骨折的诊断，第 1 次无人工智能辅助，第 2 次利用人工智能（InferRead CT Bone research，Infervision, Beijing）辅助，两次间隔大于 4 周。由两位有 15 年以上胸部诊断经验的医师结合 AI 谈论最终做出肋骨骨折的金标准。记录住院医师单独和住院医师联合人工智能在检出肋骨骨折总数、真阳性数、假阳性数及诊断所用时间。利用卡方比较放射科住院医师使用人工智能和不使用人工智能诊断急诊外伤肋骨骨折的灵敏度、假阳性率，利用 T 检验比较住院医师使用 AI 和不使用 AI 所用时间的差异。
结果：　76 例患者中共有 1822 根肋骨（其中两根肋骨发育不全）金标准中骨折共有 291 处，住院医师利用人工智能和不用人工智能分别检出骨折 316/291，其中真阳性骨折 274/260 处，假阳性骨折 42/31 处。使用人工智能和不使用人工智能诊断肋骨骨折的灵敏度分别为 94.16%/89.35%，差异有统计学意义(P=0.035<0.05)，使用和不使用人工智能的假阳性率分别为 2.55%/2.01%，差异无统计学意义(P=0.193>0.05)。不使用人工智能放射科住院医师所用的时间为 240.79±63.20s，使用人工智能所用的时间为 105.26±57.20s，差异有统计学意义(P=0.000<0.05)，。放射科住院医师使用人工智能所用时间明显缩短。
结论：放射科住院医师利用人工智能够明显缩短急诊外伤肋骨骨折诊断所用时间，提高工作效率，而且能够提高住院医师对于急诊外伤肋骨骨折诊断的准确性。

PU-2891
肺动脉高压多排螺旋 CTA 血管成像

杨莎,李征
湘雅常德医院

目的 探讨肺动脉高压多排螺旋 CTA 血管成像扫描延迟时间的最佳值最佳肺动脉血管成像。

方法 收集 40 例肺动脉高压多排螺旋 CTA 血管成像。造影剂 70ml，注射速率 4ml/S，扫描延迟时间用 Bolus Tracking 第一组 20 例其中 10 例监测层面定在上腔静脉，10 例监测层面定在肺动脉，Test Bolus 为第二组 10 例，常规计算时间为一组 10 例，准直宽度 2.5mm，层厚 3mm，

数据重建用最大密度投影 MIP 和容积显示（VR3D）等常规方法。一、二、三组图像分别由两位高年资医师阅片。

结果 第一组中 10 例监测肺动脉图像和第二组 10 例图像均清晰显示，第三组 10 例中 6 例图像模糊，第三组与第一、二组图像质量有显著差异。

结论 肺动脉高压 CTA 血管造影中监测层面的选择对扫描延迟时间最佳值的确定有很重要的作用，肺动脉高压 CTA 血管造影中扫描时间用 Test Bolus 和 Bolus Tracking 较优，常规计算时间延迟图像质量较差。

PU-2892

CT 纹理分析鉴别前纵隔淋巴瘤和胸腺瘤的价值

王翅鹏[1,2],李志浩[1],刘占[1],熊飞[2]
1.武汉平安好医医学影像诊断中心
2.中国人民解放军中部战区总医院

目的 探讨 CT 纹理分析鉴别前纵隔淋巴瘤和胸腺瘤的价值。

方法 回顾性分析经病理证实为前纵隔淋巴瘤及胸腺瘤的病例各 15 例，分别为淋巴瘤组，胸腺瘤组。入组标准：①所有患者术前均行常规 CT 平扫、增强检查；②病变直径大于 3cm；③图像质量满足纹理分析。采用 MaZda 软件通过手动勾画感兴趣区的方式提取病变的纹理特征，特征选择方法包括交互信息（MI）、Fisher 系数、分类错误概率联合平均相关系数（POE+ACC）。特征分类统计方法包括原始数据分析（RDA）、主要成分分析（PCA）、线性分类分析（LDA）和非线性分类分析（NDA）。结果以错判率形式表示，对错判率最小的分析方法的纹理特征数据进行统计学分析并制作 ROC 曲线图，筛选出 ROC 曲线下面积最大的纹理参数，并采用 t 检验对该纹理参数进行统计学分析。同时请 3 名分别具有 8 年、10 年及 10 年以上影像诊断经验的中、高级医师共同评估 30 例患者的影像资料，结果以错判率的形式表示。**结果** 鉴别前纵隔淋巴瘤和胸腺瘤的纹理特征主要来自于 CT 平扫，错判率最小（0.00%）。特征统计方法中，NDA 错判率最低（0.00%），其次为 LDA 错判率（6.67%～13.33%），RCA 与 PCA 错判率较高（20.00%～26.67%）。3 名影像诊断医师对 30 例患者的影像资料进行评估，其中 3 例淋巴瘤误诊为侵袭性胸腺瘤，1 例胸腺瘤误诊为淋巴瘤，错判率为 13.33%，较采用纹理分析方法鉴别两种肿瘤的错判率高。t 检验分析得出 4 种纹理特征(来源于小波能量参数、游程矩阵参数)在鉴别淋巴瘤和胸腺瘤中具有统计学意义(P＜0.05)。

结论 CT 纹理分析可用于鉴别前纵隔淋巴瘤和胸腺瘤，为鉴别两者提供可靠的客观依据。

256 层 iCT 心脏 CTA 剂量优化技术在复杂先天性心脏病中

郑穗生
合肥平安健康检测中心

目的：256 层 iCT 心脏 CTA 剂量优化技术在小儿复杂先天性心脏病中的应用。**方法：**收集了先天性心脏病患儿 50 例，根据检查时间分别采用回顾性、前瞻性心电门控心脏 CTA 检查，对两组图像进行图像质量评估、差异分析；采用独立样本 t 检验对两组患儿有效射线辐射剂量进行对比分析；并以手术结果为金标准，对比分析术前 CTA、UCG 与手术结果符合率。**结果：**回顾组、前瞻组两组图像差异无统计学意义（Z=-1.311，P=0.19）；前瞻组 CTDI、DLP、ED 值均低于回顾组，两组间差异有统计学意义（P<0.05）；术前总体 CTA 诊断手术符合率（94.2%）优于 UCG（83.7%），两种检查方法差异具有统计学意义（P<0.05）。**结论：**256 层 iCT 前瞻性心电门控心脏 CTA 检查在保证图像

质量的同时降低了患儿接受的有效射线辐射剂量，能很好地显示心内、心室-大血管、心外畸形及纵隔侧枝血管、冠状动脉开口、腹腔脏器、气管发育情况，对复杂先天性心脏病术前诊断提供更丰富的信息，对手术计划的制定、选择具有重要临床意义。

PU-2894
原发性气管支气管树腺样囊性癌的 MSCT 表现与临床病理特点

王江涛,周玲
襄阳市中心医院

【目的】原发性气管支气管树腺样囊性癌（primaryadenoid cystic carcinoma，PACC）是呼吸道罕见肿瘤，结合文献对 PACC 的临床、病理特点及 MSCT 表现进行回顾性分析，提高对 PACC 的诊断水平及预后判断。【方法】收集 10 例 2011 年 3 月至 2019 年 2 月经病理证实为气管、支气管原发 PACC 患者的临床、病理及 MSCT 资料，全部病例均行 MSCT 平扫，7 例另行 MSCT 增强，7 例行一次或多次 MSCT 复查。所有病例均行手术治疗，3 例术后复发。【结果】 10 例 PACC 均为中央型，7 例位于气管，左侧主支气管 2 例，左肺下叶基底干 1 例。10 例中腔内生长 4 例，腔内外生长 3 例，管壁增厚生长 3 例。MSCT 平扫病变呈均匀软组织密度,1 例内见点状钙化。7 例增强后 3 例轻度强化，1 例中度强化，3 例无明显强化。肿瘤外侵 2 例。【结论】PACC 具有一定特征：好发于大气道、多见于气管，生长方式表现为腔内型、腔内外型及管壁增厚型,宽基底沿长轴纵向缓慢生长多见。MSCT 平扫密度均匀，增强后轻度强化或强化不明显。本病常因阻塞气道出现体征，术后易复发。

PU-2895
Tumor surface irregularity at CT imaging predicts prognosis in lung tumors patients with overlying vessel signs

Dong Xu,Qizhou He,Guangyan Si
the second affiliated hospital of southwest medical university

Abstract
Purpose: The study aimed to evaluate the correlation between multi-slice computed tomography (MSCT) findings and clinical characteristics for the prognosis of lung tumors with overlying vessel signs, and identify the factors predicting prognosis.
Material and Methods: The CT imagings and clinical data of 132 lung tumors patients with overlying vessel signs were analyzed retrospectively. The prognosis of lung tumors patients with overlying vessel signs was compared using the Kaplan-Meier method and compared with the log-rank test. The correlation between tumor indexes and prgnosis was determined by Kaplan-Meier analysis and Cox regression was used to identify the independent factors for prognosis.
Results: The different lung tumors with overlying vessel signs showed similar clinial features (P>0.05), except for the age, shape and enhancement (P<0.05).

The age, tumor shape and enhancement (P<0.05) were significantly associated with prognosis. However, multivariate Cox regression analysis showed that only the tumor shape was an independent predictive factor of prognosis of lung tumors with overlying vessel signs(Exp(B)=9.664, 95%CI: 4.378-21.333, P=0.000).
Conclusion: Lung cancer, pulmonary mucoepidermoid carcinoma, and pulmonary carcinoid patients with overlying vessel signs weren't reported in the past. And age, tumor enhancement and shape are significantly associated with the prognosis of lung tumors patients with overlying vessel signs, however, the latter is an independent risk factor.

PU-2896

双能量 CT 在肺癌中的应用进展

邹红烨,左敏静
南昌大学第二附属医院

肺癌是我国最常见的恶性肿瘤，早期发现、诊断、分期与疗效评估对肺癌患者具有重要意义。目前常用传统 CT 对肺癌患者进行初步评估，但双能量 CT 较传统 CT 具有诸多优势，对临床研究与应用已有一定指导意义，随着双能技术的进步及研究的深入，肺癌患者将更好的从双能量 CT 评估中获益。

原发性肺癌（简称肺癌）是我国最常见的恶性肿瘤，其在男性和女性的癌症死因中均居首位。早期发现、诊断、分期及疗效评估对改善肺癌患者的生存质量和降低死亡率具有重要意义。双能量 CT 指通过各种方式进行双能量扫描的技术，临床最常用的是快速管电压切换单源双能量 CT 和双源 CT。除具备传统 CT 的特点外，DECT 还能通过获得虚拟平扫图像、碘基图、单能量图像、能谱曲线等，其常用参数包括：1）碘浓度；2）标化碘浓度，一般为增强后病灶与同平面主动脉碘浓度的比值；3）能谱曲线斜率，通过比较不同物质的 X 线衰减系数差异以对物质进行定量分析，为能谱曲线中病灶两个能级（常为 40 和 100keV）的 CT 值与能级差的比值，计算公式 λHU=（CT_{40KeV}-CT_{100keV}）/60。相对于传统 CT，DECT 图像对噪比更高、不增加甚至降低辐射剂量、提供多参数分析，在肺癌的诊断、指导个体化治疗、预后评估及随访中发挥着重要作用。

本文主要从以下六个方面回顾 DECT 在肺癌中的应用进展，包括肺部良恶性病灶的鉴别、评估恶性 GGO 的血供并预测侵袭性、辅助预测分子标志物表达及水平、评价肺癌的分化程度、肺癌 TNM 分期评估及疗效评估等。

PU-2897

256 层螺旋 CT 在冠状动脉支架后评估的价值

王雪
大庆龙南医院

目的：冠心病现在成为危害人民健康的常见病之一，因此心血管病成为我国公共卫生及健康事业所面临的严峻挑战，冠心病的治疗及术后评估是提高患者生存质量的必要手段。
方法：采用我科室 Philips 256 层 BrillianceiCT 进行检查 电压为 120 kV， 管电流 300 mA，旋转速度 0.27 s， 扫描层厚 1 mm 检查前对患者进行规律呼吸屏气训练，通过双通道高压注射器经手臂静脉，以流速 5.0～5.5ml / s，团注造影剂 40～70 ml 及 0. 9%氯化钠注射液 20 ml。

结果：2 5 6 层螺旋 c T 用于心脏冠状动脉成像以来,由于其扫描速度更快 ,时间分辨率较高及空间分辨率提高了，由于冠状动脉支架内再狭窄多数由于血管内膜以及中膜的过度增生所致 ,而不是冠状动脉内血栓急性形成，所以发生支架再狭窄部位的支架内密度与支架周围的血管组织密度基本一致。256 层螺旋 c T 对左主干和前降支近中段支架血管重建的图像清晰度及狭窄符合率明显高于右冠状动脉和回旋支，这是由于右冠状动脉和回旋支处于心脏边缘且晃动较快，同时回旋支与心大静脉伴行影响，易受其干扰而显影模糊。
结论：MSCT 冠脉造影具有价格低、快速、安全无创等优点，MSCT 可以用于临床冠状动脉支架术后患者复查的首选辅助检查之一，对于不能准确诊断的患者可以再进一步行选择性冠脉造影检查。

PU-2898

胸片在评价 PICC 置管中的应用价值

杨科[1],杨林[2],夏琪 李杭 蒲红[1],彭娟[3],邱翔[4]
1.四川省医学科学院·四川省人民医院
2.川北医学院附属医院
3.四川省人民医院金牛医院
4.成都市第一人民医院

【摘要】目的 探讨胸片在评价 PICC 置管中的应用价值。**方法** 收集 PICC 导管尖端位于 A（上腔静脉中 1/3 下份和上腔静脉下 1/3，但不包括 PICC 导管尖端在气管隆突或心影右上缘）处 214 例，PICC 导管尖端位于 B（心影右上缘，用 CAJ 表示）处 81 例，观察并记录每名患者气管隆突位置、PICC 导管尖端位置。测量气管隆突到 PICC 导管尖端的距离、测量胸椎单元上下径。计算胸椎单元数。按性别（女 124 例，男 90 例）、年龄（年龄＜40 岁 23 例，40 岁≤年龄 r≤70 岁 175 例；年龄＞70 岁 16 例）分组。分析年龄、性别的影响。用 SPSS22.0 统计软件对数值进行分析。**结果** ①气管隆突、PICC 导管尖端、CAJ 约对应三个椎体，分别约 T4/5 到 T7、T6 到 T8/9、T6 到 T8/9。胸椎单元较固定，2.30cm 左右，男性＞女性。②年龄、性别对气管隆突到 CAJ 距离或胸椎单元数影响较小（相差距离与年龄、性别分组无关，胸椎单元数与年龄无关，女性＞男性）③年龄、性别对导管尖端位于 A 处相差距离或胸椎单元数有一定的影响（＜40 岁组较大，女性＞男性）。④当导管尖端位于 A 处，相差距离为（2.24±1.32）cm，胸椎单元数为（0.94±0.55）。⑤气管隆突到 CAJ 的距离为（4.47±0.91）cm，胸椎单元数为（1.92±0.38）。**结论** 当 PICC 导管尖端位于气管隆突下约 2.24-4.47 cm，胸椎单元数为 0.94-1.92 时，约位于上腔静脉中下 1/3 和/或 CAJ，位置较好。

阻塞性睡眠呼吸暂停低通气综合征心血管相关损害的心脏磁共振研究

周小兵
广东省人民医院

目的： 阻塞性睡眠呼吸暂停低通气综合征（OSAS）主要表现为睡眠过程时反复发生上气道阻塞，气流中断或降低从而引起睡眠时呼吸暂停和低通气。 临床研究证实，OSAS 与难治性高血压、中风、心率失常、冠心病及心力衰竭等相关。 对于 OSAS 致心血管损害以超声心动图研究较多，通过

超声心动图研究发现 OSAS 患者的心室功能及结构较正常对照组存在差异，包括右房面积增大，左室质量指数（LVMI）增加，左室射血分数受损，左室的应变能力下降等。但是利用心脏磁共振（CMR）对于这方面的研究较少。所以，我们的研究旨在探索心脏磁共振常规的扫描及新的扫描序列如 T1 mapping，BOLD-MRI 及 Strain 等是否能够早期发现 OSAS 患者中存在心血管损害改变。

方法：对以打鼾为主要症状就诊的患者进行多导睡眠监测（PSG），排除心血管疾病及心血管相关危险因素后分别选择中重度 OSAS 及正常受试者各 20 例。纳入人群进行 CMR 检查，检查的序列包括 CMR 常规黑血、白血电影序列、 T1 mapping、 BOLD 序列及延迟强化扫描。在 CVI[42] 后处理软件中分别测得 OSAS 组与正常组的左右心室 EF、EDD、ESD，LVMI，左室后壁厚度，T1 native、T1 post、ECV 值，BOLD 序列中信号强度（SI）以及纵向应变（GLS）、圆周应变(GCS)及径向应变(GRS)的参数差异。

结果： OSAHS 患者心脏较正常对照组扩大，心肌质量较对照组增加；通过 T1 mapping 技术测得的 ECV 值发现 OSAS 组较正常对照组增大，BOLD-CMR 测得的信号强度较对照组降低且差异具有统计学意义；应变分析中，发现 GLS 在两组中存在差异，但 GRS 及 GCS 未见差异。

结论：心脏磁共振不仅能够早期发现 OSAS 患者心脏结构及功能的改变，还能发现心肌缺血缺氧性及心肌纤维化改变，这提示临床医生对中重度 OSAS 患者应采取更为积极的干预措施。

临床常见肺部弥漫性疾病的 MSCT 诊断

任欢欢,李康
中国科学院大学重庆医院（重庆市人民医院）

目的：分析 MSCT 对临床常见几种肺部弥漫性疾病的影像特征显示，对临床工作中放射科医生的诊断提供分析思路，让临床医生对于疾病的治疗更有把握。
方法：选取我院 2017 年 12 月～2019 年 5 月诊治的 53 例胸部弥漫性疾病，行胸部 CT 扫描，对 CT 图像进行仔细分析，并结合临床病史及相关实验室检查进行诊断。
结果：CT 检查结果显示，其中 17 例肺水肿，12 例肺转移瘤，11 例感染性疾病（包括结核、曲霉）,8 例尘肺，1 例 ANCA 相关性血管炎，其余 3 例影像上分别诊断为 UIP（寻常型间质性肺炎）、LIP（淋巴细胞性间质性肺炎）、（HP）过敏性肺炎，但是未得到回访结果或相应治疗预后追踪。分别总结了几种常见疾病的影像特点，并结合临床及实验室检查、病人体征等，做出正确诊断。
结论：在肺部弥漫性疾病诊断中，疾病种类繁多，影像表现特异性低，诊断困难，所以在此总结本科室常见疾病的影像表现。结果显示，多数疾病虽然异病同影，但是结合病史及其他检查后可以给临床医生提供可参考的诊断思路。

肺郎格汉斯细胞组织细胞增生症的 HRCT 表现分析

陈秀珍
中山大学附属第三医院

目的：总结肺郎格汉斯细胞组织细胞增生症 （PLCH）高分辨率 CT （HRCT）表现，提高对本病的认识。方法：回顾性分析 12 例符合 2009 年国际组织细胞协会颁布的 LCH 指南中符合 PLCH 诊断标准患者的 HRCT 及病理资料，结合文献进行分析总结。结果：12 例患者均以双肺中上肺野分布为主，肋膈角区均未累及。2 例患者以弥漫性薄壁囊腔及少量散在分布星芒状结节改变为主，3 例患

者以多发小结节及间质增厚改变为主，余患者可见结节、星芒状结节、厚壁囊腔 薄壁囊腔、不规则形囊腔及空洞的病变形态。病灶间隔可见正常的肺组织。2 例患者出现气胸。结论：PLCH 的分布和形态在 HRCT 有一定的特征性表现，认识这些特征，有助于对本病的诊断。

人机协作在高海拔地区肺小结节诊断中的效能评价

徐天天,孙艳秋,张永海
青海省人民医院

目的：探究肺结节人工智能协助不同级别影像诊断医师对提高肺小结节诊断效能的价值。
方法：回顾性收集我院胸部平扫病例共 200 例。先由初级诊断医师及高级诊断医师对 200 例肺结节做出独立诊断，并记录结节数量及用时；再由肺结节人工智能检测系统（简称 AI）(InferRead Lung CT Research,Infervision,Beijing,China，6.0 版本，阈值 0.75)自动检测；最后初、高级影像诊断医师联合人工智能筛选肺结节，并记录检测数量及用时。以高级医师与 AI 协作诊断肺结节为标准，统计比较初高级医师对肺结节诊断的检出率、AI 检测肺结节假阳性率以及人机联合检出提升率、时间缩短百分比。
结果：高级医师+AI 共检出结节 1169 个，用时 31.00（17.00,48.00）s；初级医师检出结节 592 个，用时 72.00（51.25,96.75）s，初级医师+AI 共检出结节 1164 个，用时 30.50（16.00,49.75）s；高级医师共检出结节 818 个，用时 77.00（49.25,104.75）s；AI 共检出结节 1492 个；初级、高级医师对肺结节检出率分别为 50.64%、69.97%，AI 检测肺结节假阳性率为 27.63%；初、高级人机联合检出提升率分别为 49,14%、30.03%，时间缩短百分比分别为 57.64%、59.74%。
结论：1.高级诊断医师独立诊断肺小结节较初级医师检出率高，但均有不同程度的漏诊率，尤以初级诊断医师漏诊率较高；2.AI 独立诊断肺结节假阳性率较高；3.AI 协助初、高级诊断医师不仅可以提高对肺小结节诊断的检出率，还能提高诊断效率，其中对初级诊断医师帮助较高级诊断医师更大。

PU-2903
256 排 CT 冠脉成像评估冠状硬化与冠心病危险因素的相关性

耿校伦
广西医科大学第一附属医院

目的：探讨 256 排 CT 冠脉成像（CTA）在评价冠脉斑块支数与冠心病危险因素的相关性，初步评估其临床应用的价值。 **方法：**对本院 2018 年 7 月至 2018 年 8 月期间临床诊断或疑诊为冠心病并行冠状动脉多层螺旋 CT 检查的 61 例住院患者的临床资料进行总结，分析其中的吸烟、血压、血脂、血糖等危险因素与冠脉斑块支数之间的关系,并进行统计学分析。 **结果：**冠脉 CTA 正常者 16 例（26%）；冠脉 CTA 显示有粥样斑块以及不同程度狭窄者 45 例（74%）。合并糖尿病组患者有 4 支狭窄的冠脉有 7 例（23.3%），而非糖尿病患者组为 2 例（6.5%），两者差异有显著性（P＜0.01），且合并糖尿病组多支病变所占比例最大（共 16 例，占 53.3%），而非糖尿病组正常者最

多（共 11 例，占 35.5%），两者差异有显著性（P＜0.01）。冠心病合并高血压、高脂血症、吸烟、饮酒等危险因素与冠脉狭窄程度的关系：本研究显示高血压、高脂血症、吸烟、饮酒等危险因素与冠脉狭窄程度有相关性。合并高胆固醇血症的患者以三支病变为主 （共 6 例 ，占 21.4 %），胆固醇正常组则同样以三支病变为主（共 9 例 ，占 27.3%）。**结论：**冠状动脉 硬 化的程度及单支病变、多支病变与危险因素的数量有关 （P ＜ 0．0 5）。对高危人群开展螺旋 CT 冠状动脉成像检查对 CHD 的早发现、早治疗有着重要的意义，为临床诊断和评价冠心病危险度分层提供依据。

PU-2904
功能影像学及其联合 VEGF 在肺癌疗效评估中的价值

周建忠
南昌大学第二附属医院

肺癌是世界上最常见的癌症，每年大约有两百万人会患上肺癌，而大多人都是在中晚期被诊断出来的，如若治疗失败，快速恶化的肿瘤会剥夺了他们潜在有益的二线治疗，停用无效的治疗可以预防相关的不良事件。目前常用的固体肿瘤评估标准存在一定滞后性，且单纯依靠肿瘤形态学对疾病作出疗效评价可能会出现误差。因此，临床上迫切需要更加有效的早期肺癌疗效预测及评价手段。如今，功能影像学快速发展，对肿瘤评估的量化越来越多地应用于我们的日常临床实践中，其中主要检查手段包括正电子发射计算机断层显像（PET/CT）、动态增强磁共振成像（DCE-MRI）、磁共振扩散加权成像（DWI）、CT 灌注成像及双能 CT。此外，与其他实体瘤一样，肺癌的生长、浸润、转移需要肿瘤血管的生成为基础，血管内皮生成因子（VEGF）是促进血管新生的重要因子之一，也是肺癌疗效的重要预测因素。本研究将对几种常用的功能影像学方法及其联合 VEGF 在肺癌疗效评估价值进行综述。

PU-2905
评估双能 CT 碘图影像组学在鉴别良恶性肺结节中的价值

仲艳,袁梅,俞同福
江苏省人民医院（南京医科大学第一附属医院）

目的
探讨基于双能 CT 碘图的影像组学特征对良恶性肺结节鉴别的临床价值
方法
回顾性分析术前行双能 CT 检查的 109 位患者（81 例恶性结节和 36 例良性结节）的临床病理及影像资料，提取 9 个碘相关特征和基于碘图的 89 个影像组学特征。采用 LASSO 回归法分别筛选出 2 个诊断效能最高的碘相关特征和影像组学特征，并构成碘相关特征模型和影像组学模型。通过 Receiver Operating Curve （ROC）评估两个模型在鉴别良恶性肺结节中的诊断效能。
结果
所有碘相关特征都与恶性结节相关（p<0.01），其中诊断效能最高的 2 个特征是平扫 CT 值和重要区强化程度，构成碘相关特征模型。影像组学模型由 original_shape_Sphericity 和 original_glszm_Small Area High Gray Level Emphasis 构成。影像组学模型在鉴别良恶性结节中的准确性高达 89.7%，采用 ROC 分析，其 AUC 值、敏感性、特异性分别为 0.957、83.6%、93.8%。影像组学模型在鉴别良恶性肺结节中的诊断效能优于碘相关特征模型（准确性 89.7% vs 80.6%; AUC 0.957 vs 0.756）。
结论

基于碘图的影像组学是一种定量且无创的方法，可以反映结节血管生成和血流灌注特征，在鉴别良恶性肺结节中具有较高的准确性，有望在肺结节临床决策中发挥作用。

CT 检查非小细胞肺癌患者纵隔淋巴结转移效果研究

罗文众,马湘乔
中国人民解放军北部战区空军医院

【摘要】 目的探讨研究非小细胞肺癌纵隔淋巴结转移的胸部 CT 影像体征及临床特征,以期提高非小细胞肺癌分期诊断与治疗的准确度。方法收集就诊治疗经病理确诊为非小细胞肺癌且术前 CT 影像资料完整的病例 100 例,术前患者经胸部 CT 扫描检查纵隔淋巴结转移情况,并与手术、病理结果进行比较,检测 CT 影像诊断非小细胞肺癌纵隔淋巴结转移的准确率。结果通过对 100 例患者的 CT 检查结果、手术结果与病理结果进行分析显示,其中 CT 显示为阳性的患者共 62 例,其中真阳性患者为 47 例,占 75. 8%,假阳性为 15 例,占 24. 2%; CT 显示为阴性的患者共 38 例,其中真阴性患者为 14 例,占 36. 8%,假阴性患者为 24 例,占 63. 2%;对 CT 检查结果与手术及病理检查结果的灵敏度与特异度进行分析,结果显示,本实验中 CT 检查检测准确度为 66. 2%,特异性为 73. 7%。对 CT 检查结果与手术及病理检查结果进行一致性检验,二者的符合率为 61%,Kappa 指数为 72. 4%。其中,上叶肺癌上纵隔淋巴结转移 11. 0%(11/100 例),下叶肺癌上纵隔淋巴结转移 9. 0%(9/100),上叶肺癌下纵隔淋巴结转移 6. 0%(6/100),下叶肺癌下纵隔淋巴结转移 7. 0%(7/100)。对患者对 CT 检查结果的信任程度进行分析,其中 72 例患者表示信任,5 例患者表示不信任,信任的患者占 72%。结论 CT 对非小细胞肺癌术前纵隔淋巴结状态进行评估,能够较为准确地判断淋巴结是否转移,为手术提供更好的参考,值得临床借鉴。

肺大细胞神经内分泌癌螺旋 CT 表现及其与小细胞肺癌的鉴别

陈夏浦[1],陈伟松[2],孙建鸿[1],马树华[2],吴先衡[1],李恩民[3]
1.汕头市中心医院
2.汕头大学医学院第一附属医院
3.汕头大学医学院

【摘要】 目的：探讨肺大细胞神经内分泌癌（LCNEC）的 螺旋 CT（MSCT）表现及其与小细胞肺癌（SCLC）的鉴别要点。**方法**：收集 30 例经病理证实的大细胞神经内分泌癌患者，并随机选择 34 例小细胞肺癌患者作为对照，对两组 MSCT 征象进行分析并比较之间的差异。**结果**：30 例 LCNEC 多表现为双肺上叶 80%，体积较大（＞4cm 者 70%），边界清楚（70%），浅分叶（86%），平扫、增强扫描密度不均匀（73%、100%），增强扫描轻到中度强化（90%），坏死常见（100%），且为多发或弥漫性坏死（80%），常合并肺门及纵隔淋巴结肿大（60%），且多合并坏死（77%）；而空洞（6%）、支气管血管征（3%）少见。与 SCLC 的影像征象比较中，LCNEC 沿支气管血管束形态生长率，肺门大血管、心脏、纵隔受侵率，纵隔或肺门淋巴结的肿大率及融合率均分别低于 SCLC（20%vs58%、40%vs67%、60%vs94%、11vs84%），差异具有统计学意义（χ^2=9.959,15.26，10.85，25.38，P<0.05）。结论：LCNEC 具有一定 MSCT 特征，与 SCLC 相比存在一定鉴别点。

胸腹部孤立性纤维性肿瘤 CT 和 MRI 影像学研究

秦涛,徐佳
湖北省第三人民医院

分析胸腹部孤立性纤维性肿瘤（SFTs）CT 和 MRI 影像学特征及诊断价值。方法：随机选取我院 2013 年 1 月-2018 年 12 月收治的胸腹部 SFTs 患者 80 例。所有患者先接受 CT 检查，休息 24~48h，接受 MRI 检查。并经腹部腔镜手术治疗获取肿瘤组织 2cm×2cm 送实验室检查。结果：80 例 SFTs 患者共检出 97 枚肿瘤。病灶在肺内、胸膜、腹膜、后腹膜，分别有 32 例、24 例、20 例、4 例。肿瘤直径 7.81~21.47cm，平均肿瘤直径（15.68±2.69）cm。CT 共检出 83 枚肿瘤，病灶为肺内 36 例、胸膜 20 例、腹膜 18 例、后腹膜 6 例。MRI 共检出 96 枚肿瘤，病灶为肺内 31 例、胸膜 24 例、腹膜 20 例、后腹膜 4 例。MRI 诊断胸腹部 SFTs 病位、肿瘤检出、肿瘤良恶性准确性显著高于 CT（P<0.05）。CT 胸腹部 SFTs 特征表现为包膜相对完整。肺内肿块影边缘相对光滑，密度均匀。无分叶征集毛刺征，强化影像显示肿瘤轻度不均匀强化，无明确性肿大淋巴结影。胸膜病灶肿瘤呈椭圆形或卵圆形，边缘清楚。MRI 胸腹部 SFTs 特征显示包膜完整且光滑，T1、T2 低信号，增强后有中度延时性强化。胸膜病灶 T2 信号表现为高、略高及低信号。高信号反映肿瘤同粘液样变区，略高信号反映了肿瘤细胞密集，低信号则为致密胶原纤维。高信号中片状及结节状是其典型表现。增强扫描发现病灶动脉期及实质期病灶呈中度渐进性强化。腹膜病灶 T1、T2 低信号。MRI 诊断价值高于 CT，且联合诊断优于单 CT、MRI。结论：MRI 较 CT 在胸腹部孤立性纤维性肿瘤影像学特征、灵敏性、特异性及准确性方面优佳，能较好的反映孤立性纤维性肿瘤良恶性、形态等。但 CT 和 MRI 各有优缺点，建议联合诊断。

PU-2909

气管支气管树腺样囊性癌 CT 特征分析

赵迪宙,张灵
广西医科大学第一附属医院

目的 探讨气管支气管树腺样囊性癌（ACC）的 CT 特征，从而提高对该疾病的认识水平。**方法** 回顾性分析 9 例气管支气管树腺样囊性癌患者的 CT 图像及临床资料，从 CT 轴位及 MPR、MinIP 等后处理图像中观察与评价病变，并对该病进行总结、讨论。**结果** 9 例气管 ACC 均位于气管，表现为腔内宽基底或气管腔内外肿物；形态上呈分叶状肿物或弥漫性管壁增厚为主；平扫密度一般较均匀，增强扫描呈轻中度强化为主。 **结论** 气管 ACC 的 CT 表现具有一定特点，CT 增强扫描及后处理重建能提高气管 ACC 的诊断，有助于临床诊断、治疗及预后评估。

PU-2910

纵隔血管瘤的多层螺旋 CT 表现

李景雷
广东省人民医院

目的 探讨纵隔血管瘤的多层螺旋 CT 表现。
方法 回顾性分析 13 例纵隔血管瘤的 CT 资料,观察病变数目、部位、形状、大小、边缘、密度和强化模式、肿块-心脏大血管界面（MCI）和肿块-肺界面（MPI）及其他征象。
结果 13 例患者均为单发肿块，边缘模糊，位于前中纵隔 6 例、前中后纵隔 4 例、右后纵隔 3 例。10 例呈弥漫蔓状生长，形态不规则，MCI 模糊并轻度占位效应 9 例、明显占位效应 1 例；2 例呈轻度蔓状生长，哑铃状，并延伸入椎管压迫脊髓；1 例呈膨胀性生长，椭圆形。MPI 清晰 12 例，模糊 1 例。病灶最大径 2.60~23.30 cm。8 例为混合密度并周边条索状软组织，2 例为均匀密度，3 例以脂肪密度为主并结节或条索状软组织，其中 5 例见静脉石；13 例均呈结节状或条索状强化并轻度延迟强化，其中 12 例见引流静脉、7 例见供血动脉；4 例合并脾脏血管瘤。
结论 纵隔血管瘤 CT 表现具有一定的特征，增强 CT 扫描有助于其准确诊断和术前评估。

PU-2911

孤立性纤维瘤的 CT 诊断

罗道首,李向东
中国人民解放军南部战区总医院

摘要 目的 孤立性纤维瘤为全身发病肿瘤，本文旨在提高对孤立性纤维瘤 C T 影像表现的认识。方法 回顾性分析 12 例经手术病理证实的孤立性纤维瘤的 C T 影像表现，将影像学表现与病理组织学和免疫组织化学变化相对照，并复习相关文献。结果 发生于胸膜 3 例，腹膜后 2 例,盆腔、睾丸、鼻腔、口咽、眼眶、腋窝和髂窝各 1 例，CT 表现为圆形或卵圆形肿块, 境界清楚的软组织肿块,7 例密度均匀,5 例密度不均匀，增强后肿瘤实质部分均呈明显强化，4 例呈“地图样”强化，动脉期显示肿块内较多肿瘤血管，坏死区呈不强化低密度，5 例病灶内见斑点状钙化。结论 孤立性纤维瘤见于全身多个部位,好发于胸膜，影像上具有相对特征性的 C T 表现，结合病理以及免疫组织化学能做出准确诊断。

PU-2912

纵隔（胸腺）淋巴瘤的 CT 表现及病理对照

李昇霖,周俊林
兰州大学第二医院

摘要 目的：分析原发性胸腺淋巴瘤的 CT 表现及病理学特点；方法及材料：回顾性分析经过手术病理证实起源于胸腺的 10 例淋巴瘤，其中霍奇金淋巴瘤 4 例（HL 组）、非霍奇金淋巴瘤 6 例（NHL 组），总结胸腺淋巴瘤的 CT 表现并病理学对照分析；结果：A 组男 2 例，女 2 例，年龄（36.75±6.65）岁，B 组男 2 例，女 4 例，年龄（43±8.06）岁，A 组中 4 例（2/4）结节硬化型淋巴瘤，1 例（1/4）淋巴细胞消减型淋巴瘤，1 例（1/4）混合细胞型，B 组中 6 例弥漫大 B 淋巴瘤（6/6），胸腺原发性淋巴瘤表现为胸腺区类圆形肿块、无钙化，周围肿大淋巴结较少，增强后轻中度强化，其中 HL 较 NHL 的囊变坏死更明显；结论：胸腺原发性淋巴瘤具有一定的 CT 表现特点，此外肿瘤囊变坏死所占瘤体的体积对于胸腺原发性 NL 与 NHL 可能存在鉴别价值。

PU-2913

研究肺实性病变内血管形态在肺癌及肺炎鉴别诊断中的价值

秦芬
重庆医科大学附属第三医院（捷尔医院）

目的： 探讨研究肺实性病变内血管形态在肺癌及肺炎鉴别诊断中的价值
方法： 选取接受胸部多层螺旋 CT 血管成像患者 108 例，其中，肺癌患者 71 例（肺癌组），慢性肺炎患者 37 例（肺炎组），对比 2 组的血管形态
结果： 肺癌组的显管示率为 85.15%，显著高于肺炎组的 66.57%（P<0.05）；肺癌组肺内血管的中断率及迂曲率显著高于肺炎组（P<0.05）；肺癌组的血管内径及总截面积较肺炎组显著增大（P<0.05）
结论： 肺癌患者的肺部实性病灶内血管形态具有特征性改变，应用 MSCTA 观察血管的表现对于肺癌与肺炎的临床鉴别诊断具有重要价值。

PU-2914
肺上皮样血管内皮瘤的影像学表现(附 2 例报道并文献复习)

任华
上海交通大学医学院附属新华医院

摘要：分析肺上皮样血管内皮瘤(Pulmonary epithelioid hemangioendothelioma，PEH)的影像学表现。方法：回顾性分析 2 例手术病理证实的 PEH 患者的病例资料，对其临床表现、影像学表现、病理形态及免疫组化结果等结合文献进行分析报道。结果：1 例为 54 岁男性，体检发现肺部占位 3 月。影像学提示左肺下叶前基底段胸膜下孤立性实性结节，边界清楚，邻近胸膜局部增厚。另 1 例为 49 岁男性，体检发现双肺多发结节半月余。影像学提示两肺实性结节或肿块，较大者位于两肺下叶，边缘见分叶、毛刺、支气管充气征及胸膜凹陷征，合并小叶间隔增厚及磨玻璃影，增强后明显不均匀强化，左侧胸腔少量积液。PET-CT 检查右肺下叶局部胸膜代谢增高，提示胸膜转移。术后行脊柱 MR 检查，提示多发骨转移。肿瘤细胞免疫组化均为 CD31、CD34 高表达。结论：PEH 属于罕见血管源性低度恶性肿瘤，有恶性倾向, CT 对 PEH 的诊断和病程评估具有一定意义,须经病理组织学及免疫组化检查方可确诊。

PU-2915
建立多种模型预测纯磨玻璃结节样肺腺癌的浸润程度

邱太春[1],伍建林[1,2],明兵[1]
1.德阳市人民医院
2.大连大学附属中山医院

目的 基于肺纯磨玻璃结节 CT 征象建立预测浸润性肺腺癌的预测模型。**方法** 回顾性收集经手术病理证实肺纯磨玻璃结节 300 例，随机按照（1:1:1）分为训练集（n=100 例），验证集（n=100 例），测试集（n=100 例）。收集分析患者一般临床信息及多种 CT 征象，计量资料利用独立样本 t 检验，计数资料利用卡方、Fisher 确切概率检验分析；将 P<0.05 作为二元 logistic 回归输入变量，确定预测浸润性肺腺癌的独立危险因素（P<0.05），次要危险因素（P>0.05）；利用最后二元 logistic 回归建立回归预测模型，利用独立危险因素+次要危险因素建立多种组合形式模型。并利用验证集及测试集中数据检验预测模型效能并选出最佳预测模型。
结果： 二元 logistic 回归结果显示病灶的大小与平均 CT 值是预测浸润性肺腺癌独立危险因素，其余变量病灶的形状、边缘、异常空气支气管征、空泡/空腔征以及血管类型为次要危险因素。共建

立五种预测模型，包括回归方程预测模型、病灶大小分类+至少 1 个次要危险因素、病灶大小分类+至少 2 个次要危险因素、CT 值分类+至少 1 个次要危险因素、CT 值分类+至少 2 个次要危险因素，其诊断效能 AUC 分别为 0.788、0.766、0.678、0.624、0.599。经过验证集预测，五种模型诊断效能分别为 0.804、0.739、0.734、0.676、0.679，再经过测试集预测，预测效能 AUC 分别为 0.789、0.822、0.720、0.636、0.645。其中回归方程模型与病灶大小+至少 1 个次要危险因素在三个数据集中预测浸润性肺腺癌差异没有统计学意义（P：0.5338、0.0517、0.3862）。
结论：肺纯磨玻璃结节病灶大小+至少 1 个次要危险因素与二元 logistic 回归模型对预测浸润性肺腺癌具有一定的帮助。

PU-2916
应用 CMR 评价糖尿病患者右心室心肌应变的初步研究

李昕,李智勇,宋清伟,刘爱连
大连医科大学附属第一医院

目的：糖尿病已经逐渐成为一个公共健康问题，最近的研究表明糖尿病是心血管疾病的一个高危因素，既往研究已经发现糖尿病患者的左心室整体纵向应变（longitudinal peak strain ，LS）和圆周应变（circumferential peak strain ，CS）会发生损害。本研究的目的是利用 CMR 检测糖尿病患者右心室心肌应变是否也发生了变化。

方法：本研究共纳入 28 名糖尿病患者(平均 BMI30.97±4.71 kg/ m²,平均年龄 43.25±12.23 岁)和 30 名健康志愿者(平均 BMI23.88±3.51 kg/ m²,平均年龄 46.13±13.26 岁)。所有患者均于 3.0T MR 行心脏常规成像。在 GE ADW4.4 工作站通过 Reportcard 4.0 软件完成右心室结构及功能参数测量（RVEDV、RVESV、RVEF 等），采用 QMass 8.1 工作站测量右心室整体和区域 LS 及应变率（longitudinal peak strain rate，LSR)。

结果：两组间右心室常规结构功能参数无明显统计学差异，但糖尿病患者整体右心室 LS 明显低于对照组(-14.05±3.47 vs -16.66±3.74, p=0.008)。此外，糖尿病患者间隔壁 LS 及 LSR 也明显受损(-9.84±3.88 vs -16.65±6.10,p=0.000；-0.46±0.20 vs -0.75±0.35, p=0.000）。

结论：CMR 能够定量评估糖尿病患者的右心室心肌应变状况，糖尿病患者右心室整体 LS、间隔壁 LS 及 LSR 在 RVEF 降低以前已经发生了一定程度损害。

PU-2917
原发性肺肉瘤样癌的 CT 表现及误诊分析

辛会珍,彭德昌,余宏辉,李海军,张娟,魏志鹏
南昌大学第一附属医院

目的 探索原发性肺肉瘤样癌（PSC）的 CT 表现，以提高对该病的认识，降低误诊率。 **资料与方法** 回顾性分析自 2011 年 1 月~2019 年 3 月在南昌大学第一附属医院经手术病理或穿刺活检确诊的 33 例 PSC 患者的临床资料、CT 表现及病理诊断。**结果** 33 例患者均表现为肺内单发肿块，周围型 20 例，中央型 13 例，位于肺上叶者 20 例，肿块平均直径约 6.0cm，其中 24 例直径大于 5cm；病灶边缘清楚者 8 例，25 例边缘模糊，且部分周围伴磨玻璃影；18 例伴分叶状，5 例边缘有毛刺；5 例肿块密度不均匀，其中 5 伴有空洞。增强后 13 例表现为边缘环形强化，9 例表现为环形强化伴

内部斑片状强化；累及胸膜者 16 例，合并胸水者 9 例，16 例表现为肺门或纵隔淋巴结转移，肺内转移 3 例，远处转移 13 例，3 例侵犯血管，1 例累及膈神经。**结论** PSC 的 CT 表现有一定的特征性，周围型多表现为无明显毛刺、空洞等征象的较大软组织肿块，增强呈环形强化伴或不伴内部斑片状强化。中央型 PSC 出现分叶、毛刺等典型肺癌征象的概率高于周围型。

不同注药方式对 CTPA 图像质量的影响

江晓涵
中国人民解放军总医院第一医学中心

[**摘要**]目的:探讨不同注药方式对 CTPA 图像质量的影响。**方法**:将 100 例体重在 50~75kg 内的肺动脉 CTA 患者随机分为 A、B 两组。每组 50 例，两组注射的对比剂相同，扫描机器和参数相同。其中 A 组的对比剂总量为 50ml,流速 4.5ml/s 之后以相同速度注射生理盐水 30ml。B 组的对比剂总量为 35ml,流速为 4.5ml/s 之后以相同速度注射生理盐水 50ml。分别测量两组图像肺动脉的 CT 值、信噪比(CNR)、噪声值、对比信噪比（SNR）和上腔静脉伪影。对图像进行质量评分。**结果**:两组扫描方式肺动脉充盈强化显示良好。经过测量 B 组的信噪比优于 A 组信噪比。B 组上腔静脉伪影要少于 A 组。**结论**：在相同的流速下，碘对比剂总量为 35ml,生理盐水 50ml 的扫描方案可以减少上腔静脉伪影并满足临床诊断要求。

PU-2919

肋骨原发性肿瘤的影像学特征及鉴别

杨海涛
重庆医科大学附属第一医院

目的：提高对肋骨原发性骨肿瘤的影像学表现认识及诊断、鉴别诊断能力。
方法：回顾性分析 2014 年至今经手术病理证实的 36 例肋骨原发性骨肿瘤和肿瘤样病变的临床和影像学资料。
结果：36 例经病理证实的肋骨原发性骨肿瘤或肿瘤样病变中恶性者 11 例（30.5%）其中软骨肉瘤 5 例，浆细胞骨髓瘤 3 例，Ewing 肉瘤 1 例，恶性纤维组织细胞瘤 1 例，滑膜肉瘤 1 例；良性者 25 例（69.5%），其中纤维结构不良 11 例，骨软骨瘤 7 例，Langerhans 组织细胞增生症 2 例，骨巨细胞瘤 1 例，内生软骨瘤 1 例，软骨粘液样纤维瘤 1 例，纤维黄色瘤 1 例，血管瘤 1 例。纤维结构不良是本组最常见的肋骨病变（30.5%），好发于后肋，影像表现为与肋骨长轴一致的囊性膨胀性分叶状骨质破坏，其内密度均匀或不均匀，呈磨玻璃样，可见钙化或骨化；骨皮质边缘可部分不连续，部分病例可呈肿块样突向胸腔。骨软骨瘤是第二常见的肿瘤（19.4%），好发于前肋肋软骨交界区，影像表现与其它部位骨软骨瘤类似，表现为肋骨外生性骨性肿块，常呈菜花状，突向胸壁或胸腔内。朗格汉斯组织细胞增生症表现为肋骨内单囊或多囊状溶骨性骨质破坏，破坏区可见骨质膨胀性改变伴软组织肿块，可伴有不同程度的骨质硬化。软骨肉瘤是最常见的原发性肋骨恶性肿瘤（13.8%），好发于前肋肋软骨连接处和肋骨头近胸椎处，病变肋骨呈溶骨性、膨胀性骨质破坏并软组织肿块，内多伴有软骨基质钙化，实质呈稍低的均匀密度；MRI T1WI 等低、T2WI 等高信号，血供较丰富，增强呈明显不均环状强化。
结论：肋骨原发性骨肿瘤或肿瘤样病变有不同的影像学特征，影像学诊断要结合病变在肋骨的发生部位、骨质破坏形式、内部结构及对邻近结构侵犯情况综合分析。

DCE-MRI 定量参数与软组织肉瘤组织病理学分级的对照研究

李相文,王启蒙
大连医科大学第二附属医院

目的：
探讨动态增强磁共振成像（DCE-MRI）定量参数在评估软组织肉瘤（STSs）组织病理学分级的应用价值

方法：
根据 2013 版 WHO 软组织肿瘤分类标准，收集大连医科大学 2016 年 9 月-2018 年 9 月经病理证实为软组织肿瘤患者 51 例。使用 Siemens 3.0TMRI 扫描仪，序列 T_1WI、T_2WI、DWI、DCE-MRI；使用 Omni Kinetics (GE healthcare) 进行图像后处理生成伪彩图，选取肿瘤强化最明显及弥散受限最显著区域勾画 ROI，拟合计算定量参数容积转移常数（K^{trans}）、血管外细胞外间隙与血浆间速率常数（K_{ep}）及血管外细胞外间隙容积分数（V_e）。根据法国癌症中心联合会(FNCLCC)诊断 STSs 组织病理学分级标准将 51 例 STSs 分为 I～III 级。

结果：
51 例 STSs 组织病理学分级为 I 级 17 例、II 级 18 例、III 级 16 例。K^{trans}、K_{ep}与其组织病理学分级具有正相关性（$P<0.05$），其中 K^{trans}与其组织病理学分级的相关性最好（$r=0.7168$）；V_e与其组织病理学分级无相关性（$P>0.05$）。K^{trans}、K_{ep}值较高者，其组织病理学分级较高，I-III 级间 STSs 的 K^{trans}、K_{ep}差异有显著性（$P<0.05$），依据 K^{trans}、K_{ep}能够鉴别 I 级与 III 级 II 级与 III 级（$P<0.05$），但不能鉴别 I 级与 II 级（$P>0.05$）。依据 V_e对 STSs 的 I-II、II-III 及 II-III 级均不能鉴别（$P>0.05$）。

结论：
STSs 的 DCE-MRI 定量参数 K^{trans}及 K_{ep}与其组织病理学分级呈正相关性，能够反映其组织病理学分级。K^{trans}及 K_{ep}能够鉴别 I 级与 III 级、II 级与 III 级 STSs，但是不能鉴别 I 级与 II 级的 STSs。

少见软组织肉瘤的 CT 及 MRI 表现

郑雪微,管玉瑶,刘硕,李佟,治南,丁军（通讯）
吉林大学中日联谊医院新民院区

【摘要】目的了解少见软组织肉瘤的 CT 及 MRI 征象，以提高该疾病的诊断率。**方法**:回顾性分析 2013 年 3 月至 2018 年 11 月吉林大学中日联谊医院收治的 20 例经病理证实的少见软组织肉瘤的影像资料，其中包括精索脂肪肉瘤 3 例、肺平滑肌肉瘤 3 例、前列腺平滑肌肉瘤 4 例、颈部滑膜肉瘤 5 例、骶尾部滑膜肉瘤 2 例、大腿低度恶性纤维粘液样肉瘤 3 例。**结果：**20 例中多数病灶密度不均，仅 6 例边界清楚、密度均匀，14 例发生囊变坏死，9 例伴有条状钙化，7 例病灶内可见线状分隔，多数病灶呈边界不清的软组织肿块，侵犯或推挤邻近组织，增强大多数呈明显不均匀强化，少数呈轻-中度均匀强化。**结论：**软组织肉瘤发病率较低，可发生于任何部位，一些少见部位的软组织肉瘤影像学表现也具有一定的特征性。影像学检查具有较高的诊断价值，对指导临床制定治疗方案有重要意义。

The classification and features of primary sacrococcygeal chordoma based on CT imaging

Fangni Chen,Wei Wang,Chenguang Wang,Shiyuan Liu,Li Fan,Yi Xiao,Hongbo Zhao
Department of Radiology and Nuclear Medicine, Shanghai Changzheng Hospital, Naval Medical University, Shanghai, 200003, P.R.China

【Abstract】**Objective** To develop a CT imaging classification system and analyze CT imaging features for pretreatment primary sacrococcygeal chordoma (PSC), provide evidences for its diagnosis and personalized medicine. **Methods** Pretreatment CT imaging of 101 patients with a histopathological diagnosis of PSC were analyzed retrospectively, including tumor location, extent, size, intensity, involvement of adjacent structure. According the tumor location,from upper to lower, PSC were classified into four types (Ⅰ-Ⅳ). Four subtypes (a-d), from small to large, were defined by tumor extent. The ratio of subtype was analyzed by Kruskal-Wallis H test and pairwise comparison.R×C contingency table exact probobility was compared the occurrence rate of tumor calcification among different types and subtypes. One- way ANOVA and LSD-t test were adopted to analyze tumor size and intensity among different types and subtypes. **Result** In 101 cases, the ratio of type Ⅰ-Ⅳ was 17.8%, 30.7%, 36.6% and 14.9% respectively; the ratio of subtype a-d was 9.9%, 25.7%, 58.4% and 5.9% respectively.The differences of ratio among subtypes had statistical significance (P =0.012). The proportion of subtype c was higher than subtype a (P =0.039), while the proportion of subtype d was lower than subtype a (P =0.036). There were no significantly differences among other subtypes. For the occurrence rates of tumor calcification, there were no significantly differences among different types (P =0.233), but not among subtypes (P =0.003).The occurrence rates of tumor calcificationa were increasing from subtype a to d. The transverse dimensions and vertical dimensions of type Ⅰ were larger than type Ⅱ to Ⅳ (P <0.05). For the anteroposterior dimensions, there were significantly differences from subtype b to d (P <0.05), but not between subtype a and b (P >0.05); the transverse dimensions and vertical dimensions were significantly differences among different subtypes (P <0.05); the dimensions were increasing from subtype a to d. **Conclusions** TypeⅡand Ⅲ were common in pretreatment CT imaging of 101 PSC; the first sacrum was seldom involved; subtype a was uncommon, subtype c was the commonest and subtype d was rare.The intensity of tumor was not associated with CT type and the occurrence rates of tumor calcificationa were related to subtypes. The extent of tumor in type Ⅰ was wider than other types; the tumor dimensions were increasing from subtype a to d; CT imaging classification system was beneficial to judge the extent of tumor. The diagnosis delay of PSC was obvious, but the distant invasion and metastasis were infrequency. CT imaging can develop a classification system for pretreatment PSC and provide evidences for its diagnosis and personalized medicine.

恶性黑色素瘤骨转移:一例病例报告

马锦涛,董越
辽宁省肿瘤医院

目的 一例恶性黑色素瘤骨转移患者，影像表现很有特点，本文详细介绍了相关临床及影像表现。
方法 恶性黑色素瘤通过淋巴管及血液循环发生转移，皮肤、皮下组织及淋巴结多见，而骨骼特别是长骨相对少见。1 例 46 岁男性患者，右侧前臂疼痛伴病理性骨折入院，影像显示断端少许骨膜反应，周围见 T1W、T2W 不均匀高信号软组织肿物。患者 3 年前因黑色素瘤入当地医院治疗，经过手术病理以及临床病史分析后，确诊为黑色素瘤骨转移。本文详细介绍了该患者的临床及病理相关信息。
结果 来源于黑色素瘤的 1 例患者，位于尺骨中段，伴病理性骨折。X 线及 CT 上局部骨皮质增厚，边缘不光滑，可见少许骨膜反应，软组织肿块边界欠清。MR 上可见骨皮质信号改变及明显的软组织肿块，肿块包绕骨干，T1 和 T2 上呈稍高信号。骨转移多呈溶骨性破坏，MR 对病灶显示敏感，根据病灶内黑色素的分布及含量，病灶的信号略有不同。T1W 上多显示低信号的软组织肿块内伴稍高信号的黑色素沉积，T2W 显示混杂高信号。本研究中，1 例病灶 T1W、T2W 呈不均匀稍高信号，与文献报道一致。最终，通过病理结果支持恶性黑色素瘤骨转移的诊断。
结论 联合影像学及病理活检可以确诊恶性黑色素瘤骨转移。

PU-2924

脊柱腱鞘巨细胞瘤的影像表现

王鹏,王晨光
海军军医大学第二附属医院（上海长征医院）

[摘要] 目的探讨脊柱腱鞘巨细胞瘤的影像表现。方法收集脊柱腱鞘巨细胞瘤 6 例，分析临床及影像表现特点，进行随访和预后观察。结果 6 例脊柱腱鞘巨细胞瘤，年龄 20～45 岁，男女各 3 例；颈椎 4 例，胸椎 2 例。影像显示病变主要位于椎小关节或以小关节为中心，呈溶骨性骨质破坏，边缘多见骨质硬化；MRI 上因病变内含铁血黄素沉积 ，T1WI 呈等或低信号，T2WI 呈不均匀明显低信号，在梯度回波序列更显著，少数病例 T2WI 呈混杂稍高信号，增强扫描病变呈明显强化。结论发生于脊柱的腱鞘巨细胞瘤多累及颈椎，与附件小关节关系密切。影像表现具有一定的特异性，预后良好。

PU-2925

非典型骨肉瘤的影像学表现

蔡王莉
上海交通大学附属第六人民医院

目的 探讨非典型骨肉瘤的影像学表现，提高大家对非典型骨肉瘤影像学表现的认识，减少影像学上对非典型骨肉瘤的漏诊、误诊。
方法 回顾性分析了 100 例经手术病理证实为骨肉瘤患者的 X 线、CT、MRI 表现。
结果 85 例患者发生于 20 岁以内的青少年 ， 80 例患者发生在长骨干骺端 ，78 例患者肿瘤骨内可见成骨。本组 100 例经手术病理证实为骨肉瘤患者中有 19 例误诊，误诊率达 19%，其中 10 例为年龄大于 50 岁的中老年人，9 例发生于骨干、2 例发生于扁骨，7 例肿瘤骨内未见明显成骨。

结论 典型骨肉瘤好发于青少年、长骨干骺端、肿瘤骨内可见成骨，诊断并不困难，但不典型骨肉瘤也时常可见，误诊率较高，放射科医生应该熟悉骨肉瘤的特殊影像学表现，以提高诊断正确率，减少误诊、漏诊率。

黏液纤维肉瘤的 MRI 表现及其病理学基础

王飞云
济宁医学院附属医院

目的：探讨黏液纤维肉瘤（MFS）的 MRI 表现及其病理基础，提高对本病的诊断水平。方法：回顾性分析 16 例经手术病理证实的 MFS 患者资料，就其 MRI 及病理进行总结分析。结果：14 例位于浅筋膜下，2 例位于肌间隙内；7 例呈类圆形，6 例呈梭形，3 例呈不规则形，肿瘤最大径约 4.6~13.2cm，平均 7.6cm；MRI 上，2 例呈 T_1WI 呈均匀稍高信号，14 例呈混杂等/低信号，2 例 T_2WI 呈均匀高信号，14 例呈混杂高信号，11 例病变呈 DWI 混杂高信号，ADC 均呈混杂低信号；10 例增强扫描呈不均匀明显强化；15 例可见“筋膜尾征”，12 例见瘤周水肿，12 例病灶内见“双低信号征”，11 例见囊变、坏死，6 例见黏液样变，其中 6 例囊变、坏死区及 5 例黏液样变区 ADC 值差异具有统计学意义（$P<0.05$）；镜下疏松区富含黏液基质，并可见散在曲线形血管，细胞密集区见多发梭形肿瘤细胞，异型性明显，核分裂多见； 8 例为低度恶性，2 例中度恶性，6 例高度恶性；免疫组化 16 例 Vimemtin 及 13 例 CD34 呈阳性。结论 MFS 的 MRI 表现具有一定特征性，有助于术前诊断，最终确诊依赖病理。

The clinical and imaging manifestations of SAPHO

Yuhan Zhang
Department of Radiology, Southwest Hospital, Army Military Medical University

Abstract: Objective: To investigate the clinical manifestations and imaging features of SAPHO syndrome.Methods:The clinical and imaging findings of 27 patients with SAPHO syndrome were retrospectively reviewed, in combination with a literature review. Results: SAPHO syndrome is a chronic disease with the bone, joint and the skin involvement.20 cases had bone and joint swelling and pain as major clinical manifestations, the other 7 cases appeared skin lesions included the pustulsis, acne, hidradenitis suppurativa, etc..Imaging manifestations were chronic inflammation of bone and joint,including bone destruction, sclerosis, hypertrophy, medullary cavity stenosis even disappear.Major including anerior chest wall,spine and the sacroiliac joints,respectively 23 cases,9cases,8cases. vertebra involvement showed inflammation of vertebral angle and end-plate osteochondritis and osteosclerosis;18F-FDG PET/CT performance was increased FDG uptake of bone,bone scintigraphy showed typical "bull head" sign.Conclusion:Clinical manifestations of SAPHO syndrome have no specificity,but the image findings such as anterior chest wall bone osteosclerosis,hyperostosis, hyperostosis are characteristic,Comprehensive analysis should be combined with clinical and typical images to increase the knowledge for the disease and improve the accuracy of diagnosis.

PU-2928

枢椎齿状突加冠综合征的临床及 MSCT 分析

王洲,王立忠
青岛市海慈医疗集团

目的　　探讨枢椎齿状突加冠综合征的病因、CT 影像诊断及临床治疗。方法 搜集近 6 个月 CT 发现枢椎齿状突周围钙盐沉积并经临床治疗的 6 例患者进行分析，其中男性 2 例，女性 4 例，年龄 54-86 岁，平均年龄 70.16 岁。结果 6 例患者均有不同程度的急性颈部疼痛、颈部僵硬、转头活动受限，其中 5 例患者血沉加快和 C 反应蛋白升高，2 例出现发热，MSCT 检查 6 例均有齿状突周围不同程度“皇冠状”钙盐沉积，应用非甾体类消炎药和皮质类固醇治疗两周后症状明显缓解，其中有 2 例先期曾按照颈椎间盘脱出治疗后症状缓解不明显。结论　颈椎 MSCT 平扫检查，显示齿状突周围“皇冠状”钙盐沉积，是诊断枢椎齿状突加冠综合征的重要依据，结合临床和实验室检查做出诊断，齿状突加冠综合征疼痛可特征性的被非甾体类抗炎镇痛药和皮质类固醇所缓解。

黏液纤维肉瘤的影像学表现与病理对照分析

印隆林,孙菊,曾桔,张传德
四川省医学科学院·四川省人民医院

目的:探讨黏液纤维肉瘤（MFS）的 CT/MRI 表现，并与组织病理学进行对照分析，以提高对该病的认识及影像诊断水平。**方法：**将 10 例经手术病理证实的 MFS 患者按 FNCLCC 标准分为中级别 5 例、高级别 5 例，回顾性分析各级别患者的临床、影像及病理资料。**结果：**肿瘤位于大腿 4 例（其中 1 例同时位于髋部），小腿 1 例，臀部 1 例，踝关节 1 例，手臂 1 例，髂窝 1 例，髂腰肌及股直肌 1 例。肿瘤长径范围 3.8cm~20cm（平均 10.78±6.88cm），大多与周围组织局部分界欠清，呈类圆形、梭形或不规则形。3 例位置较深（1 例高级，2 例中级），6 例位置表浅（3 例中级，3 例高级），1 例高级别同时位于表浅和深部。2 例 CT 检查患者中，平扫呈低或稍低密度，密度均匀者（可见条状分隔）及不均匀者各 1 例，均未见明显出血或钙化。8 例 MRI 检查患者中，平扫主要表现为等、稍长、稍短 T1，长、稍长、稍短 T2 混杂信号，且除 1 例高级别 MFS 外其余均可见线样低信号分隔，平扫 5 例可见尾征。其中 4 例同时行增强 MRI 检查，均呈明显强化，其中 1 例高级别强化均匀；1 例中级别强化与无强化区交织分布；1 例高级别部分明显强化，部分弱强化；1 例高级别强化不均匀，可见结节样强化区。其中 1 例同时行 DWI 检查，呈高低混杂信号。病理表现：MFS 组织病理学表现为大量的黏液样基质背景中分布梭形或星形肿瘤细胞，细胞核具有一定的异型性，高级别肿瘤往往具有更高的异型性和明显的核分裂象。**结论：**MRI 能清楚显示肿瘤的部位、形态、范围以及与周围组织结构的关系，MFS 的影像表现与组织病理学具有一定的相关性，可以指导手术范围的制定。

PU-2930

骨朗汉斯细胞组织细胞增生症的影像学表现

唐言,乐维婕
上海交通大学医学院附属第九人民医院

目的：探讨骨朗汉斯细胞组织细胞增生症（Langerhans cell histocytosis，LCH）的影像学表现。**方法：**回顾性分析 8 例经手术病理证实的 LCH，均行 CT 检查，其中 6 例行增强检查；5 例同时行 MRI 增强检查。分析 CT、MRI 影像学特征，并与病理结果进行对照分析。**结果：**8 例经 LCH 患者中，年龄 6 ~50 岁，男女比例 5：3，发病部位下颌骨 3 例，颞骨 1 例，硬腭 1 例，股骨 2 例，腓骨 1 例。CT 表现为骨髓腔内与骨长轴平行的低密度溶骨性骨质破坏区，边界清，周围可见硬化，邻近骨皮质破坏、连续性中断，可见层状骨膜反应，周围软组织肿胀，增强扫描呈中度-明显强化。MRI 扫描见边界清楚的骨质破坏区，呈 T1WI 低信号，T2WI 压脂高信号，骨皮质中断，周围软组织肿胀，强化程度同 CT。**结论：**LCH 的 CT、MRI 影像学表现具有一定的特征性。骨髓腔内边界清晰的溶骨性骨质破坏、骨缺损，伴或不伴骨质硬化、骨膜反应，增强后中高度强化提示本病。

PU-2931

四肢骨脉管畸形的影像学诊断

李小敏
上海交通大学医学院附属第九人民医院

目的：
探讨四肢骨脉管畸形的影像学特征，并分析四肢骨不同部位脉管畸形的影像学差异，以提高期诊断及鉴别诊断水平。
方法：
回顾性纳入于 2016 年 6 月至 2019 年 06 月间以脉管畸形病变收治入我院患者，所有患者均进行 CT 和或 MRI 检查，统计患者一般临床资料、发病部位、影像学表现特点。
结果：
共纳入 112 例动静脉畸形患者，静脉畸形 91 例，动静脉脉畸形 18 例，淋巴管畸形 5 例，病变位于四肢骨，其中手 19 例，足 27 例，肱骨 6 例，尺桡骨 11 例，股骨 20 例，胫腓骨 13 例，尺桡骨及手 4 例，上肢 1 例，胫腓骨及足 3 例，股骨及胫腓骨 1 例，股骨及足 1 例，膝 4 例，肘 1 例，肱骨及股骨 1 例。其中有骨质破坏表现的 32 例。
结论：
动脉畸形及静脉畸形 CT/MRI 表现相似，表现为增强的血管团，而淋巴管畸形，表现为增强或不增强团块影，无血管增大。CT 及其后处理图像有助于显示四肢骨原发性脉管畸形病变三维立体解剖图像和病灶内的血管分布，且在显示骨质破坏表现优于磁共振图像。

PU-2932

长骨骨端软骨母细胞瘤和骨巨细胞瘤临床与 CT 特征分析

左秀娟[1],姜永宏[1]
1.西安市红会医院
2.西安市红会医院

目的：探讨长骨骨端软骨母细胞瘤和骨巨细胞瘤的临床表现、CT 图像特征，提高对两者 CT 征象的认识和诊断能力。**方法：**回顾性分析西安交通大学附属红会医院 2016 年 6 月至 2019 年 3 月经手术或穿刺病理证实的长骨骨端病变软骨母细胞瘤 14 例，骨巨细胞瘤 18 例。分析患者的临床表现和 CT 图像特征。采用 SPSS 22.0 软件进行统计分析，计量资料行 t 检验，计数资料行 Fisher 精确检验，采用 Logic 回归分析各参数与疾病相关性，并以 ROC 曲线评价参数的诊断效能，以 P＜0.05 为

差异有统计学意义。**结果：**两组患者年龄(p=0.02)、病变大于母骨直径 1/2（p=0.038）、分叶（p=0.012）、瘤内钙化（p=0.000）、完整硬化缘（p=0.001）、皮质完整（p=0.000）、分隔（p=0.010）经 Fisher 精确检验，差异有统计学意义（P＜0.05）；性别、触及肿块、压痛、活动障碍，残留骨嵴、边缘清晰、骨膜反应、软组织肿块等资料经 Fisher 精确检验，差异无统计学差异（P＞0.05）。各参数经 Logic 回归分析显示，病变大于母骨直径 1/2、分叶、瘤内钙化、完整硬化缘、皮质完整、分隔为鉴别诊断骨巨细胞瘤和软骨母细胞瘤的特征性因素，差异均有统计学意义（P＜0.05），其 ROC 曲线下面积、灵敏度与特异度分别为（0.689，60.0 %、77.8%）、（0.706，46.7 %、94.4%）、（0.811，73.3 %、88.9%）、（0.800，93.3%、66.7%）、（0.822，86.7%、77.8%）、（0.739，86.7 %、61.1%）。**结论：**年龄、分叶、瘤内钙化、病变大于母骨直径 1/2、完整硬化缘、边缘清晰是鉴别软骨母细胞瘤和骨巨细胞瘤的特征性指标。

PU-2933

透明细胞肉瘤一例

程健
台州市立医院

病例资料 患者男性 ，51 岁，于 4 月余前无意中时发现左侧大腿肿块，当时肿块如黄豆大小，无疼痛，无局部红肿，无畏寒发热，无盗汗、午后潮热，无胸痛、咳嗽、咯血，未就诊。4 月来，肿块逐渐增大，现如弹珠大小，无消瘦乏力，现来院就诊。影像资料：MR 表现为左侧大腿肌肉皮下见类圆形肿物，T1W 等、稍低信号，T2W 及 T2W 脂肪抑制呈不均匀高信号，周边见少许水肿，增强后较明显不均匀强化。 术中所见：切开皮肤，沿肿块分离正常组织，见左侧大腿肌肉间一约 3.0*2.5cm 大小肿物，将肿块连同周围少量正常组织完整切除，创面止血。病理结果：左大腿肌间肿物上皮样细胞肿瘤伴色素沉着，结合形态及免疫组化结果，考虑软组织透明细胞肉瘤。免疫组化：S100（+），HMB45（+），Melan A（+），Ki67（约 60%+），Syn（-），CgA（-），CD56（弱+），CK(广)（部分弱+），Vim（+），SMA（-）。

讨论 透明细胞肉瘤（clear cell sarcoma，CCS）是临床上一种罕见的软组织来源肿瘤，病程一般较长，约占所有软组织肉瘤的 1%。1965 年由 Enzinger 首先报告。CCS 可发生在任何年龄，但以中青年多见，偶可发生在儿童及老年患者。发生部位多见于四肢远端的深部组织，以足、膝部、手腕部多见。肿瘤常见与肌肉、深筋膜相连，但未见与表皮相连。病理上肿瘤常呈分叶或结节状肿块，边界清楚，生长以浸润性为主。从组织细胞上看，多由梭形细胞或（和）上皮样细胞组成，常呈片状、巢状等形状排列，中间被纤维组织分隔。在免疫组化方面，S-100 蛋白和 HMB45 常表现为阳性。最近研究发现基因检测对于 CCS 诊断准确性较高，表现为 t（2；22）（q32；12）染色体易位，导致 EWS-ATF1 基因融合。现 CCS 的治疗有多种方法，如手术治疗、靶向治疗、免疫治疗、化学治疗、放射治疗，但以手术治疗为最主要方法。

PU-2934

骨促结缔组织增生性纤维瘤的影像学分析

钟志伟,马洁琳,吴文娟
河北医科大学第三医院

目的 分析及探讨骨促结缔组织增生性纤维瘤(Desmoplastic fibroma of bone)的影像学表现。
资料与方法 回顾性分析 15 例经手术病理证实的骨促结缔组织增生性纤维瘤的影像学特点。 15 例骨促结缔组织增生性纤维瘤具有 X 线平片的 15 例，具有 CT 检查 13 例，具有 MR 检查的 6 例。

结果 15 例骨促结缔组织增生性纤维瘤的发病年龄 14~52 岁，以 30 岁以下的青少年多见。男性 7 例，女性 8 例（男女无明显差异）。本组 15 例的发病部位是股骨 5 例，胫骨 3 例，髂骨 2 例，椎体 2 例，肱骨 1 例，桡骨 1 例，跟骨 1 例。长骨常见于干骺端。X 线及 CT 表现分为四种类型：（1）囊样型：主要呈囊样膨胀性改变，可见残存骨嵴、呈丝瓜囊状；（2）溶骨型：呈类似恶性肿瘤的溶骨性破坏；（3）小梁型：表现为以肿瘤性骨小梁形成为主的改变，骨失去正常形态，呈“树根”状；（4）骨旁型：主要表现为边缘性压迫性骨侵蚀；病变区内的 CT 值较高（大部分病例 CT 值大于 50Hu）。MR 信号因类型不同而表现为信号差异较大，但大部分病例病变区 T1 呈不均匀的等或低信号，T2 为等或偏高信号，其信号与周围肌肉信号类似；病灶区内可见散在条索状长 T1 短 T2 信号（特征性较强），其形态及信号与韧带相似，低信号周边可见散在长 T1 长 T2 信号，病变强化不明显。

结论 骨促结缔组织增生性纤维瘤病灶区 CT 值高（50Hu 以上居多），其内可见散在条索状长 T1 短 T2 信号为其特点。因骨促结缔组织增生性纤维瘤为中间型、具有侵袭性，所以又具有恶性肿瘤的征象。综合 X 线、CT 及 MR 影像特点，有利于鉴别诊断及提高本病的准确率。

PU-2935
骨母细胞瘤合并动脉瘤样骨囊肿影像表现：附 3 例报告暨文献复习

祝爽
西南医科大学附属中医医院

目的：分析骨母细胞瘤合并动脉瘤样骨囊肿的影像学表现特点，以提高对该病的认识。 **方法**：对 3 例术前行影像学检查，病理证实为骨母细胞瘤合并动脉瘤样骨囊肿病例进行回顾性分析,并结合文献复习。 **结果**：病灶均为单发。病例 1 初次检查表现为 C5 左侧椎板椭圆形磨玻璃样骨质破坏区，边界清楚。7 个月后病灶范围增大,位于 C5 左侧椎板及棘突，呈不规则膨胀性骨质破坏，边界清楚，边缘骨质硬化，内见小点状、斑片状高密度影及线样分隔。MRI 表现为 T1WI 等信号，T2WI 及 STIR 呈前份等信号、后份高信号，增强扫描显示不均匀明显强化。病例 2 位于右侧耻骨上支、髂骨，表现为膨胀性骨质破坏。病灶体积大，边界清楚，骨质不连续，可见软组织肿块影，边缘未见骨质硬化或骨膜反应。病例 3 位于左股骨远端，首次就诊时 DR 表现为边界清楚的类圆形骨质破坏，其内见结节状钙化或骨化灶，边缘骨质硬化。18 个月后，DR 显示骨质破坏区边界不清，呈斑片状。 **结论**：骨母细胞瘤合并动脉瘤样骨囊肿罕见，影像表现差异大，术前影像诊断难度较大。CT 及 MRI 表现，对本病的术前诊断有一定的价值。

PU-2936
脊索瘤的ＣＴ和ＭＲＩ影像表现与病理分型的对照研究

孙颖志,肖刚,韩宇,南海燕,胡博,王文,崔光彬
空军军医大学唐都医院

目的：探讨脊索瘤的 CT 及 MRI 影像表现与病理分型的对照研究，为临床制定个性化治疗方案提供依据。

方法：回顾性分析了我院 2013 年 9 月—2019 年 5 月，经手术病理证实脊索瘤 72 例。利用 CT 及 MRI 观察病变发生部位、大小、生长方式、密度或信号特点，以及与邻近组织的关系，以判定病变内部组成成分及生长侵袭程度；反映组织病理学表现。

结果：72 例脊索瘤患者中，男性 44 例，女性 28 例（男：女=1.6:1）。发病年龄范围 2.8 岁-77 岁，平均发病年龄为 49.1 岁。病变起源骶尾部者为 43 例，颅底骨质起源为 25 例，颈椎及胸椎 4 例。根据组织病理学分型结果经典型 48 例，软骨样型 11 例，去分化型 3 例。72 例均行 CT 和/或 MRI 检查，其中 CT 增强 20 例，MRI 增强 38 例。CT 检查（49 例），主要表现为膨胀性溶骨性骨质破坏，呈软组织密度影，病变内部密度不均匀，病变内部因斑点状钙化或残存骨呈高密度，因病变内部含粘液基质及病变囊变呈低密度改变。MRI（35 例），主要表现为以 T1WI 低信号及 T2WI、STIR 高信号为主的混杂信号影，MRI 可清晰显示病变侵袭范围，低信号纤维分隔影，由于病变大量存在的粘液成分及伴发亚急性出血时，表现为 T1WI 高信号；因残存骨、软骨基质的钙化、陈旧性出血而呈 T2WI 低信号改变。CT 及 MRI 增强扫描（33 例），病变均呈现不均匀强化，其中轻度强化 24 例，中度强化 9 例；动态增强扫描（9 例）呈持续上升型强化方式。
结论：CT 和 MRI 可清楚显示脊索瘤的发病部位、形态、大小、侵袭程度以及病变组成成分，直接反映出病理组织学的部分特征，对术前明确诊断、手术方式及术后随访评估具有重要指导作用。

PU-2937

滑膜血管瘤的 MRI 诊断

刘玉珂
河南省洛阳正骨医院（河南省骨科医院）

目的 探讨滑膜血管瘤的 MRI 表现。**方法** 回顾性分析 23 例经病理证实的滑膜血管瘤患者资料，总结其 MRI 特征。**结果** 局限型 6 例，弥漫型 17 例。局限型肿瘤位于关节内滑膜组织，不侵犯关节囊和周围组织，常有包膜，边界清楚，形态较规则，5 例信号不均匀，T_1WI 上呈低或等信号，T_2WI 及脂肪抑制序列 PDWI 上呈不均匀高信号，其内可见斑片状及多发细条形低信号影。弥漫型肿瘤分布于关节内外，常侵犯关节囊或关节囊外组织，17 例肿瘤信号皆不均匀，T_1WI 上呈低或等信号，其内可见斑片状或蜿蜒匍匐状高信号，T_2WI 及脂肪抑制序列 PDWI 上呈不均匀高信号，其内可见斑片状、结节状及多发细条形低信号，6 例瘤体内可见粗大的低信号流空血管，3 例可见静脉石。增强扫描 15 例，肿瘤呈明显斑片状、结节状或迂曲脉管状不均匀强化，其内可见斑片状、结节状及条索状低信号未强化区。**结论** 滑膜血管瘤内常见脂肪纤维成份和流空血管，MRI 表现具有特征性，对该病的诊断具有重要的临床价值。

PU-2938

肌骨系统孤立性纤维瘤的影像学表现与病理对照

刘霞
北京大学人民医院

目的
探讨孤立性纤维瘤的 CT、MRI 及 DSA 的影像学表现，分析影像学表现与病理表现的相关性，寻找孤立性纤维瘤与其他肿瘤鉴别征象。
材料与方法
回顾性分析我院近十年的骨与软组织肿瘤共 34 例记录病变的位置、形态、大小、边界、平扫的密度及信号强度、增强扫描的强化程度及强化方式、邻近及周围血管情况、邻近软组织及骨质改变、有无转移。病理采用常规 HE 染色剂免疫组化检查。
结果

34 例患者中，19 例进行了 CT 检查，17 例进行 MRI 检查，12 例进行了 DSA 检查，4 例进行 PET-CT 检查。其中位于骶骨区 16 例，大腿软组织 8 例，肩部软组织 2 例，背部软组织 1 例，脊柱旁 1 例，骨内 6 例。20 例位于骨盆区的患者呈不规则分叶状，有钻孔生长的特点，12 例位于四肢软组织的患者呈类圆形，形态略有浅分叶，1 例患者沿骨干长轴呈长椭圆形。病灶大小 3-14cm。
CT 平扫时呈现等或略低密度，12 例可见小片状略低密度，4 例可见大量的液化坏死，2 例密度均匀，4 例有钙化成分，3 例有脂肪成分，增强扫描后 19 例均呈明显强化，2 例呈均匀强化，17 例呈不均匀强化，内部可见大小不等的无强化区及低强化区，强化最强处 CT 值 100-230HU，全部病例强化后病灶周边均可见增粗迂曲的血管影。
MRIT1 平扫时 T1 呈中等略低信号 15 例，略高信号 2 例，11 例信号略不均匀，4 例信号明显不均匀，2 例信号相对均匀，T2 呈现不均匀高信号 17 例，内部可见条索状低信号 15 例，内部出现留空信号 15 例，周边出现留空信号 17 例。3 例患者可见脂肪成分。
12 例 DSA 患者均呈现快进慢出的强化特点，病灶内部及周边均可见粗大血管。5 例 PET-CT 患者 SUV 值 1.9-4.3。
病理:7 例呈恶性孤立性纤维瘤表现，27 例为孤立性纤维瘤。
结论
肌骨系统的孤立性纤维瘤虽然比较少见，但是有其典型的影像学表现特点，通过影像与病理对照，大部分还是可以想到这个诊断。

PU-2939
原发性骨上皮样血管肉瘤的影像诊断及鉴别诊断

马丽佳
河南省人民医院

【摘要】目的 探讨原发性骨上皮样血管肉瘤（epi-thelioidangiosarcoma，EA）的影像诊断及鉴别诊断，提高对本病的认识及影像诊断水平。方法 对 1 例骨上皮样血管肉瘤进行影像分析，结合相关文献资料进行分析与总结。结果 患者为中年女性，左侧尺骨占位，手术切除，结合免疫组化考虑上皮样血管肉瘤，患者影像学表现为：X 线平片与 CT 图像中，病灶表现为溶骨性骨质破坏，瘤内可见多个细网状囊腔，边界模糊。肿瘤呈膨胀性改变，骨皮质呈“皂泡状”。瘤块内无钙化。MR 图像上，肿瘤呈类圆形，平扫在 T1WI 上，病灶呈等低信号，其中夹杂着大量不规则稍高信号影，考虑为瘤内出血所致。T2WI 上肿瘤呈混杂高信号影，可见坏死。增强扫描，肿瘤呈明显不均匀强化。肿瘤血供丰富，在其周缘常见粗大的迂曲状、点或条状长 T1、长 T2 信号影，考虑为肿瘤血管流空信号，增强后，肿瘤供血血管明显强化。以上表现与相关文献报道一致。结论 原发性骨上皮样血管肉瘤是一种以肿瘤性内皮细胞呈上皮样形态为其特征的高度恶性血管源性肿瘤，影像表现缺乏特征性，需与溶骨性病变进行鉴别，确诊依靠病理检查。

腱鞘巨细胞瘤的 MRI 影像学特征与病理对照分析

颜春龙,齐先龙,郑宁,马金凤
济宁市第一人民医院

目的：探讨分析腱鞘巨细胞瘤（GCTTS）的 MRI 影像学特征并与病理对照，提高对 GCTTS 的诊断水平。方法：回顾性分析经手术病理证实的 38 例 GCTTS 患者的临床资料、MRI 影像学资料及病理临床资料。结果：38 例患者中局限型 23 例，弥漫型 15 例；MRI 表现：23 例局限型 GCTTS，表现为类

圆形软组织肿块，边界清晰，邻近骨质未见明显异常，与骨骼肌信号相比，T1WI 序列 11 例呈等信号，7 例呈等或低信号，5 例呈低信号，T2WI-FS 序列 17 例呈高或低混杂信号，6 例呈低信号。15 例弥漫型 GTCCS，其中 6 例弥漫型为术后复发，表现为关节旁多发形态欠规则软组织肿块，与周围肌腱、血管、韧带分界不清，邻近骨质未见明显异常，与骨骼肌信号相比，T1WI 序列呈等或低信号，T2WI-FS 序列呈高低混杂信号。镜下见较多组织细胞样单核细胞、多核巨细胞，并见散在泡沫细胞及含铁血黄素沉积。
结论：GCTTS 具有一定特征性的 MRI 影像表现，反映病理改变，结合临床症状和体征，可帮助临床医生提高诊断正确率。

儿童肱骨肿瘤或肿瘤样病变并病理性骨折 8 例

徐雪
三台县人民医院

目的:观探讨儿童肱骨骨肿瘤或瘤样病变并病理性骨折的手术疗效。方法:2016 年 3 月至 2018 年 3 月治疗儿童肱骨骨肿瘤或瘤样病损并病理性骨折 8 例:男 3 例,女 5 例；年龄 8~14 岁,平均 11.3 岁。病理结果:孤立性骨囊肿 3 例，骨巨细胞瘤,2 例,动脉瘤样骨囊肿 1 例,骨纤维结构不良 2 例,。手术采取同种异体骨植骨病、灶刮除联合接骨板内固定。结果:8 例均随访至恢复肱骨解剖及功能正常,随访时间 12~46 个月,平均 27 个月。参照骨与软组织肿瘤协会(MSTS)进行功能评估及 Harris 功能评分。术后最后复查肱骨正侧位 X 线片,病灶未见复发或转移,植骨区域骨愈合,内固定物无松动及断裂、变形等,手术部位均无感染、骨髓炎,双上肢等长,无再次骨折及肱骨畸形等发生。结论:儿童肱骨骨肿瘤或肿瘤样病变并病理性骨折虽治疗困难,但手术中能利用多种手段处理瘤体细胞,采用同种异体骨充分植骨结合 PHILOS 接骨板的有效固定,可以减少复发。

骨肉瘤基本病变 X 线平片、CT 和 MRI 对比研究

刘吉华[1],汪贯习[2],高传平[1]
1.青岛大学附属医院
2.青岛大学医学院松山医院

目的
探讨骨肉瘤基本病变在 X 线平片、CT 和 MRI 上的征象对应表现及显示价值。
资料与方法
回顾性分析病理证实的 34 例骨肉瘤的影像学资料(X 线平片、CT 和 MRI)，对骨肉瘤同一基本病变在不同检查方法中的表现进行对比观察和分析。
结果
1. 肿瘤骨：X 线平片显示 20 例，CT 显示 28 例。MR 上，CT 所示的 7 例象牙质样瘤骨区、6 例棉絮状瘤骨区和 7 例针状瘤骨区均呈明显长 T1 短 T2 信号，能够与周围肿瘤组织信号相区分。CT 显示针状瘤骨者 7 例，MR 上均出现形态走行与 CT 相似的低信号。2 例 X 线平片和 CT 并未显示瘤骨，MR 上出现垂直于骨皮质的长 T1 短 T2 信号短针。
2. 骨膜反应及骨膜三角：10 例 X 线平片和 17 例显示骨膜反应。18 例 X 线平片和 20 例 CT 显示骨膜三角。MR 上，CT 所示的 17 例骨膜反应部位呈现明显长 T1 短 T2 信号线，其与骨干骨皮质间为等 T_1长 T_2软组织信号。9 例 X 线平片和 CT 并未显示骨膜反应的部位（3 例软组织肿块内，6 例表面）

呈现介于骨皮质和软组织肿块表面走行的长 T1 短 T2 信号线，与 CT 显示骨膜反应病例对应的 MR 表现完全相同。
3.骨干和干骺皮质：皮质破坏见于 22 例 X 线平片和 30 例 CT 图像。1 例 CT 显示骨干轻度膨胀。MR 上，CT 所示的 30 骨干破坏区呈现长 T1 长 T2 信号，其中 14 例异常信号范围超过 CT 所示破坏区。X 线平片和 CT 均未显示破坏的 3 例，MR 上皮质内出现点条状长 T1 长 T2 信号。
4.其他：干骺端或骨端松质骨、骨干髓腔、骺板（痕）及骨骺侵犯、软组织肿块、软组织肿胀显示率亦不同
结论 骨肉瘤基本病变的 X 线平片、CT 和 MR 征象及显示率不同，在提供诊断和治疗信息方面相互补充。

PU-2943
脊柱原发性平滑肌肉瘤的影像学和临床病理学特征分析

张家慧[1],张恩龙[1,2],陈永晔[1],袁慧书[1],郎宁[1]
1.北京大学第三医院
2.北京大学国际医院

目的 探讨脊柱原发性平滑肌肉瘤的影像学和临床病理学特征，旨在提高影像科医师对本病的认识，减少误诊。
资料与方法 回顾性分析 5 例经病理证实的脊柱原发性平滑肌肉瘤的临床、影像及病理学资料等情况。
结果 5 例肿瘤均为单发病变，肿块侵犯椎体或椎旁组织大多呈分叶状，骨质破坏边界不清。软组织肿块的 CT 值平均为 53HU。与脊髓信号相比，除 1 例病变骨质破坏区 T2WI 信号不均匀外，病变在 T1WI、T2WI 呈均匀等信号，增强扫描呈明显均匀强化。
结论 脊柱原发性平滑肌肉瘤的准确诊断应结合临床、影像和病理资料，临床上表现为疼痛、活动受限，影像学表现具有一定特异性，病变一般呈分叶状，表现为边界不清的溶骨性骨质破坏，T1WI、T2WI 呈均匀等信号，增强扫描呈明显均匀强化，最后还需病理检查确诊。手术完整切除肿瘤是其主要治疗手段，由于平滑肌肉瘤有较高的复发和转移率，术后定期随访非常重要。

PU-2944
原发性骨淋巴瘤的影像分析

宋富桂,张琦,吕哲昊,陈颖
哈尔滨医科大学附属第一医院

目的： 探讨原发性骨淋巴瘤（Primary bone lymphoma,PBL）的影像学表现及病理特征，以提高其诊断准确性。
方法：通过本院骨原发性淋巴瘤及回顾性分析文献报道的原发性骨淋巴瘤的 X 线、CT 和 MRI 表现。
结果：本院及文献报道 97 例原发性骨淋巴瘤，单发 81 例，多发 17 例；所有病例病理均被证实为非霍奇金淋巴瘤，其中 B 细胞淋巴瘤共 86 例，T 细胞共 11 例；X 线和 CT 显示溶骨型 74 例，其余为混合型和硬化型；MRI 检查共 39 例，T1WI 上表现为等或稍低信号，T2WI 常高或稍高信号，增强扫描均有不同程度的强化。

结论：原发性骨淋巴瘤可以发生于全身各个部位，病理以 B 细胞型非霍奇金淋巴瘤多见，影像学上具有一定的特征，需要综合各种影像学技术增加病变的影像学信息，但最终确诊仍需要病理学检查。

Contrast-enhanced T1WI Histogram Analysis in Differentially Diagnosing of Osteosarcoma and Ewing's Sarcoma.

Chen Chen,Cui-ping Ren
The First Affiliated Hospital of Zhengzhou University

Objective：To determine if histograms of contrast-enhanced T1WI can be used to differentiate osteosarcoma and Ewing's Sarcoma.

Materials: 52 patients with confirmed histologically osteosarcoma in 32(61.54%) patients,and Ewing's Sarcoma in 20(38.46%) patients were enrolled in the study,accepting MRI at 3T. The ROIs were drawn on the maximum level of contrast-enhanced T1WI,and the histogram analysis were performed using the software named Mazda. The statistical analysis was performed on the nine histogram parameters to find out the different characteristics and the ROC curve was drawn to evaluate the diagnostic efficacy.

Results:Histogram metrics derived from mean,Perc.01%,Perc.10% and Perc.50%were significantly lower in osteosarcoma than Ewing's sarcoma. Osteosarcoma was significantly higher variance than Ewing's sarcoma. Optimal diagnostic performance to predict Ewing's sarcoma from osteosarcoma (AUC= 0.787, sensitivity = 70.60%, specificity =79.30%) was obtained when setting Perc.10%= 120.00 as the threshold value.

Conclusions:The contrast-enhanced T1WI histogram analysis may help to discriminate Ewing's sarcoma and osteosarcoma.

成人原发性脊柱淋巴瘤一例

李继亮,李群英,吴敏
铜仁市人民医院

患者，男，30 岁，因反复腰痛 6 个月余，加重伴下肢麻木 4 天入院。6 个月前患者无明显诱因出现腰部疼痛，为间歇性隐痛，能忍，休息后可缓解，无发热、畏寒，无胸闷、气促，无恶心、呕吐，无双下肢麻木、乏力、跛行等不适，4 天前患者再发腰痛不适伴左下肢麻木，经休息后症状不能缓解，无恶心、呕吐，无乏力、低热盗汗，无胸闷、气促等不适。查体：T:36.9℃，P:108 次/分，R:20 次/分钟，BP:136/96mmHg，腰部活动稍受限，臀部肌肉无萎缩，L3 椎体及椎体左侧组织压痛

明显，伴叩击痛，骨盆挤压实验及分离试验（-），左侧腹股沟区、左膝关节内上侧皮肤感觉迟钝，双侧髂腰肌、股四头肌、胫前肌、腓肠肌、小腿三头肌、跖趾屈曲肌及踇背伸肌肌力 V 级，肌张力正常；双下肢直腿抬高试验阴性，加强试验（-），腹壁反射正常引出、对称，会阴部及肛周感觉未见异常，肛门括约肌肌力正常，肛周浅反射存，双侧髌腱反射、跟腱反射正常，双侧踝阵挛阴性。克氏征（-）、布氏征（-）、巴彬斯基征（-）。

PU-2947

指骨上皮样血管内皮瘤一例

张旭霞,张皓
兰州大学第一医院

男，22 岁，发现左手环指末端肿物 2 年余，肿物渐进性增大。查体：左手环指末端可见外生性肿物，肿物呈不规则菜花状，末节指骨变形，中节指骨皮肤颜色发暗。X 线（图 A）表现为：左手环指远节指骨肿物，大小约 3.7×2cm，形态不规则，呈溶骨性及膨胀性骨质破坏，内可见分隔，肿块周边可见钙化；MRI 示：病变呈膨胀性及溶骨性骨质破坏，在 T1WI（图 B）呈不均匀低信号，T2WI（图 C）呈高信号，内可见类圆形更低信号区，PdWI 压脂（图 D）像仍呈高信号，内可见分隔。全身骨显像示（图 E）：左侧第 4 指骨异常示踪剂浓聚。后行左侧环指离断术，术后病理：大体标本：环指指端可见 4×2×1cm 的黑色隆起区域，隆起区域切面呈灰黑色；镜下（图 F、图 G）：组织表面被覆鳞状上皮，上皮角化过度伴出血、坏死及中性粒细浸润，真皮及皮下可见片状血管增生，部分内皮细胞轻度不典型增生，部分腔内可见红细胞，间质淋巴细胞浸润，深部可见骨化；免疫组化：ckp（－），p53（－），CD31（1＋），CD34（1＋），fli-1（1＋），ki67（10%）。诊断：左手指骨上皮样血管内皮瘤。发生于指骨的上皮样血管内皮瘤较少见。

PU-2948

动脉瘤样骨囊肿的影像学诊断

张国庆
河南省洛阳正骨医院（河南省骨科医院）

[**摘要**] **目的** 评价影像学检查对动脉瘤样骨囊肿（ABC）的诊断价值。**方法** 对 16 例经手术病理证实的 ABC 的影像学表现进行回顾性分析。16 例均拍 X 线平片,9 例 CT 扫描，6 例 MRI 扫描。**结果** 16 例 ABC 发生于长管状骨 9 例，脊柱 4 例，短骨及扁骨 3 例。13 例病变呈膨胀性骨质破坏，10 例病变边缘可见硬化，5 例合并病理性骨折，8 例病变可见分隔，11 例可见典型的液－液平面， 3 例病变周围可见软组织异常改变，其中 2 例软组织肿胀，1 例软组织肿块，12 例病变内密度和（或）信号显示不均匀。**结论** 动脉瘤样骨囊肿具有一定的影像学特征，CT 和 MRI 对 ABC 诊断较平片有优势，综合影像学检查能提高 ABC 诊断符合率。

PU-2949

背部骨外尤文肉瘤 1 例

向春红,杨全

重庆医科大学附属永川医院

目的：通过 1 例背部骨外尤文肉瘤及相关文献复习，进一步加强对骨外尤文肉瘤的认识。
方法：回顾性分析 1 例背部骨外尤文肉瘤的影像学表现及手术病理征象。
结果：患者男，19 岁，发现背部包块 1 年，周围皮肤无红肿，皮温无明显升高。实验室检查未见特殊。专科检查：背部可扪及大小约 6×7cm 大小包块，无明显压痛，质韧，边界清楚，活动度可，皮温不高，未扪及波动感。胸部 CT:右侧肩胛区皮下见团块状软组织密度影，CT 值约 46HU，密度较均匀，上下累及范围约 15 个层面，邻近骨质未见明显改变。MRI：右侧背部肩胛区皮层见梭形异常信号影，T1WI 呈等高信号，T2WI 呈高信号，脂肪抑制呈高信号，大小约 7.5x5.2x2.4cm，增强扫描呈明显均匀强化，病变边界清晰，与背阔肌、竖脊肌分界不清。影像诊断：右侧背部皮下占位性病变，多系肿瘤性病变。手术及病理：右侧肩背部皮下包块，尚有包膜，质韧，表面血管丰富，和周围组织分界不清，包块周围粘连紧密，包块血供丰富。背部包块结合形态学、免疫组化及基因检测结果，符合尤文肉瘤/原始神经外胚层肿瘤。免疫组化：CD99(+)、Vim(+)、EMA 灶(+)、CK(-)、Des(-)、CD34(-)、CD31(-)、S-100(-)、SMA(-)、HMB45(-)、Myosin(-)、MyoD1(-)、Ki67(+10%)。基因荧光原位杂交：发生 EWSR1 基因异位的比率 42%，大于阈值 15%；发生 SYT 基因异位的比率 42%，大于阈值 15%。
结论：骨外尤文肉瘤起源于软组织恶性小圆细胞，极为少见，恶性程度高，预后差，可发生任何年龄，20 岁左右发病率高，最常见的发生部位是胸壁、椎旁区、下肢，少数见于盆腔、臀部及腹膜后等部位，且早期临床症状不明显，易延误诊治，早期明确诊断主要依靠病理及免疫组化，最佳治疗是早期手术切除并辅以局部放、化疗。

PU-2950

躯干四肢黏液纤维肉瘤的磁共振表现

段倩倩,张秋丽,李海宁,张明
西安交通大学第一附属医院

目的 探讨黏液纤维肉瘤患者的磁共振表现，准确对该肿瘤进行术前诊断，以控制术后复发率。**方法** 回顾性分析 14 例经手术病理证实的黏液纤维肉瘤患者的临床影像资料，分析磁共振表现特点。**结果** 本研究共 14 例，男 8 例，女 6 例，平均发病年龄（62±12）岁，50 岁以上 12 例。肿瘤位于上肢 3 例、下肢 8 例，肩背部、臀部、髋部各 1 例。病灶均沿身体长轴生长，多边界清晰，呈多发结节型或肿块型，内见双低信号线样纤维分隔；病灶大小不等，最大直径范围约 2.4cm-12.2cm，平均约（7.3±3.0）cm，10 例大于 5cm；MRI 示 T1WI 12 例等信号，2 例等-低信号，T2WI 8 例不均匀高信号，3 例混杂信号，3 例均匀高信号；10 例可见尾征，9 例瘤周可见水肿区；增强扫描 2 例均呈明显不均匀强化。**结论** 黏液纤维肉瘤术后复发率极高，MRI 呈多发结节型或肿块型，T1WI 呈等信号，T2WI 呈高信号或混杂信号，增强扫描呈明显不均匀强化，可见“尾征”，这些特征有助于准确对该病进行术前诊断。

PU-2951

孤立性骨浆细胞瘤影像表现

赖庆园,董越
辽宁省肿瘤医院

目的：探讨孤立性骨浆细胞瘤的影像表现。
方法：从本院收集经病理证实为骨浆细胞瘤，再经过影像确定为单发病例的 16 例患者的临床及影像资料，所有患者至少有 1 种影像学检查。
结果：共纳入 16 名患者，所有病例在检查前均未接受相关治疗，其中男性患者 12 名，女性患者 4 名，年龄范围 43-71 岁，平均年龄 60.34 岁。病程 1 周-半年。16 例患者中 14 例出现相应部位疼痛，无活动障碍，其中 2 例因病理性骨折入院，其余均加重后入院；1 例为肺癌术后常规检查发现；1 例为反复鼻腔出血入院。发生在四肢长骨 6 例、肋骨 2 例、骨盆 3 例、胸骨 1 例、胸椎 1 例、上颌窦 1 例、肩胛骨 1 例、锁骨 1 例。
所有患者至少有 1 种影像学检查，其中 X 线 5 例，CT 检查 12 例，MR 检查 4 例，ECT 检查 5 例，PET 检查 2 例。
1.X 线及 CT 检查：
骨质破坏形式　　X 线及 CT 上大部分为溶骨型（13 例），呈明显溶骨改变，可见残留的骨嵴及分隔（7 例），部分病灶呈膨胀性改变（7 例），病灶周边骨质密度减低（2 例）；其余为混合型（1 例），溶骨性破坏周边出现硬化边，并可见粗大骨嵴。
2.MR 检查：3 例 T1WI 表现为稍高信号， 1 例呈等信号；4 例 T2WI 表现为稍高信号。2 例骨皮质破坏表现为锯齿状。所有病例均未见明显瘤周骨髓水肿及骨膜反应； 3 例可见明显的软组织肿块，其中 1 例肿块内可见明显分隔，增强后，呈明显不均匀强化。
3.ECT 检查：5 例病灶呈核素浓聚。
4.PET 检查：2 例病灶葡萄糖明显摄取，呈高代谢。
结论：孤立性骨浆细胞瘤有较特异的影像学表现，结合多种检查方式，有助于提高骨浆细胞瘤的诊断准确率。

PU-2952

胸壁原始神经外胚层肿瘤（Askin 瘤）一例

史达,全显跃
南方医科大学珠江医院

目的：我们报告一例 Askin 瘤的罕见病例，帮助临床诊断和治疗 Askin 瘤。
材料与方法：患者女性，29 岁孕妇，无明显诱因发现左侧胸壁皮下肿物，当时呈类圆形、鸡蛋大小，质硬，活动度一般，周围皮肤无红肿破溃，无疼痛及不适，未予重视。后肿物逐渐增大，因怀孕未进行治疗。生产后行胸部 256 排 CT 平扫及增强扫描，考虑恶性肿瘤并胸膜转移，后行 CT 引导下穿刺活检术并行组织病理及免疫组化检查。
结果：首次胸部 CT 检查结果示，左侧胸壁较大类椭圆形密度不均匀肿块，边界欠清，增强扫描呈轻中度不均匀强化，中央可见片状无强化液化坏死区，周围脂肪间隙密度增高，包绕邻近肋骨，骨质未见明确破坏，左侧胸膜多处结节状增厚，密度不均匀，增强扫描强化方式与主病灶相仿；组织病理示，穿刺物间质纤维增生显著，瘤组织呈梁索状或巢团状排列，浸润间质，瘤细胞类圆形，胞浆少，核小，类圆形，深染，大部分瘤细胞挤压变形，可见片状坏死。免疫组化示，CD99(+),NSE(-),VIM(-),Syn(+),TTF-1(-),CK7(-),LCA(-),DES(-),CD56(-),Myogenin(-),KI67 约 80%(+)。病理学考虑为小细胞肿瘤，符合 Askin 瘤。患者随后多次接受了全身化疗。首次复查胸部 CT 示，病变范围缩小，后再次复查示，胸壁及胸膜病变明显增大。更换化疗方案，返院复查胸部 CT 示，胸壁及胸膜病变范围进一步增大，左侧胸壁肿物内少许稍高密度渗血，前胸膜新发转移瘤，局部包绕前肋并见骨质破坏。
结论：阿斯金瘤是发生在胸壁软组织的罕见肿瘤，主要发生在儿童、青少年和青年白种人成人中[1]，通常需要手术以手术为主的综合治疗，即广泛切除+术后局部放疗及全身化疗[2]。胸部 CT 征象

于诊断 Askin 瘤存在一定特点，胸壁迅速增大密度不均肿块伴转移及邻近组织受侵、破坏应注意 Askin 瘤可能，需与肋骨的尤文氏肉瘤及胸壁横纹肌肉瘤鉴别[3]。

PU-2953
左股骨中段骨纤维肉瘤伴多器官转移:一例病例报告

赖庆园,董越
辽宁省肿瘤医院

目的 一例骨纤维肉瘤患者，影像表现很有特点，术后 1 年又出现多器官包括扁桃体转移，本文详细介绍了相关临床及影像表现。
方法 一例 55 岁女性患者，下肢疼痛伴病理性骨折入院，影像显示软组织肿物明显并可见纤维分隔，邻近骨皮质局限性缺损，骨膜反应轻微，骨髓腔内有少量钙化灶。经过手术病理分析后，确诊为骨纤维肉瘤。治疗期间出现耐药，患者术后 1 年又出现多器官包括扁桃体转移，最终患者死亡。本文详细介绍了该患者的临床及病理相关信息。

结果 骨纤维肉瘤多见于 20-45 岁的成年人，男女比例相当。起源于非成骨性间叶组织，即成纤维组织，较少见，多为原发，少数为继发。分为中央型和周围型两种，前者多见。好发于四肢长骨的干骺端或骨干，尤其是股骨远端和胫骨近端为其好发部位。一般以肿瘤部位的疼痛及肿胀为主要症状，无特征性，常伴病理性骨折。影像学表现与肿瘤类型有关。中央型表现为溶骨性或轻度膨胀性骨破坏区，边缘模糊，呈筛孔样改变，当穿破骨皮质可形成软组织肿块，瘤内少有钙化及骨化现象，一般无骨膜反应。MR 可以显示肿块内的纤维成分，呈 T1W、T2W 低信号，坏死囊变组织为 T2W 高信号。可发生病理性骨折，生长慢者破坏区可呈囊状。周围型，少见，表现为股旁软组织肿块和邻近部位的骨皮质毛糙、压迫性缺损或虫蚀样破坏，也可穿破皮质侵骨髓腔。该患者临床主要症状为下肢疼痛，继发病理性骨折；软组织肿物明显并可见纤维分隔，邻近骨皮质局限性缺损，骨膜反应轻微，骨髓腔呈磨玻璃密度,内有少量钙化灶，与软骨肉瘤影像表现很相似，但 MR 上软组织肿块内未见明确提示软骨的 T2W 高信号，CT 上分隔未见钙化，髓腔内钙化灶相对较少。病理及镜下可见交织胶原纤维束及大量梭形细胞，瘤细胞弥漫阳性表达 Vim，灶性或弱阳性表达 SMA、AACT、CD68，提示瘤细胞主要具纤维母细胞性分化。支持骨纤维肉瘤的诊断。

结论 联合影像学及病理活检可以确诊骨纤维肉瘤。

PU-2954
恶性血管外皮瘤个案报道及文献回顾

李妹玲
重庆医科大学附属永川医院

目的 恶性血管外皮瘤是一种少见的恶性肿瘤,现报道 1 例背部恶性血管外皮瘤,并回顾相关文献,以提高对该疾病的认识。**方法** 对 1 例背部恶性血管外皮瘤的临床病理资料、影像学资料进行分析，并检索 2000~2019 年国内外关于恶性血管外皮瘤的相关文献,对其临床表现、病变部位、影像学检查、病理学检查、治疗方式及随访资料进行临床分析，结合文献进行探讨。病历概要：患者女

性,47 岁,以“发现背部包块 1+月”为主诉于 2016.7 入院。专科情况：双侧肩胛骨上缘中间胸段棘突右侧可发现一大小约 6×4×3cm 的包块，局部及右侧椎旁肌肉深压痛，表面光滑，边界不清，活动度欠佳，质韧，局部皮温不高，无波动感。影像学检查提示胸 3-5 椎棘突右侧见一大小约 2.6×4.9cm 的肿块，考虑肿瘤性病变，胸 3 椎体棘突可疑受侵。无手术禁忌，于 2016-07-20 在全麻下行背部骨骼肌软组织肿瘤切除术。**结果** 术后病理结果提示(背部)恶性肿瘤，结合免疫组化结果，符合血管源性，考虑为恶性血管外皮瘤，免疫组化：CD31(+)，CD34 血管内皮(+)，CD99（+)，bcl-2(-)，TdT(-)，HMB45(-)，CD138(-)，Desmin(-)，TTF-1(-)，Napson-A(-)，LCA(-),EMA(-)，CK(-)，S100(±) Syn(-).CgA(-),ER(-) ,PR(-)，切除骨质部分提示肿瘤浸润。**结论** 恶性血管外皮瘤是一种少见的软组织肿瘤；血管外皮瘤主要根据肿瘤细胞是否丰富,有无异形性,有无坏死及核分裂的多少作为良、恶性鉴别诊断的标准。免疫组化虽无特异性标记，但在血管外皮瘤的诊断和鉴别诊断中有重要意义。恶性血管外皮瘤无特征性影像表现，故难以在术前定性，但 CT 及 MRI 可显示发病部位、大小、形态、病变与周边组织的关系，为制定手术治疗方案及预后观察提供重要依据。

PU-2955

髓外浆细胞瘤的 CT 与 MRI 表现及其误诊分析

李家言
广西中医药大学第一附属医院

目的 探讨髓外浆细胞瘤（EMP）的 CT 与 MRI 表现，分析影像学误诊的原因。 **方法** 回顾性分析本院经手术或活检病理证实的 7 例 EMP 患者的 CT/MRI 表现，观察其 CT/MRI 表现特征，并分析误诊的原因。 **结果** 7 例中，男 5 例、女 2 例；年龄 34～89 岁，平均（58.4±17.0）岁。病灶位于消化道 2 例（十二指肠及结肠各 1 例），鼻咽部、右上颌窦、颈项左侧、左前后腹壁、左睾丸各 1 例。临床症状主要表现为患处肿痛及触及肿块、压痛，发生于消化道患者出现反复上腹部胀痛或解稀烂大便，发生于鼻咽部患者出现反复鼻塞。7 例中，行 CT 检查 3 例（其中 2 例并行增强扫描），行 MRI 平扫及增强检查 4 例，均表现为患处不同形态软组织肿块影，大小 2.0 cm×2.1 cm×2.0 cm～6.2 cm×6.8 cm×15.8 cm。肿块边缘光整、分界清楚；颈项部肿块呈圆柱状纵向生长达胸廓入口处，右上颌窦肿块侵犯上颌骨，鼻咽肿块呈环壁肿块生长，前后腹壁各见椭圆形软组织肿块，十二指肠肿块向腔内隆起，结肠肿块呈肠壁局部增厚改变，睾丸呈不规则肿块；7 例肿瘤均呈软组织密度影或 T_1WI 稍低等、T_2WI 稍高及 STIR 高信号影，且密度或信号均匀，6 例行增强扫描的肿块均呈中度-明显均匀强化，均未见液化、坏死。7 例分别误诊为颈部淋巴瘤、鼻咽部慢性炎症、右上颌窦囊肿、腹壁巨淋巴细胞增生症、十二指肠降部腺瘤、横结肠癌及左睾丸感染性病变并脓肿形成。肿瘤肉眼观察呈灰白鱼肉样，镜下见弥漫成片分布的瘤细胞，其形态、大小相对一致，细胞呈卵圆形、核偏位，胞浆丰富、红染。免疫组化结果：7 例 CD138、CD38 均为（+），CD56（+）3 例，CD79α （+）4 例，Kappa 阳性 6 例，7 例 CD3、CD20 均为（—）。 **结论** EMP 的 CT/MRI 表现有一定特征性，对 EMP 的诊断与鉴别诊断有重要临床价值；对本病缺乏足够认识是活检与术前误诊的主要原因。

纤维肉瘤的影像学研究进展

姚宇斌[1],赵妍[1],林黛英[1],李仰康[2],吴先衡[1]
1.汕头市中心医院
2.汕头大学医学院附属肿瘤医院

纤维肉瘤是软组织肉瘤中较常见的一种，约占其中的 10%，它是属于纤维母细胞/肌纤维母细胞性肿瘤，其中成人型纤维肉瘤和黏液型纤维肉瘤均归为恶性肿瘤。CT 对软组织具有很好的密度分辨力和空间分辨力，是诊断软组织肉瘤的常用方法；MRI 是软组织肿瘤的一种常用的无创性检测办法，其可以清晰显示肿瘤位置、体积、边界、形态、信号特点和周围结构的比邻关系等，还能观察有无淋巴结转移和远处转移扩散。成人型纤维肉瘤在 CT 上主要表现为类圆形或分叶状的软组织密度肿块阴影，密度不均，增强扫描呈不均匀强化；在 MRI 上表现为 T_1WI 均呈低、等信号，T_2WI 上大部分呈现脑回状混杂高信号。黏液型纤维肉瘤在 CT 上呈分叶状或类圆形，表现为等、低密度肿块影，部分病灶内部可见条索状分隔影；在 MRI 上，T_1WI 上主要以低信号、等低信号为主；T_2WI 上信号比较复杂，其信号特点与病理密切相关。

The Comparative Study of Imaging Features and Histopathological Grading of Fibrosarcoma

Yubin Yao[1],Yan Zhao[1],Yangkang Li[2],Daiying Lin[1],Xianheng Wu[1]
1.Shantou Central Hospital
2.Affiliated Tumor Hospital of Shantou University Medical College

Abstract
Objective: To study the relationship between imaging features and histopathological grade of fibrosarcoma, and to screen out the imaging features associated with the histopathological grade of fibrosarcoma.
Materials and Methods: Clinical and imaging data of 30 patients with fibrosarcoma confirmed by surgery and pathology were retrospectively analyzed. 18 patients underwent MRI examination, of which 13 were enhanced scans; 16 patients underwent CT examinations, including 15 enhanced scans. There were 4 patients who underwent both CT and MRI examinations. Among all fibrosarcoma patients, there were 22 adult fibrosarcomas and 8 mucinous fibrosarcomas. MR inspection equipment uses a Siemens Magnetom Avanto 1.5T magnetic resonance scanner or a Siemens Magnetom Verio 3.0T magnetic resonance scanner. The CT inspection equipment uses a Siemens Somatom Definition 64-layer dual-source CT scanner or a GE Lightspeed 64-slice spiral CT scanner. The tumor imaging evaluation indicators include: growth site, size, shape, boundary, degree of enhancement, and necrosis, hemorrhage, peritumoral edema, and surrounding bone invasion. The relationship between each radiological sign and pathological grade of fibrosarcoma was analyzed.
Results: In this group of 30 tumors, the maximum diameter of the tumor was 2.0cm~21.4cm, with an average of 9.25±4.86cm; 19 cases were oval, 11 cases were irregular; 20 cases had clear boundaries, and 10 cases had less clear boundary; In 8 cases, cystic necrosis area with size ranging from within the tumor was seen; in 6 cases, hemorrhage area was seen in the tumor. The group of 26 cases of enhanced scans, 9 cases of uneven mild to moderate enhancement, 17 cases of uneven enhancement. In 19 cases of MRI examination, 10 cases were associated with different degrees of peritumoral edema. In this group of 30 cases of fibrosarcoma, no significant bone destruction was found on CT and MRI. Compared with the pathological results, there was a correlation between tumor boundary, enhancement degree, and peritumoral edema and

pathological grading. The correlation coefficients were 0.476, 0.522, and 0.578, respectively. The results were statistically significant ($p<0.05$). There was no significant correlation between tumor size, morphology, cystic necrosis and hemorrhage in the tumor and pathological grading, and the correlation coefficients were 0.107, 0.107, 0.223, and 0.101, respectively, and the results were not statistically significant ($p>0.05$).
Conclusions: The boundary, degree of enhancement, and peritumoral edema of fibrosarcoma are related to the histopathological grade of the tumor, which can reflect the biological characteristics of high-grade fibrosarcoma to some extent.

PU-2958

A comparative study of the value of MR follow-up in the management of local recurrent osteosarcoma after surgery

Hanqi Wang,Yaling Pan,Tongtong Chen,Yong Lu
Ruijin Hospital， School of Medicine， Shanghai Jiao Tong University

Objective: To explore the value of magnetic resonance follow-up in the diagnosis and treatment of local recurrent osteosarcoma after joint replacement for primary tumor.
Methods: Thirty-nine patients with local recurrent osteosarcoma were enrolled. Patients were divided into control group and MR follow-up group according to whehther they received MR follow-up after joint replacement for primary tumor. Clinical, imaging and pathological data were collected. We use the independent sample T test to compare the progression-free survival from primary surgery to recurrence of the two groups, Wilcoxon Mann-Whitney test to compare the maximum diameter of the recurrent lesions, Fisher's exact test to compare the limb salvage rate, and Wilcoxon Mann-Whitney test to compare the extent of surgical resection.
Results: Of the 39 patients with local recurrent osteosarcoma, 25 were in the MR follow-up group and 14 in the control group. The progression-free survival time was (11.57 ± 1.28) months in the MR follow-up group and (15.92 ± 1.89) months in the control group ($P=0.064$). The maximum diameter of the recurrent lesions was (9.00 [6.00, 15.50]) cm in the MR follow-up group, and (6.75 [4.50, 10.00]) cm in the control group, and there was a statistical difference between two groups($P=0.041$). The limb salvage rate was 57.1% (8 cases) in the MR follow-up group and 20.0% (5 cases) in the control group, indicating significant difference between two groups($P=0.033$). There was also a significant difference in the extent of surgical resection between two groups ($P=0.020$).
Conclusion: Patients with osteosarcoma receiving MR follow-up after surgery helps to early diagnosis and limb salvage. Whether MR follow-up can improve the prognosis of osteosarcoma needs further exploration.

PU-2959

创伤性平足与弹簧韧带损伤

杨江飞

山东省立医院

目的：探讨非骨折性创伤性平足与弹簧韧带损伤的相关性
方法：1.1 一般资料　回顾分析 2015-2018 年 11 例非骨折性创伤后获得性平足病人足踝部 MR 资料。患者年龄 17-56 岁，平均年龄 39 岁，男 5 例，女 6 例，左足 4 例，右足 7 例。判断弹簧韧带是否损伤，以及损伤程度，分析弹簧韧带损伤与创伤性平足之间的相关性。
1.2 检查方法：采用 Philips3.0T 超导磁共振，使用 16 通道踝关节专用线圈，采用踝关节常规扫描方案，矢状位 FSE T1IW 序列，轴位、矢状位及冠状位压脂图像均采用 Philips 专有 mDIXION 压脂，层厚 3mm，间距 0.1mm，FOV20cm。
1.3 观察与判断　弹簧韧带主要分为三束（内侧束、中间束、外侧束），内侧束主要在冠状位和轴位上观察，中间束和外侧束主要在矢状位及轴位观察。判断标准，急性韧带损伤主要表现为韧带水肿、T2WI 信号增高，部分中断、完全中断，陈旧性损伤主要表现为韧带中断或韧带松弛。
结果：创伤性平足是临床常见病，大部分原因是跟骨骨折后破坏正常足弓的骨及韧带结构，从而导致的创伤性平足，而非骨折性创伤性平足也不少见，早期不易引起重视。非创伤性平足其常见原因为外伤或过度运动后治疗不当导致骨挫伤、胫骨后肌功能不全、弹簧韧带损伤，足底韧带损伤，各因素常同时发生，也可单独存在。10 例获得性平足患者中，既往均有明确扭伤或暴力性损伤病史，均未经过及时有效治疗；　首诊 MR 显示弹簧韧带损伤 8 例，同时合并距骨、跟骨、舟骨骨挫伤 6 例，同时合并胫骨后肌损伤的 5 例，足底韧带损伤 1 例。足弓塌陷后复查 MR，均显示显示弹簧韧带松弛或中断。
结论：弹簧韧带损伤与创伤性平足具有明显相关性。高场强 MR 能清晰显示弹簧韧带正常结构及病变，对弹簧韧带损伤提供可靠的诊断依据，对诊断弹簧韧带损伤早期诊断、临床治疗方案的选择提供了有力依据，能有效预防平足症的发生

PU-2960
关于膝关节功能支具对前交叉韧带损伤后胫骨前移影响的影像学分析

李志奎
哈尔滨市第五医院

摘要：目的 探究膝关节功能支具对膝关节前交叉韧带(ACL)损伤后胫骨前移的影响。方法 选取 20 例单侧前交叉韧带损伤的患者,分别在佩戴支具前后对患侧、健侧肢体行 X 线膝关节 90° 侧位片,通过测量胫骨内侧平台外缘与股骨内侧髁前缘的相对位置,评估胫骨前移的距离。结果 20 例患者患侧佩戴支具前的胫骨前移距离为(18.98±1.39)mm,明显大于健侧佩戴支具前的(17.62±1.58)mm,差异有统计学意义(t=2.890, P=0.006<0.05)。健侧、患侧佩戴支具后的胫骨前移距离分别为(16.32±1.47)、(17.19±1.74)mm,均明显小于佩戴支具前的(17.62±1.58)、(18.98±1.39)mm,差异均有统计学意义(t=2.694、3.595, P=0.011、0.001<0.05)。患者患侧佩戴支具前后的差值(1.79±0.94)mm 明显大于健侧的(1.30±0.52)mm,差异有统计学意义(t=2.040, P=0.048<0.05),患侧佩戴支具前后缩小百分比(0.09±0.05)略大于健侧佩戴支具前后的(0.07±0.27),但差异无统计学意义(t=0.326, P=0.746>0.05)。结论 在局限性范围内,膝关节功能支具可以限制前交叉韧带损伤后的胫骨前移。

PU-2961
Diagnosis and follow-up MRI and US evaluation of tennis leg

meng dai,Xi Liu,Lian Yang
Department of Radiology, Union Hospital, Tongji Medical Collage, Huazhong University of Science and Technology, Wuhan, China

Purpose: To evaluate the MRI and ultrasonographic (US) findings of patients with a clinical diagnosis of tennis leg and to explore the pathogenesis of tennis leg.
Materials and Methods: A retrospective review of 47 (35 men, 12 women; age range, 7-81 years; mean age, 46 years) patients with a clinical diagnosis of tennis leg at our hospital during a 58-month period (May, 2014, through March, 2019) was conducted. All the patients underwent MRI examinations, and an additional US examination was performed simultaneously on 5 patients. Follow-up MRI examinations were was performed on 4 patients, with one patient also undergoing an additional US examination. Images findings were analyzed with respect to, including integrity of the myotendinous junction and tendon of the gastrocnemius and soleus, the and presence of a fluid collection were analyzed.
Results: MRI findings in the 47 patients included revealed fluid collection between the medial head of the gastrocnemius and the soleus was identified in 34 cases (69.4%). In 19 cases (38.8%), the collected fluid spread to around the medial border of fascia cruris. The dRupture of the gastrocnemius was identified in 44 Forty-four cases (89.8%) had rupture of the gastrocnemius, among which with most cases (n=44) showing rupture of the medial head of the gastrocnemius at the myotendinous junction was noted in 44 cases, the lateral head of the gastrocnemius at the myotendinous junction was seen in 15 cases, the medial head of the gastrocnemius tendon was observed in 30 cases, the medial and the lateral head of the gastrocnemius tendon was identified in 3 cases,the lateral head of the gastrocnemius tendon was noted in 2 cases. A total of 18Eighteen (36.7%) cases suffered from the had rupture of the soleus, among which with most cases (n=15 cases) showing had rupture of the soleus at the myotendinous junction, 2 cases had rupture of soleus muscle belly, and 6 cases had rupture of the soleus tendon. The mRupture of the pPlantaris tendon rupture was observed in 5 cases (10.2%). On the contraryA thick area of reparative tissue at the distal myotendinous junction of the medial head of the gastrocnemius was observed in all 4 MRI follow-up patients and 1 US patient followed up.
Conclusion: This study has demonstrated that Abnormalities of the medial head of the gastrocnemius at the myotendinous junction and tendon appear to be more common than those of the plantaris tendon. Compared to with US examination, MRI is more sensitive in diagnosis of tennis leg.

PU-2962
大鼠脊髓损伤超急性期的磁共振及弥散张量成像的实验研究

桂珊,柳曦,刘园,孔祥闯,任政威,曾练,郭晓东,杨炼
华中科技大学同济医学院附属协和医院

摘要目的 本研究旨在探讨磁共振弥散张量成像在脊髓损伤超急性期的应用价值。方法 选取实验组 12 只健康 wistar 大鼠通过撞击法制造脊髓损伤模型，6 只正常大鼠作为对照组。常规 MRI 选取了矢状位 T1 加权成像（T1WI）、矢状位和轴位 T2 加权成像（T2WI）以及轴位磁敏感成像（SWI）序列。损伤组在造模后 4h、8h、12h、24h 行常规 MRI 及弥散张量成像（DTI） 检查，对于 DTI 图像进行后处理得到纤维示踪图像（DTT）并测量各向异性分数 FA 和表观弥散系数 ADC 值。结果 在对照组中，常规 MRI 脊髓信号均匀，结构完整。损伤组损伤部位在 T1WI 上呈低信号，在 T2WI 上呈高信号。SWI 图像可见明显的低信号团状出血灶。在 DTI 图像中测得 FA 值和 ADC 值较正常组减低，且随时间 FA 值呈持续下降趋势，ADC 值在 8h 后下降放缓。DTT 图像上可以直观地观察到白质纤维变形、分离。结论 常规磁共振和 DTI 可以全面充分地定量评价脊髓损伤。

PU-2963

利用 CT 评价髌骨脱位三联术后疗效

瞿楠
上海交通大学附属第六人民医院

目的：利用 CT 观察髌骨脱位三联术手术前后的影像学改变,探讨在评价手术疗效中的作用。
方法：选取 2010 年 1 月至 2014 年 3 月上海市第六人民医院复发性髌骨脱位患者 60 例（61 膝），平均年龄为 22.2 岁，均行髌骨脱位三联术，即外侧韧带松解术、内侧髌股韧带重建术和胫骨结节移位术。测量比较手术前后膝关节 CT 中的髌骨倾斜角、胫骨结节-股骨滑车沟距离、股骨滑车沟适合角、股骨滑车沟角度以及发育不良分级、股骨滑车外侧面倾斜度、髌骨外侧移位值、Insall-Salvati 值和 Caton-Deschamps 值。同时计算手术前后各值阳性率的变化情况。
结果:术后髌骨倾斜角平均值从术前 27.3±2.3° 减小至 8±2.1° ，股骨滑车沟适合角平均值从术前 32.9±5.2° 减小至-5.5±8.4° ，外侧髌骨移位平均值从术前 9.8±1.3mm 减小至-1.1±1.6mm，TT-TG 从术前 19.1±1.5mm 减小至 14.9±1.7mm，INSALL-SALVATI 平均值从术前 1.21±0.05 减小至 1.1±0.05，C-D 平均值从术前 1.3±0.06 减小至 1.11±0.05，以上测量值手术前后均有统计学差异。股骨滑车凹角度以及发育不良分级和股骨滑车外侧面倾斜度手术前后无明显统计学差异，但所有患者均有股骨滑车发育不良，其中 A 级 8 膝，B-D 级 53 膝。
结论：髌骨脱位三联术后 CT 显示尽管股骨发育不良情况并未改善，但手术纠正了髌骨脱位及其部分危险因素，恢复了髌骨的正常解剖和功能位置。同时 CT 能发现部分患者仍然存在髌骨脱位及髌骨不稳的因素，为术后随访提供依据。

PU-2964

3.0T MRI 单髋扫描对圆韧带损伤的诊断价值

白辉,马贺骥
锦州医科大学附属第一医院

目的 探讨 3.0T MRI 单侧髋关节扫描对圆韧带损伤的诊断价值。**方法** 两名医师回顾性分析 41 例慢性髋关节疼痛患者的髋关节镜及术前髋关节 MRI 资料。定义两种 MRI 扫描方式：双侧髋关节扫描及单侧髋关节扫描。应用统计软件首先分别比较两名医师评价圆韧带损伤的一致性，然后分别比较两种扫描方式与髋关节镜检查圆韧带损伤能力的差异，最后比较并分析两种扫描方式的诊断效能。**结果** 41 个髋关节中，34 例圆韧带损伤，7 例正常。两名医师利用两种髋关节扫描方式评价圆韧

带损伤分别有（*K*=0.76、0.61，*P*<0.01），MRI 资料显示甲医师于两种扫描方式对圆韧带损伤的敏感度、特异度、阳性预测值、阴性预测值、准确率分别为 58.82%（20/34）和 88.24%（30/34）、57.14%（4/7）和 85.71%（6/7）、86.96%（20/23）和 96.77%（30/31）、22.22%（4/18）和 60.0%（6/10）、58.54%（24/41）和 87.80%（36/41）；乙医师于两种扫描方式对圆韧带损伤的敏感度、特异度、阳性预测值、阴性预测值、准确率分别为 52.94%（18/34）和 85.29%（29/34）、71.43%（5/7）和 71.43%（5/7）、90.0%（18/20）和 93.55%（29/31）、23.81%（5/21）和 50.0%（5/10）、56.1%（23/41）和 82.93%（34/41）。单髋扫描的受试者工作曲线下面积大于双髋扫描，且差异具有统计学意义（*P*=0.02）。**结论** 两名医师利用两种扫描方式评价圆韧带损伤的一致性一般，且认为 3.0T MRI 单侧髋关节扫描是诊断圆韧带损伤较好的影像学检查方法。

PU-2965

尺腕撞击综合征的影像表现体会

黄华忠,陈胜良,吕昌禄,王大江,谭一静
遵义市余庆县人民医院

目的：通过尺腕撞击综合征的影像表现分析，提高基层影像科人员对该病的认识；**方法**：应用 X 线、CT 和 MR 对临床疑及尺腕撞击综合征患者进行必要的影像检查，**结果**：5 例均有不同程度腕部疼痛及软组织肿胀，2 例有腕部外伤病史；其中 1 例为月骨、尺骨远端关节面病变；1 例表现为三角骨、豌豆骨的低密度病变。**结论**：临床医生、影像科医生尺腕撞击综合征重视，结合病史资料和影像学表现，可以做出有效正确的诊断，明显减少误诊、漏诊发生。

PU-2966

成人髋关节发育不良患者股骨前倾角的 CT 影像学研究

陈静
南京鼓楼医院

目的 通过 CT 测量股骨前倾角对 DDH 病例组和正常对照组进行对比分析，探讨股骨前倾角在成人 DDH 患者中的临床意义。
资料与方法 收集我院 2018 年 6 月至 2019 年 5 月的成人 DDH 患者共 98 例，其中男性 62 例，女性 36 例，测量其股骨前倾角，并与正常成人对照组比较分析。
结果 DDH 组和对照组存在显著性统计学差异，DDH 组股骨前倾角的平均值明显大于正常对照组（P＜0.01）。股骨前倾角较大的 DDH 患者继发骨关节炎的 CT 表现越明显。
结论 CT 扫描对 DDH 患者术前测量股骨前倾角有一定的临床价值。研究认为股骨前倾角过大的患者有必要进行矫正，有利于缓解骨关节炎的进展。

CT 与 MRI 在评估不同时期骨质疏松性椎体骨折压缩程度的对照研究

陈泽谷,陈晶,张颖,何占平,王雄,杨光
海口市人民医院/中南大学湘雅医学院附属海口医院

[摘要] 目的：观察与研究比较 CT 和 MRI 在骨质疏松性椎体骨折中的检查效果及对椎体压缩情况的应用效果。方法：选取 2017 年 6 月~2019 年 5 月期间的 90 例骨质疏松性椎体骨折患者为研究对象，将其分别以 MRI 及 CT 进行检查。比较 MRI 及 CT 检查对不同时期骨质疏松性椎体骨折的检查结果，同时比较对不同压缩程度椎体的检查结果。并比较两类检查方法的特异度、灵敏度、阳性预测值、阴性预测值。结果：MRI 检查对不同时期（急性期、亚急性期及陈旧期）骨质疏松性椎体骨折的检查准确率分别为 100.00%、97.78%及 95.56%，对不同压缩程度（轻度、中度及重度）椎体的检查准确率分别为 97.78%、100.00%及 100.00%，上述均高于 CT 检查；且特异度、灵敏度、阳性预测值及阴性预测值分别为 97.67、97.67、100.00、66.67，均高于 CT 检查的，差异有统计学意义（P＜0.05）。结论：MRI 在骨质疏松性椎体骨折中的检查效果较好，且对椎体压缩情况具有较高的检测价值，因此在骨质疏松性椎体骨折中的诊断价值较高。

PU-2968

高频超声与 CT 三维成像在急诊肋软骨骨折的对比研究

金梅[1],李小兰[2],李刚[1],祝青[1],叶龙[13]
1.川北医学院附属三台医院
2.重庆医科大学附属大学城医院
3.绵阳市中心医院

目的:对比多层螺旋 CT 三维成像、高频超声在肋软骨骨折诊断的优势，为临床提供有效的影像检查方法。方法：回顾性分析我院 2016 年 1 月-2018 年 12 月以明确胸部外伤史于急诊就诊的患者，均行超声及胸部肋骨三维成像检查，对比高频超声及多层螺旋 CT 三维成像在肋软骨骨折检出率、不同损伤肋软骨骨折及不同错位幅度肋软骨骨折检出率，分析二者优缺点，总结高频超声及 CT 在急诊肋软骨骨折诊断的优势和诊断价值。结果：二者在肋软骨骨折检出率及不同伤机制下肋软骨骨折及检出率差异无统计学意义（P>0.5）,在断端错位小于 1.0mm 时，高频超声检出率优于 CT 检查，差异有统计学意义（P<0.5）,断端错位大于 2.0mm，二者比价差异无统计学意义（P>0.5）；总体观察 CT 较超声好，可同时观察肺部情况。结论：高频超声适用于各种受力及骨折错位幅度小的肋软骨骨折中，价格便宜，值得临床广泛应用；但整体观察较 CT 差。

PU-2969

马拉松运动对髋关节影响

常晓丹
大连大学附属中山医院

目的：马拉松被认为是人类大的耐力运动项目之一。迄今为止，关于与马拉松运动相关的 MRI 研究大多是膝关节、踝关节关节软骨及运动损伤方面，马拉松运动对髋关节影响研究较少，本研究通过 MRI 评价马拉松运动员髋部骨肌改变，旨在为马拉松者科学运动提供依据。
方法：对 22~53 岁马拉松运动员，31 名（62 个髋关节）进行髋关节 MRI 平扫；同时选取不经常参加运动的 29 名健康志愿者（58 个髋关节）作为对照组。

髋关节积液量分级：1 级.单侧股骨头或股骨颈周围无积液或微量液体；2 级.股骨颈周围积液较多，包绕股骨颈，但不扩张隐窝；3 级.关节囊渗出更多，包绕股骨颈，隐窝扩张。
髋关节滑囊炎性渗出分级：0 级.滑膜腔厚度为 0mm-2mm;1 级.滑膜腔厚度为 2mm-4mm;2 级.滑膜腔厚度大于 4mm。

髋关节肌腱损伤标准：1 级.T2 加权成像存在增厚或信号增高。2 级.无完整肌腱纤维的局灶性不显示且高信号提示部分撕裂。3 级.肌腱不连续提示完全的撕裂，且该部分该由液体和/或肉芽组织填充，液流体信号。
运动常造成肌肉损伤，包括挫伤、撕裂伤，挫伤可在肌肉深处引起出血，导致血肿。
对髋关节骨髓转化采用分级和分型二种方式进行评价。
结果：对髋关节积液、滑囊、盂唇、关节骨软骨、肌肉、肌腱、骨髓转化等进行评价，马拉松运动员与正常对照组以上骨及软组织间均存在均有不同程度的差异。马拉松运动员关节积液 2 级较多；滑囊可有少量积液；肌肉、肌腱可见 PD 抑脂高信号影；盂唇损伤可见；髋关节各部位骨髓信号在 T1W 均较常人低，以红骨髓信号为主。
结论：马拉松运动员对髋关节积液、滑囊、肌肉、肌腱均有一定影响，要与相应的病理性改变鉴别；马拉松运动员髋关节骨质存在骨髓逆转化改变。

64 排螺旋 CT 扫描技术在肋骨骨折临床中的应用

谢冬生
苏北人民医院

目的：分析在临床上对肋骨骨折进行诊断的过程中，应用 64 排螺旋 CT 扫描技术的意义与价值。
方法 ：本研究在 2018 年 1 月～2018 年 12 月期间收治肋骨骨折患者中选取 122 例作为研究对象，采用 64 排螺旋 CT 扫描技术对其进行诊断，同时使用 SSD、MIP、MPR、VR 以及 CPR 等方法对扫描结果进行处理，将其与 CT 扫描前拍摄的 DR 片结果进行相应的分析与比较。
结果：通过对比发现，DR 片中显示的肋骨骨折数量为 174 处，64 排螺旋 CT 扫描技术中显示的肋骨骨折数量为 209 处，由此可以证明，64 排螺旋 CT 对于患者骨折情况的描述更为清晰。
结论 ：在临床上，64 排螺旋 CT 扫描技术对于患者骨折情况的检出效果更为准确，对于患者的治疗具有积极的意义。

PU-2971
CT 肩关节造影与 MR 肩关节造影对于肩关节外伤的诊断价值对比研究

吴俊华,张德洲,张滔,易雪冰
四川省骨科医院

目的：探讨 CTA 与 MRA 对肩关节外伤病变的诊断价值。
方法:收集 2017 年 10 月至 2019 年 4 月间因外伤在我院就诊并行 CTA 与 MRA 检查的患者 18 例，分别观察这两种检查对于关节囊及韧带损伤、盂唇损伤、骨与软骨损伤的检出情况，并与关节镜检查结果对照。
结果:18 例患者共 18 个患肩。关节囊及韧带损伤 14 个（CTA 检出 11 个，MRA 检出 12 个）；盂唇损伤 12 个（CTA 检出 8 个，MRA 检出 11 个）；骨与软骨损伤 13 个，其中骨折 5 个（CTA 检出 5 个，MRA 检出 2 个），骨挫伤 4 个（CTA 检出 0 个，MRA 检出 4 个），软骨损伤 3 个（CTA 检出 0 个，MRA 检出 3 个）。
结论:对于关节囊及韧带损伤，CTA 与 MRA 检出率相似；对于盂唇损伤，MRA 的检出率优于 CTA；CTA 更利于发现微小的骨折，而 MRA 对于观察骨挫伤及软骨损伤更有优势。

股前外侧穿支皮瓣 CTA 和 CE-MRA 临床应用评价

蒋春景[1],舒锦尔[1],林平[1],李颖如[1],丁明星[2],张春[3],胡晓刚[1],郭晓华[1],何建荣[1]
1.金华市中心医院
2.金华市职业技术学院
3.浙江省省立同德医院

目的：应用 CTA 和 CE-MRA 设计股前外侧穿支皮瓣的准确性和可行性。**方法：**28 例股前外侧穿支皮瓣供体者纳入研究，12 例进行双下肢 CTA、16 例进行 3D CE-MRA 检查。根据旋股外侧动脉分支类型、穿支血管直径并结合血管分布和覆盖范围进行术前皮瓣设计，与术中穿支血管观察和术后皮瓣存活进行对照，采用配对 t 检验统计分析。**结果：**26 例移植皮瓣存活良好，1 例左前臂皮瓣造成术后左手腕掌侧原有皮肤局部坏死，1 例皮瓣区动脉栓塞后再灌注损伤。术中观察旋股外侧动脉分支类型、穿支血管及其分布与覆盖范围与影像学测量无显著性差异（$P>0.05$）。**结论：**CTA 和 CE-MRA 可准确、直观地显示供体股前外侧皮瓣设计的各要素，是术前皮瓣设计的有效技术方法。

PU-2973

Three-Dimensional Fast Spin-Echo Imaging without Fat Suppression of the Knee: Diagnostic Accuracy Comparison to Fat-Suppressed Imaging on 3.0T MRI

Yanmei Qi,Sheng Zhou,Xioafei Chen,Fuwen Dong
Gansu Provincial Hospital of TCM

Purpose: To evaluate the diagnostic performance of three-dimensional fast spin-echo (3D FSE-Cube) without fat suppression (NFS) for detecting knee lesions, using comparison to 3D FSE-Cube with fat suppression (FS).
Materials and Methods: Twenty patients who underwent knee magnetic resonance imaging (MRI) scans,using a 3.0T scanner(Signa HDxt, GE Healthcare, Milwaukee, WI) with a receive-only dedicated knee coil,and 16 subsequent arthroscopic surgeries were retrospectively reviewed,informed consent was obtained from all patients. Each stuy consisted of 3D Cube images with fat suppression and without fat suppression. Coronal 3D Cube images with fat suppression parameters:TR=2000ms, TE=35.8,Matrix=288×288, FOV=18×18cm^2, Slice thickness=1.0mm, gap=0.5mm, NEX=0.5, acquisition time=253s. Fat suppression was achieved with chemical shift selective (CHESS) fat saturation. Delineation of anatomic structures of the knee, meniscus, ligaments, cartilage, joint fluid, all structure were qualitatively evaluated using the 5-point scoring system. Diagnostic performances of 3D FSE-Cube-NFS and FS imaging about lesions the anterior cruciate and posterior cruciate ligaments, tears of the medial and lateral menisci, subchondral bone marrow edema (BME), and cartilage were compared. Using arthroscopic results and two-dimensional images as reference standards, statistical analysis was performed to calculate the sensitivity, specificity, and accuracy of the two methods.

Results: The 3D FSE-Cube NFS demonstrated higher scores than FS in anatomic structure of the medial collateral ligament(P=0.014), the lateral collateral ligament(P=0.019), cartilage(P=0.043), medial and lateral menisci (p=0.015).However,there were no statistical significance between 2D and 3D MRI in disc and overall quality. Mean specificity and accuracy for medial meniscal tears were significantly higher with 3D FSE-Cube NFS (specificity, 97.0%; accuracy, 93.6%) than FS (specificity, 76.1%; accuracy, 86.6%), and the difference was statistically significant (specificity, p=0.003; accuracy, p=0.004). Mean specificity for BME and cartilaginous defects was significantly higher with 3D FSE-Cube FS than with NFS p=0.036). There were no other significant differences between the two methods. **Conclusion:** 3D Cube-NFS imaging has higher specificity than FS for evaluation of medial and lateral collateral ligament, medial meniscal tears and cartilaginous defects. 3D Cube-NFS imaging showed lower diagnostic performance for detecting BME and lesions of cartilage compared to FS imaging.

PU-2974

急性距腓前韧带损伤：改良斜轴位 MRI 扫描的优势

马建科
甘肃省中医院

【摘要】 目的 探讨 MRI 改良斜轴位扫描在诊断距腓前韧带损伤中的应用价值。方法 收集 2017 年 3 月—2018 年 12 月门诊踝关节损伤患者 180 例，采用斜轴位 MRI 扫描随机分为 3 组：踝关节中立体位（ A 组）、内旋 10°～15°（ B 组）、内旋 20°～25°（ C 组）。使用以上参数获取斜轴位 T2 加权快速自旋回波图像，扫描线平行距腓前韧带（ 与踝关节轴面成 20°）。对各组病例的图像显示效果等级作出评定。结果 距腓前韧带全长的显示以踝关节内旋 10°～15° 效果最佳，其次是内旋 20°～25° 和中立体位，两者显示效果相当；踝关节内旋 10°～15° 在显示 0～3 级损伤的分级诊断中也与其他两组相比有统计学差异（ P＜0. 05）。结论 MRI 评价距腓前韧带时，选择适当的扫描角度及体位可以达到最佳的显示效果。

PU-2975

The value of MRI in the evaluation of medial patellar patellofemoral ligament reconstruction of recurrent patellar dislocation

LiSi Liu
Tongji Hospital, Tongji Medical College, Huazhong University of Science and Technology

Objective This study aimed to explore the value of MRI in the evaluation of medial patellar patellofemoral ligament (MPFL) reconstruction in patients with recurrent patellar dislocation. **Methods** Follow-up 14 patients which diagnosis with recurrent patella dislocation, all patients underwent MPFL reconstruction and were followed up two years after surgery. MRI and DTI scan of the ipsilateral knee joint were performed in these 14 patients, the same as preoperative examiation. Trochlear

facet asymmetry, lateral trochlear inclination, trochlear depth, patellar tilt angle, lateral patellar displacement, tibial tuberosity-trochlear groove distance (TTTG) and cross-sectional area of the VMO on MRI were measured. FA, ADC, λ1, λ2, and λ3 values on DTI were measured. The paired-samples *t*-test was used to compare these parameters between the preoperative group and postoperative group. **Results** The postoperative patellar tilt angle and lateral patellar displacement were significantly lower after surgery(both $P<0.05$). Compared with the preoperative group, the postoperative group showed significantly lower FA values and significantly higher λ3 values (both $P<0.05$). Trochlear facet asymmetry, lateral trochlear inclination, trochlear depth, TTTG, Cross-sectional VMO area, ADC, λ1 and λ2 values did not differ between the two groups(all $P>0.05$). **Conclusion** The patellar tilt angle and lateral patellar displacement these two MRI bony measurements have clinical significance for evaluation the patellar stability of recurrent patellar dislocation after MPFL reconstruction. DTI imaging carries on the preliminary quantitative assessment for VMO muscle condition after MPFL reconstruction of recurrent patellar dislocation.

长途奔袭训练后髌软骨 T2*弛豫时间变化分析

徐茂林
解放军第 105 医院

目的：探讨长途奔袭训练后髌软骨 T2*弛豫时间变化。**方法：**对 20 名新兵于训练前后分别行右膝关节磁共振检查，数据传输到 SEIMENS3．0T 磁共振工作站，用软件处理后产生伪彩图。髌软骨按照髌骨嵴分为内、外侧髌软骨，然后将内、外侧髌软骨分别按其上下径平均分为上部及下部，分别测量四个区域髌软骨深层、浅层 T2*弛豫时间，比较训练前后对应区域 T2*弛豫时间的变化,训练前后 T2*弛豫时间比较采用配对样本 t 检验，运动前后髌软骨不同区域 T2*弛豫时间变化率采用单因素方差分析。**结果：**与训练前相比，训练后外上、外下、内上髌软骨浅层及外下髌软骨深层 T2*弛豫时间延长有统计学意义（p=0.004，p=0.001，p=0.001，p=0.001），但其相互间 T2*弛豫时间变化率无统计学意义（F=0.823，p=0.485）；内下髌软骨浅层及内上、内下、外上髌软骨深层 T2 弛豫时间均无统计学意义（p=0.015，p,0.021，p=0.026，p=0.356）。**结论：**磁共振 T2-starMapping 成像可以发现新兵长途奔袭后髌软骨生物成分早期变化，或对科学训练、早期临床干预具有一定的参考价值。

PU-2977

MRI 分级在小腿三头肌损伤中的应用价值探讨

邓晓娟,孙华彪
陆军特色医学中心（大坪医院）

目的 探讨 MRI 肌肉损伤分级系统在小腿三头肌损伤中的应用价值。材料 收集本科室小腿三头肌损伤的 MRI 病例 41 例。方法 分析所收集的病例所累及的肌肉、损伤的部位、肌肉损伤横截面积的百分比、撕裂的程度，然后分别运用慕尼黑共识声明、英国运动医学专家协商会议、意大利运动员下肢肌肉损伤保守治疗指南所提出的三种 MRI 肌肉损伤分级系统做损伤分级，对比其差异性。结果

41 例病例中仅一块肌肉损伤 31 例，同时具有两块肌肉损伤 10 例，三块肌肉损伤 4 例，损伤肌肉一共 55 块。对各损伤肌肉采用慕尼黑分级系统、英国运动分级系统及意大利分级系统判定功能性损伤均为 14 块、；部分撕裂分别为 32 块、33 块、30 块；（次）完全撕裂为 9 块、8 块、11 块。结论 MRI 可以根据肌肉损伤的类型、部位、严重程度、大小和横截面积等，将损伤分成不同的等级，而不同的等级在最佳治疗的条件下所需要的康复时间不同，选择一个合适的分级系统，这对于临床的治疗及患者的预后、康复可以提供一个非常重要的指导方针。

PU-2978

运动型横纹肌溶解症的临床及 MRI 特点分析

闫蕾,武宜
山西省中西医结合医院

目的 分析运动性横纹肌溶解症（exercise-induce rhabdomyolysis, EIR）的临床表现及 MRI 征象，提高临床对该病的认识，提高早期确诊率。
方法 回顾性分析我院经临床和实验室确诊的 4 例 EIR 的临床表现及 MRI 征象，并结合文献分析总结该病的临床、MRI 特点。
结果 4 例患者均有短时间内过量运动的病史，其中 3 例患者为突然大量剧烈健身运动后起病，1 例为连续数天持续搬重物上下楼后起病，均有肌肉疼痛伴无力、尿色加深等表现，实验室检查肌酸激酶、尿肌红蛋白升高，其中 1 例伴有发热、恶心呕吐，1 例继发肾功能衰竭。其中 3 例病变仅累及双侧大腿，1 例病变累计双侧大、小腿，受累肌肉肿胀，病变呈对称分布，于 T1WI 上信号减低，T2WI 上信号增高，脂肪抑制序列能更好的区分受损肌肉和临近脂肪，病变肌肉可见斑片状或云絮样高信号，边界欠清晰，周围肌间隙均有受累，界限模糊；其中 1 例于 T1WI 上可见到等高信号。
结论 EIR 具有典型的起病原因及临床表现， MRI 能够很好的显示病变肌肉的范围，评估损伤程度及预后，及早行 MRI 检查能够为临床制定治疗方案提供可靠依据。

PU-2979

多层螺旋 CT 平扫及三维重建对桡骨骨折的术前评估及临床治疗应用价值探讨

邵华,贾文霄,姜磊
新疆医科大学第一附属医院

【摘要】 目的 旨在探讨多层螺旋 CT 平扫及三维重建对桡骨骨折的术前评估及临床治疗应用价值。**方法**：回顾性分析 2016 年 8 月到 2018 年 6 月于我院就诊治疗的 76 例桡骨骨折患者的临床及随访资料根据资料可知所有患者入院后均行多层螺旋 CT 平扫及三维重建检查，且在完善相关准备后均行桡骨骨折内固定术治疗，分析桡骨骨折在不同影像学检查中的影像学特征表现，并总结不同检查方法对桡骨骨折检出率以及诊断的灵敏度和特异度，研究多层螺旋 CT 平扫和三维重建对桡骨骨折患者术前评估及临床治疗的应用价值。**结果** 多层螺旋 CT 平扫对桡骨骨折检出率、诊断的灵敏度和特异度分别为 84.21%、73.68%和 67.11%，三维重建检查对桡骨骨折检出率、诊断的灵敏度和特异度分别为 97.37%、93.42%和 89.47%，即三维重建检查对桡骨骨折检出率、诊断的灵敏度和特异度均显著高于多层螺旋 CT 平扫，比较差异间均具有统计学意义（P<0.05）；多层螺旋 CT 平扫可示骨折关节面出现压缩性塌陷，且主要表现在舟骨窝和月骨窝中央部分，且关节面骨块带有软骨面，矢状面可见骨折处骨皮质不连续且出现游离骨块影，三维重建检查中可示存在较多骨折块，且在三维重建矢状面表现为桡骨远段骨皮质呈现连续性中断，且远端关节面可被累及，游离骨块影可

被见；骨折断端出现变形，且以成角形式，而腕关节间隙变窄，所有患者根据图像均行切开复位内固定治疗，术后复查 X 线检查显示断端对位对线良好。**结论** 三维重建技术对桡骨骨折的检出率、诊断灵敏度和特异度均显著优于多层螺旋 CT 平扫，且临床可根据图像资料制定相关手术方案，更有利患者恢复。

PU-2980

骶髂关节磁共振扫描用于强直性脊柱炎的诊断效果观察

王银
中国人民解放军第一一七医院/杭州空军医院

目的 探究骶髂关节炎（SIJ）核磁共振（MRI）扫描对强直性脊柱炎（AS）的诊断效果。方法 研究时限为 2017 年 1 月至 2019 年 3 月，随机抽选此期间在我院确诊为 AS 患者 51 例，均有完整的影像学资料。对全体 AS 患者 CT 影像、MRI 影像进行回顾性分析，通过与 CT 影像学结果进行比较，探究 MRI 对 SIJ 诊断效果。结果 与 CT 影像相比，MRI 对患者关节扭曲、信号异常、不规则变粗等解剖学结构及关节病变信息显示更准确；MRI 诊断正确率为 100.0%（51/51），与 CT 诊断正确率 94.12%（48/51）相比，差异无统计学意义（P＞0.05）；MRI 对 SIJ 中Ⅰ、Ⅱ级、总诊断正确率分别为 91.67（11/12）、93.75%（15/16）、96.08%（49/51），均高于 CT 诊断 50.00%（5/12）、62.50%（10/16）、74.51%（38/51）（P＜0.05）；MRI 诊断对于骨髓水肿、骶髂关节退变、关节面下骨质囊变、关节面侵蚀检出率分别为 97.44%（38/39）、94.12%（32/33）、97.56%（40/41）、96.55%（28/29），较 CT 诊断 82.05%（32/39）、76.47%（26/34）、85.37%（35/41）、79.31%（23/29）高（P＜0.05）。结论 在对于 AS 患者的 SIJ 诊断中，MRI 与 CT 诊断正确率相近，但在 SIJ 早期病变分级准确率的诊断中，MRI 较 CT 具有明显优势，以此在临床诊断中，可借用 MRI 对 SIJ 发病早期病情严重程度及病变情况进行判断，以此为临床治疗提供较准确的影像学依据。

PU-2981

SAPHO 综合征的临床表现及影像学特点

蔡王莉
上海交通大学附属第六人民医院

目的 探讨 SAPHO 综合征的临床表现及影像学特点。提高大家对 SAPHO 综合征的认识，减少临床上对 SAPHO 综合征的漏诊、误诊。
方法 回顾性分析了 10 例临床明确诊断为 SAPHO 综合征患者的临床表现及影像学特点。
结果 8 例患者有双手足、颜面部的红皮疹、疱疹及脓疱疮等皮肤改变， 9 例患者有胸骨柄肿痛、6 例患者有腰骶部疼痛、5 例患者有胸腰椎压痛等骨关节症状。其中 5 例患者皮肤改变先于骨关节症状出现，2 例患者骨关节症状表现先于皮肤改变出现。影像学表现： 9 例患者累及前上胸壁,X 线、CT 表现为骨及肋软骨硬化、肥厚,关节破坏、强直， 关节间隙融合、消失,胸骨柄、锁骨近端和第 1 肋软骨受累，其中双侧不对称受累 4 例,双侧对称性受累 4 例,单侧受累 1 例。6 例柄胸联合受累,3 例第 2 肋软骨受累。5 例伴有脊柱病变,X 线、CT 表现为多发椎体终板侵蚀、硬化,椎旁骨化,椎间隙变窄,椎体楔形变;MRI 表现为椎体不均匀长 T1 长 T2 信号。6 例伴骶髂关节受累,X 线和 CT 表现为关节破坏、强直。

结论 SAPHO 综合征在临床上时常可见，临床表现以双手足、颜面部的红皮疹、疱疹及脓疱疮等皮肤改变及胸骨柄肿痛腰骶部疼痛、胸腰椎压痛等骨关节症状为主，影像学表现以前上胸壁受累为特征性表现，其中胸骨柄、锁骨近端和第 1 肋软骨受累最为常见。

PU-2982
数字断层融合检查与 CT 在诊断骶髂关节炎中的图像质量和辐射剂量的比较研究

胡安宁
南京大学医学院附属鼓楼医院

目的 评价数字断层融合（DTS）在诊断骶髂关节炎中图像质量与辐射剂量，以此替代螺旋 CT 扫描，作为此类疾病优先筛查的可行性。**方法** 由于骶髂关节炎专科门诊检查常规 DR 和螺旋 CT 扫描，而 DTS 本身优于 DR，故联系门诊专科医师随机开出 18 例患者行螺旋 CT 扫描，另开出 18 例患者行数字断层融合（DTS）作为对照组，最后评价图像质量和记录辐射剂量以比较研究。**结果** 两组患者检查后图像在双盲条件下评价：都能满足诊断要求。两组质量评分：4.17±0.82 和 4.30±0.70，差异无统计学意义（P＞0.05）。而两组患者显示的辐射剂量（mSv）分别为：3.64±0.22 和 15.85±0.73，差异有统计学意义（P＜0.05）。**结论** 骶髂关节炎 DTS 与螺旋 CT 扫描的图像质量基本等同，完全能满足诊断要求，但螺旋 CT 扫描的辐射剂量明显高于 DTS（相差 1/5），因此，在临床疑似骶髂关节炎检查时，应常规首选 DTS 检查较为符合“正当化”。**讨论** 强直性骶髂关节炎的早期诊断和治疗对于防治永久性关节损伤是非常重要的，而影像学上骶髂关节骨侵蚀的程度，决定就有调整和治疗的需要，临床上原先影像学检查多普通数字化摄影（DR），但骶髂关节结构不规则，二维重叠，加上盆腔肠道伪影致使图像灵敏度、特异性及精确度下降，即使行螺旋 CT 扫描，虽然图像质量明显提高，但患者的辐射剂量大幅上升，尤其骶髂关节处于生理敏感部位，更需要加强防护，又由于此疾患为慢性、需要多次影像学复查，所以采用一项既不影响图像质量又不造成过多辐射剂量的检查方法必要的，国际放射防护委员会（ICRP）主张 X 射线诊断应遵循实践正当性、防护最优化原则。有作者认为 DTS 在骨性结构的显示方面与 CT 类似，但患者接受的放射学剂量约为 CT 检查的 1/2 。

PU-2983
炫速双源 CT 双能量成像技术对于痛风性关节炎的诊断价值研究

付亚军
西南医科大学附属中医医院

【摘要】目的：研究炫速双源 CT 双能量成像技术（DSCT）对于痛风性关节炎的诊断价值。方法：选取 2018 年 1 月到 2019 年 1 月到我院收治关节炎患者 189 例，采用 DSCT 对发病部位扫描并分析获取影像资料，判断患者检测部位有无尿酸盐结晶沉积,把检测结果与临床确诊病例进行对比，分析 DSCT 对于痛风性关节炎诊断准确率。结果：在 189 例关节炎患者中，经炫速双源 CT 扫描检出尿酸盐检测呈阳性 136 例，经过临床确诊为痛风性关节炎有 142 例，诊断准确率为 136/142（95.7 %）。讨论：DECT 对于痛风性关节炎诊断准确率高，可作为筛查诊断痛风性关节炎重要手段。

定量ＣＴ评估老年男性冠脉钙化与骨质疏松症的相关性研究

朱忠祥,张清
武汉市普仁医院

目的 ：
定量 CT（QCT）测量老年男性冠脉钙化骨密度，分析骨质疏松症（op）与冠状动脉钙化（coronary artery calcification，CAC）的相关性。
材料方法：
收集 2019 年 3 月至 2019 年 8 月期间在武汉科技大学附属普仁医院老年男性者（年龄≥60 岁），随机选取 62 例，所有受检者均行 QCT 检查，采用西门子 16 排 MSCT 机及 Mind-ways 公 司的 5 样本固体体模，电 压 120KV，电流
125mA， 床高 90cm，FOV400mm 扫描上界为腔静脉切迹上缘，下缘达第 3 腰椎，测量胸 12、腰 1 椎体骨密度值。
根据 CT 扫描胸部过程中，确定冠脉钙化（CAC）患者 42 为组，无冠脉钙化（NCAC）患者 20 例为对照组。.分析 42 例 CAC 组和对照组的各项一般数据及骨密度值进行分析，尝试用骨密度值预测冠脉钙化。
结果：
1、冠脉钙化（CAC）组与无冠脉钙化（NCAC）患者罹患骨质疏松明显增加，比较均有统计学意义(P<0.05)，CAC 组更易罹患骨质疏松症。
2、CAC 患者骨密度值较 NCAC 明显降低，两者比较均有统计学意义(P<0.05)。
结论：
冠脉钙化（CAC）组与无冠脉钙化（NCAC）患者罹患骨质疏松明显增加，两组比较有统计学意义(P<0.05)，CAC 组更易罹患骨质疏松症。

年龄分层在女性腰椎骨密度与肥胖相关研究中的重要意义

刘正华
西安市红会医院

目的　研究不同年龄段女性腰椎骨密度与体重指数（BMI）及腹部脂肪分布测量参数的相关性，探讨年龄分层在女性腰椎骨密度与肥胖相关研究中的重要意义。**方法**　纳入成年女性 314 例，以 10 年为年龄段分为 6 组,测量其身高、体重，并计算 BMI。利用 Midways pro 定量 CT（QCT）分析系统，测量脐水平腹部脂肪面积（FA）、腹内脂肪面积（VFA）、腹壁脂肪面积（SFA）、腰 2-4 椎体的骨密度（BMD），计算腹脂比（VF/SF）及腰椎平均 BMD（vBMD）。采用单因素方差分析不同年龄段各指标是否存在组间差异；采用 Pearson 相关分析不同年龄段女性腰椎骨密度与各指标的相关性。结果　女性腰椎峰值骨密度出现在 26～35 岁组。在 25 岁以下及 26～35 岁组，腰椎 vBMD 与腹部脂肪（r=-0.5，p=0.042；r=-0.35，p=0.014），特别是腹壁脂肪呈显著负相关（r=-0.491，p=0.045；r=-0.299，p=0.033），与年龄和 BMI 不相关；36～45 岁组，腰椎 vBMD 与各项参数均未表现出相关性； 46～55 岁及 56～65 岁组，腰椎 vBMD 与年龄呈显著负相关（r=-0.265，p=0.003；r=-0.253，p=0.003）；56～65 岁及 66 岁～以上组，腰椎 vBMD 与 BMI 呈显著正相关

（r=0.179，p=0.042；r=0.150，p=0.033）。结论 不同年龄段女性腰椎骨密度与体重指数（BMI）及腹部脂肪分布测量参数之间关系复杂，在相关研究中进行合理的年龄分层十分必要。

儿童复发性多灶性骨髓炎影像表现

于静红,陶美丽,门广美
内蒙古医科大学第二附属医院

目的：熟悉慢性复发性多灶性骨髓炎(CRMO)的临床、影像特点，提高诊断准确率
方法：收集经临床随访诊断为慢性复发性多灶性骨髓炎的患者共 6 例
的临床及影像学资料，分析其 X 线、CT 及 MRI 影像表现，总结
其影像学特点。
结果：4 例均发生于儿童，年龄 6-15 岁，平均为 11.5 岁，男性 2 例，女性 4 例。病史 20 天~6 月，症状为病变部位疼痛、活动障碍，为钝痛、间断疼痛，无明显发热、盗汗、肿块等，2 例为多部位同时发病，2 例为多部位先后发病。病变累及部位包括股骨下段及干骺端、胫骨上端干骺端、骶骨、胸骨。影像表现：X 线平片检查，长骨干骺端病变表现为近干骺端髓腔内骨质密度增高，并多发局灶性破坏，边缘硬化，2 例周围见多层状骨膜增生；骶骨、胸骨密度增高，骨纹理模糊。CT 检查长骨破坏区显示更为清楚，为多发灶状骨缺损，周围骨质硬化，硬化区与正常骨髓没有明确界限；骶骨破坏区呈多发小灶状低密度，邻近骶骨耳状面毛糙，局部软组织略肿；胸骨破坏为高密度内见灶状低密度影，边缘模糊。MRI 扫描病变区主要表现为模糊 T1WI 低信号、T2WI 上为较高信号，压脂为高信号，其中破坏灶为更长 T1、T2 信号影，邻近骺板模糊，周围骨膜水肿，骶骨病变周围软组织水肿较明显。所有病例的影像检查即复查均未发现死骨、钙化。

结论：慢性复发性多灶性骨髓炎主要为慢性多发或先后发病的病灶，影像表现为多灶慢性骨破坏、骨膜炎、骨髓水肿、骨骺炎，常无脓肿、死骨。结合临床病程长，细菌培养阴性、抗生素治疗无效可以诊断。

体素内相位不相干运动在椎体骨质疏松评价中的应用研究

黄满华
荆州市第一人民医院

[摘要] 目的 探讨体素内相位不相干运动成像（IVIM）在椎体骨质疏松评价的应用价值。**材料和方法** 纳入例 42 例骨质疏松患者及 38 例健康志愿者，进行双能 X 线吸收法（DXA）、常规 DWI 成像和 IVIM 成像，测量椎体的骨矿物密度（BMD）、表观扩散系数（ADC）、扩散系数（D）、灌注扩散系数（D*）及灌注分数（f），比较健康志愿者及骨质疏松患者的 ADC 和 IVIM 参数，采用 Spearman 相关性分析 IVIM 参数与骨密度值（T）的相关性。**结果** 健康志愿者的 ADC 值、D 值、D*值和 f 值分别为 $0.50\pm0.08\times10^{-3}$ mm^2/s、$0.45\pm0.09\times10^{-3}$ mm^2/s、$14.42\pm3.01\times10^{-3}$ mm^2/s 和 0.12±0.04%，而骨质疏松患者的 ADC 值、D 值、D*值和 f 值分别为 $0.53\pm0.08\times10^{-3}$ mm^2/s、$0.39\pm0.06\times10^{-3}$ mm^2/s、$11.29\pm3.37\times10^{-3}$ mm^2/s 和 0.13±0.03%。骨质疏松患者的 D、D*值显著低于健康志愿者(P< 0.05)，并和 BMD 值之间存在中度正相关，相关系数分别 0.590 和 0.702，而 ADC 值和 f 值无统计学差异，且和 BMD 无明显相关。**结论** D 和 D*值和 BMD 存在一定相关性，IVIM 成像为临床提供了一种无创评价骨质疏松的方法。

PU-2988
膝关节痛风性关节炎 CT、MRI 及 DECT 对比分析

方军杰,陈斌,李峰,金银华
中国科学院大学宁波华美医院

目的： 对比分析膝关节痛风性关节炎（GA）CT、MRI 及 DECT 影像表现特点，探讨三种常用检查方法对痛风性关节炎的诊断价值。
方法： 回顾分析 28 例符合美国风湿病学会制定的痛风临床诊断标准的 GA 患者的膝关节 DECT 及 MRI 资料，其中 CT 图像从 DECT 平扫中分割提取。在未知最终诊断结果的情况下，由两位副高级以上职称骨肌影像医师对三种检查方式进行影像判断。
结果： 共 28 位患者，两位医师对 CT、MRI 及 DECT 三种检查方式的诊断符合的病例数是 21 例（75%）、18 例（64%）、27 例（96%）。CT 平扫表现：27 例骨质破坏，表现为圆形或类圆形骨质破坏区，边缘硬化；20 例骨质破坏区见悬垂边，19 例关节积液，20 例可见混杂高密度痛风结节；MRI 表现：27 例骨质破坏及软骨损害，3 例破坏区轻度骨髓水肿，23 例关节腔积液及滑膜增厚；痛风结节在 T1WI 呈不均匀等低信号，T2WI 和 PDWI 压脂呈不均匀中到高信号，和软组织分级清晰. 27 例在 DECT 可发现尿酸盐结晶沉积。
结论：GA 影像诊断 CT、MRI 及 DECT 都具有一定的特征，DECT 对于检测尿酸盐沉积方面较敏感，并且 CT 平扫在骨质破坏形态、痛风结节部位及密度测量等有优势，但 MRI 对于显示 GA 软组织及软骨损害有明显优势，可以做为痛风性关节炎严重程度评估的补充检查。

非增强磁共振对强直性脊柱炎髋关节受累的价值研究

方军杰,陈勇,夏建笔,干放
中国科学院大学宁波华美医院

目的探讨磁共振非增强扫描对强直性脊柱炎髋关节结构受累检出的价值，并总结髋关节受累时的磁共振影像表现。**方法**共纳入研究对象 176 例，共 352 髋，依据临床有无髋部临床症状分为 AS 无髋部症状组和 AS 有髋关节症状组，全部研究对象均行双髋非增强 MRI 检查。由 2 位放射科诊断医师对 MRI 图像进行独立、盲法分析，并对强直性脊柱炎髋关节累及的影像表现进行分析汇总。计算两组间髋关节受累的检出率，P<0.05 差异具有统计学意义。计算评估者之间一致性百分比和 kappa 系数。**结果** 髋关节症状组 95 例（95/176），无髋关节症状组 81 例（81/176），平均年龄分别为(30.9±7.1 岁)，（31.7±8.6）岁，髋关节症状组的平均病程（7.6±6.8 年），无髋关节症状组的平均病程（7.2±6.0 年），两组间无统计学差异（P=0.30）。髋关节症状组 MRI 检出阳性 90 例（90/95，94.7%），无髋关节症状组检出 2 例（2/81，2.5%）；92 例 MRI 阳性病例中：关节积液 66 例（62.9%），附着点炎 21 例（22.8%）；软骨下骨髓水肿 46 例（50%），关节面下骨质侵蚀 26 例（28.3%），关节狭窄 19 例（20.6%），关节面下脂质沉积 7 例（7.6%）。两个评估者间的变异度为 0.81，诊断一致性较好。**结论**非增强磁共振双髋检查能了解强直性脊柱炎髋关节受累情况，用时短、诊断一致性较好，并可减少钆造影剂使用，可作为 AS 患者的常规影像检查及长期随访的手段。

PU-2990

超声多普勒与 MRI 在类风湿性关节炎 早期临床诊断上的对比研究

龙邦媛,李康,卢小军,谢英
中国科学院大学重庆医院（重庆市人民医院）

[目的] 类风湿性关节炎是一种不可逆转的滑膜关节炎症，早期诊断早期治疗对有效控制病情进展起关键作用。关节超声和 MRI 在评估其进展及临床治疗效果方面发挥了重要作用。本研究旨在比较超声分级评分与 MRI 在早期类风湿性关节炎影像诊断中的作用，帮助临床选择优势影像学检查项目。
[方法] 收集 2011 年 10 月到 2018 年 8 月期间，出现症状一年内在我院确诊为类风湿性关节炎的 53 例患者，所有患者均行 DAS28、RF、CRP、ESR、CCP、双手双腕超声及 MRI 检查。分析 DAS28 评分、实验室参数、磁共振与超声检查结果之间的关系。
[结果] 超声与 MRI 对于滑膜炎、关节囊积液和腱鞘炎的诊断价值无统计学差异（P＞0.05）。超声对骨关节侵蚀性病变的检查率低于 MRI（P＜0.05）。对于滑膜炎的诊断，灰阶超声敏感性优于能量多普勒（P＜0.05）。能量多普勒检出敏感性与 DAS28、ESR、CRP、CCP 数值呈正相关（P＜0.01），与 RF、病程时间无关（P＞0.05）。灰阶超声检出敏感性与 RF、CRP 呈正相关（P＜0.01），与 DAS28、CCP、ECR、病程无关（P＞0.05）。骨质侵蚀程度与病程、CCP、RF 呈正相关（P＜0.01），与 DAS28、ECR、CRP 无关（P＞0.05）。
[结论] 超声与 MRI 对早期类风湿性关节炎患者的滑膜炎、关节积液、腱鞘炎、骨糜烂等改变具有较高的可靠性。不同超声检查与临床及实验室参数相关性不同。超声检查成本低廉，可作为类风湿关节早期筛查首选，而 MRI 评估骨侵蚀更加准确，应作为病情进展评估、治疗效果评估的优选项目。

In vivo quantification of bone mineral density of lumbar vertebrae using fast kVp switching dual-energy CT: correlation with quantitative computed tomography

shuwei Zhou[1,2],Kun Zhang[1,2],Tian You[1],Ping Li[1],Ying Guo[3]
1.First Affiliated Hospital of Hunan University of Chinese Medicine
2.College of Integrated Traditional Chinese and Western Medicine， Hunan University of Chinese Medicine
3.GE Healthcare (Shanghai) Co.， Ltd.

Purpose: To evaluate the feasibility and accuracy of phantomless in vivo dual-energy computed tomography (DECT) based bone mineral density (BMD) quantification in comparison with quantitative computed tomography (QCT).
Methods: We retrospectively analyzed 128 consecutive healthy participants (62 males, 66 females, age range 22-90 years) who underwent both DECT and QCT lumbar examinations from July 2018 to February 2019. Demographic characteristics (age, height, weight) were recorded before scanning. All the participants were divided into 6 age subgroups (21-30, 31-40, 41-50, 51-60, 61-70, ≥71 years). The density of calcium(water), hydroxyapatite(water), calcium(fat), hydroxyapatite(fat) ($D_{Ca(Wa)}$, $D_{HAP(Wa)}$, $D_{Ca(Fat)}$, $D_{HAP(Fat)}$)

and BMD were measured respectively on the trabecular bone of L1-L5 by DECT and QCT. Linear regression analysis was performed to assess the relationship between DECT-derived and QCT-derived BMD among different genders, ages, lumbar levels and BMI. Linear regression models were quantitatively evaluated with adjusted *R*-square, normalized mean squared error (NMSE) and relative error (RE). $P < 0.05$ suggested a difference was statistically significant.

Results: There were strong correlations between DECT-derived and QCT-derived BMD among different genders, age subgroups, lumbar levels and BMI (genders: $R = 0.984$-0.994, $R^2 = 0.968$-0.987, NMSE = 1.38%-3.15%, RE = 0.72%-2.18%; age subgroups: $R = 0.954$-0.983, $R^2 = 0.910$-0.966, NMSE = 4.99%-10.57%, RE = 0.11%-3.36%; lumbar levels: $R = 0.978$-0.994, $R^2 = 0.955$-0.987, NMSE = 1.74%-5.48%, RE = 0.76%-3.29%; BMI: $R = 0.992$-0.994, $R^2 = 0.984$-0.987, NMSE = 1.43%-2.01%, RE = 0.16%-1.68%). $D_{Ca(Fat)}$ showed the best predictive capability for QCT-derived BMD ($R = 0.991$, $R^2 = 0.982$, NMSE = 1.83%, RE = 1.38%).

Conclusion: 256-row fast kVp switching DECT allows for accurate phantomless in vivo BMD quantification of lumbar spine, $D_{Ca(fat)}$ has the best predictive capability.

膝关节脂肪垫常见疾病的 MRI 特征及临床诊断

李晔,王光彬
山东省医学影像学研究所

目的

分析膝关节脂肪垫常见疾病的 MRI 影像表现，以提高对该类疾病的临床诊断。

方法

回顾性分析 2017 年 5 月至 2019 年 5 月山东省医学影像学研究所经病理或临床证实的 100 例（女 45 例、男 55 例；年龄 20~60 岁）膝关节脂肪垫疾病患者，其中脂肪垫损伤 60 例，脂肪垫囊肿 10 例，腱鞘巨细胞瘤 20 例，滑膜骨软骨瘤病 10 例 。100 例患者均行膝关节平扫 MRI 检查，其中 30 例患者另行膝关节增强 MRI 检查。根据病变部位、形状、边缘、大小及与周围组织关系、信号特点、强化特点、水肿程度等方面进行影像学分析。

结果

100 例脂肪垫病变共有 3 种类型。（1）脂肪垫损伤：60 例，其中 30 例髌下脂肪垫损伤，15 例髌上前脂肪垫损伤，15 例交叉韧带旁脂肪垫损伤，MRI 表现为脂肪垫边缘毛糙，内可见条、片状 FS-T2WI 高信号，相应 T2WI 信号减低，其中 13 例髌下脂肪垫损伤表现为脂肪垫边缘不规则、萎缩、形态失常，并可见滑膜囊肿；10 例髌上前脂肪垫损伤表现出占位效应，向后推压髌上囊。（2）脂肪垫囊肿：10 例，其中 8 例为髌下脂肪垫囊肿，2 例为交叉韧带旁脂肪垫囊肿，MRI 表现为脂肪垫形态失常，内可见类圆形囊性病变，FS-T2WI 呈高信号，其中 2 例髌下脂肪垫多发囊变。（3）脂肪垫区肿瘤：30 例，其中 20 例为腱鞘巨细胞瘤，均发生在髌下脂肪垫区，与正常骨骼肌信号相比，所有病灶均在 T1WI 上呈不匀均等、低信号，T2WI 上为等、低混杂信号。20 例行增强扫描的患者中，15 例病变呈明显不均匀强化，5 例病变呈轻度强化。10 例为滑膜骨软骨瘤病，6 例发生在交叉韧带旁脂肪垫区，4 例发生在髌下脂肪垫区，病灶在 T1WI 和 T2WI 均呈高、低混杂信号，增强扫描均呈明显不均匀强化。

结论

膝关节脂肪垫的常见疾病的发病部位和 MRI 表现具有特征性，有助于对该类疾病的诊断和鉴别诊断。

腰椎曲霉菌感染一例报告

楼敏超
浙江大学医学院附属邵逸夫医院

患者，男，60 岁，仓库工人。腰背痛、咯血 2 月余，再发腰痛半月余。否认高血压、糖尿病，吸烟 20 支/天，饮酒 白酒 1 斤/天 30 年。既往无殊。外院曾诊断感染性休克，左侧脓气胸、右肺炎，血培养阴性，行胸腔闭式引流、抗感染对症支持治疗后好转。查体:生命体征平稳，左侧呼吸音低，可闻及湿罗音，脊柱活动受限，双侧肢体肌力Ⅴ级，双下肢无水肿，病理反射未引出。血清 CRP 48.8 mg/L、ESR 72 mm/h、嗜酸细胞绝对数 4.5* 10^9/L，胸部 CT：两肺炎症，左侧少量液气胸。腰椎 MR 增强：T12、L1 锥体及 L5/S1 相邻锥体斑片 T1WI、T2WI 信号减低，临近终板条片信号增高，增强可见明显强化，椎旁软组织增厚伴强化，感染性病变考虑（图 1）。骨髓穿刺活检术：骨髓培养阴性；多次血培养：阴性；椎旁软组织穿刺活检术：涂片阴性、培养阴性；椎旁软组织病理：纤维组织增生，伴浆细胞及嗜酸粒细胞浸润（图 2）；骨髓病理：组织增生活跃。GM 试验：4.98ug/L，烟曲霉 IgG 86。诊断为曲霉菌感染。后给予伏立康唑治疗后，血清 CRP、ESR、嗜酸细胞绝对数、免疫球蛋白 E 及曲霉菌半乳甘露聚糖指标进行性下降，腰背部疼痛好转。

讨论 曲霉菌病属于机会性感染，多见于支气管和肺部，发生在腰椎者少见。椎体及椎管内曲霉菌病多经血行扩散而定植到椎体及椎间盘组织。T2W 序列真菌性脊柱炎骨髓内低信号，提示惰性感染所致的纤维化可以和明显更具攻击性化脓性脊柱炎进行鉴别[1]。确诊还需靠病理及培养。

18F-FDG PET/CT 在 POEMS 综合征中的应用价值

姜阳,王云华,董楚宁,李娴
中南大学湘雅二医院 PET-CT 中心

目的：总结 POEMS 综合征患者的临床特点及影像学表现，探讨 ^{18}F-FDG PET/CT 在该病中的应用价值。

方法：回顾性分析 2014 年 9 月至 2018 年 9 月在我院行 PET/CT 检查的 10 例经临床或病理证实的 POEMS 综合征患者的临床资料、实验室及影像学资料。

结果：10 例患者中男 6 例，女 4 例，年龄 52.9±9.8 岁，主要临床表现为不同程度的四肢麻木，轻中度的肝脾、淋巴结肿大，皮肤色素沉着等。实验室检查：10 例均存在 M 蛋白血症，9 例血清 VEGF 水平异常升高，4 例甲状腺功能异常及 2 例 ACTH 异常升高。18F-FDG PET/CT 影像学表现：10 例患者均存在不同程度的骨病变，9 例多发，1 例单发，病灶共计 198 个，主要分布于脊椎、骨盆，肋骨等。所有骨病变中以硬化性最常见（157/198，79.3%），混合性次之（38/198，19.2%），溶骨性最少（3/198，1.5%）。FDG 阳性病灶约 22.7%（45/198），SUVmax 为 4.6±3.2，其中溶骨性骨病变 SUVmax 为 10.8±10.0，混合性病变 SUVmax 为 4.3±2.0，硬化性 SUVmax 为 3.5±0.3。FDG 阳性病灶以 10mm 以上多见，FDG 阴性病灶以 5-10mm 多见。7 例出现淋巴结病变者均伴 FDG 异常摄取，SUVmax 为 3.7±2.0。肝脏肿大者 2 例、脾脏肿大者 6 例。6 例出现浆膜腔积液，其中 4 例多发，2 例单发，均未见 FDG 异常摄取。

结论：^{18}F-FDG PET/CT 可系统性的评估 POEMS 综合征的骨病变、淋巴结病变、肝脾肿大、多浆膜腔积液等特点，对该病的早期诊断、活检定位及疗效评价方面具有重要临床价值。

PU-2995

骨化性肌炎的 CT 和 MRI 诊断

姜涛
天津市第三中心医院

目的 分析骨化性肌炎的 CT 和 MRI 表现，以提高对骨化性肌炎的认识。
方法 回顾性分析 11 例经手术病理证实的骨化性肌炎的 CT 和 MRI 的表现，并结合文献总结其影像学表现。
结果 大腿及肘关节各 6 例，踝关节 1 例，早中期病灶 MRI 上信号较混杂，早期临近软组织水肿明显，较明显不均匀强化，CT 上边缘可见钙化；晚期病例以钙化为主，MRI 上呈低信号。
结论 骨化性肌炎多有外伤史，其 CT 和 MRI 表现有一定特征性，根据病程分析更能避免穿刺活检或不必要的手术治疗。

PU-2996

能谱 CT 对早期痛风降尿酸治疗的定量评价

彭云,吴晶涛
中南大学湘雅二医院

目的 探讨能谱 CT 物质分离技术在早期痛风患者降尿酸治疗定量评估中的价值。**方法** 回顾性分析临床确诊的 32 例早期足部痛风患者降尿酸治疗前、后的能谱 CT 图像，采用物质分离技术获取尿酸（钙）基物质图，两名医师分别测量治疗前、后第一跖趾关节周围的尿酸盐沉积浓度。对患者治疗前、后的血尿酸浓度与尿酸盐沉积浓度分别进行配对 t 检验，采用 Pearson 相关分析评价治疗后血尿酸浓度下降值与尿酸盐沉积浓度下降值的相关性。**结果** 治疗前能谱 CT 所测尿酸盐沉积浓度为（1178.69±11.79）mg/L，血尿酸浓度为（421.59±115.23）umol/L。治疗后能谱 CT 尿酸盐沉积浓度为（1162.65±9.68）mg/L；血尿酸浓度为（309.41±87.59）umol/L。治疗后血尿酸浓度与能谱 CT 所测第一跖趾关节周围尿酸盐浓度明显低于治疗前（$P<0.05$）；治疗前、后血尿酸浓度差与能谱 CT 尿酸盐浓度差呈弱相关（$P<0.05$）。**结论** 能谱 CT 成像能够通过基物质分离技术定量测定第一跖趾关节周围尿酸盐沉积浓度在治疗后的改变，从而对早期痛风降尿酸治疗的疗效进行定量评价，为临床的治疗与监测提供依据。

DR 在负重立位全下肢 X 线摄影中的优势

田传帅[1],金松[1],胡安宁[1],刘广月[1],王钟[1],施健[1],张冰[1],钱玉[2]
1.南京大学医学院附属鼓楼医院
2.江苏省省级机关医院

目的：探讨 DR 在负重立位全下肢 X 线摄影中的优势。**方法：**随机选取 CR 和 DR 负重立位全下肢摄影各 43 例，对比分析图像质量、成像方式等。**结果：**86 例患者中，得到 CR 摄影和 DR 摄影拼接图像各 43 幅。CR 摄影中，两评分者均评为 3 分的有 15 幅，约占 34.88%；评为“2 分-3 分”或均评

为 2 分的有 22 幅，约占 51.16%；评为“1 分-2 分”或均评为 1 分的有 6 幅，约占 13.95%。DR 摄影中，两评分者均评为 3 分的有 31 幅，约占 72.09%；评为“2 分-3 分”或均评为 2 分的有 9 幅，约占 20.93%；评为“1 分-2 分”或均评为 1 分的有 2 幅约占 4.65%。CR 和 DR 图像质量评分的对比分析应用 Wilcoxon 秩和检验（所有 P<0.001），DR 摄影所得图像的质量比 CR 摄影高。**结论：**DR 负重立位全下肢摄影操作简单，成像速度快，自动无缝拼接，得到的图像清晰、细腻，对下肢关节疾病的临床诊断、治疗及关节置换方案的制定具有重要意义，与 CR 负重立位全下肢摄影相比具有明显优势。

PU-2998

腰椎间盘退变软骨终板下骨 MRI 纹理分析研究

曾菲菲
武汉大学人民医院

目的 探讨腰椎软骨终板下骨（VSB）MRI 纹理分析参数评价腰椎间盘早期退变的可行性。
方法 选择 80 名受检者行 T_1WI、T_2WI 与 T_2* mapping 成像，并对腰椎间盘进行 Pfirrmann 分级。其中 Pfirrmann Ⅰ级、Ⅱ级、Ⅲ级分别归为Ⅰ级、Ⅱ级、Ⅲ级三组。对各组腰椎头、尾侧软骨终板下骨行 T_1WI 纹理分析，并提取纹理特征参数（平均值、方差、偏度、相关性、熵）；测量各组腰椎头、尾侧 CEP 的 T_2*值。采用单因素方差分析或 Kruskal-Wallis 秩和检验对各参数值（平均值、方差、偏度、相关性、熵、T_2*）进行分析；Mann-Whitney 检验检测男女间各参数值性别差异；Dunnett's T3 检验比较不同组别间各测量值差异；ROC 分析比较Ⅰ级与Ⅱ级各测量值诊断效能。
结果 头、尾侧 VSB 各组 T_1WI 纹理特征参数（平均值、方差、熵）值及 CEP 的 T_2*值均有明显统计学意义。头、尾侧 VSB 纹理参数及 CEP 定量参数（T_2*）值在男、女组间无明显统计学差异。腰椎头侧 Pfirrmann Ⅰ级与Ⅱ级、Ⅱ级与Ⅲ级间 VSB 的方差值差异无明显统计学意义（$P > 0.05$）；Ⅰ级与Ⅱ级间 CEP 的 T_2*值差异均无明显统计学意义，余头侧各组间参数比较均有明显统计学意义。腰椎尾侧 Pfirrmann Ⅰ级与Ⅱ级、Ⅱ级与Ⅲ级间 VSB 的方差值差异无明显统计学意义；Ⅰ级与Ⅱ级间 CEP 的 T_2*值差异均无明显统计学意义，余尾侧各组间参数比较均有明显统计学意义。头侧与尾侧间各参数值差异均无明显统计学差异。对于鉴别Ⅰ级与Ⅱ级退变，头、尾侧 VSB 的纹理参数-平均值的 AUC 值、敏感度及特异度均大于其它纹理参数（方差、偏度、相关性、熵）及 CEP 定量参数（T_2*）。
结论 MRI 纹理分析评价椎间盘早期退变软骨终板下骨改变是可行的。

PU-2999

膝关节半月板边缘性移位的 MRI 研究及其临床价值

景辉[1],张辉[1],王峻[2],牛金亮[2]
1.山西医科大学第一医院
2.山西医科大学第二医院

目的：采用 MRI 观察膝关节半月板边缘性移位的影像学特点，并探究其临床价值。**方法：**收集本院 2017 年 1 月-2019 年 3 月因膝关节症状进行 MRI 检查符合骨性关节炎诊断 100 例患者（共 230 个膝关节）作为观察组，20 例正常膝关节（共 40 个膝关节）作为对照组，共 270 个膝关节，分析其半月板边缘性移位的发生情况，结合年龄等情况进行分组，以移位指数为指标进行量化分析。**结果：**膝关节半月板发生边缘性移位共 32 例，其中外侧半月板发生边缘性移位 12 例，内侧半月板发生边缘性移位 20 例，总发生率为 11.9%。半月板边缘性移位外内侧发生率之比为 1：1.67。观察组与

对照组半月板边缘性移位发生率及移位指数差异具有统计学意义(P<0.05)。所有病例移位指数平均值为 0.3421±0.2415。观察组各年龄组间半月板边缘性移位发生率及移位指数差异具有统计学意义(P<0.05）。**结论**：膝关节半月板边缘性移位与年龄、骨性关节炎具有明显的相关性，并具有重要的临床意义。

PU-3000
高分辨 3D-NerveView 序列结合压缩感知技术在磁共振腰骶丛神经根成像的临床应用研究

刘小明,孔祥闯,柳曦,刘定西,范文亮
华中科技大学同济医学院附属协和医院

目的 探讨高分辨三维 Nerve View 序列结合压缩感知技术在 3.0T 磁共振腰骶丛神经成像临床应用的可行性。 **方法** 对 20 例志愿者及 48 例怀疑腰骶丛神经根病变患者行 3.0T 常规扫描及 3d CS-Nerve View 神经成像序列扫描。由 2 名神经放射专家采用 5 分法对所获得的图像进行评估，比较常规 T2 STIR 图像与 3d CS-Nerve View 图像对腰骶丛神经及病变的显示差异。**结果** 20 例健康志愿者均完整显示腰骶丛及各分支全程且双侧对称无病变，48 例患者中 12 例肿瘤占位性病变，20 例椎间盘膨出或脱出压迫神经根，10 例外伤引起的神经根压迫或损伤，6 例遗传性周围神经病。3d CS-Nerve View 图像与常规 2D T2 STIR 图像比较，其对腰骶丛神经各解剖解剖分段显示评分及综合评分均有显著性统计学差异（P＜0.001），且前者明显大于后者。志愿者组 3d CS-Nerve View 图像可接受率（100%）明显高于常规 T2 STIR（16.7%），患者组中前者的图像可接受率（96%）也明显高于后者（10.4%）**结论** 相比常规扫描，3.0T 磁共振高分辨 3d CS-Nerve View 能更好的显示臂丛神经及病变，且可缩短扫描时间，提高成像效率。

PU-3001
多回波 Dixon 序列定量评估慢性腰背痛患者椎旁肌脂肪含量：与最大背伸展力的相关性研究

赵骏,鲁燕芬,杨森,陈伟
陆军军医大学第一附属医院（西南医院）

目的：运用多回波 Dixon 序列定量评估慢性腰背痛(Low back pain, LBP)患者 4-5 椎间盘椎旁多裂肌，竖脊肌和竖脊肌群(多裂肌加竖脊肌)脂肪含量(Fat%)与最大背伸展力相关性，并与正常志愿者比较对应部位 Fat%的差异性。
方法：20 名 LBP 侧突畸形患者(4 男，16 女，平均年龄 62.40±7.63 岁)，20 名正常志愿者(4 男，16 女，平均年龄 60.85±6.75 岁)行腰椎磁共振检查，4-5 椎间盘行多回波 Dixon 序列扫描。测量 40 名纳入者左右椎旁多裂肌，竖脊肌和竖脊肌群 Fat%，比较 LBP 组和正常志愿者组的差异性，计算 LBP 组椎旁肌 Fat%与最大背伸展力的相关性。校正卡方检验分析两组间男女分布差异性，Wilcoxon 秩和检验分析两组年龄、体重指数和椎旁肌 Fat%的差异性，Spearman 相关分析 Fat%与最大背伸展力的相关性。
结果：两组纳入人群性别分布，年龄和体重指数无显著性差异(P=1, P=0.364, P=0.433)，两组间多裂肌和竖脊肌 Fat%无显著性差异(P=0.108, P=0.100)，两组间竖脊肌群 Fat%有显著性差异(P=0.044)。多裂肌，竖脊肌和竖脊肌群分别与最大背伸展力呈中等负相关，无相关性和弱负相关性。(R=-0.325, R=-0.095, R=-0.226)。

结论：多回波 Dixon 序列可定量鉴别诊断 LBP 侧突畸形患者，竖脊肌群 Fat%为最佳定量鉴别探针，高于正常人 Fat%。多裂肌和竖脊肌群与最大背伸展力呈负相关，能更好反应患者背部最大伸展力变化情况。

动态 DR 在隐匿性肋骨骨折诊断中的优势

尤新生
张掖生殖医学专科医院放射科主任

检查目的：

肋骨生理解剖结构复杂，骨体呈弓形弯曲，自后侧脊柱向前下斜行，从影像学角度将胸部肋骨分为膈上部分和膈下部分。膈上肋骨与纵隔、心脏、肋骨、肺部血管等诸多组织器官重叠交叉，膈下肋骨受腹腔脏器成像因素影响，缺乏天然对比，往往显像不清晰，对隐匿性肋骨骨折的诊断有失精准，容易遗漏，需采用转体高清大幅面透视获取骨折显像的最佳体位图像，以便于准确定位、定性诊断。

检查
通过动态 DR 的大幅面图像可以清晰的显示完整胸廓的解剖结构，有利于观察骨性胸廓、心、肺、膈肌在呼吸运动状态下的整体状态，在透视功能下变换患者检查体位，从而获取不同体位的动态图像，选择骨折显示较为清晰的体位进行毫秒级抓拍，有效避免了漏诊和误诊。

结果：
动态 DR 大幅面透视图像，便于观察完整骨性胸廓、心、肺、膈肌在呼吸运动状态下的整体状态，有利于识别肋骨骨折部位和位置，以及骨折类型，有无合并症等，实施快速诊断，尤其适用于急诊患者的快速处治。可在透视下变换患者体位，使与纵隔、心脏、肋骨、肺部血管等诸多组织器官重叠交叉，以及被皮下气肿、胸壁血肿、气胸、胸腔积液等合并症遮盖的肋骨得以清晰的显示，在转体过程中选择骨折显像的最佳体位实时毫秒级抓拍，避免了误诊、漏诊。动态 DR 的视频保存/回放功能，可以完整的记录整个透视动态图像，便于重复观察、分析，指导教学，多科会诊，减少遗漏。

结论：
在肋骨不完全骨折或完全骨折移位不明显时，可仅表现为一侧骨皮质轻度翘起、凹陷、皱褶或呈现不完整的透亮线影、致密影，甚至有时仅表现为肋骨走行弧度的异常而不出现可见的骨折线，故部分极细微的骨折线及不完全性骨折等,须在具备高清摄像和动态转体透视多角度、多体位状态下，结合临床及影像学间接征象综合考虑，降低对隐匿性肋骨骨折病症的误诊、漏诊率，提高检查安全性。

定量 CT 骨密度测量应用于血压与腰椎骨密度相关性的研究

吴雅琳[1],翟建[1],胡琴[1],程晓光[2]
1.皖南医学院附属医院/皖南医学院弋矶山医院
2.北京积水潭医院放射科

【摘 要】 目的 应用定量 CT(QCT)测量腰椎骨密度(BMD),分析血压与腰椎骨密度的相关性。**方法** 选取 2018 年 7 月－8 月我院体检中心的体检人群 934 例，男 531 例，女 403 例，年龄 20～88 岁，平均年龄 49.47±11.90 岁，对其行低剂量胸部 CT 扫描，并测量腰椎骨密度，根据定量 CT 腰椎松质骨骨密度分为骨量正常、低骨量、骨质疏松三组。并对体检者血压进行测量，根据中国高血压防治指南 2018 年修订版中的诊断标准，将体检者根据血压情况分为四类人群：血压正常人群、高血压 1 级人群、高血压 2 级人群、高血压 3 级人群，比较这四类人群骨代谢异常的发病率。 **结果** 三组间比较骨质疏松组中，女性所占比例较大（P ＜ 0. 05）;低骨量组及骨质疏松组的年龄明显大于骨量正常组(P ＜ 0. 01)；各组体重指数（BMI）比较差异没有统计学意义(P ＞ 0. 05)。低骨量组及骨质疏松组的收缩压（SBP）、脉压（PP）大于骨量正常组(P ＜ 0. 01)；低骨量组及骨质疏松组的舒张压（DBP）大于骨量正常组(P ＜ 0. 05)。四类人群中，高血压 1 级人群、高血压 2 级人群、高血压 3 级人群的低骨量和骨质疏松的发病率均高于血压正常人群(P ＜ 0. 01)，随着血压分级的增加，骨代谢异常（低骨量+骨质疏松）的发病率也在逐渐增加(P ＜ 0. 01)。进一步行 *Pearson* 相关分析表明年龄、收缩压、舒张压、脉压均与腰椎骨密度呈负相关(P ＜ 0. 01)。 **结论** 年龄、收缩压、舒张压、脉压与腰椎骨密度呈负相关；女性骨质疏松较男性明显；随着血压的增高，骨代谢异常的发病率也逐渐增高。

精准医疗之动态 DR 在髋关节置换术中的临床应用探讨

刘海潮,丁继良
娄底市中心医院

背景：

长期以来放射科应用传统拍片并不能有效解决重叠部位的清晰显影，容易造成漏诊误诊，并且受制于成像视野的大小，不能有效显示脊柱四肢全长的整体结构及病变。动态 DR 的出现，较好的弥补了传统拍片的不足，而且初步实现了影像诊断设备向精准诊断方向的转变。动态 DR 具有多功能、全视角、卓越的图像质量，它拥有可视化操作及大幅面成像、全像素高清点片、视频保存及回放功能、全身拼接功能。本研究采用安健动态 DR 全景拼接技术拍摄双下肢负重位全长片，探讨其在髋关节置换术中的临床应用价值。

摄影体位及检查方法：

患者直立于摄影架上，后背贴近摄影架，双手自然下垂，膝关节尽量伸直，足部与双肩同宽，并内旋 15° 左右，使腓骨小头与胫骨重叠接近三分之一，髌骨垂直指向正前方。将标尺贴于患侧髋关节处，嘱患者保持姿势不动，以双髋关节股骨头连线的中点为入射点，曝光一次，得到双髋正位影像；然后向下移动立柱探测器（X 线球管与探测器呈联动状态），中心线对准两腘窝连线中点下缘，水平投照，得到双膝正位影像；再次向下移动立柱探测器，中心线对准两侧外踝连线中点，水平投照，得到双踝正位影像。

结果

30 例患者行双下肢全长拼接摄影，影像拼接成功 30 例，拼接成功率 100%，下肢全长片均由副高以上职称的放射诊断医生及技师和一位临床骨科主治医生共同阅片、分析，均认为图像质量满意，投照技术符合临床要求，图像能满足诊断及治疗要求。

结论：

动态 DR 双下肢全长站立负重位片投照技术操作相对简便，在实际工作中注意操作要点，不断积累经验，通过调节合适的图像对比，进行无缝拼接，便能得到良好的双下肢全景片，可为临床髋关节置换术提供满意的术前诊断及相关力线测量参考，并为术后评估提供了重要依据。

PU-3005
多层螺旋 CT 对极外型腰椎间盘突出症的诊断价值 及微创介入治疗的相关性探讨

王世平
云南昆钢医院

目的：探讨极外型腰椎间盘突出在多层螺旋 CT 扫描及多平面重建的影像学特征，提高极外型腰椎间盘突出的诊断率及临床价值。**方法与材料：**本文收集 2016 年 1 月至 2019 年 6 月经我院疼痛科临床手术确诊极外型腰椎间盘突出症患者 336 例，回顾性分析层螺旋 CT 扫描及多平面重建方法及影像学特征，336 例极外型腰椎间盘突出均使用多层螺旋 CT 扫描。（1）根据极外型腰椎间突出的部位及突出范围并进行三维重建；（2）评估极外型腰椎间盘突出物与受压神经根部位的关联性；（3）极外型腰椎间盘突出物影像学描述；（4）影像诊断医师根据诊断结果，追踪患者手术是否与诊断结果相符合；（5)本组病例均有 MRI 扫描影像对比分析。**结果：**回顾本组病例，336 例极外型腰椎间盘突出症。其中（1）椎间孔型极外型腰间盘突出 59 例；（2）椎间孔外型（远外侧型）腰间盘突出 213 例；（3）混和型外型腰椎间盘突出 64 例。多层螺旋 CT 扫描及后处理重建清楚显示极外型腰椎间盘突出的部位、范围、边缘；目前尚无文献对极外型椎间盘进行描述，本文 CT 及 MRI 影像学表现分为：椎间孔淹埋型、纺锤型、类园型、不规则型、水滴型（上迁移型）、神经节嵌压型（特殊型）。本分型对临床症状的分析及手术方案制定具有重要的指导作用。MRI 扫描能显示极外型腰椎间盘突出的部位，范围不确定、边缘分界不清的病例 46 例，占本组病例 13.8.4%。**结论：**多层螺旋 CT 扫描及后处理重建能准确诊断极外型腰椎间盘突出，在对椎间盘突出显示的部位、范围、边缘优于 MRI 图像，神经根与突出物的比邻 MRI 优于多层螺旋 CT。多层螺旋 CT 扫描及后处理重建对极外型腰椎间盘微创手术治疗方案及手术入路具有重要的临床指导价值。

多回波弥散成像在化疗后骨髓抑制鉴别诊断中的应用价值

孙文博,徐耽,邓明,阮兆,徐海波
武汉大学中南医院

目的：探讨磁共振多回波弥散成像技术在恶性肿瘤化学治疗后骨髓抑制【1】的鉴别诊断中的作用。
方法：将试验对象分为骨髓抑制组和对照组。在西门子 3.0T Prsima 磁共振上，使用多回波扩散加权成像（Multi-TE DWI)技术【2，3】，3D T2 SPACE 成像技术，3D T1 VIBE 成像技术， b 值选择（0，100，200，500，1000s/mm^2)，TE 时间选择 60ms，70ms，80ms，90ms，100ms，120ms。图像配准和运动校正后，使用单指数模型，比较不同 TE 时间下的 b 值拟合信号曲线，以及拟合出的 T2 Map 值的差异，3D T1/T2 加权信号差异。在 MRICRON 行感兴趣分析，感兴趣位置选择 L3~L5 椎体和髂骨，以及脑脊液。同时对不同 TE 时间下的 b 值的拟合信号曲线进行分析，得到信号拟合斜率 K 与回波时间 TE 的比值，作为特征参数。
结果：骨髓抑制组和对照组在椎体和髂骨 T2 map 值、K/TE 比值存在差异，其敏感度要优于 T1/T2 加权成像。
结论：多回波弥散成像技术可以帮助鉴别骨髓抑制，其特征参数敏感性要优于传统 T1 或 T2 加权成像。该研究同时表明选择合适的弥散成像的 TE 时间有助于恶性肿瘤化疗后骨髓抑制的鉴别诊断。该多回波技术同样可以用于其它骨骼肌肉疾病的定量分析。

PU-3007
膝关节软骨损伤：常规 MRI 成像方案加扫 3D-WATS 序列对分级诊断的价值

赵闽宁,梁文,丘清,卢炜荣
南方医科大学珠江医院

目的：探究常规 MRI 成像方案中加扫 3D-WATS 序列对膝关节损伤分级诊断的价值。
材料与方法：搜集因膝关节疼痛及运动受限入院治疗的患者 20 例，其中男性 1 例，女性 19 例；年龄 59-77 岁，平均 68.45 岁。所有患者均先进行膝关节 3.0T MRI 膝关节平扫，包括常规序列（矢状位 T1WI，矢状位、冠状位、横断位 PDW_SPAIR）及三维扰相脂肪抑制梯度回波序列（3D-WATS）。将膝关节软骨的 4 个区域作为感兴趣区，分别为内髁远端、外髁远端、后髁内侧及后髁外侧。磁共振检查后一周内行全膝关节置换术，术前与手术医生共同阅片确定各感兴趣区损伤最严重部位，并于术后获取病理标本。影像科诊断医生分别使用常规序列成像方案及常规序列+3D 序列成像方案根据 Recht 标准对各感兴趣区的软骨损伤进行分级。
结果：20 例患者中 5 例损伤过于严重，未能留取全部病理标本，最后共获得 15 例患者的 60 个病理标本。病理 Collins 分级：1 级 1 例，2 级 10 例，3 级 43 例，4 级 6 例。MRI 常规序列方案分级：1 级 1 例，2 级 13 例，3 级 41 例，4 级 5 例。MRI 常规序列+3D 序列成像方案分级：1 级 1 例，2 级 9 例，3 级 44 例，4 级 5 例。MRI 常规方案分级与病理 Collins 评分的一致性系数 Kappa=0.642（P＜0.001），诊断符合率为 83.3%（50/60）。MRI 常规序列+3D 序列方案与病理 Collins 评分的一致性系数 kappa=0.845（P＜0.001），诊断符合率为 93.3%（56/60）。常规序列+3D-WATS 序列成像方案的分级诊断结果与病理分级之间的一致性高于常规序列成像方案（0.845＞0.642），诊断符合率优于常规序列成像方案（93.3%＞83.3%）。
结论：3.0T MRI 常规序列加扫 3D-WATS 序列成像方案在膝关节软骨损伤的分级诊断的一致性及符合率方面明显优于常规成像方案，具有重要的临床价值。

PU-3008
双能量 CT 骨髓水肿成像在脊柱转移瘤中临床应用

徐驰杰[1],崔磊[2],邓小毅[1]
1.张家港澳洋医院
2.南通大学附属第二医院

目的 本研究旨在探讨双能量 CT 骨髓水肿对脊柱转移瘤的诊断准确性及其临床应用价值。
方法 收集我院 32 名脊柱转移瘤患者的双能量 CT、MRI 图像。以 MRI 为“金标准”，由两名放射科医生对图像进行主观评价分析，比较双能量骨髓水肿成像、常规 CT 图像对脊柱转移瘤的诊断准确性。测量转移椎体与相邻正常椎体虚拟去钙化成像及常规 CT 定量值，两者进行比较，通过 ROC 曲线评价其对脊柱转移瘤的诊断效能。
结果 共纳入分析 215 个转移椎体。在双能量 CT 骨髓水肿、常规图像上，两观察者主观评估的一致性均较高（Kappa 值：0.885vs0.866），诊断准确性明显高于常规 CT（89.9%vs82.8%、90.1%vs83.8%）。在溶骨型转移瘤中，虚拟去钙化成像 CT 定量值要高于相邻正常椎体，存在统计学差异（*P*=0.024），常规 CT 定量值与相邻正常椎体定量 CT 值无明显统计学差异（*P*=0.065）。溶骨型转移瘤 AUC 值大于常规 CT（0.65vs0.53）。

结论 双能量 CT 骨髓水肿成像能提高脊柱转移瘤诊断准确性。其中溶骨型转移瘤在双能量 CT 骨髓水肿成像定量值要高于邻近正常椎体。

II-IV 期股骨头坏死软骨 T2 值比较及其与 Harris 评分的关系

史珊,杨学东,孙黎,洪洋 ,方继良,曹久东,张国雷,张磊,薛超,句思萌
中国中医科学院广安门医院

目的 探讨 II-IV 期股骨头坏死关节软骨 T2 值差异及其与 Harris 评分间的关系。
方法 对 20 例 II-IV 期股骨头坏死患行 T2mapping 成像检查，通过 Siemens 后处理工作站计算定量参数 T2 值。比较不同国际骨循环研究会（ARCO）分期患者的 T2 值，并分析 T2 值与 Harris 评分间的关系。
结果 正常对照、Ⅱ期、Ⅲ期、IV 期患者两两比较 T2 值差异均无统计学意义（ P＞0.05）。T2 值与 Harris 评分无相关性。
结论 II、III、IV 期股骨头坏死关节软骨 T2 值改变不明显，与 Harris 评分无相关性，临床意义不大。

PU-3010
Research on the uric acid depositing in tophaceous gout around the knee using gemstone spectral computed tomograph

Xiaohu Li,Mengling Tong,Jian Song,Bin Liu
The First Affiliated Hospital of Anhui Medical University

PURPOSE
To investigate features of uric acid salt's deposition in joint of knee in gout using gemstone spectral computed tomography (CT) , and measure series spectrum parameters of uric acid salt to assess its clinical value

METHOD AND MATERIALS
Gemstone spectral CT scans of knee were performed on 46 patients with gout.Then we investigate the features of uric acid salt's deposition, analyze series spectrum parameters of uric acid salt and with cortical bone, muscle, cancellous bone around,include effective atomic number(Eff-Z),spectrum curve slope,),comparison between four tissue groups use Kruskal Wallis H test (P < 0.05), pairwise comparisone use the Mann-Whitney U test. And calculated CNR of deposition urate,and statistics

optimal CNR to get the optimal single energy keV, use chi-square test to test the difference significance(P<0.05).

RESULTS

The deposition of uric acid salt was found in all patients ,which distributes in 271 areas.The most common affected sites were collateral ligaments(98/271, 36.09%),cruciate ligament(37/271,13.70%),quadriceps tendon(23/271,8.49%) successively. The possibility of deposite in other site of knee articular is lower. 2. The effective atomic number (Eff-Z)of uric acid salt is 8.12±0.29, The Eff-Z of cortical bone is 13.27±0.48, The Eff-Z of muscle is 7.71±0.15, The Eff-Z of cancellous bone is 9.16±0.62, which were significantly different with cortical bone, muscle, cancellous bone around. The number of optimal CNR appear in single energy of 65keV gets to 138 of all 217 deposited uric acid salt . By chi-square test ,the difference of probability appear in 65keV with others single energy was statistically significant. 6. In one follow-up Patient,we found the deposited uric acid salt in leading edge of tibial plateau was disappeared,UA(ca) of uric acid salt decrese mostly.

CONCLUSION

The uric acid salt deposited more in ligaments and tendons of knee where stresses more, so we guess that the deposition of uric acid salt may be in proportion to stress. 2.The GSI parameter analysis [Eff-Z ,spectrum curve slope, the optimal single energy ,UA(ca) and CA(ua) and UA(ca)/CA(ua)] can help the correct qualitative diagnosis of uric acid salt, UA(ca)/CA(ua) may be more sensitive to detect the change of uric acid

PU-3011

256-row Dual-energy CT－based Hydroxyapatite-Fat separation technique in Bone Mineral Density Measurement

Iqian L,Ping Li,Kun Zhang
Department of Radiology, First Affiliated Hospital of Hunan University of Chinese Medicine

Purpose： To evaluate the feasibility of 256-row Dual-energy CT-based Hydroxyapatite(HAP)-Fat separation technique in Bone Mineral Density Measurement in comparison with quantitative computed tomography (QCT).

Methods： We retrospectively analyzed 128 healthy adults who underwent dual-energy CT(DECT) and QCT scans of the lumbar spine in our hospital.The region of interest (ROI) was delineated by cancellous bone at the middle level of L1-L5 lumbar spine HAP (Fat) ,density of lumbar spine was measured by dual-energy CT material separation technique, and BMD of vertebral body was measured by QCT. The HAP (FAT) density of lumbar spine and BMD derived from QCT were analyzed by paired t test and linear

regression in direct method and regression method.The linear regression models were quantitatively evaluated by adjusted R-square and relative error (RE),.
Results：In the direct method,there was significant difference between the density of HAP (FAT) derived from DECT and the BMD derived from QCT(P < 0.01),,RE =29.76%.In the regression method, there was no significant difference between the density of HAP (FAT) derived from DECT and the BMD derived from QCT.There was a significant linear positive correlation between HAP (Fat) density derived from DECT and BMD derived from QCT .The regression equation is Y(BMD)=1.226×HAP(FAT)-58.228(r^2=0.980,RE=1.50%,P＜0.05)..
Conclusion：The Bone Mineral Density of lumbar spine can be measured quantitatively by Dual-energy CT HAP (Fat) separation technique.

PU-3012

Comparison Between High-Resolution Isotropic Three-Dimensional Cube FS PD and Conventional Two-Dimensional FS PD MR Images of the TFCC at 3 Tesla

Yanmei Qi,Sheng Zhou,Xiaofei Chen
Gansu Provincial Hospital of TCM

Purpose: To compare a newly developed high-resolution isotropic three-Dimensiona(3D) Cube FS PD sequence with conventional high-resolution2D FS PD sequence in assessing TFCC of the wrist in term of image quality and diagnostic performance.
Materials and Methods: 12 volunteers were enrolled in the study with an average age 22.4 years (range 22-27 years). All the sequences were carried out on all volunteers at 3.0T MR scanner (Signa HDxt, GE Healthcare, Milwaukee, WI) and a Wrist Array coil. Each imaging was performed with 2D PD FS (coronal,axial and sagittal:TR=2900ms,
,TE=32.0ms,Matrix=320×256, FOV=10×7cm2, Slicethickness =2.0mm,gap=0.3mm,NEX=2,acquisition,time=99s)and 3D isotropic PD FS (coronal:TR=1400ms, TE=36.4,Matrix=256×256, FOV=10×9cm2, Slicethickness=0.4mm, gap=0.2mm, NEX=0.5, acquisition time=279s).Delineation of anatomic structures of the wrist, amount of artifact, effect of fat suppression, image blur, and overall quality were qualitatively evaluated using the 5-point scoring system (5: excellent, 4: good,3: satisfactory, 2: poor, and 1: nonidentified.Signal-to-noise-ratios (SNR) of each structure and contrast-to-noise ratios(CNR)between structures of the TFCC were quantitatively measured using vendor supplied software (AW4.6work station, GE).
Results: The 2D MRI demonstrated higher scores than 3D in anatomic structure of the SL ligament(P=0.043), the LT
ligament(P=0.022),cartilage(P=0.043),artifact(p=0.007)and image blur(p=0.015).However,there were no statistical significance between 2D and 3D MRI in disc and overall quality. Higher SNR values were found for in the 2D sequence (6.32±3.32)than the 3D(4.20±1.66),The corresponding CNR values were(4.87±3.10) for the 2D and(3.45±1.97) for the 3D.To better control for voxel size, we also measured the SNR and CNR values in the reconstructed 2-mm images from original 3D isotropic images and obtained similar values as in the 2D (5.86±3.05 and

3.01±0.86, respectively), indicating that reconstruction with larger slice thickness improved SNR and CNR.
Conclusion: Although,Isotropic 3D Cube FS PD sequence may enhance standard wrist MRI by increased visualization of multiplanar and post processing capabilities, however,the 3D Cube image quality was lower.

PU-3013
应用 MR T2 mapping 序列对肾衰患者膝关节软骨损伤的研究

郑穗生
合肥平安健康检测中心

目的 测量肾衰组及尿毒症组患者膝关节和正常对照组关节软骨 T_2弛豫时间并比较差异性，评价磁共振 T_2 mapping 成像在肾衰患者膝关节软骨损伤中的应用价值。**材料与方法** 采用西门子 3.0T 磁共振，选取正常组 20 个膝关节，肾衰组 21 个膝关节，尿毒症组 20 个膝关节；应用 T_2 mapping 序列观察和测量正常组（20 例）和肾衰组（21 例）及尿毒症组（20 例）髌软骨、股骨内侧髁、外侧髁、胫骨内侧平台、外侧平台 5 处关节软骨的 T_2值，并进行统计学分析。**结果** 肾衰组及尿毒症组 T_2值均高于正常组；正常组对比肾衰组以及尿毒症组软骨 T_2值差异具有统计学意义（P<0.05）；肾衰组与尿毒症组关节软骨 T_2值差异不具有统计学意义（P>0.05）；**结论** T_2 mapping 成像可以早期发现膝关节软骨内组织成分的变化，进而评价软骨的损伤，对肾衰患者膝关节软骨损伤的诊断和监测具有一定的临床应用价值；肾衰患者存在膝关节软骨的损伤。

PU-3014
The value of improving artifacts by using WARP sequences in assessing image quality after internal fixation implants

Bocheng Wang,Can Wang,Yi Dou,Hai-sheng Liang,Qi-lin Xu,Li-zhong Wu
the 9th hospital affiliated to Shanghai Jiao Tong University School of Medicine

Purpose: the aim of this article is to evaluate the value of improving artifacts by using WARP sequences in assessing image quality after internal fixation implants.
Methods: Analyze total 24 subjects image scores which scanned by using WARP sequences and normal TSE sequences after internal fixation implants operation. Compare the difference between two type sequences about SNR, image scores, scanning time. All data were processed by SPSS 23.0 software edition and checked for statistical significance.
Results: The image scores of WARP sequences were higher than normal TES sequences(P<0.01) as well as the same SNR in these two groups(P>0.01) even if it expended much time(P<0.01).
Conclusion: WARP sequences could help to improved image quality with lower artifacts influence in patients suffered internal fixation implants.

四关节置换术前模拟下肢拼接 DR 投照体会

李学江
河南省滑县骨科医院

摘要

目的：下肢全长拼接术前投照诊断意义

方法：选择悬吊数字化 X 线 DR，站立位投照双下肢。

结果：2017 年 5 月我院迎来一位 67 多岁老年患者，该患者双侧髋关节、膝关节严重骨性关节炎，导致双髋、双膝关节严重畸形改变，常年卧床，已丧失基本生活能力，由于长期卧床关节强直活动度不强，初步考虑患者有骨质疏松，临床医生要求关节置换站立位检查，给我们的检查带来了一定困难。结合老人实际病情，组织我科相关人员在数字化 XH-DR2000 型 DR 机上经行投照前模拟位置摆放、曝光条件的设定、站立时间的计算等，有我们的年资高医生为年轻医生进行实地讲解的患者情况，并科内进行讨论，双下肢全长拼接方法：需要患者站立位投照，分阶段经行曝光，显示合理图像，然后经行软件后处理拼接，对图像经行长轴、立线、角度等测量，观察双侧关节间隙对应情况等。我科的医生都谈到患者不能站立时间过长，而且站立的稳定性不好，患者长期不能正常活动，也会骨质疏松，肌肉力量不均匀，投照时还会出现运动性伪影，给拼接后处理带来一定困难，运动伪影会出现影像学假象，也会给临床诊断带来错觉，拼接检查时间过长，考虑到患者不能站立时间过长，我们的医生都说出了自己的个人看法和日常工作中的经验，结合模拟情况分析。

结论：为了保证图像质量，确定分 4 阶段曝光，并选择高该患者 10 岁年龄的曝光条件，使用 125mA、高 KV、短 mS 经行曝光，最后在患者坚强意志的配合下，我科医生的努力下一次性为患者投照完毕，并拼接出优质的图像，为临床的治疗提供了第一手影像学资料。

PU-3016

胫骨远端骨折继发腓骨近端骨折 30 例全长投照的价值

李宏征
河南省滑县骨科医院

摘要

目的：X 线平片全长投照对诊断胫骨远端骨折继发腓骨近端骨折价值。

方法：选择 X 线平片（踝关节正侧位、胫腓骨（全长）正侧位）进行检查。

结果：患者主因，踝关节车祸及其他外伤后，查体踝关节软组织肿胀、畸形改变，行 X 线检查示：踝关节正侧位，片示胫骨远端骨折，住院或门诊保守治疗，石膏外固定或切开手术内固定，治疗后患者自感膝关节外侧不适，行 X 线检查示：膝关节正侧位或胫腓骨全长正侧位，片示胫骨远端骨折及腓骨近端骨折（折端移位和无移位），腓骨头骨折 13 例，腓骨近端 17 例，成人 25 例，儿童 5 例，男 26 例，女 4 例，部分患者神经损伤。

结论：漏查会致使患者满意，部分患者投诉或引发医疗纠纷，部分对位好的患者可以理解，但也对当时没有检查发现对医生不太满意。为了减少诊疗过程中，避免投诉和纠纷，胫骨远端骨折患者检查时，建议患者初诊时胫腓骨全长投照，在诊疗过程中检查是否神经损伤。以免给患者带来没必要的伤害。

腕关节碟式位加食指屈曲位投照对诊断腕舟骨病变的价值

李宏征
河南省滑县骨科医院

摘要
目的：X 线平片诊断腕舟疾病的价值。
方法：选择数字化 X 线摄影（DR），腕关节正侧位、碟式位、食指屈曲位进行检查，摄影方法为：患者坐于摄影床前，做好辐射防护工作，自然曲肘，掌心向下，手掌尽量向尺侧偏移、加食指屈曲位放置，摄影距离为 90cm，中心线向肘侧倾斜 20 度角，对准尺骨、桡骨茎突连线中心摄入。
结果：常规腕舟骨损伤，普通 X 线检查方位为正侧位、碟式位为主，选择常规碟式位 20 例，碟式位加食指屈曲位 20 例对比发现，腕舟骨的重叠影更少，显示更清晰，更有利于腕舟骨骨折和疾病的诊断。
结论：腕关节损伤考虑腕舟骨骨折首选 DR 检查，除常规检查追加特殊位，更有利于腕舟骨骨折、骨质疾病的诊断。随着医学设备的先进化、科学化，按照资料查询，坚持能简单不复杂是我们的宗旨，不过度利用大型设备检查，减轻患者负担、节省资源浪费、诊断清楚为目的。

Comparative analysis of three sequence in Three-dimensional meniscus model reconstruction in 3.0 T MRI

Haiyan Li,Xiaowen Ma,Xiaobin Song
Department of MR， Hong Hui Hospital， Xi’an Jiaotong University

Abstract:
Objective To compare and analysis the clinical value of (SE) T1WI, (TSE) T2WI and (FS-PDWI) sequences in Three-dimensional meniscus model reconstruction.
Methods
Thirty normal knee joints meniscus were scanned using 3.0T MRI at the same scan conditions. MRI was performed by SIEMENS AG, Germany MAGNETOM Verio 3.0T. The knee joint was coiled with special coils. The legs were straightened naturally. The knee joint was fixed with sponge pads on both sides. Scanning range is from the outside to the inside of the knee joint, and all patients are positioned and examined by the same scanner. Three scanning parameters were set: T1WI (group A): TR440ms, TE 13ms; T2WI (group B): TR4000ms, TE 68ms; FS-PDWI (group C): TR3000ms, TE26ms; the other parameters of the three groups were consistent, the thickness of the three groups was 1.1mm, the spacing of the layers was 0mm, the pixels were 384*348, the field of vision was 180*180mm, the number of excitations was 1, and the sagittal MR images were stored in DICOM 3.0 standard format in the electronic computer.Images data of DICOM 3.0 format of three modalities including A. (T1WI) B. (T2WI) C. (FS-PDWI) were obtained. The images data were imported and view images were processed by using Mimics 16.0 software to reconstruct three-dimensional menisci model. The width and height of the anterior and posterior angles of the meniscus were measured at the sagittal plane, and the anterior cruciate ligament attachment of the intercondylar spine was measured at the coronal plane. All measurements were performed independently by two radiologists. Mean diameters were included in the statistical analysis. The interval between the

meniscus of the 3D model and the original two-dimensional image was one week.The height and width of anter,mid-body and posterior horn of medial and lateral menisci between 3D model and original 2D image were compared. The objective image quality of subjective image quality between three groups were compared. The image quality of 3D meniscus model was compared with that of arthroscopic meniscus model by two experienced radiologists and sports injury physicians, and the subjective score was 5 points.SPSS19.0 software was used for further statistical analysis.
Results
The image quality scores were for group A4.52±0.31, for group B3.98±0.24 ,and for group C4.10±0.46 ,the $\chi 2$ value were 8.86 for group A vs group B(P＜0.05) ,4.38 for group A vs group C (P＜0.05)and 0.26 for group B vs group C(P＞0.05). The width and height of the anterior and posterior angles of the inner and outer meniscus and the height of the inner and outer meniscus are slightly smaller than those of the original two-dimensional images, while the width of the inner and outer meniscus is slightly larger than that of the original two-dimensional images.There was no statistic difference in the mean value of the height and width of anter,mid-body and posterior horn of medial and lateral menisci between 3D model and original 2D image(P＞0.05).
Conclusion MRI T1WI sequence is the advantage sequence for reconstructing three-dimensional menisci model.The model can clearly and precisely simulate three-dimensional geometrical morphology of meniscus to lay foundation for accurate analysis of meniscus before operation and provide 3D model for meniscus biological printing technology.

PU-3019
第三代双源 CT 低管电压联合高级迭代重建技术在髋关节 CT 检查中的应用研究

崔学龙,李文航
贵州省人民医院

[摘要]目的：探讨第三代双源 CT 低管电压联合高级迭代重建（ADMIRE）技术在髋关节 CT 成像检查中的辐射剂量和对图像质量的影响。
方法：前瞻性收集临床拟诊髋关节病变行髋关节 CT 检查患者 60 例,体质指数为 18kg/m^2<BMI≤24kg/m^2,随机分为 2 组，各 30 例；使用第三代双源 Force CT 进行扫描；A 组：固定管电压为 120kV，开启 CARE DOSE4D 采用 FBP（滤波反投影法）重建;B 组:固定管电压 90kV，开启 CARE DOSE4D，使用 ADMIRE strength 3 级重建得。比较 2 组图像的在同一解剖层面的图像平均 CT 值、噪声值 SD 值和信噪比（SNR），对比噪声比（CNR），记录容积 CT 剂量指数(CTDIvol)、剂量长度乘积（DLP）,并计算有效剂量（ED）；由 2 位高年资的骨关节系统诊断医师分别对两组图像进行图像质量主观评分。
结果:A、B 两组描方案图像的有效辐射剂量，B 组(0.56±0.17)mSv 较 A 组(1.47±0.41)mSv 减少约 62%，差异有统计学意义（P<0.05）；与 A 组相比 B 组图像的噪声、SNR 相比较差异无统计学意义（P＞0.05）；CNR 比较差异有统计学意义（P<0.05）。两组图像质量的主观评分比较，差异无统计学意义(P>0.05)。
结论：低管电压联合 ADMIRE 重建技术可在髋关节 CT 的检查中保证图像质量同时有效降低辐射剂量，值得被推广。

能谱 CT 单能量成像技术在去金属伪影中的临床应用

苏大军,江广斌
湖北医药学院附属随州医院（随州市中心医院）

摘要　　目的：探讨能谱 CT 单能量成像技术在去金属伪影中的应用价值。方法：选取我院 2018 年 1 月-2018 年 12 月体内含金属物的 50 名患者行能谱 CT 检查，并采用单能量成像进行图像重建，其中单能量成像重建时能量间隔为 10KeV，范围 40-140KeV，共计获得 11 组图像，并测量每组图像感兴趣区的 CT 值和 SD 值。结果：110KeV 能量时图像最优，噪声最小，与其他 10 组图像有明显统计学差异（P>0.05）。结论：能谱 CT 单能量成像技术能有效减少金属伪影，其中以 110KeV 进行能量成像时伪影最小，提高了图像分辨率，具有十分重要的临床意义。

骨髓脂肪含量与 MR 定量测量技术研究进展

雷力行
川北医学院附属医院

骨髓脂肪含量与骨质的丢失、癌症的骨转移以及放化疗后骨髓损伤等有着密切关系，因此对骨髓脂肪含量的定量测量有较重要的临床价值。MR 具有无创伤、无辐射、良好的软组织对比已成为共识。本文通过对目前 MR 多种定量测量技术的汇总分析，为临床医生对骨髓脂肪含量检查的选择提供便利。

不同黏度骨水泥治疗骨质疏松性椎体压缩性骨折疗效比较

王凯,陆玉和
滁州市第一人民医院

【摘要】目的：探讨不同黏度骨水泥治疗骨质疏松性压缩性骨折的临床疗效，为骨质疏松性压缩性骨折治疗提供依据。**方法：**选择 2016 年 1 月~2018 年 6 月我院收治的骨质疏松性压缩性骨折患者 90 例，按照数字随机表法分为高黏度组 42 例和低黏度组 48 例，分别采用高黏度骨水泥经皮椎体后凸成形术和低黏度骨水泥经皮椎体后凸成形术治疗。比较两组单个椎体手术时间、骨水泥注入量、骨水泥渗漏发生情况。所有患者术后随访 3 个月，比较两组术前、术后 3 个月疼痛数字评分量表（NRS）、Oswestry 功能评分、椎体高度和 Cobb 角变化。**结果：**高黏度组单个椎体手术时间少于低黏度组（*P*<0.05），两组骨水泥注入量、骨水泥弥散体积比较无统计学差异（*P*>0.05）。高黏度组骨水泥总渗漏率显著低于低黏度组，两组数据比较有统计学差异（*P*<0.05）。两组患者术前 NRS 评分、ODI 评分、椎体中间高度和 Cobb 角比较差异无统计学意义（*P*>0.05）；术后 3 个月两组 NRS 评分、ODI 评分和 Cobb 角较术前比较显著降低，椎体中间高度显著升高，高黏度组 NRS 评分、ODI 评分和 Cobb 角显著低于低黏度组，椎体中间高度显著高于低黏度组（*P*<0.05）。**结论：**高黏度骨水泥经皮椎体后凸成形术单个椎体手术时间较低黏度骨水泥经皮椎体后凸成形术少，总渗漏率

更低，高黏度骨水泥经皮椎体后凸成形术后椎体高度恢复更好，患者脊柱畸形矫正、脊柱功能恢复更佳，疼痛也显著降低，适于临床推广。

PU-3023

脊椎多房棘球蚴病的影像学诊断

蒲鹏
阿坝藏族羌族自治州人民医院

目的 分析脊椎多房棘球蚴病的 CT 和 MRI 影像特征及诊断价值，以提高对该病的诊断和鉴别诊断能力。**方法** 回顾性分析经临床诊断或手术病理证实的 13 例脊椎多房棘球蚴病的临床和影像资料，其中 13 例行 CT 扫描，8 例 MRI 检查。 **结果** 13 例脊椎多房棘球蚴病中，1 例单椎体和 12 例相邻多椎体破坏，共 34 个椎体受累。CT 扫描 26 个（76.5%）椎体表现为簇状或弥漫的蜂窝状、囊样和斑片样溶骨性骨质破坏。18 个（52.9%）椎体破坏周围伴骨质硬化，19 个（55.9%）可见结节、砂粒样钙化或死骨形成。21 个（61.8%）椎体附件受累，20 个（58.8%）骨性终板局限性骨质破坏，13 个（38.2%）椎间盘破坏，12 个（35.2%）椎间隙变窄、消失。压脂 T_2WI 椎体及附件小囊泡检出率为 62.5%（5/8 例），软组织多房棘球蚴病小囊泡检出率 87.5%。 **结论** 脊椎多房棘球蚴病的 CT 和 MRI 影像表现具有一定特征性，综合分析更有利于准确诊断。

PU-3024

在正位定位像下，颈胸段 CT 扫描体位对图像质量的影响

董晓征
北京大学第三医院

目的：
探讨双源 CT 不同体位对颈胸段 CT 扫描图像质量的影响及辐射剂量。
材料与方法：
连续收集在我院行颈胸段 CT 扫描的非术后成年患者 120 名。将患者随机分为 A、B 两组（每组 60 人）。记录每组病人的性别、年龄、体重指数。A 组病人头部垫高，收紧下颌，使椎体尽可能与床面平行，并通过正位定位像进行螺旋扫描；B 组病人头部后仰，使下颌骨尽可能与床面垂直，并通过正位定位像进行螺旋扫描。
设备：Siemens Somatom Definition 双源 CT；开启 CARE Dose 4D 技术，扫描范围：C4—T6。
图像客观评价：记录并比较每次扫描的剂量长度乘积（DLP）。在第一胸椎体（T1）上缘层面选取 ROI 及同层面空气选取 ROI，以其 SD 值（$SD_{空气}$）作为图像噪声（N），测量两侧斜方肌的 CT 值并取其平均值（$CT_{斜方肌}$），计算并记录对比噪声比（CNR），信噪比（SNR）。
图像主观评价：两位经验丰富的放射科医师评估图像质量的主观评价，以评估基于 3 点评分系统的硬化伪影和诊断可接受性。评分标准：1 分为差，线束硬化严重，椎体边缘显示不清，无法用于诊断；2 分为良，线束硬化伪影较轻，椎体边缘大部分显示清晰，可用于诊断，但是准确性可能受影响；3 分为优，线束硬化伪影基本没有，椎体显示清晰，对诊断无影响.
统计学方法：对两组数据采用 SPSS 23.0 软件包进行分析，统计方法包括单因素方差分析及独立样本 T 检验，$P<0.05$ 认为差异有统计学意义。
结果：以上所有图像均满足诊断，A、B 两组性别，年龄，BMI,信噪比（SNR）,对比噪声比（CNR）均 $P>0.05$，差异没有统计学意义；A、B 两组 DLP，$P<0.05$ 差异有统计学意义。

结论：西门子二代双源 CT，开启 CARE Dose 4D 技术，采用正为定位像扫描颈胸段 CT 时，病人头部后仰，使下颌骨尽可能与床面垂直，既可以保证优秀的图像质量，还可以降低病人辐射剂量约 20%，建议临床推广。

PU-3025

QCT 检查在体检中的应用价值的探讨

范羽
合肥平安健康检测中心

摘要：目的 中老年体检人群中行胸部低剂量扫描同时应用 QCT 测其腰椎骨密度,通过分析体检者是否为骨质疏松患者及椎体压缩性骨折的发生率，达到提早预防及治疗的目的.**方法** 对 200 名中老年体检者行胸部低剂量，应用 QCT 对 L1、L2 分析,测量出腰椎骨密度, 通过软件比对同龄同性别健康对照组的年龄骨密度曲线及椎体压缩性骨折概率图，健康管理师给出适合该体检者最佳治疗方案，并定期随访。**结果** 骨质疏松检出 78 例,低骨量检出 99 例,正常骨密度 43 例，健康管理师对低骨量和骨质疏松客户制定详细的治疗方案，半年后复查，123 人骨量减低情况好转。**结论**：QCT 能够测量体积骨密度，对骨量变化有很高的灵敏度，且椎体是骨质疏松最先累及的部位，不受血管、钙化及椎体附件影响，所以应用 QCT 测量椎体可更早期测量体检人员骨量丢失情况，对骨折危险性进行较准确的预测,而且不受患者身高、骨退行性变及体重等的影响,可体检人群中低剂量胸部扫描的同时应用 QCT 测量骨密度，既简单快捷又适合在体检中大量运用，精准判断体检人群骨质疏松及椎体压缩性骨折的发生率，达到真正体检“早期预防”及“早期治疗”的目的。

影像检查对成人股骨头缺血性坏死的诊断体会

田黎明,陈胜良,王大江,谭一静,吕昌禄
遵义市余庆县人民医院

目的：进一步提高影像学检查对成人股骨头缺血性坏死诊断的认识，利于患者早期诊疗和康复。**方法**：选取我院 2015.01-2019.01 的 20 例股骨头缺血性坏死的患者，进行 DR、CT 及 MRI 影像检查对比分析。**结果**：DR 检查阳性率为 60%,CT 检查阳性率为 71.43%,MR 检查阳性率为 100%，三者间差异有统计学意义（P＜0.05）。**结论**：MRI 检查是早期股骨头缺血性坏死最好的检查诊断方法，为临床制定早期股骨头缺血性坏死治疗方案提供充分的影像学依据，值得临床推广应用。

PU-3027

双能 X 线骨密度测量仪在赣南地区人群骨密度异常中的应用价值

温延斌
赣州启明星眼科医院

摘要：目的：探讨双能 X 线骨密度测量仪在赣南地区人群骨密度异常中的应用价值。 **方法：**回顾性分析 1372 例赣南地区人群骨密度测量结果，并对其数据进行分析。**结果：**青年组男性股骨颈骨量减少和骨质疏松患病率分别为 31%和 0%，Ward 三角分别为 43%和 3%，腰 1～4 椎体分别为 14%和 2%；青年组女性股骨颈分别为 26%和 1%，Ward 三角分别为 42%和 2%，腰 1～4 椎体分别为 17%和

0%；中年组男性股骨颈分别为 40%和 1%，Ward 三角分别为 65%和 5%，腰 1～4 椎体分别为 19%和 3%；中年组女性股骨颈分别为 41%和 2%，Ward 三角分别为 52%和 10%，腰 1～4 椎体分别为 23%和 13%；老年组男性股骨颈分别为 54%和 23%，Ward 三角分别为 52%和 39%，腰 1～4 椎体分别为 41%和 30%；老年组女性股骨颈分别为 58%和 7%，Ward 三角分别为 57%和 27%，腰 1～4 椎体分别为 18%和 5%。**结论：**双能 X 线骨密度测量仪对诊断骨密度异常有重要价值，且 Ward 三角对骨密度异常变化敏感性高，骨量减少和骨质疏松患病率随年龄增长而递增。

PU-3028

血友病性假肿瘤影像分析并文献复习

苏莲子
安徽医科大学第二附属医院

【摘要】 目的：提高对血友病性假肿瘤影像学表现的认识，减少误诊。 **方法：**对我院 5 例确诊血友病性假肿瘤的临床、影像及病理资料进行回顾性分析，并复习国内外血友病性假肿瘤相关文献。**结果：**血友病性关节炎为血友病患者最常见并发症。血友病性假肿瘤为反复关节、肌肉出血所致肿瘤样改变，影像表现特异性较强，但缺乏相关病史时诊断困难，MRI 扫描较高鉴别诊断价值。 **结论：**血友病性假肿瘤影像学表现通常较为典型，但也要认识到不典型的影像表现，早期明确定性诊断有助于患者治疗方法的个性化选择。

PU-3029

磁共振水脂分离序列对椎体外伤的诊断价值探讨

何涌,李建松,张浩
桂林医学院第二附属医院

【摘要】 目的：探讨磁共振（MR）水脂分离序列对椎体损伤的诊断价值。 方法： 在给 74 例脊柱外伤患者做脊柱 MR 检查时，采用水脂分离序列进行脊柱扫描，水脂分离序列计算出类 T1 相、类 T2 相、脂相、水相，然后观察分析水脂分离序列有哪些征象对诊断椎体损伤有诊断意义。 结果：74 例共有 89 个椎体有损伤征象，其中椎体重度压缩 5 个、中度压缩 20 个、轻度压缩 46 个，椎体无压缩 18 个；16 个椎体可见明确的骨折线，7 个椎体可见碎骨片；89 个椎体均有超过单个椎体 1/3 体积的水肿样信号，其中 88 个椎体水肿信号区内有散在脂肪信号，在水脂分离序列 T1 相、T2 相均淡薄显示为稍高信号，在水相上脂肪被抑制呈极低信号，在脂肪相上明显显示为高信号，脂肪分布的特征有“满天星状”、“条带状”；88 个椎体水肿区没有直径超过 5mm 的“完全无脂肪区”；仅有 1 个椎体水肿区内有直径 9mm 的“完全无脂肪区”，但此“完全无脂肪区”在椎体水肿区上 1/2，其与下 1/2 的“有脂肪水肿区”的交界部也没有完整的分界线。结论： MR 水脂分离序列对椎体损伤除了能观察到常见的椎体压缩、椎体骨折线、碎骨片征象之外，还能清晰显示椎体水肿区内含脂肪信号，更有利于推论该区域为骨质不均一损伤后还有脂肪的残存，对椎体的损伤有一定的诊断价值。

PU-3030

一例胸部及肩关节骨溶解症的病例分析

曹波
西安国际医学中心

目的 临床上胸部及肩关节骨溶解症是一种极其罕见的疾病，常容易被误诊。顾报道一例典型病例，并探讨该例病例的临床表现，病理学、影像学特点及诊断治疗方法。方法 报道一例胸部及肩关节骨溶解症病例，结合文献报道总结本病的临床表现，病理学、影像学特点及诊断治疗方法。结果 胸部及肩关节骨溶解症的临床表现、病理结果及 X 线检查常不一致，极易误诊、漏诊；临床表现多无特异性；病理学亦无特异性，早期以血管增生为主，后期以纤维组织增生为主；X 线表现为大量骨质溶解吸收但无骨质增生、硬化，无骨膜反应，无瘤骨形成，早期边界模糊，后期边界清楚、锐利。结论 胸部及肩关节骨溶解症早期诊断困难，必须综合临床表现、病理、X 线及 CT 检查等结果来进一步确诊；应根据本病活动期或静止期，给予相应药物治疗、放射治疗、手术治疗及综合治疗等方法，长期随访。

PU-3031

前交叉韧带术后 CT 评估

欧舒斐,李华雨,蔡卓威,唐海泳,张丽雪,何秋宇,刘倩,张晓雯
中国人民解放军第 458 医院（南部战区空军医院）

目的

DSCT 对前交叉韧带修复术后，观察股骨隧道入点及髓腔通道情况，探讨 DSCT 对前交叉韧带修复术后的影像表现及预后评价的临床意义。

材料与方法

选取广州军区广州总医院骨病关节科病人，已确诊膝关节前交叉韧带损伤，并已行膝关节前交叉韧带修复术的患者 12 例。所有患者使用双源 CT（siemens Somatom Definition 2008G）双能模式下行双膝扫描,扫描后应用西门子图像后处理工作站，在双能 3D 模式二维观察术后钉道的走形及位置，并行 3D 建模，以髁间窝中心点为界进行图像切割，并观察股骨隧道入点处距离该点的距离。

结果

在 3D 模式下，可以直观显示股骨隧道入点处的位置，并可测量其与解剖止点的距离，有 9 例患者测得距离在 5.4mm~5.9mm，有 3 例患者距离在 6.1~6.3mm，临床预期理想距离为（5.7±0.3），说明 9 例患者行前交叉韧带修复术时股骨隧道入点达到了预期设想。

结论

前交叉韧带是膝关节的重要结构，一旦损伤、断裂会无法维持膝关节稳定，迫使人体无法进行正常活动，对患者日常生活造成较严重的影响。前交叉韧带修复术是目前针对此优选的方法。对患者而言，术后最关心的是“能否预后”，而并非“是否预后”，“能否预后”的首要条件在于手术位置是否准确，对于观察膝关节的内部结构，关节镜检查是目前公认的金标准。关节镜下可以清晰而准确的观察膝关节内部结构，但是因其检查费用高，具有一定的创伤，且无法随意旋转观察髓腔通道等不利因素，常常有患者对此往望而却步。不但是因其高昂的检查费用，更因为在一次术后，不少患者患侧关节内部会产生不同程度的积气，且创伤遗留的肿胀、疼痛，也让患者在短期类不想二度承受。而 DSCT 是无创的，同时可通过仿真 3D 模型多角度、多层面观察股骨隧道入点处的位置及髓腔通道内部情况，从解剖角度对患者能否预后情况做一个首期评估，故对临床具有一定的指导意义。

PU-3032
MRI 3D－FFE 序列、增强扫描及两者联合应用对椎管内神经鞘瘤的诊断效能对比研究

常荣,马晓文
西安市红会医院

目的：探讨 MRI 3D－FFE 序列、增强扫描对椎管内神经鞘瘤的诊断价值，为椎管内神经鞘的诊断及鉴别诊断术前提供科学的依据。
方法：收集 2018 年 1 月－2019 年 4 月在我院就诊的研究对象 45 例，这些患者均行 MRI 平扫、3D－FFE 序列及增强扫描，以手术病理结果作为评价标准，计算 MRI 3D－FFE 序列和增强扫描诊断椎管内神经鞘瘤准确性、敏感性、特异性，比较 2 种检查方法的有效性。
结果：45 例患者中，最终病理结果证实神经鞘瘤 38 例（其中 17 例合并囊变，10 例合并囊变出血），髓核组织 5 例，囊肿 2 例。颈椎体 7 例，胸椎 6 例，腰椎 32 例。男性 28 例，女性 17 例。年龄 28～72 岁。MRI 3D－FFE 序列、增强扫描及两者联合诊断神经鞘瘤准确性、敏感性、特异性分别为 88.7%、98.5%、87.5%，92.2%、95.3%、88.7%，98.7%、99.5%、97.5%。MRI 3D－FFE 序列和增强扫描诊断神经鞘瘤准确性、敏感性、特异性差异无统计学意义（P >0.05），但 MRI 3D－FFE 序列联合增强扫描诊断神经鞘瘤的准确性高于单个检查方法(P<0.05).
结论：椎管内神经鞘瘤多见，常发生囊变，极易误诊为脱出髓核或其它囊性病变，MRI 3D－FFE 序列和增强扫描诊断神经鞘瘤各有优劣，两者联合应用可提高诊断效能。

PU-3033
胸骨侧位数字化 X 摄影的后处理研究

李志伟
苏州大学附属第二医院

[摘要] **目的** 研究数字化影像（DR）图像后处理在胸骨摄影中的应用价值。 **方法** 选取 32 部外伤怀疑胸骨骨折的病例，对胸骨侧位影像进行后处理，得到默认组和优化组两组图像，进行对比评价。 **结果**优化组图像在细节表现比默认组有明显提高。 **结论** 图像后处理能够提高胸骨侧位主观感受，提高图像质量。

站立位 X 线摄影与常规卧位诊断腰椎退行性滑脱对照性研究

马程,葛小平,武刚,蒋黛蒂,胡冬敏,孙琰,袁邹文,钱玉强
上海市中山医院青浦分院

目的 研究站立位 X 线摄影与常规卧位诊断腰椎退行性滑脱对照性。**方法** 于 2015.6 月-2017.2 月间收治的 58 例腰椎退行性滑脱患者，按照检查方式不同划分为观察组与对照组各 29 例，观察组采用站立位 X 线摄影检查，对照组提供常规卧位检查，评价两组患者诊断结果。**结果** 观察组 29 例受检者中，诊断腰椎位移 22 例(75.86%)，对照组 29 例，诊断腰椎位移 14 例(48.28%)观察组结果优于对照组，（x^2=16.155，P=0.000)。观察组患者位移程度显示<3mm、滑脱程度分布均优于对照组

检查结果，（x^2=8.654，P=0.003）；（x^2=1.668，P=0.196）。**结论** 对腰椎滑脱患者提供 X 线检查期间，采用站立位，可如实、准确反应腰椎失稳、滑脱程度，为诊断提供依据。

PU-3035

关节游离体病变的影像学诊断

张保付
邯郸市第一医院

【摘要】 目的：探讨关节游离体病变的影像学表现及诊断价值。方法：回顾性分析经临床手术或病理证实的游离体病变 51 例，观察病变的临床及影像学特点，其中 48 行 X 线检查,20 例行 CT 检查,25 例行 MRI 检查.结果：发生于膝关节 38 例，单侧 32 例，双侧 6 例。髋关节 3 例，踝关节 4 例，肩关节 4 例 ,肘关节 2 例。退行性骨关节病 16 例，滑膜骨软骨瘤病 10 例，,色素沉着绒毛结节性滑膜炎 7 例，剥脱性骨软骨炎 6 例，神经营养性关节病 5 例，骨坏死 3 例，关节面骨折 2 例，关节内血肿钙化 1 例，髌骨下关节囊钙化 1 例.影像学主要表现为关节间隙及周围见数量不等、大小不等的骨性高密度影。结论:关节腔内钙化或骨化的游离体病变病种虽多，但部分病变有一定的影像学特点，影像学检查可以诊断，CT 更能清晰的显示游离体的准确数量、分布范围和方位，MRI 可发现未钙化或骨化的游离体。

PU-3036

膝关节软骨 MRI 信号异常能否预测软骨形态学缺陷的进展情况

司莉萍
上海交通大学附属第六人民医院

目的 探讨首次检查 MRI 信号异常的关节软骨 18 个月后，关节软骨形态学缺陷的发病率，并与首次检查 MRI 信号无异常的关节软骨形态学缺陷的发病率进行比较。

材料与方法 本项研究符合 HIPAA 且获得伦理委员会批准。选取 90 例[平均年龄（55±8）岁；51%为女性] 3.0 T MR 成像中显示右膝关节存在软骨信号异常但无软骨形态学缺陷且影像上无骨性关节炎表现者（Kellgren-Lawrence 评分，0~1），再选取 90 例年龄、性别、Kellgren-Lawrence 评分、体质量指数相匹配的[平均年龄（54±5）岁；51%为女性]右膝关节 无 软骨信号异常及形态性损伤者。 根据中间加权快速自旋回波 MR 成像，异常信号（n=126）分为 4 个等级：A 级：低信号，B 级：不均匀信号，C 级：高信号，D 级：高信号伴肿胀。48 个月后，在一个关节间室水平，利用广义评估方程 logistic 回归模型比较两组之间的关节软骨形态学缺陷的进展情况（全器官 MR 成像评分≥2）。

结果 髌股关节的软骨信号异常发生率高于股胫关节（59.5%：39.5%）。A 级出现的概率较 C 级和 D 级高（36%:22%）。18 个月后首次检查出现信号异常的关节软骨中软骨形态学缺陷的发生率为 57%，然而，首次检查无信号异常的关节软骨中软骨形态学缺陷的发生率仅 4%（所有关节间室合并及每个关节间室分别评估，所有 P<0.01）。 不是任何级别的软骨信号异常均发展为关节形态学损伤（P=0.98），后者与骨髓信号异常的进展显著相关（P=0.002）。 结论 MR 成像上膝关节软骨信号异常是骨关节炎形态学缺陷的先兆征象，并可能成为评估关节软骨退变风险的影像生物学标志。

PU-3037

跟骨轴位单板 DR 拍摄新思路

晋亚伟
深圳市人民医院龙华分院

目的：现在很多医院没有双板 DR，大部分都是单板 DR，单板 DR 没有双板 DR 拍摄方便，要来回移动球管和探测器，而且有的体位要旋转球管，花费时间，特别是一些特殊位置，更要增加病人等待时间，所以我想通过想一些简单方便的体位来减少病人拍摄等待时间，提高工作效率。

方法：日常工作中就有这个跟骨拍摄，我和我同事通过平常做检查，可以用下面的体位检查来试验这几个体位设计，每个体位拍摄十次，以验证这些体位的准确性。
第一个设计体位是单腿离地法
第二个体位是起跑姿势位
第三个体位是坐凳子式
第四个体位常规位
结果：前三个位置是设计的，第四个位子是常规位，经过这四十次对比结果，发现这几个位置拍摄出来效果基本一致，都能达到基本诊断要求，其中第一体位图像质量和第四体位图像质量相近，第二体位和第三图像质量少差一点。但是都能达到诊断的基本条件。
结论：第一体位和第四体位图像质量比较好，第二体位和第三体位图像质量也能达到诊断基本要求。对于可以自由活动的患者，第一体位还比较容易实现，操作方便，基本都能用这个体位。对于一些跟骨骨折的患者还是考虑得用第四位或者第三体位。根据不同的患者来决定用哪种体位。

PU-3038

定量 CT 探讨年龄、腹部脂肪与骨密度的关系

潘亚玲[1],陈彤彤[1],王晗琦[1],常蕊[1],程晓光[2],陆勇[1]
1.上海交通大学医学院附属瑞金医院
2.北京积水潭医院

目的 采用定量 CT（QCT）探讨腹部脂肪、骨密度（BMD）随年龄变化的规律及腹部脂肪与 BMD 的相关性。 **方法** 选取低剂量胸部 CT 联合 QCT 检查的健康体检者共 2442 例，年龄为 30－90 岁，分为 5 个年龄段（30－39，40－49，50－59，60－69，70－90 岁）。采用 QCT 测量 L2 中心层面腹部总脂肪（TAT）、腹内脂肪（VAT）、皮下脂肪（SAT）及腰椎 BMD。统计分析各年龄段间 TAT、VAT、SAT、BMD 的差异性及 TAT、VAT、SAT 与 BMD 的相关性。 **结果** 50 岁后各年龄段男性 TAT、VAT 高于 30－39 岁男性，而 SAT 低于 30－39 岁男性（P<0.05）。50 岁后各年龄段女性 TAT、VAT、SAT 高于 30－39 岁女性（P<0.001）。无论男性还是女性：50 岁后各年龄段间 TAT、VAT、SAT 无显著性差异（P>0.05），均在 40－59 岁出现 VAT 明显增多（P<0.01），BMD 随年龄增长逐渐减低（P<0.001）。多元逐步回归方程显示 VAT 是女性 BMD（β=-0.089，P=0.007)而非男性 BMD 的独立影响因素，TAT、SAT 均不是 BMD 的独立影响因素。 **结论** 腹部脂肪和 BMD 随年龄发生变化，对 40－59 岁男性和女性应加强内脏型肥胖预防。VAT 可能是女性 BMD 的独立负性调节因素

PU-3039

寰枢椎骨质破坏性病变的 CT 及 MR 诊断

李小荣,李向东
中国人民解放军南部战区总医院

目的：探讨寰枢椎椎体及附件骨质破坏性病变的影像学诊断，提高对造成寰枢椎骨质破坏病变的认识。**方法：**收集我院 2013 年 8 月至 2019 月 2 月经手术病理证实的寰枢椎椎体及附件骨质破坏的病例共 50 例，回顾性分析其 CT 及 MRI 检查的影像学表现。**结果：**45 例引起寰枢椎骨质破坏病变患者中，转移 15 例（平均年龄为 65.8±18.9 岁）,结核 12 例（平均年龄为 35.5±12.3 岁），嗜酸性肉芽肿 6 例（平均年龄为 23.8±8.5 岁），浆细胞骨髓瘤 5 例（平均年龄为 35.2±15.5 岁），脊索瘤 4 例，内生性软骨瘤 1 例，骨巨细胞瘤 3 例，动脉瘤样骨囊肿 3 例，骨母细胞瘤 1 例；骨质破坏发生在椎体者 16 例，齿状突 23 例，寰椎侧块者 12 例，寰椎前弓者 3 例，造成病理性骨折 19 例，寰枢椎关节脱位者 13 例，侵犯椎管 13 例，脊髓受压者 6 例，骨质破坏区可软组织肿块者 31 例，其中增强后出现强化者 25 例。**结论：**寰枢椎骨质破坏性病变主要可分为转移、结核及原发性

肿瘤，结核好发于年轻人，转移好发于中老年人，原发肿瘤与脊椎其它部位影像学表现相似，软组织肿块常见于浆细胞骨髓瘤及嗜酸性肉芽肿，膨胀性改变常见于内生性软骨瘤及骨巨细胞瘤，单纯性骨质破坏者鉴别困难。齿状突骨质破坏病变容易并发病理性骨折及寰枢椎半脱位，CT 及三维重建后处理易于显示骨质破坏及关节脱位，MRI 易于察骨质破坏区软组织、椎管受侵及脊髓受压，增强扫描对鉴别病变性质有意义。

PU-3040
461 例中老年男性 QCT 骨密度结果及相关因素分析

李小荣,李向东
中国人民解放军南部战区总医院

摘　要

目的：了解中成年男性骨密度状况及相关影响因素。**方法：**对 461 例中年男性进行定量 CT 骨密度测量，收集受检者年龄、身高、体重、吸烟、饮酒、糖尿病病史，其中 137 例进行骨代谢生化指标检查，并对结果进行统计学分析。**结果：**与正常组相比，骨量减低骨质疏松组及严重骨质疏松组，年龄与骨量减低呈正相关，相对危险度分别为 1.107、1.163、1.174，其余影响因素无统计学意义；137 例骨代谢生化指标检查结果中，骨量减低组 PINP 值低于正常组（P<0.05）；骨质疏松组β-CXT、N-MID 及甲状旁腺素值大于正常组及骨质减低组（P<0.05）；正常组与骨质减低组间β-CXT、N-MID 及甲状旁腺素无显著性差异（P >0.05）。结论：QCT 可反映骨密度随年龄变化的趋势，其结果与骨代谢生化指标具有良好相关性。

PU-3041
正常胎儿标本颈、胸、腰段脊柱椎体骨化中心发育的磁共振研究

张帅,林祥涛,高艳
山东省立医院

背景和目的：胎儿脊柱测量在脊柱畸形的产前诊断中越来越重要，在评估脊柱病病变之前，必须了解胎儿脊柱在不同胎龄时的正常表现。本研究的目的是测量正常胎儿颈、胸、腰椎椎体骨化中心体积，研究其发育随胎龄的变化。

方法：采用 3D-T2WI 序列对 55 例 17～42 孕周胎儿标本进行磁共振成像，利用后处理工作站测量颈、胸、腰及 L1=L5 椎体骨化中心体积。

结果:颈、胸、腰椎椎体骨化中心体积随胎龄呈线性增大,颈、胸、腰椎椎体骨化中心体积发育无性别差异;腰椎单椎体骨化中心平均体积增长率和体积增长倍数均大于颈、胸单椎体骨化中心;L1-L5 椎体骨化中心体积随胎龄呈线性增大。

结论：颈、椎、腰椎和 L1-L5 椎体骨化中心体积与孕中晚期胎龄有较好的相关性。L1 椎体骨化中心容积的测量更能体现胎儿颈、胸、腰椎的发育，了解胎儿脊柱的正常发育情况是研究胎儿脊柱异常的必要条件。

PU-3042
肋骨畸形、脊柱畸形对 Poland 综合征的诊断价值

王欣
南开大学附属医院（天津市第四医院）

目的：探讨体格检查时偶然发现的肋骨畸形（短小肋骨、叉状肋骨）、脊柱畸形（脊柱侧弯、椎体融合、半椎畸形、蝴蝶椎、Sprengel 畸形）对 Poland 综合征诊断的应用价值，提高对 Poland 综合征有相关联的其他畸形的认识，有助于提高对 Poland 综合征的诊断水平。

资料与方法：回顾性分析 5 例 Poland 综合征患者的异常体征，收集患者体格检查资料（DR、CT），分别观察胸肌、肋骨、肋软骨、胸椎、腰椎、骶尾椎、肩胛骨及四肢等情况。
结果：Poland 综合征患者胸大肌以缺如为主，胸小肌以营养不良为主。5 例患者除了双侧胸大肌缺如和（或）双侧胸小肌营养不良、翼状肩胛骨和肩关节前突和不同程度外展受限，双侧不同程度的背阔肌、斜方肌、前锯肌的发育不全及缺失、胸廓畸形、胸部和腋窝脱毛、乳房及乳头发育不全、皮下组织发育不全、不对称乳晕及手异常外还有一部分患者表现为其他畸形，本研究中包括肋骨畸形和脊柱畸形较为多见，本研究 5 例患者中，有 4 例存在脊柱侧弯：2 例脊柱侧弯合并叉状肋、1 例脊柱侧弯、短小肋骨畸形合并腰椎椎体融合、1 例脊柱侧弯合并胸椎椎体蝴蝶椎畸形；1 例单纯胸椎椎体蝴蝶椎畸形；3 例椎体半椎畸形：2 例胸椎椎体半椎畸形，1 例腰椎椎体半椎畸形；4 例患者胸肋缺失或发育不良；5 例患者肩关节前突和外展受限，其中 4 例患者肩关节外展受限严重（外展不大于 90 度）；骶尾椎以脊柱侧弯为主。
结论：Poland 综合征是非常罕见的胸壁及胸肌发育不良，并伴有多系统异常或畸形的综合征。体格检查中经常发现的畸形，包括肋骨畸形和脊柱畸形，特别容易被临床医生和影像医生忽视，认为是先天发育所致，临床极其容易漏诊，耽误诊断与治疗。故观察和总结 Poland 综合征相关联的其他畸形，对早期诊断、临床评价及治疗具有重要指导意义。

PU-3043

The application value of CT and MR contrast fistulography in evaluating the sinus/fistula

Hanqi Wang,Yaling Pan,Tongtong Chen,Yong Lu
Ruijin Hospital, School of Medicine, Shanghai Jiao Tong University

Objective: To investigate the application value of CT and MR contrast fistulography in evaluating the sinus/fistula.

Methods: Twenty-five patients with sinus or fistula were enrolled and received CT contrast fistulography, MR contrast fistulography and sinus endoscopic exploration. CT and MR images were reconstructed with multiplanar reconstruction and maximum intensity projection to observe the morphology of sinuses/fistulas. Wilcoxon signed rank test was used to compare the number of sinus branches detected on CT/MR images with endoscope. Paired T-test compared the depth of sinuses/fistulas measured on CT/MR images with endoscope. Kappa test was used to assess the consistency between CT/MR contrast fistulography and endoscopic exploration in diagnosing sinus/fistula involving body cavity. Using the result of endoscopic exploration as golden standard, we also calculated the sensitivity, specificity and consistency rate of MR images in detecting the pathological features at deep part of sinus/fistula.

Results: In 22 cases of sinuses and fistulas, 11 were demonstrated as pipeline-shaped, 8 were Y-shaped, 2 were cavity-shaped, and 1 was crab-shaped. CT and MR contrast fistulography clearly showed the morphology of sinuses and fistulas clearly. Compared

with endoscope, there was no significant difference of CT (P=0.500) and MR images (P=0.125) in detecting sinus branches. The depth of sinuses/fistulas on CT and MR images was 5.00±1.42cm (P=0.714) and 5.45±1.42cm (P=0.433), respectively, indicating no significant difference with endoscopic exploration. The detection rate of sinus/fistula involving body cavity was 92.9% and 62.5% for CT and MR images, with a Kappa value of 0.904 and 0.526,respectively. The sensitivity, specificity and consistency of MR images was 83.3%、89.5% and 88.0% for detecting involving bone at deep part of sinus/fistula , 83.3%、84.2% and 84.0% for detecting formation of fibroplasia pate at deep part of sinus/fistula, 37.5%、94.1% and 76.0% for detecting effusion at deep part of sinus/fistula.

Conclusion: CT and MR contrast fistulography can effectively evaluate the morphology, depth, branching and the deep feature of sinus/fistula, indicating significant application value in diagnosis and treatment of sinus/fistula.

PU-3044

x 线容积成像在膝关节隐匿性骨折检出上的价值

姜涛
天津市第三中心医院

目的：通过与 X 线摄影平片比较评价 X 线容积成像在膝关节骨折检查上的应用价值。
方法：使用 GE XR656 型号 DR 对 68 名膝关节外伤的患者行 X 线平片检查，在其同意的情况下再对其行 X 线容积成像检查，分别评价两种检查结果的骨折检出率。
结果：X 线容积检查的骨折检出率大于普通 X 线平片。
结论：X 线容积检查在膝关节的检查过程中有着价格低廉，图像成像清晰，骨折检出率高的优势，对于膝关节隐匿骨折的检查有很大的价值

PU-3045

基于 MRI 生理学成像定量在膝骨关节炎早期诊断及软骨损伤分级中的应用

敖锋,张自力,陈光斌,莫本成
湖北省十堰市人民医院

【摘要】 **目的** 探讨 MRI 生理学成像定量技术在膝骨性关节炎早期诊断的临床价值，并分析生理学定量 T2 值与软骨损伤分级的关系。**方法** 收集 2018 年 1 月至 2019 年 5 月期间我院诊断为膝骨性关节炎（KOA）患者 49 例作为观察组，另选取与观察组年龄段相匹配的 35 名健康志愿者作为正常对照组，所有受检者均在 Siemens Skyra 3.0T 超导型磁共振给予膝关节常规 MRI 扫描+T1/T2 mapping 成像。根据国际软骨修复协会(ICRS)标准对关节软骨退行性变进行分级，将观察组分为轻度 KOA 组和重度 KOA 组，在西门子 syngo MRE11 工作站对扫描所得图像进行后处理，利用 Functool 软件包生成 mapping 伪彩图，分别测量股骨及胫骨平台内外侧髁、髌骨共 5 处软骨的 T1 值和 T2 值。采用 SPSS 22.0 及 EXCEL 统计学软件进行统计学分析作图，比较正常对照组、轻度

KOA 组、重度 KOA 组生理学定量值的差异及生理学定量 T2 值与软骨损伤级别的相关性。**结果** 轻度 KOA 组、重度 KOA 组平均 T1 值、T2 值均高于正常对照组相应软骨区域，差异有统计学意义(P <0.05)；重度 KOA 组关节软骨 T2 值高于轻度 KOA 组相应各亚分区，差异有统计学意义(P <0.05)；重度 KOA 组关节软骨 T1 值高于轻度 OA 组各亚分区，但差异无统计学意义(P >0.05)；T2 值与软骨损伤分级呈正相关(r=0.695，P<0.05)。**结论** 膝关节软骨损伤早期表现为 T1 值和 T2 值延长，MRI 生理学成像定量可以发现无明显形态学改变的早期损伤，为临床早期诊治骨性关节炎提供依据；同时 MRI 生理学定量成像技术作为一种无创、准确评估软骨早期退变的工具可反映 KOA 患者病情程度分级，有助于膝关节软骨损伤的级别判定。

青少年型骨质疏松的背后：一个成骨不全家系的 QCT 表现及基因突变筛查

雷立昌,韩丹,张琳
昆明医科大学第一附属医院

【摘要】 **目的** 筛查 1 个成骨不全(osteogenesis imperfecta,OI)家系中基因突变、骨密度、影像表现与临床表型的关系。 **方法** 收集先证者及家系成员 3 代共 13 人临床资料, 采集先证者、随诊家属的外周血标本、QCT 结果和 x 线影像资料。分析筛查基因突变,基因测序确定突变位点，骨密度改变和影像学特征。 结果 PCR—HRM 分析显示,先证者和其后代 COL1A1 基因第 33 外显子结果异常，测序结果提示,先证者 COL1A1 基因第 33 外显子 C.516delC,移码突变,导致此后第 173 位氨基酸提前出现终止密码子(UAA)，即 P.（Gly173fs）杂合突变，先证者之女基因测序均具有相同的突变位点，其余家系成员无此突变。该突变位点在人类胶原突变数据库中未见报道。家系图谱显示为常染色体显性遗传,先证者及家系患者临床诊断均为 I 型 OI。先证者及其女 QCT 均显示为骨质疏松，骨量分别为 75mg/cm^2 、70mg/cm^2 ，先证者 x 线表现为桡骨及尺骨鹰嘴骨折，少许骨痂形成不愈合，骨皮质稍菲薄，骨小梁稀疏，其余家系成员 QCT 结果和影像检查均未见异常。结论 成骨不全 COL1A1 基因 C.516delC 为新的突变位点，临床表型较轻。QCT 诊断青年型骨质疏松较敏感，对于早期提示表型较轻的成骨不全有一定意义，反复骨折并骨折难以愈合为 I 型 OI 影像特点。

PU-3047

The relationship between breast density, age and mammographic lesion type among Chinese breast cancer patients from a large clinical dataset

yu ji,Wenjuan Ma,Hong Lu,Ying Zhu,Peifang Liu
Tianjin Medical University Cancer Institute and Hospital

Objective: The purpose of this study was to investigate the relationship between breast density, age and mammographic lesion type among Chinese breast cancer patients from a large clinical dataset.

Materials and Methods: A retrospective review of mammographic images from a total of 9716 breast cancer patients imaged between July 2014 and June 2017 were conducted.

Mammographic breast density was defined according to ACR's BI-RADS 4-class density rating. Mammographic lesion types were defined according to ACR's BI-RADS, including mass, mass with calcifications, calcifications, architectural distortion/asymmetries, and architectural distortion/asymmetries with calcifications. All mammograms were interpreted by three experienced breast radiologists. The chi-square (χ^2) test and Pearson correlation analyses were performed to assess the relationship between breast density, age, and mammographic lesion type.

Results: There was a significant inverse relationship between BI-RADS breast density rating given by radiologists and patient age overall ($r=-0.521$, $p<0.01$). The distribution of breast density in breast cancer patients from China reversed at 55 years old, and showed one age peak for 55-59 years group. The percentage of lesions with calcifications decreases with increasing age ($p<0.01$), and increases with increasing breast density ($p<0.01$).

Conclusions: In general, we found there is a relationship between patient breast density, age and mammographic lesion type. It may provide the basis for clinical diagnosis and screening program of breast cancer in China.

PU-3048

乳腺三阴性导管原位癌的 X 线及超声表现

张朝赫
辽宁省肿瘤医院

目的：分析乳腺三阴性导管原位癌的 X 线及超声表现,提高术前诊断的准确性。
方法：经手术、病理证实的乳腺三阴性导管原位癌 11 例, 三阴性原位癌伴微浸润 6 例,回顾性分析其 X 线及超声表现。
结果：(1)X 线表现多样：微钙化 5 例,肿块 3 例，局限不对称密度 3 例,结构扭曲 2 例,阴性 1 例.(2)微钙化特点为区段性分布小圆形钙化为主，部分伴有杆状及线状钙化.(3)超声主要表现为肿块，形态不规则、边缘模糊、血流丰富，部分伴强回声光点。
结论：乳腺三阴性导管原位癌的 X 线及超声表现有一定特征,在一定程度上可为临床治疗方法的选择提供参考。

PU-3049

Association of the differences in average glandular dose with breast cancer risk

Le Ma,Genggeng Qin,Yuxing Cai,Weiguo Chen
Nanfang Hospital, Southern Medical University

Purpose: To compare the average glandular dose (AGD) difference between both breasts of healthy subjects and breast cancer patients and further to investigate whether the addition of AGD difference improves cancer classification and evaluate its association with breast cancer risk.

Methods: This study was conducted by collecting full-field digital mammography (FFDM) images including CC view and MLO view from 1005 healthy subjects (BI-RADS category I or II for both breasts) and 475 unilateral breast cancer patients (proved by biopsy and the contralateral side of BI-RADS category I or II). The data set was divided into a training set and a test set. AGD differences between both breasts of healthy subjects and cancer patients were calculated, respectively. Odds ratio (OR) was used to assess the association between AGD difference and breast cancer risk. Multivariate logistic regression analysis was used to build the model and the receiver operating characteristic area under the curve was used for model estimation. Another 57 subjects undergoing screening FFDM (BI-RADS category I or II for both breasts) who received a diagnosis of unilateral breast cancer subsequently at least 1 year later were recruited for validation.The controls included 93 healthy subjects who had cancer-free follow-up for at least 3 years.
Results: The AGD differences of CC and MLO views from cancer patients were significantly higher than healthy subjects ($p<0.001$). The OR of CC view was 9.463 ($p<0.001$) and MLO view was 7.566 ($p<0.001$). The logistic regression model had an Az value of 0.83±0.03 for the training set and an Az value of 0.80±0.03 for the test set. The model without AGD difference had Az values of 0.64±0.04 and 0.63±0.03 for the training set and the test set, respectively. The model with AGD difference as an additional factor was significantly improved cancer classification ($p<0.001$). No significant AGD differences were found on twice follow-up CC or MLO views of healthy subjects. While for cancer patients, higher AGD differences were found on CC ($p=0.042$) and MLO ($p=0.021$) views when compared with their previous healthy breasts.
Conclusion: The proposed AGD difference between both breasts demonstrated a strong association with breast cancer risk and has the potential to serve as an independent factor for risk prediction.

PU-3050

FFDM 联合超声对第二乳腺癌相关因素的探索

武慧慧,马彦云,张辉
山西医科大学第一医院

目的：探讨不同的乳腺癌筛查方法是否与筛查检测的 DCIS 患者不同的生存结果有关，并评价与第二次乳腺癌相关的临床病理和影像学因素。
材料和方法：选取 2013 年 7 月至 2019 年 7 月间，在本机构中确诊为 DCIS 并接受手术治疗的患者，她们最初在乳腺 X 线筛查或 US 检查中发现病灶。评估总生存率(OS)和无病生存率(DFS)。用多变量 Cox 比例风险回归分析发现与第二乳腺癌(浸润性癌或 DCIS)相关的因素。根据筛选方法对各亚组进行分析。
结果：包括 814 名妇女(中位年龄 47 岁；年龄范围 25-81 岁)，627 名为接受了乳房 X 线检查检测的 DCIS(乳腺 X 线检查组)，187 名为接受了 US 检测 DCIS 的筛查(US 检查组)。随访期间(中位 4 年，间隔 2~6 年)，发现 26 例同侧和 26 例对侧第二乳腺癌(6.4%，占 814 例中的 52 例)，乳腺 X 线检查组 44 例，超声检查组 8 例。总体 5 年 OS 和 DFS 率分别为 100%和 95.3%.DFS 率在筛查方法上无显着性差异(P=.21，乳腺 X 线检查组为 94.9%，US 检查组为 96.5%)。在乳腺 X 线检查组，级别高(中等级别：危险度[HR]，5.7；95%可信区间[CI]：1.3，24.3；P=0.02)(高级别：HR，8.0；95%CI：1.9，34.2；P=.01)和致密乳腺(HR，3.5；95%CI：1.1，11.4；P=0.04)与第二次乳腺癌相关。在 US 检测组，HER-2 阳性与第二乳腺癌相关(HR，9.2；95%CI：2.2，38.5；P=.002)。

结论：接受导管原位癌筛查治疗的患者，其无病生存率在筛查检测方法上无差异。在筛查乳腺 X 线检出 DCIS 的患者中，级别较高、乳腺致密的患者与第二乳腺癌有关；在筛查经超声检测的 DCIS 的患者中，人表皮生长因子 2 阳性与第二乳腺癌有关

PU-3051
基于 FFDM 评价 DBT 联合 CAD 对乳腺病变诊断的应用价值

陈文青,姜增誉
山西医科大学第一医院

目的：评价数字化乳腺断层摄影及计算机辅助侦测对乳腺病变的临床诊断价值。
方法：收集我院经病理证实且术前均行 DBT 和 FFDM 检查的 119 例连续病例，共 131 个乳腺病变，进行回顾性分析。以病理诊断为金标准，其中乳腺良性病变 69 例，恶性病变 62 例。采用 Combo 自动曝光模式，获得二维乳腺图像和断层图像。由两位高年资放射科医师对所有病例的 FFDM 图像和 DBT 图像进行回顾性分析并记录结果。运用 SPSS23.0 统计软件进行统计学分析。
结果：（1）在 131 个乳腺病灶中，DBT、FFDM+DBT、FFDM+CAD 和 FFDM+DBT+CAD 的敏感性均比 FFDM 的高（P＜0.005），FFDM+DBT 和 FFDM+DBT+CAD 的特异性高于 DBT（P＜0.005），其余各组间敏感性和特异性比较，差异均无统计学意义。FFDM、DBT、FFDM+DBT、FFDM+CAD 和 FFDM+DBT+CAD 的 Kappa 系数分别为 0.462、0.623、0.757、0.636 和 0.848(P 值均＜0.001)，ROC 曲线下面积分别为 0.730、0.816、0.882、0.820、0.926。（2）在 ACR(3+4)中，DBT、FFDM+DBT、FFDM+CAD 和 FFDM+DBT+CAD 的敏感性均比 FFDM 的高（P＜0.005），FFDM+DBT+CAD 的特异性高于 DBT（P＜0.005），其余各组间敏感性和特异性比较，差异均无统计学意义。在 ACR(3+4）组中 FFDM+DBT+CAD 的 ROC 曲线下面积分别为 0.933，其诊断结果均和病理结果具有高度一致性(P 值均＜0.001)。在 ACR(1+2）组中 FFDM 联合应用 DBT 和或 CAD 的诊断效能相仿。
结论：DBT 和 CAD 对乳腺病变诊断有临床应用价值，FFDM、DBT 和 CAD 三者联合在致密型腺体组中诊断效能最好。

PU-3052
隐匿型乳腺癌的多种影像诊断价值及探讨

张朝赫,罗娅红
辽宁省肿瘤医院

目的：研究和评价早期隐匿性乳腺癌的乳腺钼靶，多普勒 B 超及 MRI 的诊断应用价值。
材料和方法：一例无疼性无意发现右乳腺内小肿块患者，年龄 45 岁，来我院经门诊乳腺大夫触诊于乳晕后外方触及较小肿块，活动度可，质地中等。摄双侧钼靶片考虑为右侧乳腺良性肿瘤可能，进一步 B 超检查考虑右侧乳腺肿瘤，恶性可能，再行 MRI 检查考虑乳腺癌可能。
结果：该患者钼靶片见双乳为致密型乳腺，见右乳外中象限较左侧乳腺不对称性密度稍增高影，边缘不清，无明显钙化，无明显分叶改变。再行彩超检查，发现患者右侧乳腺散在二处形态欠规则，内部回声不均匀低回声区，与周围组织分界较清楚，无包膜，有较丰富的博动性血流，腋窝末及肿大淋巴结。最后行 MRI 检查，患者右乳腺内外中可见较明显三个小结节状影，肿块边缘清楚，分叶改变明显，与周围腺体组织境界分明，增强扫描肿块强化明显，动态扫描行时间一信号曲线，为快速增高，快速减低，符合恶性肿瘤特征。该患者行右乳全切术病理结果为乳腺癌。病理类型分别为粘液腺癌及浸润性导管癌。

结论：钼靶是发现及诊断乳腺病变的最简便和重要有效的方法，但是对早期隐匿性乳腺癌的诊断仍需辅助其它检查。B 超对早期肿瘤及致密型乳腺更能良好的显示肿块内部及周边的血流信号，年轻女性及腺体丰富缺乏对比的患者，B 超应为首选检查。MRl 对隐匿性乳腺癌的诊断及检出率明显更高于钼靶及 B 超，但因其价格昂贵，仅作辅助检查，不能作为常规普查。

PU-3053

500 例白领女性乳腺疾病 X 线摄影普查诊断分析

邹薇薇,洪庆坚,木郁
海军军医大学第二附属医院（上海长征医院）

目的对白领女性来我院进行乳腺疾病普查，了解乳腺疾病发病特点。

方法用问诊（既往史、用药史、生育哺乳史、家族史等）、触诊、乳腺 X 线摄影等检查方法对 2015 年 3 月到 2016 年 7 月 500 例白领女性进行普查，分析各乳腺疾病、各年龄阶段患者的发病情况。

结果 500 例白领女性共 438 例合并乳腺增生等乳腺疾病，患病率为 87.6%。其中乳腺增生、乳腺肿块例数分别为 157 例、112 例，患病率分别为 31.4%、22.4%。乳腺增生患病率明显高于乳腺肿块,疾病间存在显著性差异(P<0. 05)。20-29 岁、30-39 岁,40—49 岁、50 岁以上年龄组女性患病率分别为 4%、22.92%、49.68%、22.92%。40～49 岁年龄组女性乳腺增生患病率明显高于 50 岁以上组，组间存在显著性差异(P<0. 05)。乳腺增生患病率随女性年龄的增加而有降低趋势。

结论白领女性乳腺疾病发生率较高，主要为乳腺增生、乳腺肿块。由于白领女性身负家庭和事业的双重角色，面临竞争压力、工作繁忙、心情压抑、生活不规律、应加强乳腺疾病的普查工作，不放过蛛丝马迹，对可疑病例及早防治。

18F－FDGPET－CT 与 SPECT 骨显像在乳腺癌骨转移的诊断价值对比研究

邹薇薇,木郁
海军军医大学第二附属医院（上海长征医院）

目的
对比分析了 18 F－FDGPET－CT 骨显像与 99 Tcm －MDP SPECT 骨显像对乳腺癌相同位置骨转移病灶的诊断价值。研究 18 F－FDGPET－CT 诊断恶性乳腺癌骨转移的临床应用价值。
方法对 14 例乳腺癌患者短期内行 18 F－FDGPET－CT 及 99 Tcm－MDP SPECT 显像，结果以 其它影像学检查和临床手术病理及随访结果为诊断依据。
结果 14 例乳腺癌患者中， 最终诊断 6 例患者出现骨转移，18 F－FDGPET－CT 显像发现全部骨转移患者，99 Tcm－MDP 诊断骨转移 4 例。18 F－FDGPET－CT 显像与 SPECT 显像共发现转移病灶 73 个， 其中 18 F－FDGPET－CT 显像发现全部转移病灶， 敏感性 100%， 特异性 93%， 准确性 99%。 SPECT 骨显像发现骨转移病灶敏感性 96%， 特异性 72%， 准确性 90%。

结论
检查乳腺癌骨转移， 18 F－F D G P E T－C T 显像的敏感性、 特异性、 准确性均高于 SPECT 骨显像。

基于深度学习的乳腺数字化 X 线 BI-RADS 密度分类的研究

马彦云,贾田菊
山西医科大学第一医院

目的：为了确保基于 ACR BI-RADS 乳腺 X 线密度评估的一致性和准确性，本研究构建基于深度学习的乳腺数字化 X 线密度的自动分类模型，使之达到对乳腺密度的精准分类。
方法：在研究中，构建并优化基于深度学习的卷积神经网络（CNN）的经典模型 ResNet 50。收集本院于 2015 年 8 月至 2018 年 2 月间行全数字化乳腺摄影图像 18152 幅，由两位有经验的放射科医师根据 ACR BI-RADS 标准对图像的乳腺密度进行评估。各自经微调的分类模型分别在小数据集（4000 幅）和原始数据集（18152 幅）对乳腺密度的分类进行评估，得到相应的分类准确性，以受试者工作特性曲线和曲线下面积评估模型的分类性能。
结果：CNN 模型在小数据集训练时，各类的分类准确性分别为 a 类 91%、b 类 86%、c 类 84%、d 类 90%；当在原始数据集训练时，a 类和 d 类的分类准确性无明显变化，b 类和 c 类的准确性分别为 89%、88%，随着数据量的增加，准确率明显提高，比较 AUC 发现分类性能明显改善。
结论：基于深度学习的卷积神经网络（CNN）分类模型能以较高的准确率对乳腺密度进行分类，在临床工作中，可协助放射科医师对乳腺密度进行准确、一致的分类。

PU-3056
数字乳腺摄影与彩色多普勒超声成像及两者联合应用在乳腺疾病诊断中的价值

柳杰
天津医科大学肿瘤医院

本文旨在比较和评价乳腺 X 线摄影检查和超声成像及两者联合应用在乳腺疾病诊断中的价值。
方法：2009 年 3 月-2009 年 5 月期间的住院患者中随机抽取 100 例，术前分别进行了数字化乳腺摄影和彩色多普勒超声检查且经手术病理证实。乳腺超声资料和乳腺 X 线片先分别由超声科和影像科医生独立进行分析诊断，记录诊断结果。再对两者进行综合分析做出联合诊断，其标准为：对同一病灶如两种方法诊断结果不同时，以分级高者为最后诊断。然后将三种检查结果与病理诊断对照。诊断结果分为以下 2 类：（1）符合（包括正确的良性、恶性、可疑良性和可疑恶性诊断）；（2）误诊或漏诊。应用 SPSS13.0 软件包，采用卡方检验，计算并比较乳腺超声、数字化乳腺摄影和两者联合应用对全部病变诊断的准确性、敏感性、特异性、阳性预测值和阴性预测值。
结果：100 例患者中共发现病灶 112 个。经手术病理证实：良性病变 28 个，位于左乳 13 个，右乳 18 个；恶性病变 84 个，位于左乳 36 个，右乳 48 个。数字化乳腺摄影、彩色超声对乳腺疾病诊断的准确性、敏感性、特异性、阳性预测值、阴性预测值分别为 95.53%、95.18%、96.55%、98.75%、87.5%和 86.61%、93.85%、70.59%、87.95%、82.76%。两者的准确性、敏感性、特异性均有显著性差异（P<0.05），数字化乳腺摄影优于彩色超声检查。两者联合诊断的敏感性、准确性、特异性、阳性预测值和阴性预测值分别为 97.62%、98.21%、100%、100%和 93.33%，均高于两

项检查的各值。但数字化乳腺摄影漏诊 4 例、误诊 1 例；彩色超声漏诊 5 例、误诊 10 例；联合诊断漏诊 2 例，没有误诊。
结论：超声成像和乳腺 X 线摄影是两种不同成像原理的影像检查方法,具有各自的优势。利用两者优势互补联合诊断，能够提高乳腺疾病诊断的准确率，达到比较满意的临床效果，是目前乳腺影像学检查的黄金组合。

同步辐射衍射增强成像技术检测人离体乳腺癌的实验研究

李瑞敏,张汐,顾雅佳,彭卫军
复旦大学附属肿瘤医院

目的：探讨同步辐射衍射增强成像(DEI)技术在人离体乳腺癌标本中的应用。**方法：**15 例乳腺癌标本经 4%福尔马林溶液固定后，在北京同步辐射装置(Beijing synchrotron radiation facility，BSRF)的 4W1A 束线 X 射线成像站进行同步辐射衍射增强成像，最后行病理学检查，将所得影像学资料与病理学资料进行对比研究。**结果：**15 例标本均获得了良好的衍射增强图像，均可清晰显示病变组织与正常组织，其中 3 例标本中可见钙化灶，同一样品在摇摆曲线不同位置获得不同的图像，所有的衍射增强图像均具有较高的空间分辨率和衬度分辨率。**结论：**同步辐射衍射增强成像技术具有很高的衬度分辨率和空间分辨率，可清晰观察肿瘤内部组织特征和空间分布，而且其采用的折射成像机制，可以有效的减少 X 射线对人体的辐射损伤，具有良好的基础医学应用前景。

PU-3058
The Value of Mammography Radiomics for Preoperative Prediction of Axillary Lymph Node Metastasis in Breast Carcinoma

Hongna Tan[1],Yaping Wu[1],Jianzhong Wan[2],Yusong Lin[2],Meiyun Wang[1]
1.Department of Radiology， Henan Provincial People’s Hospital， Henan， 450003， China;
2.Collaborative Innovation Center for Internet Healthcare & School of Software and Applied Technology， Zhengzhou University

Purpose: To investigate whether quantitative radiomics features extracted from cranial caudal (CC) view of mammogram are suit for preoperative accurate prediction of axillary lymph node (ALN) metastasis in invasive breast cancer. **Methods:** A total of 216 women patients with breast carcinoma lesions confirmed by surgical pathology were divided into primary cohort (n=144) and validation cohort (n=72). Radiomics features were extracted from CC view mammogram, and feature selection was performed using the methods of ANOVA F-value and Least absolute shrinkage and selection operator (LASSO); then a radiomics signature was constructed with support vector machine (SVM). The clinicopathological features model and the integrated model of radiomics signature and clinicopathollogical factors were constructed using the multivariate logistic regression. The integrated model was also presented as the radiomics nomogram. The four predictive models, including mammography (MG), radiomics, clinicopathological features model and the nomogram, were compared, and the performance is expressed as

the sensitivity, specificity, accuracy and area under the receiver operating characteristic (ROC) curve (AUC). **Results:** 95 of 216 breast cancer patients had ALN metastasis confirmed by surgical pathology, and 52 cases were diagnosed as metastatic ALNs based on MG-reported criteria on mammograms. The sensitivity, specificity, accuracy and AUC value of MG, radiomics, clinicopathological features model and the nomogram were 42.7%, 90.8%, 24.1% and 0.666(95% confidence interval [CI]: 0.591-0.741), 75.00%, 77.08%, 76.39% and 0.862(95%CI: 0.822-0.896), 45.83%, 85.42%, 72.22% and 0.657(95% CI: 0.590-0.708), 75.00%, 81.25%, 79.17% and 0.863(95%CI: 0.821-0.897), respectively. **Conclusion:** Quantitative radiomics features of breast tumor extracted from CC view of mammogram and the nomogram are helpful for preoperative accurate predicting ALN metastasis.

PU-3059

乳腺 X 线影像组学方法预测乳腺癌腋窝淋巴结转移的初步研究

谭红娜[1],武明辉[1],海金金[2],高飞[2],史大鹏[1],王梅云[1]
1.河南省人民医院
2.中国人民解放军信息工程大学

目的 探讨基于乳腺 X 线影像组学方法预测乳腺癌腋窝淋巴结转移与否的价值。**方法** 收集 214 例病理证实为浸润性乳腺癌的术前 X 线图像资料，分成训练集(n=153)和验证集(n=61)；所有患者均行腋窝淋巴结清扫或前哨淋巴结活检手术评价腋窝淋巴结状态。对所有患者的乳腺 X 图像进行病灶分割、图像高维特征提取；采用 LASSO 回归算法筛选与乳腺癌腋窝淋巴结转移有关的组学特征，构建淋巴结转移预测模型；使用 10 折交叉验证的方法对模型的预测能力进行验证。分析临床模型及其联合组学模型对腋窝淋巴结转移的预测效能，并应用受试者工作特征(ROC)曲线下的面积(AUC)来量化预测的准确性。**结果** ⑴ 每例患者均获得 360 个高维组学特征，包括 CC 位和 MLO 位图像各 180 个组学特征。应用 LASSO 回归模型分别从 CC 位图像、MLO 位图像和 CC+MLO 位图像的高维特征中依次筛选出 3、9 和 7 个组学特征。本研究中单独乳腺 X 线 CC 位及 MLO 位图像的影像组学特征预测腋窝淋巴结转移的效能均不如 CC+MLO 位图像，其 AUC 值分别为 0.680、0.723 和 0.740。⑵ 214 例乳腺癌患者中，病理证实腋窝淋巴结转移者 99 例，无腋窝淋巴结转移患者 115 例；分析二者在年龄、病灶大小、病理学分级、ER、PR、HER2 及 Ki-67 等方面的差别，仅病灶大小在二者有统计学意义(p=0.010)。⑶ 单独组学特征预测腋窝淋巴结转移的效能明显高于较临床模型，AUC 值分别为 0.740 和 0.558，而二者联合后预测效能较单独组学特征预测效能稍减低(AUC 值: 0.714 vs. 0.740)。**结论** 乳腺 X 线图像组学特征可术前定量预测乳腺癌腋窝淋巴结是否发生转移，但仍需扩大样本量进一步验证。

PU-3060

Breast cancer and angiogenesis with synchrotron radiation

Ruimin Li,Xi Zhang,Weijun Peng
Shanghai Cancer center Fudan University

Purpose: To evaluate the privilege of the synchrotron radiation (SR) in-line phase-contrast imaging on human breast tumors.

Materials and methods: Eighty-four excised human breast specimens were studied. Monochromatic SR in-line phase-contrast images were obtained at the beamline BL13W of the SSRF in China at the energy of 13~16 keV, and 0cm, 60cm, 100cm and 120cm different sample-detector distances. Meanwhile, we progressed 3D image angiogenesis reconstructions. Moreover, for comparison, conventional mammograms were taken. Finally, the pathology results were confirmed.
Results: The images obtained with SR had higher contrast and better resolution than traditional mammograms and demonstrated excellent details in all cases studied. Moreover, 3D image reconstruction of breast tumor angiogenesis was obtained for the first time without using any contrast agents.
Conclusion: Synchrotron radiation mammography was much better and much detailed than traditional mammography, and might be a great potential diagnostic tool in clinical application in the future.

PU-3061

Mammographic imaging in diagnosis of benign and malignant male breast lesions

Yan Huang[1,2], Qin Xiao[1], Yajia Gu[1]
1. Department of Radiology, Fudan University Shanghai Cancer Center
2. Shanghai Institute of Medical Imaging, Fudan University

Purpose: Our study aimed to evaluate the mammographic characteristics and enhance radiologists' acquaintance between benign and malignant male breast lesions.
Methods: Patients with male breast lesions detected by preoperative mammography were enrolled in this study. All lesions were identified by biopsy and classified into benign group and malignant group. Imaging features were recorded and analyzed by statistical methods.
Results: A total of 93 men(median age: 61, rang 32 to 81) were enrolled, 40 men were in benign group and 53 men were in malignant group. Advanced age was common in malignant lesions(p=0.014). A mass with calcification was more likely to be malignant than mass or asymmetry(p=0.0142). A mass eccentric to a nipple, distinct margin, high density were significantly related to malignancy(p<0.001, p=0.033, p=0.047). In addition, nipple retraction and enlarged lymph nodes were increased the risk of malignancy(p<0.001, p=0.041).
Conclusion: Mammographic characteristics have significant differences and promote diagnostic accuracy between the benign and malignant male breast lesions.

PU-3062

数字乳腺断层摄影在乳腺疾病诊断中的临床研究

罗春燕,赵卫,李俊
昆明医科大学第一附属医院

目的 通过比较全数字化乳腺 X 线摄影（FFDM）与 FFDM 结合数字化乳腺断层摄影（DBT）这两种方法在乳腺病变诊断中的差异，探讨 DBT 在乳腺疾病影像诊断中的应用价值。**资料与方法** 搜集本院

2017 年 1 月至 2017 年 5 月期间在我院同时进行过 FFDM 和 DBT 检查，检查后经病灶穿刺活检或手术病理证实的患者 87 例作为研究样本。对基本病变的影像特征显示清晰度、同一病例 FFDM 与 FFDM 结合 DBT 的诊断符合率、BI-RADS 分类准确性、FFDM 结合 DBT 较 FFDM BI-RADS 分类结论发生的改变进行统计学分析，得出两种检查方法之间的差异，P＜0.05 为差异有统计学意义。**结果** FFDM 与 DBT 对各病例乳腺基本病变影像特征显示清晰度、诊断符合率、BI-RADS 分类结论准确性、BI-RADS 分类结论存在的差异均有统计学意义。**结论** FFDM 结合 DBT 对乳腺基本病变的影像特征显示更加清晰，可以提高乳腺病变的检出率、与病理诊断的符合率，对乳腺病变的 BI-RADS 分类级别更准确，对进一步确定乳腺良、恶性病变性质较 FFDM 有明显优势，可以减少 BI-RADS 0 类诊断。

PU-3063

乳腺叶状肿瘤影像表现与病理对

吴秀丽,黄宝生,刘小霞
河西学院附属张掖人民医院

目的 探讨超声、X 线钼靶摄影、MRI 检查对乳腺叶状肿瘤的诊断价值，并与病理对照提高乳腺叶状肿瘤的诊断水平。**方法** 回顾性分析经手术病理证实的 32 例乳腺叶状肿瘤超声、X 线钼靶摄影和 MRI 影像表现，并将三种检查方法分别进行对照分析，比较各自优势。**结果** 32 例乳腺叶状肿瘤中病理良性 19 例，交界性 10 例，恶性 3 例；X 线钼靶诊断：叶状肿瘤 13 例，准确率 40%（13/32）；X 线表现：以不规则形＞10cm 的高密度肿块为主 47.87%（15/32），肿块边缘光整见分叶，部分见晕环征为主要表现；超声诊断：乳腺叶状肿瘤 15 例，准确率 43%（15/32）；超声表现：肿块周围见丰富的供血血管 96.4%（27/28），血流分级以 III 级为主，动脉阻力指数（RI）及收缩期峰值流速（Vmax）明显升高；MRI 诊断：乳腺叶状肿瘤 27 例，准确率 84%（27/32）；MRI 表现以囊变、坏死及出血为主 84.37%（27/32），以裂隙性囊变及压脂 T2WI 分隔不强化为主要特征。**结论** 超声、X 线钼靶及 MRI 在叶状肿瘤的诊断中，各自有特征性及局限性，三种检查结果互补，可提高乳腺叶状肿瘤的诊断率。

PU-3064

人工智能乳腺 x 线密度评估新方法:探索一种更有效的人工智能模型用于临床

张琬姝,杨帆
华中科技大学同济医学院附属协和医院

目的：验证现有乳腺密度评估 AI 模型的效能，进一步探求更适用于临床的深度学习(DL)算法。方法：从 2018 年 11 月-2019 年 2 月，每周随机抽取 50 人份病例，最终收集 637 例 2548 张钼靶片子（除去做过单乳切除的病人）。由四位有 5 年以上乳腺钼靶诊断经验的医生进行独立密度评价，之后统一评价结果获得测试集金标准。同时，由 AI 模型输出腺体评价分析结果，该模型是基于 ResNet-18 神经网络构建的，收集医生对多中心多钼靶机型 22000 名女性的 80156 张钼靶图像的密度评价结果训练得到。与以往文献里报道的测试方法不同的是，4 名医师分别对每个患者的乳腺密

度评价 7 次，包括双乳总体、右乳总体、左乳总体、右乳 CC、右乳 MLO、左乳 CC、左乳 MLO。AI 模型也分别输入相应的图像获得 7 次密度评价结果。
结果：AI 与医师评价准确率都较高，均在 0.77 以上，其中 AI 对单张片子评价准确率最高。以单张片子为入口，AI 与医师人工评价的准确率及一致性相近（κ = 0.675; 95% CI: 0.648,0.702），差异无统计学意义；以单侧乳房或以整个病人为入口，AI 评价的准确率及一致性均略差于医师评价，且差异有统计学意义(κ = 0.559 vs 0.718; κ = 0.667 vs 0.751)；AI 对单张乳腺 X 线片子密度评价的准确率及一致性近似于双乳总体评价，且较优(κ = 0.674; κ=0.667)，而对于单侧乳房评价效能不如对单张片子及双乳总体评价效能(κ=0.599)。对于医师对单张乳腺、单侧乳房及双乳总体密度评价的准确率及一致性逐渐升高(κ= 0.696; 0.718;0.751 respectively)；此外，我们发现 AI 对 CC 位评价准确率及一致性(κ= 0.698)高于 MLO 位(κ= 0.650)，而医师人工评价则差异不明显。
结论：该 DL 模型可用于乳腺密度评估，但若中和了人为逻辑性，评价准确度及一致性会更高。

PU-3065
乳腺癌 DBT 征象与不同分子亚型之间的相关性研究

宁艳云,马彦云
山西医科大学第一医院

目的：本研究通过回顾性分析术后病理确诊的乳腺癌病例，研究乳腺癌分子分型与 DBT 征象之间的相关性，以期在术前通过影像表现来预测乳腺癌的分子分型，从而对临床治疗和预后评估起到一定的指导作用。
方法：收集本院 2017 年 1 月至 2019 年 6 月手术后病理证实为乳腺癌的病例。观察乳腺病灶类型，肿块形态、边缘，钙化形态、分布等。本研究共收集女性病例 260 例，年龄 24~87 岁，其中 5 例患者为双侧发病，因此共 265 例病灶，其中左侧乳腺病变者 135 例，右侧病变者 130 例。运用 SPSS 24.0 统计软件进行统计学分析，采用卡方检验比较各分类变量间的差异性。
结果：
1.乳腺癌各分子亚型的 DBT 征象表现不同（P=0.002），Luminal A（9/18，50%）、三阴型（5/18，27.8%）更多表现为局部不对称影或结构扭曲；单纯性微钙化最多见于 HER-2 型乳腺癌（5/11，45.5%），肿块伴钙化最多见于 Luminal B 型乳腺癌（40/80,50%）。
2. 乳腺癌各分子亚型 DBT 表现是否有肿块无统计学差异（P=0.304），对于肿块形态、边缘特征，不同分子亚型乳腺癌间差异有统计学意义（均 P<0.001）。与其他三种类型相比，三阴型乳腺癌（13/20，65.0%；16/39，41.0%）更多表现为边缘清楚的规则肿块。
结论：
乳腺癌某些 BDT 影像特征可用于预测特定的亚型，将这些发现与临床信息相结合，放射科医生可以提供有关潜在肿瘤生物学的信息，并帮助指导临床决策。

PU-3066
乳腺导管原位癌微钙化 X 线特征与病理的对照研究

朱丽钰,娄鉴娟,王思奇,邹启桂,肇毅,王聪,徐祎,蒋燕妮
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨通过乳腺导管原位癌（DCIS）微钙化 X 线特征判断 DCIS 生物学行为及预后的可能性。方法 回顾性分析 2010 年 9 月到 2018 年 08 月在我院经钼靶定位穿刺微钙化病灶并通过手

术、病理证实的 DCIS 患者 101 例，收集 101 例患者的乳腺钼靶及病理资料，将钙化形态分为细小多形性组及非细小多形性组，将钙化分布分为群集分布组与非群集分布组，分析钙化表现与 ER、HER2、ER/HER2 亚型、Ki67 表达及病理分级相关性。结果 ①在细小多形性组与非细小多形性组中 DCIS 的 ER（x^2=0.571 ,P=0.450）、HER2（x^2=0.019，P=0.890）、ER/HER2 亚型（Fisher 精确检验，P=0.214）、Ki67（x^2=2.129，P=0.145）表达及病理分级（x^2=2.021，P=0.155）构成均无显著差异。②在群集分布组与非群集分布组中 DCIS 的 ER（x^2=17.460，P<0.001）、HER2 （x^2= 13.305，P<0.001）、ER/HER2 亚型（Fisher 精确检验，P<0.001）、Ki67 表达（x^2=8.117，P=0.004）及病理分级（x^2=17.241，P<0.001）构成均存在显著差异。结论 DCIS 钙化分布特征与 ER、HER2、ER/HER2 亚型、Ki67 表达情况及病理级别存在相关性，对预后评估能够提供一定的参考价值。对于表现为群集分布钙化的 DCIS，可以推测具有较好的预后。

PU-3067
多模态影像组学模型对 X 线乳腺 BI-RADS 4 类肿块型病变良恶性的鉴别诊断价值

陈旭[1],李爱银[1],宋歌声[1],崔景景[2],左盼莉[2]
1.山东省千佛山医院
2.慧影医疗科技（北京）有限公司

目的 探讨基于多模态影像组学模型对 X 线乳腺 BI-RADS 4 类肿块型病变良恶性的鉴别诊断价值。
方法 回顾性分析山东省千佛山医院 2017 年 8 月至 2019 年 4 月，经 FFDM 和 DBT 检查诊断为 BI-RADS 4 类肿块型病变，且最终诊断经病理证实的 60 例女性患者。良性病变 28 例，恶性病变 32 例。患者均行乳腺 FFDM 头尾位和内外斜位及 DBT 头尾位和内外斜位扫描。由两名有经验的医师参照 X 线乳腺影像报告与数据系统对病变进行亚型分级，分为 4A、4B、和 4C 类，将有病灶一侧乳腺的 FFDM 头尾位和内外斜位及 DBT 头尾位和内外斜位图像导入影像组学分析工具（Radcloud,Huiying Medicial Technology Co.,Ltd），分别对病灶区进行勾画，其中 DBT 图像选取病灶最清晰的五幅图像，然后进行影像特征提取。分别构建 FFDM、DBT、FFDM+DBT 及 FFDM+DBT+BI-RADS 分级四类分类模型，依次采用 VarianceThreshold、SelectKBest 和 Lasso 进行特征降维。对影像特征进行预处理，分别使用四种模型数据的 80%做训练集，20%做测试集，利用 KNN 模型进行机器学习，比较四个模型的分类诊断效能。
结果 建模后分别验证四种类型的诊断准确度，FFDM、DBT、FFDM+DBT 及 FFDM+DBT+BI-RADS 分级四种类型中 DBT 预测模型的诊断效果高于 FFDM,FFDM+DBT 与 FFDM+DBT+BI-RADS 分级预测模型诊断效果基本相当，其灵敏度和特异度为 1、0.83，AUC 值分别为 0.92、0.98，均高于 FFDM、DBT 预测模型的 AUC、敏感度及特异度，其分别为 0.85、0.86、0.67，0.89、0.88、0.73。
结论 多模态影像组学模型对鉴别 X 线乳腺 BI-RADS 4 类肿块型病变良恶性具有价值，联合应用效果优于单独应用。

PU-3068
乳腺 X 线摄影与 64 排螺旋 CT 筛查乳腺癌的价值对比

刘小庆,林青
青岛大学附属医院

目的：研究乳腺癌患者实施 64 排螺旋 CT 与 X 线摄影的筛查价值情况。

方法：选择 52 例我院所收治的疑似乳腺癌患者，2017 年 11 月至 2018 年 11 月作为本研究的时间范围，全部疑似乳腺癌患者予以 CT 与 X 线摄影检查，对比 2 种检查方式准确率、乳腺癌患者钙化及淋巴转移情况。
结果：疑似乳腺癌患者确诊结果阳性 41（78.85%）例、阴性 11（21.15%）例；X 线摄影检查阳性 38（73.08%）例、阴性 14（26.92%）例；CT 检查阳性 40（76.92%）例、阴性 12（23.08%）例；同 X 线摄影检查（78.05%、45.45%、71.15%）相比，疑似乳腺癌 CT 检查诊断结果灵敏度（95.12%）、特异度（90.91%）、准确性（94.23%）较高，CT 检查泥沙状钙化、杆状钙化、叉状钙化、不规则钙化检出率（75.61%）与 X 线摄影检查（46.34%）相比较高，具备显著组间差异性（P＜0.05），2 种检查方式淋巴结转移比例（70.73%、65.85%）具一致性（P＞0.05）。
结论：通过 CT 与 X 线摄影检查均可诊断乳腺癌疾病，但 CT 检查准确性水平较高，可降低临床乳腺癌误诊及漏诊比例。

PU-3069
乳腺断层成像在致密型乳腺内乳腺癌诊断中的应用价值

余琼
吉林大学第三医院(中日联谊医院）

目的：探讨数字乳腺断层成像(DBT)在致密型乳腺内乳腺癌诊断中的应用价值。方法：收集我院病理证实乳腺癌患者 143 人，均为致密型乳腺，分别行双侧乳房全数字化乳腺摄影（FFDM）检查及数字乳腺断层成像（DBT）检查，并进行 BI-RADS 分类。最终以病理结果为金标准，分别评价 DBT、FFDM 与 FFDM 结合 DBT 对致密腺体内乳腺癌的检出率及准确率之间的差异性。
结果：143 例致密型乳腺患者中,共病理证实乳腺癌病灶 153 个。DBT 对致密腺体内病灶的总检出率明显高于 FFDM(93.6% vs. 77.6% ，P＜0.05) ，其中 DBT 检出不伴钙化的肿块型病灶的比率明显高于 FFDM(67.5% vs. 47.5% ，P＜0.05) 。同时，FFDM 结合 DBT 对致密腺体内病灶的诊断准确率也明显高于 FFDM(95.3 % vs. 77.6% ，P＜0.05)，其中 FFDM 结合 DBT 准确诊断不伴钙化的肿块型病灶的比率明显高于 FFDM(76.8% vs. 47.5% ，P＜0.05) 。
结论：对于致密型乳腺，DBT 较 FFDM 能更敏感地检出乳腺癌，尤其是不伴钙化者，FFDM 结合 DBT 能显著提高诊断准确率，更适合于对致密型乳腺内的可疑乳腺癌筛查。

PU-3070
乳腺 X 线密度与乳腺癌的相关性研究进展

崔凤娇,罗娅红
辽宁省肿瘤医院

目的：本文综述了数字化乳腺 X线摄影对乳腺密度的评估及乳腺癌诊断率的影响，以及乳腺 X 线密度与年龄、月经情况、雌激素水平、生育情况、BMI 以及分子分型信息的相关性。
方法：对近年来有关乳腺 X 线密度的文章进行了阅读及总结，主要从以下三个方面总结了乳腺 X 线密度的应用、开发及研究进展：乳腺癌患者乳腺实质密度在不同年龄阶段的分布差异；乳腺癌患者的双侧乳腺实质密度差异；不同年龄段乳腺癌患者乳腺实质密度与月经情况、雌激素水平、生育情况、BMI 以及分子分型的相关性探索。
结果：年龄是影响乳腺密度的重要因素，随年龄的增长，乳腺密度逐渐减低，但不是绝对的；对于不同地域、不同种族的人群，乳腺密度有差异；致密型乳腺伴随高的患乳腺癌风险；乳腺密度与多种因素相关。乳腺密度是预测乳腺癌风险的一个指标，致密型乳腺与乳腺癌具有相关性，随着乳腺

密度的增加，乳腺癌诊断敏感度下降，数字化乳腺 X 线摄影技术可提高致密型乳腺乳腺癌的诊断敏感度。

PU-3071
量子计数乳腺 X 线摄影系统与常规几何成像乳腺 X 线摄影系统辐射剂量及图像质量的对比研究

肖勤,孙轶群,顾雅佳,彭卫军
复旦大学附属肿瘤医院

目的：量子计数乳腺 X 线摄影系统采用量子计数探测器，成像过程中不涉及可见光散射，理论上能在较低辐射剂量条件下保持图像质量。本研究以常规几何成像乳腺 X 线摄影系统为对照，研究量子计数乳腺摄影系统的辐射剂量及图像质量。 材料与方法：204 例年龄介于 40-54 岁疑似乳腺癌患者，随机分为两组。 A 组应用量子计数乳腺 X 线摄影系统，B 组应用常规几何成像系统进行乳腺摄影。每例均获取内外侧斜（MLO）位和头尾（CC）位摄影，记录两组患者的平均腺体剂量（AGD）和乳腺压缩厚度。由两名高年资（从业 5 年以上）乳腺放射学医师采用 4 分制量表，根据美国放射学会 2012 版 AAPM 实践指南，遵循双盲法进行主观图像质量评估。采用两独立样本 t 检验比较两组年龄分布，乳腺厚度以及 AGD，采用 Mann-Whitney U 检验比较两组图像质量，以 P<0.05 为差异有统计学意义。 结果：两组患者平均年龄分别为（46.9±3.9）及（46.8±3.7）岁，P=0.716，差异无统计学意义。MLO 位乳腺压缩厚度 A 组(53.8±11.4)mm，高于 B 组(50.0±10.1)mm，p=0.00，差异有统计学意义；CC 位乳腺压缩厚度 A 组(49.9±10.8)mm，高于 B 组(45.9±10.8)mm，P=0.00, 差异有统计学意义。A 组 MLO 位 AGD(0.55±0.19)mGy,显著低于 B 组 MLO 位(1.41±0.56)mGy，p=0.00；A 组 CC 位 AGD(0.60±0.21)mGy，显著低于 B 组(1.56±0.58)mGy，p=0.00。两组图像质量无显著差异，U=5304,P=0.603。结论：相较常规几何成像乳腺 X 线摄影系统，量子计数乳腺 X 线摄影系统在不损失图像质量的条件下，可降低患者平均乳腺检查剂量 60%以上。

PU-3072
乳腺断层摄影及彩色多普勒超声在乳腺导管原位癌的诊断价值比较

张晓娟,杨晓棠,赵晚苗
山西省肿瘤医院

目的：回顾性分析 DCIS（包括微浸润）DBT 与超声 BI-RADS 分类、有无钙化等影像表现的差异，比较两者对 DCIS 的诊断价值。
方法： 收集我院 2017 年 1 月～2018 年 12 月经病理证实的 184 例 DCIS（包括微浸润）患者，术前均进行乳腺断层摄影（DBT）及彩色多普勒超声检查，回顾性分析了患者的 DBT 及超声检查的病例资料。采用 SPSS16.0 统计分析软件，计数资料行 χ^2 检验，以 P＜0.05 时差异有统计学意义。
结果：184 例患者纳入本次研究，年龄 29～80 岁，平均 48±8 岁；其中 DCIS152 例（82.6%），伴微浸润 32 例（17.4%）。DBT 检查结果：无异常表现 7 例（3.8%）；单纯钙化征象 6 例（3.3%）；肿块 59 例（32%），其中形态规则 12 例（20.3%），不规则 47 例（79.7%%），结构紊乱 99 例（53.8%），结构扭曲 10 例（5.4%），非对称性致密影 3 例（1.6%）；伴钙化 115 例（62.5%），不伴钙化 56 例（30.4%）。彩超检查结果：无异常表现 9 例（4.9%）；单纯钙化征象 5 例

（2.7%），肿块 149 例（81.0%），其中形态规则 22 例（14.8%），不规则 127 例（85.2%），乳管扩张 13 例（7.1%），腺体增厚结构紊乱 8 例（4.3%）；伴钙化 69 例（37.5%），不伴钙化 81 例（44.0%）.统计结果显示：DBT 分类与彩超 BI-RADS 分类两组资料间比较，χ^2=41.095，P＜0.001，具有统计学意义；DBT 钙化检出率达 65.8%，彩超钙化检出率 40.2%，两组资料比较，χ^2=16.993，P＜0.001，具有统计学意义。其余组间比较无统计学意义。
结论：X 线摄影诊断最突出且无可替代的重要作用是发现乳腺内微钙化，而微钙化对于 DCIS 诊断意义重大，DBT 的诊断价值尤为突出，但对于肿块型 DCIS 患者 DBT 与超声相结合可起互补作用。

PU-3073
基于乳腺 X 线灰度直方图在乳腺良恶性肿块诊断中的价值

郭亚飞,赵鑫
郑州大学第三附属医院

目的：探讨 X 线直方图分析鉴别乳腺良恶性肿块的价值。
材料和方法：回顾性分析我院经手术病理证实的 92 例乳腺肿块性病变，其中恶性病变 55 例，良性病变 37 例。收集 92 例未经治疗的乳腺 X 线图像，用软件 Mazda 提取病变的感兴趣区(ROI)，针对病变 ROI 进行直方图分析，利用平均值、方差、偏斜度、峰度、第 1、10、50、90、99 百分位数特征，找出良恶性病变之间的显著性差异。
结果：利用直方图提取出的 9 个纹理参数中，方差、第 90 百分数、第 99 百分数具有统计学意义(P<0. 05)，并绘制 ROC 曲线，ROC 曲线下的最大面积分别为为 0.585、0.802、0.766，鉴别良恶性病变的敏感性分别为 80.0%、92.7%、92.7%，特异性分别为 40.5%、51.4%、48.6%。**结论：**直方图分析可以提供更多量化信息特征，为乳腺肿块的良恶性鉴别诊断提供了新的思路和方法。

PU-3074
Digital mammography improve diagnostic accuracy of breast microcalcification

Weimin Liu
The Third Affiliated Hospital of Sun Yat-Sen University

ObjectiveWe aimed at investigating diagnostic value of digital mammography (DBT) in breast microcalcifications of Asian women. **Methods**A retrospective analysis of 70 breast disease patients with 76 confirmed microcalcifications were enrolled. Clinical characteristics and diagnosis accuracy by full field digital mammography (FFDM) and DBT images were compared. **Results**52 malignant lesions and 24 benign lesions were found in 76 breast microcalcifications. FFDM presented with high sensitivity and low specificity with 94.2% and 45.8%, while DBT presented with high sensitivity and media specificity with 96.1% and 62.5%. The positive predictive value, negative predictive value and diagnostic coincidence rate of DBT were also higher than FFDM examination (84.7%, 88.2%, 85.5% vs. 79.0%, 78.5%, 78.9%). The area under curve (AUC) of DBT was significantly higher than FFDM examination (Z=2.322, P = 0.020) with 0.700±0.055 [0.584-0.800] and 0.793±0.052 [0.685-0.878]. Diagnosis decision by two image specialists indicated that DBT was more precise for breast microcalcification

diagnosis. **Conclusion**DBT improves the diagnostic accuracy and detection rate of microcalcifications in Asian women.

PU-3075

乳腺癌微钙化与 ER、PR 及 HER-2 表达的相关性

李冬芹
锦州医科大学附属第一医院

目的 探讨乳腺癌微钙化与雌激素受体（ER）、孕激素受体（PR）及人类表皮生长因子受体-2（HER-2）表达水平的关系。**方法** 回顾性分析 2017 年 9 月 - 2018 年 12 月于锦州医科大学附属第一医院经穿刺或手术病理证实的 152 例乳腺癌患者，按有无微钙化、微钙化的分布及形态记录乳腺癌患者的 X 线微钙化征象，并分析其与 ER、PR 及 HER-2 表达的相关性。**结果** 乳腺癌微钙化的存在、分布及形态与 ER、PR 的表达无关（P>0.05）；乳腺癌微钙化的存在、分布及形态与 HER-2 的表达有关（P<0.05）。微钙化呈线样或段样分布的 HER-2 阳性表达率 80.0%，细线样或细线分支状组 HER-2 阳性表达率 100%，乳腺癌微钙化呈集群分布、不定型或粗糙不均质钙化与 HER-2 阴性表达相关。**结论** 乳腺癌微钙化与 ER、PR 的表达无关，与 HER-2 的表达有关，因此可以从乳腺癌的钼靶 X 线微钙化特征去预测乳腺癌患者的预后因子的表达，从而为乳腺癌的治疗方案的选择提供一定的帮助。

PU-3076

多体位设计在乳腺 X 线摄影中的应用

何雅坤
四川省肿瘤医院

目的：探讨多体位设计在乳腺 x 线摄影中的应用 方法：应用美国 Hologic 乳腺机对 2018 年 1 月到 8 月乳腺 B 超结果显示腺体内靠近胸壁有可疑病灶的 500 个病人进行乳腺 x 线摄影。条件选择自动曝光模式。分两组进行，一组照常规的 CC 位及 MLO 位，另一组对有病灶侧加照 ML 位。 结果：加照侧位组的病灶检出率高达 90%。还有一部分由于包块太小，贴近胸壁太近，病人体型过瘦，乳房偏小等原因造成常规位置与侧位都无法显示。 讨论：乳腺 X 线摄影的常规位置 CC 位与 MLO 位对于一般的病灶显示完全足够，但如果病灶靠近胸壁压迫过程中容易遗漏病灶，这时我们发现加照侧位是达到乳腺靠近胸壁肿瘤显示的最佳方法。可见多体位设计在乳腺 X 线摄影中有着举足轻重的作用。

PU-3077

基于乳腺 X 线摄影及超声等影像学特征构建机器学习模型预测乳腺癌分子亚型 Here-2

马梦伟,徐维敏,陈卫国
南方医科大学南方医院

研究目的：乳腺癌是女性最常见的恶性肿瘤之一，其发生率逐年上升。研究表明人表皮生长因子受体 2（ＨＥR-２）在乳腺癌分子分型、预测靶向治疗疗效及预后中有重要价值，早期检测乳腺癌 HER-2 表达状态对个性化治疗乳腺癌至关重要。目前ＨER-２表达水平主要通过活组织标本免疫组织化学检测，为有创检查，且肿瘤的异质性可能导致误诊。乳腺 X 线摄影联合超声检查被认为是乳腺癌筛查及诊断的“黄金组合”。因此本研究通过开发和验证一种可解释和可重复的机器学习模型，依托临床信息联合乳腺 X 线摄影和超声影像学特征预测乳腺癌 HER-2 的表达状态。
研究方法：回顾性收集 2010 年 1 月至 2016 年 12 月在术前同一时间段内行乳腺 X 线摄影及超声检查并经病理学诊断证实为乳腺癌并经免疫组化证实为 HER-2 阳性的患者 320 例，通过查阅病例资料，收集每例患者的临床数据信息；而乳腺 X 线摄影及超声影像学特征均由两位具有 5 年以上诊断经验的乳腺诊断医生根据第五版 BI-RADS 通过共同阅片后所决定，总共提取 58 个影像学特征。将所收集的数据按照 7:3 的比例将数据分为训练组、测试组，基于支持向量机分类器，在建立模型前先对输入的特征值进行标准化处理，然后采用 5 折交叉验证法对分类性能进行验证，计算 SVM 的敏感性、特异性、准确性、阳性预测值、阴性预测值以及曲线下面积。
研究结果：该模型在术前预测乳腺癌 HER-2 表达效能的 AUC 值为 0.85(95% CI：0.729~0.875)，敏感度、特异度和准确度分别为 82.5%、83.4%和 86.7%。
研究结论：基于第五版乳腺 BI-RADS 特征描述，通过结合乳腺 X 线摄影和超声的影像学特征，并加入临床信息，构建的支持向量机模型预测乳腺癌 HER-2 的效能是可行的。

PU-3078
基于诊断效能的男性乳腺病变的数字化乳腺 x 线摄影及乳腺超声诊断价值对比分析

曾辉,徐泽园,曾凤霞,徐维敏,文婵娟,陈卫国
南方医科大学南方医院

目的
通过基于诊断效能，包括敏感性、特异性等指标的评价，探讨数字乳腺 X 线摄影及乳腺超声对男性乳腺病变的诊断价值。
方法
回顾性收集行乳腺 X 线摄影检查的男性乳腺肿块的病例，最后共纳入 89 例，部分病例同时行乳腺超声检查，共计 71 例。乳腺病灶的评价根据 2013 版乳腺影像报告和数据系统（breast imaging reporting and data system，BI-RADS）标准，通过 3 位高年资乳腺放射医师对征象进行分析，并作出影像 BI-RADS 分类，并以病理为金标准，最终评价数字乳腺 X 线摄影及乳腺超声对男性乳腺病变的诊断效能。
结果
(1) 89 例男性乳腺病变，年龄分布于 16-83 岁，平均年龄为 53.1 岁，中位年龄为 55.0 岁；临床触诊上，阴性 8 例，单侧包块 67 例（右侧 27 例，左侧 40 例），双侧包块 13 例，溢血 1 例。
(2) 数字乳腺 X 线摄影的 BI-RADS 分类为：1 类 5 例，2 类 62 例，3 类 5 例，4a 类 3 例，4b 类 1 例，4c 类 4 例，5 类 9 例。其中乳腺超声 71 例，BI-RADS 分类为：0 类 6 例，1 类 4 例，2 类 43 例，4a 类 5 例，4b 类 1 例，4c 类 7 例，5 类 5 例。其中超声诊断为 0 类的 6 例病例，在乳腺 X 线摄影中 BI-RADS 分类为 1 类 1 例、2 类 3 例，3 类 2 例。
(3) 数字乳腺 X 线摄影检查对男性乳腺疾病的敏感性为 100%，特异性为 98.7%，阳性预测值为 92.9%，阴性预测值为 100%，ROC 曲线下面积为 0.993；乳腺超声检查对男性乳腺疾病的敏感性为 83.3%，特异性为 84.7%，阳性预测值为 52.6%，阴性预测值为 96.2%，ROC 曲线下面积为 0.840。
结论

数字乳腺 X 线摄影及乳腺超声对男性乳腺疾病均具有较高的诊断效能，尤其数字乳腺 X 线摄影在敏感性、特异性方面表现出更为显著的优势，并且在 BI-RADS 分类方面更为准确。在剂量允许的基础上，对于男性乳腺疾病患者，数字乳腺 X 线摄影可作为一种推荐检查方法。

PU-3079

基于多排螺旋 CT 的深度学习标签对乳腺癌前哨淋巴结转移的术前预测价值

杨晓君
广东省人民医院

目的 探讨基于多排螺旋 CT 的深度学习标签在术前预测乳腺癌前哨淋巴结（SLN）转移状态的价值。
方法 回顾性收集 2016 年 1 月至 2018 年 12 月行术前多排螺旋 CT 胸部增强扫描并经病理证实的浸润性乳腺癌患者 374 例，将其进一步分为训练组 198 例（2016 年 1 月-2017 年 4 月）和验证组 171 例(2017 年 5 月-2018 年 12 月)。在 CT 动脉期增强图像上肿瘤最大层面的感兴趣区域提取深度特征，筛选并构建深度标签预测 SLN 转移状态及数目（1～2 枚或 2 枚以上）。利用多参数 logistic 回归构建深度学习 SLN 转移预测标签。使用 Mann-Whitney *U*检验分析深度学习标签与浸润性乳腺癌 SLN 转移状态之间的关系；应用受试者工作特征(receiver operating characteristic，ROC)曲线并计算曲线下面积(area under curve，AUC)、敏感度、特异度及准确度以评价深度学习标签术前预测浸润性乳腺癌 SLN 转移的效能，应用校准曲线评价标签的校准能力;并在验证组中验证其效能。
结果 在训练组中分别提取并筛选出 12 个、5 个深度特征，分别构建术前预测浸润性乳腺癌 SLN 转移深度标签和预测 SLN 的转移数目的深度学习标签。其中，术前预测浸润性乳腺癌 SLN 转移的深度学习标签效能在训练组中 AUC 值为 0.783 (95% CI:0.717-0.849)，在验证组中，AUC 值为 0.801(95% CI:0.738-0.865)；预测 SLN 的转移数目的深度学习标签也表现出良好的预测效能，在验证组中 AUC 值为 0.772(95% CI:0.726-0.818)。
结论 基于多排螺旋 CT 的深度学习标签对术前预测乳腺癌前哨淋巴结转移有一定价值，有望协助临床治疗决策。

PU-3080

肉芽肿性乳腺炎 2D X 线摄影的影像特点

周玉容,徐丽莹
武汉大学中南医院

背景：肉芽肿性乳腺炎是一种临床罕见的炎性乳腺疾病，它的临床特点和影像学征象与乳腺癌类似，是影像工作中容易误诊的一类疾病。但是它的治疗和预后与乳腺癌差异很大，因此，正确诊断此病具有较大临床意义。
目的：本研究的目的是回顾性地分析肉芽肿性乳腺炎的 2D X 线摄影相关征象及临床特点。
患者及方法：本文章回顾性研究了 2014.1.1-2017.12.31 在武汉大学中南医院就诊并确诊为肉芽肿性乳腺炎患者的钼靶图像，共计 33 例。这些患者最后都由组织病理学结果来确诊。
结果：这 33 例患者中，小于 30 岁的有 4 人，30-34 岁的有 15 人，35-39 岁的有 2 人，40-49 岁的有 7 人，50 岁及以上的有 5 人，总体发病年龄较轻；其中，胸痛的有 12 人（36%），皮肤红肿有 9 人（27%），可扪及肿块的有 26 人（79%），皮肤破溃窦道形成的有 2 人（6%），乳头回缩的有 4

人（12c%），腋窝淋巴结肿大的有 17 人（52%）；2D X 线摄影图像表现为非对称致密的有 28 人（85%），结构扭曲的有 9 人（27%），表现为肿块的有 5 人（15%），皮肤增厚 7 人（21%），2D X 线摄影为阴性的有 4 人（12%）。
讨论：肉芽肿性乳腺炎的 2D X 线摄影表现缺乏特异性，乳腺 MRI 及穿刺作为乳腺的辅助诊断手段，可以帮助鉴别肉芽肿性乳腺炎及乳腺癌

PU-3081

可疑无定形钙化：恶性风险分级研究

沈丽娟,姜婷婷,唐鹏洲,肖勤,彭卫军
复旦大学附属肿瘤医院

目的：结合临床及影像特征评估不同分布乳腺无定形钙化的恶性率，旨在细致管理无定形钙化恶性肿瘤风险。
材料和方法：PACS 系统中搜索 2016 年 1 月至 2018 年 12 月无定形钙化病例，纳入有明确病理结果病例 1098 例，由两名乳腺影像诊断医师（3 年、12 年工作经验）分别回顾性分析录入影像学特征及临床特征（临床症状、年龄、绝经情况、个人及家族史、乳腺腺体构成、钙化分布、定位、是否多发、最大径、伴随征象、新出现或较前增多、BIRADS 分级、病理结果）。以病理结果为金标准将病例分为三类：良性病变、高危病变及恶性病变，采用卡方检验、秩和检验及 Logistic 回归分析对影像及临床特征进行统计学分析。
结果：1098 例无定形钙化病例中 406 例（37.0%，符合 BI-RADS 4B 类）证实为恶性， 76 例（6.9%）为高危病变，616 例（56.1%）为良性病变。临床症状、年龄、绝经情况、钙化分布、是否多发、最大径、伴随征象均有统计学差异且为独立危险因素。集群样分布病例 659 例恶性率为 25.3%(4B)，段样 238 例恶性率为 74.4%（4C）,区域样 127 例恶性率为 37%（4B）。绝经前病例 791 例恶性率为 31.7%(4B)，绝经后病例 307 例恶性率为 50.8%(4C)。临床体检病例 578 例恶性率 9.0%（4A）且其中 61.5%为 DCIS；而体格检查阳性病例 310 例恶性率 83.9%（4C）。单发病例 628 例恶性率 46.8%，单侧多发 149 例恶性率 32.2%，双侧多发 321 例恶性率 19.9%。结合多个危险因素考虑临床体检绝经前患者中，集群样分布无定形钙化恶性率仅为 4.2%，其中多发者仅为 2.9%（4A）且 50%为 DCIS。
结论：无定形钙化的恶性率与分布、临床症状、绝经情况等密切相关，可结合危险因素进行危险度分层管理，对于体检无症状绝经前患者集群样分布恶性率较低，尤其是多发患者，组织学检查的假阳性率较高。

PU-3082

乳腺癌的多层螺旋 CT 征象与 VEGF 和、CD34 表达水平相关性研究

孔丹青
深圳市龙华人民医院

目的：探讨乳腺癌的多层螺旋 CT 征象与 VEGF-C 和 CD34 蛋白表达水平相关性研究。

方法：选取 120 例乳腺癌患者，同时期检查的 64 例非乳腺癌患者作为对照组，采用酶联免疫吸附法测所有定患者血管内皮生长因子(VEGF)水平，采用多层螺旋 CT 进行影像学检查，对 CT 图像进行分析，观察图像中肿块大小、形态、淋巴结转移、钙化区域、血流显像分级等，分析 CT 征象与 VEGF 蛋白表达和 CD34 蛋白表达之间的相关性。
结果：观察组患者组织 CD34 蛋白表达水平和血浆 VEGF 蛋白表达水平均显著高于对照组患者，差异有统计学意义；血浆 VEGF 蛋白表达和组织 CD34 蛋白表达水平在不同肿块大小、边缘形态及微小钙化点的患者体内无显著差异，但是肿块形态规则的患者体内血浆 VEGF 蛋白表达和组织 CD34 蛋白表达水平显著高于不规则患者，差异有统计学意义；血流显像分级在 2～3 级的患者体内血浆 VEGF 蛋白表达和组织 CD34 蛋白表达水平显著高于 1～2 患者，差异有统计学意义；存在淋巴结转移的患者体内血浆 VEGF 蛋白表达和组织 CD34 蛋白表达水平显著高于不存在淋巴结转移的患者，差异有统计学意义)；血浆 VEGF 蛋白表达和 CD34 蛋白表达之间呈正相关。
结论：乳腺癌 CT 图像征象与血浆 VEGF 蛋白表达和组织 CD34 蛋白表达之间存在相关性，可以作为无创性预测乳腺癌患者血浆 VEGF 蛋白表达和组织 CD34 蛋白表达的方式，为乳腺癌恶变程度和预后的判断提供更多的依据。

PU-3083
基于 X 线纹理分析鉴别诊断乳腺纤维腺瘤与良性叶状肿瘤

王婷婷
中国科学技术大学附属第一医院西区，安徽省肿瘤医院

摘要：目的 探讨 X 线纹理分析对乳腺纤维腺瘤与良性叶状肿瘤的鉴别诊断价值。**方法** 回顾性分析 2016 年 8 月至 2019 年 6 月，在我院术前均行数字化乳腺 X 线摄影共 115 例患者 X 线资料，并经手术病理证实为乳腺纤维腺瘤或良性叶状肿瘤，其中纤维腺瘤 55 例，良性叶状肿瘤 60 例；115 例患者共计 131 个病灶，其中纤维腺瘤多发 7 例，良性叶状肿瘤 2 例。利用 ITK-SNAP 软件对上述 115 例患者乳腺 X 线图像种的 131 个病灶进行 ROI 勾画，再使用美国 GE 公司提供的 A.K 软件，通过软件自动分析进行相关纹理提取分析，共提取 377 个纹理特征，经过 laso 降维，共提取 10 个有意义特征。所得结果应用 SPSS 软件，采用单因素方差分析及 LSD， $P<0.05$ 有统计学意义。**结果** 乳腺纤维腺瘤与良性叶状肿瘤位置、形状、肿瘤最大径、有无钙化、有无晕征等无统计学差异($P>0.05$)。2 组间纹理特征比较，提取 10 个有意义特征中，运用 SPSS 软件分析，其中 9 个 X 线纹理特征差异具有统计学意义($P<0.05$)。**结论 单**纯 X 线影像征象很难区分乳腺纤维腺瘤与良性叶状肿瘤，但 X 线纹理特征可以提高两者鉴别诊断能力，为临床治疗方案的选择提供更准确的影像参考信息。

PU-3084
Multidetector Computed Tomography-based Radiomics Nomogram for Preoperative Prediction of Axillary Lymph Node Metastasis in Breast Cancer

Xiaojun Yang
Guangdong Provincial People’s Hospital

Objectives: To assess the predictive value of preoperative multidetector computed tomography(MDCT)-based radiomics for axillary lymph node (ALN) metastasis in breast cancer patients.
Methods: A total of 231 consecutive female patients were retrospectively analyzed (primary cohort, n =120; validation cohort, n =111). Radiomics features were extracted from arterial-phase MDCT images of the whole primary tumor. LASSO logistic regression was performed to choose the key features and construct a radiomics signature. A radiomics nomogram incorporating this signature was developed on the basis of multivariable analysis in the primary cohort. The performance of nomogram was assessed with respect to its discrimination, calibration and reclassification. Clinical usefulness was estimated by decision curve analysis.
Results: The radiomics signature including 9 features was significantly associated with ALN metastasis. The radiomics nomogram, which incorporated the signature and CT-reported ALN status, distinguished ALN metastasis with an area under curve (AUC) of 0.792 in the primary cohort, and performance was similar in the validation cohort (AUC: 0.788) Discrimination of the radiomics nomogram exceeded that of CT-reported ALN status alone in both the primary cohort (p=0.026) and the validation cohort (p=0.008).Integrated discrimination improvement (IDI) and categorical net reclassification improvement (NRI) showed significant improvement in prediction value when the radiomics signature was added to CT-reported ALN status in the validation cohort (IDI 19.2%; p<0.001; categorical NRI 62.7%; *p*<0.001). Decision curve analysis supported that the radiomics nomogram is superior to CT-reported ALN status alone.
Conclusions: The proposed MDCT radiomics nomogram may help preoperative prediction of ALN metastasis in breast cancer patients.

两种乳腺 X 线导管造影图像分类系统 对溢液性乳腺病诊断价值分析

张燕芹[1],余建群[2],刘莹[2],梁春晓[2],李爽[2]
1.彭州市人民医院
2.四川大学华西医院

【研究目的】评估乳腺 X 线导管造影图像分类系统（Galactogram Image Classification System，GICS）和改良版乳腺 X 线导管造影图像分类系统（mGICS）对病理性乳头溢液（PND）患者的应用价值。**【材料与方法】**回顾分析 2017 年 1 月至 12 月行乳腺 X 线导管造影检查并获得病理结果的 PND 患者资料。共纳入 159 名患者，170 侧乳腺。对纳入研究 GL 图像进行 GICS 及 mGICS 分类。将 GICS 与 mGICS 各分类交叉对比，与病理结果对比，并计算 GICS、mGICS 检测恶性病变的诊断性能。**【结果】1.**本组病例全为女性，归入 GICS 0、1、2、3、4、5 类病例分别有 1、30、24、50、26、39 例。归入 mGICS 0、1、2、3、4a、4b、4c、5 类病例分别有 1、34、19、2、50、23、29、12 例。GICS 2 类有 4 例归为 mGICS 1 类。GICS 3 类全部归为 mGICS 4a 类。GICS 5 类被归入 mGICS 4b、4c、5 类，病例数分别为 9、18、12。**2.**病例结果为恶性病变 37 例，GICS 5 类最多，有 13 例（35.1%）；mGICS 1、4c、5 类较多，分别有 9 例、8 例、7 例。良性病变 130 例，GICS 3 类（mGICS 4a 类）最多，有 44 例，占 33.8%。**3.**GICS 检测恶性病变的敏感度、特异度、PPV、NPV、ROC 下面积分别为 45.9%、63.9%、26.1%、81.0%、0.614，mGICS 分别为 59.4%、30.8%、

18.8%、73.2%、0.624。【**结论**】**1.**GICS 与 mGICS 两种对 GL 图像征象的分类有助于临床分类处理。**2.**mGICS 将 4 类细分后，更利于良性病变准确分类。**3.**mGICS、GICS 的分类细则可能需要大样本数据支撑后进一步完善。

PU-3086
探讨 BI-RADS IV 类钙化的影像征象与病理的相关性研究

张毅力,梁挺,胡斌,杜红文
西安交通大学第一附属医院

目的 探讨数字乳腺 X 线引导下导丝定位的 BI-RADS IV 类钙化灶的影像征象与术后病理之间的关系。**方法** 收集 70 例患者（73 处 BI-RADS IV 类钙化灶行 X 线引导下导丝定位）的临床及影像资料，分析钙化灶的形态及分布等影像特征，并与术后活检病理结果进行对照分析。**结果** 73 处乳腺钙化病灶中，术前 BI-RADS IVA 类 24 例，BI-RADS IVB 类 35 例，BI-RADS IVC 类 14 例；其中不定型钙化 31 例，粗糙不均质钙化 13 例，细小多型性钙化 22 例，细线样或细线样分支钙化 7 例；呈散在分布 6 例，呈区域状分布 25 例，呈集群分布 33 例，呈线样分布 1 例，呈段样分布 8 例；所有患者行乳腺 X 线引导下定位并手术活检，其中恶性病变 25 例，良性病变 48 例；14 例诊断为 BI-RADS IVC 类 13 例病理为恶性，1 例为良性，35 例诊断为 BI-RADS IVB 类其中 10 例为恶性，25 例为良性病变，24 例诊断为 BI-RADS IVA 类 22 例病理为良性，2 例为恶性。**结论** 乳腺钙化灶的形态、分布特征与乳腺病变性质密切相关，基于乳腺 X 线引导下定位对 BI-RADS IV 类钙化中的乳腺癌早期诊断具有重要临床价值。

PU-3087
腺体复杂性的乳腺 X 线影像组学表型对乳腺癌患病风险的预测

张睿馨,许茂盛
浙江中医药大学附属第一医院

目的 使用影像组学特征确定乳腺 X 线成像实质复杂性的表型，并评估它们与乳腺密度和其他乳腺癌风险因素的关联。
材料与方法 选取从 2016 年 8 月 1 日-2019 年 3 月 28 日采用数字乳腺 X 线成像进行筛查的女性病人的横断面样本（n=1989；年龄 35~75 岁，平均 55.9 岁），使用计算机图像分析方法量化样本的乳腺密度，提取实质的纹理特征。采用无监督聚类算法识别和重现分开的训练集（1319 例）和测试集（670 例）的实质复杂性表型。使用 Fisher 精确检验、卡方检验（ x 2）和 Kruskal-Wallis 检验方法评估年龄、体质量指数、乳腺密度和估计的乳腺癌风险与表型的差异性。使用条件逻辑回归对年龄相匹配的独立病例对照样本（76 例被诊为乳腺癌，158 例对照）的表型与乳腺癌之间的初步关联进行评估。
结果 无监督聚类算法识别了筛选样本的 4 种与实质复杂性增加相关的表型,这些表型可以在训练组和试验组之间重现（P=0.001）。乳腺密度与表型的类别没有很强的相关性（线性趋势 R2=0.24）。低-中复杂表型[390/2029（19％）]的致密乳腺比例最低 [8/390（2.1％）]，而其他表型的乳腺致密性比例相似 [高复杂表型 140/291（48.1%），低复杂表型 275/511（53.8%）]。在独立病例对照样本中，表型与乳腺癌显著相关（P=0.001）。把表型添加到乳腺密度和体质量指数所在的模型中，模型的鉴别能力提高（曲线下面积为 0.84 和 0.80；P=0.03）。
结论 影像组学表型在获取乳腺 X 线成像腺体复杂性上优于传统的乳腺密度测量方法和已制定的乳腺癌危险因素评估方法。

X 线摄影微钙化与乳腺癌临床病理特征的相关性分析

荣小翠,康一鹤,杨光,薛晶,武中林,吴勇超
河北医科大学第四医院

【摘要】目的 探讨微钙化与乳腺癌临床病理特征的相关性。方法 回顾性收集我院 2011 例乳腺癌患者的临床病理及影像资料。根据 X 线摄影检查是否存在微钙化，分为微钙化组和无微钙化组。采用 logistic 回归分析微钙化与乳腺癌临床病理特征的相关性。结果 微钙化组乳腺癌占 42.3%（850/2011），无微钙化组乳腺癌占 57.7%（1161/2011）。单因素分析结果显示：年龄、月经状态、就诊原因、病理学类型、组织学分级、脉管瘤栓、PR、HER-2、Ki67、是否伴有导管原位癌、肿瘤大小、分子分型及腺体类型与微钙化型乳腺癌均相关（均 P<0.05），而腋窝淋巴结转移、ER 与微钙化无关（均 P>0.05）。多因素 logisitic 回归分析显示：年龄、月经状态、组织学分级、脉管瘤栓、HER-2、是否伴有导管原位癌、分子分型及腺体类型与微钙化明显相关（均 P<0.05）。结论 微钙化与乳腺癌的临床病理特征存在一定的相关性。

原发性乳腺高分化血管肉瘤的影像学表现

黄丽萍
南昌市第三医院

简要： 目的 探讨原发性乳腺高分化血管肉瘤的影像学表现和临床特点，从而提高对该肿瘤的认识。**方法** 对 3 例在我院诊治经病理证实的乳腺高分化血管肉瘤进行回顾性分析，并结合文献总结。**结果** 3 例乳腺彩超均表现为多发大小不等的囊状及长条状的无回声区，无实性占位回声，无异常血流信号；乳腺 X 线均表现为多发结节状、团絮状的较腺体密度稍高的增浓影，无分叶、毛刺及钙化；磁共振 T2WI 均表现为伴有多发分隔的囊性病灶，无明显实质成分，囊内 DWI 图像呈高信号、但 ADC 值未减低，增强扫描，囊腔壁及分隔均呈无或轻度强化。病灶有向腋窝进展的趋势。**结论** 当临床发现影像表现为多发囊性结构而无明显实质成分及无明显异常强化，并且肿块进展快、体积大而触诊柔软的乳腺肿块时，应考虑到高分化血管肉瘤的可能。

PU-3090
乳腺线摄影及彩超对结构扭曲病变的诊断效能对比

黄美铃
福建医科大学附属第二医院

研究乳腺 X 线摄影（全数字化乳腺摄影 FFDM 与数字乳腺断层摄影 DBT）及彩超对于结构扭曲良恶性病变诊断效能对比研究及结构扭曲在 X 线征象的分析方法。**方法：**收集本院 2013 年 6 月～2018 年 12 月期间就诊的 51 例均接受 FFDM、DBT 及彩超检查且发现单纯结构扭曲征象，同时具有病理结果，根据乳腺影像报告和数据系统进行阅片诊断，比较三种影像学方法的诊断效能及结构扭曲的征象分析。**结果：**通过 Fisher 精确算法分析结构扭曲 X 线征象在良恶性鉴别存在显著性差异

（P<0.05）。通过 ROC 曲线分析三种影像学方法在乳腺疾病诊断效能。研究发现，三者曲线下面积均大于 0.5，是具有诊断价值的。**结论：**DBT 相对于 FFDM、彩超能更好地观察结构扭曲病变，提高诊断效能。

PU-3091
数字乳腺断层摄影在乳腺结构扭曲征象中的应用

邢姗姗,魏瑶,芦春花
南昌大学第二附属医院

［摘要］ **目的** 探讨数字乳腺断层摄影(DBT)在乳腺结构扭曲征象中的应用。**方法** 共收集 58 例经 DBT 发现结构扭曲征象的患者,分别对 FFDM 及 DBT 图像进行影像诊断，其中 41 例在 1 个月内行乳腺超声检查。以病理诊断为金标准，比较 DBT 与 FFDM 对乳腺结构扭曲病变的诊断优势，并评估 DBT 与超声对良恶性结构扭曲病变的诊断价值。**结果** 在 DBT 上发现的 58 例结构扭曲病变中，FFDM 图像上仅发现 23 例，差异有统计学意义（X^2=33.029,P＜0.001）。FFDM 检出 23 例中，中-少量腺体型 6 例，致密腺体型 17 例；未检出的 35 例中,致密型及中-少量型分别为 33 例、2 例，差异有统计学意义（X^2=4.845,P＜0.05）。其中行超声检查的 41 例中，恶性病灶 23 例，良性病灶 18 例。DBT 正确诊断恶性病变 21 例，良性病变 13 例；超声正确诊断恶性病变 19 例，良性病变 16 例；Kappa 检验结果显示，DBT、超声对结构扭曲病变良恶性的诊断与病理结果的 K 值分别为 0.647（P＜0.001）、0.706（P＜0.001）。DBT 与超声对结构扭曲病变良恶性诊断的敏感度及特异度分别为 91.30%（21/23）vs.82.60%（19/23）和 72.22%（13/18）vs.88.89%（16/18）。两者 ROC 曲线下面积（AUC）分别为 0.797、0.906，差异无统计学意义（Z=1.453，P>0.05）。**结论** 与 FFDM 相比，DBT 能明显提高乳腺结构扭曲病变的检出率。DBT 与超声对结构扭曲病变良恶性的诊断与病理结果均存在一致性，且两种检查的诊断效能相当。DBT 上检测到的 AD 恶性程度较高，有必要进行活检。

PU-3092
钼靶、导管造影与 MRI 对乳腺导管内乳头状瘤的诊断价值分析

朱丹
上海交通大学医学院附属第九人民医院

目的 分析钼靶、导管造影及 MRI 检查在乳腺导管内乳头状瘤诊断中的影像表现。
方法 回顾性分析于 36 例经病理证实的乳腺导管内乳头状瘤病例，患者术前均行钼靶、导管造影及 MRI 检查。
结果 钼靶及 DWI 对于导管内乳头状瘤诊断参考价值有限；导管造影对于大导管内病变显示较好，可显示特异性乳头状结构，而对于周围型导管内乳头状瘤敏感性较差；增强 MRI 肿块样强化病变多呈良性征象；非肿块样强化病变形态学易与恶性病变混淆；导管样强化病变与导管原位癌强化方式相仿；隐匿性病变病理上均属于周围型导管内乳头状瘤。
结论 钼靶、导管造影及 MRI 对于诊断导管内乳头状瘤各具有优势，故建议联合使用，有利于进一步降低误诊风险。

PU-3093

男性乳腺结节良恶性分析

赖庆园,董越
辽宁省肿瘤医院

目的 探讨男性乳腺结节良恶性影像学特点
材料和方法 本研究为临床回顾性研究。从辽宁省肿瘤医院收集 1 年内经影像学发现乳腺结节的男性患者 9 名，年龄 35-68 岁，平均为 52.7 岁。所有患者均进行至少两项影像学检查，并均病理穿刺活检。评价男性乳腺结节在影像学诊断的价值。

结果 男性乳腺结节发现较早，肿块不大。9 例患者都为单发病灶，全都位于乳头后方，其中 2 例位于右侧乳腺，7 例位于左侧乳腺。结节大小在 10-20mm 范围内，仅 1 例大小约 88mm（乳腺转移瘤）。3 例患者行钼靶检查， 1 例分叶状，呈高密度，边界清楚，周边见环状低密度影（炎性肉芽肿性病变）；2 例不规则，其中 1 例肿块密度局部增高，内缘边界欠清，见少许毛刺，肿块内见集簇状微钙化，伴周围结构扭曲（浸润性导管癌），另外 1 例密度欠均匀，脂肪密度为主，边界欠清，周围结构正常。

CT 检查共 9 例患者，表现为乳内软组织密度肿块影，密度欠均匀，5 例病灶边界不清，其中 3 例肿块周围有晕，2 例周围有少许腺体分布。仅 1 例患者腋窝可见肿大淋巴结。

超声检查共 4 例患者，1 例表现为中等回声，卵圆形，长轴平行于皮肤，后方无声影，内未见异常血流信号。3 例为低回声，局部见等回声，呈分叶状，边界欠光整，周边见少许血流信号，其中 2 例后方回声增强（炎性肉芽肿性病变），1 例后方回声呈混合回声伴回声减弱（慢性炎症伴局灶脓肿）。

MR 增强共 4 例患者。ADC 值大于 0.001mm2/s，共 3 例，边缘多不光整，其中 1 例增强呈较均匀环形强化，1 例见不规则强化结节，1 例呈不均匀环形强化；ADC 值小于 0.001mm2/s，共 1 例（浸润性导管癌），不规则，呈长 T2 信号肿块影，信号不均匀，边缘毛糙不光整，增强扫描强化不均匀，TIC 曲线初始相呈快速强化，延迟期呈平台型，DWI 呈高信号。
结论 结合结节形状、边缘、密度、钙化、ADC 值及强化方式可以对结节进行良恶性鉴别。

维吾尔、哈萨克、汉族等不同民族女性乳腺导管分型及其与导管疾病的关系

曾莉,宫悦
新疆伊犁哈萨克自治州友谊医院

目的 探讨乳腺导管 X 线解剖形态及分型与导管疾病之间的关系。**方法** 对 185 例 236 支溢液导管孔行乳腺导管造影检查，分析其影像征象，对导管分型并与导管疾病进行比较。**结果** 多支型 170 支（72%）；少支型 50 支（21.2%）；单支型 16 支（6.8%）。乳腺导管扩张症 140 支（59.3%）；导管内乳头状瘤 69 支（29.3%）；导管未见异常 27 支（11.4%）。 **结论** 正确认识不同民族乳腺导管的 X 线解剖形态与分型，对少数民族地区乳管系统疾病的诊断与治疗具有重要临床价值。

PU-3095
乳腺导管内乳头状瘤与导管 X 线分型及不同民族之间的相关性

曾莉,宫悦
新疆伊犁哈萨克自治州友谊医院

目的 探讨导管内乳头状瘤与乳腺导管 X 线解剖形态分型及不同民族之间的关系。**方法** 对 188 例 245 支溢液导管孔行乳腺导管造影检查，分析其影像征象与导管分型之间的关系进行分析。**结果** 多支型导管 174 支占 71.0%良性乳头状瘤发病 28 例占 16.1%，恶性 4 例占 2.3%；少支型导管 53 支占 21.6%，良性乳头状瘤发病 24 例占 45.3%，恶性 4 例占 7.5%；单支型导管 18 支占 7.3%，良性乳头状瘤发病 12 例占 66.7%。 **结论** 本组良性乳头状瘤的发病率以单支型多见，少支型次之，多支型较少，其发病率与导管分型有明显的相关性；恶性导管内乳头状瘤以少支型发病较高，单支型较少；正确认识乳腺导管的 X 线解剖形态与分型及不同民族之间的关系，对导管内肿瘤的诊断与治疗具有重要意义。

PU-3096
乳腺包虫病的影像学特征及诊断

曾莉,宫悦
新疆伊犁哈萨克自治州友谊医院

目的 分析乳腺包虫病的 X 线及 CT 影像表现，探讨其影像特征。**方法** 分析经手术证实的 11 例病例的 X 线影像资料，其中 1 例 CT 影像资料并对照手术病理进行分析。**结果** 11 例乳腺包虫囊肿，9 例为单发，2 例为多发，其中 1 例单发者因外伤而破裂。乳腺 X 线征象表现为大小不等单发或多发类圆阴影，密度高或低，边缘光滑锐利，5 例出现钙化中，2 例表现为囊壁弧线形“蛋壳”样钙化，3 例囊肿内有斑点状钙化，1 例破裂后呈空洞样改变，出现“日环蚀”征。其中 1 例乳腺 CT 表现：呈类似水样密度的类圆低密度阴影，边界光滑锐利，界限清，有完整包膜，内后方可见斑点状高密度钙化影。**结论** 乳腺 X 线及 CT 检查能准确显示乳腺包虫病囊肿的部位和形态特征，结合临床及流行学史能提高对该病的认识。

PU-3097
乳腺癌筛查及危险因素调查初探

曾莉,宫悦
新疆伊犁哈萨克自治州友谊医院

目的 通过回顾性调查乳腺病患者的自然状况与乳腺癌发病关系的内在联系，分析其危险因素，找出差异性，提出控制对策**方法** 采用回顾性调查的方法，将 2017 年 6 月~2018 年 6 月新疆伊犁州友谊医院乳腺病就诊病例 1986 例，设置统表格进行调查，利用数据库进行筛选，并进行统计学分析。**结果** 1986 例乳腺就诊妇女人群中，患各类乳腺疾病 943 例（47.5%），其中增生患者 845 例（42.54%），乳腺纤维腺瘤 32 例（1.61%），乳管系统疾病 22 例（1.11%），乳腺癌 44 例（2.22%）。分析结果分为文化程度高，体重指数高，精神心理压抑，性格内向，有女性生殖系统病史，摄入高脂高糖饮食为主要因素，可增加发病危险性。而常年清淡饮食及避孕年数多，哺乳超

过 6 个月为保护因子。**结论**。 高危人群中文化程度高、体重指数高、长期精神压抑、性格内向、患女性生殖系统疾病者内在联系密切，发病率较高。

PU-3098

乳腺结节性筋膜炎 1 例

艾莉
重庆市第七人民医院

乳腺良性疾病中，乳腺结节性筋膜炎比较少见，作者遇到 1 例，已经手术病理证实，现报告如下。结节性筋膜炎(nodular fasciitis，FN) 又称假肉瘤性筋膜炎(pseudosarcomatous fasciitis) ，是由 Kandahar 于 1955 年首次描述并命名。2012 年世界卫生组织肿瘤组织学分类将结节性筋膜炎定义为一种自限性、形成肿块的纤维母细胞、肌纤维母细胞的克隆性增生，确定其属于良性病变[1]。结节性筋膜炎的病因与发病机制目前尚不明确，有观点认为与外伤或感染等因素有关。此病可发生于任何年龄，多为 20-40 岁青年人，男女均可发病，好发部位为前臂、躯干、头颈部的皮下，发生于乳腺者非常少见。典型的临床表现为皮下筋膜、肌肉组织或实质脏器内迅速生长的肿块，病程短，多不超过 3 个月。乳腺结节性筋膜炎绝大多数发生于女性，偶见男性患者报道[2]，一般为单侧乳腺孤立性肿块。国内外有文献认为[3-5]乳腺结节性筋膜炎影像学表现无特异性，乳腺 X 线摄影常表现为不规则，分叶状肿块，超声检查多表现为囊性浸润灶。Brown 等[6]认为因为该病发病年龄较轻，且乳腺 X 线检查阴性率较高，因此不作为首选检查。但是随着 DBT 的出现，它能更清晰地显示病灶及其背景，使乳腺 X 线诊断的误诊率及漏诊率明显地降低，极大地提高了阳性率，对乳腺结节性筋膜炎与乳腺其他良恶性疾病的鉴别诊断亦具有较高的价值。本研究仅搜集 1 例，不能完全代表乳腺结节性筋膜炎的所有 X 线征象，仍需大量的样本对其 X 线表现进行研究总结概括，其最终诊断需要病理及免疫组化学确定。乳腺结节性筋膜炎是一种自限性良性疾病，预后良好，治疗以手术切除为首选，完整切除后很少复发，即使再复发，仍可再行手术切除。

PU-3099

Digital Breast Tomosynthesis Plus Synthesis Two-dimensional images for Breast Cancer Screening :A Systematic Rewiew and Meta-analysis

Hongyan Zhou,Tao Yu
Cancer Hospital of China Medical University，Liaoning Cancer Hospital＆Institute

Purpose: We evaluated the benefit of digital breast tomosynthesis (DBT) plus synthesized two-dimensional images (s2D) for breast cancer screening compared to full-field digital mammography (FFDM) alone, with a focus on cancer characteristics. Methods: We searched electronic databases including PubMed, EMBASE, the Cochrane Library, Web of Science, and Chinese Biomedical Literature Database, from 1950 to June 2019 and relevant references for published studies comparing DBT plus s2D versus FFDM alone for breast cancer screening. Pooled risk ratios (RRs) for various pathologic results were determined using random effects models. Results: Five eligible studies were included. Pooled RRs superior cancer detection for DBT plus s2D than FFDM alone for all types of breast cancer (1.35; 95% CI 1.13－1.62), and invasive cancer (1.74;

95% CI 1.23－2.47); however, DBT plus s2D did not increase detection of carcinoma *in situ* (1.14; 95% CI, 0.73－1.78). DBT plus s2D decreased recall compared to FFDM alone. Conclusion: DBT plus s2D detected early invasive breast cancer that may be missed by full-field digital mammography alone. DBT plus s2D described the characteristics of breast cancer, which is great significance in predicting the prognosis and treatment of patients.

PU-3100
乳腺 X 线摄影与乳腺断层摄影对乳腺病灶特征描述的一致性分析

周宏岩
辽宁省肿瘤医院

目的 探讨乳腺 X 线摄影（mammography,DM）与乳腺断层摄影（digital breast tomosynthesis,DBT）对乳腺病灶特征描述的一致性分析
方法 回顾性分析来我院同时进行乳腺 DM 和 DBT 检查发现乳腺病灶的患者资料，对 DM、DBT 发现的乳腺病灶的最大直径、形态、边缘、密度、深度、象限、钟点方向、距乳头距离、乳腺实质 BI-ARDS 分类、可疑性钙化分布、可疑性钙化形态及最终分类进行一致性分析。
结果 乳腺检查发现乳腺病灶的患者共 217 例，两种方法共发现 258 个病灶，DBT 发现病灶 257 个，DM 发现病灶 172 个，二者共同发现病灶 171 个，其中可疑性钙化 23 例，结构扭曲 15 例，肿块 158 例，不对称致密 62 例。两种方法检查乳腺病灶的钟点方向、距乳头距离、象限、深度一致性分别为 0.842、0.988、0.854、0.845。两种方法图像特征描述的一致性参数分别为最大直径 0.967、形态 0.911、边缘 0.943、密度 0.936。两种方法钙化特征描述的一致性参数可疑性钙化分布 0.864、可疑性钙化形态 0.940。形态乳腺实质 BI-ARDS 分类一致性参数为 0.945。病灶 BI-ARDS 分类一致性参数为 0.939。
结论 在乳腺病灶诊断方面，DBT 和 DM 具有较好的一致性，DBT 较 DM 可以发现更多的乳腺病灶，可作为乳腺 X 线摄影的补充方法应用于乳腺癌诊断及新辅助化疗疗效评价等方面。

PU-3101
乳腺浸润性导管癌相关病理免疫组化指标表达特点和数字化钼靶摄影影像学特征比较

姚娟
新疆医科大学第一附属医院

目的：对比分析新疆地区维吾尔族与汉族女性乳腺浸润性导管癌相关病理免疫组化指标表达特点和数字化钼靶摄影相关影像学特征。方法：本研究通过对 122 例汉族女性及 42 例维吾尔族女性乳腺浸润性导管癌患者钼靶表现特点及 ER、PR、HER-2、KI-67 免疫组化指标表达进行回顾性对比分析，探讨二者差异性及不同民族乳腺癌 X 线征象与免疫组化指标相关性分析。结果： 新疆地区维吾尔族女性及汉族女性乳腺浸润性导管癌乳腺钼靶表现为肿块伴钙化二者差异有统计学意义；维吾尔族女性乳腺浸润性导管癌 HER-2、KI-67 阳性表达率差异有统计学意义；汉族女性肿块边缘有毛刺 HER-2 阴性表达较无毛刺组高，肿块边缘有血管聚集者 HER-2 阳性表达率较无血管聚集者高，有淋巴结转移者 KI-67 阳性表达率较无淋巴结转移者高；而维吾尔族女性乳腺浸润性导管癌肿块直径越大，ER、PR 阴性表达率越高，肿块边缘有毛刺者 ER、PR 阳性表达率较无毛刺者均偏高，肿块边缘有血管聚集者及腋窝下有淋巴结转移者 HER-2 阳性表达率较无毛刺者及无淋巴结转移者均片高，

肿块伴钙化者 ER 阴性表达率较无钙化者高。结论：新疆地区维吾尔族女性及汉族女性乳腺癌钼靶表现特点及相关免疫组化指标之间存在一定差异性，同时通过对不同民族乳腺钼靶表现特点与 ER、PR、HER-2、KI-67 免疫组化指标的相关性进行分析，在一定程度上可以通过乳腺钼靶无创检查方法间接预测乳腺癌相关免疫组化指标特点，为不同民族乳腺癌临床诊断、 治疗及远期预后提供更多信息及参考。

PU-3102
早期乳腺癌患者 MRI 及数字乳腺断层摄影技术回顾性分析

许新
辽宁省肿瘤医院

目的： 乳腺癌是世界范围内危害女性健康最常见的恶性肿瘤之一，据统计，全世界每年新发乳腺癌病例 120 万，死亡病例 50 万。近年来由于人们生活方式，居住环境以及其它因素的影响下，不但乳腺癌的发病率逐年上升，而且发病年龄有年轻化的趋势。2012 年世界卫生组织（WHO）统计数据显示乳腺癌位居全部女性肿瘤的第二位，而当年我国乳腺癌发病率为 22.1/10 万，已经跃居我国女性肿瘤第一位。乳腺癌的早发现、早诊断、早治疗对提高患者的五年生存率以及降低死亡率有着重要的临床意义，有文献报道乳腺癌处于不同的临床分期，其五年生存率有很大的差异，原位癌为 100%，I 期为 84~100%，II 期为 76~87%，III 期为 38~77%。由此可见乳腺癌的早发现，早诊断能有效改善患者预后并降低病死率。本文旨在认识 MRI 和数字乳腺断层摄影技术联合检查在诊断早期乳腺癌中的作用。

方法： 共收集我院经临床穿刺活检或者手术病理证实，并拥有完整临床资料的 54 例早期乳腺癌患者，纳入标准：1.进行影像学检查之前未进行乳腺手术治疗、放化疗及活检。 2.患者诊断结果由手术或者穿刺活检病理证实 3.患者均行数字乳腺断层摄影及乳腺磁共振检查 4.患者病灶大小≤2.0 cm 且腋窝无肿大淋巴结及远处转移灶。对其 MRI 及数字乳腺断层摄影检查表现作回顾性分析。

结果：54 例患者中术前 MRI 发现 49 例各有 1 个肿块，3 例各有 2 个肿块，2 例各有多个肿块，术前诊断均为恶性；术前 DBT 检查发现肿块 50 例,术前诊断 BI-RADS 4B 级及以上 46 例，BI-RADS 4A 级及以下共 4 例。

结论：MRI 与数字乳腺断层摄影二者结合能提高早期乳腺癌的诊断符合率。

PU-3103
数字乳腺断层摄影在诊断乳腺肿瘤中的临床应用

许新
辽宁省肿瘤医院

目的：乳腺癌是全世界危害女性健康最常见的恶性肿瘤之一，据估计，每年全球新发乳腺癌病例一百二十万，死亡病例五十万。世界卫生组织（WHO）在 2012 年的数据显示乳腺癌位于女性全部肿瘤的第 2 位，而在我国乳腺癌的发病率为 22/10 万，已经成为我国全部女性肿瘤的第 1 位。由于近年来人们生活方式逐渐西方化，以及生活环境以及其它未知因素的影响下，乳腺癌的发病率不但逐年上升，而且发病年龄有越来越年轻化的趋势。本文旨在讨论数字乳腺断层摄影技术在诊断乳腺肿瘤中的临床价值应用,为乳腺癌的诊断提供一个简便、易行、可靠的检查方法。

方法：选取我院 124 例经穿刺活检或者手术病理确诊为乳腺良恶性肿瘤的患者。纳入标准:1.进行影像学检查之前未行乳腺放化疗、手术治疗及活检 2.患者诊断结果由手术或者穿刺活检

病理证实。 3.患者均行数字乳腺断层摄影检查。对其结果作回顾性分析，观察乳腺肿瘤典型影像表现，以病理学诊断结果为金标准，确定肿瘤良恶性。计算诊断良恶性肿瘤的诊断符合率。

结果：经数字乳腺断层摄影检查，共检出恶性肿瘤 73 例，良性肿瘤 51 例，并将其和穿刺活检以及手术病理结果做对比，DBT 检查诊断恶性肿瘤和良性肿瘤的符合率分别为 91.25%和 86.27%，该差异有统计学意义（P＜0.05）。

结论：数字乳腺断层摄影技术检查中，X 线管围绕乳腺进行一定角度的的旋转，每进行一次旋转就曝光一次，获得不同角度下的投射数据，最后由计算机重建出平行于探测器平面的断层融合图像.传统数字乳腺 X 线摄影由于病变组织与正常组织相重叠，可能会遮挡病灶，导致病灶的漏诊或者误诊。而数字乳腺断层摄影技术则能克服这种缺陷，增加诊断的灵敏度与特异度。相较于传统 X 线摄影更能清晰显示病灶的边缘、形态，从而提高诊断准确率

PU-3104
数字乳腺断层摄影在诊断早期乳腺癌中的临床价值分析

许新
辽宁省肿瘤医院

目的 乳腺癌已经成为全球危害广大女性健康最为常见的恶性肿瘤之一，据测算，全球每年新发乳腺癌病患者至少为一百万，死亡患者大约为五十万。世界卫生组织在 2012 年的统计报告中显示乳腺癌已经位居全部女性肿瘤的第 2 位，而我国乳腺癌的发病率也已达到 20/10 万，已经成为危害我国女性健康的最大杀手。由于人们生活习惯逐渐改变，生存环境及其它已知或未知因素的影响下，乳腺癌的发病率不但有逐年上升的趋势，而且发病年龄也愈发年轻化。本文旨在讨论数字乳腺断层摄影在诊断早期乳腺癌中的临床价值，为乳腺癌的诊断提供一个准确、经济、可靠的方法。

方法 选取在我院就诊，经数字乳腺断层摄影检查诊断为早期乳腺癌的患者 116 例，纳入标准为：1.进行数字乳腺断层摄影检查之前未行手术治疗、放化疗及穿刺活检 2.患者诊断结果由穿刺活检病理或手术切除病理证实 3.患者病灶大小≤3.0cm 且腋窝无淋巴结肿大以及远处转移。然后分析数字乳腺断层摄影在诊断早期乳腺癌的临床应用价值。

结果 早期乳腺癌共 116 例 其中肿块型 66 例，簇状分布钙化 41 例，钙化合并肿块 24 例，结构紊乱 9 例 ，不对称致密 4 例。

结论 数字乳腺断层摄影能晰显示病灶的边缘、形态，从而提高诊断早期乳腺癌的准确率。

PU-3105
乳腺非钙化型导管原位癌：乳腺断层融合技术和 X 线摄影及超声诊断的对比研究

苏晓慧,林青,崔春晓
青岛大学附属医院崂山院区

目的 对比分析数字乳腺断层融合技术（Digital Breast Tomosynthesis, DBT）、数字乳腺 X 线摄影（Digital Mammography, DM)及超声检查（Ultrasonography, US）对乳腺非钙化型导管原位癌（Ductal Carcinoma In Situ ，DCIS)的诊断价值。**材料和方法** 110 例非钙化型乳腺导管原位癌患者纳入我们的研究中。以乳腺影像报告及数据系统（Breast Imaging Report and Data

System，2013，BI-RADS 第五版）为诊断标准，比较三种检查方法对全部非钙化型 DCIS、不同乳腺致密度中非钙化型 DCIS 检出率及诊断符合率的差异。**结果** DBT、DM 及 US 对全部非钙化 DCIS 的检出率分别为 84.5%、70.9%、94.5%，对致密型乳腺中非钙化 DCIS 的检出率分别为 82.0%、65.2%、96.6%；全部非钙化 DCIS 及致密型乳腺中非钙化 DCIS，US 的检出率高于 DBT 及 DM，DBT 的检出率高于 DM，差异均具有统计学意义。DBT、DM 及 US 对非钙化 DCIS 的诊断符合率分别为 70.0%、44.5%、69.1%，对致密型乳腺中非钙化 DCIS 的诊断符合率分别为 96.6%、65.2%、66.3%；全部非钙化 DCIS 及致密性乳腺中非钙化 DCIS，US 及 DBT 的诊断符合率均高于 DM，差异均具有统计学意义；DBT 的诊断符合率稍高于 US，但差异无统计学意义。**结论** 对于非钙化型 DCIS 及致密性乳腺组织中非钙化 DCIS 病变，US 的检出更有优势。DBT 作为一种新兴的数字乳腺 X 线摄影技术，对于非钙化导管原位癌病变的诊断具有重要的价值。

PU-3106
数字乳腺 X 线和断层摄影及超声检查对乳腺导管原位癌诊断价值的对比研究

苏晓慧,林青
青岛大学附属医院崂山院区乳腺影像科

目的：对比分析数字乳腺断层摄影（Digital Breast Tomosynthesis ，DBT）、数字乳腺 X 线摄影（Digital Mammography ，DM)及超声检查（Ultrasonography，US）对乳腺导管原位癌（Ductal Carcinoma In Situ ，DCIS)检出率及诊断符合率的差异。**材料和方法：**回顾性分析 412 例经手术病理证实的乳腺导管原位癌的 X 线及超声资料，其中钙化型病变 302 例、非钙化型病变 110 例，以乳腺影像报告及数据系统（Breast Imaging Report and Data System，2013，BI-RADS 第五版）为诊断标准，比较数字乳腺断层摄影、数字乳腺 X 线摄影及超声检查对 DCIS 的检出率、诊断符合率的差异。P＜0.05 差异有统计学意义。**结果：**对于本研究中所有 DCIS，DBT 较 DM 对 DCIS 的检出率（95.5% vs 92.2%）及诊断符合率（87.6% vs 78.2%）均较高，DBT 较 US 的诊断符合率（87.6% vs76.2%）较高，差异有统计学意义。**结论：** DBT、US 检查各具优势，DBT 作为一种新兴的数字乳腺 X 线摄影技术具有广泛的应用前景。

PU-3107
关于乳腺癌的发生部位与筛查敏感性及其影响因素的研究

武慧慧,马彦云,姜增誉
山西医科大学第一医院

目的：探讨乳癌部位与筛查性乳腺 x 照片敏感性间关系，评估其是否受 BMI 及 MD 影响。方法：选取行 FFDM 检查的乳癌患者 273 例，其中筛查发现者 150 例，间隔期者 123 例。筛查乳腺 X 线包括每个乳腺 MLO 和 CC 两视图。有关女性特征的资料由病史询问获得。筛查发现是在指在异常后 6 月内诊断出的癌。间隔性癌是在一次异常的乳房 x 检查后 6 至 24 个月内被诊断的乳癌，或一次正常的乳房 x 检查后 24 个月内被诊断之。由一位经验丰富的放射医生据 MLO 及 CC 盲评估 MD 及癌症的位置。为了评估肿瘤的位置，将乳腺分 MLO(后上、后下、中央、乳晕下)投影区 4 个，CC(后内侧、后外侧、中央、乳晕下)投影区 4 个。本项研究中，使用了 2 年敏感性，这相当于筛查后 24 个月发现的浸润性乳腺癌在所有浸润性癌症(即筛检和间隔癌)中所占的比例。筛查敏感性，即筛查发现乳腺癌的数量除以筛查发现乳腺癌和间隔乳腺癌的总数，评估筛查发现乳癌的能力。采用

logistic 回归分析癌症定位与筛查敏感性间的关系。结果：共检出 109 例筛查和 98 例间隔性癌症。2 年的敏感性达 68%。总言之，敏感性与癌症的位置没无统计学联系。但 BMI≥25 kg/m ^{2}者，MLO 位后下区域的敏感度较低，而 BMI≤25 kg/m ^{2}者中心区域敏感性较低。对于乳腺密度较高的女性乳晕下区域的敏感性也较低，而乳腺密度较低者中心区域敏感性较低。结论：1. MLO 后下区的筛查敏感性在 BMI 高的妇女中较低，在乳腺密度较高的妇女的乳晕下区较低。在分析乳房 x 线照片时，应需要特别注意这些区域。2. 对筛查性乳房 x 的解释包括系统地搜索可疑乳腺癌的特定迹象。人们认识到乳房突出的某些区域（“Tabar 禁区”）值得放射医生特别注意。包括位于 MLO 位投影上的“银河系”(平行于胸肌边缘)和位于 CC 位的“无人区”(腺后空间)，在 CC 投影上的乳房中部，以及 MLO 和 CC 的乳晕后区域。

乳腺癌全数字化乳腺摄影误诊分析

沈悦
天津医科大学肿瘤医院

乳腺癌全数字化乳腺摄影误诊分析
[摘要] 目的:通过了解乳腺癌误诊的原因来提高全数字化乳腺摄影（FFDM）对乳腺的诊断准确性。方法:收集经 FFDM 检查并且病例结果证实的 300 例乳腺癌中初诊错误的 59 例患者的病历资料。对其摄影方法、影像表现等回顾性的分析。全部病例均为乳头头尾轴为和内外侧斜位。结果:59 例病例中有 37 例浸润性导管癌，7 例导管原位癌，5 例混合癌，5 例乳头状癌，4 例浸润性小叶癌，1 例腺样囊性癌。其中由于病灶位置深，摄影漏诊 8 例，致密型线体及 x 线片中显示阴性 12 例，显示钙化和肿块儿 9 例，不对称乳腺局部致密 11 例，局部结构扭曲 11 例。大导管儿征，漏斗征各 3 例。本组数据 FFDM 对不对称线体致密、局部结构扭曲和致密腺体型乳腺误诊率较高。结论:对侧乳腺的腺体局部结构扭曲及不对称性致密容易被忽视，FFDM 对致密型腺体的病灶敏感性较低，需结合其他检查方法降低乳腺癌的误诊率。

PU-3109

乳腺包裹性乳头状癌的影像诊断研究

王聪聪,林青
青岛大学医学院附属医院

目的：分析乳腺包裹性乳头状癌（Encapsulated Papillary Carcinoma,EPC）的数字乳腺断层融合技术（Digital Breast Tomosynthesis,DBT）、数字乳腺 X 线摄影（Digital Mammography,DM)及超声检查（Ultrasonography, US）的影像表现，以提高 EPC 的诊断水平。
材料与方法：33 例经手术病理证实的包裹性乳头状癌患者纳入我们的研究中。回顾性分析单纯性包裹性乳头状癌或伴原位癌、包裹性乳头状癌伴灶性浸润以及包裹性乳头状癌合并浸润性癌三组病理的影像学表现。
结果：三组病例的 EPC 在 DBT 均可见典型 EPC 肿块形态，多表现为椭圆形，边界清楚且边缘可见细线征，部分肿块密度不均匀，内见模糊结节样更高密度影，与超声所示囊实性肿块实性部分相对应。DM 表现多呈不规则形，高密度，部分边界清楚。US 表现多为囊实性及低回声结节，边界清楚，后方回声增强，纵横比小于 1，见较丰富血流信号。
结论：乳腺包裹性乳头状癌在 DBT 表现有一定特征，这些特征可提高对 EPC 的诊断。

PU-3110
评估数字乳腺断层合成摄影技术对 X 线或超声表现不典型乳腺纤维腺瘤的诊断价值

许洪芬,林青（通讯作者）
青岛大学附属医院

目的 探讨数字乳腺断层合成摄影（DBT）新技术对 X 线或超声表现不典型乳腺纤维腺瘤的诊断价值。**方法** 回顾性分析 2016 年 1 月至 2017 年 12 月经手术病理证实为乳腺纤维腺瘤，以 DM 及 US 图像为基准，影像表现不典型为：形态不规则、边界不清、边缘成角或毛刺状、高密度、纵横比＞1、后方回声衰减、伴有可疑恶性钙化、局灶性不对称致密、结构扭曲以及单一检查方法假阴性的 545 例患者共 688 个病灶进行分析，其中 91.3%（627/688）为致密乳腺纤维组织；手术前均进行过乳腺 DBT 、DM 和 US 检查。参照第 5 版乳腺影像报告及数据系统（BI -RADS）对肿块型病变进行评估，进行 BI-RADS 分类和乳腺致密度分类。评估数字乳腺合成摄影新技术对 X 线或超声表现不典型乳腺纤维腺瘤的诊断价值。采用 c2 检验比较 DBT 、DM 及 US 对 X 线或超声表现不典型乳腺纤维腺瘤的检出率和诊断准确率的差异。**结果** DBT 、DM 及 US 对 X 线或超声表现不典型纤维腺瘤的检出率分别为 69.5%（478/688）、43.8%（301/688）、99.4%（684/ 688），3 种检查方法两两比较检出率的差异均有统计学意义（P 均< 0.05）。 DBT 、DM 及 US 对 X 线或超声表现不典型纤维腺瘤的诊断准确率分别为 60.8%（418/ 688）、23.3%（160/ 688）、91.1%（627/ 688），DBT 及 US 的诊断准确率均高于 DM，3 种检查方法两两间诊断准确率的差异均有统计学意义（P 均< 0.01）。**结论** DBT 较 DM 对 X 线或超声表现不典型乳腺纤维腺瘤的检出及诊断准确性具有明显优势，更能清楚显示病灶边缘，使 BI-RADS 分类更趋向于良性；但检出及诊断准确性弱势于 US。

PU-3111
对比增强 X 线能谱对乳腺癌诊断价值的系统评价

夏婷
广东省人民医院

摘要：目的：乳腺 X 线摄影是乳腺癌筛查首选的检查方式，微钙化是钼靶检查的优势，但乳腺钼靶检查的假阳性仍然是个关注的焦点问题，对比增强能谱 X 线乳腺摄影是一项新技术，检查方便，诊断效能高，可以应用于乳腺癌的筛查、诊断及随访等方面。本研究目的在于通过系统评价和荟萃分析评价对比增强能谱 X 线摄影对乳腺癌的诊断价值。方法:检索 PubMed、Embase 以及 Cochrane 数据库，所有数据库检索时间截止到 2018 年 7 月，筛选能获得 CESM 独立诊断乳腺癌的真阳性值（TP）、假阳性值（FP）、假阴性值（FN）、真阴性值（TN）等原始数据并在国内外公开发表的 CESM 对乳腺癌的诊断性试验。所有入选文献研究对象必须为 18 岁以上患者，性别、病例来源不限；目标病灶行 CESM 且有明确的病理诊断（不论是穿刺或手术切除活检）。研究的结局指标包括其诊断实验的合并敏感性（Sen）、合并特异性 （Spe）、合并诊断比值比（DOR）以及受试者工作特征（SROC）曲线下面积（AUC）、诊断实验准确性指标（TPR），用 Revman 软件进行 meta 分析。结果:此次研究检索到如何纳入标准的 18 篇文献进行分析，meta 分析结果显示合并后的灵敏度和特异度分别为 84.03%、77.59%，表明对比增强能谱 X 线摄影在乳腺癌的诊断中具有较好的灵敏度和特异度。本研究 SROC 曲线下面积为 0.874，诊断试验准确性指标 TPR 为 81.62%，SDOR 值为 15.05（95%CI：10.32%～21.95%）），说明对比增强能谱 X 线摄影对乳腺癌的诊断价值较高，具有较好的准确性，是乳腺癌筛查和诊断的一种较好的影像学方法。结论:尽管对比增强能谱 X 线摄

影对乳腺癌的诊断价值较高，具有较好的准确性，是乳腺癌筛查和诊断的一种较好的影像学方法。本研究认为，对比增强 X 线能谱对乳腺癌的早期诊断还值得进一步研究。

PU-3112
低剂量腹壁下动脉 CTA 的图像质量和临床价值

王悦
浙江大学医学院附属邵逸夫医院

目的 探讨基于双源 CT 大螺距 Flash 扫描模式和高级建模迭代重建技术下的低管电压低辐射剂量腹壁下动脉 CTA 对图像质量的影响和临床应用价值。**方法** 30 例患者随机分为两组，对照组采用常规剂量滤波反投影重建技术，实验组采用低辐射剂量的低管电压 FLASH 扫描模式结合高级建模迭代重建技术。设腹壁下动脉平脐孔层面为感兴趣区，计算两组图像质量的客观评价指标并统计两组患者的辐射剂量以 t 检验比较差异。图像质量的主观评价采用 4 分法，采用 Mann-Whitney U 非参数检验比较两组主观图像质量评分。**结果** 对照组感兴趣区的 CT 值为 251.06±18.16Hu，实验组为 276.02±14.86Hu ，（*P*=0.882＞0.05）。对照组 SNR 为 8.37±1.94，实验组 SNR 为 9.17±1.90，（*P*=0.903＞0.05）；对照组 CNR 为 7.02±1.93，实验组 CNR 为 7.31±1.54，（*P*=0.180＞0.05），差异均无统计学意义；主观评价两组图像的对比度、锐利度、主观噪声和总体图像质量差异无统计学意义（*P*=0.63，0.55，0.32，0.63＞0.05）。两组有效辐射剂量为(1.61±0.04)mSv 和(7.02±0.21)mSv，实验组约为对照组剂量的 23%。利用 MIP 和 VR 重建技术，根据腹壁下动脉 CTA 建立腹壁下动脉穿支皮瓣三维重建模型 30 个，共观察到可靠的腹壁下动脉穿支 126 支，实验组和对照组中分别有 13 例和 12 例主观图像质量被评为：腹壁下动脉血管边缘锐利并清晰显示其可靠穿支(直径＞0. 5 mm)和最粗穿支。**结论** 低剂量腹壁下动脉 CTA 可以显著地提高目标血管的 CT 值，提高图像信噪比与对比噪声比，在辐射剂量降为对照组的约 23%的情况下仍能保持与之相当的图像质量，为手术提供可靠的腹壁下动脉穿支血管路径信息。

Blood supply to male nipple-areola-complex evaluated by CTA

Ning Ding[1],Lingyan Kong[1],Zhengyu Jin[1],Huadan Xue[1],Yun Wang[1],Nanze Yu[2],Lin Zhu[2]
1.Department of Radiology , Peking Union Medical College Hospital
2.Department of Plastic Surgery, Peking Union Medical College Hospital

Purpose: In male breast surgeries, necrosis of Nipple-Areola-Complex (NAC) is a common complication. Earlier studies on blood supply of NAC were all conducted on female breasts. Vasculature to male breast NAC is seldom studied. Understanding male-specific blood supply is important to reduce NAC ischemia in male breast surgeries. CTA has been proven to be the golden standard in preoperative visualization of breast blood supplies. This retrospective study is to fill the blank in literature by describing the main blood supply to male NAC.
Method: We retrospectively included 25 male thoracic CT angiography patients. The dominant supply arteries to NAC were revealed through image data analysis.
Results: 25 male patients were included with totally 50 breasts, age 16-63 years (mean: 45.1). For the right breasts, 6 breasts had double dominant vessels (24%). Among all

the 19 breasts with single dominant arteries, 10 were internal thoracic (Internal mammary) artery (ITA)(40%), 3 were lateral thoracic(external mammary) artery (LTA) (16%), 1 was anterior intercostal artery (AICA) (4%). No dominant supply vessel was detected in 7 breasts(28%).
For the left breasts, 1 breast had double dominant vessels(4%). Among all the breasts with single dominant arteries, 4 were ITA (16%), 10 were LTA(40%), 2 were AICA (8%), 1 was contralateral ITA (4%). No dominant supply vessel was detected in 7 breasts (28%).
Conclusion: Unlike female breast vasculature of NAC, ITA and LTA intended to be the dominant blood supply in male NAC. Most male breasts showed asymmetrical perfusion pattern (18/25, 72%). For most male breast NAC, there is a single dominant supply artery.

基于对比增强能谱 X 线摄影的影像组学诺莫图预测乳腺癌新辅助化疗疗效

王中一,谢海柱
烟台毓璜顶医院

目的：探讨基于对比增强能谱 X 线摄影（CESM）的影像组学诺莫图术前预测乳腺癌新辅助化疗疗效的价值。
材料和方法：回顾性分析我院 135 名术前接受新辅助化疗的乳腺癌患者（训练组 100 ，验证组 35），按照实体瘤疗效评价标准（RECIST）评价患者新辅助化疗的疗效，并将患者分为有效组和无效组。从每个病人的 CESM 图像中提取影像组学特征。然后在训练集中用 LASSO 算法建立影像组学标签。结合独立的临床预测因子，采用多元 Logistic 回归模型建立诺莫图。诺莫图的效能在训练集中进行评估，并在验证集中进行验证。
结果：由 9 个特征组成的影像组学标签，具有良好的预测效果。包括影像组学标签、ki67、HER2 的诺莫图在训练集（AUC 0.87；95%CI，0.82-0.91）和验证集（AUC 0.85；95%CI，0.80-0.90）中也显示出良好的效能。决策曲线表明了我们列线图的临床实用性。
结论：基于术前 CESM 影像组学特征和临床预测因子建立的诺莫图模型在预测乳腺癌患者新辅助化疗疗效方面具有重要的价值。

PU-3115
对比增强能谱乳腺 X 线摄影对乳腺可疑钙化的诊断价值及对外科治疗的影响

孙笑芬,邢伟,俞胜男,沙圆圆,潘靓,陈沁
常州市第一人民医院

目的：探讨对比增强能谱乳腺 X 线摄影(contrast-enhanced spectral mammography，CESM)对乳腺可疑钙化的诊断价值及其对外科治疗决策的影响。**材料与方法：**回顾性分析 2017 年 4 月至 2019 年 4 月我院行 CESM 检查并在低能图上发现可疑钙化的患者，所有患者均经穿刺或手术获得病理结果。两名经验丰富的乳腺诊断放射科医生分别为低能图及 CESM 提供 BI-RADS 分级，通过病理与影像的对照分析，使用受试者操作特性（receiver operating characteristic，ROC）曲线分析二者

对乳腺可疑钙化的诊断效能，计算诊断敏感性、特异性。使用组内相关系数（intraclass correlation coefficient，ICC）评估恶性病灶的影像最大径与病理最大径的一致性。两名乳腺外科医生根据影像表现决定恶性病灶的首选外科治疗方式（保乳治疗[BCT]或乳房切除），分别与最终的外科治疗方式进行比较，采用 McNemars 检验比较手术决策的差异。**结果：**94 名患者共检出 103 例乳腺可疑钙化病灶，良性 49 例，恶性 54 例。低能图及 CESM 的敏感性为 80.39%、96.23%，特异性为 75.00%、94.00%，ROC 下面积分别为 0.81、0.96，CESM 的 ROC 下面积显著大于低能图（*P* = 0.0003）。低能图及 CESM 的病灶最大径与病理最大径的 ICC 分别为 0.86、0.96。根据低能图，44.44%的患者推荐行 BCT，55.56%的患者推荐行乳房切除术，与最终外科治疗方式之间差异有统计学意义（*P* = 0.0075）；根据 CESM，27.78 %的患者推荐行 BCT，72.22%的患者推荐行乳房切除，与最终外科治疗方式之间差异无统计学差异（*P* = 0.1250）。**结论：**CESM 对乳腺可疑钙化的诊断准确性较高，对病灶大小的评估较准确，为术前手术决策的制定提供了依据。

PU-3116
对比增强能谱乳腺 X 线摄影量化评分对定性乳腺病灶的价值

孙笑芬,邢伟,俞胜男,沙圆圆,耿薇薇
常州市第一人民医院

【摘要】目的 探讨对比增强能谱乳腺 X 线摄影（contrast-enhanced spectral mammography，CESM）量化评分在定性乳腺病变中的价值。**方法** 回顾性分析 2017 年 8 月至 2019 年 3 月我院临床或超声检查怀疑有乳腺病变，并在术前一周内行 CESM 检查的患者。两名经验丰富的乳腺诊断放射科医师共同对同一患者的低能图进行 BI-RADS 评分，然后对减影图进行病灶强化程度分级，最后计算 CESM 综合评分。通过与病理对照，使用受试者操作特性（receiver operating characteristic，ROC）曲线比较低能图 BI-RADS 评分、减影图病灶强化程度分级和 CESM 综合评分鉴别诊断乳腺良恶性病变的效能。**结果** 181 名患者共检出 190 例乳腺病灶，良性病灶 97 例，恶性病灶 93 例。低能图 BI-RADS 评分、减影图病灶强化程度分级和 CESM 综合评分判别病灶良恶性的 ROC 曲线下面积分别依次为 0.83、0.87、0.95；CESM 综合评分与低能图 BI-RADS 评分、减影图病灶强化程度分级的 ROC 曲线下面积有统计学差异（*P* 均＜ 0.0001），后两者的 ROC 曲线下面积间无统计学差异（*P* = 0.34）；三者判别乳腺病灶为恶性的诊断敏感性分别依次为 84.95%、92.47%、89.25%，特异性依次为 71.13%、67.01%、93.81%。**结论** 综合低能图及减影图的 CESM 综合评分提高了定性乳腺病变的诊断效能。

PU-3117
CESM 对致密型乳腺患者良恶性病灶的诊断效能评价

张雪琴,孙加冠,杨吉学
四川大学华西医院

目的：探讨对比增强乳腺 X 线摄影(CESM)在致密型乳腺患者应用中，对良、恶性病灶的诊断效能进行评价，确定 CESM 的临床应用价值。**方法：**回顾性收集 2017 年-2018 年于我院行 FFDM 和 CESM 的致密型乳腺患者信息，并且有穿刺或手术病理结果的 114 例，与病理结果的金标准来比较分析。比较 FFDM 与 CESM 的低能图，FFDM 与 CESM 的低能图+减影图，对乳腺疾病的诊断的敏感度、特异度、阳性预测值和阴性预测值；采用卡方检验两种检查方法对致密型乳腺疾病的诊断效能比较。**结**

果：在 114 位有病理结果的患者中，总共发现 144 例病灶，其中良性病灶 110 个，恶性病灶 34 个。以病理诊断结果为金标准，计算出两种检查方法对乳腺疾病的诊断效能。FFDM 的敏感性、特异性、阳性预测值及阴性预测值分别为：63.55%、75.10%、43.22%、82.72%，CESM 的低能图敏感性、特异性、阳性预测值及阴性预测值分别为：67.58%、76.35%、46.57%、83.33% ；CESM 的低能图+减影图的敏感性、特异性、阳性预测值及阴性预测值分别为：82.4%，96.4%，87.5%，94.6%。FFDM 与 CESM 的低能图的诊断效能对比,差异无统计学意义（P>0.05），FFDM 与 CESM 的低能图+减影图的诊断效能对比，其中敏感性、特异性、阳性预测率都存在显著差异，具有统计学意义（P＜0.05）。**结论** 与 FFDM 比较,CESM 的低能图像诊断效能相当，而 CESM 的低能图+减影图，其中减影图像能够去除正常乳腺组织的干扰，突出显示乳腺病灶的形态和血供情况，特别是对致密型乳腺疾病的诊断效能明显提高。中国女性中有较多的致密型乳腺，因此 CESM 具有较广阔的临床应用价值 。

PU-3118
乳腺对比增强 X 线摄影的强化特点对于乳腺浸润癌的诊断价值

锁彤[1],盛蕾[2],谢元忠[2]
1.山东第一医科大学，泰安市中心医院
2.泰安市中心医院医学影像科

目的 通过分析乳腺良恶性肿瘤在对比增强乳腺 X 线摄影（CESM）上的强化特点，探讨其对于乳腺癌的诊断价值。**方法** 回顾性分析本院 138 例临床怀疑乳腺肿瘤的女性患者资料。以手术或组织活检的病理结果为参考标准，参照第五版乳腺影像报告及数据系统（BI-RADS）对乳腺肿瘤进行评估分类。对浸润癌、原位癌及良性肿瘤的强化程度（轻，中及重度）、密度（均匀，不均匀）及方式（流入型Ⅰ型，平台型Ⅱ型，流出型Ⅲ型）进行统计，再使用 x^2检验乳腺浸润癌的强化特点与原位癌、良性肿瘤的组间差异。 **结果** 经病理确诊乳腺肿瘤共 147 个，40 个良性肿瘤，86 个浸润癌，21 个原位癌。96.5%（83/86）的浸润癌、42.9%（9/21）的原位癌、15.0%（6/40）的良性肿瘤表现为中或重度强化（*P*=0.000，χ2=87.878）。 91.9%（79/86）的浸润癌、85.7%（18/21）的原位癌、73.5%（25/34）的良性肿瘤表现为不均匀强化（包括环形强化）（*P*=0.030，χ2=7.036）。90.7%（78/86）的浸润癌、47.6%（10/21）的原位癌、32.4%（11/34）良性肿瘤表现出Ⅱ型或Ⅲ型强化方式（*P*=0.000，χ2=45.683）。中、重度强化这个独立的诊断指标对诊断乳腺浸润癌、原位癌、良性肿瘤的敏感度分别为 96.5%，42.9%，15.0%；不均匀强化对诊断三者的敏感度分别为 91.9%，85.7%，73.5%；Ⅱ型或Ⅲ型强化方式对诊断三者的敏感度分别为 90.7%，47.6%，32.4%。 **结论** CESM 上肿块显示为中、重度，不均匀强化，流出型或平台型强化方式，对于乳腺浸润癌有较大的诊断价值。

探讨对比增强光谱乳房 X 线与 MRI 在评价新辅助全身治疗后乳腺癌残留的价值

刘艳,王雪岩
新疆医科大学附属肿瘤医院

目的：目的评价对比造影(CESM)与 MRI 在评价乳腺癌新辅助全身治疗(NST)患者肿瘤反应中的表现。方法：从 2014 年 9 月到 2017 年 6 月，我们确定了接受 NST 手术的经病理证实的侵袭性乳腺癌患者。所有患者均行术前和术后的 CESM 和 MRI 检查，并在手术治疗后进行病理评估。并与手术病理结果进行比较。采用 Lin 一致性和 Pearson 相关系数进行一致性评价。用布兰德-阿尔特曼图观察肿瘤大小在影像学和病理学上的差异。结果：65 名患者被确诊。平均年龄为 52.7 岁(范围 30-76 岁)。NST 类型包括化疗 53 例(82%)和内分泌治疗 12 例(18%)。NST 后肿瘤平均大小为 14.6 mm(范围 0-105)，CESM 为 14.2 mm(范围 0-75 mm)， MRI 为 19.6 mm(范围 0-100)。等值试验表明，用 CESM (p = 0.009)或 MRI (p = 0.01)测量的肿瘤平均大小与病理在- 1 和 1 cm 范围内测量的肿瘤平均大小相等。比较 CESM 与 MRI 对完全缓解的评估，敏感性为 95%对 95%，特异性为 66.7%对 68.9%，阳性预测值为 55.9%对 57.6%，阴性预测值为 96.7%对 96.9%。结果：在评估 NST 术后残余恶性肿瘤方面，CESM 与 MRI 具有可比性

PU-3120
对比增强乳腺 X 线摄影（CESM）对乳腺肿瘤的应用价值

李焱
四川大学华西医院

目的：探讨常规数字化乳腺 X 线成像（FFDM）和对比增强能谱乳腺 X 线摄影（CESM）的术前评估乳腺肿瘤分型，对临床应用价值。
方法：收集临床拟诊乳腺肿瘤患者两组共 66 例，年龄 24～67 岁，根据腺体类型分为第一组 30 例少量腺体组，第二组 36 例多量腺体组。两组均先行 FFDM 检查，再进行双侧乳腺 CESM 检查，图像自动重建和图像融合后分别获得低能图像和减影图像，记录病灶检出情况。由两位有经验的乳腺医师根据乳腺病变的评价乳腺影像报告和数据系统 BI-RADS，具体分为 0～6 类，将 BI-RADS 分类标准中的 4B、4C、5、6 类作为影像恶性评价，1、2 类为影像良性评价，3、4A 类在 3 或 6 个月后随访或结合其他检查进行评估，0 类需结合其他影像检查。两组病例均行病理检查，以病理结果为金标准。并对 FFDM、CESM 的图像进行分析，将影像学诊断结果与病理结果进行对照分析。
结果：第一组 30 例受检病例中，病理结果共检出病灶恶性 26 例，CESM 影像学评价恶性 24 例，准确度分别为 92.3%（24/26）；FFDM 影像学评价恶性 19 例，准确度分别为 53.8%（14/26）；X^2 检验显示影像差异有统计学意义（X^2=6.696,P<0.05）。第二组 36 例致密型腺体组受检病例中，病理结果共检出恶性病灶 28 例；CESM 影像学评价恶性 22 例，准确度分别为 78.6%（22/28）；FFDM 影像学评价恶性 16 例，准确度分别为 57.1%（16/28）；X^2 检验显示影像差异有统计学意义（X^2=8.461,P<0.05）。在多量腺体乳腺中，CESM 重建图像能够去除腺体背景干扰，可以提高临床对乳腺肿瘤诊断的敏感度。
结论 ：由于本研究病例有限，CESM 是否能广泛应用于临床，还需要进一步大规模的数据。但本组的初步研究结果表明 CESM 对乳腺肿瘤的诊断准确度较高，优于 FFDM。

PU-3121
增强光谱钼靶和磁共振对乳腺癌诊断效能的 Meta 分析

姚娟
新疆医科大学第一附属医院

摘要：目的：评价 CESM 诊断乳腺癌的诊断效能。**方法：**检索中国知网、万方数据库、CBM、MEDLINEE、Embase、PubMed 和 Ovid 近 10 年发表的 CESM 与 MRI 比较诊断乳腺癌效应的文献，采用 Review Manager5.3 软件对发表偏倚进行评价，采用 Meta Disc 14 对纳入文献的异质性进行检验，根据异质性检验结果选择效应模型，同时对敏感性、特异性、PLR、NLR 和 DOR 进行汇总分析。**结果：**共检索出相关中英文文献 435 篇，经过筛选共有 12 篇文献符合入选要求。汇总结果显示，CESM 和 MRI 的敏感度分别为 0.97 和 0.97，特异度分别为 0.69 和 0.51，DOR 分别为 105.44 和 33.73，PLR 分别为 2.94 和 1.95，NLR 分别为 0.05 和 0.07，AUC 及其 95%CI 分别为 0.9645(0.981552~0.9558)和 0.9198(0.946848~0.892752)。两种诊断方法 AUC 的 95%CI 不重叠，CESM 的 AUC 大于 MRI，说明其真实性有明显的差异。**结论：**CESM 在乳腺癌诊断方面具有较高的准确性，与 MRI 比较有统计学差异。

PU-3122
乳腺错构瘤 X 线、超声及 DCE-MRI 影像表现及其诊断效能评价

黄雪洁,常晓丹
大连大学附属中山医院

【摘要】目的 分析乳腺错构瘤的 X 线、超声及 DCE-MRI 表现特点，旨在提高对本病的影像诊断水平、同时评估三种检查方法的诊断效能。**资料与方法** 搜集 2012 年 11 月~2019 年 2 月于我院行乳腺肿瘤切除并经病理证实为乳腺错构瘤者 24 例，分析其 X 线、超声及 DCE-MRI 表现特点，并基于 BI-RADs 分级对其良恶性进行分类，以最终病理学为金标准，采用卡方检验和 *Fisher* 精确检验评估 X 线、超声及 DCE-MRI 的诊断效能。**结果** 肿块呈类圆形或椭圆形，内密度/回声/信号多不均匀，边界清楚、局部可与邻近腺体分界不清；可有包膜。X 线检出病灶 22 例，2 例未检出；诊断为良性 19 例，恶性 3 例。超声检出病灶 23 例，未检出 1 例；诊断为良性 22 例，恶性 1 例。DCE-MRI 检出所有病灶，并全部诊断为良性。诊断符合率：X 线为 79.17%%、超声为 91.7%%、100.0%，$P_{X线,MRI}<0.05$，$P_{超声,MRI}>0.05$，$P_{超声,X线}>0.05$。**结论** 乳腺错构瘤因其内部组织结构不同而有差异，但典型病例其影像学表现具有一定特点，X 线、超声是首选检查方法，MRI 在乳腺错构瘤的诊断及鉴别诊断方面是重要的补充手段。

PU-3123
乳腺 MRI 背景实质强化预测新辅助化疗早期疗效的研究

但汉丽
重庆市肿瘤医院

目的：回顾性分析进展期乳腺癌对侧乳腺腺体背景实质强化（background parenchymal enhancement,BPE）在乳腺癌新辅助化疗（neoadjuvant chemotherapy,NAC）前后的变化是否有助于预测乳腺癌的肿瘤反应。
材料与方法：收集 2017 年 5 月至 2018 年 4 月经穿刺活检或手术证实的单侧乳腺癌，并于本院行新辅助化疗以及手术治疗的患者共 168 例。由两名放射科医师根据乳腺影像报告和数据系统（Breast Imaging Reporting and Data Syetem, BI-RADS）对 MR-DCE 上对侧乳腺腺体的背景实质强化行定性评价（1＝极少，2＝轻度，3＝中度，4＝明显），治疗前以及治疗 2 疗程后均行 MR 检查。评估背景实质强化在新辅助化疗前后的变化，并评估背景实质强化与新辅助化疗早期疗效的关系。

结果：新辅助化疗治疗后，62 例达到病理完全缓解（pCR）；106 例非完全缓解（非 pCR）。绝经前组背景实质强化均明显高于绝经后组，无论是治疗前还是治疗后；背景实质强化的降低在绝经前组及绝经后组均有统计学意义（P＜0.05）。
结论：无论绝经前、后，乳腺腺体背景实质强化（BPE）的变化可以作为早期治疗反应有效性的指标。

PU-3124

深度学习在乳腺癌磁共振诊断的研究

周娟,盛复庚
中国人民解放军总医院第五医学中心南院区

目的： 探讨在乳腺磁共振诊断中，深度学习自动判读与医生团队对乳腺癌的诊断效能，以及弱监督学习对病灶自动定位的准确性。
方法： 此项研究收集了从 2013 年 3 月到 2017 年 6 月 1715 例乳腺动态增强 MRI 扫描和非脂肪抑制的 T1 平扫图像，包括 1137 例恶性肿瘤和 578 例良性肿瘤，平均年龄 47.5 岁±11.8，均为女性，乳腺 MRI 均在 1.5T 的磁场进行。患者俯卧位检查，两个乳房自然放置在线圈腔中。动态增强扫描前先扫描蒙片，采用脂肪抑制 3D VIBE 序列，静脉注射对比剂钆喷酸葡胺后，连续用相同的序列扫描 6 次，7 个时相全部完成后，使用自动高压注射器以 2 毫升/秒的速度用 20 ml 生理盐水（0.9%）冲洗。扫描完成后，机器自动完成 6 个时相的减影。所有病例均有穿刺或手术的病理结果，影像学结果由具有 10 年以上丰富经验的影像医生团队给出最终的 BI-RADS 分类。基于病理基础事实的监督，输入数据集 10290（1715x6）个对 CNN 进行训练，实现对病灶的自动分类和定位。整个数据集被随机分为训练集（1204）、验证集（165）和测试集（346）。计算模型诊断乳腺癌的准确性、敏感性、特异性和受试者工作特征曲线下面积（AUC）。
结果： CNN 训练模型诊断乳腺癌的准确性为 85.5%（296/346），敏感性为 85.7%（198/231），特异性为 85.2%（98/115），受试者工作特征曲线下的面积 AUC 为 0.902。BI-RADS 评估诊断乳腺癌的准确性为 84.7%，敏感性为 98.3%，特异性为 57.4%。深度学习对癌灶的自动定位采用自动定位的中心点到人工标记的中心点之间的距离来评价，平均值为（18.26+-13.65）mm，较传统方法得到的结果（39.82+-8.82）mm 有提高。
结论： 深度学习自动诊断乳腺癌可有望改变放射科医生阅片的工作流程，提高医生的综合诊断结果；弱监督学习自动定位较传统方法有提高。

PU-3125

多模态 MRI 检查对乳腺囊实性肿块结节的诊断与鉴别诊断价值

邱立艳,高巧灵,郑建军
中国科学院大学宁波华美医院（宁波市第二医院）

目的 探讨乳腺囊实性肿块结节的 MRI 影像特征和诊断价值。
方法 回顾性分析经手术及病理证实的 21 例乳腺囊实性肿块结节的影像表现，总结病变的形态学特点、其在 T2WI、扩散加权成像上的特点，血液动力学表现，探讨其特征及 MRI 诊断价值。
结果 结节型导管内乳头状瘤 3 例，葫芦状改变或分叶，边界欠清 1 例，边界清楚 2 例，表现为多囊状扩张的导管内实性壁结节，结节可向扩张的导管腔内外生长，弥散受限轻度、中度、不受限

各 1 例，时间-信号曲线流出型 3 例；导管内乳头状癌 2 例，均边界欠清楚，分叶 1 例，不规则形态 1 例，弥散均中度受限，时间-信号曲线均流出型；囊肿伴附壁肉芽结节形成 6 例，壁结节多较规则，边界多清楚，弥散均不受限，壁结节 TIC 平台型 4 例，渐进型曲线 2 例；浸润性导管癌 2 例，边界清楚 1 例，欠清楚 1 例，弥散受限较明显 2 例，流出型曲线 1 例，平台型曲线 1 例；粘液腺癌 8 例，边界均较清楚，T2WI 信号明显整体增高 8 例，弥散多不受限，增强后强化多不明显、少许小结节或间隔状强化，TIC 平台型为主。

结论　乳腺囊实性肿块结节的组织学类型多样，MRI 影像学有一定特征，对术式选择和指导治疗有重要价值。

PU-3126

A comprehensive nomogram to predict distant metastasis in breast cancer: a study based on clinicopathological characteristics and magnetic resonance imaging features

Wenjuan Ma, Jia Tang, Chao Zhang, Hong Lu, Peifang Liu
Tianjin Medical University Cancer Institute and Hospital

Purpose: The aim of this study was to develop a comprehensive nomogram for predicting distant metastasis in breast cancer (BC) based on clinicopathological characteristics and magnetic resonance imaging (MRI) features.

Materials and Methods: Ninety-three metastatic BC patients and 186 age-matched cases without distant metastasis were selected from the breast MRI database consisting of 6,703 patients from January 2011 to December 2016. The least absolute shrinkage and selection operator (LASSO) method was used to identify the optimal subset of clinicopathological and MRI features. Multivariate logistic regression was used to construct a model for predicting distant metastasis. A nomogram was constructed based on the identified features. The performance of the nomogram was evaluated by areas under receiver operating characteristic curves (AUCs) and calibration curves. The temporal splitting method was used to evaluate the stability of the nomogram.

Results: A total of nine features, namely, reproductive history, menstrual status, lesion type, multiple masses, oestrogen receptor status, progesterone receptor status, lymph node metastasis, tumour size and T2-weighted imaging (T2WI) signal, were incorporated into the predictive nomogram. The calibration curve showed an optimal consistency between the observed and predicted probability of distant metastasis. The predictive nomogram made satisfactory discrimination [AUC=0.857; 95% confidence interval (CI): 0.809-0.905]. No difference was found in the AUC between the training and validation datasets.

Conclusion: The comprehensive nomogram incorporating clinicopathological and MRI features was a valid tool for predicting distant metastasis in breast cancer and can potentially guide distant metastasis screening and implementation of prophylactic treatment.

PU-3127

3.0T MRI 多 b 值扩散加权成像 ADC 直方图与乳腺癌分子分型及预后因素 的相关性研究

孙淑萌,邵真真,刘佩芳
天津医科大学肿瘤医院

目的：探讨 3.0T MRI 多 b 值扩散加权成像表观扩散系数（apparent diffusion coefficient，ADC）直方图参数与乳腺癌分子分型及预后因素的相关性，并评估 ADC 直方图在各 b 值下诊断效能。**方法**：回顾性分析 2015 年 3 月至 2016 年 1 月于天津医科大学肿瘤医院行乳腺 MRI 检查并经手术病理证实为浸润性导管癌患者的临床病理资料，共 116 个病灶。利用 Image J 软件对 b 值为 0、500、800、1000、1 500 s/mm^{2}时 ADC 图进行直方图分析，记录 ADC 最小值（ADC_{min}） 、ADC 平均值（ADC_{mean}） 、 ADC 众数（ADC_{mode}）、偏度及峰度等参数。根据肿瘤分子分型、T 分期（T1 *vs.* T2~T3）、组织学级别（高级别 *vs.* 低级别）以及淋巴结转移情况（阳性 *vs.* 阴性）进行分组，采用 Mann-Whitney U 检验比较不同两组间参数差异，并绘制受试者工作特征（receiver operating characteristic curve，ROC）曲线。**结果**：b 值为 500、800、1000 及 1 500 s/mm^{2}时，Luminal 型偏度均低于非 Luminal 型（均 P<0.05），Her-2 过表达型 ADC_{min}均高于非 Her-2 过表达型（均 P<0.05），T1 期肿瘤峰度均低于 T2~T3 期（均 P<0.05），且峰度与肿瘤大小存在相关性（均 P<0.05）。b 值为 500 s/mm^{2}时，组织学低级别组 ADC_{mode}及 ADC_{mean}较高级别组高（均 P<0.05）。在不同 b 值下，通过 ROC 曲线分析差异具有统计学意义的各直方图参数的曲线下面积（area under ROC curve，AUC）无显著性差异（均 P>0.05）。**结论**：多 b 值 ADC 直方图是一种肿瘤异质性的定量分析方法，在一定程度上反映乳腺癌的生物学行为和预后。

PU-3128

磁共振弥散峰度成像在鉴别乳腺癌裸鼠皮下移植瘤模型上皮-间质转化中的实验研究

刘欢欢,汪登斌
上海交通大学医学院附属新华医院

目的：探讨磁共振弥散峰度成像（DKI）在鉴别重组 Snail1 基因过表达诱导的乳腺癌裸鼠皮下移植瘤模型上皮-间质转化（EMT）中的价值。**材料与方法**：采用慢病毒介导的重组 Snail 1 基因过表达转染乳腺癌 MCF7 细胞，诱导 MCF7 细胞的 EMT。将 MCF7/Control 和 MCF7/Snail1 分别于裸鼠进行皮下成瘤（MCF7/Control、MCF7/EMT 组，每组 10 只）。待两组皮下瘤体积达 500 mm^{3}左右时，采用常规 MRI 和 DKI 序列进行扫描，DKI 扫描采用 3 个扩散梯度场，选取 5 个 B 值（0,500,1000,1500,2000 sec/mm^2）。比较两组皮下瘤的 DKI 后处理参数（表观弥散系数 D 值和峰度系数 K 值）的差异，分析 D 值和 K 值与 EMT 标记分子 E-cadherin 和细胞增殖标记分子 Ki-67 标记分子表达的相关性。**结果**：MCF7/Control 和 MCF7/EMT 组皮下移植瘤的 D 值分别为（0.76±0.13）×10^{-3} mm^2/sec、（0.53±0.43）×10^{-3}mm^2/sec，两组间的 D 值具有显著差异（P<0.001）； K 值分别为 1.18±0.09、1.36±0.11，两者间差异具有统计学意义（P<0.001）。D 值取阈值为 0.60×10^{-3} mm^2/sec 时，其评估 EMT 的敏感度为 100%，特异度为 90%；K 值取阈值为 1.28 时，其评估 EMT 的敏感度为 80%，特异度为 80%。D 值与 Ki-67 表达呈负相关，与 E-cadherin 表达呈正相关（P<0.001，P=0.005）；K 值与 Ki-67 表达呈正相关，与 E-cadherin 表达呈负相关（P=0.006，P=0.032）。

结论：DKI 对鉴别乳腺癌裸鼠皮下移植瘤的 EMT 具有潜在的价值，有助于筛选具有 EMT 特征的高侵袭性、易于远处转移的乳腺癌。

PU-3129
3.0T MRI 扩散加权成像及动态增强扫描对乳腺病变 的诊断价值

张朝赫,罗娅红
辽宁省肿瘤医院

目的 探讨妊娠期乳腺癌的临床与 MRI 表现，加强认识，提高诊断率。**方法** 回顾性分析 2012 年 9 月至 2015 年 1 月间我院 3 例经手术病理证实为乳腺癌的妊娠期或哺乳期患者的 MRI 表现，分析病灶的 MRI 形态学、信号强度、弥散加权信号及表观扩散系数（ADC）值及其动态增强特点等，并与病理结果对照。**结果** 3 例病灶病理组织学类型均为浸润性导管癌。3 例均发生于右乳，其中占据整个乳腺 1 例，位于外上象限 1 例，位于内下象限 1 例；肿块最大径为 8.2~12.8cm；3 例病灶肿块形态均不规则，其中 2 例由多个病灶融合而成，边界均不清；MRI 平扫 T1WI 与乳腺实质比较呈混杂等信号，T2WI 呈混杂高信号；3 例肿块内均见坏死出血区，表现为 T1WI 和 T2WI 均为高信号；所有病灶 DWI 上均表现为高信号，相应 ADC 值低于正常乳腺组织，平均 ADC 值为 0.73×10-3mm2/s；动态增强后病灶均为边缘强化，时间信号强度曲线呈快速流入-流出型（III型）。**结论** 妊娠期乳腺癌的 MRI 表现与一般乳腺癌相比具有一定特征性，认识其特征性 MRI 表现有助于鉴别诊断，提高诊断准确率。

PU-3130
低信号分隔在 MRI 诊断乳腺纤维腺瘤中的价值

贺帅
辽宁省肿瘤医院

目的：评价 MRI 低信号分隔征诊断纤维腺瘤中的价值，加深对低信号分隔的认识，更好地鉴别乳腺良恶性病变。

方法：收集本院自 2013 年 3 月至今核磁报告诊断纤维腺瘤患者 62 例，均行手术切除，其中 52 例诊断正确，2 例双侧发病，误诊 10 例。确诊患者中，51 例女性患者，1 例男性患者，年龄最 18 岁，最大 75 岁，中位年 42 岁。采用西门子 Pink Espree 1.5T 磁共振机，乳腺专用线圈进行扫描。分析经病理证实纤维腺瘤中有无低信号分隔，低信号分隔在各个序列中的显示率及分隔的粗细情况。

结果：手术证实 52 例共 54 个纤维腺瘤中，37 个纤维腺瘤在 MRI 可观察到低信号分隔，发生率为 69%（37/54）；其中 29 个病灶分隔厚度小于 2mm，8 个病灶厚度大于 2mm；37 个病灶低信号分隔 33 个在抑脂 T2WI 像可以观察到，在非剪影 TIWI 增强序列均可观察到。

结论：纤维腺瘤“分隔征”在 T1WI 及 T2WI 均表现为低信号，增强扫描无强化，部分胶原带较为细小 MRI 难以显示，MRI 可显示的胶原带都有相似的厚度，一般厚约 0. 25～0. 75 mm[3],偶有大于 2 ｍｍ者，较纤细者难以显示。低信号在抑脂 T2WI 或非减影的增强后图像显示最好，分析除与增强扫描层厚有关外，还与部分纤维腺瘤在抑脂 T2WI 呈明显低信号，影响低信号分隔征观察有关。虽然文献报道低信号分隔征是纤维腺瘤的特异性 MRI 征象，但同时也是叶状肿瘤的一个常见征象,但诊断价值有限。值得注意的是，在部分边界清楚的乳腺癌中也会出现所谓的“分隔”征，表现为 T2WI 低信号。但纤维腺瘤的内部分隔增强后通常不强化，乳腺癌的内部分隔则常有强化，两者病理构成截然不同。

PU-3131

影像组学在乳腺癌的应用

黎娇
广东省人民医院

【摘要】 目的 传统乳腺磁共振在乳腺癌诊断、疗效评估、转移等方面处于主要地位，但仍存在主观、半定量等缺点。 新兴的放射组学它应用大量的自动化数据特征算法将感兴趣区域的影像数据转化为具有高分辨的可发掘的特征空间数据，应用于乳腺癌的诊断预测模型、基因表型模型、分子亚型预测模型和疗效评价模型等一系列临床应用模型，有望成为乳腺癌精准医疗的重要方法。本文总结放射组学在乳腺癌各个方面的研究进展。 方法 应用 PubMed、万方数据库等检索系统， 以“乳腺癌，放射组学”或“乳腺癌，影像组学”为关键词，检索相关文献。 纳入标准：（ 1）放射组学在乳腺癌诊断的研究进展；（ 2）放射组学在预测乳腺癌分子亚型方面的研究进展；（ 3）放射组学在乳腺癌新辅助治疗疗效评价及预测治疗反应性中的研究进展；（ 4）放射组学对乳腺癌基因表型的预测；（5）放射组学在乳腺癌复发及淋巴结转移评估中的研究进展。共纳入分析 20 篇文献。 结果 放射组学作为一种新兴的研究方法，最初主要用于辅助临床诊断及评估乳腺癌治疗后疗效，逐渐地在乳腺癌的分子亚型及基因表型的预测、乳腺癌的复发及淋巴结转移评估、治疗反应性的判断及预测等方面取得了一定的成果。大量研究证实，结合放射组学提取的特征来评估乳腺癌患者可达到精准的预测效果，有望成为基因检测，分子亚型测定等的替代物，从而促进精准医疗及个体化医疗的实现。结论 放射组学在乳腺癌中有高度的临床应用价值及研究前景。

Necrosis nodule mimic breast cancer after breast augmentation with injectable polyacrylamide hydrogel a case report

Ning Ding[1],Lingyan Kong[1],Zhengyu Jin[1],Huadan Xue[1],Dong Liu[1],Nanze Yu[2],Lin Zhu[2]
1.Department of Radiology , Peking Union Medical College Hospital
2.Department of Plastic Surgery, Peking Union Medical College Hospital

Introduction: Necrotic nodule is a common complication after polyacrylamide hydrogel injection of the breast. A necrosis nodule mimicking breast cancer after polyacrylamide hydrogel injection was reported.
Case presentation: A 43- year- old woman underwent bilateral breast augmentation with injectable polyacrylamide hydrogel (PAAG) 12 years ago. 7 years later, she was admitted to hospital for the PAAG removal surgical procedure followed by bilateral silicone implant breast augmentation. 5 years afterward, she noted a palpable nodule in the upper-outer quadrant of her left breast.
Ultrasound: A hypoechoic nodule in the tail of the left breast at 2 o'clock was noted, with an irregular shape, microlobulated, closely adjacent to the pectoral muscle, with rich internal blood flow signal, BI-RADS 4C
MRI: An oval mass with heterogeneous enhancement was noted in the left breast, upper outer quadrant, 10:00, posterior third, near the pectoral muscle. The nodule size was

about 1.2 × 1.9 × 2.2cm, its boundary with the posterior chest muscle was unclear, DWI signal was high, ADC value is about $1.01\times10^{-3}mm^2/S$. In kinetic curve assessment, rapidly enhancing pattern was noted, delayed post-contrast indicate washout enhancement.BI-RADS 5.Surgery: The patient underwent B-ultrasound guided left breast extensive local excision and biopsy.
Pathology: Necrotic nodule, blue-stained amorphous matter and multi-nuclear giant cell reaction, accompanied by scattered calcification, a little fibrous adipose tissue, and striated muscle tissue.
Conclusion: Necrotic nodule after polyacrylamide hydrogel injection of the breast can mimic breast cancer in multiple imaging evaluations. Carefully differentiation should be made in imaging diagnosis.

PU-3133

乳房 MRI 背景实质增强与乳腺癌分子亚型相关性的探索

崔曹哲,马彦云,张辉
山西医科大学第一医院

目的：探讨不同乳腺癌分子亚型 MRI 乳腺实质增强(BPE)的分布特点**方法：**回顾性研究行 DCE 检查的患者 73 名。由 2 名医师采用 BI-RADS 分类法盲法评阅磁共振扫描图像，在 DCE-MRI 序列的早期阶段对 BPE 进行评估，将 BPE 分为 4 类：最小（<25%）、轻度（25%-50%）、中度（50%-75%）、明显（>75%）。如 BPE 等级评估有差异，则由两位医师共同讨论后决定。免疫组化：ER≥1%为阳性、PR≥1%为阳性。HER-2 染色强度评分为-、+、++或+++，≥3 值为阳性，-和+为阴性，分值为++时需进一步采用 fish 检测.若 fish 检测为阳性，则 HER-2(++)为阳性。据 2013 年 S t. Gallen 会议提出的临床病理分子分型，将患者分为 5 组 ：Luminal A 型组， Luminal B 型 HER2 阴性组 ，Luminal B 型 HER2 阳性组，HER2 阳性非 Luminal 型组 ，三阴型组。采用 x 2 试验，评价 5 组肿瘤亚型中 BPE 型分布的意义。同时采用 x 2 试验，研究了 5 种乳腺癌亚型在不同类型乳腺癌中的分布情况。**结果：**仅在腔 B 型(Her-)组中，轻度 BPE 型明显高于其他类型（P<0.001）。在其他乳腺癌亚型组中没有发现显著的分布差异。根据 BPE 在五组中分布情况，其中 4 组的轻度和中度 BPE 为常见类型。唯一的例外是三阴型组，中度和明显 BPE 在占优势;在所有轻度 BPE 患者中，腔 B 型 (HER 2-)组明显增高（P<0.001）。明显 BPE 患者中，三重阴型组明显高于其他对照组(P<0.001)。5 种肿瘤亚型在最小、中等 BPE 组中均无显著差异(P=0.07 和 P=0.09)。**结论：**1.不同分子亚型的乳腺癌中 BPE 的分布有所不同。2.BPE 可为从影像学角度来预测乳腺癌分子亚型提供一定的帮助。

PU-3134

Unilateral hematoma after breast augmentation with injectable polyacrylamide hydrogel a case report

Ning Ding,Lingyan Kong,Zhengyu Jin,Huadan Xue,Nanze Yu,Lin Zhu,Bo Jiang
Department of Radiology , Peking Union Medical College Hospital

Introduction: Bleeding is a rare complication after polyacrylamide hydrogel injection of the breast. Accurate preoperational diagnosis is helpful to the formulation of the surgical plan and follow-up treatment. A case of breast hematoma after breast polyacrylamide hydrogel (PAAG) injection and removal surgery was reported.
Case presentation:
A 46- year- old woman injected PAAG to both breasts for augmentation in 2004. Neither acute nor chronic complication like skin ulceration, redness or breast pain was present. Since 2013, the patient noticed nodules in both breasts, she underwent surgery to remove the PAAG gel in 2016, but progressive bilateral breast enlargement was noted afterward. And she was admitted again to our hospital for treatment. Breast physical examination: asymmetrical bilateral breasts was seen. It was found that the right breast enlarged with high skin tension. Neither side of the skin had erythema or dimpling. Scars were noted under bilateral papillae. Hard nodules were palpable in all four quadrants of the right breast. No discharge was found in both nipples.
Ultrasound: There were multiple hypoechoic nodules in the right breast. The largest one was located 2 cm away from the nipple at 5 o'clock direction, 2.6×2.2×2.1cm in size. CDFI: no obvious blood flow signal. BI-RADS 3.
MRI: multiple irregular implant cysts were seen anterior to the bilateral pectoralis major, an abnormally enlarged rounded mass was noted anterior to the right pectoralis major muscle. Its maximum cross-section plane was approximately 8.1×11.3cm. It was mainly consisted of T2WI and T1WI high signal, with scattered linear low T2 signal and patches of extremely high T2 signal. No obvious enhancement was noted in the mass.
Consideration: Mass in the right breast was considered mixed bleeding evolution signal at different phases.
Surgery record: Cut the skin along the right areola incision line. Then, the gland was cut into the deep semi-curved shape. There was a large amount of brown liquid in the posterior space of the gland, which was sucked out, and a large amount of brown semi-solid was taken out by scraping spoon.
Conclusion: MRI is a valuable choice in differentiating complications after polyacrylamide hydrogel injection, with multi-sequence and large viewing field. More accurate imaging diagnosis can be made by MRI.

PU-3135

Feasibility study of diffusion-weighted imaging histology in predicting Ki-67 expression in breast cancer

Qinglin Wang
Yantai Yuhuangding Hospital

Objective To investigate the feasibility of preoperative prediction of Ki-67 expression in breast cancer using diffusion-weighted magnetic resonance imaging (DWI).

Methods DWI images of breast cancer patients who underwent preoperative MRI examination were selected and Ki-67 expression level was measured by pathological examination. 114 lesions were obtained, of which 38 were negative for Ki-67 expression and 76 were positive for Ki-67 expression. They were randomly divided into training set and verification set. The image histology characteristics of DWI images were analyzed, and the image histology characteristics were screened and dimensionality reduced by LASSO regression model. The image histology label was constructed. According to the weight of the selected image histology characteristics, each patient was scored by image histology. The patients were divided into Ki-67 positive expression and Ki-67 negative expression 2. Group B: Established a prediction model for evaluating the expression level of Ki-67 in breast cancer by screened characteristic parameters combined with pathological diagnosis detection. The classification performance was evaluated by the area under the working characteristic curve (AUC).

Results Statistical analysis showed that 25 of 76 image histology parameters, such as entropy, energy and contrast, had statistical significance in both groups ($P < 0.05$). LASSO method was used to select uniformity, Haralick Correlation, inverse Difference Moment and difference Variance among 76 image histology features. To the training set and verification set, the distribution of each patient's image histology score was significantly different between the two groups. Combined with pathological results, the two-classification model was established. The training set AUC was 0.83, and the verification set AUC was 0.76.

Conclusion Ki-67-negative and Ki-67-positive breast cancer have different imaging histological characteristics in DWI images. The imaging histology of DWI is feasible in identifying the two, which is helpful to predict the expression of Ki-67 in breast cancer before operation.

PU-3136
基于多模态影像学表现的乳腺叶状肿瘤预后预测研究

刘君君,孙鹏峰,李芳芳,刘佩芳
天津医科大学肿瘤医院

目的：基于乳腺叶状肿瘤（Phyllodes Tumors，PTs）的超声（Ultrasound，US）、X 线摄影（Mammography，MG）及磁共振成像（Magnetic Resonance Imaging，MRI）的多模态影像学表现，分析其与 PTs 分级的关系，以期术前能准确诊断 PTs 并判断分级，为临床治疗策略的选择提供影像学依据。**材料与方法**：按照美国放射学院（American College of Radiology，ACR）BI-RADS 诊断标准回顾性分析 2006 年 12 月至 2016 年 4 月经手术病理证实的 132 例 PTs 的多模态影像图像及病理资料。采用卡方检验、fisher 精确检验对数据进行统计分析。**结果**：69 例具有术前 MG 检查的 PTs 术后病理诊断良性 25 例，交界性 17 例，恶性 27 例，肿物周围的“晕征”与分级有关（P=0.011）；121 例术前行 US 检查的 PTs 中有良性 43 例，交界性 36 例，恶性 42 例，形状不规则（P<0.01）、边缘不清晰（P<0.01）、内部回声不均匀（P=0.002）且出现囊性回声（P<0.01）与 PTs 的分级有关；36 例具有术前 MRI 检查的 PTs 中良性 20 例，交界性 8 例，恶性 8 例，病变平扫信号均匀性（P<0.05）、脂肪抑制 T_2WI 病变信号呈等或低信号（P=0.025）、不均匀强化（P<0.01）、时间-信号强度曲线呈Ⅱ、Ⅲ型（P=0.009）及 ADC 值较低（P=0.034）与分级有关。**结论**：MG 肿物周围“晕征”更易出现在良性 PTs 中，而 US 检查中肿物形态不规则、边缘不清晰及内部回声不均匀且有囊性回声，MRI 检查中病变平扫信号不均匀、脂肪抑制 T_2WI 信号呈等或稍

低信号、内部强化不均匀可见无强化区、时间-信号强度曲线呈Ⅱ、Ⅲ型及 ADC 值较低提示恶性 PTs 的可能。多模态影像学表现能有效为 PTs 术前的准确诊断及分级提供影像学信息，为临床制定治疗策略提供依据。

误诊为其它疾病的不典型乳腺导管内乳头状瘤的 MR 征象及临床症状分析

贺帅
辽宁省肿瘤医院

目的：分析误诊的乳腺导管内不典型乳头状瘤的 MR 征象及临床症状，以提高乳腺导管内乳头状瘤的诊断正确率。
方法：研究纳入了 16 例误诊的导管内乳头状瘤，把 23 例正确诊断的乳头状瘤作为对照组，对照性分析误诊的导管内乳头状瘤的 MR 征象，评价指标包括：病变部位、病变边缘情况、强化形态、内部强化特点、时间-信号强度曲线、导管扩张情况及乳头溢液情况。并对有统计学显著性差异的影像学征象的鉴别诊断价值进行分析。
结果：16 例误诊的不典型乳头状瘤中，乳头状瘤误诊为其它良性病变 7 例，包括腺瘤 4 例，误诊为腺病 3 例；误诊为恶性病变 9 例，包括导管原位癌 3 例，误诊为小叶浸润癌 1 例，误诊为浸润性导管癌 2 例，漏诊 3 例。病变位于周围乳腺导管多见于误诊组（67.3% vs 32.2%; p=0.02），无乳头溢液多见于误诊组（42.3% vs 20.2%; p=0.03），病变形态不规则多见于误诊组（47.3% vs 21.3%; p=0.04），乳腺导管未扩张多见于误诊组（57.4% vs 21.5%，p=0.03）。两组的强化形态无显著性差异（p=0.06），多表现为结节状强化；两组的内部强化特点无显著性差异（p=0.09），多表现为不均匀性强化；两组的时间-信号强度曲线无显著性差异（p=0.10），多表现为廓清型或平台型。
结论：病变位于周围乳腺导管、无乳头溢液、形态不规则及乳腺导管未扩张的乳头状瘤容易误诊，综合分析 MR 征象与临床症状可以提高不典型乳头瘤的正确诊断率。

PU-3138

乳腺脂肪坏死的 MR 诊断

贺帅
辽宁省肿瘤医院

目的：分析乳腺脂肪坏死的 MR 表现，以提高其正确诊断率。
材料与方法：12 例乳腺脂肪坏死的患者进行回顾性分析，分析病变形态、边界情况、内部结构、动态增强表现及临床病史、临床症状。
研究结果：在压脂序列显示为灶性“黑洞”征象，T1WI 显示病灶呈高信号改变，但有低信号环改变，增强后表现为环形强化（8/12）；动态增强区域（测量区域避开无血供的坏死区）显示为持续增强型（n=7）、平台型（n=3）及廓清型（n=2）。病史包括：外伤（n=3）、感染（n=2）、放疗（n=1）、自体脂肪植入手术（n=2）和病史不详（n=4）。
结论：乳腺脂肪坏死有特征性的 MR 表现，结合病史有助于提高其正确诊断率。

PU-3139
不同激素受体状态下 HER-2 阳性乳腺癌的 MR 影像与病理特征比较分析

王海丽
山东省立医院

目的：探讨不同激素受体（HR）状态下人表皮生长因子受体 2 （HER-2）阳性乳腺癌的 MR 影像与病理特征。
方法：对在我院行 MRI 检查并住院治疗的共 45 例 HER-2 阳性乳腺癌患者的 MR 影像及病理资料进行分析。
结果：将 HR+/HER-2+组与 HR-/HER-2+组乳腺癌的影像、病理结果做统计学分析，其中两组间在 BPE、病变位置、边界、瘤周水肿、前胸水肿、增强早期高/低强化比值、病理级别及 Ki-67 指数方面的差异有统计学意义；将上述差异有统计学意义的变量纳入多因素 logistic 回归分析，并绘制相应 ROC 曲线。logistic 回归分析结果显示增强早期高/低强化比值及病理级别对鉴别 HR+/HER-2+与 HR-/HER-2+乳腺癌的意义较大（P<0.05）。RCO 曲线下面积以增强早期不均质强化程度、瘤周水肿、组织学级别及 Ki-67 指数最大。根据 logistic 回归分析结果及 ROC 曲线，MR 影像征象方面，瘤周水肿与增强早期不均质强化程度对鉴别 HR+/HER-2+与 HR-/HER-2+乳腺癌的意义较大；病理上，组织学级别与 Ki-67 指数对鉴别 HR+/HER-2+与 HR-/HER-2+乳腺癌的意义较大。
结论：HER-2+乳腺癌根据 HR 状态的不同有着不同的影像、组织病理学及分子生物学特征。与 HR+/HER-2+乳腺癌比较，HR-/HER-2+乳腺癌多位于右乳，背景实质强化程度偏高，边界多欠清，更易出现瘤周水肿、前胸水肿，动态增强早期不均质强化程度、病灶的组织学级别及 Ki-67 表达指数更高，尤其是瘤周水肿、增强早期不均质强化程度、组织学级别及 Ki-67 表达指数的差异更具有鉴别意义，从而可以为不同 HR 状态下的 HER-2+乳腺癌在诊断、治疗及随访预后方面提供有价值的信息。

PU-3140
Histogram analysis of apparent diffusion coefficient maps for histological grades of breast phyllodes tumors

Qi Tang
Hubei Cancer Hospital

Background: *In patients with breast phyllodes tumors (PTs), the therapeutic approach and clinical prognosis differ considerably according to tumor histological grade. The aim of this study was to assess the role of apparent diffusion coefficient (ADC) histogram in histologically grading of PTs prior to treatment.*
Methods: *Forty-two women with forty-five histopathologically confirmed PTs were enrolled and divided into three subgroups: fourteen benign, seventeen borderline and fourteen malignant type tumors. Whole-tumor histogram-derived ADC parameters before treatment were compared among the three subgroups. Additionally, intra-reader correlation coefficient (ICC) was calculated to assess interobserver agreement.*

Results: Weak to moderate negative correlations were observed in minimum ADC, ADC5, ADC10 and ADC25 for each histological grade (r = -0.322; r = -0.410; r = -0.436; r = -0.402; all P < 0.05), while skewness showed a weak positive correlation (r = 0.312; P = 0.037). Among a series of parameters, only minimum ADC proved to be statistically significant among histological grades (P = 0.026). However, the results of pairwise comparisons demonstrated that minimum ADC differed significantly between benign and malignant PT (P = 0.009), but did not show any differences between borderline and benign as well as malignant PTs (P = 0.078 and 0.305, respectively). ROC curve revealed that ADC10 and ADC25 produced the largest AUCs (0.760 and 0.744) in distinguishing benign PT from combined borderline and malignant PT (namely non-benign PT), with corresponding threshold values of $1.335\times10^{-3}mm^2/s$ and $1.520\times10^{-3}mm^2/s$. All the parameters except minimum ADC and kurtosis showed excellent inter-observer agreement with ICCs higher than 0.80.

Conclusions: *Several histogram-retrieved parameters can be used to help determine the histologic grade of breast phyllodes tumors. However, the borderline type remains to be identified individually.*

PU-3141

乳腺磁共振成像检查序列规范化与病例展示

张爱莲,张晶
中国人民解放军总医院第一医学中心

扫描序列及扫描参数
常规平扫序列：推荐采用横轴面扫描 T1WI 非脂肪抑制序列、T2WI 脂肪抑制序列、扩散加权成像(diffusion weighted imaging，DWI)。扫描参数：层厚 4～6 mm，层间隔为层厚的 10%～20%。
动态增强扫描序列：采用横断面三维快速梯度回波 T1WI 抑脂序列，三维快速容积成像 T1WI，先平扫再注射对比剂，采用同样序列连续 5～7 次,不同时相的动态增强扫描，延迟时间≥7 min。扫描参数：层厚应 1～3 mm，层面内的分辨率应＜1.5 mm，单期相扫描时间<2 min。对比剂选用 Gd-DTPA，注射剂量 0.1 mmol/kg，采用压力注射器以 2～3 mL/s 的速率经肘静脉注入，注射完对比剂后以相同速率注入 15 mL 生理盐水冲管。增强延迟扫描时长推荐 7 min，不低于 5 min。
MRI 图像后处理 平扫 T1WI 非脂肪抑制序列、T2WI 脂肪抑制序列图像不需后处理。DWI 图像需要测量 ADC 值。动态增强扫描的图像需测量信号强度并生成时间-信号曲线(time-intensity curve，TIC)。将采集的图像传送至工作站对病灶进行分析，利用后处理软件寻找病灶放置感兴趣区(region of interest，ROI)，ROI 光标不能小于 5 个体素，应避开肉眼可见的出血、液化、坏死及囊变区，并在对侧正常乳腺组织内选取相同大小的 ROI 作为对照，绘制病灶 TIC。多平面重组，用动态增强的不同期相原始轴面图像，根据需要重组矢状面像及冠状面像。
影像显示：乳腺和腋窝区域包括完全；各序列影像组织层次分明，病灶显示清晰；脂肪抑制序列压脂良好；增强检查时相把握准确，血管、病灶显示清晰；背景噪声较低；假体检查时，假体清晰可见，无伪影。

PU-3142

BPE 与乳腺良恶性病变、雌孕激素受体状态及乳腺癌分子亚型的相关研究

李勤勍,杨军,丁莹莹,李卓林
云南省肿瘤医院

【目　　的】探讨乳腺增强磁共振背景实质强化（BPE）与乳腺良、恶性病变、雌、孕激素受体状态及乳腺癌分子亚型之间的相关性。
【方　　法】　回顾性分析 150 名女性受检者(良性病变 49 例，恶性病变 101 例)的乳腺 DCE-MRI 资料以及临床病例资料。定性及定量分析良恶性病变组间 BPE 的关系，乳腺癌组中 BPE 与雌孕激素受体状态的相关性；乳腺癌四种分子亚型中不同类型间 BPE 的关系，并对 BPER 与背景实质 ADC 值之间的相关性进行分析。**【结　　果】**乳腺良、恶性组间 BPER 无差异（P>0.05）；在乳腺癌中，BPE 与雌、孕激素受体状态无相关性（P>0.05）；增强早期乳腺癌四种分子亚型之间 BPER 有差异（P<0.05），三阴性组最高，Lumina A 组最低；BPER 与背景实质 ADC 值之间无相关性（P>0.05）。
【结　　论】　1、乳腺背景实质强化与乳腺良、恶性病变之间无明显相关性。2、雌激素、孕激素受体阳性及阴性乳腺癌患者乳腺背景实质强化率之间无差异。3、乳腺良性病变组乳腺背景实质强化率与病灶强化率之间呈中等度相关，相关系数大于恶性病变组。4、乳腺背景实质强化程度与乳腺背景实质 ADC 值之间的无相关性。5、在乳腺癌分子分型中，三阴性乳腺癌的 BPER 最高，Luminal A 型最低，BPER 的增高预示乳腺癌预后不良。

PU-3143

Comparative study of diffusion kurtosis imaging model and traditional diffusion weighted imaging model in diagnosis of breast cancer

Kangan Li,Jingge Lian,Ting Li,Lunbo Lu
Shanghai General Hospital

Objective: To compare the value of diffusion kurtosis imaging model with traditional single-index diffuse weighted imaging model parameters in the differential diagnosis of benign and malignant breast lesions, and to explore the correlation between the parameters and molecular subtypes and prognostic factors of breast cancer.
Methods:64 cases of breast lesions were examined by DKI (b = 0,500,1000,1500,2000,2500,3000 s / mm^2) and traditional DWI (b = 0,1000 s / mm^2). To compare the diagnostic efficacy of DKI parameters (MK and MD) and traditional DWI parameters (ADC) in benign and malignant breast lesions, and to analyze the correlation between MK, MD and ADC values and molecular subtypes and prognostic factors of breast cancer. **Results:**The difference of MK, MD and ADC between the benign and malignant groups was statistically significant (P <0.05). The area under the ROC curve of MK, MD and ADC was 0.897, 0.827 and 0.776, respectively. According to the Youden index, the sensitivity, specificity and accuracy of the MK were 83.3%, 85.3% and 84.4% respectively. The combination of the three parameters could increase the AUC to 0.935. The MK of ER positive lesions were higher than negative (P = 0.024). The correlation analysis showed that ER was low positively

correlated with MK (r = 0.417, P = 0.022), and there was no significant correlation between the other prognostic factors and the parameters (P> 0.05). There were no significant differences in DKI and DWI parameters between the subtypes (P> 0.05). **Conclusion:**The parameters of DKI model and traditional DWI model can be used to differentiate benign and malignant breast lesions. The diagnostic value of MK value in DKI model is the largest. There is a certain correlation between DKI model parameters and prognostic factors.

PU-3144
月经周期、乳腺肿瘤性质对乳腺磁共振背景实质强化程度影响的研究

王玉芬[1,2],郑建军[1],金银华[1],戴琦[1]
1.中国科学院大学宁波华美医院
2.宁波大学医学院

目的 研究月经周期、乳腺肿瘤性质对乳腺磁共振（MRI）背景实质强化（BPE）程度的影响。**方法** 回顾性分析 2017 年 6 月至 2018 年 6 月在中国科学院大学宁波华美医院诊断为乳腺肿瘤的 127 名患者病例资料，根据患者的月经周期（1-7 天为第 1 周，8-14 天为第 2 周，15-21 天为第 3 周，22-28 天为第 4 周）及肿瘤性质（良性肿瘤，恶性肿瘤）分别对患者进行分组研究。在患者乳腺 MRI 的 T_1加权脂肪抑制-最大强度投影减影序列中观测 BPE，根据最新版 BI-RADS 对患者健侧乳腺的 BPE 进行定性评价（极少、轻度、中度和重度），分析患者月经周期、肿瘤性质与 BPE 程度的关系。**结果** 1、50 岁及以下患者 80 名，BPE 为中度或重度占 75.0%（60/80）；50 岁以上患者 47 名，BPE 为中度或重度占 10.6%（5/47），两者具有统计学差异（P<0.05）。2、乳腺良性肿瘤患者 BPE 为中度或重度占 62.7%（32/51），乳腺恶性肿瘤患者 BPE 为中度或重度占 43.4%（33/76），两者无统计学差异（P>0.05）。3、在 44 名乳腺良性肿瘤患者和 40 名乳腺恶性肿瘤患者中，不同月经周期患者的乳腺 BPE 均无统计学差异（P>0.05）。通过组间比较发现，乳腺良性肿瘤患者月经周期第 4 周的 BPE 高于非第 4 周，具有统计学差异（P<0.05），乳腺恶性肿瘤患者月经周期各周期无统计学差异（P>0.05）。**结论** 1、50 岁以下女性的乳腺 BPE 高于 50 岁以上女性。2、乳腺肿瘤良恶性与乳腺 BPE 无明显的相关性。3、乳腺良性肿瘤患者的 BPE 与月经周期有关，月经周期第 4 周不适宜行乳腺磁共振检查。

PU-3145
乳腺颗粒细胞瘤影像学发现

闵庆华,江珍敏,牛娟娟
上海市同仁医院

颗粒细胞瘤(granular cell tumor)是一种少见的软组织良性肿瘤，可以发生于任何部位，大多数位于头颈部，发生于乳腺者少见。本文报道 1 例乳腺颗粒细胞瘤，分析该肿瘤的影像学、临床病理特征、免疫组化特点及诊断和鉴别诊断要点，并结合文献进行讨论。GCT 多位于内上象限。本例发生于乳晕旁，是为特殊。GCT 通常表现为无痛、质硬肿物，易于与乳腺癌混淆。GCT 的 MRI 表现多在个案中有报道，缺乏共性。最终确诊需要依靠组织病理学检测和免疫组化检查。影像学意义在于确定病灶范围及数量，初步判断良恶性，诊断病理类型相对困难。

PU-3146

MRI 动态增强光梭成像在乳腺疾病中的应用

冯旭霞,朱洁,闫苗苗,李静,王霞
延安大学附属医院

目的：针对乳腺疾病临床诊断中应用 MRI 动态增强光梭成像应用价值。方法：2018 年 1 月～2019 年 2 月行乳腺 UCS-MRI 扫描，且均有病理和临床随访证实的乳腺结节患者 50 例。采用联影 UMR770 先行乳腺常规 MRI 平扫，15 毫升顺磁性造影剂钆喷酸葡胺 MRI 造影剂，按照 2.5 毫升/秒速度采用高压注射器注射。采用常规矢状位、冠状位及轴位序列进行扫描后，再进行脂肪抑制、动态增强及 TSE T2WI 扫描。对患者采取平扫方法检查后，将 Gd-DTPA 造影剂对患者注射后再采取 T1 高分辨率各向同性容积采集技术进行 UCS-MRI quick 3d 动态扫描，无间断 10 次连续扫描的增强扫描方法。10 个动态增强序列先后导入到乳腺分析软件中，计算出 TIC 曲线。对诊断结果及动态增强磁共振征象进行分析研究。结果：有 17 例患者为乳腺癌，25 例患者为乳腺良性疾病，准确性为 80%、特异性为 76%、敏感性为 85.6%。临床患者在医学影像、周边血管及初期病灶增强性等方面，乳腺良性疾病和乳腺癌患者存在的差异具有统计意义（P ＜0.05）。结论：磁共振光梭成像在临床中应用于诊断乳腺疾病，女性患者与男性患者相比发病率相对较高一些，早期对患者及时进行诊断并制定有针对性地方案进行治疗，可使患者疗效明显提高，患者预后得到显著改善，采用磁共振动态增强光梭检查技术在临床中诊断乳腺肿瘤主要是能够利用对肿瘤血流动力学状态分析并形成影像，对比剂产生肿瘤强化与向组织细胞外间隙进入的剂量及肿瘤内血管的密度等有关指标存在比较密切的关系，而病变强化程度及速度等与组织细胞外渗透的间隙及病灶部位血管密度存在密切关系，乳腺良性疾病和乳腺癌患者存在的差异具有统计意义（P＜ 0.05），这与有关研究结果基本吻合，说明磁共振动态增强检查技术不只是在诊断乳腺疾病中能够使准确性、特异性及敏感性提高，还对乳腺疾病的良恶性分型具有重要的应用价值。

PU-3147

乳腺浸润性微乳头状癌 MRI 表现与淋巴结转移的关系

周嘉琪
辽宁省肿瘤医院

目的：探讨具有微乳头结构的乳腺癌磁共振检查的影像学表现及与淋巴结转移的关系。**方法：**将 79 例 IMPC 的 MRI 表现按淋巴结是否转移分为两组进行统计分析。**结果：**IMPC 的淋巴结转移组与淋巴结未转移组 MRI 检查均主要表现为不规则性肿块伴边缘毛刺，强化方式为不均匀强化，时间-信号强度曲线常为流出型，早期快速强化。淋巴结转移组 ADC 平均值为 (0.000853±0.000176)㎜²/s，小于淋巴结未转移组 ADC 平均值(0.000963±0.000183)㎜²/s，两者差异具有统计学意义(P=0.017)。**结论：**淋巴结转移 IMPC 的 ADC 值小于淋巴结未转移 IMPC，说明 ADC 值低的 IMPC 较 ADC 值高的 IMPC 可能更易发生淋巴结转移。

PU-3148

Diffusion parameters in diffusion kurtosis imaging and perfusion parameters in dynamic contrast-enhanced MRI:

Correlation of prognostic factors in breast invasive ductal carcinoma

Kangan Li, Jingge Lian, Ting Li, Lunbo Lu, Yaoyao Zhuo
Shanghai General Hospital

Purpose: This study evaluated the capability of characterizing breast lesions by diffusion parameters derived from diffusion kurtosis imaging (DKI) and perfusion parameters derived from dynamic contrast-enhanced magnetic resonance imaging (DCE-MRI) and investigated whether a correlation exists between those parameters and prognostic factors of breast invasive ductal carcinoma.

Materials and methods: The institutional review board approved the study, and written informed consent was obtained. This prospective study included 133 women (mean age±standard deviation: 46.16 years±13.70; range, 19–79 years) with breast lesions (61 malignant, 72 benign) who underwent magnetic resonance imaging (MRI) examination before surgery between July 2017 and Jan 2018. For the DKI model, we used 7 b values: 0, 500, 1000, 1500, 2000, 2500 and 3000 s/mm^2. The quantitative parameters of the DKI model (MK and MD) and DCE model (K^{trans}, V_e, V_p and K_{ep}) were calculated by two radiologists. Student's t tests were performed tocompare malignant and benign breast lesions. Receiver operating characteristic (ROC) analysiswas used forassessing the sensitivity, specificity and accuracy of the quantitative parameters. The relationships between parameters, prognostic factors and molecular subtypes were investigated using the Mann-Whitney U test or the Kruskal-Wallis H test.

Results: The mean values of MK, K^{trans} and K_{ep} in malignant lesions were significantly higher than those of benign lesions ($P<0.05$). Conversely, the mean MD values of benign lesions were higher than those of malignant lesions ($P<0.05$). The K^{trans} value obtained the largest sensitivity (85.2%) using 0.083 as a threshold, with a relatively low specificity (65.3%). The MK value demonstrated the largest area under the curve (AUC) (0.847), specificity (84.7%) and accuracy (82.0%) using a cutoff value of 0.727; however, the sensitivity was not comparably high (78.7%). Combined with MK or MD, the specificities of K^{trans} were improved to 83.3% and 81.9%, respectively. Meanwhile, combined with K^{trans} or K_{ep}, the sensitivities of MK increased to 86.9% and 85.2%, respectively. The mean V_e was higher in tumors with a low histologic grade (1.042±0.882) or progesterone receptor (PR) positivity (1.034±0.893) than in tumors with a high histologic grade (0.780±0.901) or PR negativity (0.700±0.875) ($P=0.038$ and 0.022, respectively). The mean K_{ep} was higher in tumors with high Ki67 expression (0.564±0.496) than those with low Ki67 expression (0.289±0.125, $P=0.016$). The mean MK was higher in tumors with Her-2 negativity (0.977±0.142) than in those with Her-2 positivity (0.847±0.140, $P=0.004$). Luminal B breast tumors showed significantly higher MD values than luminal A and triple-negative breast tumors ($P=0.018$ and 0.021, respectively).

Conclusion: The combination of DKI and DCE-MRI can complementarily improve the performance of differentiating between benign and malignant breast lesions. Preoperative functional MRI parameters could be used to identify several prognostic factors or molecular subtypes.

Radiological and Clinical Findings in Sclerosing Adenosis of the Breast

Hongna Tan[1],Huiyu Zhang[2],Fangfang Fu[1]
1.Department of Radiology, Henan Provincial People's Hospital, Henan, 450003, China;
2.Department of Radiology, The First Affiliated Hospital of Zhengzhou University, Zhengzhou University

Purpose: To study the imaging and clinical features of breast sclerosing adenosis (SA), and to enhance the recognition of this disease, as well as to help the clinic to give a correct diagnosis. ***Methods:*** Imaging findings were retrospectively reviewed in 47 women with SA lesions confirmed by pathology (including 39 cases of mammography, 40 cases of US and 34 cases MRI). ***Results:*** Of 47 patients confirmed with SA, 18 cases were pure SA, and 29 cases coexist with other proliferative lesions and malignancies; the maximum diameter of SA lesions was 0.5cm~3.5cm with an average of 1.6cm. On the mammogram of 39 SA cases, the percentage of architectural distortion, calcifications, mass/nodular, asymmetric density and mass combining with calcifications were 30.8%, 23.1%, 17.9%, 12.8% and 7.7%, respectively; and 3 cases had no abnormal findings. On the sonogram (excluding five normal finding cases), the majority lesions showed regular shaped (57.1%), well defined margined (60.0%), heterogenous low echoed (71.4%) nodulus. 85.3% lesions showed high signal on T2-weighted images, and all lesions were enhanced markedly, including 82.4% lesions appearing mass-like enhancement(17 star-shaped enhanced masses included); and the percentage of the time-signal intensity curve in type 1, type 2 and type 3 were 52.9%, 41.2% and 5.9%, respectively. If the category BI-RADS≥4b was considered to be a suspicious malignant lesion, the misdiagnostic rates of mammography, US and MRI would be 17.9%, 17.5% and 35.3%, respectively. ***Conclusion:*** The SA lesions are small and can occur with other diseases histologically. The majority SA lesions showed distortion or calcifications on mammograms, low echo-level nodules with heterogenous echo on US and mass like lesion with or without star shape on enhanced MRI.

基于超顺磁性氧化铁基多功能纳米探针的乳腺癌诊疗一体化研究

戴琦,郑建军,金银华
中国科学院大学宁波华美医院

目的：回顾多功能纳米探针的乳腺癌的成像现状，介绍基于超顺磁性氧化铁基分子探针乳腺癌诊疗一体化研究成果。
材料与方法：综述了近年来在超顺磁性氧化铁作为肿瘤成像的多功能分子探针现状。此外，还介绍了一系列潜在的治疗技术，这些技术包括成像引导手术，光动力疗法，光热治疗，化疗，磁热疗疗法。
结果：超顺磁性氧化铁的制备和表面改性对于进一步的成像和治疗至关重要。制备方法包括共沉淀法，高热分解，水热反应和微波辐射。表面改性包含介孔二氧化硅，PEG，PVA，葡聚糖和白蛋白。

为了准确定位乳腺癌，应选择特异性受体，如叶酸受体，人类表皮受体，转铁蛋白受体和αvβ3整合素。乳腺癌成像除外，SPION 也可用作光动力疗法，光疗法和化疗的载体。
结论：葡聚糖包裹的超微 USPIO 纳米对比剂，核心粒径=4nm，实现 MRI 的 T2 负性增强向 T1 正性增强成像模式转变；白蛋白包裹叶酸靶向超顺磁性氧化铁纳米探针，实现对乳腺肿瘤的高效、低毒和靶向 MRI 显像；创新设计出 Janus 结构的 Fe3O4-TiO2 复合分子探针，可以实现 MRI 成像和光动力/光热治疗双功能。

乳腺癌 MRI 表现与肿瘤浸润淋巴细胞比例的相关性研究

李芳芳
天津医科大学肿瘤医院

目的 本研究旨在探讨乳腺癌 MRI 表现特征与肿瘤浸润淋巴细胞比例之间的相关性，以期能否从乳腺癌 MRI 表现特征间接提示和预测肿瘤浸润淋巴细胞比例，为从影像学角度评价预后提供一定的依据。**方法** 回顾性分析 2015 年 6 月至 2016 年 12 月于天津医科大学肿瘤医院行乳腺 MRI 检查表现为肿块型病变并经病理证实的浸润性导管癌患者 138 例（共 140 个病变）的资料。所有患者均行双侧乳腺平扫、DWI 和动态对比增强 MRI 检查。依据美国放射学院（ACR）提出的乳腺影像报告和数据系统（BI-RADS）标准对图像进行分析，观察病变的形状、边缘、脂肪抑制 T_2WI 信号强度及均匀度、强化方式和时间-信号强度曲线（TIC）类型，并测量病变的大小（最大径）、早期强化率和 ADC 值。根据肿瘤浸润淋巴细胞比例将所有病例分为两组，比例＜30%者纳入肿瘤浸润淋巴细胞低比例组，比例≥30%者纳入肿瘤浸润淋巴细胞高比例组。评估肿瘤浸润淋巴细胞比例与病变影像学特征之间的关系。定性资料的比较采用 x^2检验，定量资料的比较采用独立样本 t 检验。**结果** 在 138 例（共 140 个病变）乳腺癌患者中，肿瘤浸润淋巴细胞低比例组 97 个病变，高比例组 43 个病变。TIL 低比例组和 TIL 高比例组病变在肿块的形状、边缘、脂肪抑制 T_2WI 信号是否均匀、内部强化方式的差异上有统计学意义（P均＜0.05）。两组病变在肿瘤大小、TIC 类型、早期强化率及 ADC 值的差异上无统计学意义（P均＞0.05）。**结论** 乳腺癌 MRI 表现部分特征与肿瘤浸润淋巴细胞比例之间具有一定的相关性。病变的形状规则、边缘趋于光滑、脂肪抑制 T_2WI 信号趋向均匀以及动态增强后病变内部强化均匀这些征象提示病变肿瘤浸润淋巴细胞比例较高。通过这些影像学表现特征可以间接预测肿瘤浸润淋巴细胞比例，有助于评价预后并为临床选择合适的治疗方案提供一定的影像学信息。

PU-3152
基于 DCE-MRI 的影像组学和五种不同网络的深度学习对乳腺良恶性病灶的鉴别诊断

周洁洁,王美豪
温州医科大学附属第一医院

目的：探讨并比较 MRI 增强影像组学和深度学习对乳腺良恶性病变的诊断价值。
方法：本研究选取 2017 年月至 2018 年 6 月经手术病理证实的乳腺病变患者 152 例，其中恶性肿瘤患者 93 位、病灶 103 个，良性病变患者 59 例、病灶 73 个。所有患者均术前行乳腺 MRI 平扫及增强检查。基于动态增强生成了早期流入信号增强比、最大增强信号比和流出斜率相对应的 DCE 参数图。采用基于纹理和强度直方图的影像组学分析和 5 个网络（ResNet50、VGG16、VGG19、

Exception 和 Inception V3）的深度学习进行诊断分析，并采用包含不同肿瘤周围组织的五种不同输入边界框进行 CNN 分析。
结果：影像组学的诊断准确度均值为 80%；五种不同输入边界框的 CNN 模型中，含少量肿瘤周围组织的最小边界框诊断效能最高，ResNet50（93%）、Xception（94%）和 InceptionV3（93%）的平均诊断准确度优于 VGG16（80%）和 VGG19（79%）。
结论：深度学习的诊断效能优于影像组学，含少量肿瘤周围组织的诊断效能高于仅包含肿瘤组织或包含较多肿瘤周围组织。
本研究由温州市科技局基础性科研计划项目（NO.Y20180187）资助。

PU-3153
多参数 MRI 神经网络自编码器影像组学融合模型预测乳腺癌患者前哨淋巴结转移

王颖仪
广东省人民医院

目的：本研究基于动态增强（DCE）、T2 加权脂肪抑制（T2-FS）和弥散加权（DWI）的多序列磁共振图像，使用神经网络自编码器影像组学融合模型，无创性地预测乳腺癌患者前哨淋巴结（SLN）转移状态。

方法：回顾性收集广东省人民医院 2012 年 2 月至 2018 年 2 月组织病理学证实为乳腺癌的 284 例患者（均为女性，年龄范围 24-80 岁），按时间分为训练集（n=199）和验证集（n=85）。所有患者均接受了 DCE、T2-FS 和 DWI MRI 扫描，未在 SLN 活检或腋窝淋巴结清扫术前接受新辅助化疗。本研究的病理临床信息包括 Ki-67 增殖指数、病理组织学分级、雌激素受体（ER）状态和孕激素受体（PR）状态等。本研究使用 ITK-SNAP 软件人工勾画肿瘤区域，使用 Matlab 对肿瘤区域提取手工影像组学特征 15000 个（4 类，包括一阶统计特征、形态特征、纹理特征和小波特征），并使用神经网络自编码器提取自编码器特征。研究使用最小冗余最大相关算法（mRMR）选择 top-5 特征组成影像组学标签，最后使用 logistic 回归融合影像组学标签，构建乳腺癌患者前哨淋巴结转移预测模型。

结果：融合模型在训练集和测试集的 C-index 分别为 0.918 和 0.807，通过综合判别改善指数（IDI）和净重分类改善指数（NRI）分析，发现融合了多序列的手工特征和深度特征的融合模型，优于单序列模型，具有统计学差异（p 值均小于 0.05）.通过决策曲线分析（DCA），发现无论在训练集还是测试集，融合模型均优于单序列模型。

结论：本研究基于多序列（DCE、T2-FS 和 DWI）MRI，提取神经网络自编码器和手工影像组学特征，建立了乳腺癌患者前哨淋巴结转移术前预测模型。研究结果表明，无论在训练集还是测试集，多序列融合模型均优于单序列模型。该模型提高了 SLN 转移预测的性能，为临床实践提供了新的思路。

PU-3154
Differences in heterogeneity analysis at pre-contrast and post-contrast of DCE-MRI between tumor and

peritumoral stroma for predicting Ki-67 status of invasive ductal breast carcinoma

Xiaxia He,Jiejie Zhou,Meihao Wang
First Affiliated Hospital of Wenzhou Medical University

Purpose: This study aimed to evaluate and compare the heterogeneity of intratumor and peritumor in predicting Ki-67 status, and the effect of different contrast periods on prediction accuracy.
Materials and Methods: This study included 88 patients with 57 high-Ki-67 and 31 low-Ki-67 breast lesions. All patients underwent preoperative breast dynamic contrast-enhanced magnetic resonance imaging (DCE-MRI). The signal characteristics, which representing heterogeneity, was derived from the grey-level co-occurrence matrix on slice-matched post-contrast and five post-contrast images. We obtained the signal characteristics of tumor and peritumoral stroma by drawing the region of interest (ROI) of different regions.
Each parameter was correlated with Ki-67 status using the Mann-Whitney test and receiver operating characteristic curve analysis.
Results: Statistical assessment demonstrated that entropy values obtained at the first post-contrast period in each ROI were all highly significantly different between the high- and low-Ki-67 proliferation status (P< 0.05). At the first post-contrast series, the AUC values amongst various regions of tumor and peritumoral stroma are all higher than 0.6 (AUC= 0.713, 0.636, 0.644, 0.756, 0.632 respectively). Entropy values obtained based on the tumor boundary as a band-like area inside and outside at the first post-contrast series revealed the highest AUC (0.765).
Conclusion: Heterogeneity analysis of DCE-MRI lesions obtained before pathological diagnosis could successfully discriminate high- and low-Ki-67 proliferation status. The band-like region inside and outside the tumor boundary can also distinguish the Ki-67 states and showed better predictability.

This work was supported by grants from the Science Foundation of Wenzhou(NO.Y20180187).

具有微乳头状结构乳腺癌影像学研究

周嘉琪
辽宁省肿瘤医院

目的：探讨具有微乳头结构的乳腺癌的临床病理特点，乳腺磁共振检查的影像学表现。**方法：**回顾性总结 84 例具有微乳头结构的乳腺癌患者的临床病理学特点及 MRI 检查结果，并选取 60 例同期同级别非特殊型浸润型导管癌（NST）作为混合型 IMPC 的对照组进行统计分析。**结果：**5 例 IMPC 伴导管原位癌 MRI 表现以非肿块样强化为主，平均 ADC 值为(0.00101±0.000118)㎜²/s。19 例纯型 MRI 表现多为形态不规则、边缘毛刺、不均匀强化的肿块，早期快速强化，时间-信号强度曲线为流出型，11 例中 8 例 ADC 值平均为（0.000898±0.000322）㎜²/s。60 例混合型 IMPC 及 60 例同级别单纯 NST 的 MRI 检查均主要表现为形态不规则的肿块，强化方式为不均匀强化，时间-信号强度曲线为流出型，早期强化率为快速强化；混合型 IMPC 肿块边缘毛刺常见，与 NST 比较有统计学差异（P=0.049）；混合型 IMPC 的平均 ADC 值为(0.000873±0.000176)㎜²/s，小于 NST 的平均 ADC

值（0.001058±0.000212）mm²/s,两者有统计学差异(P=0)。**结论：**IMPC 侵袭性强、易发生淋巴结转移。影像学表现为典型的恶性肿瘤征象，多为形态不规则、边缘毛刺的肿块，ADC 值较低。

PU-3156

Predicting breast cancer prognosis using quantitative dynamic contrast-enhanced (DCE)-MRI parameters with a reference region model

Aijing Li[1],Yuning Pan[1,2],Bin Chen[1],Rong Huang [1],Jianbi Xia[1],Yinhua Jin[1],Jianjun Zheng[1]
1.Hwa Mei Hospital， University of Chinese Academy of Sciences
2.Ningbo First Hospital

Background: In this study, we investigated the feasibility of using quantitative DCE-MRI with a reference region model for the prognosis of breast cancer.
Methods: We retrospectively analyzed 80 cases with pathologically confirmed invasive ductal carcinoma of the breast using quantitative dynamic contrast-enhanced (DCE-MRI) with a reference region model. The pharmacokinetic quantitative parameters and prognostic factors of breast cancer were measured, and the relationship between the quantitative parameters and prognostic factors was examined.
Results: The volume transfer constant (RRK^{trans}) and rate constant (K_{ep}) were significantly higher in patients with level 3 histological grading compared to patients with level 1 & 2 histological grading ($p<0.05$), and patients with negative estrogen receptor (ER-negative) and/or negative progesterone receptor (PR-negative) compared to patients with ER-positive ($p<0.05$) and/or PR-positive ($p<0.05$), respectively. For immunohistochemistry, RRK^{trans} was significantly higher in Triple-Negative Breast Cancer (TNBC) type ($p<0.05$) compared to luminal type breast cancer. In addition, K_{ep} was higher in TNBC type compared to luminal type ($p<0.05$).
Conclusion: Our results demonstrated that high RRK^{trans} and K_{ep} values are associated with a poor breast cancer prognosis. In addition, RRK^{trans} and K_{ep} parameters can differentiate different types of breast cancer, in particular, differentiating between luminal type and TNBC type. Quantitative DCE-MRI parameters with reference region models (RR) may potentially improve the prediction of breast cancer prognosis.

三阴性与非三阴性乳腺癌转移临床特征的差异性研究

翟春丽,郑建军
宁波市第二医院（原:宁波华美医院）

目的：探讨三阴性乳腺癌（TNBC）转移的临床特征，与非三阴性乳腺癌（NTNBC）比较。**方法：**回顾分析本院 2016 年 1 月至 2018 年 1 月 75 例乳腺癌转移患者临床资料，根据免疫组化分为 TNBC 转移与 NTNBC 转移组。分析两者在发病年龄、肿瘤大小、手术方式、病理类型之间的差异。**结果：**（1）TNBC 转移组与 NTNBC 转移组在发病年龄间差异有统计学意义；组间比较，≤40 岁与＞60 岁年龄组差异有统计学意义。（2）TNBC 转移组与 NTNBC 转移组在肿瘤大小间差异有统计学意义；组

间比较，＞2cm 且≤5cm 与＞5cm 组差异有统计学意义。（3）TNBC 转移组与 NTNBC 转移组在手术方式、病理类型间差异无统计学意义。**结论：**TNBC 转移好发于≤40 岁患者，或原发灶＞5cm；NTNBC 转移好发于＞60 岁患者，或原发灶＞2cm 且≤5cm；两者均多见于浸润性导管癌，且原发灶手术方式对转移发生率无影响。

PU-3158
MRI 在乳腺癌化疗疗效评估中的应用研究

王婷婷
中国人民解放军总医院第五医学中心

目的：通过分析乳腺癌化疗前与化疗 4 周期后肿瘤大小、ADC 及早期强化率的变化，研究 MRI 测量指标在乳腺癌化疗疗效评估中的应用价值。材料与方法：收集 2016 年 12 月至 2018 年 11 月就诊于我院的 70 例乳腺癌患者的 MRI 资料。患者在治疗前、4 周期后进行乳腺 MRI 检查，用 1.5T Espree Pink MRI 系统扫描轴位 T1WI、轴位和矢状位 T2WI，DWI 和的动态增强扫描，在西门子工作站上测量肿瘤的大小、ADC 值及早期强化率。用 RECIST 1.1 和 Miller＆Payne 标准对乳腺癌进行评价；经 Kolmogorov-Smirnov[3]、Shapiro-Wilk、方差齐性及 t 检验，分析乳腺癌化疗前后 MRI 测量指标的变化，用 ROC 曲线检测评估效能。结果：术后病理示完全反应组 38 例，未完全反应组 32 例。疗前组间肿瘤大小、ADC 值及早期强化率无差异(P>0.05)，4 周期后组间肿瘤的大小、ADC 值及早期强化率存在明显差异(P<0.05)。化疗后，完全反应组的肿瘤收缩 15.87%~85.37%，ADC 值升高 0.092×10^{-3}~$1.943\times10^{-3}mm^2/s$，早期强化率降低 53.3%~292.1%；未完全反应组的肿瘤收缩 16.26%~58.79%，ADC 值升高 0.004×10^{-3}~$0.798\times10^{-3}mm^2/s$，早期强化率降低 1.4%~246.2%；完全反应组的肿瘤收缩率、ADC 值增加高于未完全反应组(P<0.01)，早期强化率下降较未完全反应组明显(P<0.01)。肿瘤收缩率、ADC 值和早期强化率变化对乳腺癌疗效评估的 ROC 曲线下面积(AUC)分别为 0.768、0.850 与 0.900，多指标联合应用的 AUC 为 0.919。结论：MRI 显示的肿瘤大小、ADC 值及早期强化率的变化可早期反映乳腺癌的最终化疗效果，且早期强化率和 ADC 值较肿瘤大体敏感，早期强化率较 ADC 值敏感。

PU-3159
扩散加权成像在不同分子亚型乳腺癌新辅助化疗疗效的评估价值

李卓琳,谢瑜,吴建萍,薛珂,孙诗韵,丁莹莹
云南省肿瘤医院

【目的】比较乳腺癌新辅助化疗前、后 DWI 表现的差异是否与乳腺癌的不同分子亚型有关，并进一步探讨 DWI 对不同分子亚型乳腺癌 NAC 疗效的评估价值。**【资料与方法】**穿刺活检证实为乳腺癌的患者 69 例，患者分别于 NAC 前、全程化疗后（手术前）行乳腺 MRI 扫描。将所有病例分为病理完全缓解组与非病理完全缓解组。比较不同分子亚型乳腺癌 CRp 与 NCRp 间，NAC 前后 ADC 值、rADC 的差异。绘制受试者工作特征曲线，并计算曲线下面积值（AUC），分析各参数对病理反应性的预测和评估效能，并获取预测病理反应的最佳临界点。**【结果】** 69 例患者经术后病理证实 LuminallA、LuminalB、HER-2+及三阴性乳腺癌病例分别有 19 例，23 例，14 例和 13 例。化疗前，LminalA、LuminalB 的 rADC 值在 CRp、NCPp 组间有差异（P＜0.05）。化疗后，LuminalA 的 rADC 值，HER-2+的 ADC 在相应亚型乳腺癌病灶中的 CRp、NCRp 组间均有统计学差异（P＜0.05），其余各亚型乳腺癌各参数在相应亚型病灶的 CRp、NCRp 组间均无统计学差异（P＞0.05）。采用 ROC 分析 DWI 对四种不同亚型乳腺癌病理反应性评估的效能： LuminalB 的化疗前 rADC 具有诊断效能；

LuminalA 型化疗后 ADC 具有诊断效能。HER-2+乳腺癌的化疗后 rADC 具有诊断效能【**结论**】乳腺癌新辅助化疗前、后 DWI 的表现在一定程度上可以评估新辅助化疗疗效，且 DWI 表现的差异与乳腺癌的不同分子亚型间具有一定相关性；化疗前 rADC 能更好地评价 LuminalA 是否达到病理完全缓解。

PU-3160

纯型浸润性微乳头状癌影像学表现特征

周嘉琪
辽宁省肿瘤医院

目的：探讨浸润性微乳头状癌（invasive micropapillary carcinoma，IMPC)影像特点，及与分子分型、淋巴结转移的关系。**方法：**回顾性总结了 19 例纯型 IMPC 病人 X 线、超声、MRI 检查并与临床病理资料进行分析。**结果：**19 例纯型 IMPC 中的 8 例 X 线表现多为形态不规则(85.7%)、边缘毛刺(71.4%)的高密度(71.4%)肿块，常伴钙化(62.5%)，多为细小多形性钙化（60.0%）。15 例超声表现多为形态不规则(100.0%)、边缘毛刺(60.0%)的低回声(60.0%)肿块，后方回声正常（66.7%），11 例 RI 值平均为 0.81。19 例 MRI 表现多为形态不规则（56.2%）、边缘毛刺（62.5%）、不均匀强化（87.5%）的肿块（84,2%），早期快速强化（63.2%），TIC 曲线为流出型（68.4%），11 例中 8 例（72.2%）ADC 值小于 0.001mm²/s。分子分型 Luminal A 型占 78.9%，Luminal B 型占 5.3%，Her-2 阳性型占 10.5%，三阴性型占 5.3%。Ki-67 平均为 27%。淋巴结转移率为 68.4%。**结论：**IMPC 侵袭性强、易发生淋巴结转移。影像学表现为典型的恶性肿瘤征象，多为形态不规则、边缘毛刺的肿块，X 线表现常伴细小多形性钙化，超声检查血流非常丰富，MRI 检查 ADC 值常小于 0.001mm²/s。分子分型以 Luminal A 型多见。

PU-3161

Influence of menopause status on fibrograndular tissue and background parenchymal enhancement

xiaoxin hu[1],Yajia Gu[1],Luan Jiang[2],Qiang Li[2],Jian Mao[1],Weijun Peng[1]
1.Department of Radiology, Fudan University Shanghai Cancer Center, Shanghai, China
2.Center for Advanced Medical Imaging Technology, Shanghai Advanced Research Institute, Chinese Academy of Sciences, Shanghai, China

Objective To evaluate the influence of menopause status on fibrograndular tissue, background parenchymal enhancement volume ratio(BPE_V) and intensity ratio(BPE_I) by breast MR image automatic quantitative analysis. **Methods** From 14,033 consecutive patients who underwent breast MRI in our center, we randomly selected 101 normal cases (47 cases of premenopausal and 54 cases of postmenopausal). Premenopausal status was subclassified into four groups (8 cases in the 1st week and 13 cases in the 2nd, 3rd and 4th week, respectively) based on the menstrual cycle. We evaluated FGT and BPE_V, BPE_I at early (2 minutes), medium (4 minutes) and late (6 minutes) enhanced time phases of breast MRI for quantitative assessment. The FGT, BPE_V and BPE_I in premenopausal and postmenopausal women was compared using the Mann-Whitney U test. Comparison of each menstrual cycle using the Kruskal-Wallis test. **Results** The FGT, BPE_V and middle-late BPE_I of postmenopausal women were significantly lower than premenopausal women ($P<0.05$). The maximum BPE_I in the 1st week, the minimum in

the 2nd week in premenopausal women (P<0.05). The FGT and BPE_V in the 1st week are the highest than the other weeks, but there was no significant difference. **Conclusions** The FGT, BPE_V and BPE_I were significantly decreased after menopause. The optimal time of breast MR examination is in the 2nd week of menstrual cycle.

PU-3162
MRI 定量参数联合动态增强曲线评价对腋窝淋巴结的定性诊断价值

边泽宇
山西省肿瘤医院

目的：探究 MRI 定量参数联合动态增强曲线对腋窝淋巴结定性诊断中的价值
材料与方法：搜集在我院进行乳腺磁共振动态增强扫描患者，对有明确手术病理结果或穿刺活检病理结果的 43 例患者共 68 枚腋窝淋巴结（淋巴结长径>1cm）进行回顾性分析。应用自带软件处理出时间-信号强度曲线（TIC）类型，并使用专用灌注软件行后处理，获得容量转移常数(Ktrans)、速率常数（Kep）、细胞外血管外间隙容积比（Ve）定量参数。应用 ROC 曲线分析其在定性中的最佳诊断界点和敏感性、特异性。
结果：乳腺癌腋窝淋巴结转移者 TIC 曲线多为 Ⅲ型，早期强化率 1.75；Ktrans 值（0.346）min^{-1}。乳腺良性病变伴淋巴结增大，TIC 曲线多为Ⅰ型，早期强化率 0.68；Ktrans 值（0.127）min^{-1}。其中结核 TIC 曲线均为Ⅲ型，早期强化率为 1.68，但达峰时间小于 50s；Ktrans 值（0.232）min^{-1}。乳腺癌腋窝淋巴结转移和除结核外良性病变的定量参数有统计学意义，与腋窝淋巴结结核无统计学意义，但腋窝淋巴结结核达峰时间少于乳腺癌伴腋窝淋巴结患者。
结论：联合定量参数和动态增强曲线有助于对腋窝淋巴结定性诊断，从而提高对乳腺病变的诊断。

PU-3163
联合 DCE-MRI 定量参数和 DWI 对乳腺癌新辅助化疗疗效的预测价值

边泽宇
山西省肿瘤医院

目的：探讨乳腺癌新辅助化疗 2 周期后联合动态增强 MRI（DCE-MRI）和扩散加权成像（DWI）对预测病理反应性的价值。方法：收集术前需行新辅助化疗（NAC）的乳腺癌患者于新辅助化疗（NAC）前、NAC 第 2 周期后分别行磁共振检查并获得 DWI 和 DCE-MRI 数据。术后按病理结果分为组织学显著反应（MHR）组和非组织学显著反应（NMHR）组。对化疗前两组参数采用两独立样本 t 检验，然后计算并评估表观扩散系数（ADC）、容量转移常数（K^{trans}）、速率常数（K_{ep}）的变化率，并通过 Mann-Whitney U 检验评估 MHR 组和 NMHR 组间各参数变化率的差异。选择 ADC 变化率和最佳 DCE-MRI 定量参数变化率建立 Logistic 回归模型并构建新参数，以术后病理结果为金标准，通过绘制

受试者工作特征曲线（ROC）探究新构建参数对预测乳腺癌新辅助化疗疗效的价值。结果：MHR 组有 11 例，NMHR 组 37 例。NAC 前 MHR 组 ADC、K^{trans} 和 K_{ep} 值分别为 774±104*10^{-6} mm^2/s、0.345±0.121 min^{-1}、0.925±0.30 min^{-1}；NMHR 组参数值分别为 786±126 mm^2/s、0.347±0.157 min^{-1}、0.936±0.349 min^{-1}，两组间各参数均无统计学差异。NAC 2 周期后 MHR 组 ADC、K^{trans} 和 K_{ep} 变化率分别 51.2%、 -65.1%、 -64.7%，NMHR 组 ADC、K^{trans} 和 K_{ep} 变化率分别为 31.2%、-11.8%、-24.9%，两组间 ADC、K^{trans}、K_{ep} 变化率均有统计学差异。
ADC、K^{trans}、K_{ep} 变化率和新构建联合预测参数曲线下面积（area under curve，AUC）分别为 0.774、0.850、0.823 和 0.894。
结论：联合 ADC 和 K^{trans} 可以更准确的预测乳腺癌 NAC 的疗效。

PU-3164
磁共振成像在乳腺良恶性病变中的诊断价值

南聪慧
锦州医科大学附属第一医院

目的：探讨磁共振功能学参数对浸润性导管癌及乳腺良性病变的鉴别诊断价值。
方法：回顾性分析经手术或穿刺病理证实的 20 例乳腺浸润性导管癌患者及 20 例乳腺良性病变患者的表观扩散系数（Apparent Diffusion Coefficient , ADC）值及时间-信号强度曲线(Time-signal intensity curve , TIC)类型，患者均为女性，避开出血、液化、坏死和囊变的前提下，对乳腺病变的感兴趣区（Region of Interest , ROI）的 ADC 值进行 3 次测量，每次测量的 ROI 面积均>2mm^2，取三次测量的均值为该 ROI 的 ADC 值；同时计算出时间-信号强度曲线类型。
结果：20 例乳腺浸润性导管癌，1 例Ⅲ级（4.00%），15 例Ⅱ级（77.00%），4 例Ⅰ级（16.00%），其中时间-信号强度曲线呈廓清型的 11 例（55.00%），平台型的 9 例（45.00%），流入型的 0 例（0%）；20 例乳腺良性病变中，11 例为乳腺腺病，5 例为乳腺纤维腺瘤，3 例导管内乳头状瘤，1 例乳腺囊肿，其中流入型的 4 例（20.00%），平台型的 15 例（75.00%），廓清型的 1 例（5.00%）。乳腺浸润性导管癌的 ADC 为(0.99±0.12)×$10^{-3}$$mm^2$/s，乳腺良性病变的 ADC 值为(1.47±0.29)×$10^{-3}$$mm^2$/s ，差异具有统计学差异（P＜0.05）。将乳腺病变的 ADC 值以 1.20×$10^{-3}$$mm^2$/s 为界值时其灵敏度、特异度相对最高，分别为 95.0%、90.0%，阳性预测值 90.48%，阴性预测值 94.47%。
结论：浸润性导管癌与乳腺良性病变的 TIC 曲线类型、ADC 值有明显差异，该两项指标，对浸润性导管癌和乳腺良性病变有重要的鉴别诊断价值。

PU-3165
基于 DCE-MRI 纹理分析的乳腺癌新辅助化疗的疗效预测与评估研究

宋慧玲
山西省肿瘤医院

目的：探讨基于动态增强磁共振成像（DCE-MRI）的纹理参数对乳腺癌新辅助化疗（NAC）的疗效预测与评估价值。**方法：**回顾性分析本院 2014 年 9 月至 2018 年 10 月在 NAC 前后均行 DCE-MRI 且经病理证实的乳腺癌患者共 63 例，根据实体瘤反应评价标准（RECIST），将患者分为治疗有效组（40 例）和治疗无效组（23 例），测量 NAC 前及 NAC4~8 个周期后的 DCE-MRI K^{trans} 图的纹理参数，使用独立样本 t 检验或非参数 Mann-Whitney U 检验对两组纹理参数进行统计分析，并绘制受

试者工作特征（ROC）曲线，根据曲线下面积（AUC）得出 DCE-MRI 纹理参数对乳腺癌 NAC 疗效的诊断效能。**结果：**本研究采用 47 个纹理参数。63 例患者 NAC 前与 NAC4~8 个周期后有 36 个纹理参数差异有统计学意义（P＜0.05）；NAC 前有效组与无效组之间有 9 个纹理参数差异有统计学意义（P＜0.05），包括均匀性、直方图能量及直方图熵等；NAC4~8 个周期后有效组与无效组有 10 个参数之间差异有统计学意义（P＜0.05），包括相对偏差、直方图熵、熵、Haralick 熵、灰度不均匀性（GLN）及游程长度不均匀性（RLN）等；有效组与无效组 NAC 前后的参数变化率之间有 13 个参数变化率的差异有统计学意义（P＜0.05），主要包括Δ灰度不均匀性、Δ游程长度不均匀性及Δ高灰度游程强度等。经 ROC 曲线分析，在所比较的参数中，AUC 较大的有 NAC 后 DCE-MRI K^{trans} 图的灰度不均匀性、游程长度不均匀性及Δ灰度不均匀性、Δ游程长度不均匀性，其 AUC 分别为 0.80、0.81 及 0.85、0.84。**结论：**基于 DCE-MRI K^{trans} 图的纹理参数可以预测评估乳腺癌 NAC 疗效，诊断效能较高的参数有 NAC 后灰度不均匀性、游程长度不均匀性及Δ灰度不均匀性、Δ游程长度不均匀性。

PU-3166

三阴性乳腺癌的 MRI 与临床病理特征

张建新,边泽宇,郝慧超,杨晓棠
山西省肿瘤医院

目的：探讨三阴性乳腺癌(TNBC)的磁共振特点与临床病理特征的相关性。**方法：**收集 31 例 TNBC 及 68 例非三阴性乳腺癌(non-TNBC，NTBNC)患者的 MRI 资料及临床病理资料。分析病变的 MRI 形态、时间-信号强度曲线(TIC 曲线)、表观扩散系数(ADC 值)(b=1000S／mm^2)与临床病理特征之间的相关性，采用 SPSS 13.0 统计软件进行统计学分析。**结果：**TNBC 与 NTNBC 患者在病理类型、病理分级、形态、边缘、内部信号特征、TIC 曲线、ADC 值方面、腋窝淋巴结转移率等差异均具有统计学意义(p＜0.05)。病理类型上，TNBC 主要表现为髓样癌、鳞状细胞癌、基底样癌；TNBC 的腋窝淋巴结转移率较高，为 81.3%；TNBC 更易表现为III型 TIC 曲线类型(91.3%)；病灶易出现分叶征，增强后环形强化等征象，发生率分别为 55.6%、43.6%；TNBC 病灶有较高的 ADC 值；而在发病年龄、是否绝经、家族史及肿块最大径、病灶的个数、肿块类型等方面，两组间差异无统计学意义(p＞0.05)。**结论：**TNBC 的 MRI 影像学征象与临床病理特点具有一定的相关性，掌握 TNBC 的 MRI 特点，有利于初步预判乳腺癌的临床病理特点，为临床治疗及预后评估提供影像学依据。

PU-3167

MRI 在乳腺癌新辅助化疗中的作用

刘玉蒙
深圳大学总医院

目的：对于局部进展期乳腺癌患者，新辅助化疗（NCT）已成为乳腺癌综合治疗的重要组成部分。准确地评估化疗的疗效是临床治疗过程中的一个重要环节。本研究的目的是探讨 MRI 对乳腺癌患者新辅助化疗后肿瘤评估的效果，以指导临床医师制定合适的治疗方案。
方法：经组织学活检证实为乳腺癌 20 例患者，采用多西紫杉醇联合表柔比星(75mg/m2 静脉推注)进行 NCT 治疗，每 21d 为 1 个周期,至肿瘤缩小到可手术或保乳手术可行时停止化疗。分别在新辅助化疗前、化疗 2 个周期后及化疗结束后行 MRI 检查（3.0T GE），对动态增强数据进行后处理，分别得到基线时（第一次 MRI）、两个周期后（第二次 MRI）和完成化疗后（第三次 MRI）K^{trans}, K^{ep}, V^e, initial area under the time signal curve (IAUC), ADC 和增强曲线；以肿瘤体积减少 50%定义为肿瘤治疗有效，反之为无效，分为两组，使用 SPSS（17.0 版）对数据进行分析。计算基线

和化疗结束时所有参数的平均值，并通过方差分析进行比较。P<0.05 被认为具有统计学意义。在最后一疗程化疗后，所有入选的患者接受了乳腺切除术或保乳治疗。术后进行病理检查，并记录病理检查测量的大小。
结果：以肿瘤体积减少 50%为界值。在第二次 MRI 检查中，有效果（10/20）的 IAUC 明显小于无效果者（10/20）（p=0.023）。当比较第一次和第二次 MRI 检查的结果时，无效果者和有效果者的 k^{ep} 都明显降低（p=0.04）。从基线到第三次 MRI，有效果者的 ADC 值显著增加（p=0.012）；化疗后 MRI 测得肿瘤体积大小与手术后病理测量的肿瘤体积大小较一致。
结论：IAUC 和 ADC 可以在新辅助化疗后有效鉴别化疗是否有效，从而指导临床制定下一步的治疗方案；新辅助化疗结束后 MRI 测得的肿瘤大小与病理大小较一致，在指导临床手术切除范围具有重要的意义。

PU-3168

Evaluate the ability of Diffusion Kurtosis MR Imaging in invasive breast cancer classification and its correlation with prognostic factors

Mo Zhu, Chunhong Hu
the first affiliated hospital of Soochow University

Purpose: To assess the ability of diffusion kurtosis imaging (DKI) in invasive breast cancer grading and to evaluate the potential association between DKI-derived parameters: MK/MD and breast cancer clinical-pathologic factors: Estrogen receptor (ER), progesterone receptor (PR), human epidermal growth factor receptor 2(HER-2), antigen identified by monoclonal antibody Ki-67(Ki-67).
Materials and methods: 168 patients with suspicious breast cancer who were treated in our hospital from August 2015 to August 2018 were selected, DKI (with b values of 0, 1000, 2000 sec/mm2) data were acquired. Breast lesions were histologically characterized and DKI related parameters - mean diffusivity (MD) and mean kurtosis (MK)—were measured. The MD and MK in grade II and grade III were compared by One-way analysis of variance (ANOVA). Kurtosis and diffusion coefficients from DKI were measured by two radiologists.
Results: According to the exclusion and enrollment criteria of the study, 108 cases of breast cancer were finally enrolled, MK were significantly higher in grade III breast cancer than in grade II breast cancer (0.99 ± 0.31 vs 0.85± 0.23, respectively; $P<0.05$). MD were significantly higher in grade II breast cancer than in grade III breast cancer (1.17 ± 0.24 vs 0.83 ± 0.21 P <0.05). MD values were significantly different in Ki-67 expression (1.01 ± 0.24 vs 1.10 ± 0.16), ER expression (1.05 ± 0.14vs 1.22 ± 0.32), PR expression (0.78 ± 0.29 vs 1.15 ± 0.26). But MK values only showed significant difference in Ki-67 expression (0.90 ± 0.15 vs 1.09 ± 0.24, $P<0.05$).
Conclusion: DKI quantitative parameters have important application value in the evaluation of breast cancer classification, MD value and MK value are different between partial immune factor groups, and there is a certain correlation with the expression of ki-67.DKI can provide valuable information in evaluating the proliferation activity of breast cancer tumor cells. MD value and MK value can be used

as the indicator of prognosis factors of breast cancer, and indirectly predict the prognosis and treatment effect of breast cancer.

PU-3169
IVIM 参数与乳腺癌免疫因子 ER、PR、HER-2、Ki-67 的相关性研究

朱默,胡春洪
苏州大学附属第一医院

目的：探讨体素内不相关运动（IVIM）模型参数与乳腺癌雌激素受体（ER）、孕激素受体（PR）、人表皮生长因子受体-2（HER-2）和增殖标志物 Ki-67 表达相关性。
方法：选取 2015 年 8 月到 2018 年 8 月期间在我院接受治疗的可疑乳腺癌患者 152 例，均进行常规 T2WI 脂肪抑制序列、T1WI、DWI、DCE-MRI 扫描和 IVIM 科研序列的扫描，采用相关软件计算表观扩散系数（ADC）、单纯扩散系数（D）、假性扩散系数（D*）、灌注分数（f）等参数，检测所有患者肿瘤组织中的 ER、PR、HER-2、Ki-67 表达情况。
结果：根据研究的排除和入组标准，最终入组研究乳腺癌病例 90 例，、ER、PR 阳性表达与阴性表达之间的 ADC 值、D 值、D*值、f 值比较无统计学差异（P＞0.05），HER-2 阳性表达与阴性表达之间的 ADC 值、f 值比较无统计学差异（P＞0.05），HER-2 阳性表达的 D 值、D*值高于 HER-2 阴性表达的 D 值、D*值（P＜0.05）；Ki-67 阳性表达与阴性表达之间的 D*值和 f 值比较无统计学差异（P＞0.05），Ki-67 阳性表达的 ADC 值、D 值低于 Ki-67 阴性表达的 ADC 值、D 值（P＜0.05）。Spearman 相关分析结果：ADC 与 ER 因子表达情况呈负相关，D 值与 HER-2 因子呈正相关，D 值与 Ki-67 呈负相关；D*值与 HER-2 因子呈正相关（均为 P＜0.05）。
结论：根据 ADC 值、D 值、D*值在乳腺癌免疫因子 ER、HER-2 及 Ki-67 阴阳表达情况的组间差异，以及 ADC 值与 ER、D 值与 HER-2 和 Ki-67、D*值与 HER-2 表达情况的相关关系，提示 IVIM 参数可以有助于分析乳腺癌部分免疫因子的表达情况，进而分析患者的预后。

PU-3170
DKI 参数在乳腺癌病理分级及与免疫因子的相关性研究

朱默,胡春洪
苏州大学附属第一医院

目的：评价 MR 扩散峰度成像（DKI）在乳腺癌病理分级中的应用及 DKI 参数与乳腺癌雌激素受体（ER）、孕激素受体（PR）、人表皮生长因子受体-2（HER-2）和增殖标志物 Ki-67 表达相关性。
方法：选取 2015 年 8 月到 2018 年 8 月期间在我院接受治疗的可疑乳腺癌患者 168 例。所有患者术前进行乳腺磁共振常规 T2WI 脂肪抑制序列、T1WI、DWI、DCE-MRI 扫描以及基于 b 值为 0，1000，2000 sec/mm2 的 DKI 模型计算平均扩散率（MD）和扩散峰度平均值（MK）值。通过 SPSS 软件，应用 Spearman 分析上述参数值与乳腺癌病理分级及与 ER、PR、HER-2、Ki-67 的组间差异及相关性。
结果：根据研究的排除和入组标准，最终入组研究乳腺癌病例 108 例，在这些患者中，MD，MK 值在不同分级乳腺癌之间差异有统计学意义（P＜0.05），III 型乳腺癌组 MK 值大于 II 型乳腺癌组，III 型乳腺癌组 MD 值小于 II 型乳腺癌组。在对 ER、PR、HER-2、Ki-67 阴阳表达情况组间的统计学分析发现，MD 值在 ER、PR、Ki-67 阴阳表达组间存在统计学差异（P＜0.05），MK 值仅在 Ki-67 阴阳表达组间存在显著统计学差异（P＜0.05）。Spearsman 相关分析显示，MD 值与病理分

级呈负相关（r=-0.43，p<0.05），MK 值与病理分级呈正相关（r=0.48，p<0.05），MD 值与 Ki-67 表达呈负相关（r=-0.39，P<0.05），MK 值与 Ki-67 表达呈正相关（r=0.56，P<0.05）。
结论：DKI 定量参数在评价乳腺癌分级方面有重要的应用价值，DKI 在评估乳腺癌肿瘤细胞增殖活性方面可以提供有价值的信息，MD 值和 MK 值可以作为乳腺癌病理分级和预后因子表达的提示指标，从而可以间接评估乳腺癌的预后和治疗效果。

PU-3171
乳腺浸润性导管癌扩散加权成像与 HER-2 的相关性研究

张建新,边泽宇,张俊杰,杨晓棠
山西省肿瘤医院

目的：探讨乳腺浸润性导管癌的扩散系数 ADC 值与乳腺癌预后因子 HER-2 的相关性。
方法：回顾性分析 2013 年 6 月至 2016 年 2 月在山西省肿瘤医院行 MRI 检查，并经手术或细针穿刺获得病理证实的浸润性导管癌患者，排除病灶小于 1cm 者，最终获得研究对象 52 例。在病变区域设置感兴趣区（ROI），分三次测量病灶的 ADC 值，求平均值。利用获取的肿瘤标本，采用 SP 法对 HER-2 的表达情况进行染色，根据免疫组化结果分：0、1+、2+、3+；其中 0、1+定义为阴性组，3+定义为阳性组，若为 2+则继续采用原位杂交检验分为阳性组及阴性组。研究 ADC 值与生物学预后因子 HER-2 的相关性。采用两独立样本 t 检验，计算阳性组与阴性组之间 ADC 有无统计学差异。
结果：两组之间 ADC 值的差异具有统计学意义。HER-2 阳性组 ADC 值（1.18×10^{-3}）较 HER-2 阴性组 ADC 值（0.94×10^{-3}）高（$p<0.05$）。同时发现 HER-2 过表达者 ADC 值更高。
结论：HER-2 可促进肿瘤细胞的有丝分裂，HER-2 的高表达与肿瘤的侵袭与转移具有相关性。利用 MRI 通过对 ADC 值的测定可间接反映浸润性导管癌的 HER-2 表达情况，有助于对浸润性导管癌的恶性程度及其预后进行评估。

PU-3172
Ktrans 联合 ADC 值对乳腺浸润性导管癌及纤维腺瘤的鉴别诊断价值

张建新,张俊杰,边泽宇,杨晓棠
山西省肿瘤医院

目的：联合 Ktrans 与 ADC 值对乳腺浸润性导管癌及乳腺纤维腺瘤的鉴别诊断价值。
方法：回顾性分析我院 2015 年 1 月到 2016 年 3 月经手术病理证实的乳腺病灶 75 例，其中浸润性导管癌 41 例、乳腺纤维腺瘤 31 例；采用飞利浦 3.0T 磁共振扫描仪，行 DCE-MRI 检查及扩散加权成像(b 值 1000s/mm^2)，测量病灶 ADC 值。采用 GE 公司 Omni-Kinetics 软件测定病灶容量转运常数(Ktrans)，分别评价 ADC 值、Ktrans 值、联合 ADC 与 Ktrans 对乳腺浸润性导管癌及乳腺腺病合并纤维腺瘤的鉴别诊断价值。
结果：乳腺纤维腺病、浸润性导管癌的平均 ADC 值分别为：（1.49 ± 0.23）$\times10^{-3}$mm/s、（1.18 ± 0.13）$\times10^{-3}$mm/s，二者具有统计学差异（$p<0.001$）。二者的定量参数 Ktrans 平均值分别为：（0.78 ± 0.11）min^{-1}、（0.46 ± 0.05）min^{-1}，二者具有统计学差异（$p<0.05$）。以最大约登指数为最佳诊断切入点， Ktrans、ADC 值的敏感性分别为 90.3%、84.5%，特异性分别为 88.1%、80.4%，曲线下面积分别为 0.907、0.813。联合 Ktrans 与 ADC 值对鉴别良恶性病变的敏感性、特异性分别为 94.3%、85.4%，以最大约登指数为最佳诊断切入点，曲线下面积为 0.935。

结论：乳腺浸润性导管癌及纤维腺瘤的 Ktrans 及 ADC 值差异均具有统计学意义，Ktrans 及 ADC 值对乳腺癌均有较高的诊断效能，Ktrans 的诊断效能高于 ADC 值。联合 Ktrans 与 ADC 值对鉴别乳腺良恶性病变的诊断效能较单一参数有所提高。

PU-3173

乳腺非特殊型浸润性癌的影像学诊断与组织分级

崔雪娥,汪登斌,张玉珍,李芳珍,王丽君,罗冉
上海交通大学医学院附属新华医院

目的 分析乳腺不同组织分级的非特殊型浸润性癌在乳腺 X 线摄影及 MRI 上的影像学特征，以提高对其诊断和鉴别诊断能力。
资料与方法 60 例经穿刺或手术病理证实的乳腺非特殊型浸润性癌，其中 I 级 6 例，II 级 33 例，III 级 21 例，年龄 33-81 岁，平均 57 岁，术前均行 MRI 检查，47 例同时行钼靶 X 线检查，结合病理，回顾性分析病灶的形态、信号特点、ADC 值及增强时间- 信号曲线（TIC）的类型。
结果 Ⅰ级中 4 例行乳腺 X 线摄影，表现为多发小肿块，部分周边毛糙 1 例，局灶性不对称性致密伴高密度小肿块 1 例，高密度肿块 1 例，腺体致密 1 例。MRI 表现为非肿块区域性强化 3 例，多发强化小肿块 1 例，不规则小肿块 1 例，边界清晰肿块伴出血 1 例。Ⅱ级中 28 例行乳腺 X 线摄影，表现为不规则肿块伴毛刺 2 例，肿块伴钙化 5 例,成簇钙化 5 例,不对称致密影伴钙化 4 例,结构扭曲 1 例,不对称致密 2 例,不规则肿块 4 例,腺体致密 5 例;其中 14 例有钙化,占 50%。MRI 表现为肿块样强化 29 例,占 88%,不规则肿块 22 例,伴毛刺 12 例,环形强化 1 例;非肿块样强化 4 例;平均 ADC 值约：0.99 ×10-3mm2/s。Ⅲ级中 16 例行乳腺 X 线摄影，表现为肿块影 11 例，伴毛刺 2 例，伴钙化 4 例；结构扭曲伴钙化 1 例；节段性分布钙化 1 例；表现为钙化占 38%。MRI 表现为不规则肿块样强化 17 例，占 81%；表现为区域性强化 1 例；节段性异常强化 1 例；弥漫性强化 1 例。
结论 乳腺非特殊型浸润性癌多发生于中老年女性，典型表现易于诊断，以不规则肿块伴沙砾样钙化或毛刺征，较低的 ADC 值及 II-Ⅲ型 TIC 曲线诊断价值最大，级别越高伴出血及坏死可能性越大，肿块大小与组织学分级呈正相关。

PU-3174

不同分子亚型乳腺癌 MRI 特征分析

曹婧,马贺骥
锦州医科大学附属第一医院

目的：探讨不同分子亚型乳腺癌的 MRI 特征。**方法：**回顾性分析 85 例经病理证实的乳腺癌患者的 MRI 资料，采用免疫组织化学检查结果判断不同分子亚型（Luminal A 型、Luminal B 型、Her-2 过表达型和基底细胞样型），分析呈肿块样强化不同分子亚型乳腺癌的 MRI 征象（数目、形态、边缘、肿块的强化特点、TIC 曲线类型以及 ADC 值等），进一步利用统计学软件进行分析。**结果：**本组 85 例患者中，77 例病灶呈肿块样强化，Luminal A 型 9 例、Luminal B 型 40 例、Her-2 过表达型 18 例和基底细胞样型 10 例，病灶的形态、边缘、强化方式、ADC 值于不同分子亚型间差异有统计学意义（P＜0.05），病灶的数目、瘤周血管有无增多及 TIC 曲线类型与不同分子亚型间差异无统计学意义（P＞0.05）。**结论：**不同分子亚型乳腺癌表现出不同的 MRI 征象，MRI 检查有助于术前对分子亚型的预测。

PU-3175

乳腺实性乳头状癌的影像表现及病理

吴晨青,汪登斌
上海交通大学医学院附属新华医院

目的:探讨乳腺实性乳头状癌(SPC)影像表现及病理,以提高诊断准确性，指导临床判断疾病预后及选择治疗方案。
方法：回顾分析 2013 年 6 月-2019 年 6 月经手术及病理证实为 SPC 的 31 名患者的乳腺 MRI 及病理检查资料。术后病理区分 SPC 病变为原位或浸润性癌，免疫组化分析病变生物学标志物包括雌激素受体（ER）、孕激素受体（PR）、人表皮样生长因子受体-2（Her-2）以及 Ki67。分析乳腺 MRI 图像手动勾画感兴趣区并测定病灶表观扩散系数(apparent diffusion coefficient, ADC)。统计学分析原位与浸润性癌之间 ADC 值的差别。
结果：31 例 SPC 的病理类型均为 Lumina A 型，Her-2 基因均无扩增。31 例病变均在 MRI 上显示,13 例位于乳晕后区，23 例 T1WI 示病灶前方伴导管扩张 ，19 例 T2WI 呈高信号。动态增强扫描显示 18 例呈非肿块样强化，13 例呈肿块样强化。18 例非肿块样强化中，8 例为集簇小环状强化 ，6 例为集簇样强化，4 例为区域分布不均匀强化。表现为肿块样强化的 13 例均呈不均匀强化。动态增强曲线显示其中 14 例呈快速-流出型。浸润性 SPC 的 ADC 值低于原位 SPC（$P<0.05$）。
结论：SPC 在 MRI 上的表现具有一定特征性，ADC 值与病变浸润性有相关性，对疾病术前诊断有价值，可指导临床判断预后及选择治疗方案。

PU-3176

磁共振脂肪定量技术与扩散加权成像及动态增强扫描比较在乳腺癌患者腋窝淋巴结转移诊断中的价值

胡利平
江西省肿瘤医院

[摘要] 目的 探究磁共振脂肪定量技术(mDIXON-quant)在乳腺癌患者腋窝淋巴结转移诊断中的价值，并与扩散加权成像及动态增强扫描相比较各自诊断效能。 **方法** 本研究共收集 20 例经病理证实的乳腺癌伴腋窝淋巴结肿大病例，淋巴结总数共 45 个，术前患者均行磁共振 mDIXON-quant、弥撒加权成像（DWI）及动态增强扫描，通过 mDIXON-quant 测得脂肪含量比（fat fraction，FF）值，通过 DWI 获得表观扩散系数(apparent diffusion coefficient，ADC)值，通过动态增强扫描获取时间-信号曲线(time-intensity curves，TIC)并判断其类型。 **结果** 病理报告淋巴结阴性组（29/45）FF 值 21.4±4.8%，淋巴结阳性组（16/45）FF 值 6.2±2.7%，两组之间 FF 值具有明显统计学差异（p <0.05），阴性淋巴结组 FF 值明显大于阳性淋巴结组。淋巴结阴性组 ADC 值（1.27±0.29）$\times 10^{-3}mm^2/s$，淋巴结阳性组 ADC 值（0.85±0.18）$\times 10^{-3}mm^2/s$；阴性组 TIC 曲线以“流入型”曲线为主（20/29），而阳性组以“平台型”、“流出型”为主（14/16）；ADC 值及 TIC 类型在两组病变鉴别中亦有统计学意义（p <0.05）。应用 FF 值、ADC 值、TIC 类型对两组病变进行判别，敏感性分别为（94%、81%、78%）、特异性分别为（80%、83%、79%）、准确性分别为（85%、88%、81%） **结论** 脂肪定量技术在判断乳腺癌腋窝淋巴结转移中有着较高的敏感性，其特异性及准确性亦无明显减低，有较高的诊断效能。

PU-3177
乳腺叶状肿瘤与纤维腺瘤 MRI 征象分析及鉴别

付芳芳,谭红娜,王梅云
河南省人民医院

目的：探讨乳腺叶状肿瘤与纤维腺瘤 MRI 表现特点并对两者进行鉴别，提高临床对两种疾病诊断准确率。
材料与方法：回顾性分析经手术或穿刺病理证实的 34 例乳腺叶状肿瘤和 59 例乳腺纤维腺瘤患者临床及 MRI 资料。
结果：叶状肿瘤好发于中年女性（平均年龄 49 岁），纤维腺瘤发好于年轻女性（平均年龄 37 岁）。叶状肿瘤的平均最大径（5.3cm）大于纤维腺瘤(3.7cm)。叶状肿瘤和纤维腺瘤的形态学特征有一定差异：叶状肿瘤表现分叶状有 23 例 (23/34)，表现为不规则形 5 例(5/34)；纤维腺瘤表现为类圆形 31 例(31/59)，表现为分叶状有 23 例(23/59)，本组未见不规则形纤维腺瘤。叶状肿瘤 11 例（11/34）边缘不规则，2 例边缘见毛刺。纤维腺瘤通常边缘光滑，本组 56 例（56/59），边缘不规则比较少见。MRI 平扫 T1WI 叶状肿瘤 13 例内见片状高信号，而纤维腺瘤未见片状高信号。T2WI 压脂序列叶状肿瘤 31 例（31/34）表现为高信号；而纤维腺瘤等、低、高信号均可见，其中 36 例(36/59)表现为高信号。13 例(13/34)叶状肿瘤内见囊变区，而纤维腺瘤内未见。增强扫描两者肿块内均可见未强化的低信号分隔。时间信号强度曲线，叶状肿瘤以Ⅱ型多见 14 例（14/34），Ⅰ型 12 例，Ⅲ型 8 例；纤维腺瘤以Ⅰ型多见 39 例（39/59），Ⅱ型 17 例，Ⅲ型 3 例。
结论：乳腺叶状肿瘤与纤维腺瘤 MRI 表现具有一定特征性，且二者之间存在差异。结合患者的临床资料，病变的形态学特征、MRI 信号、强化特征及时间-信号强度曲线类型，能够对两者作出鉴别。

PU-3178
两例乳腺急慢性化脓性乳腺炎 MRI 误诊分析及鉴别诊断

王婷婷
中国科学技术大学附属第一医院西区，安徽省肿瘤医院

摘要 目的 总结分析乳腺急慢性化脓性乳腺炎 MRI 影像学表现特点，提高对该疾病的影像学诊断及鉴别诊断能力。**方法** 回顾性分析 2019 年 3-6 月经手术病理证实并行影像学检查的 2 例乳腺急慢性化脓性乳腺炎，包括一般临床资料、超声表现、乳腺 X 线及乳腺 MRI 影像学资料。**结果** 2 例病例超声均表现为条片状低回声，内部回声不均，形态欠规则，一例边界尚清，一例边界略欠清，超声 BI-RADS 4A 类；乳腺 X 线均表现为条片状致密影，边界不清，其内无明显恶性微钙化灶，周围腺体无明显纠集样改变，BI-RADS 4A 类；乳腺 MRI 均表现为段样走行分布长 T1、长 T2 信号病灶，DWI 像呈不均匀性高信号，ADC 较低值分别为 $0.968\times10^{-3}mm^2/s$、$0.957\times10^{-3}mm^2/s$，增强扫描呈段样强化，强化局部 DWI 像高信号区无明显强化，且 2 例病灶均可见多层厚壁样强化表现，TIC 曲线均呈平台型；灶周无明显水肿及渗出性改变。MRI 术前均考虑为导管源性病变，BI-RADS-MRI 4 类和 5 类。**结论** 急慢性化脓性乳腺炎影像学表现多无明显特异性，MRI 敏感性高，但特异性偏低，易误诊为导管原位癌。综合多种影像学检查，以及 MRI 相对特异性表现，可提高对该疾病的诊断准确性。

PU-3179
乳腺导管原位癌的 FFDM 与 MRI 影像学表现对照分析

李宇明,唐文伟
南京市妇幼保健院

摘要：目的 对比乳腺导管原位癌（ductal carcinoma in situ,DCIS）及其微浸润的钼靶 X 线及 MRI 影像学表现。**方法** 回顾性分析经手术和病理证实的乳腺导管原位癌 26 例。所有病例均于术前进行数字化乳腺摄影（FFDM）及磁共振成像（MRI），均参照乳腺影像报告数据系统（BI-RADS 系统）进行分析。**结果** 乳腺摄影中单纯钙化为 15 例（57.7%），肿块伴钙化、结构扭曲伴或不伴钙化为 11 例（42.3%）。诊断为恶性或可疑恶性病变 24 例，误诊为良性病变 2 例，对乳癌诊断的敏感性是 92.3%；MRI 检出 25 例，敏感性为 96.2%，1 例因未见异常强化灶而误诊为良性。8 例呈肿块样强化（30.8%），18 例呈非肿块样强化（69.2%）。其中内部强化均匀 2 例，强化不均匀 4 例，内部蜂窝状、簇点状、簇环状强化共 19 例，未见明显强化 1 例。所有病例时间-信号强度（TIC）曲线呈平台型 14 例，流出型 9 例，先平台后流出型 3 例。**结论** 乳腺导管原位癌及其微浸润的钼靶 X 线表现以微钙化或肿块伴微钙化为主要特征，乳腺摄片对 DCIS 诊断有较高敏感性。乳腺 MRI 特征表现为非肿块样强化及其内部卵石状及簇状小环状强化，时间-信号强度曲线呈平台型或流出型。MRI 对 DCIS 诊断的敏感性更高，但对于极少部分病例仅在摄片上表现为少许成簇微钙化，且钙化密度较低者，在 MRI 上可以不表现出异常强化灶，故而可能会导致误诊。这两种检查方法结合可以进一步提高 DCIS 的诊断准确性，为临床治疗（尤其是精准治疗）提供可靠的依据。

PU-3180
基于乳腺动态增强分析参数对鉴别乳腺良恶性病变的价值

曹锋
中国科学技术大学附属第一医院西区，安徽省肿瘤医院

【摘要】 目的 探讨基于乳腺动态增强分析参数对鉴别乳腺良恶性病灶的价值。方法 回顾性分析 112 例经手术病理证实的乳腺结节的患者临床及影像资料，依据病理将其分为恶性组 55 例和良性组 57 例。使用联影乳腺分析软件对结节实性成分最大层面进行 ROI 手动勾画，然后经过软件处理后得出流入（WI）、流出（WO）、达峰时间（TTP）、最大上升斜率（MSI）、正性增强积分（PEI）5 个参数作为分析指标。采用独立样本 t 检验及 Mann-Whitney U 检验分析两组之间参数的差异，并采用受试者工作特征曲线下面积评估各参数的诊断效能。**结果** 恶性组的 WI、WO、TTP、MSI、PEI 分别为 877.15±241.35、441.73±69.18、263.64±57.54、1203.71±297.79、1842.69±579.40，良性组上述各参数值分别为 675.87±171.18、477.339±60.87、303.14±62.94、935.54±207.24、1792.82±495.73。WI、WO、TTP、MSI 参数间差异有统计学意义（t 值分别为 5.075、-2.895、-3.463、5.513， $P<0.05$）。PEI 间差异均无统计学差异（$P>0.05$）。ROC 曲线分析显示，WI、MSI 分别以偏度 730.15 和 967.6 为鉴别良恶性结节的阈值，其 ROC 曲线下面积（AUC）、敏感度和特异度分别为 74%、69.1%、38.6%和 76%、76.4%、43.9%。**结论** 基于乳腺动态增强分析参数对鉴别乳腺良恶性结节有一定的价值。

PU-3181
早期乳腺导管内浸润性癌 ADC 值与生物因子 ER、PR、C-erb-B2 表达的相关性研究

秦凤英,董越
辽宁省肿瘤医院

目的：探讨不同早期乳腺导管内浸润性癌 ADC 值与生物因子的表达情况的相关性。**方法**：选取 2014 年 12 月至 2017 年 4 月 100 例经病理及临床证实为早期乳腺导管内浸润性癌，患者年龄 34-67 岁，中位年龄 50.5 岁。所有患者治疗前行 3.0T MR 常规扫描及 DWI 检查，测量肿块区域 ADC 值（避开液性坏死区域），并与乳腺相应正常区域 ADC 值作为对照，统计病人 ER、PR、C-erbB-2 的表达情况，根据生物因子表达情况分为 ER 阴性组与阳性组、PR 阴性组与阳性组、C-erbB-2 阴性组与阳性组，ER、PR、C-erbB-2 均阴性组及非均阴性组，各组之间两两比较采用 LSD-t 行相关性分析。**结果**：100 例早期乳腺导管内浸润性癌患者中 ER 阳性表达率为 28%、PR 为 35%、C-erb-B2 为 36%；C-erb-B2 阴性组 ADC 均值为（1.65±0.209）×$10^{-3}$$mm^2$/s，阳性组（1.16±0.134）×$10^{-3}$$mm^2$/s，ER、PR、C-erbB-2 均阴性组 ADC 均值为（1.76±0.256）×$10^{-3}$$mm^2$/s,ER、PR、C-erbB-2 均阳性组 ADC 均值为（1.12±0.116）×$10^{-3}$$mm^2$/s，C-erbB-2 阴性组与阳性组早期乳腺导管内浸润性癌之间 ADC 均值差异有显著性意义(p<0.05)，ER、PR、C-erb-B2 均阴性与 ER、PR、c-erbB-2 均阳组早期乳腺导管内浸润性癌 ADC 值差异有统计学意义（P<0.05）。ER 阴性与 ER 阳性、PR 阴性与 PR 阳性早期乳腺导管内浸润性癌 ADC 值差异之间两两比较异无统计学意义（*P*>0.05）。**结论**：ADC 值在术前预测早期乳腺导管内浸润性乳腺癌生物因子 C-erbB-2 及三阴性表达有一定意义，但是对 ER 及 PR 的阳性预测价值有限。

PU-3182
DWI 对肉芽肿性小叶性乳腺炎和浸润性乳腺癌的鉴别诊断价值研究

曲宁,罗娅红
辽宁省肿瘤医院

摘要：目的：研究 DWI 对肉芽肿性小叶性乳腺炎和浸润性乳腺癌的鉴别诊断是否有帮助。方法：回顾性分析 45 个肉芽肿性小叶性乳腺炎和 188 个浸润性导管癌的 DWI 图像和计算其平均 ADC 值，并且分别以对侧正常乳腺实质、胸大肌和胸骨的平均 ADC 值为对照，计算病变 ADC 值率（ADCr），对比平均 ADC 值和多个 ADC 值率是否有统计学差异。结果：肉芽肿性小叶性乳腺炎和浸润性导管癌的平均 ADC 值分别为（1.02±0.17）x10-3mm2/s、（0.98±0.24） x10-3mm2/s，二者无统计学差异（p=0.543）。肉芽肿性小叶性乳腺炎和浸润性导管癌以对侧正常乳腺实质、胸大肌和胸骨的 ADCr 分别为 0.821 ± 0.310、0.789 ± 0.223，4.2 ± 2.62、4.4±1.57，3.94±1.64、5.21±1.26，两组间所有 ADCr 差异均无统计学差异（p>0.05）。结论：肉芽肿性小叶性乳腺炎和浸润性乳腺癌的平均 ADC 值和 ADCr 近似，因此 DWI 对二者的鉴别诊断没有帮助。

PU-3183
术前乳腺癌原发灶 DCE-MRI 特征预测腋窝淋巴结转移的价值

牛微
辽宁省肿瘤医院

目的：探讨乳腺癌原发灶动态增强磁共振（DCE-MRI）特征预测腋窝淋巴结转移的价值。

方法：回顾性分析 2014 年 6 月-2017 年 6 月在我院诊断为乳腺癌并行乳腺癌根治术的患者 231 例，根据术后病理淋巴结状态分为淋巴结转移组 91 例、非淋巴结转移组 140 例，将淋巴结转移组依据淋巴结转移数目及 TNM 分期分为 N1、N2、N3 期，分别为 61 例、20 例、10 例。收集两组患者临床病理特征及 DCE-MRI 特征,计数资料采用卡方检验/Fisher 确切概率法，计量资料采用秩和检验，绘制 ROC 曲线评价其预测腋窝淋巴结转移的效能，并应用 logistic 回归计算病灶各特征联合预测腋窝淋巴结转移的效能。
结果：肿块大小、病理分级、HER-2 状态及 Ki-67 状态在腋窝淋巴结转移组和非淋巴结转移组有统计学差异（$P<0.05$）。肿块越大、病理分级越高越易发生淋巴结转移。
原发灶长径及淋巴结短径在腋窝淋巴结转移组与非淋巴结转移组有统计学差异（$P<0.05$）。而病灶强化类型、内部强化方式及 TIC 曲线类型在两组中无统计学差异（$P>0.05$）。
原发灶 AUC 值、Max Conc 值、TTP 值、Max Slope 值、K^{trans} 值及 K_{ep} 值在腋窝淋巴结转移组和非淋巴结转移组有统计学差异（$P<0.05$）。而原发灶 V_p 值在腋窝淋巴结转移组与非淋巴结转移组无统计学差异（$P>0.05$）。
原发灶长径、病灶强化类型、内部强化方式、TIC 曲线类型及动态参数在淋巴结转移分期中无统计学差异（$P>0.05$）。
原发灶长径、淋巴结短径联合动态参数预测腋窝淋巴结转移的曲线下面积为 0.770（95%CI，0.709-0.831），高于单个变量预测及动态参数间联合预测，特异性为 74.29%，敏感性为 65.93%。
结论：
综合分析原发灶 DCE-MRI 特征对术前乳腺癌淋巴结转移的预测、指导选择与设计临床治疗方案有重要意义。

PU-3184
DWI 与 DCE-MR 预测乳腺癌腋窝淋巴结转移中的价值

牛微
辽宁省肿瘤医院

目的：探讨磁共振弥散加权成像(DWI) 与动态增强磁共振（DCE-MRI）在乳腺癌原发灶腋窝淋巴结转移预测中的应用价值。方法：回顾性分析我院 2014 年 6 月-2017 年 6 月行乳腺癌根治术或乳腺癌病灶切除术+前哨淋巴结活检术，且术前均行 DWI 及 DCE-MRI 扫描的 259 例早期乳腺癌患者，分析 MRI 的病灶直径、强化方式、强化类型、原发灶表观扩散系数（ADC）值及 DCE-MRI 定量参数在乳腺癌腋窝淋巴结转移组与非转移组、淋巴结转移分期之间的差异。结果：病灶直径、ADC 值及 k^{trans} 值在乳腺癌有无腋窝淋巴结转移中有统计学差异($p<0.05$)，直径＞2cm 较≤2cm 的病灶更易发生淋巴结转移。腋窝淋巴结转移组较非腋窝淋巴结转移的 ADC 值小，k^{trans} 值大。结论：乳腺癌原发灶 DWI 及 DCE-MRI 在腋窝淋巴结转移中有一定的预测价值。

PU-3185
IVIM-DWI 在不同免疫组化表达的 T1 期乳腺癌中的研究价值初探

张楠,张丽娜,宋清伟,姜健,康建蕴,刘爱连
大连医科大学附属一院

目的：探讨在不同免疫组化表达的 T1 期乳腺癌中体素内不相干运动扩散加权成像（Intravoxel incoherent motion diffusion-weighted imaging，IVIM-DWI）技术的诊断价值。**材料与方法**：前瞻性收集超声或 X 线摄影疑诊乳腺癌的女性患者，术前均行 IVIM-DWI 成像，通过后处理工作站获

得各参数值包括 ADCfast、ADCslow 和 f 值。追踪所有手术病人病理结果，最终入组经病理确诊的 T1 期乳腺癌患者共 50 例。采用 SPSS 21.0 统计软件进行数据分析，采用独立样本 t 检验或 U 检验，观察病灶区 ADCslow、ADCfast、f 值与免疫组化指标（ER、PR、HER-2 和 Ki-67）不同表达情况之间是否具有统计学差异。利用 ROC 比较各参数在激素受体（HR）组、HER-2 组的诊断效能。**结果：**50 例 T1 期乳腺癌中 ER 阳性、PR 阳性、HER-2 阳性者分别为 40 例、26 例、25 例。经统计学分析发现 T1 期乳腺癌病灶中，ER 阳性组和阴性组的 ADCslow、f 值差异有统计学意义（P<0.05），ADCfast 两组间差异无统计学意义（P>0.05）；PR 阳性组和阴性组的 ADCslow 值差异有统计学意义（P<0.05），ADCfast、f 值两组间无统计学差异（P>0.05）；HER-2 阳性组和阴性组的 ADCslow、ADCfast 和 f 值差异均无统计学意义（P>0.05）。ER 组 ADCslow 和 f 值曲线下面积（AUC）分别是 0.877 和 0.76，PR 组 ADCslow 值 AUC 是 0.66。**结论：** IVIM-DWI 在激素受体表达的 T1 期乳腺癌中具有较高的诊断效能。

PU-3186
IVIM 参数与乳腺癌分子生物学指标的相关性研究

郇艳美
徐州医科大学附属医院

目的：通过对不同分子分型乳腺癌的体素内不相干运动（Intravoxel incoherent motion，IVIM）参数的分析，探讨 IVIM 参数与生子生物学指标雌激素受体（Estrogen receptor, ER）、孕激素受体（Progestrone receptor，PR）、人类表皮生长因子受体-2（Human epidermal growth factor receptor 2，HER-2）、Ki-67 的相关性。
方法：收集自 2014 年 4 月至 2016 年 12 月期间在大连医科大学附属一院成功完成乳腺 MR 检查的女性乳腺癌患者，入组 46 例（49 枚病灶）。所有病灶均经手术病理证实，术后行免疫组化分析。磁共振检查前未行穿刺、未接受放化疗。患者年龄范围为 28～74 岁。图像扫描采用 GE 3.0T 磁共振扫描仪，专用 8 通道双侧乳腺相控线圈。所有图像经 GE ADW4.6 工作站处理。分析测量乳腺癌的 IVIM 参数值。记载分子生物学指标 ER、PR、HER-2、Ki-67 的表达状况。统计学分析使用 SPSS 20.0 软件，采用非参数检验 Spearman 方法评价乳腺癌 IVIM 参数与分子生物学指标表达情况的相关性，P<0.05 认为差异有统计学意义。
结果：D 值与 ER、PR 阳性表达呈负相关（r 分别为-0.416，-0.452，$P<0.05$）；
与 HER-2、Ki-67 阳性表达无相关性（r 分别为-0.083，0.236，$P>0.05$）。D*值与 ER、PR、Ki-67 阳性表达呈负相关（r 分别为-0.403，-0.479，-0.415，$P<0.05$），与 HER-2 阳性表达无相关性（r=-0.226，$P>0.05$）。f 值与 ER、PR、HER-2、Ki-67 阳性表达均无相关性（r 分别为 0.05，0.049，0.357，0.079，$P>0.05$）。
结论：D 值愈小，其 ER、PR 阳性表达率愈高。D*值愈小，其 ER、PR、Ki-67 阳性表达率愈高。

PU-3187
T2 联合动态增强增强 MR 对肉芽肿性乳腺炎与乳腺癌的 MR 鉴别诊断价值

吴晓燕,詹松华,陆孟莹,杨雪融
上海中医药大学附属曙光医院

研究目的：探讨以非肿块样方式强化的肉芽肿性乳腺炎与乳腺癌在 T2 加权及 DCE 表现上的差异，提高两者在 MR 上的鉴别诊断效率。
研究方法：回顾性分析已明确病理诊断、且在 MR 增强上以非肿块样方式强化的乳腺 MR 资料 56 例（肉芽肿性乳腺炎 31 例，乳腺癌 24 例）。分析两者在 T2 信号强度、分布方式、内部强化方式及 TIC 曲线上的表现。
研究结果：（1）T2 信号强度：肉芽肿性乳腺炎中，T2WI 呈高信号 25 例，等信号 6 例；乳腺癌中，T2WI 呈高信号 5 例，等信号 18 例，混杂信号 1 例，两者间的差异具备统计学意义（c^2=6.781，P=0.021<0.05）。（2）强化分布：肉芽肿性乳腺炎中，局灶性 2 例，区域性 5 例，多区域性 12 例，节段性 12 例；乳腺癌中，局灶性 3 例，区域性 6 例，多区域性 2 例，节段性 13 例，两者间的差异具备统计学意义（c^2=7.214，P=0.018<0.05），。（3）强化方式：肉芽肿性乳腺炎中，不均匀强化 5 例，簇状环形强化 14 例，环形强化合并不均匀强化 12 例；乳腺癌中，不均匀强化 4 例，簇状环形强化 15 例，卵石样强化 5 例。两者间的差异不具备统计学意义（c^2=1.437，P=0.095>0.05）。（4）TIC 曲线：肉芽肿性乳腺炎中Ⅰ型-Ⅲ型曲线分别为 4 例，23 例，4 例，在乳腺癌中Ⅰ型-Ⅲ型曲线分别 2 例，16 例，6 例，两者间的差异不具备统计学意义（c^2=1.134，P=0.105>0.05）。
结论：非肿块样强化的肉芽肿性乳腺炎与乳腺癌在 T2 信号强度及强化分布方面存在一定差异，有助于两者进行鉴别诊断。

PU-3188

包裹性乳头状癌的影像学表现及病理特征

吴晓燕,詹松华,陆孟莹,杨雪融
上海中医药大学附属曙光医院

研究目的：探讨包裹性乳头状癌的磁共振表现及临床病理特征。
研究方法：回顾性分析经病理证实的 EPC 患者 12 例，其中 12 例行乳腺 MR 检查，8 例行乳腺 X 线检查，观察患者的影像学表现及其相关病理特征。
研究结果：12 例包裹性乳头状癌患者病理表现为实性肿块 7 例、囊实混合性肿块 5 例，免疫组化显示肌上皮缺失，分子分型均为 Luminal A 型，7 例实性肿块中伴发 DCIS 3 例，合并 DIC 者 3 例，其余 6 例为单纯性 EPC，其中囊实混合性肿块 5 例，实性肿块 1 例 。7 例在乳腺 X 线摄影上表现为等密度肿块，12 例均在 MR 上显示，其中 9 例位于乳晕后区。动态增强后，6 例单纯性 EPC 呈结节样（2 例）、囊实混合结节样（4 例）强化，边缘清晰，后者延迟强化见薄壁环形强化影。3 例合并 IDC 者除肿块样强化外见节段样不均匀强化影，2 例合并 DCIS 者表现为边缘不规则的实性肿块样强化，1 例在 MR 上未显示，仅在钼靶上表现为集簇分布的细小多形性钙化。
结论：单纯性包裹性乳头状癌的 MR 表现较有特征性，多为乳晕后区的囊实性肿块，但 EPC 易合并肿瘤，与其病理改变密切相关。

乳腺磁共振智能扫描（SmartExam breast）在乳腺术后患者中的应用价值

尹秋凤
上海交通大学医学院附属新华医院

目的 探讨在乳腺 MR 检查中,利用 T2-spair 脂肪抑脂序列，在常规 Breast 以及 SmartBreast 两种不同匀场方式中，对于显示乳腺切除术后术区结构图像质量的影响，评估两种不同匀场方式对于术区病变的诊断价值。

材料与方法 乳腺癌切除术后患者 11 例，采用 PHILIPS Ingenia3.0T 超导 MR 扫描仪，按照常规 Breast 中 T2-spair 脂肪抑脂序列的匀场及 smartBreast 中 T2-spair 脂肪抑制序列的匀场方式分别扫描,每例患者均使用两种不同的匀场方式各扫描一次，共计 11 组图像。由两位高年资医师对图像质量进行主观评分并求其平均值。评分内容包括以下四项：患侧胸壁有无伪影，皮肤是否连续显示，皮下脂肪间隙是否清晰显示，肋骨信号是否清晰显示；每一项根据图像质量分别评分：满意 3 分、一般 2 分、不满意 1 分，然后将合计总分作为每一病例的图像评分结果。利用 SPSS 统计软件对于图像质量的评分结果进行分析。

结果 Smart-Breast 中 T2-spair 脂肪抑制序列的匀场方式，能够智能地勾画出需要匀场的范围，清晰显示乳腺切除术后术区胸壁皮肤、皮下软组织、肋骨等结构，图像质量评分结果较满意；对于常规 Breast、Smart-Breast 中 T2-spair 图像质量的评估分数进行统计分析，显示两者在 99%可信区间 $P<0.01$，提示两者之间的图像质量差异具有统计学意义。

结论 对比常规 Breast 中的 T2-spair 扫描序列，采用 Smart-Breast 进行同一序列扫描，能够避免术后胸壁软组织不对称对局部磁场不均性的影响，有利于对此类患者术后复发、术区新发病灶等的早期诊断，具有较高的临床应用价值。

背景实质强化和纤维腺体组织比例与乳腺癌分子分型相关性研究

段立娜[1],马俊丽[1],王志军[2],张薇[1],戈锐[1]
1.宁夏医科大学
2.宁夏医科大学总医院

目的：评估乳腺磁共振中背景实质强化（BPE）和纤维腺组织（FGT）比例与浸润性乳腺癌分子亚型的相关性。 材料和方法：回顾性分析 2017 年 7 月至 2019 年 3 月期间于我院行乳腺 MRI 检查并满足纳入标准的 174 例患者的绝经情况、MRI 检查图像及病理免疫组化结果（确定分子分型），根据美国放射学院 2013 版的乳腺影像报告和数据系统（BI-RADS）标准回顾磁共振 T1 加权图像以确定 FGT 比例，并且回顾动态增强的脂肪抑制的 T1 加权图像以确定 BPE，将肿瘤的分子亚型与 BPE 和 FGT 比例进行比较，采用 SPSS22.0 进行统计学分析，采用卡方检验，以 $P<0.05$ 认为具有统计学差异。 结果：在 174 例乳腺癌患者中，绝经前女性 104 例，绝经后 70 例，经病理证实均为非特殊浸润癌，lumina A 型 50 例，luminal B 型 78 例，HER-2 过表达型 22 例，三阴型 24 例，以 luminal B 型最多。 FGT 分类与 BPE 具有相关性（$p=0.000$）；FGT 分类和 BPE 与绝经状态有统计学差异（$P=0.000$），且高 FGT 及高 BPE 在未绝经女性中发生率较高，进行绝经前后亚组分析 FGT 分类和 BPE 均与分子亚型无相关（$P<0.05$）。 结论：对于患乳腺癌的患者，FGT 分类及 BPE 与绝经状态具有相关性，高 FGT 及高 BPE 在未绝经女性发生率高，但无论是绝经前还是绝经后女性，FGT 比例和 BPE 与浸润性乳腺癌分子分型不具有统计学差异。

PU-3191
MRI 动态增强与弥散加权成像联合应用对乳腺良恶性病变的诊断评价

粟晶晶
陆军军医大学附属新桥医院放射科

目的：联合应用磁共振动态增强及弥散加权成像对临床诊断乳腺良恶性肿瘤的意义。**方法：**对伴有乳腺肿块的 80 例患者(良性肿瘤 40 例，恶性肿瘤 40 例)行磁共振平扫 T1W1、T2W1，Flash-3D 动态增强扫描，分别对良恶性病变的形态学特征与动态增强表现进行评估，绘制病变的时间-信号强度曲线，判断其敏感性、特异性；后行弥散加权成像，计算弥散加权成像在不同 b 值时乳腺良性、恶性肿瘤 ADC 值，利用 ROC 曲线判定诊断阈值、敏感性、特异性；最后 MRI 动态增强扫描及弥散加权成像联合对肿瘤良恶性进行判断，与手术病理结果相对照，研究联合应用磁共振动态增强及弥散加权成像对乳腺癌诊断的敏感性和特异性。**结果：**动态增强扫描中，乳腺恶性肿瘤多为Ⅱ、Ⅲ型曲线，乳腺良性肿瘤多为Ⅰ、Ⅱ型曲线，差异有统计学意义(P<0.05)，动态增强扫描诊断的敏感性为 90.0%、特异性为 62.5%；b 值 800 s/mm2 时，磁共振弥散加权成像诊断的敏感性为 92.5%、特异性为 75.0%；二者联合应用敏感性为 95.0%、特异性为 90.0%。**结论：**联合应用磁共振动态增强及弥散加权成像可以提高对乳腺良恶性病变的诊断效能，尤其能够提高特异性。

MR 多参数成像对肉芽肿性乳腺炎和乳腺癌鉴别诊断的价值研究

胡红云
中国科学技术大学附属第一医院/安徽省立医院

目的 分析 MR 多参数成像对肉芽肿性乳腺炎与乳腺癌的鉴别诊断价值。**方法** 回顾性收集经术后组织病理或穿刺活检病理确诊的 23 例肉芽肿性乳腺炎及 53 例乳腺癌患者的临床及影像资料。分析肉芽肿性乳腺炎与乳腺癌 MRI 形态学特征、强化方式、时间-信号强度曲线（Time-signal Intensity Curve,TIC）与表观扩散系数（Apparent diffusion coefficient ,ADC）等差异，进行统计学分析。**结果** 肉芽肿性乳腺炎弥漫性/不规则区域分布 19 例（82.6%），边界模糊 18 例（78.2%），毛刺及分叶征改变 2 例（8.7%）；乳腺癌以结节/肿块形态为主 42 例（79.2%），毛刺/分叶征改变 42 例（79.2%）。 肉芽肿性乳腺炎动态增强扫描后以斑片及环形强化为主（15 例，65.2%），乳腺癌则主要为肿块/结节样强化（37 例，69.8%）；肉芽肿性乳腺炎组中 TIC 曲线呈 I 型 8 例，II 型 15 例，III 型 0 例，乳腺癌组 I 型 6 例，II 型 28 例，III 型 19 例；两组病例的强化方式及 TIC 曲线具有统计学差异。肉芽肿性乳腺炎组 ADC 值（1.146±0.218）×$10^{-3}$$mm^2$/s，乳腺癌组 ADC 值（1.03±0.195）×10^{-3}mm2/s，两组间 ADC 值存在统计学差异（P<0.05）；绘制 ROC 曲线，ROC 曲线下面积为 0.677，当 ADC 值阈值为 1.160×$10^{-3}$$mm^2$/s，灵敏度 59.1%，特异度 77.4%。**结论** 病灶形态、分布特点、强化特征及曲线和 ADC 值对肉芽肿型乳腺炎与乳腺癌鉴别诊断有一定的临床价值。

PU-3193
乳腺原发性弥漫大 B 细胞淋巴瘤的 MRI 影像学表现

马媛媛
上海交通大学医学院附属瑞金医院

【摘要】**目的** 探讨乳腺原发性弥漫大 B 细胞淋巴瘤的 MRI 影像学表现特点。
方法 回顾性分析 10 例经临床诊断和病理证实的乳腺原发性弥漫大 B 细胞淋巴瘤患者的临床及乳腺 MRI 检查影像学资料，总结其特征征象。
结果 10 例患者均为女性，年龄跨度为 38-69 岁，中位年龄为 55 岁。双乳病变者 1 例，单侧乳腺病变者 9 者（其中左乳 5 例，右乳 6 例）。除一例患者因右侧胸壁刺痛就诊，余 9 例患者均因自

觉乳腺肿块或体检偶然发。非肿块样强化 2 例（1 例为局灶性，1 例为区域性），4 例为单发肿块样强化（1 例为椭圆形且边缘清晰，3 例表现为不规则肿块，其中 1 例伴短毛刺），4 例为多发类圆形肿块样强化、边缘不清晰，呈融合趋势。所有病灶均呈欠均匀强化，其中 5 例表现为 TIC 呈平台型为主，4 例表现为流出型为主，1 例表现为上升型为主。3 例累及乳头，表现为乳头凹陷或增大，乳晕皮肤增厚，1 例出现肿块临近皮肤增厚及患侧乳腺间质水肿改变。4 例患者表现为患侧腋下肿大淋巴结。所有病例均表现为 fsT2W 高或稍高信号，T1W 等信号，DWI 高信号，ADC 图明显低信号。

结论 原发性乳腺淋巴瘤 MRI 表现具有一定特征，乳腺淋巴瘤的确诊依赖于病理学检查，早期诊断有利于患者合理的治疗方案的选择。

MR 表观系数不同测量方法对乳腺良恶性病变的诊断效能

彭彬,袁玉山,马培旗,张杨
安徽阜阳市人民医院

摘要：目的 评估不同的 ADC 测量方法对乳腺良恶性病变的鉴别诊断效能。方法 回顾性分析经手术病理证实的 65 例乳腺病例，分别采用大 ROI（直径约 4-7mm）及小 ROI（直径约 4mm）测得多个不同 ADC，并相应取得两组数据，即平均 ADC 及最低 ADC，运用 ROC 曲线确定两组数据的诊断效能。结果 平均 ADC 鉴别良恶性病变的临界值为 $1.11\times10^{-3}mm^2/s$,其敏感性为 80%,特异性为 87%，ROC 曲线下面积为 0.894；最低 ADC 鉴别良恶性病变的临界值为 $0.85\times10^{-3}mm^2/s$,其敏感性为 98%，特异性为 78%，ROC 曲线下面积(AUC)为 0.961。结论 小 ROI 测量最低 ADC 值对乳腺良恶性病变的鉴别诊断效能高于大 ROI 平均 ADC 值

PU-3195
MR IVIM-DWI 定量参数与乳腺癌分子分型的相关性分析

刘侠静
深圳市第二人民医院

目的：乳腺癌是一种高度异质性肿瘤，分子分型较多，不同分子分型间具备完全不同的治疗及预后反应，因此正确判断乳腺癌的分子分型非常重要。本研究目的在于探究体素内不相干运动（IVIM）模型定量参数(ADC、D、D^*、f)与乳腺癌不同的分子分型的相关性，为临床患者进行精准的个体化治疗、预后评估等提供影像学依据。**方法：**前瞻性搜集临床怀疑为乳腺癌的患者，术前进行 MRI 检查并扫描 IVIM-DWI 序列，将 IVIM 原始数据传送至工作站进行图像后处理和分析，得到 IVIM 各参数图像(ADC、D、D^*、f)。最终符合纳排标准的病例共 55 例，包括 Luminal A 型 13 例、Luminal B 型 15 例、HER-2 过表达型 12 例、基底细胞样型 15 例。采用 SPSS 22.0 统计软件进行方差检验及 t 检验数据分析，比较不同分子分型分组间的参数值。对于组间有统计学差异的参数值，运用 ROC 曲线分析它们鉴别不同分子分型的诊断效能。**结果：**不同分子分型间 ADC 值整体比较及组间比较差异均无统计学意义。HER-2 过表达型组 D 值、D^*值、f 值大于其他各组，差异均有统计学意义（$P<0.05$）；Luminal A 型组 D 值、D^*值参数值小于 Luminal B 型组和基底细胞样型组，差异均有统计学意义（$P<0.05$）；其余各组间参数值均无统计学差异。HER-2 过表达组与 Luminal A 型组组间 D 值、Luminal A 组与基底细胞样型组组间 D^*值、HER-2 过表达组与基底细胞样型组 f 值的诊断效能最好（曲线下面积分别为 0.865、0.810、0.750，P 值分别为 0.002、0.005、0.028）,分别以 0.215×10^{-3} mm^2/s、1.194×10^{-3} mm^2/s、2.283×10^{-3} mm^2/s 为最佳诊断临界值，诊断敏感度及特

异度为 92%、92%及 87%、85%及 75%、100%。 **结论：**IVIM-DWI 模型参数具有预测乳腺癌的分子分型的潜在价值。

PU-3196
双指数模型扩散加权成像对乳腺癌分子分型鉴别诊断的价值研究

吴海龙
南昌大学第二附属医院

目的：乳腺癌的个体化治疗基于分子分型，本文初步探讨双指数模型 DWI 对乳腺癌不同分子分型的鉴别诊断价值。
方法：回顾分析 2018 年 3 月至 2019 年 4 月我院乳腺外科诊治的 105 例乳腺癌患者资料，年龄 27~75 岁，中位年龄 47 岁。所有患者于治疗前完成 MRI 扫描，仪器为 GE Signa HDxt 3.0T MR，乳腺专用 8 通道相控阵列线圈。所有患者在 MRI 检查前未接受任何治疗及有创检查，扫描后一周内经病理证实。双指数模型 DWI b 值取（20、40、60、80、100、150、200、400、600、700、800、900、1000、1100 及 1200 s/mm^2）共 14 个。应用 Functool 软件对双指数模型 DWI 进行后处理及数据测量，获得各病灶 D_{slow}、D_{fast} 及 f 值。以癌细胞表达 ER、PR 和 HER2 三种蛋白状态分为激素受体阳性乳腺癌（HR+）组、HER2 阳性乳腺癌（HER2+）组及三阴性乳腺癌（TNBC）组。各组参数采用独立样本 t 检验及单因素方差分析比较（$p<0.05$ 为有统计学差异），受试者特征曲线（ROC）判断各参数诊断性能。
结果：（1）105 例患者共检出 111 个病灶，3 例患者为 2 个病灶，1 例为多灶性病灶，9 例患者为非肿块型病灶，其余病例均为单发结节病灶，病灶最大径 8mm~43mm。HR+组 44 例，HER2+组 47 例，TNBC 组 14 例。
D_{slow}、D_{fast} 及 f 值在乳腺癌三种分子分型中均无显著差异（$p>0.05$）。D_{slow} 在 TNBC 与非 TNBC（HR+ +HER2+）间有统计学差异（$p<0.05$），TNBC 具有相对较低 D_{slow} 值，诊断阈值为 $0.402\times10\text{-}3^{mm2}/s$，敏感性、特异性为及准确性分别为 76.7%、83.5%和 80.3%。
结论：IVIM-DWI D_{slow} 值对 TNBC 与非 TNBC 具有一定的鉴别诊断价值，可为乳腺癌治疗前评估提供无创性参考证据。

PU-3197
全肿瘤 ADC 直方图参数与乳腺浸润性导管癌病理分级的相关性研究

程庆元,周洁洁,王美豪
温州医科大学附属第一医院

目的：旨在探讨全肿瘤表观弥散系数（ADC）截断值与乳腺浸润性导管癌（IDC）病理分级的相关性，评估乳腺浸润性导管癌的异质性及组织病理学分级。**方法和材料：**回顾性分析本院 2017 年 1 月至 2018 年 5 月间具有完整病理及术前磁共振资料的 92 名浸润性导管癌女性患者，其中单纯型 IDC 69 例，混合性型 IDC 23 例(IDC 合并部分导管原位癌（DCIS）(21 例)及 IDC 合并部分粘液腺癌(2 例))。采用改良的 Bloom 和 Richardson 标准将病理组织学级别分为 3 个等级，证实为 1 级和 2 级者归类为低级别组，3 级独立归为高级别组。患者均行乳腺 3.0 T MRI 检查，在 DWI 图中（b=1000 s/mm^2）手动勾画肿瘤的每一层感兴趣区（ROI），生成 ADC 直方图，并记录全肿瘤体积的直方图参数，包括 ADC 平均值、ADC 最小值、ADC 中位数、ADC 最大值、ADC 各百分位数、不均质度、偏度系数、峰度系数和熵等。对各病理等级组的各 ADC 参数行 Kruskal-Wallis 检验，并通过

Mann-Whitney *U*检验比较浸润性导管癌不同病理等级与 ADC 值之间的关系，使用 ROC 来确定区分低级别组和高级别组浸润性导管癌的最佳直方图参数和截断值。**结果：**高级别组浸润性导管癌的不均质度（p= 0.038）、偏度系数（p= 0.001）、峰度系数（p= 0.043）和 ADC 最大值（p= 0.002）明显高于低级别组。其中 ADC 直方图参数中的偏度系数达到了曲线下最高面积（ROC-AUC：0.79；95%CI：67.5-87.8；p<0.0001），约登指数确定最佳 ADC 阈值为 1.02×10-3mm^2/s，其敏感性和特异性分别达 76.47%、78.85%。**结论：**全肿瘤 ADC 直方图分析可以较好的区分出高、低级别组的乳腺浸润性导管癌， 为辅助临床治疗提供有价值的指导和评估。本研究由温州科技局项目（NO.Y20180187）资助。

浸润性导管乳腺癌 Ki-67 预测与评估的磁共振研究

何遐遐,周洁洁,王美豪
温州医科大学附属第一医院

目的：本研究旨在明确浸润性导管乳腺癌肿瘤及肿瘤基质不同区域异质性在预测 ki-67 状态上是否存在差异，以及增强前与增强后不同时期对预测准确性的影响。
材料和方法：回顾性研究包括 88 例 57 例高 ki-67 表达(Ki67 增殖指数高于 20%)和 31 例低 ki-67 表达(Ki67 增殖指数低于 20%)肿块型病灶乳腺浸润性导管癌患者，均于术前行连续 6 期动态增强磁共振检查（包括增强前期及增强后 5 期），选取病灶最大层面在增强 6 期分别绘制肿瘤及瘤周基质不同感兴趣区域(ROI)，利用灰度共生矩阵得到各个感兴趣区域的异质性参数值（均值、标准差、峰度、偏度、熵值）。利用 Mann-Whitney 检验和接收机工作特性曲线分析，评估各参数与 ki-67 状态的相关性，并评估其预测效能。
结果：统计结果表明，在注入造影剂后第一时期（90 秒）各 ROI 获得的熵值在 ki-67 高增殖状态和低增殖状态之间均有显著性差异；且肿瘤各区域和瘤周基质的 AUC 值均大于 0.6(AUC 分别为 0.713、0.636、0.644、0.756、0.632)。在增强后第一个时期绘制的 ROI 中，基于肿瘤边界为内外带状区域所获得的熵值显示出最高的 AUC(0.765)。
结论：浸润性导管乳腺癌肿块型病灶所行术前动态增强磁共振检查的图像异质性分析（熵值）可以成功区分 ki-67 的高增殖状态和低增殖状态，肿瘤边界内外的带状区域也可以区分 ki-67 的状态，且具有更好的可预测性。
本研究由温州市科技局基础性科研计划项目（NO.Y20180187）资助。

PU-3199
全病灶 ADC 直方图对乳腺良恶性病变的鉴别诊断价值研究

叶舒欣,周洁洁,王美豪
温州医科大学附属第一医院

目的：探讨全病灶表观扩散系数（ADC）直方图在乳腺良恶性病变中的鉴别诊断价值。**材料与方法：**回顾分析 2017 年 1 月至 2018 年 5 月在本院经病理证实的乳腺病灶 160 个，其中恶性病灶 103 个，良性病灶 57 个，患者术前均行 3.0T MRI 乳腺扫描。对 ADC 图进行分析获得直方图参数，包括 ADC 值平均数（ADC_{mean}）、中位数（ADC_{median}）、第 5、10、15、20、25、75、80、85、90、95 百分位数（ADC_{5th}、ADC_{10th}、ADC_{15th}、ADC_{20th}、ADC_{25th}、ADC_{75th}、ADC_{80th}、ADC_{85th}、ADC_{90th}、ADC_{95th}）、方差、标准差、四分位距、偏度、峰度。进一步对数据进行统计学分析比较分析。**结果：**恶性病灶的平均体积大于良性病灶（P<0.01），恶性组的所有 ADC 值均低于良性组，恶性组的偏度及峰度则均高于

良性组（P<0.05）。第 5-25 百分位 ADC 值和 ADC_{median}的 ROC 曲线下面积（AUC）均大于 ADC_{mean}（P>0.05）。偏度和峰度的 AUC 则低于 ADC_{mean}（P<0.05）。ADC_{mean}的 AUC 为 0.856，最佳阈值为 $1.079\times10^{-3}mm^2/s$，敏感度为 75.73%，特异度为 82.46%，阳性预测值为 88.64%，阴性预测值为 65.28%，准确度为 78.13%。ADC_{15}、ADC_{20}、ADC_{25}的敏感度高于 ADC_{mean}（P<0.05），其中 ADC_{15}的敏感度最高。**结论：**全病灶 ADC 直方图分析可以为鉴别乳腺良恶性病变提供帮助。恶性病灶的所有 ADC 值均低于良性病灶，偏度和峰度高于良性病灶，其中 ADC_{15}、ADC_{20}、ADC_{25}的敏感度高于常规使用的 ADC_{mean}。本研究由温州市科技局基础性科研计划项目（NO.Y20180187）资助。

PU-3200
磁共振动态增强灌注成像参数图在乳腺乳腺良恶性病变鉴别中的价值

刘晓龙
济宁医学院附属医院

摘要：目的探讨磁共振动态增强灌注成像参数图在乳腺良恶性病变鉴别中的价值。方法收集乳腺病变患者 44 例共 46 个病灶，联合采用乳腺普通平扫、扩散加权成像(DWI)及动态对比增强 MR 成像(DCE-MRI)序列，绘制时间-信号强度曲线(TIC)，通过软件处理获得 Washin、Washout、MPIT、PEI 及 Combine 等 5 种乳腺灌注伪彩参数图像，分别测定病灶的表观扩散系数(ADC)值及各灌注参数值。参照病理结果，绘制 ADC 值及各灌注参数值的受试者工作特征曲线(ROC)，比较 ADC 值及各灌注参数图的 ROC 曲线下面积(AUC)以及诊断乳腺癌的灵敏度和特异度。结果 ADC、Washin、Washout、MPIT、PEI 及 Combine 灌注参数图 ROC 曲线下面积分别 0.977、0.608、0.974、0.759、0.752、0.646。在良恶性病变的诊断差异有显著统计学意义(P<0.01)；ADC、Washout、MPIT、PEI 在良恶性病变的诊断差异有统计学意义(P<0.05)，灵敏度和特异度分别为 97.0%、87.9%、69.7%、72.7%和 92.3%、100%、84.6% 69.2%。结论磁共振动态增强灌注成像参数图特别是 Washout 图在乳腺良恶性病变的诊断中具有较高的应用价值，可为乳腺良恶性病变鉴别诊断提供重要的补充信息。

PU-3201
DCE-MRI 联合 eADC 技术在鉴别诊断乳腺良恶性病变中的价值

尹家瑜
南宁市第一人民医院

【目的】探讨磁共振动态增强(DCE-MRI)技术联合指数化表观扩散系数(eADC)技术在鉴别诊断乳腺良恶性病变的价值。
【方法】回顾 2014 年 1 月至 2019 年 1 月在我院就诊的乳腺疾病患者 45 例,均行 MR-DWI 和 DCE-MRI 检查，并将 56 个病灶与病理验证结果进行比较分析，其中 38 个病灶为恶性，28 个病灶为良性。结果良性乳腺病灶的 eADC 值为 0.19±0.068;恶性乳腺病灶的 eADC 值为 0.46±0.071,良恶性病灶患者 eADC 值相比差异有统计学意义(P＜0.05)。28 例良性病灶患者Ⅰ型（逐渐上升型）、Ⅱ型（平台型）、Ⅲ型（流出型）曲线病灶分别为 20 个（71.4%），6 个（21.4%），2 个（7.2%）。38 个恶性病灶患者Ⅰ型、Ⅱ型、Ⅲ曲线病例数分别为 1 例(2.6%),20 例(52.6%)和 17 例(44.8%)。DCE-MRI 技术中Ⅰ型和Ⅲ型曲线在乳腺良恶性病灶相比,差异有统计学意义(P＜0.05)。两者联合诊断的曲线下面积与单纯使用 DEC-MRI、eADC 相比,差异有统计学意义(P＜0.05)，eADC 与 DEC-MRI 诊断的曲线下面积相比差异无统计学意义(P＞0.05)。

【结论】DCE-MRI 联合 eADC 技术能够为乳腺良、恶性肿瘤的鉴别诊断奠定坚实的数据基础，能够给临床提供更客观及准确的评价。

基于多 b 值 DWI 在乳腺病变诊断中的优化应用

聂品[1],张潇月[1],杨迪[2],刘松涛[1],王苹苹[1],李铁柱[1],李晓艳[1],陈宝莹[1]
1.西安国际医学中心
2.空军军医大学唐都医院

目的：探讨 Magnetic Resonance Imaging （MRI）多 b 值弥散加权成像（multiple b-value diffusion-weighted imaging, MB-DWI）在乳腺病变诊断中的优化应用。方法：回顾性分析 2015 年 05 月 01 日-2015 年 05 月 01 日 110 例行乳腺 MRI 扫描的乳腺病变患者（良性 41 例，恶性 69 例），且均进行乳腺 MRI 多 b 值 DWI 序列检查，分别选取 b 值为 0、25、75、100、300、500、800、1000、1200、2000、3000s/mm^{2}进行扫描，取得不同 b 值时的标准化信号强度比（SIR）值及表观扩散系数（ADC）值，以病理结果为标准，观察各参数对病变的诊断价值。结果：当 b 值=2000s/mm^{2}时，SIR 值达最大，提示病变在该 b 值获得最好病变对比显示。当 b 值=500 及 1000s/mm^{2}时，去除了灌注效应的影响，能评估病变内的真实自由水分子扩散，反映病变的细胞密度，ADC 值达到最佳的鉴别诊断效能。结论：优化后的多 b 值 DWI 能提高乳腺病变的对比显示及诊断效能。

PU-3203
磁共振成像特征联合免疫组化指标预测乳腺癌腋窝淋巴结转移的应用研究

蓝海菲
青岛市妇女儿童医院

目的
探讨动态增强磁共振成像(DCE-MRI)扫描中,磁共振成像特征联合免疫组化指标在预测乳腺癌腋窝淋巴结转移中的应用价值.
方法 回顾性分析 117 例原发乳腺癌患者的术前 MR 及术后免疫组化特征。所有患者术前未发现淋巴结转移。术前 MR 检查,获得乳腺癌肿块的磁共振成像特征，包括病灶最长径，最短径，内部强化方式，边缘，形态，TIC 曲线，SER，DWI。根据术后病理结果获得免疫组化指标 ER、PR、HerbB-2、Ki-67.利用 Logistic 回归分析得出危险因素，并建立危险模型，进一步应用 ROC 曲线分析其诊断价值.
结果 MR SER≥180.5%、短长径之比≤0.56、Ki-67≥14%均是腋窝淋巴结转移的独立危险因素,危险模型 ROC 曲线的曲线下面积(AUC)为 0.826,其敏感度、特异度分别为 93.8% (60/64)、88.7% (47/53).
结论 MR SER、短长径之比及 Ki-67 的联合应用可预测乳腺癌腋窝淋巴结转移,为临床选择适当治疗方案及评估预后提供参考依据.

PU-3204
乳腺断层 X 线摄影和磁共振成像在浆细胞性乳腺炎诊断中的价值

陈倩,沈玉英
苏州市立医院

目的：探讨乳腺断层 X 线摄影（DBT）及磁共振成像（MRI）在浆细胞性乳腺炎（PCM）中的应用及诊断价值。
方法：回顾性分析我院 25 例经病理证实的浆细胞乳腺炎患者的影像学资料，所有患者均行双侧乳腺 X 线摄影和磁共振检查，DBT 检查包括内外斜位（mediolateral，MLO）和头尾位（craniocaudal，CC），MRI 检查序列有常规横断位，包括 T_1WI-快速自旋回波序列、T_2WI-快速自旋回波序列、T_2WI-快速反转恢复序列、扩散加权成像（DWI）序列和动态增强扫描(DCE-MRI)，分别对图像上病灶的部位、大小、形态、边缘、范围、信号特征、时间-信号强度曲线(TIC)进行研究。所有 MRI 图像均经 2 位放射科乳腺专科医生共同阅片。
结果：15 例患者共检出病灶 16 个，16 个病灶 DBT 图像中，其中 3 个表现为乳晕后区致密影、局部皮肤增厚（3/16），13 个表现为乳头后方肿块、乳晕皮肤增厚（13/16），其中 4 例患者腋窝淋巴结肿大。根据 MRI 图像特征，将 PCM 分为炎症型（6 个）、脓肿型（4 个）及混合型（6 个），所有病变在 T_1WI 均呈等低信号改变，T_2WI 抑脂序列上呈混杂高信号改变。其中炎症型 6 例,病变范围广泛 5 例,病变局限在乳晕后区 1 例 ,增强扫描单纯斑片状强化 2 例,斑片及导管状强化 4 例；脓肿型 4 例,病变范围广泛 3 例,病变局限于 1 个象限 1 例 ,增强扫描呈蜂窝状强化 2 例,环形及片状强化 2 例；混合型 6 例,炎症伴脓肿及窦道形成 ,增强扫描蜂窝状强化 3 例,2 例散在多发环形强化,1 例不均匀斑片状及环形强化。对增强扫描后病灶选取感兴趣区并绘制时间-信号强度曲线，TIC 多数呈Ⅰ型（4 个）和Ⅱ型（12 个）。
结论：浆细胞乳腺炎 DBT 及 MRI 表现具有一定特征性，主要是病灶主要表现为乳头后方肿块样致密影，部分病灶可形成脓肿及管道样改变，尤其是 MRI 可提供 PCM 更多的影像学特征，对临床诊断具有很大的指导意义。

IVIM-MR 评价三阴型乳腺癌新辅助化疗疗效的应用价值研究

李莹
广西中医药大学第一附属医院

目的 探讨 3.0T IVIM-MR 影像预测三阴型乳腺癌(TNBC)新辅助化疗后的疗效评估。方法 收集接受 3.0T MR 检查并经病理证实的三阴型乳腺癌病例 58 例，新辅助治疗前后分别进行 IVIM-MRI 及常规 DWI-MRI 扫描，并分别获得治疗前及治疗后各个序列的参数，并通过 IVIM-MRI 组及常规 DWI-MRI 组 IVIM-DWI 参数值（f 值、D 值、D*值）、ADC 值的对预后的比较，并采用单样本 t 检验、配对 t 检验分析法进行统计学分析。结果 两组治疗后病灶明显较治疗前缩小(P=0.023)，结合手术后病理结果，IVIM-MRI 对残留癌灶检测率明显于常规 DWI-MRI 组(P＜0.001＝。结论 IVIM-MRI 对癌灶的检测敏感性要明显于常规 DWI-MRI 组.

PU-3207
Diffusional kurtosis imaging for differentiation between benign and malignant breast lesions

Yanfang Huang,Ya Ren,Yu Yang,Ping Li
The First Hospital of Hunan University of Chinese Medicine

Purpose: To investigate and evaluate the role of magnetic resonance (MR) diffusion kurtosis imaging (DKI) in differentiating malignant from benign breast lesions. Materials and Methods:MRI images data of 93 patients with breast lesions confirmed by surgical biopsy were retrospectively analyzed. There were 107 lesions, including 52 malignant lesions (21 intraductal carcinoma of the breast, 30 non-specific types of invasive carcinoma，1 lymphoma),55 benign lesions (18 mastitis lesions, 8 atypical hyperplasia,7 breast adenosis and 22 breast fibroadenomas). DKI related parameters—mean diffusivity (MD)、mean kurtosis (MK), axial kurtosis (AK), radial kurtosis (RK) , anisotropy fraction (FA), apparent diffusion coefficient (ADC)—were measured.MK, MD, FA, AK, RK, ADC and MK+MD+AK+RK in benign and malignant lesions were compared by independent sample t-test or Mann-Whitney U test.The diagnostic performances of these parameters were evaluated by receiver operating characteristic (ROC) analysis. Results: MK, AK, RK and MK+MD+AK+RK in breast malignant lesions was significantly higher than that in benign lesions. MD and ADC of malignant breast lesions were significantly lower than benign lesions, and the differences were statistically significant (P <0.01). The difference of FA between benign and malignant breast lesions was not statistically significant (P>0.05). The area under the curves (AUCs) of MK, MD, FA, AK, RK, ADC and MK+MD+AK+RK for differentiating malignant from benign lesions were 0.972, 0.921, 0.601, 0.970, 0.973, 0.923, 0.985, respectively.Using 0.662,1.205,0.203,0.715,0.719,1.180 and 0.483 as the cut-off of the these parameters in evaluation of malignant and lesions,the sensitivity was 98.00%, 84.60%,57.9%, 97.6%,98.2%,96.2%,98.9%respectively, and the specificity was 92.3%,89.50%,84.60%,96.2%, 92.3%,89.5%,97.9% respectively.

Conclusion: MK, MD, AK and RK obtained by DKI are valuable in the diagnosis of benign and malignant breast lesions. The combined diagnosis index of MK+MD+AK+RK is more valuable in the differential diagnosis of benign and malignant breast lesions.

PU-3208
乳腺动态增强 MRI 血流动力学参数测量的重复性与一致性研究

田瑶天,李叶琴
山东省医学影像学研究所

目的 探讨乳腺动态增强 MRI 早期强化率、最大强化率及峰值信号强度（PEI）的重复性和一致性。方法 回顾性分析术前均行 MRI 扫描并经病理证实的乳腺癌患者的 77 个病灶，其中三阴型 11 例，her2 阳型 10 例，luminal 型 56 例。两位操作者分别测得病灶强化最明显区域的 PEI 并计算早期强化率、最大强化率。运用配对 t 检验评估早期强化率、最大强化率以及 PEI 的差异性，运用组内相关系数（ICC）和 Cronbach's Alpha 系数评估其重复性，运用 Bland-Altman 分析以上参数的组间一致性。结果 两位操作者测得的三阴型病灶的以上参数分别为早期强化率（148.40±45.83）%和（132.61±50.78）%、最大强化率（200.87±48.50）%和（206.08±34.68）%以及 PEI（434.47±116.36）和（470.19±106.09）；her2 阳型分别为（130.52±58.21）%和（139.16±64.43）%、（175.20±61.35）%和（205.59±53.28）%以及（386.62±89.56）和（400.92±86.40）；luminal 型分别为（141.86±61.00）%和（134.08±68.06）%、（201.53±61.66）%和（213.89±66.09）%以及（399.97±112.46）和（425.61±114.74）。不同操作者间三种分型的早期强化率、最大强化率以及 PEI 值差异均无统计学意义（P>0.05）；不同操作者间所测得的以上参数的 ICC 均在 0.7 以上，Cronbach's Alpha 系数也均>0.8，显示重复性较好。BlandAltman 分析结果显示两个操作者间一致性较好。结论 乳腺动态增强 MRI 的早期强化率、最大强化率以及 PEI 值的测量在不同操作者间具有较好的重复性和一致性，提示这些指标具有可靠的临床指导价值。

PU-3209
乳腺良性及交界性叶状肿瘤与纤维腺瘤磁共振的差异性表现

贺帅
辽宁省肿瘤医院

摘要： 目的 分析乳腺低级别叶状肿瘤(phyllodes tumors,PT)与纤维腺瘤(fibroadenoma,FA)的磁共振特征,提高两者的鉴别诊断水平.材料与方法 搜集术后经病理证实且有完整磁共振资料的良性及交界性叶状肿瘤 52 例、纤维腺瘤 68 例,对其 MRI 征象表现进行统计学分析.结果 叶状肿瘤以分叶状或多结节融合状多见,纤维腺瘤以圆形或类圆形多见,无多结节融合状;叶状肿瘤及纤维腺瘤都以边缘光滑多见;T1WI 上 18 个良性及交界性叶状肿瘤病灶内见片状高信号影,病理提示出血,纤维腺瘤只有 5 例出现高信号;T2WI 上叶状肿瘤多呈高信号,纤维腺瘤多呈低或等低信号;动态增强叶状肿瘤多呈明显不均匀强化,可见无强化分隔及囊变;纤维腺瘤多表现为均匀强化,1 例出现囊变,可见无强化分隔;时间信号强度曲线(time-signal intensity curve,TIC)分型,叶状肿瘤以Ⅱ型多见,纤维腺瘤以Ⅰ型多见;DWI 信号表现,叶状肿瘤全部表现为高信号,纤维腺瘤有 8 例表现为等低或低信号.结论 乳腺良性及交界性叶状肿瘤与纤维腺瘤在形状、信号、强化方式及 TIC 表现上具有一定差异,有助于其与纤维腺瘤的鉴别诊断.

基于极端随机树算法的 MRI 乳腺癌淋巴结转移多参数风险预测分析

徐校胜,张昌丽,时高峰
河北医科大学第四医院

目的 采用极端随机树（Extra Tree）方法，研究乳腺癌腋窝淋巴结转移的相关危险因素，以提高 MRI 对淋巴结的诊断效能，并建立术前乳腺癌腋窝淋巴结转移的预测模型。**材料与方法** 收集并分析我院自 2015 年 3 月至 2017 年 3 月经手术或穿刺病理证实的乳腺癌患者 387 例，所有数据分别采用集成学习方法中的 Extra Tree 来进行特征的筛选及多因素 logistic 回归分析，比较二者的诊断效能，选择诊断效能最优的研究方法，并筛选出乳腺癌淋巴结转移的危险因子或预测因素，建立相关的预测模型。**结果** 采用 Extra Tree 方法建立的预测模型的诊断效能要优于 logistic 回归模型。使用 Extra Tree 方法进行数据特征选择时，乳腺肿块位置、淋巴结液化坏死、乳腺皮肤增厚受侵、淋巴结最短径、MRI 乳腺肿块 BI-RADS 分级、肿块边缘、年龄、淋巴结 TIC 曲线的贡献率相对较高，高于均值，其为乳腺肿块腋窝淋巴结转移的危险因子，建立的相关预测模型测试效果的 AUC 值为 0.86，准确率为 0.84、灵敏度为 0.85，特异度为 0.73。采用多因素 logistic 回归建立的预测模型 AUC 值为 0.80，准确率为 0.80、灵敏度为 0.80，特异度为 0.73。**结论** 采用 Extra Tree 方法建立的乳腺癌 MRI 淋巴结转移的预测模型是评估乳腺癌患者淋巴结转移的有用工具，能提供每个危险因素的贡献率，其综合诊断效能提高对临床乳腺癌患者腋窝淋巴结处理及预后提供了有效的参考。

PU-3211
不同乳腺非特殊型浸润性癌分子分型的 MRI 表观扩散系数特点研究

贺帅
辽宁省肿瘤医院

摘要： 目的 探讨乳腺非特殊型浸润性导管癌各分子亚型(Luminal A、Luminal B、HER-2 过表达、基底细胞样型)及其生物学因子[雌激素受体(estrogen receptor,ER)、孕激素受体(progesterone receptor,PR)、HER-2 及 Ki-67]的表观扩散系数(apparent diffusioncoefficient,ADC)是否具有一定的特征性,为鉴别不同分子亚型及评估乳腺癌预后提供理论依据.材料与方法 回顾性分析术前行 MRI 检查的 158 例乳腺非特殊型浸润性癌患者的资料,术前获得扩散加权成像并测定平均 ADC 值,术后采用免疫组化检查获得 ER、PR、HER-2 及 Ki-67 等生物学因子和 4 种分子亚型.比较不同分子亚型间及乳腺癌生物学因子间的 ADC 值是否具有各自特征.结果 ER、PR、Ki-67 阴性者的 ADC 值(1.013±0.099,1.002±0.094,1.003±0.087)高于阳性者(0.932±0.066,0.940±0.079,0.952±0.089),差异有统计学意义(P 均＜0.01);HER-2 阳性者 ADC 值(1.004±0.088)显著高于阴性者(0.948±0.088),差异有统计学意义(P＜0.05);HER-2 过表达型的 ADC 值(1.048±0.073)较管腔 B 型及基底细胞样型(0.923±0.074,0.960±0.095)高,差异有统计学意义(P 均＜0.01).结论 乳腺非特殊型浸润性癌的各分子分型及生物学因子的 ADC 值具有一定的特征性.

PU-3212
乳腺浸润性导管癌中医证候与 p53、Her-2 蛋白及 Ki-67 表达相关性研究

贺帅
辽宁省肿瘤医院

摘要： 目的:探讨肝郁气滞证、冲任失调证和正虚毒炽证乳腺浸润性导管癌患者肿瘤组织中 p53、Her-2 蛋白及增殖指数 Ki-67 的表达特点和意义.方法:选择乳腺浸润性导管癌患者 279 例,其中肝郁气滞证 124 例,冲任失调证 99 例,正虚毒炽证 56 例.采用免疫组织化学方法检测各证型患者乳腺肿瘤组织内 p53、Her-2 蛋白及 Ki-67 表达情况并做统计学比较.结果:肝郁气滞证组 p53 蛋白阳性表达比例明显低于冲任失调证组和正虚毒炽证组(P<0.05),正虚毒炽证组 Her-2 蛋白阳性表达比例明显高于肝郁气滞证组和冲任失调证组(P<0.05),正虚毒炽证组 Ki-67 表达水平明显高于肝郁气滞证组和冲任失调证组(P<0.05).结论:乳腺癌中医辨证分型与 p53、Her-2 蛋白表达程度及增殖指数 Ki-67 存在相关性,对于冲任失调证、正虚毒炽证和 p53、Her-2 蛋白及增殖指数 Ki-67 高表达的肝郁气滞证乳腺癌患者均应加强随访并定期复查.

PU-3213
乳腺癌脏腑经络诊断在 MRI、纹理分析中的应用探析以及 ADC 对于新辅助化疗的疗效评价

贺帅
辽宁省肿瘤医院

摘要： 目的 研究乳腺癌脏腑经络诊断在 MRI 及纹理分析中的应用,探讨表观弥散系数(ADC)对于新辅助化疗疗效的评价,及乳腺癌新辅助化疗疗效评估与乳腺癌脏腑经络的关系.方法 回顾性分析乳腺恶性病变患者 404 例,行 MRI 检查,并采用 O.K.软件进行图像参数处理.选取其中行新辅助化疗的患者,应用磁共振扩散加权成像(DWI),比较 ADC,评价新辅助化疗的疗效.结果 足太阴脾经、足少阴肾经及足阳明胃经经络分组中,乳腺癌病变的肿块大小、强化形态、类型以及灌注参数等影像学表现比较,差异均无统计学意义,但三条经络病变的淋巴结转移情况具有显著差异(P=0.011);足太阴脾经,足少阴肾经,足阳明胃经病变淋巴结转移率分别为 35.3%,21.1%,40.0%.两两分析比较显示,脾经与肾经,肾经与胃经淋巴结转移具有显著差异(P=0.012,0.003),脾经与胃经淋巴结转移比较,差异无统计学意义(P=0.416).乳腺 MRI 纹理参数分析显显示三组经络分组 Cluster Shade 与 Cluster Prominence 具有显著差异,脾经及胃经病变 Cluster Shade 参数值相对较高,胃经病变 Cluster Prominence 参数值较高.化疗有效组患者化疗后肿瘤组织的 ADC 值增高,化疗前与化疗后各疗程相比,差异具有统计学意义,化疗无效组患者化疗后 ADC 值略增高,但差异无统计学意义.化疗有效组患者化疗前及化疗第 2、4 周期的正常乳腺组织 ADC 值比较,差异无统计学意义.结论 脾经、胃经的淋巴结转移率相对较高,腋窝淋巴结状态是乳腺癌患者评估预后效果的重要指标,发生于脾经、胃经的病变可能较肾经预后差,治疗前 ADC 值不能预测疗效.

PU-3214
三阴性乳腺癌的影像学特征分析

贺帅
辽宁省肿瘤医院

摘要： 目的:探讨三阴性乳腺癌(triple-negative breast cancer,TNBC)的影像学特征,并与非三阴性乳腺癌(non-TNBC,NTNBC)进行比较.方法:回顾性分析辽宁省肿瘤医院经病理学及免疫组织化学证实的 42 例 TNBC 及 504 例 NTNBC 患者的乳腺 X 线及 MRI 表现,两组 X 线及 MRI 检查中病灶钙化、形态、边缘、T2 信号、内部强化、时间-信号强度曲线(time-signal intensity curve,TIC)等比较采用 x2 检验.结果:TNBC 组病变最常见的 X 线表现为边缘清晰(12/25,48%)、圆形或类圆形(10/25,40%)、少钙化单纯肿块(17/28,61%).TNBC 组 MRI 常见表现为类圆形或结节状(22/27,82%)、边缘光滑(11/27,41%),T2WI 序列呈高信号(5/27,18.5%)、环形强化(8/27,29.6%)、TIC 呈速升速降型(20/32,63%).TNBC 组与 NTNBC 组乳腺 X 线肿块边缘及肿块钙化表现差异有统计学意义(P＜0.05).两组 MRI 检查在肿块形态、边缘、强化方式、表观扩散系数(apparent diffusion coefficient,ADC)及 TIC 方面的差异有统计学意义(P＜0.05).结论:TNBC 的 MRI 检查中,如肿块边缘光滑,出现环形强化,TIC 呈III型,ADC 值较高,结合乳腺 X 线检查所见,其对诊断 TNBC 有一定的参考价值.

乳腺癌的影像学诊断进展和研究方向

贺帅
辽宁省肿瘤医院

摘要： 随着生活方式的改变,我国女性乳腺癌的发病率呈上升趋势,在我国沿海发达地区已居女性恶性肿瘤发病率的第 1 位.早发现、早治疗对降低乳腺癌死亡率有重要的意义.目前,以乳腺 X 线检查为代表的各种医学影像学方法在乳腺癌的诊断中发挥着重要作用.近年来,在乳腺癌的诊断和治疗中,包括数字化乳腺 X 线检查、高频彩超、MRI 等影像学新技术飞速发展,使乳腺癌的影像学诊断由形态学诊断进入了组织水平、细胞水平和分子水平的诊断.

PU-3216

The relationship between kinetic parameters of DCE-MRI and clinicopathological prognostic factors of invasive breast cancer

Cuiyan Wang
Shandong Medical Imaging Research Institute

Purpose: To determine the association between DCE-MRI derived quantitative kinetic parameters (CD-QKPs) and breast cancer clinicopathological prognostic factors.
Material and Methods: Clinicopathological factors in consecutive women with biopsy-confirmed invasive breast cancer who underwent breast DCE-MRI were retrospectively reviewed. Analysis of variance was used to examine associations between prognostic factors and CD-QKPs. Fisher’s exact test was used to investigate the relationship between kinetic curve type and prognostic factors.
Results: One hundred and ninety-eight women with invasive breast cancer were included. High-grade and HER2+ tumors were more likely to have a washout type curve while luminal A tumors were less likely. High-grade was significantly associated with increased peak enhancement (PE, P = 0.01), enhancement maximum slope (MS, P = 0.03),

and mean enhancement (ME, P = 0.03), while high clinical lymph node stage (cN3) was significantly associated with increased MS and time to peak (tP, P = 0.01). HER2+ tumors were associated with a higher PE (P = 0.03) and ME (P = 0.06) than HER2- counterparts, and ER-/HER2+ tumors showed higher PE and ME values than ER+/HER2- tumors (P = 0.06).
Conclusion: DCE-MRI time-intensity CD-QKPs are associated with high tumor grade, advanced nodal stage, and HER2+ status, indicating their utility as imaging biomarkers.

PU-3217
乳腺 MRI 弥散峰度成像对 ER 阳性、HER-2 阴性乳腺癌 Oncotype DX 的相关性研究

周卫平,方向明
南京医科大学附属无锡市人民医院

目的 探讨 ER 阳性、Her-2 阴性乳腺癌病人的临床、MRI 动态增强（DCE-MRI）影像特征、DKI 参数及病理预后因子与复发评分（RS）间的相关性，以寻找能预测 RS 的影像标记。**方法** 收集术前行 DCE-MRI 及 DKI 检查且经手术病理证实为 ER 阳性、Her-2 阴性乳腺癌病人，记录年龄、病灶大小、肿块形状、边缘、内部强化、腺体分型、强化峰值、达峰时间、ADC、MD、MK、Ki67、组织分化程度等。将肿瘤组织石蜡标本送去做 21 基因（Oncotype DX）检测获得 RS 值。**结果：** 1. 低、中、高 RS 组间年龄、ADC、MD、Ki67 具有显著差异，进一步两两比较，低 RS 组与中 RS 组、低 RS 组与高 RS 组间年龄差异具有统计学意义。MD、Ki67 在低 RS 与高 RS 组间有显著差异，ADC 在低 RS 与中 RS 组间有显著差异。2.低 RS 组与中高 RS 组间平均年龄、强化峰值、MD、MK 及 Ki67 分别为 63.96±10.96 岁、52.68±11.96 岁，396.24±94.97 、338.34±102.10 ，(1.35±0.50)×$10^{-3}mm^2/s$ 、1.03±0.13×$10^{-3}mm^2/s$，0.92±0.24、1.03±0.11，（24.80±15.03） %、（42.68±21.43）%，差异具有统计学意义。低 RS 组与中高 RS 组间的腺体构成差异具有统计学意义（p=0.017）。将患者年龄、强化峰值、MK、MD、Ki67 纳入建立逻辑回归方程，其中 MD、年龄对低 RS 与中高 RS 组预测影响有统计学意义。以 Logistic 回归产生的综合变量预测中高 RS 组的 ROC 曲线下面积为 0.92，敏感度为 84%，特异度为 92%，约登指数为 0.76。**结论** 以年龄、强化峰值、MK、MD、Ki67 建立的模型可较好预测中高 RS 组，提示可以预测复发风险，并指导临床治疗及预后评估。

PU-3218
动态增强 MRI 定量分析在乳腺癌新辅助化疗疗效评估的 META 分析

杨钊,杜笑松,侯丽娜,张建新,崔艳芬,杨晓棠
山西省肿瘤医院

目的 采用 META 分析来评价动态增强 MRI 定量参数在乳腺癌新辅助化疗疗效评估中的价值。 方法 搜集国内外公开发表的以病理结果为金标准、且运用动态增强 MRI 定量参数来评估乳腺癌新辅助化疗疗效的相关文献，采用 Meta-DiSc1.4 软件进行动态增强 MRI 的定量参数对乳腺癌新辅助化疗疗效评估价值的综合评价。结果 共纳入国内外文献 17 篇，乳腺癌总病灶数 854 例；经统计分析结果显示动态增强 MRI 定量参数评估乳腺癌新辅助化疗疗效的灵敏度为 83.3%，特异度为

82.9%，综合受试者工作特征曲线（SROC）下面积为 89.99%。 结论 动态增强 MRI 定量参数对乳腺癌新辅助化疗疗效的评价具有较高的准确度。

PU-3219

浆细胞性乳腺炎 MRI 表现与临床特点及病理对照

林淋淋
中国人民解放军总医院第五医学中心

目的：探讨分析浆细胞性乳腺炎的 MRI 表现与临床特点及病理表现。**方法**：回顾性分析 15 例经病理证实的浆细胞性乳腺炎不同时期的病理表现及临床特点，并进行 MRI 平扫及增强扫描。**结果**：浆细胞性乳腺炎临床热点主要表现为病程多数较长，易反复发作、长期不愈后易形成脓肿及瘘管窦道。MRI 炎症期病灶多表现为节段性、片状不均匀长 T1 稍长 T2 信号影，与周围腺体分界不清。脓肿期病灶内可见多发大小不等脓腔形成，伴有丰富扩张的引流静脉，脓肿壁呈环形强化。瘘管期病灶内脓肿不愈破溃形成的与皮肤表面相通的瘘管，增强后表现为窦道壁强化而官腔不强化的短线样双管征。混合期即脓肿和瘘管同时存在。**结论**：浆细胞性乳腺炎具有一定的临床特点和 MRI 影像特点，随着病理过程的进展，不同时期常有不同的临床表现与 MRI 表现。

乳腺浸润性导管癌磁共振影像表现与相关免疫组化指标的关联性分析

方磊
江西省肿瘤医院/江西省第二人民医院

目的 乳腺浸润性导管癌（IDC）磁共振平扫与增强扫描的基本特征，探讨其与相关免疫组化指标的关联性。
方法 回顾分析 38 例经手术病理证实为乳腺浸润性导管癌患者的乳腺磁共振平扫及动态增强扫描图像，记录病灶大小、形态、边缘、时间-信号曲线（TIC）类型分类；每例病例均行免疫组化检查，测定包括雌激素受体（ER）、孕激素受体(PR)、原癌基因 Her-2、P53 抑癌基因、Ki67 核抗原表达等指标，分析磁共振表现与免疫组化指标之间的相关性。 **结果** 病灶的大小及形态征象与免疫组化指标无明显相关性；病灶的边缘情况及 TIC 曲线类型与免疫组化指标有一定的相关性，其中边缘有毛刺征的 31 例 IDC 病灶 ER、PR 阳性表达明显高于 7 例边缘光整者（P＜0. 05），TIC“流出型”29 例的 IDC 病灶 P53 抑癌基因、Ki67 核抗原阳性表达高于 7 例“平台型”及 2 例“流入型”（P＜0.05）。免疫组化中的 Her-2 基因表达与以上任何一项磁共振表现无明显相关性。 **结论** 乳腺浸润性导管癌影像表现中的边缘毛刺征、TIC 流出型曲线与免疫组化部分指标具有关联性。

PU-3221

乳腺 Paget's 病在磁共振动态增强扫描及弥散加权成像中影像学表现的研究

杨素梅,胡瑞
云南省文山壮族苗族自治州人民医院

摘要：目的 探讨乳腺 Paget's 病在磁共振动态增强扫描（dynamic contrast enhanced， DCE）及弥散加权成像（diffusion weighted imaging，DWI）上的表现特点。**方法** 收集 12 例经过手术病理证实的乳腺 Paget's 病患者的资料，对乳腺 Paget's 病在 DCE 及 DWI 上的影像学表现征象进行研究分析。**结果** 乳腺 Paget's 病在磁共振成像（MRI）表现为乳头增大，乳晕及邻近皮肤增厚，DCE 呈渐渐性明显均匀强化，时间-信号强度曲线以流入型、平台型为主，DWI 显示以高信号为主，高信号范围小于强化范围。91.7%合并的乳腺内导管癌，病灶 DCE、DWI 表现与单发的导管癌病灶表现相近。**结论** 乳腺 Paget's 病在 DCE、DWI 上的表现有一定特征性，DCE、DWI 在乳腺 Paget's 病的诊断上有很好的临床应用价值。

Evaluation of 89Zr-Trastuzumab for HER2 PET in breast cancer xenografts - bearing mice

Nannan Zhao
Liaoning cancer hospital and Institute

Background: Breast cancer with HER2 overexpression is associated with tumor growth, angiogenesis and development of distant metastases. Accurate monitoring of HER2 expression is conducive to individualized application of targeted therapy. Radionuclide tracer imaging has become research focus in recent years.
Methods: Trastuzumab modified by DFO(DF-BZ-NCS) was labeled with 89Zr, the stability and activity were analyzed in vitro by High-performance Liquid Chromatograph (HPLC) and Enzyme linked immune-sorbent assay (Elisa) respectively. Flow cytometry and cell-binding assay were performed to evaluate HER2 expression and radioactivity uptake in BT474 (HER2 overexpress), MDA-MB-453 (HER2 minimally express) and MDA-MB-231 (HER2 negative) cell lines. Micro-Pet was used to evaluate the efficiency of 89Zr-DFO-trastuzumab in HER2/neu-positive and negative xenograft - bearing mice tumor respectively.
Results: Radionuclide 89Zr was effectively combined with trastuzumab modified by DFO at a high radiochemical purity and specific activity in vitro. 89Zr- trastuzumab was significantly enriched in tumorof BT474 xenograft - bearing miceup to 3-5w. Tracer imaging in MDA-MB-453 xenograft - bearing mice with HER2 minimal expression were not quite accurate.
Conclusions: The procedures of conjugation and labeling were stability, targeted and safety. 89Zr- trastuzumab PET as a tool to investigate heterogeneity of HER2/neu-positive breast cancers and provide a good application prospect for clinical transformation from basic research.

Application of Magnetic Resonance Image Texture Analysis in Differential Diagnosis of Benign and Malignant Breast Lesions

Nannan Zhao
Liaoning cancer hospital and Institute

ObjectiveTo study the differential diagnosis of benign and malignant breast lesionsby using texture analysis based on magnetic resonance imaging (MRI) plain scan and dynamic contrast-enhanced scan, and evaluate the diagnostic performance.
Materials and Methods587 breast lesions, including 404 malignant lesions and 183 benign lesions, were retrospectively collected. Three experienced radiologists manually delineatedthe region of interest (ROI), and quantitative radiomics features automatically extracted from ROI images. Dimensionality reduction of features; prediction models for diagnosis of benign and malignant lesions were built based by logistics regression analysis; the diagnosis performance was evaluated by using ROC curves; the radiomics scores of the two models were superposed by generalized linear regression; and the weights of the two models were compared and evaluated by using nomograms.
ResultsThe diagnostic accuracy of the radiomics models built by using T_1WI and enhanced scan images was 71.2% and 83.1%, respectively, the AUC was 0.742 and 0.887, respectively, the sensitivity was 0.636 and 0.820 respectively, and the specificity was 0.740 and 0.855, respectively.
ConclusionMRI texture analysis can be used for distinguishing benign and malignant breast lesions, and the diagnostic efficacy of the radiomics model built by using enhanced scan images was superior to that of the model built by using plain scan images. Therefore, the texture analysis method based on enhanced MR images is expected to become the basic identification tool to aid clinical diagnosis.

PU-3224

DWI 和最小 ADC 值鉴别乳腺良恶性肿瘤

张杨,张少华
阜阳市人民医院

目的：
DWI 及 ADC 值定量测量在乳腺良恶性病变鉴别中有较高的诊断价值，目前文献中多采用平均 ADC 值的测量方法。本研究探讨扩散加权成像 DWI 和最小 ADC 值、平均 ADC 值在乳腺良恶性病变鉴别诊断中的价值。

方法：
收集我院经手术及病理证实的 97 例乳腺良恶性病变患者，所有患者均在术前行乳腺 MRI 平扫、增强及 DWI 扫描。

病灶 ADC 测量时，ROI 选取方法采用“部分不规则法”，即在病变最大层面上手动绘制 ROI，避免肿瘤囊变坏死区，记录平均 ADC 值和最小 ADC 值。
比较乳腺良恶性病变的最小 ADC 值、平均 ADC 值差异，并以 ROC 曲线分析其诊断效能。

结果：
全部 97 例患者均为女性，年龄 16~74 岁，平均 40.0±12.3 岁。其中良性病变 38 例（纤维腺瘤 19 例、腺病 6 例，炎性病变 12 例，叶状肿瘤 1 例，错构瘤 1 例），最小 ADC 值 1.31±0.31×$10^{-3}mm^2/s$，平均 ADC 值 1.56±0.33×$10^{-3}mm^2/s$；恶性病变 59 例（浸润性导管癌 46 例，导管原位癌 5 例，导管内癌 4 例，浸润性小叶癌 2 例，粘液癌 2 例），最小 ADC 值 0.78±0.29×$10^{-3}mm^2/s$，平均 ADC 值 1.04±0.33×$10^{-3}mm^2/s$。
ROC 曲线结果显示：最小 ADC 值鉴别乳腺良恶性病变 AUC 为 0.908，高于平均 ADC 值（AUC 为 0.868）。以最小 ADC 值 1.07×$10^{-3}mm^2/s$ 为临界值，鉴别良恶性肿瘤的敏感性 88.4%，特异性 89.8%。

结论：
部分不规则法选取 ROI 测量最小 ADC 值鉴别乳腺良恶性病变有较高的临床应用价值，可作为定性诊断的有力补充。

PU-3225
MR 扩散峰度成像对 BI-RADS 3 及 4 类病变的诊断价值

周卫平,方向明
南京医科大学附属无锡市人民医院

目的 探讨 MR 扩散峰度成像（DKI）对 BI-RADS 3 及 4 类病变的诊断价值。
方法 收集术前行乳腺 MRI 动态对比增强（DCE）及多 b 值弥散加权成像（DWI）、且 BI-RADS 3 及 4 类病例共 59 例，71 个病灶，据病理结果分恶性组（n=43 个）与良性组（n=28 个）。分析两组间年龄、病灶大小、形态、边缘、T2WI 信号，内部强化特征、早期强化率（EER）、TIC 类型、ADC、MK、MD 差异。采用 Fisher 精确概率法、Mann-Whitney、受试者工作特性曲线（ROC）进行统计分析。比较基于 DCE 和 DCE 结合 DKI 的两组 BI-RADS 评估效能。**结果** ①良、恶性组间病灶形态、内部强化、EER、TIC、ADC、MK、MD 差异有统计学意义（$P < 0.05$），平均年龄、病灶大小、形态、边缘、T2WI 信号差异无统计学意义（$P > 0.05$）。②在基于 DCE 图像的 BI-RADS 评估中，3 类有 17 个，4 类有 54 个。DCE 结合 DKI 的 BI-RADS 评估中，2 类 9 个，3 类 18 个，4 类 10 个，5 类 34 个。与基于 DCE 的 BI-RADS 评估相比，DCE 结合 DKI 数据的评估具有更高的特异度（46.4% vs 89.3%）、准确度(73.2% vs 95.8%)和更低的假阳性(53.6% vs 10.7%)、假阴性(9.3% vs 0%)。**结论** DKI 能提高 MRI 对 BI-RADS 3 和 4 类病灶诊断的特异度和准确度，降低假阳性和假阴性，避免漏诊及不必要的穿刺检查。

To explore the value of edema on MRI T2 around breast cancer masses in prognosis prediction.

yili zhang,Ting Liang,Bin Hu,Hongwen Du
Imaging center， the Ist Affiliated Hospital of Medical College， Xi’an Jiaotong University

Objectives: Compared with DCE-MRI, MRI Plain Scan provides less information for the diagnosis of breast diseases. This study aims to investigate the role of abnormal manifestations on MRI T2 fat suppression sequence around breast cancer masses in prognosis prediction.
Methods: 80 patients with breast cancer of mass type underwent breast MRI plain scan, DCE-MRI and DWI scan. To analyze the correlation between imaging findings around the mass on MRI T2 fat suppression sequence plain scan and tumor stage, pathological findings, immunohistochemistry and axillary lymph node metastasis of the tumor.
Results: There was grid or patchy blurred high signal shadows around the mass on MRI T2 fat suppression sequences plain scan in 35 patients, Moreover, these area of MRI T2 fat suppression sequences abnormal signals did not show abnormal enhancement on DCE-MRI and that of ADC value did not decrease. In other 45 patients, there was no abnormal signal around the mass on MRI T2 fat suppression sequence plain scan. The 35 patients were later in tumor staging than the other 45 patients, this difference was statistically significant ($P<0.05$) . There was no significant difference in pathological classification between the two groups. There was significant difference in Luminal typing between the two groups ($P<0.05$), these 35 patients are more likely to present with triple-negative breast cancer. There was also a significant difference in axillary lymph node metastasis between the two groups($P<0.05$), these 35 patients had a high rate of axillary lymph node metastasis.
Conclusion: Abnormal gridding or patchy high signal on MRI T2 fat suppression sequence around the mass can predict the prognosis of tumors in patients with mass-type breast cancer. Furthermore, 26 of 35 cases also showed skin thickening and showed subcutaneous fibrous connective tissue enlargement on MRI T2 fat suppression sequence.

PU-3227

Machine Learning Models for Evaluation of Pathological Complete Response to Neoadjuvant chemotherapy in HER2-positive breast cancer

Qin Li,Qin Xiao,Yajia Gu
Fudan University Shanghai Cancer Center

Objectives: To investigate whether machine learning analysis of radiomics based on dynamic contrast-enhanced magnetic resonance imaging(DCE-MRI) can help predict pathological complete response(pCR) to neoadjuvant chemotherapy(NAC) in patients with locally advanced human epithelial growth factor receptor 2(HER2)-positive breast cancer.
Materials and Methods: One hundred and twenty seven patients with locally advanced HER2 positive breast cancer at our institution were enrolled in this retrospective study. All patients underwent DCE-MRI imaging before NAC, 1316 radiomic features were extracted from DCE-MRI imaging over four time points. To reduce the dimensionality of the feature space, we proposed a two-staged feature selection strategy combining traditional statistics and machine learning-based method. With selected features, the models for pCR classification task were established. The performence of the Machine Learning-Based

classification were assessed by their accuracy, sensitivity,specificity, and the area under the curve (AUC).
Results: Fifty-four of 127 patients(42.52%) achieved pCR. For the pCR classification task, the best accuracy of 79.5% was achieved based on linear support vector machine (SVM) in conjunction with 6 sequential features based on DCE time series and the sensitivity, specificity and AUC values were 0.74, 0.84, 0.84 respectively.
Conclusion: Using pretreatment MRI data over time, we develop a model to predict pCR to NAC in patients with locally advanced HER2 positive breast cancer.

PU-3228
乳腺癌内乳淋巴结影像学评估及临床意义

陈岑,周玉容,徐丽莹
武汉大学中南医院

目的 探讨乳腺癌内乳淋巴结影像学评估及其临床意义。
方法 回顾性分析武汉大学中南医院 2017-2018 年 200 例乳腺癌患者的临床病理资料及在我院 64 排螺旋 CT、3.0T MR 上的影像学资料进行分析，选取病人的年龄、肿瘤大小、肿瘤位置、乳腺癌类型/分子分型、腋窝淋巴结转移状况、远处转移等 7 个可能相关因素，分析不同情况下内乳淋巴结出现转移的情况；同时通过对转移的内乳淋巴结进行影像学征象分析和总结。
结果 200 例乳腺癌患者中，有 32 例出现内乳淋巴结转移，在选取的 7 个可能相关因素中，肿瘤的大小、乳腺癌类型/分子分型、腋窝淋巴结转移状况与内乳淋巴结转移有相关性；对 32 例内乳淋巴结转移患者的影像资料进行前后对比分析，从内乳淋巴结大小、形态、密度、单发/多发以及伴/不伴腋窝淋巴结肿大五方面进行总结，同时发现内乳淋巴结转移患者较无内乳淋巴结转移患者临床预后差。
结论 腋窝淋巴结状况、乳腺癌类型/分子分型与内乳淋巴结转移有相关性。当内乳淋巴结短径＞5mm，呈不规则形/卵圆形，淋巴结门消失，增强前后 CT 值增加＞20HU，常常伴有腋窝淋巴结肿大，往往提示内乳淋巴结转移；内乳淋巴结阳性检出可以提高临床乳腺癌 TNM 分期的准确性，以及指导精准治疗及判断预后。

PU-3229
乳腺癌原发灶及癌旁组织的影像学特征预测淋巴结转

徐丽莹,周玉容,周舟,陈岑
武汉大学中南医院

目的：探讨乳腺癌癌灶及癌周组织 MRI 特征与腋窝淋巴结转移和淋巴血管侵犯（Lymphovascular invasion, LVI）的相关性。
方法：回顾性分析了 201 例乳腺癌患者的乳腺 MRI 资料，包括 DCE-MRI 和 DWI，以及临床病理资料，分析的影像学特征包括肿块或非肿块强化、单发或多发病灶、病灶最大径、边缘强化、毛刺状、早期增强率、TIC 曲线、Tumor ADC、Peritumor ADC、 Peritumor ADC/ Tumor ADC ratio 等，与手术后病理结果中的腋窝淋巴结转移及有无 LVI 进行相关性分析。
结果：腋窝淋巴结转移和 LVI 与多发肿块病变、大病灶（2cm）、边缘强化、早期快速强化相关，和 Peritumor ADC/ Tumor ADC ratio 强相关。以 Peritumor ADC/ Tumor ADC ratio=2.2 为阈值，

预测腋窝淋巴结转移的敏感性、特异性、阳性预测值、阴性预测值分别为 85.4%、91.7%、88.9%和 84.1%。
结论：乳腺癌病灶及周围组织影像学特征可以预测淋巴结转移及 LVI。

PU-3230

乳腺炎与乳腺癌的 MRI 诊断与鉴别

王楠竹,王谦,刘莉,唐雷
贵州省人民医院

目的：探讨乳腺炎与乳腺癌的 MRI 诊断与鉴别研究。
方法：将 2019 年 1 月-4 月在我院治疗的 30 例乳腺癌患者作为观察组，将同期 30 例乳腺炎患者作为对照组，均行 MRI 检查，比较两组的 MRI 图像特征、TIC 类型分布。
结果：观察组淋巴结肿大、强化特征、环形强化、水肿等 MRI 表现与对照组相比有明显差异（P＜0.05），但在边缘、毛刺征、淋巴结肿大、累及乳头、皮肤增厚等 MRI 表现与对照组相比无明显差异（P＞0.05）；观察组Ⅱ型、Ⅲ型明显多于对照组，而Ⅰ型明显少于对照组（P＜0.05）。
结论：乳腺炎与乳腺癌的 MRI 的图像存在一定差异，乳腺炎多呈非肿块样、环形强化、TIC 多为Ⅰ型，乳腺癌多呈肿块样，TIC 多为Ⅱ型、Ⅲ型。

PU-3231

乳腺恶性叶状肿瘤的磁共振表现

江岷芮
陆军军医大学大坪医院

目的：探讨乳腺恶性叶状肿瘤的磁共振表现，为鉴别诊断提供依据，提高对该病的诊治水平。
方法：搜集 2018 年 9 月到 2019 年 3 月我院 5 例乳腺恶性叶状肿瘤患者为研究对象，全部患者都行乳腺磁共振平扫加增强检查，磁共振检查序列包括 T1 加权成像，T2 加权成像，T2 脂肪抑制成像，弥散加权成像，动态增强成像，并有病理结果对照。
结果：5 位患者均为女性，年龄 16-56 岁，5 例叶状肿瘤均发生恶变。T2WI 上多以高信号为主，2 例病变内可见小片状低信号区，病理证实为出血； 3 例伴有出血坏死的病变呈不均匀强化。弥散加权成像高 B 值成像病灶均表现为高信号，时间信号强度曲线有 2 例是平台型，3 例是流出型。
结论：乳腺叶状肿瘤好发于中年妇女，该病一般肿块较大，当发现病变逐渐增大时应考虑是交界性或恶性叶状肿瘤可能。本组中 5 例病变，最大的直径 7 厘米，最小的直径都超过 3 厘米。磁共振多参数成像可提供病变更多的诊断信息，弥散加权成像和乳腺动态增强序列可以很好的鉴别乳腺良恶性病变。

PU-3232

Using histogram analysis on dynamic contrast enhanced MRI to improve assessment of pCR in small residual enhancement of breast cancer after neoadjuvant therapy

崑 Cao,Yan-ling Li,Xiao-ting Li,Ying-shi Sun
Peking University Cancer Hospital

Purpose: To assess the ability of histogram analysis(HA) on pre-operative dynamic contrast enhanced (DCE) MRI in identifying pathologic complete response(pCR) of small residual enhancement after neoadjuvant therapy(NAT) for mass-like breast cancer.
Materials and Methods: Consecutive breast cancer patients who received NAT before operation were enrolled. Regions of interests covering the entire enhanced areas of tumor site were drawn to extract parameters, including volumes and 17 HA features acquired separately on subtractive images of early and late phases to pre-enhanced phase on MR DCE sequences by using a house made radiomics software developed on 3D slicer platform. Lesions were stratified by volume of residual enhancement, and comparison of features were made between pathologic complete response (pCR) and non-pCR groups. Multivariate cox regression and receiver operating characteristic (ROC) curve were used to select useful features and to assess the overall diagnostic abilities and among different molecular subtypes.
Results: Totally 112 patients with mass-like breast cancer on initial MR were enrolled and grouped as pCR(42 cases) and non-pCR (70 cases). Further analysis divided the cohort by residual tumor volume(V) as V=0, $0<V<0.5cm^3$, and $V\geqslant0.5cm^3$. Multivariate regression analysis on group with $0<V<0.5cm^3$ (42 cases) yielded uniformity and entropy on late DCE phase as independent factor related with pCR(P=0.007 and 0.013 respectively). Using the formula with combined factors, areas under the curve on ROC and accuracy for pCR diagnosis in this small enhanced volume group were 0.778 and 83.3%, comparing with 0.500 and 64.3% using the no-enhancement criterion. For the whole setting with 112 case, the accuracy for identifying pCR reached 84.82% by using HA features on DCE late phase and stratified by residual cancer volume. Diagnostic ability was best in triple negative subtype.
Conclusion: HA is a useful tool to depict tumor heterogeneity in post-treatment mass-like breast cancer patients. By stratification of residual volume and combination of uniformity and entropy from DCE late phase, MR's ability to identify complete response in small residual enhanced ($V<0.5cm^3$) tumor group is significantly improved.

PU-3233
结合乳腺 X 线及超声检查降低磁共振 BI-RADS 4 类病灶假阳性率的可能性探讨

王翠艳[1],郝雯[1,2]
1.山东省医学影像学研究所
2.复旦大学附属肿瘤医院

目的 乳腺磁共振敏感性高于乳腺 X 线和超声检查，在乳腺癌患者术前评估中发挥重要作用，但由于乳腺磁共振特异性稍低，其发现的 BI-RADS 4 类病灶的假阳性率较高，引起了过度治疗问题。本研究探讨结合乳腺 X 线及超声降低乳腺磁共振 BI-RADS 4 类病灶假阳性率的可能性。

方法 回顾性收集 2016 年 1 月至 2018 年 12 月于本院进行治疗的原发性乳腺癌患者，收集病人治疗前乳腺磁共振发现并由病理证实的 BI-RADS 4 类病灶，再筛选出同时具有术前乳腺 X 线及超声检查结果的病灶。最终有 173 个病灶入组，其中 78 个为良性，95 个为恶性。以病理

结果为金标准分为良性组和恶性组。BI-RADS 4 类及以上需要活检，3 类及以下不需要活检。观察良性组和恶性组乳腺 X 线及超声检查结果。

结果　78 个良性病灶中乳腺 X 线及超声两种检查均认为需要活检的共 32 个（32/78，41.0%），一种方法认为需要活检的 33 个（42.3%），两种方法均认为不需要活检的 13 个（16.7%）；95 个恶性病灶的结果分别为 70（73.7%）、20（21.0%）和 5（5.3%）。总之，对于乳腺 X 线及超声两种检查均认为不需要活检的磁共振 BI-RADS 4 类病灶，其恶性率仅为 2.9%（5/173）。

结论　乳腺 X 线及超声均认为不需要活检的磁共振 BI-RADS 4 类病灶阳性率较低，在为这类病人制定临床干预方案时应综合考虑，以求在安全范围内降低假阳性率，减轻患者负担。

PU-3234

乳腺实性乳头状癌的影像学表现

师小凤
上海交通大学医学院附属瑞金医院

目的：分析乳腺性乳头状癌的钼靶、超声及 MR 表现，以提高其诊断的准确性。
材料和方法：收集我院 2018.06-2018.12 经病理诊断的 21 例实乳腺性乳头状癌患者，年龄范围 39-74 岁，平均年龄 62.10 岁，所有患者术前均行钼靶、超声及磁共振检查。
结果：21 例患者，12 例以乳头溢液就诊，8 例以乳头肿物就诊，1 例无明显症状；10 例术后病理为原位实性乳头状癌，11 例为实性乳头状癌伴浸润。钼靶、超声及磁共振诊断的准确性分别为 29%、95%、100%。乳腺实性乳头状癌的钼靶及超声表现没有特异性，最常见的 MR 表现为位于乳晕后区，通常沿导管分布（16/21,76%），DWI 均表现为高信号（21/21,100%），导管扩张（15/21,71%），表现为线性或段样的非肿块强化（11/21,52%），不均质肿块强化（10/21,48%），TIC 曲线呈平台型及流出型为主（18/22,82%）。原位乳腺实性乳头状癌与伴浸润的乳腺实性乳头状癌相比，大小有显著差异性（t=1.12，p=0.03）。
结论：乳腺实性乳头状癌诊断比较困难，钼靶及超声缺乏特异性，MR 表现具有一定的特征，其表现与临床病理有密切关系。

PU-3235

硬化性腺病的 X 线、MRI 影像学表现及病理对照分析

李娜
辽宁省肿瘤医院

目的　探讨硬化性腺病（sclerosing adenosis,SA）的 X 线、MRI 影像学表现特征，结合病理结果，探讨 X 线及 MRI 检查对硬化性腺病术前诊断的价值。
方法　回顾性分析本院经手术病理证实的 68 例硬化性腺病的临床资料及 X 线、MRI 图像特征，其中 58 例术前行乳腺 X 线检查，68 例术前行乳腺 MRI 平扫、动态增强扫描及扩散加权成像，X 线及 MRI 检查结果分别与病理结果对照分析。
结果　68 个硬化性腺病病灶中，单纯硬化性腺病 43 个，伴大汗腺化生 9 个，伴纤维腺瘤 7 个，伴导管内乳头状瘤 6 个，伴钙化灶 3 个。X 线表现为不规则肿块者 11 个、非对称致密者 18 个、结构扭曲者 9 个、钙化 12 个，未见确切异常者 8 个。MRI 表现为不均匀长或者稍长 T2WI 信号者 52 例；肿块 48 例，均可见强化；不均匀非肿块样强化病灶 20 例。病灶时间信号曲线(time intensity curve，TIC)渐进型曲线 33 例，平台型曲线 32 例，流出型曲线 3 例；扩散加权成像

(diffusion weighted imaging，DWI) 呈等信号者 11 例，稍高信号者 44 例，高信号者 13 例。乳腺 X 线及 MRI 相结合诊断硬化性腺病准确率为 83.71%。
结论 乳腺硬化性腺病 X 线检查多表现为不规则肿块、非对称致密，钙化；MRI 多表现为长或者稍长 T2 信号肿块，多不均匀强化。病变形态、增强扫描时间信号曲线及 DWI 图像对硬化性腺病术前诊断具有重要价值。

PU-3236
乳腺 MRI 对单纯型黏液腺癌与纤维腺瘤的鉴别诊断价值

李娜
辽宁省肿瘤医院

目的 探讨 MR 平扫、扩散加权成像（DWI）、动态增强及表观扩散系数（ADC）值对单纯型乳腺黏液腺癌和乳腺纤维腺瘤的鉴别诊断价值。方法 回顾性分析经手术病理证实的 20 例单纯型黏液腺癌与 20 纤维腺瘤患者的 MRI 资料，观察比较两组患者的 MR 表现特征。结果 ①TIC 曲线：61.5%的单纯型黏液腺癌延迟期 TIC 曲线呈上升型，71.1%混合型黏液腺癌 TIC 曲线呈平台型；②ADC 值：单纯型黏液腺癌平均 ADC 值(1.62±0.47)×10 -3 mm 2/s 高于纤维腺瘤平均 ADC 值(1.34±0.32)×10 -3 mm 2/s，差异具有统计学意义（P<0.05）。结论 单纯型黏液腺癌和纤维腺瘤的 MRI 表现上有交叉，但是单纯型黏液腺癌的高 ADC 值具有鉴别诊断价值，故 MRI 多种成像序列相结合在单纯型黏液腺癌和乳腺纤维腺瘤的诊断及鉴别诊断中具有重要价值。

PU-3237
MRI 在小体积乳腺叶状肿瘤诊断中的价值

李娜
辽宁省肿瘤医院

目的 分析 MRI 平扫、扩散加权成像（DWI）、动态增强及表观扩散系数（ADC）值在小体积（直径＜5cm）乳腺叶状肿瘤（PTB）诊断中的价值。**方法** 回顾性分析经手术病理证实的 18 例乳腺叶状肿瘤患者的 MRI 表现特征,其中良性 10 例，交界性 4 例，恶性 4 例。分析病灶形态、信号强度、ADC 值及其动态增强特点,并与病理结果对照。**结果** 14 例呈分叶状，4 例呈类圆形，最大径 1.1cm～5.0cm，T_1WI 平扫呈低或等信号，T_2WI 呈均匀高信号或混杂高信号，动态增强不均匀强化，5 例见囊变，9 例见不强化分隔，所有病灶 DWI 均呈高信号，平均 ADC 值(1.29±0.18)×10 -3 mm 2/s，TIC 曲线 8 例Ⅰ型，9 例Ⅱ型,1 例Ⅲ例。**结论** 小体积乳腺叶状肿瘤 MRI 表现上具有特征性表现，认识其特征性 MRI 表现有助于鉴别诊断,但最终确诊仍需依靠病理组织学检查。

PU-3238
MR 放射组学：预测三阴性乳腺癌患者新辅助治疗后的病理学完全缓解和无病生存期

夏冰清[1],王哲[2],王鹤[2],顾雅佳[1]
1.上海复旦大学附属肿瘤医院
2.复旦大学类脑智能科学与技术研究院

目的： 研究基于增强 MRI 的放射组学能否预测接受新辅助治疗 (NAC) 的局部晚期 TNBC 的病理完全缓解 (pCR) 和无病生存期 (DFS)。

方法： 回顾性分析 2010 年 1 月至 2017 年 5 月共 113 例接受 NAC 的患者，然后随访至 2018 年 8 月。这些患者通过穿刺活检确诊为三阴性乳腺癌。病理完全缓解定义为 ypT0/is 和 ypN0。使用 3Dslicer 后处理软件在动态增强第一期绘制肿瘤全容积 ROI。放射组学标记用于预测 NAC 后的病理学完全缓解以及无病生存期。使用单变量和多变量 Cox 比例风险模型和 Kaplan-Meier 分析确定放射组学特征、MRI 结果和临床病理学变量与 DFS 的相关性。利用开源 pyradiomics 软件总共提取 1177 个组学特征，为了表征 DCE 图像随时间序列的纹理变化，我们测量了 10 个新的连续特征。最后采用 23 个机器学习的模型进行计算，并且所有的机器学习模型使用 5 倍交叉验证。
结果： 47 (41.6%) 例患者最终获得病理学完全缓解 (pCR)，66(58.4%) 例患者没有获得病理学完全缓解(npCR)。中位随访时间为 36 个月。113 例中有 28 例 (24.7%) 发生复发和转移。预测 pCR 的模型显示灵敏度和特异性分别为 77.0 %和 88.0%；准确率为 84.1%（ROC 曲线下面积：0.87）。预测 DFS 的模型显示灵敏度和特异性分别为 71.0% 和 94.0%；准确率为 88.5%（ROC 曲线下面积：0.87）。
结论： 基于 DCE-MR 图像的放射组学标记有望成为三阴性乳腺癌患者新辅助治疗后 pCR 和 DFS 的独立早期预测标记物

PU-3239

肉芽肿性乳腺炎一例

李颖勤,田素伟,覃愉娟,占颖莺,陈炳辉,钟海红,谢青
中山大学附属第五医院

临床资料：女，30 岁，发现右乳肿物 2 月，伴疼痛、皮温增高，无破溃、流脓、流血等。查体：右乳中央区可触及一大小约 2.5mm*3mm 肿物，质偏硬，不可移动。

乳腺 X 线钼靶摄影：右乳中央区见类圆形肿块影，大小约 32mm×32mm，边缘可见环形透亮带，外上缘见小钙化灶；其外上方可见成串排列的边界不清的结节影，边缘模糊。诊断：右乳中央区肿块，感染性病变？

MRI 表现：右乳中央区下份及外下象限多个结节及团片状异常信号灶，中央区者较大，约 31mm×27mm，呈 T1W 低信号、T2W 明显高信号，增强扫描呈环形强化，壁厚薄欠均，内壁欠光整，见壁结节，DWI 示病灶大部分呈高信号，中间无强化区明显弥散受限，ADC 值减低，壁及壁结节部分弥漫轻度受限；病灶周围大片状 T2W 信号增高区，边界不清。动态增强曲线右乳部分结节呈平台型、部分呈轻度流出型。诊断：右乳多发结节，考虑 BI-RADS 4，感染并脓肿形成，不除外肿瘤合并感染可能。

病理：送检“右乳肿物”穿刺组织，镜下示乳腺组织，见大量的中性粒细胞、浆细胞等炎性细胞浸润、聚集，小脓肿形成，并见组织细胞聚集，肉芽肿形成。

讨论：肉芽肿性乳腺炎好发于已婚、经产妇女，病变常位于单侧，以外上象限多见。肿块不痛或微痛，表面皮肤红肿较轻，质硬，边界不清，常与皮肤或周围组织粘连，并伴通常腋窝淋巴结肿大，少伴发热。乳腺 X 线摄影表现为等、稍高于腺体密度的不规则形肿块，边界不清，部分表现为毛刺浸润或索条状；可有卵圆形或同心圆状小钙化；局部皮肤增厚，可伴腋窝淋巴结肿大。MRI 呈 T1WI 低、T2WI 较高信号，脓肿形成 T2WI 信号明显增高。动态增强以周边环形强化为主，TIC 曲线以上升平台型为主。伴脓肿形成时，病变中心 DWI 呈高信号，脓液可弥散受限，但增强后不强化。

PU-3240
DCE-MRI 定量参数 Ktrans、Kep 及 Ve 与乳腺癌分子分型间的关系

聂婷婷
湖北省肿瘤医院

目的 利用动态增强 MRI，探讨定量参数 K_{trans}（容量转移常数）、K_{ep}（速率常数）和 Ve（细胞外血管外间隙）与乳腺癌分子分型间的关系。
方法 收集 2015 年 1 月～2018 年 1 月我院首诊乳腺癌 136 例作为研究对象，术前利用西门子 3.0T 乳腺 DCE-MRI 进行定量参数 K_{trans}、K_{ep}和 Ve 水平测定。术后病理利用免疫组织化学法作 ER、PR 、HER-2 水平检测并对患者进行分子分型。采用 SPSS18.0 统计学软件处理，计数资料行卡方检验，计量资料行 t 检验，P<0.05 为差异有统计学意义。
结果 136 例乳腺癌患者中，Luminal A 型 46 例 、Luminal B 型 40 例、HER2 阳性型 24 例和 TNBC 型 26 例。统计结果显示 Luminal A 型 K_{ep}水平，高于 Luminal B 型、HER-2 阳性型及 TNBC 型(P<0.05)；Luminal B 型 K_{ep}水平，高于 HER-2 阳性型及 TNBC 型(P<0.05)；ER 阳性者 K_{ep}低于 ER 阴性者(P<0.05)；PR 阳性者 K_{trans}、K_{ep}低于 PR 阴性者 (P<0.05)。ER 阳性者 K_{trans}、Ve 与阴性者比较差异无统计学意义(P>0.05)；PR 阳性者与阴性者 Ve 比较差异无统计学意义(P >0.05)。
结论 利用动态增强 MRI 定量参数对鉴别乳腺癌分子分型有重要价值，不同分子分型乳腺癌 ER、PR 表达水平不同。

PU-3241
乳腺浸润性导管癌 DCE-MR 特征与不同分子分型间的相关性研究

聂婷婷
湖北省肿瘤医院

目的：探讨不同分子分型乳腺浸润性导管癌的 MRI 特征及其相关性。
材料与方法 ：回顾性分析 146 例初诊乳腺浸润性导管癌患者的术前 DCE-MRI 图像，根据美国放射学会乳腺影像报告与数据系统 (ACRBI-RADS)对增强后第二期强化图像进行观察及分类诊断，包括病灶大小、强化方式、肿块样病灶强化后形态、边缘、内部强化特征、时间-信号强度曲线 (TIC) 类型、伴随征象。所有患者均通过手术或核芯穿刺取得组织病理及免疫组织化学(IH C)结果，同时记录免疫组化指标 ER、PR、HER-2 表达情况，按照乳腺癌分子分型分类，分成 Luminal A 型、Luminal B 型、HER-2 阳性型和三阴性乳腺癌(TNBC)。利用卡方检验比较各分子分型间 MRI 表现的差异，采用交叉列联表方法分析二者的相关性，并根据列联系数(C 值)进行判断：C <0.4 为低度相关，0.4≤C <0.7 为中度相关，C ≥0.7 为高度相关，P<0.05 为差异有统计学意义。
结果：146 例患者中 Luminal A 型 33 例 (22.0%) Luminal B 型 78 例(53.4%)，HER-2 阳性型 13 例(8.9%)，TNBC 22 例(15.0%)；肿块样强化病变 121 例（82.8%），非肿块样病变 25 例（17.2%）。肿块样强化病变中，病灶大小、内部强化特征与分子分型呈中度相关 (C =0.481/C=0.472，P= 0.001)；TIC 类型、病变的边缘与分子分型呈低度相关 (C=0. 327/C=0.352，P=0.008)，而病灶的形态及伴随征象与分子分型无相关性(C=0.083，P= 0.528)。
结论：不同分子分型乳腺浸润性导管癌的 MRI 表现各异，乳腺癌分子分型与部分 MRI 征象之间存在一定的相关性，术前 MRI 特征分析对预测乳腺癌生长方式、分子分型有重要价值，为术前初步判定预后及初步确定治疗方案提供了功能学参考指标。

基于 DCE-MRI 组学的机器学习模型预测 HER2 阳性浸润性乳腺癌新辅助治疗疗效的价值

李芹,肖勤,顾雅佳
复旦大学附属肿瘤医院

目的： 探讨基于动态增强磁共振成像(DCE-MRI)组学的机器学习模型是否有助于预测人类上皮生长因子受体 2(HER2)阳性浸润性乳腺癌患者新辅助治疗(NAT)疗效。
材料与方法： 对我院经病理证实的 127 例 HER2 阳性浸润性乳腺癌进行回顾性分析。所有患者 NAT 前均行 DCE-MRI 成像，4-6 疗程 PCH(紫杉醇 + 卡铂 +赫赛汀)方案治疗后行乳腺癌根治手术。以术后病理为金标准将患者分为病理完全缓解(Pathological Complete Response, pCR)组与非病理完全缓解(non-Pathological Complete Response, non-pCR)组。将传统统计和机器学习相结合用于特征降维。根据选定的最优特征，建立预测 pCR 与 non-pCR 的分类模型。通过准确率、敏感性、特异性和曲线下面积(AUC)评价机器学习分类的性能。
结果： 127 例患者中 54 例(42.52%)达到 pCR。据基线 DCE-MRI 增强后第一期图像、DCE-MRI 四期图像分别提取 107、1316 个组学特征。基于增强后第一期图像建立的分类模型中 logisitic regression 具有最大曲线下面积（Area Under Curve, AUC），其预测 pCR 的准确率、敏感性、特异性、AUC 值分别为 68.5%、0.52、0.81、0.69。基于 DCE-MRI 时间序列特征的分类模型中线性支持向量机(SVM)的 AUC 最大，其预测 pCR 的准确率、敏感性、特异性、AUC 值分别为 79.5%、0.74、0.84、0.84。
结论： 基于 DCE-MRI 时间序列组学特征的机器学习模型在预测 HER2 阳性浸润性乳腺癌 NAT 后疗效方面具有潜在的价值。

X 线摄影联合 DCE-MRI 对非肿块乳腺可疑钙化的诊断价值分析

赵建秀

中国人民解放军第三零七医院

中文摘要：目的　通过分析非肿块乳腺可疑钙化形态及分布特点，探讨 X 线摄影联合 DCE-MRI 对乳腺癌的诊断灵敏度。方法　回顾性分析 50 例经手术或穿刺病理证实的非肿块乳腺可疑钙化，分别通过对病变在 X 线摄影及 DCE-MRI 的影像特征进行分析，以病理为参照，进一步判断二者对良恶性病变的敏感度。 结果　50 例均行 X 线检查，细小多形性钙化 18 例，无定形钙化 16 例，细线样或细分枝状钙化 13 例，粗糙不均质钙化 3 例，段样分布 21 例，区域性分布 22 例，团簇状分布 7 例，诊断准确率 92%；41 例行 MRI 检查，成簇环状强化 26 例，集簇状强化 7 例，不均匀强化 4 例，弥漫点状强化 2 例，无异常强化 2 例，以段样分布（21 例）和区域分布（7 例）为主，诊断准确率 100%， BI-RADS 分类 5 类的 30 例（81%），X 线 BI-RADS 分类 4C 及 5 类的 20 例（43%），DCE-MRI 对恶性病变的灵敏度高于 X 线摄影，并且具有更高的诊断准确率。结论 对于非肿块乳腺可疑钙化病变，X 线摄影联合 DCE-MRI 可以提高诊断准确率，避免过度治疗，同时提高对恶性病变的灵敏度，为临床提供进一步的参考。

乳腺浸润性筛状癌 MRI 影像学表现

双萍
解放军总医院第五医学中心南院区

摘要：目的：通过观察分析乳腺浸润性筛状癌的磁共振图像，总结其特征性影像学表现，提高对该疾病的认知及诊断水平。**方法**：收集于我院做乳腺磁共振检查并手术病理证实的 9 例乳腺浸润性筛状癌病例，回顾性分析其 MRI 特征性影像学表现。**结果**：9 例病例中单纯性 5 例，混合型 4 例；7 例表现为不规则肿块，可见毛刺，2 例表现为卵圆形肿块，边界清楚；9 例均为 T1WI 低信号，T2WI 呈稍高信号，部分中心见类圆形及不规则长或短 T2 信号，DWI 呈结节及环形高信号，病灶实性成分信号均匀一致，强化程度均匀一致，7 例病灶中心见小圆形或不规则形无强化及低强化区，病灶整体呈现为厚环状强化，笔者称其为“甜甜圈征”，考虑此为其特征性表现，2 例病灶过小尚未表现出特征性改变，TIC 曲线多为Ⅱ、Ⅲ型，ADC 值平均值约 0.83 单位。**结论**：乳腺浸润性筛状癌在 MRI 影像表现上有一定的特征性，影像学早期明显诊断对临床优化治疗方案有重要的辅助作用。

乳腺癌患者月经周期不同时期的 DWI 表现特征

谢瑜,丁莹莹,李卓琳,吴建萍
云南省肿瘤医院

目的：研究乳腺癌患者月经周期不同时期的 DWI 表现的差异，探讨其 ADC 值与月经周期之间的关系，以指导临床有针对的选择乳腺癌患者 MR DWI 的检查时间。方法：回顾性纳入 2016 年 1 月至 2018 年 12 月于我院放射科行 MR DWI 检查的乳腺癌患者 495 例，将所有患者按行 MR DWI 检查时所处的月经周期时期分为月经期、增殖期及分泌期，测量患侧病灶最大层面的最小 ADC 值及健侧相同层面乳腺实质的平均 ADC 值。采用方差分析比较乳腺癌患者 ADC 值与月经周期不同时期之间的差异。结果：乳腺癌患者月经期病灶的最小 ADC 值和乳腺实质的平均 ADC 值分别为：$(0.92\pm0.15)\times10^{-3}mm^2/s$、$(2.01\pm0.20)\times10^{-3}mm^2/s$；增殖期分别为：$(0.85\pm0.13)\times10^{-3}mm^2/s$、$(1.97\pm0.18)\times10^{-3}mm^2/s$；分泌期分别为：$(0.88\pm0.11)\times10^{-3}mm^2/s$、$(1.98\pm0.15)\times10^{-3}mm^2/s$。乳腺癌患者病灶的最小 ADC 值在不同的月经周期当中有统计学差异($P<0.05$)，而健侧乳腺实质的

平均 ADC 值无统计学差异(P＞0.05)。结论：对乳腺癌患者行 MR DWI 检查时应考虑到月经周期因素对乳腺癌患者 ADC 值的影响，避免对疾病准确诊断的干扰。

PU-3247
MRI 影像组学肿瘤最大强化体积预测乳腺癌新辅助治疗早期无复发生存

张睿馨,许茂盛,周长玉
浙江中医药大学附属第一医院

背景：本研究的假设是基于 MRI 的影像组学可以在乳腺癌新辅助化疗早期就预测无复发生存率。
材料 一个基于动态对比增强 MR 图像的可行性的子集被用来分析所有进行治疗前基线检查的患者的图像(141 位女性患者：40 位有复发，101 位无复发）和在结束第一轮化疗之后，即，处于早期治疗阶段的患者的图像(143 位女性患者：37 位有复发,105 位无复发)．我们的方法为完全自动化，不存在人为定位肿瘤大致中心的情况。增强最明显的肿瘤容积(METV) 已被自动化计算，用于治疗前和早期治疗实验.METV 在本课题（即预测复发情况）中的表现则通过 ROC 分析来评估.无复发生存率和 METV 之间的关系则通过控制了患者年龄，种族，以及激素受体水平的 Cox 回归模型来评价，并通过 C-statistics 来评估．Kaplan-Meier 分析则被用来预估残存函数.
结果：在 C-statistics 上， METV 和无复发生存率的关联值是 0.69（治疗前）， 95%置信区间[0.58；0.80] 和 0.72 [0.60；0.84]（早期治疗）．由 Kaplan-Meier 曲线计算得来的早期治疗的 METV 的危机比值分别为：下四分位数 2.28 [1.08；4.61],中四分位数 3.43 [1.83；6.75],上四分位数切割点 4.81 [2.16;10.72]
结论：自动化 METV 计算的表现可以媲美为 ACRIN 6657 研究(C-statistic 0.72 [0.60；0.84])准备的半人工模型,它包含了相同的数据集但是获得了对功能性肿瘤容积 (FTV)的半人工勾画以及术前残余癌症负担相关知识。

PU-3248
乳腺磁共振弥散加权成像联合动态增强扫描预测肿瘤恶性度、组织学分级与复发

张睿馨,许茂盛,卜阳阳
浙江中医药大学附属第一医院

目的：探讨弥散加权成像（DWI）中表观扩散系数（ADC）联合动态增强磁共振成像（DCE-MRI）在乳腺癌病理分型及复发中的价值。
材料与方法：本研究为 IRB 批准的回顾性分析，选取 2016 年 10 月至 2019 年 3 月期间，956 名接受乳腺 MRI 检查的患者，其中在 111 名患者中检测到 156 个 BIRADS 分级在 4、5 或 6 级的病变。采用 DCE-MRI 分别进行 B0、B100、B600、B1000 的 DWI 成像。两位接受过相关培训的放射科医生记录 ADC 图像与数值。平均 ADC 值和信号强度（SI）与肿瘤分期、组织学分级、激素受体（ER、PR 和 HER-2）和 Oncotype DX 评分（如有）相关，P ≤0.05 结果具有统计学意义。

结果：156 例病变中，良性病变 59 例(38%)，导管原位癌 24 例(15%)，浸润性导管癌（IDC）47 例(30%)，浸润性小叶癌（ILC）15 例(10%)，粘液性癌（MC）2 例(2%)，混合性导管癌 5 例(5%)，其他 4 例(4%)，包括管状和罕见的恶性肿瘤。恶性肿瘤的平均 ADC 值明显低于良性病变（1085×343×10-6 vs 1481×276×10-6 mm 2/s），具有很高的预测性（曲线下面积=0.82）。此外，具有 PR 阴性和 Oncotype 评分 18（复发率为中到高风险）的肿瘤 ADC 值显著降低。B100 和 B600 的 SI 有助于区分良性病变与 IDC。ADC 值与肿瘤分级或 ER/Her2 状态无显著相关性。
结论：ADC 值是鉴别肿瘤良恶性、Oncotype 评分较高的肿瘤和 PR 阴性的重要因素。因此，它可以作为辅助临床医生制定治疗方案一个重要的工具。

PU-3249
以不规则肿块表现的导管内乳头状瘤的 MR 诊断分析与病理对照研究

孙诗昀,刘一帆,薛珂,丁莹莹,吴建萍,李卓琳
云南省肿瘤医院/昆明医学院第三附属医院

目的：探讨不规则肿块型导管内乳头状瘤（IDP）的 MRI 影像表现和特征，提高 MRI 的诊断率。**方法：**本研究回顾性纳入了 48 例经手术病理证实为 IDP 的患者，分析了包括病灶大小、边界、性质、平扫信号强度、强化方式、ADC 值及 TIC 曲线在内的 MRI 表现。**结果：**病变最大径范围约 0.6cm~5.0cm，平均(1.35±0.81)cm；病灶边界清楚者 22 例、模糊 26 例；病灶性质为囊性者 1 例、实性 27 例、囊实混合 6 例、实性，边缘伴斑点状囊变区 14 例；T2WI 呈等信号者 18 例、稍高或高信号 30 例；ADC 值范围约(0.68~2.1)×$10^{-3}$$mm^2$/s，平均(1.03±0.23)×$10^{-3}$$mm^2$/s；伴导管扩张者 15 例；增强扫描均匀强化 8 例、不均匀强化 13 例、环形强化 26 例、向心性强化 1 例；TIC 曲线达峰时间范围约 1min20s~5min，平均 2min±30s；术前 MR 诊断准确率为 29.2%，误诊为乳腺癌的概率为 56.3%，误诊为纤维腺瘤的概率为 14.6%。**结论：**不规则肿块型 IDP 术前易误诊为乳腺癌，但具备实性病灶边缘伴斑点状囊变区、邻近导管扩张、早期环形强化、曲线达峰时间早的 MR 征象者，提示其为 IDP 的可能性较大。

PU-3250
基于机器学习方法的多参数磁共振对早期预测乳腺癌患者新辅助化疗疗效价值研究

张睿馨,许茂盛
浙江中医药大学附属第一医院

目的 本研究的目的是评价基于机器学习方法的多参数磁共振成像（mpMRI）早期预测新辅助化疗（NAC）后乳腺癌病理完全缓解（pCR）患者的生存率。
材料与方法 本研究是经伦理审查委员会批准所进行的前瞻性研究。入组患者选取 80 名计划接受 NAC 乳腺癌女性患者（年龄中位数 45.5 岁；年龄范围 25-70 岁）。2 次 NAC 循环前后分别进行 3T mpMRI 包括动态对比增强（DCE）、扩散加权成像（DWI）和 T2 加权成像。针对每个病变提取 23 个图像特征：根据 BI-RADS 分级定性分析 T2 加权及 DCE-MRI 图像，同时定量分析 DCE 药代动力学特征和 DWI 表观扩散系数（ADC）值。将机器学习应用到 mpMRI，采用线性支持向量机、线性判别分析、logistic 回归、决策树、自适应增强和极端梯度增强（xgboost）等 8 个分类器对特征进行排

序。根据 RCB 类、RFS 和 DSS 所定义的 pCR 所提取的定性和定量特征，采用递归特征消除法，对接收操作特性曲线(AUC)下面积的分类精度进行评估。

结果 用 mpMRI 进行机器学习取得了稳定的性能，如基于 xgboost 的 RCB 类（AUC，0.86）和 DSS 类（AUC，0.92）预测的平均分类精度及基于 logistic 回归的 RFS（AUC，0.83）预测的平均分类精度。与其他分类器相比，XGBoost 分类器性能最稳定，精度较高。预测 RFS 最相关特征如下：体积分布、平均血浆流量和平均通过时间；DCE-MRI 病变大小；DWI 的最小、最大和平均 ADC 值。预测 DSS 最相关的特征如下：DCE-MRI 上病变大小，体积分布和平均血浆流量，以及 DWI 下的最大 ADC 值。

结论 基于机器学习方法的 mpMRI，可以早期精准的预测新辅助化疗（NAC）后乳腺癌病理完全缓解（pCR）患者的生存率，以辅助临床医师适时调整治疗方案和评估预后。

PU-3251

乳腺癌复发风险的磁共振图像影像组学特征

张睿馨,许茂盛
浙江中医药大学附属第一医院

目的：通过研究由计算机提取而来的乳腺核磁图像表型与 MammaPrint, OncotypeDX,PAM50 的多基因试验的关系来评价影像组学在评估乳腺癌复发风险中的作用。

材料与方法：分析基于经机构审查委员会批准的 84 组去识别且多机构的回顾性数据集。这些数据集来自美国国家癌症研究所癌症影像档案库的乳腺核磁试验,和来自肿瘤基因图谱计划的临床, 组织病理学, 基因组数据。这些已经活检证实为侵袭性乳腺癌的数据集包括 74 例 (88%)导管癌, 8 例 (10%) 小叶癌,2 例 (2%) 混合型.这其中, 73 (87%)为雌激素受体阳性, 67 (80%) 为孕激素受体阳性, 19 (23%)为人类表皮因子受体 2 阳性.在每个案例中, 经计算机处理的 MR 图像的影像组学都可以得到经计算机提取的如大小, 形状, 边缘形态,增强纹理, 动态评估的肿瘤表型。回归以及受试者操作特征分析则被用来评价与多基因检测分类相关的核磁影像组学特征的预测水平。

结果：多重线性回归分析表明影像组学特征和多基因检测复发评分（multigene assay recurrence scores）之间存在巨大联系 (R2 =0.25-0.32, r = 0.5-0.56, P < .0001). 重要的影像组学特征包括肿瘤大小和强化纹理（enhancement texture）, 表明了肿瘤的异质性. 通过在区分乳腺癌预后的课题中使用影像组学的方法，我们得到了受试者操作特征曲线下的面积值分别为：MammaPrint：0.88 (标注误差, 0.05)Oncotype DX：0.76 (标注误差, 0.06) , PAM50 基于亚型的复发风险：0.68 (标注误差, 0.08), 以及 PAM50 基于亚型与增殖的复发风险：0.55 (标注误差, 0.09),后者还可以显示除了数据上的区别。

Diagnostic Performance of Whole-lesion Apparent Diffusion Coefficient Histogram Analysis Metrics for Differentiating Benign and Malignant Breast Lesions: A Systematic Review and Diagnostic Meta-analysis

Fan Xu,Zhiping Liang,Song Chen,Xuwen Zeng
Guangzhou Red Cross Hospital

Purpose: To evaluate the performance of whole-lesion ADC histogram analysis metrics for differentiating benign and malignant breast lesions.
Material and Methods: A systematic PubMed/Embase/Cochrane electronic database search was performed for original diagnostic studies from January 1, 1970 to January 2, 2019. Summary estimates of diagnostic accuracy were generated and meta-regression was performed to explore sources of heterogeneity according to study and magnetic resonance imaging characteristics.
Results: Five original articles involving 493 patients were included in the meta-analysis. The pooled sensitivity and specificity of whole-lesion ADC histogram analysis were 0.85 (95% CI: 0.81－0.89) and 0.79 (95% CI: 0.72－0.84) respectively for distinguishing benign and malignant breast lesions. The area under the curve (AUC) was 0.9178. No publication bias was detected (p=0.51). In subgroup analysis, the summary sensitivity and specificity of 50th percentile ADC value were 0.81 (95% CI, 0.71－0.88) and 0.86 (95% CI, 0.74－0.94) respectively. Meta-regression analysis indicated no covariates were sources of heterogeneity (p＞0.05).
Conclusion: Whole-lesion ADC histogram analysis demonstrated good diagnostic performance for differentiating between benign and malignant breast lesions, with 50th percentile ADC value showing higher diagnostic accuracy than other histogram parameters. Given the limited number of studies included in the analysis, the findings from our meta-analysis will need further confirmation in future research.

PU-3253

基于常规 MRI 图像的纹理分析鉴别乳腺的良恶性肿物

彭铮堃
深圳大学总医院

目的 探讨常规 MRI 序列纹理分析对鉴别乳腺良恶性肿物的可行性。方法 回顾性分析经病理证实为乳腺良性肿物 12 例（纤维腺瘤、乳腺腺病伴良性叶状肿瘤、纤维腺瘤伴粘液变性）和乳腺恶性肿物 6 例（浸润性导管癌、血管肉瘤）患者的术前 MRI 资料。采用 MaZda 软件手动勾画感兴趣区，提取出 T1WI、T2WI-IDEAL 图像中病灶的纹理特征参数，然后通过 Fisher 系数法、分类错误概率联合平均相关系数（POE+ACC）、交互信息（MI）以及三种方法联合（F+PA+MI）分别对其进行筛选，得到最佳纹理参数集合，并使用软件自带的特征分类法包括原始数据分析（RDA）、主要成分分析（PCA）、线性判别分析（LDA）和非线性判别分析（NDA）对两类疾病进行判别；同时由 2 名影像诊断医生通过视觉对 T1WI、T2WI-IDEAL 图像中病灶进行判别，结果以误判率表示。比较两种不同扫描序列的纹理分析参数及医师之间对两类病变的判别能力。结果 纹理分析参数选择方法中，Fisher 系数、POE+ACC、MI 对乳腺良恶性肿物的误判率相近，NDA 的误判率明显低于其他分类方法，其中 T2WI-IDEAL 图像的 NDA（最低误判率 0.00%）的判别能力最强；T2WI-IDEAL 图像的纹理分析参数的误判率（0.00%-5.50%）总体低于 T1WI 图像（8.33%-11.29%），但二者均高于医师的判别（16.67%）。结论 基于常规 MRI 的 T1WI、T2WI-IDEAL 序列的纹理分析有助于鉴别乳腺肿物的良恶性。纹理分析分类方法中，NDA 具有最优的诊断效能，这可能与医学图像本身纹理的复杂性有关。T2WI-IDEAL 序列显示出更高的鉴别能力，可能是由于 T2WI-IDEAL 图像对显示病灶组织有较好的对比度。综上，常规 MRI 图像的纹理分析可用于乳腺良恶性肿物的鉴别诊断。

PU-3254

超声及 MRI 对乳腺癌的诊断与鉴别诊断

董非
运城市中心医院（原：运城地区人民医院）

乳腺癌的早期诊断、及时治疗至关重要，可以避免其进一步进展，而临床上诊断、鉴别乳腺肿瘤的影像学检查方法，主要包括超声、钼靶、磁共振成像（MRI）等检查方法。 本研究对本院 60 例乳腺肿瘤患者进行超声检查及 MRI 检查，详细两种检查方法对乳腺癌的诊断结果。
资料与方法
一般资料：选取本院 2017 年 1 月至 2019 年 4 月收治且术后病理确诊的 60 例乳腺癌患者进行回顾性研究， 病史均为发现乳腺肿块、乳房异常溢液而来我院就诊，均为女性患者，乳腺癌为初步诊断，年龄 35~67 岁，平均为（48±15）岁。 检查前详细询问病史、过敏史，告知患者检查方法、步骤及注意事项，完善检查前的各项准备并知情同意。
方法：60 例乳腺肿瘤患者依次进行了双侧乳腺的超声扫描及西门子 3．0 T 高分辨 MRI 扫描。对两组受检者进行检查诊断时采用高频多普勒超声诊断仪，探头频率可调节。MRI 扫描采用西门子 3．0 T 超导磁共振扫描仪，患者体位为俯卧位，双乳自然垂于线圈中心，训练患者自由平静呼吸。
手术病理诊断结果作为诊断的金标准，分析、对比超声和 MRI 检查方法对乳腺癌诊断的灵敏度、特异度、准确性。
结果：超声检查对乳腺肿瘤性质诊断的灵敏度、特异度、准确性依次为 82%（28/34）、77%（20/26）、80%（48/60）， 均低于 MRI 检查诊断结果的 97%（31/34）、96%（25/26）、99%（58/60）。
结论：MRI、超声检查的诊断结果与术后病理诊断结果之间的一致性比较：一致性系数依次为 0．748、0．563，超声低于 MRI；MRI 检查的诊断结果与术后病理诊断结果之间的一致性良好，而超声检查诊断结果与术后病理诊断结果仅有中等水平的一致性。

PU-3255
不同指数模型 DWI 鉴别 BI-RADS 4 类乳腺病变良恶性的价值

王志远
南昌大学第二附属医院

目的 探讨单指数模型参数、双指数模型参数及拉伸指数模型参数在鉴别乳腺影像报告和数据系统（BI-RADS）4 类病变良恶性的价值。**方法** 回顾性分析 MRI 诊断为 BI-RADS 4 类病变，并取得病理结果的 86 例乳腺病变患者（良性组 40 例，44 个病灶，恶性组 46 例，51 个病灶）。所有患者均行 MRI 常规检查及多 b 值 DWI 检查，获得单指数模型、双指数模型及拉伸指数模型各参数。比较各参数在 BI-RADS 4 类病变良恶性中的统计学差异，绘制受试者工作特征（ROC）曲线，评价各参数对 BI-RADS 4 类病变良恶性的诊断效能。**结果** 良性组、恶性组间表观扩散系数(ADC)、慢速表观扩散系数(slow ADC)、灌注分数(f)、扩散分布指数(DDC)及扩散异质性指数(α)值均存在统计学差异（$p<0.05$）。ADC、slow ADC、f、DDC 和 α 的 AUC 分别为 0.911、0.845、0.814、0.938、0.619。 ADC、slow ADC、f、DDC 和 α 的最佳诊断阈值分别为 $1.20\times10^{-3}mm^2/s$、$0.88\times10^{-3}mm^2/s$、0.277、$1.18\times10^{-3}mm^2/s$ 和 0.816，其鉴别良恶性病变的敏感度分别为 81.8%、72.7%、79.5%、84.1%、77.3%，特异度分别为 96.1%、92.2%、78.4%、98.0%、56.9%。**结论** 单指数模型参数 ADC，双指数模型参数 slow ADC、f 值，以及拉伸指数模型参数 DDC、α 对于 BI-RADS 4 类乳腺病变良恶性的鉴别都具有较高的价值，其中拉伸指数模型 DDC 的诊断效能最大。

PU-3256
影像组学预测乳腺癌分子分型及相关生物学标志物的研究进展

张琦
哈尔滨医科大学附属第一医院

目的：目前，乳腺癌分子分型及相关生物学标志物的检测主要是依靠有创手段取得病理组织并进行免疫组化获得。影像组学能从影像图像中高通量地提取并分析大量高级且定量的影像学特征，本文旨在研究影像组学作为无创手段辅助诊断乳腺癌分子分型及其他相关标志物的研究进展，探讨影像组学代替常规免疫组化诊断的可能性。
方法：检索使用放射组学方法对乳腺癌分子分型及相关生物学标志物进行研究的相关文献，评估放射组学在乳腺癌分子分型及相关生物学标志物预测中的作用。
结果：在 MRI 上，T2WI、DCE-MRI、DWI 的 ADC 图影像组学对不同亚型乳腺癌均有较好的预测作用，T2WI 和 DCE-MRI 影像组学对 HER-2、Ki-67 有较好的预测能力，MRI 提取的背景实质增强（BPE）特征也能在部分亚型乳腺癌中发挥预测作用；在乳腺 X 线摄片上，影像组学对鉴别三阴性乳腺癌与非三阴性乳腺癌有较好的准确性。
结论：影像组学对明确诊断乳腺癌分子分型及 Ki-67、HER-2 有较高的特异性和敏感性，是乳腺癌精准影像医学的重要组成部分，对临床诊断和治疗乳腺癌有较好的辅助作用。

ADC 值对乳腺癌 ki-67 指数表达价值的研究

顾磊[1],夏进东[1],饶圣祥[2],陈财忠[2]
1.上海市松江区中心医院
2.复旦大学附属中山医院放射科，上海市影像医学研究所

摘要：目的 初步探讨乳腺癌 ADC 值与 ki-67 指数表达的关系。
方法 回顾性分析 120 例手术证实的乳腺癌术前 DWI 图像（b=0，800，1000 s/mm^2），并测量其 ADC 值，计算 ADC 值与 ki-67 指数的相关性。根据 ki-67 指数的不同分为 A 组(低 ki-67 组，n=60)和 B 组（高 ki-67 组,n=60），比较两组之间的 ADC 值并采用 ROC 曲线分析 ADC 值鉴别的能力。
结果 乳腺癌测量的 ADC 值与 ki-67 指数呈明显负相关性（$r_{b\,值\,800}$=-0.587，$r_{b\,值\,1000}$=-0.63，P<0.05）。相同 b 值下，B 组的平均 ADC 值明显低于 A 组(P<0.05)。b 值为 1000s/mm^{2}时的平均 ADC 值低于同组 b 值 800s/mm^{2}的平均 ADC 值。当 b 值为 800 和 1000s/mm^{2}时，分别以 ADC 值 1954、1521（×10^{-6}mm^2/s）为临界值，鉴别诊断 A、B 组乳腺癌的 ROC 曲线下面积分别为：0.914、0.944，敏感度分别为：73.3%、83%，特异度分别为：95%、91.7%。
结论 ADC 值对乳腺癌 ki-67 指数的表达有重要的预测价值。

乳腺梭形细胞癌一例

冯琳琳,张静
西北妇女儿童医院

目的 报道一例乳腺梭形细胞癌的 MRI 表现。方法 使用 GE 1.5T 核磁共振行乳腺 MRI 平扫、扩散加权成像（DWI）及多期动态增强检查，扫描方案：Ax：T2WI-STIR，T1WI，DWI，FSPGR 序列

（VIBRANT）；Sag：fs-T2WI。扫描参数：FOV 32cm；层厚 5mm；T1WI：TE 8ms，TR 480ms；T2WI-STIR：TE 48ms，TR 8200ms； fs-T2WI：TE 83ms，TR 3820ms；DWI（b=1000）：TE 75ms，TR 8800ms；动态对比增强扫描：TR 4.6ms，TE 2.2ms，层厚：2.0mm，无间隔扫描，共扫描 8 个时相（第 1 个时相为蒙片，对比剂注射后 10s 开始扫描第 2-8 时相，每个时相扫描时间 68s）。结果 MRI 表现：右乳外上象限类圆形长 T1 中等 T2 信号影，病变边缘呈环形长 T2 信号影，DWI 上内可见不规则片絮状弥散受限高信号，ADC 值范围约为（1.4-1.5）$\times 10^{-3}mm^2/s$。动态增强扫描后，病变呈环形明显强化，大部分壁尚光整，局部呈开环形未强化；于第 3 期达强化最高峰，动态增强时间信号强度曲线呈平台型。病理：（右乳）梭形细胞化生性腺癌 结论 乳腺梭形细胞癌(Spindle cell carcinoma，SpCC)属于较为罕见的病理类型。2012 年 WHO 乳腺肿瘤分类将梭形细胞癌归为乳腺化生性癌的一个亚型。SpCC 发病率极低，占所有乳腺癌的 0.024%～0.5%。其主要临床表现为无痛性单发乳腺肿块，具有快速增生的特性，内部组织坏死可引起囊性变。影像学多表现为实质性占位病变，无特异性。多数病例表现为良性肿瘤的特征。本例系患者无意发现乳腺肿块，在乳腺 MRI 上呈环形长 T2 信号影，动态增强扫描呈环形强化，动态增强时间信号强度曲线呈平台型，具有一定特征性。因此，了解本病的 MRI 表现，有助于乳腺少见病变的良恶性鉴别，对临床的诊治具有重要意义。

PU-3259
磁共振多参数联合对局部进展期乳腺癌新辅助化疗后病理反应的预测价值

王彦龙,朱丽娜,刘艳
新疆医科大学附属肿瘤医院

目的 分析磁共振参多参数联合对局部进展期乳腺癌新辅助化疗（NAC）后病理反应的诊断效能。**方法** 回顾性分析经穿刺病理确诊的局部进展期乳腺癌患者 50 例，于 NAC 前、4-6 周期后行 DCE-MRI 及 DWI 检查，按 Miller&Payne 改良病理分级分为组织学显著反应（MHR）组（19 例）、组织学非显著反应（NMHR）组（32 例）。采用 t 检验分析 NAC 前肿瘤最大径、ADC 值、早期强化率、最大强化率及 NAC 后上述参数变化率在两组间的差异。对 NAC 后 MHR 与 NMHR 组有差异的变量，绘制 ROC 曲线，探讨各参数对病理反应的诊断效能。利用二元 Logistic 回归选择与病理反应相关的变量，并拟合出新的联合参数，探讨联合参数对病理反应的诊断效能。**结果** NAC 前，肿瘤最大径、ADC 值、早期强化率、最大强化率在 MHR 组与 NMHR 组间差异均无统计学意义（P>0.05）；NAC 后，肿瘤最大径变化率、ADC 值变化率、早期强化率变化率、最大强化率变化率在两组间差异有统计学意义（P<0.05）。肿瘤最大径变化率、ADC 值变化率、早期强化率变化率、最大强化率变化率对病理反应的 ROC 曲线下面积（AUC）分别为 0.776、0.873、0.733、0.820，联合参数的 AUC 为 0.944，优于单个参数的诊断效能。**结论**：MRI 形态学与功能学参数联合对局部进展期乳腺癌 NAC 后病理反应的诊断效能优于单个参数。

PU-3260
利用 MRI 动态增强纹理特征预测不同分子亚型乳腺癌

薛珂,李卓琳,丁莹莹
云南省肿瘤医院/昆明医学院第三附属医院

目的：利用磁共振纹理分析来区分不同分子亚型乳腺癌。 材料及方法：回顾性分析 353 例经病理证实为乳腺浸润性导管癌患者的临床资料及 MRI 图像，根据免疫组化或荧光原位杂交结果分为 Luminal A 型、Luminal B 型、人类表皮生长因子受体 2(human epidermal growth factor

receptor-2，HER-2)过表达型与三阴型(triple-negative breast cancer,TNBC)四型，利用第三方软件在动态增强强化最明显一期手动勾画病灶，所有层面融合为三维感兴趣区并提取纹理特征，采用秩和检验和单因素 logistic 回归分析患者的临床、纹理特征，初步筛选特征，再使用多因素 logistic 回归挑选独立预测因素并建立预模型，最后用 ROC 曲线下面积 AUC 评估模型的预测效能。 结果：Luminal A 型 90 例，Luminal B 型 115 例，HER-2 过表达型 66 例，TNBC 型 82 例。通过单因素分析初步筛选出 25 个特征，再进行多因素 logistic 回归分析，分别找出各分子亚型的预测因素并建立预测模型。获得了鉴别 Luminal A 型与非 Luminal A 型、Luminal B 与非 Luminal B 型、HER-2 过表达型与非 HER-2 过表达型、三阴型与非三阴型的最佳模型，AUC 值分别为 0.811、0.604、0.770 和 0.741，且模型拟合效果均较好。 结论：基于动态增强 MRI 纹理特征能够区别不同分子亚型乳腺癌，其中对 Luminal A 型的鉴别能力最佳。

PU-3261

延迟期环形强化乳腺癌的组织病理学特征分析

陈欣,王琳,张冰,杨全新
西安交通大学第二附属医院

目的：探讨在乳腺 DCE-MRI 中表现为肿块、且内部强化特征为延迟期环形强化的乳腺癌的组织病理学特征。
方法：收集我院 2015 年 1 月至 2018 年 12 月行乳腺 3.0T MRI 检查，MRI 表现为肿块，经手术或活检穿刺病理证实为乳腺癌，并有与分子分型相关的免疫组织化学检查结果的患者纳入本研究。根据 DCE-MRI 上是否具有环形强化特征以及环形强化出现的时相将其分为 3 组：延迟期环形强化组，早期环形强化组和非环形强化组。采用卡方检验和非参数秩和检验，比较延迟期环形强化组与早期环形强化组、非环形强化组的组织病理学上的差异。
结果：共纳入 181 例肿块型病变，其中延迟期环形强化组 40 例，早期环形强化组 31 例，非环形强化组 110 例。三组中最常见的病理类型均为浸润性导管癌，但是所纳 7 例髓样癌均表现为延迟期环形强化，4 例导管原位癌均表现为非环形强化，延迟期环形强化组与早期环形强化组、非环形强化组病理类型比较均具有显著性差异（P＜0.000，P=0.044）。免疫组织化学结果显示，延迟期环形强化组多表现为 ER 阴性表达（30/40，75%）、PR 阴性表达（36/40，90%），以及 Ki67 高表达（33/40，82.5%），与早期环形强化组（32.3%，41.9%和 58.1%）和非环形强化组（16.3%，29.1%和 52.7%）比较具有显著性差异（所有 P＜0.05）。在分子分型方面，延迟期环形强化组多为 HER-2 阳性（11/40，27.5%）和三阴性（20/40，50%），早期环形强化组和非环形强化组多为 Luminal B 型（61.3%，56.4%），而三阴性仅为 16.1%和 10.9%，具有显著性差异（P＜0.01）。
结论：在 DCE-MRI 上表现为延迟期环形强化的肿块型乳腺癌具有显著的组织病理学倾向，延迟期环形强化可以在一定程度上预测乳腺癌的激素受体表达、细胞增殖状态和分子亚型，并提示不良预后。

PU-3262

动态增强 MRI 和 DWI 对乳腺肿块样病变的诊断价值

张亚平,耿海,褚玉静
潍坊市人民医院

目的：探讨 DCE-MRl 对乳腺良恶性病变的鉴别诊断价值。方法：回顾性分析经临床手术或穿刺病理证实的 77 例乳腺肿块样病变的 MRI 影像资料，包括病灶的边缘、病灶强化特点、D1（前后径）、D2（左右径）和 D3（上下径）、TIC 类型、ADC 值，其中 45 例为乳腺癌，32 例为乳腺良性病灶，

对乳腺病变的 MRI 形态学及强化特点采用 χ^2 检验进行分析，对乳腺病变的 ADC 值比较采用两样本的 t 检验。结果：乳腺良恶性病变的 D2/D3 差异具有统计学意义（P<0.05），乳腺癌与乳腺良性病变相比，乳腺癌左右径通常大于等于上下径（D2≧D3），乳腺良性病变左右径多小于上下径（D2＜D3），D1/D2 与 D1/D3 差异不具有统计学意义；乳腺癌边缘多毛刺、不规则，乳腺良性病变边缘多光滑；乳腺恶性病灶的 TIC 类型多为 III 型，乳腺良性病灶的 TIC 多为 I 型，,其 II 型曲线在良恶性病变中均可出现差异具有统计学意义，乳腺恶性病变的 ADC 值小于乳腺良性病变，乳腺癌周围腺体的 ADC 值小于乳腺良性病灶周围腺体的 ADC 值，差异有统计学意义(P 小于 0.05)。结论：DCE-MRI、DWI 联合应用对诊断乳腺良恶性病灶具有较好的诊断价值。

PU-3263

DCE-MRI 定量参数在乳腺癌新辅助化疗疗效评价的应用价值

李娜,罗娅红
辽宁省肿瘤医院

目的：探讨 DCE-MRI 定量参数及相关生物学因子的表达评估乳腺浸润性导管癌术前新辅助化疗疗效的应用价值。方法：回顾性收集临床资料完整且术前行新辅助化疗的女性乳腺浸润性导管癌患者 56 例，根据 RECIST 标准分为治疗有效和无效两组，比较两组化疗前、 2 个疗程后、化疗结束时的 K^{trans}、K_{ep}、V_e 值。采用免疫组化染色法检测乳腺癌组织 ER、PR、Her-2 及 Ki-67 表达情况，并分析不同表达状态时 DCE-MRI 定量参数的大小及 DCE-MRI 定量参数与 Ki-67 表达之间的相关性。结果：治疗有效组 K^{trans}max、K^{trans}mean、K_{ep}max、K_{ep}mean 值在 2 个疗程后及化疗结束时均明显低于治疗前（P＜0.05），K^{trans}min 值在化疗结束时较治疗前明显降低（P＜0.05）。ER、PR 阴性组的 K_{ep}max、K_{ep}mean 值高于 ER、PR 阳性组（P＜0.05）；PR 阴性组的 $V_e$max 值高于 PR 阳性组（P＜0.05）。Ki-67 表达与 K^{trans}min、K^{trans}max 值及 K^{trans}mean 值呈正相关（r=0.384，P=0.003；r=0.294，P=0.028；r=0.551,P＜0.01），Ki-67 表达与 K_{ep}、V_e 值无相关性（P＞0.05）。结论：DCE-MRI 定量参数及相关生物学因子的表达可对乳腺浸润性导管癌患者新辅助化疗疗效进行评估，值得临床推广应用。

PU-3264

基于 MRI 的影像组学预测乳腺癌复发风险

毛宁[1],洪楠[2]
1.山东省烟台毓璜顶医院
2.北京大学人民医院

目的：评估雌激素受体阳性、淋巴结阴性乳腺癌患者的磁共振影像组学与复发风险之间的关系。
材料与方法：本回顾性研究经过机构审查委员会批准。该数据包括 298 例具有完整磁共振检查，以及临床、组织病理和基因组数据的乳腺癌病人。从每个病人的磁共振图像中提取影像组学特征。该组患者分为训练集和验证集。通过回归分析和受试者操作特征（Receiver operating characteristic, ROC）曲线分析，评价磁共振影像组学特征对 Oncotype DX 多基因检测结果的预测能力，用独立验证集数据评估模型的效能。
结果：多重线性回归分析显示影像组学与多基因检测复发评分之间存在显著相关性（R2=0.26-0.36，r=0.5-0.55，p<0.0001）。在训练集（AUC 0.89；95%CI，0.80-0.98）和验证集（AUC 0.87；95%CI，0.80-0.95）中，影像组学模型显示出良好的判别能力。

结论：基于磁共振成像的影像组学在评估乳腺癌复发风险中显示出良好的前景。

PU-3265
乳腺癌 DCE-MRI 特征及 ADC 值与相关分子生物学标记物的关系分析

王月波
四川省医学科学院·四川省人民医院

目的　探讨乳腺癌（BC）动态对比增强 MRI（DCE-MRI）特征及表观弥散系数（ADC 值）与相关分子生物学标记物的关系。方法　选取 2016 年 5 月-2018 年 1 月我院收治的 46 例乳腺癌患者为研究对象，均行 DCE-MRI 扫描检查，测定 ADC 值，免疫组化染色法检测患者分子生物学标记物[雌激素受体（ER）、孕激素受体（PR）、人表皮生长因子受体 2（HER-2）、Ki-67]阳性表达情况，并对 BC 患者 DCE-MRI 特征及 ADC 值与相关分子生物学标记物进行相关性分析。结果　以术后病理结果为金标准，DCE-MRI 诊断 BC 形态学的灵敏度 94.29%、特异度 72.73%、准确度 89.13%，BC 患者 DCE-MRI 形态学中的毛刺状边缘与 ER 阳性表达呈正相关（r=0.409，P<0.05），而与 PR、HER-2、Ki-67 阳性表达无明显相关性（P>0.05）；BC 患者 DCE-MRI 形态学中的不均匀强化与 HER-2、Ki-67 阳性表达呈正相关（r=0.461、0.268，P<0.05），但与 ER、PR 阳性表达无明显相关性（P>0.05），BC 患者 ADC 值与 Ki-67 阳性表达呈明显正相关（r=0.345，P<0.05），但与 ER、PR、HER-2 无明显相关性（P>0.05）。结论 DCE-MRI 在 BC 患者形态学中有较高诊断效能，其 DCE-MRI 形态学特征、ADC 值与 ER、HER-2、Ki-67 阳性表达密切相关。

PU-3266
乳腺叶状肿瘤的影像学表现及病理对照分析

矫娜
深圳市人民医院

摘要：目的 评价乳腺叶状肿瘤（PTs）影像学表现与病理组织学的相关性，旨在提高对 PTs 的术前正确诊断率。**方法** 回顾性分析 42 例经手术病理证实为 PTs 患者的临床及影像学资料， 42 例均行钼靶 X 线检查，其中 25 例行 MRI 检查，并与其病理学结果相对照分析。**方法** （1）42 例 PTs 患者共 43 个病灶，病理学分级为良性、交界性及恶性分别为 32.6%（14/43）、46.5%（20/43）、20.9%（9/43）；其病灶的最大直径、形态、边缘及密度在良性、交界性及恶性差异上无统计学意义（P>0.05）。（2）病灶内是否存在点状、粗大钙化在不同病理类型中差异有统计学意义（P<0.05）。（3）在 25 例 PTs 患者（包括良性 14 例，交界性 20 例，恶性 9 例）的 MRI 图像中，三者在 T_2WI 无强化低信号分隔、T_1WI 病灶内高信号（提示出血）、ADC 值减低、坏死囊壁不规则及 TIC 流出型方面差异均有统计学意义（P <0.05）。**结论** 乳腺叶状肿瘤的 X 线及 MRI 表现均具有一定特征性，综合其临床特点分析，可提高术前诊断正确率；并且 MRI 的一些特殊征象对判断叶状肿瘤的病理亚型有一定的价值。

PU-3267

乳腺 MRI 背景实质分型及强化对乳腺癌的辅助诊断价值

刘丽丽
中国科学院大学重庆医院（重庆市人民医院）

目的:乳腺 MRI 诊断结合病灶本身影像学特征，探讨乳腺背景实质的分型及强化（ BPE）对病灶的辅助诊断价值。
方法 回顾性分析在我院行乳腺 MRI 检查并经手术病理证实的 28 例乳腺癌和 23 例乳腺良性病变患者的临床及影像资料，分别对其平扫及动态对比增强表现进行评估，绘制时间-信号强度曲线，判断其敏感性、特异性。不考虑患者的月经周期，参照美国乳腺影像报告数据系统（ BI-RADS）对乳腺腺体实质密度（ FGT）及 BPE 进行分级。统计病例组及对照组的病变增强强化方式、BPE 强化程度、FGT 之间有无差异。
结果（ 1）平扫：良性病变为边界较清、形态规则肿块，部分其内可见分隔，信号尚均匀，为稍长 T1、T2 信号影；而乳腺癌为界限不清、分叶状肿块，伴毛刺，为不均匀稍长 T1、T2 信号影。（ 2）动态对比增强：良性病变多为缓慢渐进较均匀强化或离心性强化，Ⅰ、 Ⅱ、 Ⅲ型曲线分别为 9 例、10 例、4 例；恶性病变为不均匀、环形强化或向心性强化，Ⅰ、 Ⅱ、 Ⅲ型曲线分别为 2 例、3 例、23 例，诊断敏感性 91% 、特异性 82%，差异有统计学意义（ P ＜ 0．05）。（ 3)BPE 强化程度 4 个级别中良性病变分别为 5 例、7 例、8 例、3 例，乳腺癌分别为 2 例、5 例、7 例、14 例，二者间差异有统计学意义（ P ＜ 0．05）；FGT 无明显差异（ P ＞ 0．05)。
结论 乳腺 MRI 病灶的形态学改变及动态增强强化特点对乳腺癌的诊断价值较高，背景实质强化则具有一定的辅助诊断价值。

PU-3268

微小乳腺癌的 X 线及动态磁共振影像学表现

张玉珍,李芳珍,崔雪娥,王丽君,罗冉,汪登斌
上海交通大学医学院附属新华医院

目的 探讨微小乳腺癌的 X 线及动态 MRI 影像特点，提高术前影像诊断水平。 **材料与方法** 对 60 例经手术病理证实直径≤1cm 的微小乳腺癌的 X 线及 MRI 影像进行回顾性研究。 **结果** 60 例微小乳腺癌病灶位于左乳和右乳例数分别为 38 例和 22 例。病理结果显示 54 例为单灶，6 例为多灶（≥2 处癌灶，直径均小于 1cm）。其中浸润性导管癌 21 例，导管内癌伴微浸润 26 例，浸润性癌非特殊性 5 例，小叶原位癌 2 例，浸润性乳头状癌、浸润性小叶癌、神经内分泌癌、粘液腺癌、导管内乳头状瘤伴导管原位癌，硬化性小管癌伴导管原位癌各 1 例。在乳腺 X 线中，表现为肿块征象 16 例，微小钙化 9 例，局灶非对称性致密 7 例，结构扭曲 6 例，致密型乳腺中无明显异常征象 22 例。X 线 BI-RADS 分类 3 类、4A 类、4B 类、4C 类分别占 30%，53.33%，11.67%，5%。在 MRI 中测得病灶大小介于 0.4×0.4cm-1.6×1.1cm 之间；术后病理结果显示病灶大小直径 0.2cm-1.0cm。增强显示强化均匀占 30%（18/60），强化不均匀占 70%（42/60）。病灶边缘光整占 30%（18/60），边缘不光整伴小毛刺改变占 70%（42/60）。TIC 为持续上升型、平台型及廓清型分别为 20 例，24 例和 16 例。5 例伴有腋窝淋巴结增大,其中 4 例为病灶同侧，1 例为对侧腋窝淋巴结增大。DWI 上表现为肿块高信号，可测得 ADC 值的为 30 例，ADC 值介于 0.758-1.58 mm^2/s 之间，平均值为 1.128±0.24 mm^2/s。MRI BI-RADS 分类 3 类、4A 类、4B 类、4C 类、5 类分别占 6.67%，23.33%，40%，25%，5%，MRI 诊断 BI-RADS 分类 4B 以上达 70%。 **结论** 动态 MRI 增强作为乳腺病变检查的一种重要影像学检查方法，结合病灶形态特征、ADC 值、重建及动态增强曲线，综合判断，必将大大提高微小乳腺癌术前诊断正确性。

PU-3269
探讨具有髓样特征浸润性乳腺癌的影像学分析

谢菲
深圳市人民医院

摘要目的：探讨具有髓样特征的浸润性乳腺癌影像学特点及分子分型，以探讨其影像学特点与分子生物学特点及预后关系。方法：回顾性分析 2014 年 6 月至 2019 年 3 月，我院经手术病理证实具有髓样特征的侵润性乳腺癌 20 例，包括典型 10 例，非典型性乳腺髓样癌 10 例，分析超声、X 线特点，动态增强 MRI 评估，包括早期强化率、TIC 曲线，观察病变内部信号特点，免疫组织化学染色雌激素受体（ER）、孕激素受体（PR）和人类表皮生长因子受体 2（HER2）；同时对照组织病理学、免疫组化化学结果，t 检验，独立样本，比较病变的特点。结果：1、20 例乳腺钼靶表现为单纯肿块/局灶性不对称（75%），同侧乳腺伴有钙化 33%，钙化形态无特异性。肿块形态不规则可见分叶或边缘伴有毛刺约 25%，肿块密度较高约 50%。超声提示肿块周围血流异常约 33%。50%患者乳腺常规筛查方法钼靶及超声提示病灶与良性肿瘤形态学表现相似易误诊。其中术前 X 线评估 BI-RADS 1-3 的 12 例，BI-RADS4A 8 例。2、MRI 表现为单发肿块样强化 15 例，非肿块 5 例。肿块强化特点：其中肿块强化的病变，术前 BI-RADS 43 例，评估 ：非肿块强化病变术前 BI-RADS 3 有 6 例，4A 1 例。3、乳腺 X 线检查阳性率约 66%，准确率约 50%，乳腺超声检查阳性率约 75%，准确率 33%，MRI 检查阳性率 100%，准确率 80%，钼靶超声 MRI 联合检查可有效提高疾病检出率。4、本组资料三阴性乳腺癌例 18，非三阴性 2 例。5、其中选择保乳手术 2 例，改良根治 18 例，大于 75%的患者未行保乳手术治疗。结论：乳腺 MR 成像对伴髓样特征性的癌患者的早期诊断具有细分和参考价值，可提高早期检出率降低漏诊和误诊，多数具有髓样特征乳腺癌为三阴性，不适合选择保乳手术及新辅助化疗，尽管为孤立单发病变但可能提示预后不良。MR 增强检查对治疗方案评估及预后的判断可提供影像学支持。

PU-3270
青年女性浸润性导管癌 T2WI 特征联合 ADC 值与 Ki-67 表达相关性

吕雪飞
武汉市红十字会医院

目的：探讨青年女性浸润性导管癌 T2WI 特征联合 ADC 值与 ki-67 表达相关性。
方法：选取 2018-2019 年我院就诊 13 例（≤35 岁）经手术证实的青年组浸润性导管癌患者作为研究对象。回顾性分析 MRI 平扫序列中癌组织的 T2 加权的信号特征、表观弥散系数（ADC）的值，并选取免疫组织化学方法计算出 ki-67（增殖细胞的活性）的百分比值。
结果：青年女性乳腺浸润性导管癌组织的 ADC 值范围为（0.78±0.08）10-3/㎜²，所检测的 Ki-67 的阳性表达率约为 92%。在癌组织中,T2 WI 呈现稍高信号与 Ki-67 的阳性表达率呈正相关，ADC 值与 Ki--67 在一定范围内呈负相关。
结论：青年女性浸润性导管癌 MRI 检查中 T2WI 序列信号特征多表现为稍高信号（84%）或等信号(16%)；伴随有 ADC 值下降至一定范围（＜1×10-3/㎜²），Ki-67 呈现阳性表达率显著增高。T2WI 信号特征联合 ADC 值对青年女性浸润性导管癌患者的诊断、临床治疗方法的选择及预后的预估有重要的参考价值，进而可以预测对于一些不能配合做增强扫描的患者或者对高危人群做常规筛查，T2WI 序列联合测量 ADC 值会提供重要的参考信息。

PU-3271

妊娠哺乳期乳腺癌的 MRI 价值研究

赵莉芸,李静,车树楠,周纯武
中国医学科学院肿瘤医院

目的：探讨妊娠哺乳期乳腺癌的临床特征及影像学检查在其诊断中的价值。
材料与方法：回顾性分析 2014 年 1 月至 2018 年 8 月期间来我院就诊的妊娠哺乳期乳腺癌（即妊娠期或产后 1 年内发现的乳腺癌）患者 95 例，其中 50 例患者行 MRI 检查，共 52 侧（2 例为双侧乳腺癌）。收集并记录患者的临床病史、病理结果、MRI 图像特点及行 X 线和超声检查的情况。
结果：50 例患者中妊娠期 8 例（16%），均于妊娠中晚期发现，哺乳期 42 例（84%），一级亲属患乳腺癌者仅 1 例（2%），二级亲属患乳腺癌者 3 例（6%）。52 侧妊娠哺乳期乳腺癌的临床分期集中在Ⅱ、Ⅲ期，共 38 侧（73%），35 例（70%）患者行新辅助化疗。病理上均为浸润性导管癌Ⅱ或Ⅲ级，ki-67 百分比较高，大于 14%者 44 侧（85%）,Luminal A、Luminal B、Her2 阳性型和三阴性乳腺癌分别为 8 例（15%）、22 例（42%）、12 例（23%）、10 例（19%）。行超声检查者 37 例（74%）；行 X 线检查者仅 12 例（24%），其中 10 例伴有钙化（83%）。MRI 的敏感性为 98%（1 例双侧乳腺癌患者漏诊），特异性 100%；肿块型 40 侧（77%），其中单发者 35 侧（88%），多发者 5 侧（13%），非肿块型 12 侧（23%），以段样分布或弥漫性分布为主，分别为 6 侧（50%）和 4 侧（33%）;T2WI 以等信号或混杂信号为主，分别占 54%和 27%；DWI 以中等度扩散受限为主，占 62%；增强扫描肿块型病变以混杂强化为主，占 65%，非肿块型病变亦以混杂强化为主，占 75%。时间-信号强度曲线均为“平台型”或“流出型”，分别占 50%和 48%（1 例患者曲线缺失）。同侧腋窝淋巴结转移比例较高，达 77%。
结论：妊娠哺乳期乳腺癌有一定的临床和影像学特征。了解这些特征，可早期诊断、避免误诊，且有助于临床治疗。

PU-3272

年轻乳腺癌分子分型与 ADC 值、KI-67 指数的相关性研究

谢瑜,丁莹莹,李卓琳,吴建萍
云南省肿瘤医院

目的：探讨年轻乳腺癌 ADC 值与分子分型、KI-67 指数之间的相关性。方法：回顾性分析 2010 年 1 月至 2016 年 5 月间 148 例经手术病理确诊的年轻乳腺癌患者（<40 岁）术前最小 ADC 值，采用免疫组织化学检查将患者分为管腔 A 型、管腔 B 型、HER-2 过表达型、三阴性型 4 组。应用单因素方差分析、pearson 相关分析进行统计分析。结果：148 例患者平均年龄 35.22 岁，其中管腔 A 型 15 例，管腔 B 型 106 例，HER-2 过表达型 22 例，三阴性型 5 例，其最小 ADC 值分别为 $0.8327\times10^{-3}mm^2/s$、$0.8361\times10^{-3}mm^2/s$、$0.8056\times10^{-3}mm^2/s$、$0.7479\times10^{-3}mm^2/s$，KI-67 指数分别为 7.07、30.93、31.14、40.00。不同分子分型年轻乳腺癌患者间的最小 ADC 值无统计学意义。不同分子分型年轻乳腺癌中管腔 B 型、HER-2 过表达型、三阴性型的 KI-67 指数均显著高于管腔 A 型，差异有统计学意义（$P<0.05$），而管腔 B 型、HER-2 过表达型、三阴性型三者间的 KI-67 指数差异无统计学意义（$P>0.05$）。HER-2 过表达型患者的最小 ADC 值与 KI-67 指数有相关性，相关系数为 0.388（$P<0.05$）。
结论：年轻乳腺癌的最小 ADC 值对预测其分子分型表达情况尚需进一步深入研究。

PU-3273
MR 成像定量监测局部进展期乳腺癌新辅助化疗疗效的应用价值

陈园园
广东省妇幼保健院

目的:通过对局部进展期乳腺癌新辅助化疗前后癌灶的 MRI 改变进行定量检测，从而对新辅助化疗进行疗效评价。方法：回顾性分析自 2016 年 1 月至 2018 年 10 月之间 116 例局部进展期乳腺癌患者的临床、MRI 及病理资料，所有患者均接受新辅助化疗，且满足化疗前、后均行磁共振检查，所有病例化疗后均进行乳腺癌根治手术。结果：经病理证实浸润性导管癌 94 例，浸润性微乳头状癌 10 例，浸润性小叶癌 6 例，乳腺化生性癌 4 例，黏液腺癌 2 例。治疗前有效组最大径标准差为（49.18±27.46）mm，治疗后最大径标准差为（28.46±20.28）mm，比较治疗前后有效组最大径改变有统计学意义，P =0.018，P＜0.05；治疗无效组治疗前最大径标准差为（44.45±21.27）mm，治疗后最大径标准差为（25.26±0.37）mm，比较治疗前后无效组最大径差异无统计学意义，P =0.054。治疗前有效组和无效组癌灶最大径比较差异无统计学意义，P=0.760，治疗后无效组和有效组癌灶最大径差异统计学有意义，P=0.043。结论 MRI 可以精确测量病灶大小，通过 fMRI 还可以对 NAC 的疗效进行定量评价，为临床治疗提供客观循证医学依据。

PU-3274
乳腺癌 MRI 表现及诊断价值的分析

王利华,罗娅红
辽宁省肿瘤医院

目的: 分析乳腺癌 MRI 表现及 X 线、MRI 两种影像学检查方法对于乳腺癌的诊断价值。
方法: 回顾分析经手术病理证实的乳腺癌患者 42 例，所有患者均行 MRI 及 X 线检查。
结果:
1.42 例患者中，18 例 X 线表现为单发的高密度肿块影，其中 15 个肿块边缘呈分叶状及毛刺征，3 个边缘光整， 部分边界清晰； 6 个肿块内可见成簇状细小钙化影； 2 个仅见斑片状成簇状钙化，未见明确肿块影； 2 例病灶大小小于 1cm， 边缘与周围腺体分界不清， X 线误诊为小叶增生，1 例病灶呈片状高密度影，边界不清，未见明确肿块， 邻近皮肤显示增厚， X 线误诊为乳腺炎； 5 例局部皮肤显示增厚，3 例乳晕显示增厚， 4 例乳头显示凹陷； 2 例腋窝淋巴结肿大。
2.在 MR 检查中， 其中 34 个病灶形态学表现为典型的恶性征象， 边缘显示不规整， 分叶有毛刺， T1WI 为低信号， T2WI 及 STIR 为稍高信号， 部分病灶内信号显示不均；6 个病灶边缘显示清晰， 肿块内信号明显不均， 3 个边界显示模糊， 内部腺体结构紊乱， 增强后病灶显示强化，动态曲线时间- 信号强度曲线为大部分为典型的流出型(33 例)， 平台型(10 例)，未见持续强化型； 本组病例 MRI 显示局部皮肤显示增厚者 7 例， 乳头凹陷者 4 例， 胸壁侵犯者 2 例； 腋下淋巴结肿大者 2 例。
3.42 例乳腺癌共 43 个灶， 在乳腺 X 线检查中， 2 个乳腺癌病灶未见明显显示， 检出率为 93.02%； 乳腺 MRI 检出 43 个病灶。上述病例中，X 线检查漏诊 2 例；与术后的病理结果比较，MRI 检查结果病理符合率较高；对于乳腺皮肤、腋窝淋巴结、及胸壁侵犯情况乳腺 MRI 优于 X 线检查。MRI 与 X 线检查对于病灶检出的价值比较， 显示前者优于后者。
结论：X 线检查对于钙化病变显示较好，可以用于早期肿块不明显而钙化明显病变的显示；MRI 对于乳腺癌病灶的检出高于 X 线摄影， 对于判断病变范围及淋巴结转移等方面也具有较大价值。总之，X 线与 MRI 联合应用有助于提高乳腺癌的诊断准确率。

单纯乳腺导管原位癌 MRI 特征与 HER2 表达及病理核分级的相关性研究

王利华,罗娅红
辽宁省肿瘤医院

目的
探讨单纯乳腺导管原位癌动态增强 MRI 影像特征与 HER2 表达及病理核分级的相关性。
方法
回顾我院 2011 年 1 月-2014 年 6 月经手术病理证实的单纯 DCIS 28 例，术前全部接受乳腺增强 MRI 检查。系统描述病变的 MRI 形态特征、早期强化率、时间信号强度曲线、ADC 值及坏死成分，分析它们与 HER2 表达及病理核分级的关系。
结果
单纯 DCIS 动态增强 MRI 形态特征主要为非肿块样强化（22/28,78.6%），以区段分布（13/28,46.4%）为主。早期快速强化为主（25/28,89.3%），时间信号强度曲线以平台型（18/28,64.3%）和流出型(9/28,32.1%)为主。平均 ADC 值约 1.29±0.12×$10^{-3}$$mm^2$/s,95%可信区间（1.24×$10^{-3}$$mm^2$/s—1.35×$10^{-3}$$mm^2$/s）。HER2 表达在高级别组和非高级别组分布差异有统计学意义（P=0.04），高级别组 HER2 阳性比例（11/18）较非高级别组（2/10）高；坏死成分在高级别组、非高级别组以及 HER2 阳性组和 HER2 阴性组分布差异有统计学意义（P=0.00、P=0.03），高级别组和 HER2 阳性组易伴有坏死成分。单纯 DCIS MRI 形态特征、ADC 值及时间信号强度曲线在各组差异无统计学意义。
结论
单纯 DCIS 动态增强 MRI 形态学表现具有相对特异性，主要表现为区段分布的非肿块样强化，早期快速强化为主，时间信号强度曲线以平台型和流出型为主。高级别 DCIS 更易表达 HER2，且更易出现坏死。

PU-3276
Correlation between MRI Characteristics of pure DCIS and HER2 expression and pathology nuclear grade

lihua wang,Yahong Luo
liaoningshengzhongliuyiyuan

Objectives
To investigate the correlation between MRI characteristics of pure DCIS and HER2 expression and pathology nuclear grade.
Methods
Reviewing 28 patients with pure DCIS confirmed by pathology in our hospital from Jan.2011 to Jun.2014,pre-operation all patients underwent Dynamic Contrast-Enhanced MRI.The MRI morphological characteristics,the early enhancement rate,the time-intensity curve,the ADC values and necrosis of the lesion were described

systematically,then analyze the relationships between them and HER2 expression and pathology nuclear grade.

Results

The most common morphological characteristics of pure DCIS is non-masslike reinforcement(22/28,78.6%),mainly on segment distribution(13/28,46.4%).During the initial period,the time-intensity curve mainly on rapid reinforcement(25/28,89.3%),at delayed period,mainly on plateau type(18/28,64.3%) and washout type (9/28,32.1%).The mean ADC value is 1.29±0.12×$10^{-3}mm^2$/s,95% confidence interval is 1.24×$10^{-3}mm^2$/s to 1.35×$10^{-3}mm^2$/s.The distributional difference of HER2 expression in HNG group and non-HNG group have statistical significance(P=0.04),HER2 positive proportion in HNG group(11/18)is larger than non-HNG group(2/10).Necrosis distributional difference in HNG group,non-HNG group and HER2 positive group ,HER2 negative group have statistical significance(P=0.00,P=0.03),necrosis is more easily occured in HNG group and HER2 positive group.The MRI morphological characteristics,ADC value and the time-intensity curve of pure DCIS have no statistical significance.

Conclusions

The morphological manifest of pure DCIS have relative specificity,non-masslike reinforcement,mainly on segment distribution,the time-intensity curve mainly on rapid reinforcement at the initial period,the time-intensity curve mainly on plateau type and washout type at the delayed period.HNG pure DCIS is more easily express HER2 and necrosis.

PU-3277

乳腺黏液癌的 MRI 表现及临床病理特征相关分析

马少君,周理乾
陕西省人民医院

目的： 探讨分析乳腺黏液癌（breast mucinous carcinoma ，MC）的 MRI 影像学特征及临床病理特征。**方法 ：**收集 2006 年 1 月-2016 年 12 月间临床资料完整的乳腺黏液癌患者 75 例，其中单纯性乳腺黏液癌（Pure MBC）患者 54 例，混合型乳腺黏液癌（Mixed MBC）患者 21 例。分析比较 2 组患者的 MRI 影像学表现和临床病理特征。**结果** 在两组乳腺癌患者中，单纯性乳腺黏液癌与混合型乳腺粘液癌比较，混合纯性乳腺黏液癌更多表现为淋巴结阳性(P =0.002)；在年龄、 月经状况、 家族史、 ER、PR 、HER2 水平方面差异无统计学意义（P<0.05）；在 MRI 检查，肿块平均大小及肿块边缘、形态、强化方式($p=0.002$)、强化程度及表观弥散系数(ADC)差异具有统计学意义($p<0.001$)。**结论：**了解乳腺黏液癌的 MRI 影像学及临床病理特征，可帮助临床医师预测乳腺黏液癌及其亚型和患者的预后，有利于制定最优的治疗方案。

PU-3278

乳腺 X 线摄影及动态增强 MRI 对表现为微钙化病变的诊断价值

许梅,马捷,林小慧,弋春燕,胡根文
深圳市人民医院

目的：探讨乳腺 X 线摄影及乳腺动态增强磁共振（DCE-MRI）对乳腺微钙化病变的诊断价值。

方法：回顾性分析我院 2014 年 7 月至 2018 年 11 月 67 例患者（78 个病灶）乳腺 X 线摄影发现微钙化，完成 MRI 动态增强检查后行穿刺活检，以术后病理诊断为标准，采用卡方检验对比乳腺 X 线摄影、DCE-MRI 及两种方法相结合对微钙化病变的诊断效能，并分析微钙化病变在乳腺 X 线摄影中的形态、分布特点及在 DCE-MRI 的强化特点。
结果：78 个微钙化病变中，良性 59 个，恶性 19 个。对于微钙化病变，乳腺 X 线摄影与 DCE-MRI 诊断效能比较，其中特异度存在统计学差异（*P*=0.038），乳腺 X 线摄影（81.4%）明显高于 DCE-MRI（64.4%）；且乳腺 X 线摄影、DCE-MRI 及乳腺 X 线摄影结合 DCE-MRI 检查诊断效能比较，特异度也存在统计学差异（*P*=0.038）；而乳腺 X 线摄影结合 DCE-MRI 检查比单独应用乳腺 X 线摄影或者 DCE-MRI 灵敏度、阴性预测值高，分别为 94.7%、97.3%。乳腺 X 线摄影微钙化的形态在乳腺良、恶性病变中差异有统计学意义（*P*=0.004），而微钙化的分布差异不具有统计学意义（*P*=0.688），微钙化形态与分布组合差异具有统计学差异（*P*=0.003）。DCE-MRI 误诊 2 例恶性病变中，1 例为无强化，1 例为明显背景实质强化。
结论：对于微钙化病变乳腺 X 线摄影较 DCE-MRI 诊断效能高，其中微钙化的形态比分布对乳腺良、恶性病变鉴别更具有价值，而形态与分布联合应用增加诊断准确率。乳腺 X 线摄影联合 DCE-MRI 检查可以提高恶性病灶的检出并排除恶性病变，当 DCE-MRI 表现为无强化时多提示良性病变可能性大，但无强化不能完全排除中低级别导管原位癌，同时应排除明显背景实质强化掩盖作用，并结合乳腺 X 线摄影进行综合判断，所以乳腺 X 线摄影与 MRI 联合应用，可以提高良、恶性病变诊断效能。

PU-3279

乳腺叶状肿瘤的 MRI 表现

李雪梅
复旦大学附属中山医院青浦分院

【摘要】目的 分析乳腺叶状肿瘤（PTB）的 MRI 特征，并与病理结果对照，提高对该病的诊断水平。方法 回顾性分析 12 例经手术病理证实的乳腺叶状肿瘤的 MRI 表现，包括形态学、平扫信号、动态增强 TIC 形态、弥散信号及表观扩散系数(ADC 值)特点。结果 12 例 PTB 患者经术后病理诊断为良性 6 例，交界性 3 例，恶性 3 例。T1WI 病灶呈等信号或低信号，其中 3 例夹杂斑片状高信号影，T2WI 均为不均匀高信号，12 例 DWI 均呈高信号,相应 ADC 值低于正常乳腺组织。动态增强病灶实质呈不均匀强化,12 例时间一信号强度曲线(Time—signal intensity curve，TIC)类型呈Ⅰ型 3 例,8 例Ⅱ型，Ⅲ 型 1 例。结论 乳腺叶状肿瘤的 MRI 表现多样，MRI 检查有助于乳腺叶状肿瘤的诊断，确诊仍需对整个病灶行组织病理学检查。

多模态磁共振成像评价术前乳腺癌腋窝淋巴结转移的诊断价值

薛梅,李静
中国医学科学院肿瘤医院

目的：探讨多模态磁共振成像对术前乳腺癌腋窝淋巴结转移的诊断价值。
方法：回顾性分析本院经手术病理证实的 219 例乳腺癌患者乳腺原发灶的 MR 特征及，包括：年龄、肿瘤长径、表观弥散系数（Apparent Diffusion Coefficient ，ADC）值、腺体类型、背景强化、肿瘤位置、T2WI 信号特征、强化方式、时间-信号强度曲线（Time-Intensity Curve，TIC）

类型、病灶个数、MR 有无肿大淋巴结，探讨有腋窝淋巴结转移（ALNM(+)）与无转移淋巴结组(ALNM(-))的差异。
结果：与 ALNM（-）组比较，ALNM（+）组的肿瘤长径较大、ADC 值较低、多发病灶比例更多，两者间有显著统计学差异（P<0.05）。MR 有无肿大淋巴结方面，两组间有明显统计学差异（P<0.05）。而在腺体类型、背景强化、肿瘤位置、T2WI 信号特征、强化方式、时间-信号强度曲线（Time-Intensity Curve，TIC）类型等方面，两组间没有显著统计学差异（P>0.05）。
结论：乳腺癌的肿瘤长径、ADC 值及病灶个数与腋窝转移淋巴结有很好的相关性，术前 MR 检查能够对临床判断腋窝淋巴结性质制定有效治疗方案提供参考。

PU-3281

乳腺恶性孤立性纤维瘤一例

林家权
广西医科大学第一附属医院

目的：探讨乳腺恶性孤立性纤维瘤的临床、影像表现与相关病理特征，提高对乳腺恶性孤立性纤维瘤的认识。方法：回顾性分析 1 例经手术病理证实的乳腺恶性孤立性纤维瘤的临床、影像及病理学资料并复习相关文献讨论。结果：患者为女性，55 岁，发现左乳肿物 4 月余，增长加快伴肿痛 1 月余。B 超表现肿块呈实质性、混合性回声，边界不清，形态不规则，边缘不整齐，内回声不均匀，可见液性暗区，CDFI：肿块周边及内部可见条棒状血流信号。PW：肿块内部可测及低速高阻力动脉频谱，Vmax19.7cm/s，Vmin5.9cm/s，RI=0.698。钼靶表现左乳腺正常腺体结构消失，肿块边界清楚，分叶状，密度均匀，其内及周围未见钙化。CT 表现肿块呈类圆形，大小约 13.1cm×8.1cm×15.0cm，边界清楚、分叶状，肿块呈稍低密度，密度欠均匀，CT 值约 19Hu，未见钙化，增强扫描病灶不均匀中度强化，内见囊变、坏死区。MRI 表现肿块呈稍短 T1 稍长 T2 信号，信号不均匀，内见多发分隔，DWI 肿块弥散受限，动态增强扫描呈渐进性不均匀明显强化，时间-信号曲线呈流入型，早期强化率为 193.9%-217.5%，ADC 值约 1.212-1.239×10-3mm2/s，周围分支血管增多、增粗，病灶与乳头皮肤分界不清，与左侧胸大肌分界欠清，左侧胸大肌明显强化。免疫组化结果显示:Vimentin(+),CD34(+，部分),CD99(+),Bcl-2(+),CD68(－),CK(－),SMA(+，部分),Desmin(－),Actin(－),EMA(－),S-100(+，少量),Ki-67(40%)。结论：乳腺恶性孤立性纤维瘤的临床特征及影像表现有助于乳腺上皮恶性肿瘤的鉴别诊断。乳腺恶性孤立性纤维瘤具有较高侵袭性，充分认识其影像征像，有助于术前诊断，指导治疗及判断预后。

PU-3282

扩散加权成像在监测乳腺癌患者新辅助化疗的病理反应中的 meta 分析

刘艳,闫霜
新疆医科大学附属肿瘤医院

【摘要】目的：在乳腺癌患者接受新辅助化疗(NACT)后的完全反应(pCR)，弥散加权成像(DWI)被认为是一种非侵入性和无放射性的成像方式。越来越多的试验正在进行这方面研究，一些研究发现与传统的成像技术相比，DWI 有更好的性能。然而，DWI 的效能仍然存在争议。meat 分析旨在评估 DWI 检测乳腺癌患者 NACT pCR 的准确性。**方法：**采用联合敏感性、特异性和诊断优势比(DOR)评估 DWI 对 NACT 的诊断效果。 计算 SROC、SROC 曲线下面积(AUC)和 Youden 指数(*Q)。通过单因素回归分析探讨了纳入研究中可能存在的异质性来源。采用 Deek 漏斗图和 QUADAS-2 形式对发表偏倚和

质量评估进行分析。**结果：**在我们的分析中，有 20 项研究包括 1490 名参与者。汇总结果显示敏感性为 0.89 (95% CI, 0.86-0.91)，特异性为 0.72 (95% CI, 0.68-0.75)， DOR 为 27.00 (95% CI, 15.60-46.73)。SROC 曲线和*Q 指数的 AUC 分别为 0.9088 和 0.8408。meta 回归分析结果显示，pCR 率、研究人群的持续时间和研究设计并不是异质性的来源。**结论：**在我们的 meta 分析中，我们发现 DWI 对接受 NACT 治疗的乳腺癌患者的 pCP 诊断具有较高的敏感性和特异性。这一发现表明，使用 DWI 可能会对 NACT 的 pCR 进行准确和精确的评估。

乳腺颗粒细胞瘤一例并相关文献复习

曾乔,刘岚,胡利平,钟林花,周永杰
江西省肿瘤医院/江西省第二人民医院

颗粒细胞瘤(granular cell tumor, GCT)是一种临床少见的软组织肿瘤,第一次由 Weber 在 1854 年提出，然后 Abrikossoff 首次描述发生于舌及乳腺的 GCT，认为它是一种肌源性肿瘤[1]。GCT 的起源现在还存在一定的争议，但 S100 强阳性和肿瘤的镜下结构与施万细胞相似支持其是一种神经或神经外胚层源性肿瘤[2]。乳腺 GCT(GCTB)因发病率低、认识较少，在临床、影像、冰冻切片上容易误诊为乳腺癌，导致不必要的乳房根治术及过度治疗[3]。笔者报道江西省肿瘤医院收治的 1 例 GCTB，并结合既往文献总结其影像表现特点，旨在提高对其影像特征的认识并减少误诊。

PU-3284

Granular Cell Tumor of the Breast: A Case Report and Literature Review

Qiao Zeng,Lan Liu,Li Ping Hu,Lin Hua Zhong,Yong Jie Zhou
Jiangxi Cancer Hospital

Granular cell tumour (GCT) is a relatively uncommon lesion of the soft tissues, especially in the breast. Often, it mimics carcinoma on clinical and radiological examinations. Besides, the striking feature of GCT is the presence of abundant granular eosinophilic cytoplasm, which can easily lead to a misdiagnosis of needle aspiration biopsy and may result in unnecessary surgery. Immunohistochemistry with S100 positive is necessary to obtain a correct diagnosis. Here, we report a case of GCT of the breast in a postmenopause woman who presented with a subcutaneous mass in the upper outer quadrant of the right breast, and review the importance of differentiating between this tumor and malignant breast carcinoma in imaging. To radiology and clinically, this case appears to be a malignant tumor of the breast, but with a correct and precise diagnosis including histopathologic examination and immunohistochemical studies, it was correctly identified as a GCT.

PU-3285
动态增强磁共振成像及扩散加权成像对乳腺导管原位癌（DCIS）和非特异性乳腺炎的诊断价值

罗芳
广西中医药大学第一附属医院

目的：探讨动态增强磁共振成像（DCE-MRI）及扩散加权成像（DWI）对乳腺导管原位癌（DCIS）和非特异性乳腺炎的诊断价值。
方法：搜集 62 例经病理证实的非特异性乳腺炎 29 例的 MRI 表现,同时随机抽取相同时段经病理证实的乳腺癌患者 33 例作为对照组,术前均行 DCE-MRI 及 DWI。统计病灶的形态学特征、时间-信号强度曲线（TIC）及表观扩散系数（ADC）值,并运用 x 2 检验和 t 检验分析 DCIS 和乳腺炎组差异;采用受试者工作特征曲线（ROC）确定 DCIS 和非特异性乳腺炎的 ADC 界值。
结果：DCIS 和非特异性乳腺炎均以非肿块样强化多见,前者以导管样、节段样强化为主,后者以区域性、弥漫性强化为主;DCIS 以均匀强化多见,其中以点簇样强化更具特征性。乳腺炎多表现为均匀或不均匀强化，其中 19 例可见环形强化小脓腔;Ⅰ型 TIC 多见于非特异性乳腺炎，而Ⅲ型曲线多见于 DCIS,Ⅱ型曲线在两者之间无显著差异。DCIS 的 ADC 值（1.102±0.247）×10-3mm2/s 显著低于乳腺炎病 ADC 值（1.481±0.158）×10-3mm2/s（b=800 s/mm2）,差异具有统计学意义（P<0.001）。根据 ROC 曲线确定 ADC 界值为 $1.30\times10^{-3}mm^2/s$,诊断敏感性和特异性分别为 75.6%、80.3%（$b=800\ s/mm^2$）。
结论：DCE-MRI 联合 DWI 有助于鉴别 DCIS 和非特异性乳腺炎。

PU-3286
乳头状瘤背景下导管原位癌的多模态影像学特征分析

蒋颖,刘君君,张淑平,路红,刘佩芳
天津市肿瘤医院

目的 探讨乳头状瘤背景下导管原位癌（ductal carcinoma in situ within papillomas, DCIS-WP）和普通导管原位癌（ductal carcinoma in situ in general, DCIS-IG）的 X 线、超声和磁共振（magnetic resonance imaging, MRI）影像学表现特征及其影像学正确诊断对临床的意义。**方法** 回顾性分析本院 2015 年 1 月至 2018 年 10 月经病理证实为 DCIS-WP 和 DCIS-IG 的 134 例患者，其中 DCIS-WP 患者 40 例，DCIS-IG 患者 94 例。依据乳腺影像报告和数据系统（breast imaging reporting and data system，BI-RADS）标准对 X 线、超声和 MRI 上的病变进行系统性分析，并评价病变术前穿刺、术中冰冻病理与术后最终石蜡病理诊断一致性。定性资料的比较采用 x^2 检验或 Fisher 确切检验。**结果** 与 DCIS-IG 相比，DCIS-WP 在 X 线上较少出现钙化、X 线上漏诊率高、诊断准确率较低；而超声常表现为多发低回声结节，漏诊率低；MRI 上出现导管扩张征象和多发乳头状瘤背景的比例更高，病变内部环形表现较散在、大小不均；DCIS-WP 在术前穿刺、术中冰冻病理与术后最终石蜡病理诊断一致性较低，P 均＜0.05。**结论** 两种类型 DCIS 的 X 线和超声表现特点不同，DCIS-WP 在 X 线上通常不表现为钙化性病变而易漏诊，超声对其检出具有优势；DCIS-IG 在 X 线通常具有典型恶性钙化征象且检出及诊断准确率高，而在超声上较易漏诊；MRI 对两种类型 DCIS 均具有较好的诊断效能且有助于不同类型 DCIS 的鉴别。在乳腺癌筛查工作中 X 线和超声结合更有利于不同类型乳腺导管原位癌的检出。对影像学提示为 DCIS-WP 的患者，临床应减少穿刺及冰冻检查，以术后最终石蜡病理为准决定进一步治疗方案。

PU-3287
DCE-MRI 及影像组学在乳腺癌新辅助治疗疗效预测中的应用

彭舒怡,杨帆
华中科技大学同济医学院附属协和医院

目的：探讨新辅助治疗前的 DCE-MRI 图像及影像组学特征对乳腺癌新辅助治疗（Neoadjuvant therapy, NAT）病理完全缓解（pCR）的预测价值。
方法 ：收集 2015 年 6 月至 2018 年 10 月，在我院完成新辅助治疗及后续手术的乳腺浸润性导管癌患者共 73 例，所有患者在治疗前均采用 SIEMENS 3.0T 磁共振行双侧乳腺扫描。根据术后的病理结果,将患者分为 pCR 组和 non-pCR 组。由两名放射科医生在 DCE-MRI 图像上手动分割病灶并提取影像组学特征，采用 LASSO 回归对特征进行降维、筛选。采用 3 种监督学习算法（LR，KNN，SVM）对所筛选出的影像组学特征进行分类建模，并用 ROC 曲线对所构建的模型在训练集中的预测性能进行评价。
结果 ：一般资料及 MR 征象分析显示，pCR 组中三阴型所占比例最大（36.4%），而 non-pCR 组中 Luminal B 型所占比例最大（58.8%），两组患者在分子分型分布上的差异具有统计学意义（P=0.016）。pCR 组中 90.9%（20/22）的病灶表现为肿块， non-pCR 组中肿块所占比例为 49.0%（25/51），两组间的差异具有统计学意义（P<0.001）。影像组学分析显示，使用 LASSO 回归最终筛选出 4 个与 pCR 相关性最佳的影像组学特征用于构建预测模型。其中 LR 分类器相较其他两种方法具有较高的预测效能，训练集的 AUC 为 0.871（灵敏度：0.76，特异度：0.68），测试集的 AUC 为 0.745（灵敏度：0.80，特异度：0.73）。
结论：基于治疗前 DCE-MRI 提取出的影像组学特征可以作为 NAT 疗效的预测因子，利用影像组学特征所构建的预测模型能够有效预测肿瘤组织 pCR。

不同分子亚型乳腺癌的磁共振影像诊断研究

高燕
上海市同济医院(同济大学附属同济医院)

目的：探讨不同免疫组化分子亚型乳腺浸润性导管癌磁共振影像表现特点。方法：回顾性分析 30 例经手术病理证实为乳腺浸润性导管癌患者 3.0T 磁共振影像特点。包括形态学、动态增强时间信号强度曲线（TIC）特征、ADC 值。根据手术标本免疫组织化学检测雌激素受体（ER）、孕激素受体（PR）、人类表皮生长因子受体 2（HER-2）表达水平分为 4 种亚型：Luminal A 型、Luminal B 型、HER-2 过表达型、基底样型。结果：Luminal A 型 2 例、Luminal B 型 12 例、HER-2 过表达型 14 例、基底样型 2 例。单发 21 例，多发 9 例，不同分子亚型乳腺癌形态学不具特征性。四种不同分子亚型病灶平均 ADC 值分别为（0.807±0.02）×10-3mm2/s,（0.953±0.118）×10-3mm2/s,（1.183±0.191）×10-3mm2/s,（0.961±0.103）×10-3mm2/s（F=1.915,p=0.216）。最小 ADC 值分别为（0.630±0.013）×10-3mm2/s,（0.825±0.089）×10-3mm2/s,（0.987±0.139）×10-3mm2/s,（0.704±0.015）×10-3mm2/s，具有统计学差异（F=4.745,p=0.014）。HER-2 过度表达型与其余三组 Luminal A 型、Luminal B 型、基底样型最小 ADC 值差异均有显著性（p=0.024、0.044、0.010）。Luminal A 型与 Luminal B 型的 TIC 曲线可呈速升平台或速升速降型。 HER-2 过表达型的 TIC 曲线呈缓升持续型 3/12、速升平台型 5/12、速升速降型 4/12。基底样型的 TIC 曲线呈速升速降型。结论：不同分子亚型乳腺癌因病理基础不同，表现出不同 MRI 影像特征，HER-2 过表达型 TIC 曲线表现多样，但其扩散受限特点及最小 ADC 值有一定鉴别价值。

PU-3289
乳腺组织标记物对乳腺病灶磁共振评价的影响及临床意义

刘海晴,张汉臣,程子亮,曾伟科,龚畅,胡越,吴卓
中山大学孙逸仙纪念医院

目的 本研究通过对比两种乳腺组织标记物的磁共振表现，探讨不同乳腺组织标记物对 MRI 评价的影响和临床意义。**方法** 回顾性分析 2015 年 11 月至 2018 年 8 月本院 69 位患者（共 78 个肿物）放置两种乳腺组织标记物的乳腺 MRI。在横断位脂肪抑制 T2WI、T1WI 平扫及 T1WI 增强图像上评估乳腺组织标记物影的大小和形状。**结果** 圈状无镍不锈钢合金标记物影的长径大于带状钛金属标记物的长径，在脂肪抑制 T2WI 序列中有统计学意义（P=0.039）。圈状无镍不锈钢合金标记物在 T1WI 平扫及 T1WI 增强图像均比在 T2WI 图像大（P=0.001，P=0.019）。在 T1WI 增强图像中，所有圈状无镍不锈钢合金标记物影均＞6mm，带状钛金属标记物影有 20 例＞6mm，有 8 例≤6mm；前者均为圆形，后者为圆形、点状和条状分别有 20 例、7 例、1 例，两种乳腺组织标记物的大小及形状分类均具有统计学意义（P<0.001、P<0.001）。**结论** MRI 不适于评价放置乳腺组织标记物体积较小的病变，带状钛金属标记物比圈状无镍不锈钢合金标记物产生的伪影范围小，对周围病变的干扰少，应根据临床需要选择合适的乳腺组织标记物和影像评估手段。

PU-3290
A Comparative of Contrast-enhanced Cone Beam Breast CT and Breast MRI for Breast Cancer Diagnosis in women with Dense Breasts

hong lu
Tianjin Medical University Cancer Institute and Hospital， National Clinical Research Center of Cancer， Key Laboratory of Cancer Prevention and Therapy， Tianjin， PR China

Background：
Breast density is considered a risk factorfor breast cancer. The peak breast cancer incidence rate occurs in women aged 45 to 55; in this age range most Asian women have dense breast parenchyma. Whereas MRI has good sensitivity and specificity for the diagnosis of breast cancer, Cone Beam Breast CT (CBBCT) is less costly, and time consuming.

Purpose:
To evaluate and compare the diagnostic value of CE-CBBCT and breast MRI in patients with heterogeneous to extremely dense breasts and to provide evidence for the clinical application of CE-CBBCT.

Method：
Eleven patients (22 breasts: 18 heterogeneously dense, 4 extremely dense) were evaluated. Lesion enhancement was evaluated on both CBBCT and MRI according to the Breast Imaging Reporting and Data System (BI-RADS) system with BI-RADS 2, 3and 4a lesions categorized as benign, and BI-RADS 4b、4C and 5 lesions categorized as

malignant. Histopathology findings were used as gold standard. The detection rate, lesion characteristics and diagnostic accuracy of the two modalities were compared.

Results：
Nineteen histopathologically confirmed lesions, including 11 benign (8 intraductal papilloma, 2 inflammatory lesions and 1 fibroadenoma) and 8 malignant (5 non-specified invasive carcinoma and 3 ductal carcinoma in situ) were evaluated. All lesions were detected by both techniques. No significant differences were found between the two modalities in terms of lesion size (mean size: 3.7 cm: range 1 - 8.7 cm; p>0.05). There were 13 mass lesions (10 benign, 3 malignant). MRI determined 6 of 10 benign masses as BI-RADS 4a and 4 as BI-RADS 3 while CBBCT assessed 1 as BI-RADS 4c, 3 as BI-RADS 4a and 3 as BI-RADS 3. The 3 malignant masses were characterized as BI-RADS 4b, 4c and 5 on MRI and as 4b (n=2) and 4c on CBBCT. Six histopathologically confirmed non-mass lesions were detected (5 malignant, 1 benign).MRI characterized 4 of 5 malignant lesions as BI-RADS 5 and the other as BI-RADS 4c. Conversely, CBBCT characterized 2 as BI-RADS 5, 1 as BI-RADS 4b and 2 as BI-RADS 4c. The benign lesion was characterized as BI-RADS 4a by MRI and as BI-RADS 3 by CBBCT. CBBCT better displayed the shape and distribution of calcifications.

Conclusion：
Contrast-enhanced CBBCT has diagnostic sensitivity and specificity similar to breast MRI in patients with dense breasts, especially for mass lesions. CBBCT can reveal calcifications inside lesions which cannot be detected by MRI. CBBCT has good clinical values in breast cancer diagnosis.

PU-3291
磁共振动态增强检查-Vibrant 技术在乳腺疾病 诊断中的应用

赵丹,罗娅红
辽宁省肿瘤医院医学影像科

目的：通过优化乳腺扫描序列,结合平扫检查,探讨 Vibrant 软件技术在 1.5T 磁共振双侧乳腺动态增强检查中的优势。**方法**：随机选取我院经手术或穿刺病理证实的乳腺疾病患者 35 例，均为女性，中位年龄 45 岁。术前均采用 GE1.5T MR 机行动态增强检查，应用 Vibrant 乳腺动态增强扫描技术。**结果**：在满足高信噪比、高时间分辨率和高空间分辨率的情况下，Vibrant 技术克服了传统动态增强检查的不足，在乳腺疾病的诊断上发挥了重要作用。本组病例诊断的敏感性为 100%，特异性为 77.78%，准确性为 88.57%。**结论**：相对于传统的乳腺动态增强技术，Vibrant 乳腺动态增强扫描技术无疑是一种更好、更先进的技术。

3.0 动态增强 MR 血管成像对乳腺良恶性病变的诊断价值

刘万花
东南大学附属中大医院

摘要：目的:回顾性评估 3.0T 动态增强 MR 血管成像(MRA)对乳腺良恶性病变的诊断价值。方法:经病理证实的 108 例乳腺疾病患者(52 例恶性,56 例良性)作为研究对象,借助 3D MRA 图像计算患侧血管增加(双侧差异血管数≥2)及病变邻近血管数。结果:52 例乳腺恶性病变中 41 例、56 例良性病变中 9 例出现患侧血管增加,以患侧血管增加作为诊断标准,其对乳腺恶性病变诊断的敏感性、特异性及准确度分别 79%、84%及 84%;52 例乳腺恶性病变中 46 例、56 例良性病变中 18 例出现病灶邻近血管,以病灶邻近血管作为诊断标准,其对乳腺恶性病变诊断的敏感性、特异性及准确度分别为 89%、68%及 76%;患侧血管增加的阳性预测值及阴性预测值分别为 82%、81%,病灶邻近血管的阳性预测值及阴性预测值分别为 82%、79%。结论:3D MRA 能有效评估双侧乳腺血管形成。乳腺恶性病变比良性病变更容易出现患侧血管增加及病灶邻近血管。

PU-3293

3.0T 磁共振不同 b 值表观扩散系数值与乳腺癌预后因子及分子分型相关性对比研究

刘万花,张悦
东南大学附属中大医院

摘要：目的对比分析 3.0 T 磁共振扩散加权成像(DWI)不同 b 值下表观扩散系数(ADC)值与乳腺癌预后因子及分子分型的相关性。材料与方法 81 例经手术病理证实为乳腺癌患者,于术前行不同 b 值(b=0、400、800、1000 s/mm^2)DWI 扫描,所有病灶行 ADC 值测量并计算平均值。利用免疫组织化学检测获得雌激素受体(ER)、孕激素受体(PR)、人类表皮生长因子受体 2(,HER2)及 Ki-67 的表达状态,并将其分为 Luminal A 型、Luminal B 型、HER2 过表达型及三阴性型 4 种分子亚型,其中 Luminal B 型又分为 B1 型和 B2 型。根据不同的数据资料分别采用独立样本 t 检验、单因素方差分析及 Kruskal-Wallis 检验进行统计分析。结果 (1)除 b=400 s/mm^{2}时,ER 分别表达阴阳性时的 ADC 值差异无统计学意义外,其余因子在不同 b 值下,不同表达状态的 ADC 值差异均具有统计学意义。(2)除 b=400 s/mm^{2}时,ADC 值与 ER 阳性表达无相关性外,余不同 b 值下 ADC 值与 ER、PR 的阳性表达均呈负相关,与 HER2 阳性表达呈正相关,且当 b=800、1000 s/mm^{2}时,各预后因子阳性表达与 ADC 值间相关系数较高;Ki-67 表达程度与各 b 值下 ADC 值均无相关性。(3)在不同 b 值下,各分子分型间 ADC 值差异均有统计学意义(P<0.05);不同 b 值下 Luminal A 型及 Luminal B 型的 ADC 值间差异具有统计学意义(P<0.05),而 HER2 过表达型及三阴性型则差异无统计学意义(P 均>0.05)。结论扩散加权成像 ADC 值与乳腺癌部分预后因子表达状态及不同分子亚型具有相关性,且行乳腺 DWI 检查时 b 值选择 800 s/mm^{2}为佳。

对于全数字化乳腺 X 线三维钢丝定位术中立位与卧位在乳腺钙化定位应用中的对比探讨

张洪营
天津医科大学肿瘤医院

[摘　要]　**目的** 探讨全数字化乳腺 X 线三维钢丝定位术中立位与卧位在乳腺钙化定位中的应用，对比两种检查方法的应用价值。**方法** 回顾性分析 2016 年 10 月至 2018 年 5 月在我院进行全数字化乳腺 X 线三维钢丝定位术的患者，选取钙化患者，其中分为立位检查者 A 组 157 例，卧位检查者 B 组 86 例。**结果** 本组病例中所有目标钙化灶均全部切除。针尖距离病灶≤2cm ，A 组中

151/157 例(96%)，B 组中 81/86 例(94%)。A 组平均用时 9 分钟，B 组平均用时 16 分钟。**结论** 全数字化三维乳腺 X 线钢丝定位术立位与卧位均能准确定位乳腺中的钙化病灶，指导外科医生准确切除病灶，提高乳腺癌的早期诊断率。

PU-3295

乳腺原发性腺样囊性癌的影像学表现

张淑平,青春,韩敏,刘芳芳,刘佩芳
天津医科大学肿瘤医院

目的：探讨乳腺原发性腺样囊性癌（Adenoid cystic carcinoma，ACC)的影像学表现特征，提高对其认识和术前诊断准确性。方法：按照 BI-RADS 标准，回顾性分析经手术病理证实的 31 例乳腺原发腺样囊性癌的 X 线和超声表现，并与病理进行对照分析。结果：31 例乳腺 ACC 的 X 线基本表现：高密度或稍高密度肿物 16 例（51.6%，16/31），其中 14 例符合一般乳腺癌的典型 X 线表现，诊断 BI-RADS 4C 或 5 类，BI-RADS 4A 和 4B 类各 1 例；等密度肿物 7 例（22.6%，7/31），其中诊断 BI-RADS 4B 类 5 例，BI-RADS 4A 和 3 类各 1 例；2 例表现为混杂密度肿物，BI-RADS 2 类和 4A 类各 1 例；局限不对称致密共 6 例（19.4%，6/31）；所有病例均无钙化。超声表现可分为三种：（1）低回声肿物，共 22 例（70.9%，22/31），其中 14 例符合一般乳腺癌的典型超声表现，诊断 BI-RADS 4C 或 5 类；（2）混合回声肿物，3 例，其中 2 例表现为以高回声为主的混合回声肿物，1 例表现为囊实性混合回声肿物，BI-RADS 分类均为 4B；（3）非肿块样低回声区或混合回声区，共 6 例（19.4%，6/31），均无沿导管走行方向分布趋势。依据 BI-RADS 分类，X 线和超声检查的误诊率分别为 22.6%（7/31）和 12.9%（4/31）。结论：大部分乳腺原发腺样囊性癌的影像学表现无特异性，但某些特定征象（如 X 线上表现为形态不规则、边缘模糊的高密度肿物内含稍低密度或脂肪样密度和/或超声表现为偏高回声为主、不沿导管走行方向分布的非肿块样病变）具有一定提示意义，最终确诊依靠病理并需结合免疫组化结果。

The application value of mammography combined with local point pressure magnifying photography in the screening of benign and malignant breast lesions

Nashan Wu,Qi Qi,JunQin Xu,ZhiHui Chen
Shenzhen University general Hospital

Objective
To evaluate the value of mammography local point pressure magnifying photography in the screening of benign and malignant breast lesions.
Methods

Retrospective analysis of 1658 patients with The conventional position of mammography (CC position and MLO position) combined with local point pressure magnification mammography .The clinical diagnosis combined with pathological examination results were compared by comparing different photographic positions. To explore the accuracy of breast X-ray local point pressure magnifying photography in screening for benign and malignant breast tumors.

Results
All patients underwent routine imaging examination of CC and MLO. Only 332 cases (20.02%) were able to confirm the diagnosis. There were 219 cases of benign diagnosis and 113 cases of malignant diagnosis. All patients underwent X-ray local pressure amplification. After photography, 1450 cases (87.5%) were diagnosed, 1232 cases were benign diagnosed, and 218 cases were malignant. The disease diagnosis rate of routine examination was 20.02%, and the disease diagnosis rate of point-pressure magnifying photography was 87.5%. The difference was statistically significant (P<0.05).

Conclusion
The conventional position of mammography (CC position and MLO position) combined with local point pressure magnification mammography can significantly improve the diagnostic coincidence rate of benign and malignant breast diseases, and play a positive role in the diagnosis of early breast cancer tumors.

PU-3297
乳腺 X 线摄影结合局部点压放大摄影在乳腺良恶性病变甄别中的应用价值

吴娜珊,陈格,陈馨,徐俊卿
深圳大学总医院

目的 评价乳腺 X 线局部点压放大摄影在乳腺良恶性病变甄别中的应用价值。
方法
回顾性分析我院放射科行乳腺 X 线常规 CC 位及 MLO 位摄影并结合乳腺局部点压放大 X 线摄影检查的患者 1658 例，通过对比不同摄影体位给出的临床诊断结合病理检查结果，探究乳腺 X 线局部点压放大摄影在甄别乳腺肿瘤良恶性的准确性。
结果
所有患者均先行 CC 位 及 MLO 位常规影像检查，其中只有 332 例（20.02%）可以明确诊断结果，良性诊断结果 219 例，恶性诊断结果 113 例； 所有患者加摄乳腺 X 线局部点压放大摄影后可以明确诊断结果 1450 例（87.5%），良性诊断结果 1232 例，恶性诊断结果 218 例。常规检查的疾病诊断率为 20.02%，点压放大摄影检查的疾病诊断率为 87.5% .差异有统计学意义 （P＜0.05）。
结论 乳腺 X 线摄影常规摄影体位（CC 位及 MLO 位）结合乳腺 x 线局部点压放大摄影可以提高钼靶摄影对乳腺疾病诊断的检出率与特异性，尤其适用于隐匿部位的小病灶和致密型乳腺的 X 线检查，显著提高乳腺良恶性疾病的诊断符合率，对乳腺疾病的良恶性诊断有积极的作用，有利于提高早期乳腺癌的检出率，具有较高的临床实用价值。

PU-3298

乳腺 X 线摄影的附加特殊体位在检查中的应用

董晓蕾
四川省肿瘤医院

目的：通过探讨附加体位在全数字化乳腺 X 线摄影中的应用，从而为临床提供优质的乳腺 X 线图像。
方法：对 69 例乳腺特殊位置的肿块经乳腺常规 X 线摄影无法显示或显示不清，在常规摄影的内外斜位（MLO）和头尾位（CC）的基础上进行附加体位的拍摄，讨论乳腺 X 线常规体位摄影和附加特殊体位对特殊位置病灶的显示。
结果：69 例特殊位置的肿块中，有 27 例肿块位于乳腺 12 点方向腺体边缘处，并紧贴胸壁，加摄 90°侧位摄影（ML 或者 LM），27 例病灶完全显示。有 19 例肿块位于乳腺外上象限靠近腋窝处，加摄夸大头尾位（XCCL），19 例病灶完全显示。有 8 例肿块位于乳房内下象限靠近乳沟的位置，加摄乳沟位，5 例病灶完全显示，3 例病灶部分显示。有 11 例肿块位于乳腺 6 点钟方向，并紧贴胸壁下缘，加摄 90°侧位（ML 或 LM）主要以乳腺下方与胸壁连接处为主，11 例病灶完全显示。有 4 例肿块位于乳腺侧壁，近腋中线位置，加摄腋尾位（AT）,3 例病灶完全显示，1 例部分显示。
结论：乳腺特殊位置的肿块显示，需要配合乳腺 X 线附加体位的摄影方法，以此提高病灶的检出率，为临床提供优质的图像质量。

PU-3299

乳腺三维立体定位技术在乳腺疾病中的应用

张燕
山西医科大学第一医院

目的：对临床不能扪及的乳腺微小病灶，乳腺 x 线摄影结合三维立体定位穿刺其较高的准确率及精准的定位，是早期乳腺癌定位定性诊断的首选检查方法。
方法：收集 50 名乳腺可疑疾病患者，全部为女性，年龄 28-66，临床触诊阴性，但钼靶片表现异常，经病人同意后穿刺定位并活检。
术前对机器进行校准，根据钼靶片确定可疑病变部位，调整乳腺机到合适位置，拍摄图像，确定病变部位位于压迫板中心，并进行进针。拍摄正负 15°定位像，确定两次拍摄钯点没有移位，如有移位重新拍摄，直至位置居中。确定 x、y、z 三个方向的数值。开始进针并释放导丝，待导丝固定后拔出针套。拍乳腺头尾位、内外斜位片，观察导丝是否位于靶点，纱布包扎并固定体外导丝。
结果：50 名患者定位 52 处病灶，定位满意为 51 处。
病理结果：术后病理结果恶性病变为 19 例，其中癌前病变为 3 例，导管原位癌为 5 例，浸润性导管癌 9 例，粘液癌为 2 例。良性病变 31 例，其中导管癌 8 例，纤维瘤 12 例，非典型增生 11 例。
结论：数字乳腺钼靶摄影对检测乳腺微小病变具有较高的敏感性，原发灶越小，治疗的预后越好。早期诊断在乳腺癌的综合治疗中占有及其重要的地位。而临床不能触及的小病灶立体定位可避免临床医师盲目切除的问题。

锥光束乳腺 CT 平扫下正常乳腺 CT 值初步研究

郑仲涛,康巍,赵欣,蒙丽宇,苏丹柯
广西医科大学附属肿瘤医院

目的 测量锥光束乳腺 CT 扫描得出的正常乳腺腺体、脂肪、肌肉 CT 值的范围并总结不同侧别、象限、腺体分型的乳腺腺体及乳房前后部腺体、脂肪的 CT 值的变化规律。方法 选取 2019 年 6 月至 2019 年 8 月在本院进行锥光束乳腺 CT 检查且为结果阴性的 99 侧乳房，共 58 例患者，年龄 24～74 岁，通过测量乳腺、脂肪、肌肉的 CT 值，比较不同侧别、象限、腺体分型的乳腺腺体及乳房前后部腺体、脂肪的 CT 值有无统计学差异。结果 （1）乳腺腺体 CT 值为（92.0±4.1）HU，脂肪 CT 值为（-126.7±3.0）HU，肌肉 CT 值为（-39.7±4.1）HU；（2）乳腺腺体前部 CT 值为（120.2±4.8）HU，乳腺腺体后部 CT 值为（63.6±3.7）HU，乳腺腺体前后部 CT 值组间差异具有统计学意义（P＜0.05）；（3）乳房前部脂肪 T 值为（-118.8±2.9）HU，乳房后部脂肪 CT 值为（-142.4±4.8）HU，乳房前后部脂肪 CT 值组间差异具有统计学意义（P＜0.05）；（4）非致密型乳腺腺体 CT 值为（76.7±4.9）HU，致密型乳腺腺体 CT 值为（113.6±5.5）HU，两种分型乳腺腺体 CT 值组间差异具有统计学意义（P＜0.05）；（5）乳腺外上象限腺体 CT 值为（88.5±4.1）HU，乳腺外下象限腺体 CT 值为（97.7±4.4）HU，乳腺内上象限腺体 CT 值为（87.0±3.9）HU，乳腺内下象限腺体 CT 值为（94.8±4.4）HU，不同象限腺体 CT 值组间差异具有统计学意义（P＜0.05）；（6）左侧乳腺 CT 值为（90.1±6.4）HU，右侧乳腺 CT 值为（94.1±6.8）HU，两侧乳腺 CT 值组间差异无统计学意义（P＞0.05）。结论 锥光束乳腺 CT 平扫下乳腺腺体 CT 值与乳腺的象限、腺体分型有关，乳房后部腺体及脂肪 CT 值较前部腺体及脂肪 CT 值低。

乳腺癌腋窝淋巴结转移的磁共振成像研究进展

贺帅
辽宁省肿瘤医院

摘要： 乳腺癌腋窝淋巴结转移是患者预后的独立危险因素,因此腋窝淋巴结转移的早期诊断及个体化预测是至关重要的.随着影像诊断技术的进步,磁共振功能成像包括扩散加权成像、动态增强磁共振成像、磁共振波谱成像等越来越广泛的用于乳腺疾病的鉴别及诊断.现就磁共振功能成像评估乳腺癌腋窝淋巴结转移方面的研究进展进行综述.

PU-3302

MRI 技术在乳腺癌诊断中的应用进展

贺帅
辽宁省肿瘤医院

摘要： 乳腺癌作为女性恶性肿瘤的常见病,其发病率和发病人数表现出逐年递增趋势.伴随诊治技术及方案的改进,乳腺癌的诊治方式、疗效监督及预后评估等各方面都有了显著提升,从而也对乳腺癌临床早期诊断的检出率及分期的准确率有了较高的要求.医学影像技术尤其是 MRI 检查在乳腺疾病诊治方面不断取得新突破和新应用,乳腺 MRI 检查技术的角色和作用显得越发重要.MRI 基础及功能序列扫描等多种辅助检查,多角度、全方位提供病灶相关解剖、血流动力学、功能及代谢等信息.因而需要全方面熟悉 MRI 检查技术在乳腺癌诊治中的应用现状,才能使之合理高效的运用于临床诊断、术前分期、治疗方案选取及疗效评估等各方面.

PU-3303
动态增强 MRI 在乳腺癌保乳手术中的应用价值

贺帅
辽宁省肿瘤医院

摘要： 目的:探讨动态增强磁共振成像(magnetic resonance imaging,MRI)在乳腺癌保乳手术中的应用价值.方法:选择保乳手术治疗并经病理证实的乳腺癌患者 54 例.术前均行动态增强 MRI 检查,观察病灶的位置、大小和强化类型等,并与术后病理学诊断结果相对照.结果:手术后病理学检查发现 54 个病灶.动态增强 MRI 对病灶的检出率为 100%,对病灶的定位与病理学诊断结果完全符合;对病灶大小的测量与病理学诊断结果具有较高的一致性(P<0.05);不均匀强化的病灶多为低分化癌(13/19).结论:动态增强 MRI 可评估乳腺癌保乳手术的可能性和预后,具有重要的临床应用价值.

纹理分析在鉴别乳腺 MRI 病灶良恶性的研究

李翼
厦门大学附属翔安医院

:现代社会，乳腺癌的发生概率大大增加，是女性死亡的第二大原因 。在我国虽然发病率不是最高的，但是增长速率已经达到了恐怖的速度，早期发现可以很大的提高治疗率，所以在乳腺诊断上面的研究也越来越多，虽然乳房 X 线摄影是乳房的主要成像方式，但它有其局限性，尤其是密集的乳腺实质。乳腺磁共振成像(MRI)已发展成为重要的辅助工具，因为它是目前最敏感的乳腺痛检测技术。而纹理分析作为 一种新型的研究方法能够很好的根据图像的信息得到组织的情况，也被应用于 MRI 的分析与诊断，尤其是在病灶良性恶性方面有一定的优势，本文选取了大量外的文献材料对这方面的研究进行综述。

PU-3305
乳腺组成致密类型的乳腺 X 线摄影平均腺体剂量研究

高燕
上海市同济医院(同济大学附属同济医院)

[摘要]目的：探讨 ACR 新分型 c、d 乳腺类型的数字化 X 线摄影中平均腺体剂量与压迫力、乳腺厚度相关性。方法：回顾分析荷兰飞利浦公司 mammo 乳腺 X 线摄影系统检查的 c、d 乳腺类型患者各 50 例。管电压、管电流为机器根据组织压迫厚度自动选择。管电压范围 26-28KVp。根据腺体厚度分为 5 组，≤30mm，30-40 mm，40-50 mm，50-60 mm，≥60 mm 以上。记录曝光时腺体厚度（mm）、压力（N）、平均腺体剂量（mGy）。结果：c、d 型两种类型乳腺在实际检查中接受压迫板压力差别没有显著性（p=0.18），两者之间腺体厚度差异具有显著性（c 型：45.31±8.11,d 型：28.03±8.52，p=0.008），c 型平均腺体剂量稍小于 d 型，没有统计学差异（c 型：1.67±0.48, d 型：1.79±0.64，p=0.34）。对于不同摄片体位，MLO 位腺体厚度大于 CC 位，且接受压迫板的压力更大(MLO: 145.80±28.05,CC: 113.50±26.80; p=0.000)，有统计学差异。但两者间平均腺体剂量无显著差异（CC:1.75±0.5，MLO:1.70±0.50,p=0.71）。对于不同腺体厚度，CC 位压力与腺体厚度呈明显负相关，平均腺体剂量与厚度呈正相关。对于不同腺体厚度，1~5 各组间压力差别不具有显著性（p=0.554），平均腺体剂量具有明显统计学差异（分别为

1.33±0.54,1.84±0.45,1.51±0.36,1.71±0.57,1.72±0.55，p=0.003）。**结论：平均腺体剂量在 c、d 两种类型乳腺构成、不同摄片体位中均没有明显区别，纤维腺体构成致密的乳腺腺体厚度相对较小，通过增加压力，降低腺体厚度，自动调节管电流，减少辐射剂量。不同腺体厚度的乳腺接受的平均腺体剂量具有明显差异性，提示实际检查中应注意技术操作与辐射防护。**

PU-3306
CBCT 联合乳腺钼靶对于乳腺癌表现的临床初步探讨

姚娟
新疆医科大学第一附属医院

目的：用锥体束乳腺 CT，乳腺钼靶及乳腺切除标本 x 线分别分析乳腺癌的边缘，毛刺、侵润等特征进行比较探讨锥体束乳腺 CT 的临床价值。**材料和方法：**共 46 例乳腺癌患者的标本经实验室设计的锥体束乳腺 CT 扫描。每例患者均在六个月内进行乳腺钼靶检查，术后再进行乳腺切除标本的 x 线摄影。综合乳腺边缘观察如下指标：形态，毛刺，密度，侵袭，结构紊乱和钙化。**结果：**三种检查方式在钙化、毛刺机形态的检出方面无显著统计学差异。这三种方法在观察乳腺癌侵袭性的指标时有显著统计学差异。结论：初步研究表明，在现有的参数条件下，锥体束乳腺 CT 对于乳腺癌边界和钙化的显示并没有呈现出明显优势，但是其空间定位的优势是明显的，这是我们需要进一步研究的突破点，锥体束乳腺 CT 应于于临床还需要更多的实践。

乳腺导管造影技术在乳头溢液性疾病检查中的质量控制

曾莉,宫悦
新疆伊犁哈萨克自治州友谊医院

目的 常规乳腺导管造影检查方法，尚存在操作难度相对大、分支导管显影不足，对比剂易进入腺泡导致诊断困难等问题进行技术改进，以提高造影的成功率和造影质量。**方法** 采用数字表法将 100 例 120 侧，随机分成 2 组，B 组使用常规方法，A 组在此基础上进行如下改进：⑴术前与病人作充分交流，告知检查的必要性和注意事项；⑵使用非离子型对比剂，注射量参考导管溢液的排出量，总量控制在 0.5～4ml，注射时间 5～10s；注射结束到摄第一张片的时间控制在 30 s 之内，摄片时压迫器压力控制在 6～8 牛顿。**结果** A 组 80 侧中，78 侧一次性造影成功（97.5%），2 侧第 2 次插管造影成功；导管树均显示良好，图像清晰，对比剂保留时间长，摄片时间充足，对溢液有一定的缓解作用。B 组 40 侧中一次性造影成功 32 侧（80.0%），8 侧第 2 次插管造影成功；导管树的充盈程度、图像清晰度，均较 A 组显影淡薄，充盈不充分，导管树显影不完全或对比剂进入腺泡。2 组乳腺导管造影质量及显示效果比较，差异有统计学意义。**结论**术前加强和病人沟通，在术中控制进针深度、对比剂总量及注射压力、注射速度，对比剂类型，以及注射结束到摄片的时限，是提高乳腺导管造影质量的关键因素。因此，正确掌握导管造影技术和严格按操作要求进行质量控制，可提高造影质量，获得更优化的影像信息。

PU-3308
CT 联合超声对直径小于 2 cm 乳腺癌临床确诊的价值（摘要）

张冬雪,丁莹莹
昆明医科大学第三附属医院云南肿瘤医院

目的：观察 CT 联合超声对直径小于 2 cm 乳腺癌的临床诊断价值。
方法：收集直径小于 2cm 乳腺癌患者 20 例，所有患者行 CT 及超声检查，观察这两种诊断方式的影像特点，并与病理结果对比分析。
结果　CT 诊断与病理诊断结果符合率为 85%、敏感性 95%，超声诊断与病理诊断结果符合率为 80%、敏感性 80%。CT 联合超声检查诊断与病理诊断结果符合率为 90%，显著高于 CT、超声单独使用的检查符合率（P<0.05）。20 例早期乳腺癌患者中，浸润性导管癌占比 80%、乳头状癌占比 5%、导管内癌占比 15%。
结论　对直径小于 2cm 乳腺癌应用 CT 联合超声检查具有较高的诊断效果，对乳腺癌早期诊断治疗具有重要意义。

高频彩色多普勒超声及超声造影对乳腺癌腋窝淋巴结转移 的诊断价值

张朝赫,罗娅红
辽宁省肿瘤医院

目的　探讨高频彩色多普勒超声及超声造影对乳腺癌腋窝淋巴结转移的诊断价值。**方法**　回顾性分析 295 例乳腺癌患者腋窝淋巴结的常规超声及超声造影图像，其中淋巴结转移组 198 例，淋巴结无转移组 97 例。记录两组淋巴结的纵横比、皮髓比及血流分布类型，观察其超声造影增强模式，并将两组结果进行对比分析。**结果**　淋巴结转移组的纵横比小于淋巴结无转移组，皮髓比大于无淋巴结转移组，两者相比差异均有统计学差异（P<0.01）。取淋巴结纵横比≤1.8，对诊断淋巴结转移的敏感度及特异度分别高达 63.8%与 65.9%；取淋巴结皮髓比≥1.0，对诊断淋巴结转移的敏感度及特异度分别高达 76.5%与 87.8%。淋巴结转移组血流分布以周围型和混合型居多，而淋巴结无转移组血流分布以中央型居多。对两组淋巴结超声造影的结果分析显示：淋巴结转移组灌注模式表现为不均匀型增强或无增强，而淋巴结无转移组表现为均匀型增强，两组灌注模式之间的差异有统计学意义（P<0.01）。**结论**　高频彩色多普勒超声及超声造影可提高乳腺癌腋窝淋巴结转移的诊断率，具有重要的临床价值。

PU-3310
乳腺 X 线导丝导向立体定位术辐射剂量优化研究

李晶晶,王倩,宋颖,于卫军,李二妮
中国医院科学院肿瘤医院

[摘要]
目的　通过体模及临床研究优化乳腺钼靶立体定位活检术 SNLB 的辐射剂量。

方法 采用不同厚度的 PMMA 板（20-60mm）配合 ACR 乳腺 18-220 体模的核心模块模拟不同压迫厚度的乳腺组织及不同直径的微钙化灶，以手动 Manual 模式 5mA 为变化单位改变管电流为实验组；以自动 AOP 模式为对照组，观察第 7、8 组 A1203 模拟微钙化灶的显示情况，记录每组成像条件下的 mA 值、AGD 及微钙化灶主观评分，分析 mA 值与 AGD、主观钙化评分间的相关性。根据体模研究筛选出的成像参数结合不同患者乳腺压迫厚度和腺体密度，将 61 例患者分 A 组（乳腺压迫厚度≤5cm 且腺体含量≤50%）17 例、B 组（压迫厚度>5cm 或腺体含量>50%）44 例，分别采用超低剂量或¼Dose 模式、¼Dose 或½Dose 模式手动曝光。

结果 管电流 mA 与 AGD 呈线性正相关（R=0.783-0.945）；mA 与微钙化灶主观评分负相关，变化趋势非线性。不同组别的主观评分做 Numear 检验，辐射剂量以 Auto 模式剂量作为基准百分比，不同厚度组别在辐射剂量下降 60%-91%出现具有统计学差异的主观评分衰减。模拟乳腺压迫厚度＜5cm 时，1/2DOSE、 1/4DOSE 以及超低剂量（4mAs）均可满足主观评价的要求；厚度＞5cm 时，超低剂量模式曝光存在风险， 1/2DOSE、 1/4DOSE 可满足主观评价与同厚度对照组相比，主观钙化评分无明显衰减，61 例患者微钙化的显示质量均可满足定位要求，A、B 两组平均腺体剂量分别下降 87.13%、53.94%。

结论 随 mA 递减，AGD 和微钙化主观评分均呈下降趋势。乳腺压迫厚度≤5cm 且腺体含量≤50%组采用超低剂量或¼Dose 模式，压迫厚度>5cm 或腺体含量>50%组采用¼Dose 或½Dose 模式曝光，均可满足 SNLB 术微钙化灶定位需求同时辐射剂量显著下降。

PU-3311
乳腺 X 线引导下穿刺定位在乳腺簇状钙化病变的应用

李慧
徐州医科大学附属医院

目的 乳腺 X 线引导下穿刺定位在乳腺簇状钙化病变的临床应用研究。方法 乳腺影像报告及数据系统分类（BI-RADS）分类为 IV 类和 V 类的簇状钙化病变的患者 68 例，采用乳腺 X 线定位穿刺的方法，定位导丝留置于簇状钙化病变区，在导丝引导下进行手术切检，切除标本再次 X 线摄片，确认钙化灶完全切除，送至病理组织学检查。结果 乳腺 X 线摄片发现簇状钙化病变的患者 68 人均一次性穿刺定位成功，手术均完整切除。病理检查：恶性病灶 52 例，良性病灶 16 例，术前 X 线摄影对乳腺簇状钙化病变诊断的灵敏度，特异度、阳性预测值和阴性预测值分别为 84.62%，75.00%，91.67%和 60.00%，与病理结果一致性 Kappa 值为 0.549（p<0.05）。结论 乳腺 X 线引导下导丝穿刺定位技术可以明确簇状钙化性质，提高早期乳腺癌的检出率，是诊断和治疗为一体的方法。

PU-3312
99Tcm-SC SPECT 与 CT-LG 同机融合显像 VX2 兔乳腺癌腋窝前哨淋巴结的价值

谭红娜[1],王攀鸽[2],王博[3]
1.河南省人民医院
2.河南省儿童医院
3.郑州大学第一附属医院

目的 初步探讨锝 99 标记硫胶体($^{99}Tc^{m}$-SC) SPECT 与 CT 淋巴管造影(CT lymphography, CT-LG)同机融合显示 VX2 兔乳腺癌腋窝前哨淋巴结(sentinel lymph node, SLN)的价值。**方法** 选取 20 只雌性新西兰大白兔建立 VX2 兔乳腺癌动物模型，并先后分别行 CT-LG 和 $^{99}Tc^{m}$-SC SPECT 与 CT-LG

同机融合检查显示腋窝 SLN，且与常规腋窝 SLN 活检和淋巴结清扫手术结果相对照。**结果** (1) 20 只实验兔建模成功率为 95%(19/20)，均依次顺利完成 CT-LG 和 $^{99}Tc^{m}$-SC SPECT 与 CT-LG 同机融合检查。(2) 19 只荷瘤实验兔 CT-LG 检查和 $^{99}Tc^{m}$-SC SPECT 与 CT-LG 同机融合图像上均清楚显示 SLN 及其引流淋巴管的百分比分别为 78.9% (15/19)和 73.7% (14/19)，二者并无明显统计学差异(P＞0.05)。(3) CT-LG 检出腋窝 SLN16 枚，n-SLN7 枚，$^{99}Tc^{m}$-SC SPECT 与 CT-LG 同机融合检查检出 SLN20 枚，n-SLN12 枚；SLNB 手术共 21 枚 SLN，17 枚 n-SLN。比较这三种方法检出腋窝淋巴结的差异，未见明显统计学差异(x^2=1.497, P=0.454)。**结论** $^{99}Tc^{m}$-SC SPECT 与 CT-LG 同机融合检查可有效检出和准确定位腋窝 SLN，可为临床准确识别及定位 SLN 提供一种新的检查方法。

PU-3313
含可疑钙化的乳腺良性增生性病变 MRI 诊断价值

邬昊婷[1],汪登斌[1]
1.上海交通大学医学院附属新华医院
2.上海交通大学医学院附属新华医院

目的：探讨乳腺 MRI 对乳腺 X 线摄影中含可疑钙化良性增生性疾病的诊断价值。
方法：搜集 2014 年 1 月至 2019 年 4 月于我院行乳腺钙化灶定位下活检术或术前钩丝定位局部切除活检术后，经病理证实为良性增生性病变共 48 例患者，51 个病灶，所有患者术前均行乳腺 X 线摄影及 MRI 检查且病灶包含可疑钙化。分析病灶内可疑钙化的形态、分布及其在乳腺 MRI 上的表现，结合患者乳腺 X 线摄影腺体构成、乳腺 MRI 背景实质强化情况，与组织病理学结果进行对照。
结果：48 例患者均为女性，平均年龄 47.2 岁。共 51 个病灶，其中不伴非典型增生良性增生性疾病共 33 个（64.7%），伴非典型增生良性增生性疾病共 18 个（35.3%）。乳腺 X 线摄影中，可疑钙化的形态及分布方式以无定形（30，58.8%）、团簇状（32，62.7%）多见，在伴或不伴非典型增生的良性增生性疾病中无统计学差异；乳腺 MRI 中，病变以非肿块样强化多见（40，78.4%），伴非典型增生者常表现为多区域或区域性（16，61.5%）、不均匀强化（22，84.6%），不伴非典型增生者常表现为线样（6，42.9%）、均匀或不均匀（6，42.9%）强化，均具有统计学差异。乳腺腺体构成以 C 型、D 型多见，乳腺背景实质强化以中度型、显著型多见，在伴或不伴非典型增生良性增生性疾病中无统计学差异。
结论：乳腺 X 线摄影中伴含可疑钙化良性增生性疾病在乳腺 MRI 上以非肿块强化多见，强化分布方式及内部强化模式在伴与不伴非典型增生中存在差异。

PU-3314
全数字化乳腺 X 线引导下俯卧式三维立体真空辅助活检的护理配合

邓建红,柳杰
天津医科大学肿瘤医院

目的：总结全数字化乳腺 X 线引导下俯卧式三维立体真空辅助活检的护理配合。方法：通过使用全数字化乳腺 X 线三维立体定位系统及 ATEC 乳房活检与旋切系统，对 53 例临床触诊阴性、乳腺 X 线平片显示钙化灶的患者进行真空辅助穿刺活检，根据病理结果进行下一步治疗。结果：50 例乳腺钙化灶患者真空辅助活检术均一次性完成，护理效果良好，患者无血肿无并发症发生。剩余 3 例患者手术未成功。病理结果：良性 39 例，恶性 11 例。结论：有效的护理配合可以提高全数字化乳腺

X 线引导下俯卧式三维立体真空辅助活检的成功率，极大地减少并发症的发生，而且此项检查创伤小、操作简单，定位准确，可以有效的为临床减轻手术负担。

PU-3315
浅析 X 线引导下真空辅助乳腺活检的技术要点

王红彬
天津医科大学肿瘤医院

目的：探讨 X 线三维立体定位真空辅助乳腺活检系统对乳腺内簇状钙化灶穿刺活检的技术要点。**方法**：回顾性分析我院 2017 年 11 月至 2018 年 10 月 49 例乳腺内有簇状钙化灶的患者行 X 线三维立体定位真空辅助乳腺活检的手术资料。**结果**：49 例患者中有 2 例因乳房压迫厚度较薄无法实施旋切而放弃手术,1 例因乳房压迫后病变距离乳头位置较近而放弃手术，最终完成手术 46 例，有 39 例应用针槽 20MM 旋切探针，7 例应用针槽 12mm 旋切探针，一次压迫找到钙化灶 26 例，经改变体位压迫乳房找到钙化灶 5 例，未改变体位但重复压迫乳房找到钙化灶 15 例。定位准确 43 例，定位不准 3 例。旋切后标本组织 X 线摄影后均显示有钙化。术中未出现严重并发症，未出现感染病例。**结论**：熟练掌握 X 线三维立体定位真空辅助乳腺活检操作技术要点是此项手术成功与否的关键，对术中及术后并发症的发生和患者接受 X 线剂量的多少起决定性的作用。

PU-3316
乳腺三维断层合成摄影引导下导丝定位新技术的临床应用价值

李丽丽,林青
青岛大学附属医院

目的 探讨乳腺三维断层合成摄影(DBT)引导下导丝定位新技术的应用价值。**方法** 收集 2017 年 5 月至 2019 年 2 月我院临床不可触及和乳腺常规二维摄影片(DM)显示阴性，DBT 发现可疑病变 12 例，均行 DBT 引导下导丝定位术，外科切除定位区域病变组织，行乳腺断层标本摄影，确认病变完整切除后送病理科进行组织病理检查。**结果** 本组均定位准确，病变组织切除完全，病理诊断恶性病变 4 例（浸润性导管癌 1 例、导管内原位癌 3 例、），占 33.33% ；良性病变 8 例（导管内乳头状瘤 2 例、放射状瘢痕 3 例、腺病伴慢性炎 1 例、腺病 2 例），占 66.67%。**结论** 临床不可触及和 DM 显示阴性的病变，DBT 引导下导丝定位新技术对 DBT 发现可疑病变并准确切除具有较大的优势，值得临床推广应用。

PU-3317
钼靶 X 线定位穿刺活检对乳腺微小病灶的诊断价值

邓丽佳,李刚,祝青
川北医学附属三台医院

目的探讨乳腺 X 线定位穿刺活检术对乳腺微小病灶的诊断价值。方法回顾分析临床触诊阴性而乳腺钼靶 X 线片显示的微小病灶 45 例,采用乳腺钼靶 X 线定位下穿刺,并留置导丝在微小病灶 区,引导手术将病灶切除活检。结果 45 例微小病灶均一次性定位成功,定位满意率 94%,手术切除完整。病理检查:恶性病变 21 例,其中浸润性导管癌 12 例,导 管内癌伴早期浸润 5 例,导管内癌 1 例,髓样癌

3 例;良性病变 24 例。结论乳腺钼靶 X 线定位穿刺活检术,定位准确,诊断明确,能确定乳腺微小病灶的性质,是目前诊断早期乳腺癌的有效方法。

PU-3318

乳腺 X 线钙化灶投影位置与二维体表定位的关系

刘茜茜,王光,赵旸
吉林大学第一医院

目的 ：探讨乳腺 x 线钙化灶的诊断方法。
方法： 回顾临床未触及到乳腺病变患者,根据患者乳腺条件将不可进行钼靶引导下穿刺及导丝定位术筛选出 79 例，对其 79 例患者行乳腺 x 线摄影,用金属铅做标记，使其金属铅的体表位置与病灶投影位置一致。
结果： 79 例患者，其中 23 例硬化性腺病，17 例早期乳腺癌，13 例乳腺小叶增生，26 例重度非典型增生，成功率为 100%。
结论：乳腺钼靶二维定位能够帮助乳腺钙化病灶准确定位，乳腺钼靶摄片立体定位是诊断乳腺钙化病灶的重要方法定位的准确性与乳腺是否下垂无关,与病灶所占象限或方向及乳腺大小有关，过大的乳腺在行 ML 位时，因乳腺过大向上托举时腺体组织活动会导致病灶位置移动。

PU-3319

钼靶二维钩针定位在不能扪及乳腺钙化性病变中的定性诊断及治疗中的应用

陈洋,蔡亲磊,谢永玲,张小花
海南省人民医院

目的：探讨钼靶二维钩针穿刺定位对不可触及乳腺钙化性病变的诊断价值及其对乳腺外科手术的指导作用。
方法：采用 GE Senograghe DS 乳腺钼靶机及数字化二维定位穿刺系统，对 33 例临床不能触及肿块行常规乳腺钼靶头尾位(CC)和侧斜位(MLO)，发现乳腺细小钙化病变进行术前乳腺钩针定位，然后，切取组织标本(连定位钩丝)再行钼靶检查。
结果：经钼靶钩针引导下行乳腺手术活检 38 例中，全部病例均一次性成功定位与切除，其中 2 例为病变贴近胸壁，仅小部分置于穿刺野内，导致定位钩丝偏离；定位正确率达 94.7%。并且根据微小钙化形态、大小、数量和密集度等表现可反映病变性质和范围，本组病理检查结果：恶性 29 例，导管原位癌 16 例，浸润性导管癌 9 例，导管内乳头状癌及小叶原位癌各 2 例，良性病变 9 例。可见对这一类钙化是钩针定位手术活检定性的重要对象；钙化灶的出现对乳腺癌的诊断有十分重要的意义。
结论：乳腺钼靶二维钩针穿刺定位简单易行，在乳腺微小钙化病变的诊断中起着重要的作用，并可指导乳腺外科医生准确切取病变，减少不必要的乳腺损害，使切除范围更准确。

PU-3320

乳腺高危病变的乳腺 X 线诊断及技术进展

尤超
复旦大学附属肿瘤医院

乳腺高危病变包括良性病变及原位癌，具有发生乳腺癌的风险。高危病变首诊主要依赖于穿刺活检，但首诊后存在一定的病变升级率。对于不同的高危病变，如不典型导管增生（ADH）、乳头状瘤伴不典型增生、放射状瘢痕、小叶原位癌（LCIS）、不典型小叶增生（ALH）、黏液囊肿样病变、平坦上皮非典型增生等，乳腺 X 线检查的诊断及处理原则并不完全相同。就乳腺 X 线检查对高危病变的诊断、处理、预后评估的研究进展予以综述。

PU-3321
全数字化乳腺 X 线三维立体定位系统引导下的核芯针活检技术对乳腺病变诊断的临床价值

张贝[1],杨迪[2],聂品[2],上官芳芳[2],王英[2],户莉娜[2],陈宝莹[2]
1.陕西省肿瘤医院
2.空军军医大学附属第二医院

目的 探讨全数字化乳腺 X 线三维立体定位系统引导下的核芯针活检技术对乳腺病变诊断的临床应用价值
方法 回顾性分析 21 例在全数字化乳腺 X 线三维立体定位系统引导下行核芯针活检的患者，21 例患者共 21 个病变，活检前 X 线摄影检查表现为包块（4 例）、可疑钙化（15 例）及腺体纠集（2 例），BI-RADS 分类为 4 类，根据乳房 X 线片（0°及 90°）人工计算进针深度，利用全数字化乳腺 X 线三维立体定位系统自动计算进针深度，将此值与人工计算的进针深度值相结合，再结合患者皮肤弹性以及腺体结构情况，调整进针深度，局部麻醉，行小切口置入穿刺针，再行 X 线摄片，观察穿刺针位置，随即激发穿刺枪取出组织，在病变不同位置多次取出组织。将取出组织行 X 线摄影，观察
结果 21 例患者平均乳房厚度 43mm，最厚 63mm，最薄 28mm，行垂直活检 19 例，水平活检 2 例，患者采取侧卧位（19 例）及坐位（2 例），平均整个操作时间 45 分钟，穿刺时间 25 分钟，穿刺针深度调整范围是 3-5mm，采用 14G 穿刺针，根据病变情况穿刺组织条 4-8 条，对取出的组织条行 X 摄影，针对可疑钙化的病例，取出的组织条中均查见钙化灶。21 例患者均未出现严重不良反应，2 个病人出现头晕、恶心、心慌，出现不良反应的患者均为坐位行穿刺活检，经休息、心理安抚后能很快恢复，穿刺结果 6 例乳腺癌（导管内乳头状癌 1 例、导管原位癌 2 例、浸润性乳腺癌 3 例、），15 例良性病变，随诊 1 年后未见明显变化
结论 对乳腺病变行全数字化乳腺 X 线三维立体定位系统引导下的核芯针活检时优先选择患者呈侧卧位，可有效减少不良反应发生；14G 穿刺针，取组织条≥4，阳性率较高。该技术穿刺准确性高，简单易行，具有推广价值

PU-3322
疲劳状态下放射科规培医生借助 AI 辅助软件对肺内不同大小结节检测效能的比较研究

孙丹丹
辽宁省大连市中山区大连大学附属中山医院

目的：放射科规培医师在疲劳状态下借助 AI 软件进行肺结节检测，比较其对大于等于 4mm 结节与小于 4mm 结节检测的优效性。
方法：收集 2019 年 1 月 1 日到 2019 年 1 月 10 日大连大学附属中山医院双源 CT 胸部病例 200 例。由 4 名低年资影像规培医师（从事影像诊断工作满 4 月以上）对上述病例肺结节标注，测试前进行统一培训。放射科规培医师，在疲劳状态下（即一天日常工作满 8 小时以上）使用 AI 软件辅助进行阅片，自行调节窗宽窗位观察 1mm 薄层图像，并记录结节位置、大小、数目。最终，肺结节检测结果与金标准（由 2 名从事影像诊断工作 8 年及以上的医师结合 AI 辅助软件共同阅片，意见不同时由第 3 名从事影像诊断工作 15 年及以上的医师进行会诊，最后做出一致诊断）进行比对，分别统计长径≥4mm 与＜4mm 结节的正确、误诊、漏诊数，并计算两组敏感度、准确率、假阳性率、假阴性率，应用 χ^2 检验分析两组敏感度是否存在差异，P＜0.05 为差异有统计学差异。
结果：≥4mm 结节组与＜4mm 结节组敏感度分别为 0.80、0.77，p＜0.05 有统计学意义，两组准确率分别为 0.73、0.90，假阳性率分别为 0.44±0.73、0.44±0.86，假阴性率分别为 0.3±0.63、1.2±1.69。疲劳状态下结合 AI 对≥4mm 结节的检测敏感度（0.80）较＜4mm 结节的检测敏感度（0.77）高，且假阳性率、假阴性率均降低。
结论：放射科规培医师在疲劳状态下应用 AI 软件后对肺内不同大小结节检出效能有差异，且对≥4mm 结节的检出效能优于＜4mm 的结节。

驾驭或被取代？医学影像 AI 时代放射诊断医师的职业思考

张光明
云南省第二人民医院

【摘要】目的　浅谈医学影像 AI 背景下，放射诊断医师面临的机遇与挑战，应该如何做出正确的职业思考。 方法　通过我科放射诊断医师 1 年多来使用医学影像 AI 技术筛查肺小结节的情况，以及目前医学影像 AI 技术的应用领域分析研究。 结果　医学影像 AI 技术在辅助筛查肺小结节方面能够明显降低漏诊率，减轻放射诊断医师日常繁重的工作，在其他领域的应用也价值突显。 结论　医学影像 AI 技术不但不会取代放射诊断医师的地位，反而会在正确的引导下发挥它的更大优势，为人类的健康保驾护航。

PU-3324
Title：Ensemble learning-based analysis of T1-weighted and T2-weighted magnetic resonance (MR) radiomics for the prediction of prostate cancer grades with small-scale cohort

huipeng ren,Zhuanqin Ren,Qing Fan,Xiaohu Wang
Baoji Central Hospital

Purpose: The present study aimed to construct predictive models for prostate cancer grading by
combining T1-weighted and T2-weighted magnetic resonance (MR) radiomics features.
Methods:A cohort of 33 samples of prostate cancer (PCa) with T1-weighted images (T1WI) and T2-weighted images (T2WI) was gained from the Baoji Central Hospital. T1WI and

T2WI were co-registered by Statistical Parametric mapping 12 (SPM 12) and then fused via 3DSlicer. After Adaptive Synthetic (ADASYN) was used to balance the data, 1132 radiomics features were extracted through PyRadiomics and selected by XGBoost and Random Forest which were continued to construct the prognostic model afterwards. The performance of two models was evaluated by accuracy and receiver operating characteristics curve (ROC). The best
model—XGBoost was chosen as the higher accuracy and AUC.
Results: To prevent over-sampling, patients' number went up to 53 after ADASTN (12, 13, 16, and 12samples in 1 to 4 Gleason group respectively.). Top 17 features in T1-T2, top 14 features in T2 and top 6 features in T1 were selected and inputted into XGBoost and Random Forest. Their accuracy was 0.69, 0.75 and 0.67 in XGBoost and 0.44, 0.62 and 0.47 in Random Forest separately. Besides, their mean AUC was 0.79, 0.91 and 0.80 in XGBoost and 0.87, 0.78 and 0.73 in Random Forest.
Conclusions:(1) The integrated learning algorithm using XGBoost can effectively predict prostate cancer grade based on T2WI radiomics features. (2) T2WI has a better prognostic performance compared with T1-T2 fusion images.

PU-3325

Study on the detection capability of AI assisted software in detecting long-axis diameter <4 mm pulmonary nodules by resident in radiology department

Dandan Sun
Affiliated Zhongshan Hospital of Dalian University

MOTIVATION: To evaluate the detection capability of artificial intelligence (AI) assisted software in the detection of long-axis diameter <4 mm pulmonary nodules by resident.
METHOD AND MATERIALS: A total of 169 patients were collected. One senior radiologist with more than 10 years' experience read CT images based on the initial diagnosis of another senior radiologist with similar experience and a final decision was subsequently conducted by deputy chief radiologist with more than 15 years' experience to determine the ground truth lung nodules. All readings were performed on 1 mm slice thickness CT images with the assistance of AI software (InferRead CT Lung Research, Infervision, Beijing, China). One resident read the images without AI software (group A). After two weeks washout period, the same resident read CT images again with AI software (group B). The number of nodules, long-axis diameter, location and labeling time were recorded. The number of true positive nodules, false positive nodules in group A and B were obtained by comparing with the gold standard nodules.
RESULTS: Group A detected 511 nodules, including 442 true positive nodules and 69 false positive nodules with a sensitivity of 0.49±0.26 and a false positive rate of 0.41 per CT scan (69/169). Group B detected 858 nodules including 813 true positive nodules and 45 false positive nodules with a sensitivity of 0.82±0.24 and a false positive rate of 0.27 per CT scan (45/169). The sensitivity in group B was 33% higher than that in group A (p<0.05) and the false positive rate in group B was 14% lower than that in Group A(p<0.05).

CONCLUSION: Compared with resident without AI, the AI-assisted resident achieve much higher detection sensitivity and lower false positive rate of long-axis diameter <4 mm pulmonary nodules .

PU-3326

2D and 3D texture analysis to predict lymphovascular invasion in lung adenocarcinoma

Pei Nie,Guangjie Yang
The Affiliated Hospital of Qingdao University

Purpose: Lymphovascular invasion (LVI) impairs surgical outcomes in lung adenocarcinoma (LAC) patients. Preoperative prediction of LVI is challenging by using traditional clinical and imaging factors. The purpose of this study was to evaluate the value of two-dimensional (2D) and three-dimensional (3D) CT texture analysis (CTTA) in predicting LVI in LAC.
Methods: A total of 87 LAC patients (36 LVI-present LACs and 51 LVI-absent LACs) were retrospectively enrolled. Clinical data (age, gender, smoking history) and CT findings (maximum diametre, lobulation, speculation, bubble lucency, air bronchogram, vessel convergence, pleural indentation, and component of the nodule) were analyzed to select independent clinical predictors. Texture features were extracted from 2D and 3D regions of interest (ROI) in 1.25 mm slice CT images. The 2D and 3D CTTA signatures were constructed with the least absolute shrinkage and selection operator algorithm and texture scores (Tex-scores) were calculated. The optimized CTTA signature was selected by comparing the predicting efficacy and clinical usefulness of 2D and 3D CTTA signatures. A CTTA nomogram was developed by integrating the optimized CTTA signature and clinical predictors, and its calibration, discrimination and clinical usefulness were evaluated.
Results: Maximum diametre and air bronchogram were independent clinical predictors. 837 texture features were extracted from 2D and 3D ROIs and reduced to 9 features to build 2D and 3D CTTA signatures. There was no significant difference (P=0.127) in AUC between the 2D signature (AUC [area under the curve], 0.907; 95% confidence interval [CI], 0.840-0.974) and the 3D signature (AUC, 0.851; 95% CI, 0.767-0.935). Decision curve analysis showed the 2D signature outperformed the 3D signature in terms of clinical usefulness. The 2D CTTA nomogram (AUC, 0.909; 95% CI, 0.846-0.872), which incorporated the 2D signature and clinical predictors, showed similar discrimination capability (P=0.798) as the 2D signature.
Conclusions: Both 2D and 3D CTTA signatures have favorable performance in predicting LVI in LAC, but 2D signature had a higher net benefit. The 2D CTTA nomogram with the 2D signature and clinical predictors incorporated do not show incremental value to the 2D signature for individual LVI prediction in LAC.

PU-3327
放射组学标签：一种优于 CT 形态学特征的 NSCLC 患者 EGFR 基因突变状态的生物标记物

涂文婷[1],范丽[1],方梦捷[2],董迪[2],刘士远[1]
1.海军军医大学第二附属医院（上海长征医院）
2.中国科学院自动化研究所分子影像重点实验室

目的：对比放射组学标签和 CT 形态学特征对于 NSCLC 患者 EGFR 基因突变状态的预测价值，进而建立并比较不同的 EGFR 基因突变预测模型。
方法：回顾性收集 2012 年 4 月至 2016 年 2 月的 243 例非小细胞肺癌（NSCLC）作为训练集，另外收集 2015 年 5 月至 2016 年 10 月的 161 例 NSCLC 作为独立验证集。放射组学特征提取于术前胸部 CT 平扫图像的肿瘤感兴趣体积（VOI）。使用 Mann-Whitney U 检验、卡方检验对所有特征及放射组学标签进行单因素分析。无监督一致性聚类分析用于分析放射组学特征的代表性和减少冗余特征。多因素 Logistic 回归分析用于构建放射组学标签和 EGFR 基因突变预测模型。ROC 曲线用于评价不同特征及模型的预测效能，并采用 Delong 检验比较特征之间、模型之间的效能差异是否有统计学意义。
结果：在 234 个放射组学特征中，筛选出 93 个重复性高及区分度好的特征。放射组学标签（由一个直方图特征、两个纹理特征组成），相比于所有临床特征和形态学特征，显示出最佳的 EGFR 基因突变预测性能（在训练集和验证集中的 AUC 分别为 0.762、0.775，$P<0.05$）。EGFR 基因突变整合模型由最大直径、位置、性别以及放射组学标签构成。在训练集和验证集中，相比于其它两个临床模型，整合模型均显示出最好的预测价值（在训练集和验证集中的 AUC 分别为 0.798、0.818）。
结论：放射组学标签是一种优于 CT 形态学特征的、可用于预测 NSCLC 患者 EGFR 基因突变状态的生物标记物。此外，基于放射组学标签的 EGFR 基因突变整合模型具有较高的预测效能，可辅助临床靶向治疗。

PU-3328
A reliable prediction model for renal cell carcinoma subtypes based on the radiomic features extracted from the 3D multi-phase enhanced CT image

Haijie Zhang[1,2],Fu Yin[3],Menglin Chen[2],Ge Wen[2]
1.Shenzhen Second People's Hospital
2.Southern Hospital of Southern Medical University
3.School of Computer and Software， Shenzhen University

Purpose: Considering the different treatment methods for different renal cell carcinoma (RCC) subtypes and the risks and limitations of pathological biopsy, we aimed to construct an effective and reliable prediction model to distinguish RCC subtypes by using 3D multi-phase enhanced CT radiomics features (RFs), which can help us to make individualized treatment in a non-invasive way.
Methods: A total of 210 RCC subtypes confirmed patients were included in this study (143 clear cell RCC, 25 papillary RCC, 29 chromophobe RCC, and 13 other RCC). The 3D multi-phase enhanced CT based radiomic features (RFs) were used to construct the

prediction model including: non-contrast phase (NCP), cortico-medullary phase (CMP), parenchyma phase (PP), excretory phase (EP), and an all-phase (ALL-P) which contains all the single-phase information. The ensemble learning stratified bagging method was applied to predict the different RCC subtypes by using LASSO regression and one vs. rest logistic regression algorithm. Five-folds and external stratified cross-validation was used to assess the performance among the different prediction models. **Results:** 105 RFs were extracted from each single phase of CT scan. The study found 4 CMP, 3 PP, 1 EP and 1 NCP RFs were significantly in the All-P model and there was no overlap with the other 4 single-phase model. The prediction efficiency of All-P was the best, showed diagnostic accuracy of 0.81 (AUC, 0.853; precision, 0.717; recall, 0.799, kappa, 0.579).
Conclusion: The All-P prediction model based on the 3D RFs is an effective and reliable prediction model for distinguishing RCC subtypes in a non-invasive way before the treatment.

Automatic prostate cancer segmentation and location on ADC map using U-Net convolutional neural network

Lina Zhu[1],Chao Han[1],Xiang Liu[1],Xiaoying Wang[1],Weipeng Liu[2],Jingyuan Zhang[2],Xiangpeng Wang [2],Xiaodong Zhang[1],Ge Gao[1]
1.Peking University First Hospital
2.Beijing Smart Tree Medical Technology Co., Ltd.

Objective: To develop an automatic approach using U-Net convolutional neural network (CNN) for prostate cancer (PCa) detection, segmentation and location on apparent diffusion coefficient (ADC) map. **Methods:** This retrospective study included 184 PCa patients confirmed by TRUS-guided systematic plus targeted biopsy after MRI examination from June 2017 to March 2019. 129/18/37 patients were randomly selected for training/validation/testing, respectively. Ground truth of PCa lesion segmentation was obtained using manual delineation by an experienced urogenital radiologist on ADC

map (DWI b=1400 s/mm2) in reference to the pathological findings. After image preprocessing of fully automatic segmentation of the whole prostate gland, a U-Net CNN was trained for the PCa lesion segmentation. The computer-generated segmentation results were compared with the manual segmentation results. Dice similarity coefficient (DSC) was used as an accuracy measure of PCa lesion segmentation and sensitivity of lesion detection was evaluated. Additionally, the accuracy of PCa automatic location in sextant-sector was also assessed. **Results:** The mean DSC of the model for testing set was 71.5±8.2%。For the 51 PCa lesions in testing set labeled by the expert, the sensitivity of lesion detection is 96.1% (49/51). The model accuracy of automatic PCa localization in sextant-sector was 90.1% (200/222), the sensitivity for PCa region detection was 95.5% (64/67), and the specificity was 87.7% (136/155). **Conclusion:** This fully automatic strategy using U-Net convolutional neural network provide relatively satisfactory performance in PCa detection and segmentation on ADC map. The model has high accuracy for automatic localization of PCa.

PU-3331
基于骨盆正位 X 线和深度学习构建髋关节智能测量模型的可行性研究

杨巍[1,2],龚向阳[1,2],叶琴[1,2]
1.浙江省人民医院
2.杭州医学院人工智能与远程影像研究所

研究目的：基于骨盆正位 X 线和深度学习神经网络，研究构建成人髋关节发育不良（DDH）指标智能测量模型的可行性。
研究方法：通过 PACS 系统回顾性采集骨盆正位 X 片 5180 例，从中随机选择 1060 例作为训练集和验证集，另随机选择 200 例作为测试集。选取临床常用的四项成人 DDH 测量的指标：外侧 CE 角、臼顶倾斜角、Sharp 角、头臼指数，左右两侧分别测量。确定测量指标所涉及的关键点，对每个关键点进行命名，由一名放射科医师利用 JPHV 标注软件在骨盆正位片上进行所有关键点标注，以坐标（x,y）的形式保存。将数据随机分为 70％训练集和 30％验证集，基于深度学习神经网络建模，通过训练集和验证集调整优化模型参数，建立成人 DDH 智能测量模型。根据上述测量指标的定义，比较模型预测与人工标注的一致性。采用 medcalc15.2.2 统计软件进行相关性及一致性分析。
研究结果 ：模型预测与人工标注所计算的 8 个指标相关性系数 r 均大于 0.7，P<0.0001：Pearson 相关分析：头臼指数 r=0.8514（左）、r=0.7212（右），Sharp 角 r=0.9029（左）、r=0.8596（右），外侧 CE 角 r=0.8760（左）、r=0.7802（右）；Spearman 等级相关分析：臼顶倾斜角 rs=0.800（左）、rs=0.841（右），（P<0.0001）。进一步 ICC 一致性分析，头臼指数 ICC=0.8341（左）、ICC=0.6650（右），Sharp 角 ICC=0.8923（左）、ICC=0.8321（右），外侧 CE 角 ICC=0.8562（左）、ICC=0.7405（右），臼顶倾斜角 ICC=0.8600（左）、ICC=0.8465（右），除了右侧头臼指数及外侧 CE 角外，其余 ICC 均大于 0.75。
研究结论：成人髋关节发育不良（DDH）指标智能测量模型与人工标注具有较高的一致性，可以成为 X 片智能测量有效工具。

PU-3332

Image reconstruction kernels in determination of pulmonary lesion benign/malignant classification using deep learning (DL)-based computer aided diagnostic system

lin lin,Wenfei Liu,Jing Yu,Qing Zhang
Affiliated Zhongshan Hospital of Dalian University

OBJECTIVE: Different reconstruction kernels were often used to achieve the improved image qualities for diagnostic decision. The aim of this study is to evaluate the effect of different reconstruction kernels in the detection of malignancy/benign of pulmonary lesions using a available diagnostic image processing software.
METHOD AND MATERIALS:
A total of 68 patients (mean age: 56.31±14.86 years, range 26-83 years) underwent routine chest plain CT scans were collected retrospectively from May 1, 2018 to February 27, 2019. All of the 38 malignant lesions were pathologically proven, while the benign lesions were diagnosed based on pathology or clinical follow-up by attending radiologists. These results were reviewed by board-certified expert panel and served as gold standard. Different reconstruction kernels: sharp (B70) and soft (B30) kernels, were applied to produce images which then used as inputs into a commercial DL-based diagnostic image processing system to classify the pulmonary lesions into malignant or benign lesions. After processing, the performance was evaluated by the area under the ROC curve (AUC) from the score the software assigned to each lesion against the gold standard. The detection and precision rate under different reconstruction kernels were assessed and compared using Chi-square tests and kappa score between groups.
RESULTS:
Reconstruction kernel of B30 achieved AUC of 0.785, while reconstruction kernel of B70 accomplished a higher AUC of 0.821, suggesting an improved prediction of lesion characteristic. For benign lesions, the detection rate for B30 and B70 were 73.7% (28/38) and 97.4% (37/38), and the precision rate were 86.8% and 81.6%. Diagnostic accuracy rate and consistency were found no statistical difference between the two reconstruction kernels (p=0.688, kappa score=0.409)
For malignant lesions, B30 and B70 achieved detection rate of 81.6% (31/38) and 92.11% (35/38); while achieved precision rates were 71.05% and 81.6%, respectively. However, there was no statistical difference in diagnostic accuracy and agreement rate between B30 and B70 (p=0.125, kappa score=0.713).
The two-way ANOVA shows when analyzing reconstruction kernel as the main effect, diagnostic performance was at the boarder-line difference (p=0.054).
CONCLUSION:
B70 demonstrated a trend of better performance in lesion-wise detection and malignancy classification, however, B30 had advantage in classification of benign lesions at non-contrast CT. It was tendency that different reconstruction kernel may have an influence on pulmonary lesions detection and benign/malignant classification.
CLINICAL RELEVANCE/APPLICATION

B70 reconstruction kernel may hold the potential to improve detection of pulmonary lesions, however radiologists should consider the combination of B30 reconstruction kernel when judging the risk degree of pulmonary lesions for better operation decision.

PU-3333

Volumetric apparent diffusion coefficient histogram analysis on gallbladder carcinoma

sisi Wu,Zhen Li
Department of Radiology, Tongji Hospital, Tongji Medical College, Huazhong University of Science and Technology

Objective: To evaluate the diagnostic performance of histogram analysis of apparent diffusion coefficient(ADC) derived from diffusion-weighted imaging (DWI) for differentiating malignant from benign gallbladder diseases.
Materials and methods: Our study collected 789 patients with gallbladder disease who had undergone DWI scan for preoperative evaluation in Tongji Hospital from Septemper2017 to December2018,and finally 86 patients were enrolled after excluding unqualified cases.Preoperative DWI images of 86 patients with gallbladder disease confirmed by surgery or puncture pathology were measured by two radiologists. Volumetric ADC maps were generated using all slices of the DWI images to obtain histogram parameters, including mean, median, 10th percentile, 25th percentile, 75th percentile, 90th percentile ADC, and SD ADC values, as well as skewness, kurtosis, and entropy.The weighted-K test was used to examine the consistency of the results measured by the two radiologists. Comparisons of these parameters were made by Mann-Whitney U test .The sensitivity and specificity were calculated according to the area under the ROC curve (AUC) to evaluate the differential diagnosis on malignant and benign gallbladder diseases.
Results:1.The consistency analysis of the measurement data has good credibility that ICC range from 0.715 to 0.872.
Mean ADC, median ADC, 10th,25th,75th and 90th percentile ADC of gallbladder cancer were significantly lower than those of benign diseases ($p<0.001$).
SD and entropy of gallbladder cancer were higher than those of benign disease,but there were no differences in kurtosis and skewness among these gallbladder diseases.
The areas under the ROC curves (AUC) of the parameters ,including ADC mean, 10th percentile, 25th percentile, 50th percentile, 75th percentile, 90th percentile, standard deviation, kurtosis, skewness，entropy were 0.856、0.963、0.959、0.942、0.908、0.721、0.861、0.526、0.513、0.612，respectively.The 10th percentile yielded the highest AUC that range from 0.959 to 0.968. It had the largest Yoden index when the critical value is 95,and its specificity and accuracy are 89.5% and 95.4% respectively.
Conclusions: Volumetric apparent diffusion coefficient histogram analysis could be helpful for diagnosing gallbladder cancer.

PU-3334

Glioma: MRI radiomics in prediction of preoperative glioma-associated epilepsy

Ankang Gao[1], Pan Sun[2], Jie Bai[1], Lin Shi[2], Jingliang Cheng[1]
1. the First Affiliated Hospital of Zhengzhou University
2. Department of Imaging and Interventional Radiology, The Chinese University of Hong Kong, HK

Purpose: To investigate whether radiomics feature extracted from MRI could improve glioma epilepsy prediction in patients with glioma.

Methods:

MR images of patients from Picture Archiving and Communication Systems (PACS) scanned on 3.0 T MR scanner (Prisima Siemens Healthcare, Erlangen, Germany) of our hospital date from 2016 Aug. to 2018 Aug. MRI sequence including: axial T2-weighted fast spin echo, T2 tirm dark-fluid images, Diffusion weighted images (DWI) , ADCs, post-contrast 3D MPRAGE-T1 and axial post-contrast MPRAGE-T1. Patients who underwent surgery and pathologically proved to be glioma after MR scanning less than one week were recruited. GAE was diagnosis as glioma patients who had preoperative complained simple or complex seizures. By SPSS statistics software (version 21.0, IBM), independent t-test or Chi-Squared was used to observe the difference of gender, age and glioma grade between glioma GAE group and non-GAE group

Quantitative features included first-order statistics (18) and texture-based features(Gray Level Cooccurence Matrix (24), Gray Level Run Length Matrix (16), Gray Level Size Zone Matrix (16), Neigbouring Gray Tone Difference Matrix (5),Gray Level Dependence Matrix (14)) from ROIs of every sequence as well as 14 shape features were extracted. For selecting the valuable feature in predicting epilepsy, we calculated and ranked all candidate feature importance using Extreme Gradient Boosting algorithm (XGBoost) [5]. A combination of leave-one-out cross-validation (LOOCV) and a grid search strategy were utilized to optimize the necessary parameters in XGBoost. In a grid search, systematically alternating pairs of parameters were used for LOOCV. And the parameter combination which resulted in the best LOOCV result were subsequently applied to select the radiomics features. The selected features were normalized with z-score transformation (a mean of zero and a standard deviation of one) to construct the rad-score. Since the feature importance calculate by XGBoost was absolute value, binary Logistic regression was conducted between the selected features and epilepsy status to further confirm the positive or negative relationship. For each patient, the rad-score was finally constructed by a linear combination of the normalized features and their importance. In this study, all experiments including feature extraction, feature selection and classification were implemented using python (version 3.7.1). Candidate prognostic factors including Radscore, patient’s age and glioma grade were performed in the logistic regression analysis for developing a prediction model of glioma epilepsy. Besides, we developed other logistic regression models, which one was rad-score as prognostic factors and the other one was patient’s age and glioma grade as indicators to compare the predictive value of rad-score. Accuracy, sensitivity, specificity, receiver operating characteristic (ROC) and area under the curve (AUC) were used to assess the prediction efficiency.

Results:

80 adult patients (temporal lobe, n=34; frontal lobe, n=46) underwent surgery and pathologically diagnosed with glioma and 34 patients of them were diagnosed GAE (temporal lobe, n=16; frontal lobe, n=18). 41 of them (temporal lobe,n=17; frontal lobe, n=24) have IDH type: 15 patients (temporal lobe, n=8; frontal lobe, n=7) have IDH wild type, 7(46.7%; temporal lobe, n=4; frontal lobe, n=3) of them diagnosed GAE; The other 26 patients (temporal lobe, n=9; frontal lobe, n=17) have IDH mutation type, 13(50%; temporal lobe,n=7; frontal lobe, n=6) of them diagnosed GAE.
We found that rad-score was significantly correlated with temporal lobe epilepsy occurrence (Figure ROC). Rad-score along with patient's age and glioma grade significantly predicted epilepsy in patients with 96.2% accuracy, while the values were 93.8% without rad-score .
When this specific radiomics features were used to predict frontal glioma epilepsy, AUC 85.1%, accuracy 80.4%, sensitivity 85.7 and specificity 72.2%. When 80 patients were considered to distinguish non-GAE group and GAE group, the accuracy was lower than 65%.
Conclusions：
Radiomics features could offer a noninvasive way to estimate the occurrence of epilepsy in glioma patients. Thus, maybe offer an advance notice for glioma patients to prevent epilepsy and damages from epilepsy.

钆塞酸二钠增强磁共振诊断肝细胞癌微血管侵犯的临床价值

许永生,刘海峰,雷军强,黎金葵,刘钊
兰州大学第一医院

目的：探讨 T1 Mapping 成像及钆塞酸二钠多期动态增强灌注参数诊断肝细胞癌微血管侵犯（Microvascular invasion, MVI）的临床应用价值。**方法**：纳入行上腹部 T1 Mapping 成像和多期动态增强扫描 36 例患者（36 个病灶）。MDCE-MRI 影像图像通过 MRIcron 将 DICOM 格式转换为分析所需 NIFTI 格式，并应用 MATALAB R2018b（导入统计参数映射包 SPM 12）进行呼吸运动校正，最后导入 PMI 0.4 计算 HCC 的灌注参数。使用独立样本 *t* 检验（正态分布）或 *Mann-Whitney U* 检验（偏态分布）检验评估 T1 减低值比率及各个灌注参数在有无 MVI 组间的差异。ROC 曲线下面积分析定量指标诊断 MVI 的最佳临界点，并计算出敏感度、特异度、阳性预测值、阴性预测值。**结果**：灌注参数 VPF、AFF、Ve 诊断 MVI 具有统计学意义（P<0.05），诊断 MVI 的 ROC 曲线下面积分别为 0.735(95%CI: 0.545-0.924)，0.726(95%CI: 0.530-0.923)，0.749 (95%CI: 0.554-0.944)。Ve 诊断效能最高，以 13.25mL/100mL 为截断值时，诊断 MVI 的敏感度、特异度分别为 77.8%和 74.1%，阳性预测值、阴性预测值分别为 0.50、0.91。**结论**：MDCE-MR 灌注参数 VPF、AFF 与诊断 MVI 具有一定的诊断价值，其中 Ve 的诊断价值最高。

PU-3336

MRI-based Radiomics Features for Prediction of Biochemical Recurrence Following Endocrine Therapy for Prostate Cancer with Bone Metastases

Yueren Wang,Zhong Fei,BING YU,Qiyong Guo
Shengjing Hospital of China Medical University

PURPOSE
To identify radiomics features of multiparametric MRI (mp-MRI) for prediction of biochemical recurrence following endocrine therapy for prostate cancer (PCa) with bone metastases (BM).
METHOD AND MATERIALS
In all, 124 patients with BM from PCa were enrolled,the data was gathered from January 2010 to January 2018. Median follow-up of 42 months revealed 59 patients with biochemical recurrence. A total of 976 texture features were extracted from T2-weighted (T2-w) and dynamic contrast-enhanced T1-weighted (DCE T1-w) MRI. Step regression, ridge regression and LASSO regression method model was applied to select features and develop the predicting model for biochemical recurrence following endocrine therapy for PCa with BM. The performance of the radiomics features, PSA level and Gleason Score were explored with the respect to the receiver operating characteristics (ROC) curve. We built clinical and MRI-based texture features nomogram to predict biochemical recurrence following endocrine therapy for PCa with BM.
RESULTS
The radiomics features, which consisted of 13 selected features, were significantly associated with biochemical recurrence (P＜0.05). The combined MRI features derived from T2-w and DCET1-w showed better prognostic performance(AUC=0.885) than features derived from single sequence (T2-wAUC=0.842、DCE T1-w0.862). MRI -based imaging biomarker(including 7 radiomoics features) combined with clinical risk factors (t-PSA, age and Gleason score) yielded the highest AUC(AUC=0.903). Multivariate regression analysis showed that the imaging biomarker was an independent risk factor for the detection of biochemical recurrence. The clinical and MRI-based radiomics features nomogram was built to predict biochemical recurrence following endocrine therapy for PCa with BM.
CONCLUSION
MRI-based radiomics feature was significant predictor for biochemical recurrence following endocrine therapy for PCa with BM. Clinical risk factors combined with MRI-based texture feature could further improve the prediction performance, which provide an illustrative example of precision medicine and may affect treatment strategies.

人工智能肺结节筛查系统的临床使用效能评估

韩佳悦,张晓琴,柴军
内蒙古自治区人民医院

目的 在临床环境中检验、验证基于深度学习的人工智能（Artificial Intelligence，AI）肺结节筛查系统的使用效能。
方法 回顾性收集 117 例胸部 CT 平扫病例数据，薄层扫描层厚为 1 至 1.25mm。首先由两位拥有超过 15 年胸部 CT 阅片经验的放射科专家共同制定本研究使用的金标准肺结节数。接着，利用基于深度学习的 AI 肺结节筛查系统（北京推想科技有限公司）进行结节检测，记录其检测到的肺结节数。通过与金标准对比，分析 AI 系统检测到的真阳性结节，假阳性结节和假阴性结节的数量。通过计算 AI 系统检测灵敏度和假阳性率（假阳性结节数/CT），验证其临床应用效能。
结果 在 117 例胸部 CT 数据中，共计标注 563 个肺结节作为本研究的金标准。AI 肺结节筛查系统检测到共计 1285 个结节，与金标准对比发现，其中包含 500 个真阳性结节，其检测敏感性达到 88.81%。与此同时，AI 肺结节筛查系统检测结节的假阳性率为 6.71/CT。
结论 AI 肺结节筛查系统在临床使用中表现出较高敏感性，可以有效的辅助临床肺结节筛查工作。

人工智能在骨盆肿瘤手术规划中的应用

曲扬,李小敏,艾松涛,陶晓峰
上海交通大学医学院附属第九人民医院

目的 探究应用全卷积神经网络的人工智能算法在骨盆肿瘤磁共振影像学边界全自动分割中应用的可行性及效果。
方法 回顾性收集 2012 年 3 月至 2018 年 6 月于以骨盆肿瘤收治我院的患者，术前均行 CT、MRI 检查，具有手术切除或穿刺手术病理结果，其中磁共振 T1WI 压脂增强序列同时具有横断位和冠状位图像。肿瘤边界金标准由两名资深骨肌系统放射科医生共同讨论确定，由一名医师采用 ITK-SNAP (version 3.6.0)手动勾画分。磁共振图像经过均一化处理后，同分割结果一起用于人工智能肿瘤边界图像的识别和分割。采用 Dice similarity coefficient（DSC 系数）和 Hausdorff distance（Hausdorff 距离）对于人工智能分割肿瘤边界的结果进行分析。
结果 研究共纳入骨盆肿瘤患者 77 例，平均年龄 49.86±15.92 (12~88)岁。骨盆肿瘤边界人工智能分割结果和金标准间的 Dice 系数为 0.85±0.08 (0.621~0.963)，Hausdorff 距离 5.34±1.71 (2.189~8.762)mm。同医师间标注结果比较，放射医师手动标记肿瘤边界平均需要 40 分钟（10~60 分钟），深度学习网络分割肿瘤边界则仅需要大约 25 秒；放射科住院医师标注同金标准间的 Dice 系数为 0.92±0.03，Hausdorff 距离 5.80±3.07mm，准确性高于人工智能分割结果。
结论 应用全卷积神经网络模型的人工智能算法在骨盆肿瘤全自动分割中效果显著，极大地缩短了骨盆肿瘤分割建模的时间，初步减少了人为操作的误差，肿瘤边界分割的准确性得到保障。

Reduces Reading Time and Occupational Fatigue of Radiologists with Different Experiences by Deep Learning-Based Computer Aided Diagnostic System

Chenglong Ren,Jia Yongjun,Yu Nan,He Taiping
Affiliated Hospital of Shaanxi University of Chinese Medicine

Objective: To explore the potential of deep learning-based computer aided diagnostic system (DL-CAD) in reducing occupational fatigue of radiologists with different experiences.

METHODS: 4 attending radiologists with more than 5 years ‘ experience and 4 intern radiologists with less than 1 year experience were assigned to two groups (group A and group B) to interpret chest CT images for thoracic fractures with and without DL-CAD system (InferRead CT bone Research, Infervision, Beijing). The two groups were both divided into two sub-groups: subgroup I and II each consisted of two attendings and two interns. All 103 cases with thoracic fractures were diagnosed by each radiologist within seven hours. Occupational fatigue index of each radiologist was assessed immediately after they completed all interpreting tasks with the improved Swedish Occupational Fatigue Scale which consisted of 5 evaluation indictors (lack of energy, physical consumption, physical discomfort, lack of motivation and sleepiness). And the mean reading time for each patient in each group and sub-group were calculated. Two-samples t-test and Sidak's multiple comparisons test of Two-way ANOVA were used to examine the differences.
Results: The mean reading time for group A was and group B was 425min and 220min with a significant difference ($P<0.05$). For the occupational fatigue assessment, there was a significant difference between group A and group B for all the 5 evaluation indictors. However, there were no significant differences between subgroup I and II for both group A and group B.

Conclusion: DL-CAD reduces reading time and occupational fatigue of radiologists with different working experiences.

Invasive Ductal Breast Cancer: Preoperative Predict Ki-67 Index Based on Radiomics of ADC Maps

Yu Zhang[1],Shaowu Wang[1],Yifeng Zhu[1],Jingjing Cui[2]
1.The Second Hospital of Dalian Medical University
2.Huiying Medical Technology Inc. (Beijing)

Purpose: The purpose of this study is to develop a radiomics model for predicting the Ki-67 proliferation index in patients with invasive ductal breast cancer through magnetic resonance imaging (MRI) preoperatively.
Materials and Methods:128 patients who were clinicopathologically diagnosed with invasive ductal breast cancer were recruited. This cohort included 32 negative Ki67 expression (Ki67 proliferation index <14%) and 96 cases with positive Ki67 expression (Ki67 proliferation index >/=14%). All patients had undergone diffusion-weighted imaging (DWI) MRI before surgery on a 3.0T MRI scanner. Radiomics features were extracted from apparent diffusion coefficient (ADC) maps which were obtained by DWI-MRI from patients with invasive ductal breast cancer. 80% of the patients were divided into training set to build radiomics model, and the rest into test set to evaluate its performance. Theleast absolute shrinkage and selection operator (LASSO) was used to select radiomics features, then the Logistic regression (LR) model was established using 5-fold cross-validation to predict of the Ki-67 index. The performance were evaluated by receiver operating characteristic (ROC) analysis, accuracy, sensitivity and specificity.
Results: Quantitative imaging features (n=1029) were extracted from ADC maps, and 11 features were selected to construct the LR model. Good identification ability was exhibited by the ADC-based radiomics model, with areas under the ROC (AUC) values of 0.75±0.08, accuracy of 0.71 in training set and 0.72, 0.70 in test set.
Conclusions: The ADC-based radiomics model is a feasible predictor for the Ki-67 index in patients with invasive ductal breast cancer. Therefore, we proposed that three-dimensional imaging features from ADC maps could be used as candidate biomarker for preoperative prediction the Ki-67 index noninvasively.

PU-3342

Radiomics Signature: A Potential Biomarker for the Prediction of Survival in Advanced Hepatocellular Carcinoma Patients Treated with apatinib plus TACE

Lingli Li,Lian Yang
1. Department of Radiology, Union Hospital, Tongji Medical College, Huazhong University of Science and Technology

Purpose: To develop and validate a radiomics nomogram for the pretreatment prediction of overall survival (OS) and time to progression (TTP) in patients with advanced hepatocellular carcinoma (HCC) treated with apatinib plus transarterial chemoembolization (TACE).
Materials and Methods: A total of 60 advanced HCC patients were divided into a training set (n=48) and a validation set (n=12). Median survival time and median TTP were calculated in the cohort by using Kaplan-Meier analysis. Radiomics features were

extracted from late arterial and portal venous phase CT images of each patient. A radiomics signature was then constructed with the least absolute shrinkage and selection operator (LASSO) Cox regression algorithm in the training set. Combined with independent risk factors, a radiomics nomogram was built with a multivariate Cox proportional hazards regression model. Nomogram performance was assessed in the training set and validated in the validation set. Finally, decision curve analysis was performed with the combined training and validation set to estimate the clinical usefulness of the nomogram.

Results: Apatinib plus TACE could improve OS in patients with advanced HCC, with median survival times of 540 days. Apatinib plus TACE could prolong TTP in patients with advanced HCC, with median TTP of 270 days. Predictors contained in the individualized prediction nomogram included the radiomics signature and serum α-fetoprotein level(AFP). The radiomics signature achieved favorable prediction efficacy. The calibration curve of the radiomics nomogram for OS and TTP demonstrated good agreement between prediction and observation in the training set.The C-index for the prediction clinical-radiomics nomogram of OS was 0.833 (95% CI, 0.793 to 0.873) for the training set, which was confirmed to be 0.792 (95% CI, 0.715 to 0.870) via bootstrapping validation. The C-index for the prediction radiomics nomogram of OS was 0.828 (95% CI, 0.787 to 0.869) for the training set, which was confirmed to be 0.745 (95% CI, 0.695 to 0.795) via bootstrapping validation. The C-index for the prediction clinical-radiomics nomogram of TTP was 0.739 (95% CI, 0.692 to 0.786) for the training set, which was confirmed to be 0.701 (95% CI, 0.635 to 0.767) via bootstrapping validation. The C-index for the prediction radiomics nomogram of TTP was 0.732 (95% CI, 0.685 to 0.779) for the training set, which was confirmed to be 0.586 (95% CI, 0.543 to 0.628) via bootstrapping validation. Decision curve analysis demonstrated that in terms of clinical usefulness, the clinical-radiomics nomogram outperformed the radiomics nomogram.

Conclusion: Apatinib plus TACE could improve OS and prolong TTP in patients with advanced HCC. The presented radiomics nomogram, a noninvasive preoperative prediction tool that incorporates the radiomics signature and AFP, shows favorable predictive accuracy for OS and TTP in patients with advanced HCC treated with apatinib plus TACE. Multicenter validation is needed to acquire high-level evidence for its clinical application.

PU-3343

放射科医师与人工智能乳腺密度评估探讨

陶然
华中科技大学同济医学院附属协和医院

目的:评价放射科医师和人工智能(AI)对乳腺密度评估的不同观点。
方法:本研究选取 2018 年 11 月至 2019 年 3 月 637 例患者，每周随机抽取 50 例，共收集 2548 张乳腺 x 线照片。4 名经验丰富的放射科医生记录了独立的密度评估。对四名乳腺成像者的多数评价成为共识。与以往的研究相比，这四位放射科医生分别从 7 个不同的角度对每位患者的乳腺密度进行

了评估:双乳、右乳、左乳、头尾侧(CC)位和外侧斜(MLO)位。评估彼此是盲目的。人工智能模型利用深度卷积神经网络 ResNet-18 对这些图像的密度进行了评估。
结果:人工智能在评估一个人,单侧乳腺、单侧乳腺 CC 位和 MLO 位的准确性和一致性分别为 0.821,0.667,0.776,0.600,0.818,0.675,0.840,0.698,0.795,0.650，放射科医生的准确性和一致性分别为 0.856,0.751,0.834,0.718,0.825,0.696,0.831,0.696,0.822,0.700。从临床实践来看，人工智能的最佳表现是单张片子。而放射科医师从单人视角的表现最好。从位置的角度来看，人工智能的最佳性能是 CC 位，而对于放射科医生来说，CC 位和 MLO 位几乎没有区别。
结论:随着乳腺 x 线照相术的增多，人工评价的效果越来越好。因此，BI-RADS 2013 推荐的乳腺密度的类别评估更加科学。单侧乳腺和单个人的人工智能评价不如单张片子评价好。这可能是由于输入和输出模式的不同。CC 位优于 MLO 位，或许因为 MLO 视图可能受到胸大肌、脂肪和腋窝淋巴结结构重叠的干扰。此外，不同的拍摄体位对密度的评估也有所不同。
因此，结果提示放射科医师应综合评价乳腺密度，而人工智能从 CC 的角度显示出更好的结果。此外，今后的研究应强调为每个观点建立不同的投入和产出模型。

PU-3344

Development of a predictive model for intracranial hypertension in neonates based on volumetric quantitative magnetic resonance imaging and clinical features

Yitao Mao,Yan Qin,Dongcui Wang,Lirong Ouyang,Weihua Liao
Department of Radiology， Xiangya Hospital， Central South University

Purpose: Intracranial hypertension (ICH) may result in serious sequelae in newborn babies. The aim of this study is to identify factors derived from quantitative magnetic resonance imaging (MRI) as well as clinical characteristics which associated with neonates ICH, and to develop a nomogram for the prediction of ICH in suspected neonates.
Methods: Neonates with suspected ICH and underwent MRI examination were retrospectively collected. The volume of cerebral white matter (WM), gray matter (GM), cerebrospinal fluid (CSF), as well as cerebral blood flow (CBF) was extracted from the MRI data. LASSO regression analysis was used to selected the most relevant variables from the combination of the above four variables and clinical variables. Logistic regression was used to develop a model for the prediction of ICH probability in neonates. Performance of the model was assessed by discrimination, calibration, and clinical applicability.
Results: A total of 181 neonates with suspected ICH were included, and the prevalence of ICH was 67%. GM, birthweight, birth way and corrected age were the selected predictive factors for ICH, with an AUC of 0.777. The model also has satisfactory calibration ability and clinical applicability.
Conclusion: A nomogram for the prediction of ICH in neonates was developed, with an acceptable predictive power, as well as a promising clinical applicability. This model needs external validation before it can be clinically used for guiding decision-making process for individuals.

PU-3345

Automatic Segmentation of Gallbladder in CT Images Using Cascaded 3D U-Net

Jiejin Yang,Yingpu Cui,Shuai Ma,Xiaodong Zhang,Xiaoying Wang
Peking University First Hospital

PURPOSE
This paper describes the gallbladder segmentation algorithm developed using 3D U-Net.
METHOD AND MATERIALS
1. We selected 100 cases of abdominal CT scan images from previous CT images as gallbladder segmentation training data set. These cases include normal gallbladder and other gallbladder diseases. 2. Label the gallbladder area with the workstation (IntelliSpace Discovery, Philips, Best, The Netherlands). All used images were thin CT slices. Pre-processing like intensity scaling was first performed. The proposed segmentation method is based on a cascaded application of two 3D U-Net that learn the tasks of localization and segmentation of gallbladder, using global and local information respectively. A 3D U-Net was first trained on resampled images to locate gallbladder. The next 3D U-Net aiming to segment gallbladder accurately was trained on the images containing the only gallbladder, which was cropped according to the label map predicted by the first model. 3. Test data set. We randomly selected two random days from 2018 using Excel software. There were 23 cases of CT scan in the emergency department for these two days, one of which was excluded because of cholecystectomy, and the remaining 22 cases (including 5 calculous cholecystitis) were used as test data sets. Segmentation performance was estimated with the Dice coefficient on the test data set. Finally, we calculated the volume of the segmented gallbladder.
RESULTS
Segmentation performance is evaluated on gallbladder in the held-out test data set, with a mean dice coefficient of 0.89. Among them, the average dice coefficient of cases of cholecystitis reached 0.90.
CONCLUSION AND CLINICAL RELEVANCE/APPLICATION
Gallbladder segmentation is a crucially important step for computer-assisted diagnosis and computer-aided functional analysis. Gallbladder's volume is associated with gallbladder functional changes and disease risks. However, manual delineation and volumetric calculation of gallbladder is a time-consuming procedure. Automatic segmentation would be much more appropriate. In particular, in cases of cholecystitis, the gallbladder is automatically segmented from the right upper abdomen, including the edema of the gallbladder wall and gallstones. In the future, cholecystitis and gallstones can be further identified on the basis of segmentation of the gallbladder, and the volume can be analyzed.

基于深度学习的计算机辅助诊断系统在脑出血量测量中的临床应用

赖建东,王宁,罗坤,朱亚男,周和平
安康市中心医院

目的：探讨基于深度学习的计算机辅助诊断系统（DL-CAD）在测量脑出血量方面的表现。
方法：前瞻性收集 54 名急性脑出血患者，随机分为两组，第 1 组 27 例(18 名男性, 9 名女性, 年龄范围 44-84），第 2 组 27 例(n=27，15 名男性，12 名女性, 年龄范围 43-77)，所有患者在 64 排螺旋 CT 上用 120 kVp/120 mA 的扫描参数进行常规头部扫描，用 5mm 层厚重建每个患者的图像。第 1 组（DL 组）在有基于深度学习的计算机辅助诊断（DL-CAD）系统（InferRead CT Stroke Research，Infervision，Beijing）的帮助下进行诊断，通过 DL-CAD 系统自动测量脑出血量，第 2 组（非 DL 组）由放射科医师用多田公式法手动测量脑出血量。以经验丰富的放射科医师手动勾画出患者的每一层的脑出血面积并相加得出总出血面积，总出血面积和图像厚度的乘积代表脑出血量的金标准。用 APE = 100 * | Vm-Vr | / Vr 计算表示测量精度的绝对误差率，其中 Vm 和 Vr 分别代表测量的和实际的体积值。并且记录两组患者脑出血量测量的时间消耗。使用 SPSS 2.0 软件，用于双样本 t 检验统计分析。
结果：就测量的脑出血量而言，DL 组或非 DL 组与金标准没有统计学差异。然而，DL 组的测量精度高于非 DL 组的测量精度，APE 值较小（8.17±6.53 vs.23.62±12.07）。另外，DL 组的脑出血测量时间少于金标准的手动测量时间（91.21±8.32s vs. 321.48±114.51s，P <0.05）。
结论：与传统的手动测量方法相比，DL-CAD 实现了脑出血量的自动测量，并且准确，高效。

PU-3347
Semiautomatic segmentation for HCC delineation in CT volumetric images by ITK SNAP

Zhuang Nie
wuhan union hospital

Objective:

Radiomics based data mining of medical images makes it possible to quantify the Hepatic Cell Carcinoma (HCC) phenotype non-invasively. Accurately segmentation of hepatic tumor is critical for adequately radiomics feature quantification. In this study, we evaluated the clinical feasibility and reliability of a semiautomatic segmentation method using the Radom Forest Classifier based algorithm, implemented in the free and public available ITK SNAP imaging processing platform.

Methods:
Twenty five diagnostic CT scans of Hepatic Cell Carcinoma patients were used for segmentation in this study. Two experienced radiologist performed the manual segmentation of lesion independently. Another radiologist performed the semiautomatic segmentation on ITK SNAP. The Dice similarity index (DSI) was used as a statistical

validation metric to evaluate the performance of both the manual and semiautomatic segmentation methods.

Results:
Results showed that the time and user effort required for classification-based semiautomatic segmentations were on average about fifty percent less than the pure manual segmentations. Furthermore, we calculated the Dice Similarity index (DSI) between the manual(DSI = 79±3.12 %) and the semiautomatic segmentations(DSI = 92±3.34%) to prove that semiautomatic segmentation method was more robust. However, for non-solid tumors with poorly defined boundaries and subtle appearances, automatic segmentations were observed to perform poorly (DSI = 51±3.14%)

Discussion:
Our results show that, for most solid HCC lesion cases, classification based semiautomatic segmentations can be used for accurate contouring and are more time-efficient than manual delineations. Therefore, semiautomatic segmentation of ITK SNAP can be employed as a starting point for radiomics analysis, where manual segmentation often represent a time-consuming bottleneck.

PU-3348
基于深度学习的计算机辅助诊断系统测量不同时期脑出血量的准确性

赖建东,王宁,罗坤,朱亚男,周和平
安康市中心医院

目的：探讨和比较基于深度学习的计算机辅助诊断系统（DL-CAD）测量不同时期脑出血量的准确性。
方法：前瞻性收集 33 例超急性期脑出血患者（出血时间<24 小时）（A 组），34 例急性期脑出血患者（出血时间 2-7 天）（B 组）和 27 例亚急性期期脑出血患者（出血时间 8 天—4 周）（C 组）。所有患者在 64 排螺旋 CT 上用 120 kVp/120 mA 的条件进行常规头部扫描，用 5mm 层厚重建的图像。然后利用 DL-CAD 系统（InferRead CT Stroke Research，Infervision，Beijing）自动测量每位患者的脑出血量。脑出血量的金标准由经验丰富的放射科医师确定，该放射科医师手动描绘并计算患者每一层的脑出血面积，总出血面积和图像厚度的乘积代表金标准的脑出血量。用 APE = 100 * | Vm-Vr | / Vr 计算表示测量精度的绝对误差率，其中 Vm 和 Vr 代表测量的和实际的脑出血体积值。使用 SPSS 2.0 软件，用配对 t 检验用于统计分析。
结果：与金标准相比，DL-CAD 测量不同时期的脑出血量均有较高的准确度（A 组，B 组，C 组的 APE 分别为 7.47±5.08,11.54±6.67,19.92±16.66）。在所有这 3 组患者中，测量体积与金标准体积之间无统计学差异。
结论：对于不同时期的脑出血，基于深度学习的计算机辅助诊断系统（DL-CAD）均能够准确的测量，改善了诊断工作流程。

PU-3349

基于深度学习的计算机辅助诊断系统测量不同形状脑出血的准确性

赖建东,罗坤,王宁,朱亚男,周和平
安康市中心医院

目的：探讨基于深度学习的计算机辅助诊断系统（DL-CAD）测量不同形状脑出血的准确性。
方法：前瞻性收集 58 名急性脑出血患者。所有患者在 64 排螺旋 CT 上用 120 kVp/120 mA 的条件进行常规头部扫描，用 5.0mm 层厚重建图像。所有患者根据脑出血灶形状分为两组，包括规则脑出血 26 例（类球形）和不规则脑出血 32 例。通过 DL-CAD 系统（InferRead CT Stroke Research，Infervision，Beijing）自动测量脑出血量。脑出血量的金标准由经验丰富的放射科医师确定，放射科医师手动描绘并计算患者每一层的脑出血面积，总出血面积和图像厚度的乘积表示金标准的脑出血量。用 APE = 100 * | Vm-Vr | / Vr 计算暗示测量精度的绝对误差率，其中 Vm 和 Vr 代表测量的和实际的脑出血体积值。使用 SPSS 2.0 软件，用配对 t 检验用于统计分析。
结果：在规则组和不规则组中，DL-CAD 测量的脑出血量均与金标准无明显统计学差异（P> 0.05）；此外，规则组 APE 和不规则组 APE 也无明显统计学差异，表明 DL-CAD 在准确测量脑出血量方面的准确性和鲁棒性。与金标准测量相比，DL-CAD 测量显著缩短了测量时间，规则组脑出血（242.69±61.03s VS 90s），不规则组的脑出血（378.75±107.37s VS 90s）。
结论：DL-CAD 系统测量不同形状脑出血具有强大的的准确性和鲁棒性，并且更加快捷。

PU-3350
基于深度学习的计算机辅助诊断系统测量不同层厚 CT 图像脑出血的准确性

赖建东,罗坤,王宁,朱亚男,周和平
安康市中心医院

目的：探讨深度学习计算机辅助诊断系统（DL-CAD）测量不同层厚 CT 图像脑出血的准确性。
方法：前瞻性收集 58 名急性脑出血患者。所有患者在 64 排螺旋 CT 上用 120 kVp/120 mA 的条件进行常规头部扫描，分别用 2.5mm 和 5.0mm 厚度重建图像。通过 DL-CAD 系统（InferRead CT Stroke Research，Infervision，Beijing）在 2.5mm 和 5.0mm 组的图像上自动测量脑出血量。脑出血量的金标准由经验丰富的放射科医师确定，放射科医师手动描绘并计算患者每一层的脑出血面积，总出血面积和图像厚度的乘积表示金标准的脑出血量。用 APE = 100 * | Vm-Vr | / Vr 计算表示测量精度的绝对误差率，其中 Vm 和 Vr 代表测量的和实际的体积值。使用 SPSS 2.0 软件，用配对 t 检验用于统计分析。
结果：在 DL-CAD 测量的脑出血量方面，2.5mm 组或 5.0mm 组与金标准无统计学差异。虽然较小的 APE 值（8.17±6.53vs8.40±6.92）证明 2.5mm 组的测量精度高于 5.0mm 组，但 DL-CAD 测得的脑出血量在 2.5mm 组和 5.0mm 组之间无统计学差异，表明其对脑出血量测量的准确性和鲁棒性。
结论：DL-CAD 在不同厚度 CT 图像上测量脑出血量具有很强的准确性和鲁棒性。

Automatic structured reports of classification and localization of rib fractures from thorax CT using

Convolutional neural networks combined with medical history

Qingqing Zhou[1], Yu Yu-Sheng[1], Hu Zhang-Chun[1], Li Xue-Song[1], Xia Zi-Yi[1], Zhang Rongguo[2], Zhang Bing[3], Yin Xindao[4], Zhang Hong[1]
1. The affiliated Jiangning hospital of Nanjing medical university
2. Beijing InferVision Inc.
3. The Affiliated Nanjing Drum Tower Hospital of Nanjing University Medical School
4. Nanjing First Hospital, Nanjing Medical University

Objectives: This study aims to analyze the accuracy and feasibility of structured reports using convolutional neural network (CNN) combined with medical history which can automatically classify and locate rib fractures based on thoracic CT.
Methods: A total of 1049 patients (25054 annotations) from three hospitals were divided into a monocentric training set (n = 876) and multicentre validation sets (n = 148). Firstly, the feature pyramid network (FPN) part of Faster Region-based CNN (Faster R-CNN) were used to locate and identify the rib fractures categories. Then the classification part of Faster R-CNN combined with patients' medical history were used to classify rib fractures categories. The feature vectors of patients' medical history were processed with nature language processing (NLP) methods including word cutting, embedding and normalization. Finally, intersection over union (IOU) and z-distance was employed to merge results and get structured reports. Three classifications (fresh fracture, healing fracture and old fracture) combined with fracture location (corresponding CT slices) were revealed by structured reports. Precision, recall and F1-score were selected as metrics to measure the performance of CNN model with and without medical history input. Detection/diagnose time, precision, sensitivity were employed to compare the diagnostic efficiency of structured report and experienced radiologists.
Results: The detection efficiency of three categories of rib fractures combined with medical history of CNN model is higher than that without medical history (all $P < 0.05$). There were no significant differences in detection efficiency across three multiparameter validation sets (all $P > 0.05$). The precision and sensitivity of structured reports was greater than that of experienced radiologist (92.4% vs.72.4%, 91.35% vs. 67.65% respectively; $P < 0.05$). The detection time was reduced to an average of 23.9 seconds compared with an average of 3 minters by radiologists.
Conclusions: Our CNN model can output structured reports which can automatically classify and locate rib fractures accuracy and with a certain degree of robustness. The results would help emergency patients to obtain accurate CT findings quickly and reduce the eye strain and workload of radiologists.

运动伪影对基于深度学习的计算机辅助诊断系统测量脑出血准确性的影响

赖建东, 王宁, 罗坤, 朱亚男, 周和平
安康市中心医院

目的：探讨运动伪影对基于深度学习的计算机辅助诊断系统（DL-CAD）在 CT 图像上测量脑出血的准确性的影响。
方法：前瞻性收集 58 名急性脑出血患者。所有患者在 64 排螺旋 CT 上用 120 kVp/120 mA 的条件进行常规头部扫描，用 5.0mm 层厚重建图像。所有 CT 图像均符合诊断要求，并根据放射科医师的主观评价分为无伪影组 39 例和有伪影组 19 例。通过 DL-CAD 系统（InferRead CT Stroke Research，Infervision，Beijing）自动测量脑出血量。脑出血量的金标准由经验丰富的放射科医师确定，放射科医师手动描绘并计算患者每一层的脑出血面积，总出血面积和图像厚度的乘积表示金标准的脑出血量。用 APE = 100 * | Vm-Vr | / Vr 计算表示测量精度的绝对误差率，其中 Vm 和 Vr 代表测量的和实际的体积值。使用 SPSS 2.0 软件，用配对 t 检验用于统计分析。
结果：DL-CAD 测量脑出血量与金标准量没有统计学差异（P> 0.05）。而且，无伪影组 APE 和有伪影组 APE 也没有统计学差异，表明 DL-CAD 在准确测量脑出血量方面的准确性和鲁棒性。
结论：DL-CAD 系统在有或没有伪影的图像的脑出血量测量方面表现出强大的准确性和鲁棒性。

PU-3353
分类阈值对人工智能肺结节筛查系统检测磨玻璃结节效能的影响

张中宝,张晓琴*
内蒙古自治区人民医院

目的 研究分类阈值对基于深度学习的人工智能（Artificial Intelligence，AI）肺结节筛查系统检出磨玻璃结节效能的影响，进而筛选出适合磨玻璃结节检出的模型分类阈值。
方法 回顾性收集 117 例胸部 CT 平扫病例数据，薄层扫描层厚为 1 至 1.25mm。研究入组病例中的金标准磨玻璃结节数由两位拥有超过 15 年胸部 CT 阅片经验的放射科专家共同制定，共计 147 个。在此基础上，利用基于深度学习的 AI 肺结节筛查系统（北京推想科技有限公司）进行磨玻璃结节检测，记录其在不同模型分类阈值（0.65，0.75，0.85）下检测到的磨玻璃结节数。通过与金标准对比，分析比较不同分类阈值下，AI 系统检测到的真阳性磨玻璃结节（TP），假阳性磨玻璃结节（FP）和假阴性磨玻璃结节（FN）的数量。探索最适合检测磨玻璃结节的模型分类阈值。卡方检验用于比率指标的统计分析，P＜0.05 具有统计学意义。
结果 AI 肺结节筛查系统（后简称 AI 系统）在阈值为 0.65 时，检测到 411 个磨玻璃结节，包含 133 个 TP 和 278 个 FP， FN 个数为 14 个，检测敏感性为 90.48%，假阳性率为 2.38/CT。当阈值调整至 0.75 时，检测到的磨玻璃结节有所减少，主要体现在假阳性结节数目上，TP 仍为 133 个，而 FP 降为 223 个，敏感性不变，假阳性率降为 1.91/CT。相比之下，当阈值调整为 0.85 时，检测到 303 个磨玻璃结节，包括 127 个 TP 和 176 个 FP，虽然 FN 数目增加至 20，检测敏感性降至 86.39%，但与模型一敏感性无统计学差异（p=0.058），假阳性率为 1.53/CT。
结论 分类阈值影响 AI 肺结节筛查系统的磨玻璃结节检测效能，尤其体现假阳性结节数方面。综合分析不同的检测指标，分类阈值为 0.85 保证敏感性的同时有效减少了假阳性磨玻璃结节数，因此是 AI 肺结节筛查系统用于磨玻璃结节检测时的最佳选择。

扫描基线对 Diffusion Toolkit 脑白质纤维束示踪的影响研究

吕亮[1],魏淼[2]
1.中国科学院大学重庆医院（重庆市人民医院）

2.重庆医科大学附属第一医院

【摘要】**目的** 探讨不同扫描基线对 Diffusion Toolkit 脑白质纤维束示踪的影响。
方法 招募健康志愿者 6 例，均在 SIEMENS Verio 3.0T 扫描仪行不同扫描基线（一组扫描基线为 AC-PC 线，二组扫描基线不打角度）DTI 扫描。将扫描所得 Dicom 数据导入个人电脑，运行 mricorn 软件进行格式转换，将 BVEC 文件进行分列、转制得到 Gradient table。运行 Diffusion Toolkit 软件，选择每一数据所得 Gradient table，Angle threshold 45，Invert Z，运行结果在 TrackVis 显示，得到全脑白质纤维束容积 Volumn，最大纤维束长度 Maximum Length，最小纤维束长度 Minimum Length 等脑白质纤维束定量指标。根据不同扫描基线将定量指标分为两组。采用 SPSS17.0 统计学软件对各定量指标进行配对样本 t 检验分析，检验水准 α 为 0.05。
结果 一组 Volumn 1145.22±131.15 ml, MaxLength 189.42±37.28 mm, MiniLength 1.32±0.07 mm。二组 Volumn 1122.02±120.09 ml, MaxLength 220.21±24.42 mm, MiniLength 1.27±0.12 mm。 组间差异不具有统计学意义(P=0.21, 0.13, 0.52) 。
结论 在受检者配合较好，头部摆位好的情况下，采用 AC-PC 扫描基线或不打角度的 DTI 扫描对 Diffusion Toolkit 脑白质纤维束示踪不具有统计学差异的影响。

Radiomics model based on ADC maps for predicting lymph node metastasis in mid-low risk rectal cancer

Yibo Tang[1,2,3],Mengsu Zeng[1,2,3],Liheng Liu[1,2,3]
1.Zhongshan Hospital， Fudan University
2.Shanghai Institute of Medical Imaging
3.Department of Medical Imaging， Shanghai Medical College， Fudan University

Objectives: Diffusion-weighted imaging (DWI) and its associated quantitative parameters—apparent diffusion coefficient (ADC) can help identify the biological behavior of tumors. Rectal cancer patients with T3b stage and below are recognized in the mid-low risk group, and the clinical decision is controversial. The purpose of

this study was to explore whether the radiomics model based on ADC maps could identify the lymph node metastasis of rectal cancer.
Materials and methods: From January 2017 to December 2018, 109 patients and 156 patients were enrolled from two different MRI equipment with different DWI sequences (A and B, b values=0, 1000s/mm^2), respectively. Patients did not receive any preoperative neoadjuvant therapy. The average age of the patients was 61 years (29-88 years). There were 157 males and 108 females. The region of interest (ROI) was delineated manually along the border of the low signal part of the rectal lesion on ADC images by ITK-SNAP software. Based on the open-source radiomics feature extraction program, five types of radiomics features were extracted from each patient. Patients were divided into lymph node metastasis group and lymph node non-metastasis group according to the postoperative pathological results. Principal component analysis and support vector machine was implemented to achieve reliable results. 80% of the cases were used as training data, and the rest cases were used as validation data to test the classification accuracy of the model. The accuracy, sensitivity, specificity and cut-off value were determined and calculated by the receiver operating characteristic (ROC) curve. Ten-fold cross-validation and ROC were used to validate the performance of the model.
Results: The AUC of radiomics model-A of training data and validation data are 0.989 and 0.984, respectively, and the accuracy is 0.951 and 0.943, respectively. The AUC of radiomics model-B of training data and validation data are 0.960 and 0.930, respectively, and the accuracy is 0.866 and 0.834, respectively. After cross-validation, the AUC of model-A is 0.78±0.05, and the AUC of model-B is 0.80±0.18.
Conclusions: The radiomics model based on ADC map can effectively predict lymph node metastasis of mid-low risk rectal cancer. The prediction model established by ADC images with higher resolution is more stable.

Computed tomography (CT)-based radiomics signature: a potential indicator of EGFR mutation in pulmonary adenocarcinoma appearing as a subsolid nodule

Xinguan Yang[1,2], Yubao Guan[2]
1.GuiLin Medical University Affiliated Hospital
2.The fisrt affiliated hospital of Guangzhou medical university

Objective: To investigate the ability of CT radiomics signature based on preoperative CT images for prediction of EGFR mutation status in LADC appearing as a subsolid nodule.
Materials and Methods: We obtained the records of 2932 consecutive patients who underwent surgical resection for primary lung cancer at our hospital from January 2016 to May 2018. A total of 467 eligible patients were divided into a training cohort (n = 306) and a validation cohort (n = 161). All patients underwent unenhanced CT using normalized protocols. We employed a 3D U-net model for nodule segmentation. Radiomics features were extracted from unenhanced CT images by using Pyradiomics. 1063 radiomics features were extracted from unenhanced CT images. A CT-based radiomics signature for distinguishing EGFR mutation status was constructed using RF method in the training cohort and then tested in the validation cohort. To check the additive effect on classification, we concatenated the radiomics features and clinical features. A combination of radiomics signature with clinical factors model was also constructed using RF. The performance of the model was evaluated using the area under the curve (AUC) of a receiver operating characteristic (ROC) curve.
Results:
(1)In this study, 64.2% (300/467) of the patients showed EGFR mutations. Exon 21 missense and exon 19 missense were the most frequent types of mutations. Within the training and validation cohorts, there were significant differences in age, tumor size, CT pattern, and subtype between EGFR(+) and EGFR(-). The EGFR(+) of these lesions also appeared more frequently in patients with an part-solid nodue.
(2)Forty-three features were selected from 1063 radiomics features using RF method in the training cohort. Based on selected radiomics feature, we identified a CT-based radiomics signature that successfully discriminated between EGFR(+) and EGFR(-) in the training cohort (AUC = 0.831) and the validation cohort (AUC = 0.789).
(3) The radiomics features and clinical features were combined to develop a combined model, AUC = 0.826, 0.789, in the training the validation cohorts, respectively. The combined model was not superior to the simple radiomics signature in the training and validation cohorts ($p \geq 0.05$).
Conclusion: CT-based radiomics signature predict the EGFR mutation status of LADC appearing as a subsolid nodule with good predictive performance. CT-based radiomics signature is expected to be an effective supplement to determine the EGFR mutation status of subsolid nodule lung adenocarcinoma.

基于 CESM 的影像组学诺莫图预测乳腺癌新辅助化疗疗效

王中一,谢海柱
烟台毓璜顶医院

目的：探讨基于对比增强能谱 X 线摄影（CESM）的影像组学诺莫图术前预测乳腺癌新辅助化疗疗效的价值。
材料和方法：回顾性分析我院 135 名术前接受新辅助化疗的乳腺癌患者（训练组 100 ，验证组 35），按照实体瘤疗效评价标准（RECIST）评价患者新辅助化疗的疗效，并将患者分为有效组和无效组。从每个病人的 CESM 图像中提取影像组学特征。然后在训练集中用 LASSO 算法建立影像组学标签。结合独立的临床预测因子，采用多元 Logistic 回归模型建立诺莫图。诺莫图的效能在训练集中进行评估，并在验证集中进行验证。
结果：由 9 个特征组成的影像组学标签，具有良好的预测效果。包括影像组学标签、ki67、HER2 的诺莫图在训练集（AUC 0.87；95%CI，0.82-0.91）和验证集（AUC 0.85；95%CI，0.80-0.90）中也显示出良好的效能。决策曲线表明了我们列线图的临床实用性。
结论：基于术前 CESM 影像组学特征和临床预测因子建立的诺莫图模型在预测乳腺癌患者新辅助化疗疗效方面具有重要的价值。

An accurate detection method for biopsy needle in ultrasound images based on fuzzy enhancement and Hough transform

Jinxia Ren

Department of Radiology, Zhongnan Hospital of Wuhan University

Biopsy needle detection in ultrasound images plays an important role in prostate biopsy. The precise positioning of biopsy needle is vital for reducing the number of insertion failures and it still remains a challenging problem. Existing needle detection methods cannot provide accurate detection results or cannot meet the demand of real-time biopsy. To address this problem, we have proposed a fast and accurate biopsy needle detection method based on fuzzy enhancement and Hough Transform (HT). This method uses the fuzzy enhancement to improve the visibility of biopsy needle in the ultrasound images. Based on the enhanced ultrasound images, Hough transform combined with edge thinning have been used to detect the biopsy needle. To ensure the detection accuracy in the case where the appearance of needle in ultrasound images is discontinuous, the intensity correlation based tracking algorithm is adopted to locate the tip of the needle. The proposed algorithm was tested on the prostate video sequences including 32 frames in total. Experimental results demonstrate that the needles in the sequences can be detected with 6.7% mis-detection rate. The mean length and angle errors are 8.8 pixels and 0.98 degree, respectively. The needle detection time is 25ms for one frame of size 800×600. Indeed, the proposed method will facilitate the reduction of insertion failures during ultrasound-guided needle procedures due to its high needle detection accuracy.

PU-3362
磁共振多模态成像在胶质瘤智能诊断与分级中的应用

任金霞
武汉大学中南医院

目的：胶质瘤是中枢神经系统最常见的原发性肿瘤，术后复发率和病死率较高。通常低级别胶质瘤预后良好，高级别胶质瘤术后复发率较高，胶质瘤的诊断分级对于指导个体化治疗和精确评估预后具有重要意义。
方法：磁共振多模态成像技术相较于单一模态成像能为不同级别胶质瘤提供更为全面的信息，人工智能的快速发展也给胶质瘤的诊断分级提供了一种新的途径，文中选取动态磁敏感对比增强成像(DSC_MRI)、动态对比增强成像(DCE_MRI)、动脉自旋标记成像(ASL)三种不同模态图像，利用有监督学习的模式来训练优化神经网络，来提高诊断分级的准确性。
结果：结合多模态核磁图像的诊断准确率可以达到 90%以上，明显优于单一模态下的准确率。
结论：研究表明人工智能结合多模态核磁方法在胶质瘤的诊断、分级、术后评估等方面具有重要的临床意义。

PU-3363
基于影像组学的乳腺 ABUS 图像良恶性鉴别诊断

苏月颖
天津医科大学肿瘤医院

目的：探讨影像组学用于 ABUS 图像良恶性鉴别诊断的价值。

方法：收集就诊于天津医科大学肿瘤医院的女性乳腺病变患者，进行乳腺 ABUS（Automated Breast Ultrasound System，ABUS）检查并获取 ABUS 图像。纳入研究共计 220 个病变，其中包括 123 个恶性病变，97 个良性病变。手动勾画病变的感兴趣区，对所有病变采用影像组学方法进行特征提取，并用 LASSO 方法进行特征降维，采用支持向量机分类方法进行良恶性的分类，评估其该模型的诊断效能。分析所提取特征对乳腺良性病变及恶性病变的诊断效能，采用正确率、敏感性及特异性评估其诊断效能。
结果：本研究共提取了 21 个影像组学特征，包括：（1）形态学特征：面积，周长，最大径，圆度，凹性率，分叶征；（2）灰度直方图特征：灰度均值，均方差，跨度，偏度，峰度，第五中心态，第六中心态；（3）纹理特征：对比度，相关性，能量，熵，均质性，角二阶矩，惯性逆差距。采用 LASSO 方法进行特征提取，得到偏度，峰度，第五中心态，角二阶矩四个特征。采用支持向量机分类方法，并采用十折交叉验证得到正确率 82.3%，敏感性 76.4%，特异性 90.3%。
结论：ABUS 通过乳腺超声的全自动扫描，可以获得较二维超声更加客观的图像信息，更适合进行影像组学分析。基于 ABUS 影像组学能够为乳腺良恶性病变的诊断提供客观、准确的诊断依据。

Correlation analysis between asymmetry of the inferior fronto-occipital fasciculus and attention

Yuan Leng
The affiliated hospital of xuzhou medical university

Objective: Human brain hemispheres differ in their anatomy and function. However, the asymmetry of inferior fronto-occipital fasciculus was still under debate.
Materials and Methods: 60 volunteers were recruited in this study. Attention network test was performed and 3.0T DTI imaging was collected. Trackvis was used to visualize the fasciculus and calculate its microstructural integrity.
Results: The results suggested that the FA of occipital part was leftward asymmetry and the other four segments were rightward asymmetry. For the MD, the frontal and insular parts were rightward asymmetry and the other three segments were leftward asymmetry. In the structure-function correlation analysis, the rightward asymmetry of IFOF was related to EC function and the occipital part was an important segment in the correlation. Moreover, genetic factors were implicated in the aforementioned two relationships.
Conclusion: Our study suggested that structural asymmetry was important in brain function and the common physiological mechanisms were implicated in the brain asymmetry-function correlations.

一体化阅片室构架与实施方案

后嘉林
昆明医科大学第一附属医院

我院一体化阅片室具有专业化、智能化、快捷化、舒适化等功能。解决方案由软硬件组成，系统采用模块化设计，通过专业的空间环境设计与智能控制终端进行实施，充分考虑集约化、智能化、标

准化和人性化。整体方案符合国家相关要求及标准，智能化、标准化符合质控和诊断要求。模块包括环境光线可控、照度调节、显示屏颜色统一亮暗调节、桌椅工作台可升降调节匹配、室外光线遮蔽、室内温湿度、窗帘控制，背景音乐调节、情景模式环境噪音控制，胶片投屏等等。符合国际国内环境照度标准。配套会诊智能投屏显示系统，各个系统功能可根据需要自由组合搭配，通过系统交互界面集中控制，适时实现 HIS/EMR/PACS/RIS 以及其它检查检验等数据一键式调阅。控制终端具有遥控智能设备图像无线投屏功能，操作界面为触摸屏图形按钮，操作直观，简单方便，统一管理。

专业化：阅片室采用专业 DICOM 标准 3M、6M 医用诊断显示器，94 寸彩色专业显示器构成影像诊断与会诊显示系统。

智能化：提供声光电的智能控制，提高阅片医生工作效率。显示器屏幕闪烁频率、反射光线、显示器间的相互影响，环境光亮度的差异，导致医生眼疲劳程度增加、诊断准确率降低。

快捷化：合理的布局设计，融合了远程阅片、阅片报告审核、网络会诊的快捷设计，阅片医生可一键将影像分享投屏至会诊显示器进行教学或会诊。

舒适化：提供符合人体工学设计理念的座椅和电动升降工作台，在医生较大工作量的情况下，最大限度保护其颈椎，腰椎。

影像诊断医生以专业化、智能化、舒适化、快捷化阅片为中心，享受着数字化带来的高效率和便捷，真正从传统的胶片阅片模式或单一屏幕阅片显示方式提高到软阅片/无胶片模式。极大提高阅片精确度及阅片效率，杜绝因外部环境造成的漏诊误诊。诊断效率、诊断准确率明显提高，病人等待报告的时间大大缩短，这就是一体化阅片环境设计的重要性体现。

PU-3366
分类阈值对人工智能肺结节筛查系统检测实性结节效能的影响

柴军,张晓琴,刘瑞,贺燕林,刘瑞,张凯,李夕彤
内蒙古自治区人民医院

目的 研究基于深度学习的人工智能肺结节筛查系统中，分类阈值对实性结节检出效能的影响。**方法** 回顾性收集 117 例胸部 CT 图像，扫描层厚约 1.25mm。由两位超过 15 年经验的放射科专家制定研究参考的实性结节金标准，最终标注 310 个实性结节。再利用 AI 肺结节筛查系统进行检测，记录其在不同模型分类阈值(0.65,0.75,0.85)下检测到的结节数。与金标准对比，分析不同阈值下，AI 系统检测到的真阳性实性结节(TP)，假阳性实性结节(FP)和假阴性实性结节(FN)的数量。通过计算比较不同阈值下 AI 系统检测敏感性，准确性和假阳性率，筛选检测实性结节的最佳阈值。卡方检验用于统计分析,P＜0.05 具有统计学意义。**结果** 阈值为 0.6 时，AI 肺结节筛查系统检测到 727 个实性结节，其中 276 个 TP 和 451 个 FP，假阳性率为 3.85/CT；FN 为 34 个，检测敏感性和准确性分别为 89.03%和 38%。阈值为 0.75 时，AI 肺结节筛查系统检测到 626 个实性结节，FP 降为 356 个，假阳性率降为 3.04/CT；TP 个数为 270 个，FN 数目为 40，检测敏感性 87.1%(p>0.05)，与 0.65 阈值结果比较无统计学差异，准确性提升至 43.13%(p=0.059)。分类阈值为 0.85 时,AI 系统共计检测到 525 个实性结节,257 个 TP 和 268 个 FP,假阳性率为 2.29/CT；FN 数目则增加至 53 个,检测敏感性降至 82.9%,显著低于 0.65 阈值结果的敏感性(p<0.05)，但与 0.75 阈值敏感性无统计学差异(p>0.05)，检测准确性提高至 48.95%, 显著高于前两者准确性(p<0.05)。**结论** 分类阈值影响 AI 肺结节筛查系统对实性结节的检测效能，在假阳性结节数和检测准确性方面尤为突出。本研究中阈值为 0.85 时的 AI 系统在保持相当敏感性的同时有效减少了假阳性结节数，是临床中 AI 系统辅助检测实性结节的最佳阈值。

PU-3367
探究 ctDNA 液体活检对肺结节 CT 鉴别诊断模型的增效作用

赵颖[1,2],陆梦洁[2]
1.南京市第一医院
2.东部战区总医院

目的：验证循环肿瘤 DNA（ctDNA）在提高 CT 图像的影像组学或语义特征对肺结节诊断模型的价值。材料和方法：这是一项前瞻性研究，共纳入了 123 例经 CT 发现的肺结节患者。患者于 2017 年 4 月至 2018 年 5 月在金陵医院接受手术，并且术前进行了 ctDNA 高通量测序。每位患者都收集其临床信息、术前 CT 图像和术前血液的遗传信息。最终通过 103 个患者的 CT 图像建立了包含 37 个放射组学特征的肺结节影像组学模型。并联试验及方差分析用于评估遗传特征与恶性风险之间的关联。模型由支持向量机（SVM）的方法构建，采用嵌套的 5 倍交叉验证。结果：良性和恶性组之间差异的基因的并联试验得到最终的 ctDNA 遗传特征。通过与遗传特征相结合，影像组学模型的 AUC 从 0.819 增加到 0.887。当语义特征进一步加入模型时，融合模型的 AUC 可以增加到 0.935。结论：ctDNA 液体活检可提高 CT 特征的诊断能力，从而提高诊断正确率。它可以作为术前诊断的微创补充，以提高图像诊断的准确性，避免不必要的侵入性医疗操作。

PU-3368
不同肺结节周围组织的标注对肺结节良恶性预测的影响

刘凯,范丽,萧毅,刘士远
海军军医大学第二附属医院（上海长征医院）

目的
大多数研究通常依赖于肺结节的特征，如大小和形态特征来预测恶性肿瘤。在本文中，我们试图研究肺结节周围组织对结节良恶性分类的影响。
方法和材料
该方法基于 3D CNN 模型，其结合 ResNet 和 UNet 的结构来预测肺结节良恶性。胸部 CT 图像包含直径 5 mm 和 30 mm 的 942 个结节（325 个良性，617 个恶性，841 个患者）用于训练，另外 200 个结节（78 个良性，122 个恶性，200 个患者）分别收集作为我们的测试组。所有结节的恶性肿瘤均经病理证实。我们将图像重新采样为所有维度的 0.6 mm 像素空间，并以三种方式对图像进行预处理。 （1）小组织状况，我们分割立方体（64 * 64 * 64 像素），中心有目标结节和少量周围组织。 （2）大组织状况，我们分割了包含更大范围的周围组织的立方体（96 * 96 * 96 像素）。（3）没有组织条件，我们仅在没有周围组织的情况下分割结节。我们分别用上述数据训练和测试了三种不同的模型，并使用卡方检验来比较结果。
结果
周围组织的存在显着影响预测准确度， $x2= 8.61$，$p = .013$（参见表 1）。具体而言，大组织条件产生的最高准确度为 86%，显着高于无组织条件， $x2= 8.34$，$p = .004$。小组织条件产生的准确度略高于无组织条件。此外，包括周围组织显着改善恶性结节的敏感性（ $x^2= 19.37$，$p <.001$）。然而，是否包括周围组织不影响特异性（ $x2= 1.29$，$p = .52$）。
结论
我们的研究表明，包括周围组织可以改善肺结节分类，尤其是恶性结节的敏感性。这可以为放射医学研究提供新的方向，其中传统方法仅对结节进行分割，这可能遗漏包含在周围组织中的重要信息。
临床相关/应用
我们用于肺结节分类的 3D CNN 模型实现了 86%的高精度。我们还经实验证明了在结节恶性肿瘤预测中包括肺结节周围组织的重要性。

PU-3369
利用深度学习算法预测增强 MR 图像上胰腺神经内分泌肿瘤 WHO 分级

高翾[1,2],王小林[1,2]
1.复旦大学附属中山医院介入治疗科
2.上海市影像医学研究所

背景与目的：胰腺神经内分泌肿瘤是较少见的胰腺肿瘤，其 WHO 分级直接影响患者的临床诊疗，临床上对其进行 WHO 分级需要有创操作，此外，其较低的发病率对深度学习算法在影像医学上的运用构成障碍。本研究尝试利用深度学习算法在增强 MR 图像上直接预测胰腺神经内分泌肿瘤的 WHO 分级。
材料与方法：本研究包括了从 2010 年 1 月至 2016 年 12 月期间 50 例在复旦大学附属中山医院进行术前增强 MR 检查及手术治疗的胰腺神经内分泌肿瘤患者，其中 WHO1 级 14 例，WHO2 级 30 例，WHO3 级 6 例。由于 WHO3 级患者较少，将所有患者分为 WHO1 组及非 WHO1 级组。首先，以 5 折交叉验证的方法将所有患者以 4：1 的比例随机分入 4 对训练集与测试集。之后，利用每个训练集中患者的增强 MR 图像，训练 2 个分别针对 WHO1 级组及非 WHO1 级组的生成式对抗网络，并利用这些网络来合成人工图像以扩增相应的训练集。最后，分别利用每个扩增的训练集中的图像（真正的 MR 图像及人工合成的图像），对一个卷积神经网络模型进行训练，并在相应的测试集上评估卷积神经网络对增强 MR 上病灶 WHO 分级的预测能力。此外，卷积神经网络的预测能力也在外部测试集（复旦大学附属肿瘤医院 2015 年 1 月至 2018 年 3 月期间的 8 例患者）上进行了测试。
结果：在 5 折交叉验证中， 当评估于对应的测试集，卷积神经网络准确率在 89.71% to 90.99%之间，ROC 曲线下面积在 0.8895 to 0.9369 之间，模型的平均准确率为 90.29%，平均 ROC 曲线下面积为 0.9245。当评估于外部测试集，在 5 折交叉验证中训练于不同训练集的卷积神经网络准确率在 85.39%与 87.64%之间，ROC 曲线下面积在 0.8909 到 0.9114 之间，模型的平均准确率为 86.97%，平均 ROC 曲线下面积 0.9053。
结论：深度学习算法具备在增强 MR 图像上直接预测胰腺神经内分泌肿瘤 WHO 分级的可行性。

PU-3370
不同重建算法下 AI 对肺结节三维容积定量影响的体模研究

张田宝,朱亚男,周和平,李正军
安康市中心医院

目的：探讨不同重建算法下人工智能技术对仿真胸部体模肺结节三维容积及 CT 值测量的影响。
材料和方法：一共 15 枚人造肺结节随机放置于体模内双肺上、中、下叶，结节分为 5 种直径（3mm,5mm,8mm,10mm,12mm），每个直径结节各有 3 种 CT 密度值（100HU,-630HU,-800HU），由 GE Revolution256 排螺旋 CT 在 120KV，NI=12 进行扫描，重建层厚为 1.25mm，依次采用肺算法、骨算法、标准算法、软组织算法进行重建，使用人工智能软件读取这些肺结节，记录结节数目、大小、体积及性质等数据信息，利用公式计算结节直径、体积、CT 值测量的绝对错误率（Absolute Percentage Error, APE）:APE=100×（$V_{测量}$-$V_{实际}$）/$V_{实际}$，使用单项方差分析（one-way ANOVA）结合 T 检验比较重建算法、结节直径对 APE 的影响。
结果：将 APE 按照重建算法的不同进行分组比较，发现 $APE_{直径}$、$APE_{体积}$均无显著统计学差异（P=0.932、0.557）,并且可以发现结节直径的大小，对 $APE_{体积}$影响不明显（p=0.162）。

结论：不同重建算法下 AI 对检测出的结节体积和 CT 值的测量结果是可信的，且结节的直径对体积的测量无显著影响。
临床意义：评估重建算法对人工智能在肺结节检测中的影响，更好的利用 AI 为临床提供更详实准确的肺结节信息，对患者尽早开始有效治疗有重大价值。

Accuracy of deep learning-based computer aided diagnostic system in measuring diameter and volume for nodules of different diameter and density: a phantom study

Tianbao Zhang,YaNan Zhu,HePing Zhou,ZhengJun Li
AnKang Central Hospital

Objective: To investigate the effects of nodule diameter and density on the accuracy of deep learning-based computer aided diagnostic system (DL-CAD) in measuring nodule sizes and volume.
Materials and Method: In this phantom study, a total of 12 artificial pulmonary nodules (Simulated Tumors, Kyoto Kagaku, Tokyo, Japan) were randomly placed in the chest phantom (Multipurpose Chest Phantom N1 "LUNGMAN", Kyoto Kagaku, Tokyo, Japan). All 12 nodules were divided into 4 groups based on their sizes (5mm, 8mm, 10mm, and 12mm in diameter) while each size group was composed of 3 nodules with different densities to simulate solid, mixed ground-glass and pure ground-glass morphology. The chest phantom was scanned on a spiral CT system (Revolution, GE Healthcare) at 120 kVp with a constant noise index of 12HU. Image sequence was reconstructed with 1.25 mm slice thickness. The diameter and volume of the nodules in the chest phantom were measured by a DL-CAD system. In order to evaluate the measurement accuracy, the absolute percentage measurement error (APE) for measured diameter and volume were calculated with APEd=100*(Dm-Dr)/Dr, APEv=100*(Vm-Vr)/Vr, respectively, where Dm, Vm,and Dr, Vr represented the measured and actual values of diameter, volume. Paired-samples t-test was used for statistical analysis.

Result: As the decrease of nodule sizes, it's becoming more difficult to measure nodules diameters accurately (p=0.041), the measurement accuracy for volume was not affected (p_{volume}=0.71). Meanwhile, the measurement accuracy of diameter and volume was all significantly different among nodules of density ($p_{diameter}$=0.001, p_{volume}=0.007). DL-CAD exhibited higher accuracy for nodules of lower densities.
Conclusion: In contrast to nodule diameter, nodule density had a greater impact on measurement accuracy. Measurement accuracy for ground glass nodules was much better than it for solid and calcified nodules.
Clinical Application: DL-CAD can provide more detailed and accurate pulmonary nodules information for clinical diagnosis, which is of great value in providing effective treatments for patients in time.

不同重建算法对 AI 肺结节检出率的影响：体模研究

张田宝,朱亚男,周和平,李正军
安康市中心医院

目的：探讨不同重建算法下人工智能技术对仿真胸部体模肺结节检出率的影响。
材料和方法：一共 15 枚人造肺结节随机放置于体模内双肺上、中、下叶，结节分为 5 种直径（3mm,5mm,8mm,10mm,12mm），每个直径结节各有 3 种 CT 密度值（100HU,-630HU,-800HU），由 GE Revolution256 排螺旋 CT 在 120KV，NI=12 进行扫描，重建层厚为 1.25mm，依次采用肺算法、骨算法、标准算法、软组织算法进行重建，使用人工智能软件读取这些肺结节，记录结节数目、长径、体积及性质等数据信息。
结果：不同重建算法下 AI 提取到的结节差异性较大，部分 3mm 和 5mm 结节出现漏诊情况，LUNG 算法漏诊率最低（13.3%），但假阳性结节较多，而 BONE 算法漏诊率最高（40%）。
结论：重建算法会影响 AI 对肺内真实结节的提取，LUNG 算法下漏诊率最低，BONE 算法最高，AI 对≤5mm 结节的识别能力有待进一步提高。
临床意义：重建算法对肺结节的 DL-CAD 诊断有一定的影响.因此，需要对不同内核的图像进行测试，然后再将其应用于临床。

Chest X-Ray Binary Classification by Deep Learning

Zhaonan Sun,Xiao dong Zhang,Xiao ying Wang
Peking University First Hospital

Purpose To develop an automated artificial intelligence system that can differentiate normal from abnormal X-ray at a high level. **Materials and Methods** All frontal-view chest radiographs were retrieved from PACS between 2017-8-1 to 2018-5-31, and each image was read by three radiologists together and was annotated with normal (10652) and abnormal (7110) according to the consensus of them . Exclusion criteria were as follows: internal and external implants, chest x-ray beside the bed, under 18 and over 100 years of age.The abnormalities included any lesion or variation in chest. No abnormalities were found in the normal group. The data was divided into 70% training set, 20% verification set and 10% test set.Alexnet-based model, Googlenet-based model, Densenet-based model was respectively trained on our well-labelled data. An automated artificial intelligence model was synthesized through soft-voting method. **Result** The accuracy, sensitivity and specificity of Alexnet-based model is 79.4%, 80.9%, 78.6%. The accuracy, sensitivity and specificity of Googlenet-based mode is 81.4%, 56.3%, 96.7%.The accuracy, sensitivity and specificity of Densenet-based model is 85.1%, 73.6%, 92.9%. **Conclusion**：Our algorithm can distinguish normal and abnormal chest x-Ray with high accuracy,sensitivity and specificity.

全院级 PACS/RIS 的应用研究

吴艳红
江西省肿瘤医院

目的：探讨全院级 PACS/RIS 的应用研究。

方法：将 PACS/RIS 和 MRI、cT、DR、乳腺钼靶、多功能胃肠、ECT、超声、内窥镜及激光相机等联结在一起，组成一个局域信息网。并实现 PACS/RIS 与 HIS 跨系统通讯，与 EMR、城市癌症筛查、自助打印等系统集成。

结果：
应用全院级 PACS/RIS 后，工作流程得到优化，缩短了报告的发出时间，提高了诊断的准确率，加强了科室管理。构建了各个影像学科图像及文本信息整合，实现在统一 ID、统一界面及统一索引下涵盖医疗、教学和科研信息的 EMIR 管理。实现区域内医院之间的信息同步和信息共享。应用全院级 PACS/RIS 后，工作流程得到优化，缩短了报告的发出时间，提高了诊断的准确率，加强了科室管理。构建了各个影像学科图像及文本信息整合，实现在统一 ID、统一界面及统一索引下涵盖医疗、教学和科研信息的 EMIR 管理。实现区域内医院之间的信息同步和信息共享。提高了影像诊断的水平与效率，为综合发挥各类影像检查手段提供了广阔的空问。在显著提高科室工作效率的同时，也将医学影像诊断带入了数字化、无胶片化管理的时代．为远程医学奠定了坚实基础。PACS 在更好地为临床医疗服务的同时．也为医学影像学教学提供了更加先进的手段，使医学影像学教学在原有的基础上提高了一个层次。
结论：PACS/RIS 的实施，提高了医院的工作效率和医疗水平，对现代医疗技术的发展和医院信息系统的建设起到了推动作用。

非小细胞肺癌术前 IA 期淋巴结转移预测模型的建立

丛梦迪[2,1],时高峰[2]
1.河北省儿童医院
2.河北医科大学第四医院

目的:利用非小细胞肺癌(NSCLC)术前 IA 期淋巴结转移(LNM)的临床/CT 表现、放射学特征及两者的结合，建立并验证预测模型。
方法与材料:回顾性研究我院 2017 年 9 月至 2019 年 1 月 649 例非小细胞肺癌术前 IA 期患者。所有患者术前均行薄层 CT 扫描。649 例患者手术后病理提示 LNM 的有 138 例(21%)。临床/CT 特征，包括(如年龄，性别，吸烟状况，大小，空泡征，毛刺征，分叶征和胸膜牵扯征)被研究放射科医生所确定，并用于建立一个临床模型。从薄层 CT 扫描中共提取 396 个放射组学特征。训练组 455 例(97 例合并 LNM, 358 例未合并 LNM)，试验组 194 例(41 例和 153 例)。采用 Mann-Whitney U 检验和卡方检验选择临床/CT 特征。采用 Mann-Whitney U 检验和单变量方差分析进行放射组学特征降维。采用最小绝对收缩选择算子(LASSO)逻辑回归算法进行放射组学特征选择。建立了三种预测早期非小细胞肺癌 LNM 的模型(临床模型、放射组学模型和联合模型)。利用三种预测模型，利用接收机工作特性曲线(ROC)下面积(AUC 值)来评价 LNM 分类的性能。
结果:训练组基于 7 个最佳特征的放射组学模型 AUC 值为 0.898 (95% CI, 0.890-0.906)，试验组 AUC 值为 0.851。训练组和试验组临床模型 AUC 值(大小和毛刺征)分别为 0.739 (95% CI, 0.725-0.753)和 0.614。放射组学-临床联合模型 AUC 值分别为 0.911 (95% CI, 0.904-0.918)和 0.860。
结论:基于 CT 放射组学-临床模型在预测非小细胞肺癌术前 IA 期患者 LNM 方面优于单纯应用放射组学和临床特征建立的模型。

PU-3376
基于去噪卷积神经网络（DnCNN）的磁共振压缩感知图像复原可行性研究

范文亮,孔祥闯,刘定西,杨帆
华中科技大学同济医学院附属协和医院

目的

磁共振压缩感知技术可大幅度缩短图像采集时间。但在压缩系数过大时，由于信号丢失会导致采集的图像存在伪影。本研究探讨基于去噪卷积神经网络（DnCNN），对高压缩感知系数磁共振图像复原的可行性。

方法

使用飞利浦 3T 磁共振 Ingenia CX 采集 30 例使用不同压缩感知系数（cs=6,8,10,12,14,16,18）的 3D-MSDE 序列脑部图像，每人 100 层，共计 3000 层。同时采集不使用任何加速算法的 3D-MSDE 序列脑部磁共振数据作为参考图像。计算不同压缩感知系数下采集到的图像与参考图像之间的均方误差，信噪比，图像结构相似度系数，评价不同压缩感知系数下图像噪声严重程度。构建去噪卷积神经网络[1]，将 3000 层图像分为 2000 层训练集，1000 层测试集，训练去噪卷积神经网络参数。同样使用均方误差、信噪比、图像结构相似度系数评价去噪之后的图像相对参考图像的噪声水平。统计分析不同组之间三个评价指标之间的差异性。

结果

随着压缩系数的升高，图像均方误差显著性升高，信噪比、图像结构相似度显著性下降（$p<0.05$）。压缩感知系数在达到 10 以后，图像质量下降严重，影响图像细节观察。使用去噪卷积神经网络处理之后的图像，与对应图像配对比较，信噪比、图像结构相似度显著性升高，图像均方误差显著性降低（$p<0.05$）。横向比较，使用去噪卷积神经网络处理之后的图像，甚至在压缩感知系数达到 18 时，仍可保持图像较高的信噪比和结构相似度。

结论

使用去噪卷积神经网络可有效去除因压缩感知系数过大引入的磁共振图像噪声，去噪卷积神经网络结合压缩感知技术可在保证磁共振图像质量的同时，减少扫描时间。

PU-3377
MRI 影像组学评估肝细胞肝癌 Ki-67 的表达

许露露,舒健
西南医科大学附属医院

目的：探讨 ADC 图、T2WI、DWI 的影像组学特征诊断肝细胞肝癌 Ki-67 标记指数高低的价值。方法：回顾性收集本院行病理检查的肝细胞肝癌患者 57 例。将纳入病例分为 Ki-67＞20%、Ki-67≤20%组。通过 MaZda 软件手工勾画 ROI 并分别提取 ADC 图、T2WI、DWI 纹理特征，随后采用 Fisher 系数、分类错误概率联合平均相关系数（POE+ACC）和交互信息（MI）的方法分别选择 10 种最佳纹理特征。组间比较通过应用 SPSS22.0 进行 *t* 检验或 *Mann-Whitney U* 检验，并做 ROC 曲线计算 AUC 值，并将每个序列组间比较有意义的纹理特征纳入二元 logistic 回归模型进行自变

量筛选，并建立预测模型。应用灵敏度、特异度、受试者工作特征曲线（ROC）的曲线下面积（AUC）大小评估预测模型的分类性能。结果：1.对于区别肝细胞肝癌 Ki-67 标记指数高低，*t* 检验和 *U* 检验示 ADC 图组间差异有统计学意义的纹理特征 20 个。T2WI 序列 Fisher 法共选择出组间差异有统计学意义的纹理特征 8 个。利用 Fisher 法、POE+ACC 法、MI 法共提取 30 种纹理特征，组间比较结果示 DWI 纹理特征对 Ki-67 标记指数高低组间差异无统计学意义。2.二元 logistic 回归示 ADC 图中的 S(5,0)和方差(P<0.01)以及 T2WI 中的高频对角分量小波系数能量 s-5（P =0.03）是 Ki-67>20%的独立预测因素。3.结合 ADC 图中的 S(5,0)和方差以及 T2WI 中的高频对角分量小波系数能量 s-5 建立肝细胞肝癌 Ki-67 表达程度的预测模型，AUC 值为 0.781，灵敏度为 73.3%，特异度为 70.4%。结论：利用 MRI 影像组学评估肝细胞肝癌 Ki-67 的表达，其影像组学预测模型的 ROC 曲线下面积 0.781，灵敏度为 73.3%，特异度为 70.4%。

PU-3378

基于人工智能诊断的 320CT 冠脉斑块的扫描优化研究

余菡
重庆医科大学附属第二医院

[摘要] 目的 探讨低剂量和常规剂量 CT 条件对人工智能系统冠脉斑块的检出效能的影响。方法 收集重庆医科大学附属第二医院 2018 年 6 月-2019 年 6 月冠脉斑块患者 54 例，其中男 32 例，女 22 例，年龄 40-70 岁，平均 57.3 岁，BMI 值 18.5-23.9。每位患者分别在东芝 320 排容积 CT Aquilion ONE 中应用 4 组不同的 CT 辐射剂量行冠脉 CT 血管成像，其中 A 组为常规剂量组，B、C、D 组为低剂量组，扫描毫安呈等梯度递减。扫描条件为 A 组（120KV，180mA），B 组（120KV，140mA），C 组（120KV，100mA），D 组（120KV，60mA），矩阵 1024*1024，视野 16cm，准直螺距 0.35，其余扫描参数均保持一致，并导入数坤科技辅助诊断软件 Coronary Doc 1.0 进行检测。结果 常规剂量组与低剂量组冠脉斑块在 AI 中检出效能分别为 A、B 组(93.8% vs 94.6%，P>0.05）;A、C 组(93.8% vs91.2%，P>0.05）;A、D 组(93.8% vs 73.2%，P<0.001），在一定剂量范围内，降低管电流，诊断效能无明显差异。结论 在一定剂量范围内，降低管电流，在保证诊断效能的同时，也能大大降低降低辐射剂量。但是要注意避免追求低剂量而导致噪声指数升高,造成图像细节显示受限甚至丢失，低于一定剂量范围，会降低人工智能对冠脉斑块的检出敏感度。

PU-3379

常规 MRI 纹理在脑胶质瘤分级中的价值

李倩,张伟
湖南省第二人民医院/湖南中医药大学附属人民医院（原：湖南省脑科医院）

目的 探讨常规 MRI 纹理分析在脑胶质瘤分级中的价值。
方法 回顾性分析 20151 月至 2019 年 5 月于我院经病理证实的脑胶质瘤患者 125 例，其中低级别胶质瘤 46 例，高级别胶质瘤 79 例。所有患者均于术前行常规 MRI 检查，包括轴位 T1WI、T2WI、T2FLAIR 序列及 T1WI 增强。使用 MaZda 软件手动勾画感兴趣区并提取分析病灶的纹理特征，通过 Fisher 系数、交互信息、分类错误概率及以上三种方法联合选择特征，通过主成分分析、线性/非线性判别分析进行特征分类，并筛选出最佳分析方法、分类序列及纹理特征组。将最佳特征组纳入 Logistic 回归模型进一步分析，采用错判率及受试者工作特性曲线评价不同纹理特征的诊断效能。

结果 利用 Fisher 系数、交互信息、分类错误概率三种方法联合选择特征、主成分分析在 T1WI 增强序列上对胶质瘤分级诊断效能最佳，最低错判率为 13.76%，受试者工作特征曲线下面积为 0.935，模型敏感度为 0.818，特异度为 0.726。
结论 基于常规磁共振图像，利用影像组学方法，可以对高低级脑胶质瘤有较好判别能力。

PU-3380
基于人工智能诊断的 320CT 肺磨玻璃样结节的扫描优化研究

舒樱岚
重庆医科大学附属第二医院

[摘要] 目的 探讨低剂量和常规剂量 CT 条件对人工智能系统肺磨玻璃样结节的检出效能的影响。方法 收集重庆医科大学附属第二医院 2018 年 6 月-2019 年 6 月 3-10mm 大小的肺磨玻璃样结节患者 40 例，其中男 28 例，女 12 例，年龄 45-69 岁，平均 54.3 岁，BMI 值 18.5-23.9。每位患者先后在东芝 320 排容积 CT Aquilion ONE 中应用 5 组不同的 CT 辐射剂量对胸部同一范围行肺结节局部高分辨靶扫描，其中 A 组为常规剂量组，B、C、D、E 组为低剂量组，扫描毫安呈等梯度递减。扫描条件为 A 组（120KV，180mA），B 组（120KV，140mA），C 组（120KV，100mA），D 组（120KV，60mA），E 组（120KV，20mA），矩阵 1024*1024，视野 18cm，准直螺距 1.25，其余扫描参数均保持一致，并导入深睿医疗基于深度学习模型的人工智能软件（Deepwise healthcare,V190120）进行检测。结果 常规剂量组与低剂量组磨玻璃结节在 AI 中检出效能分别为 A、B 组(94.1% vs 94.7%，$P>0.05$）;A、C 组(94.1% vs 91.4%，$P>0.05$）;A、D 组(94.1% vs 63.2%，$P<0.001$）；A、E 组(94.1% vs 21.1%，$P<0.001$）。结论 在保证 AI 诊断效能的同时，降低管电流，能大大降低降低辐射剂量,但要注意避免追求低剂量而导致噪声指数升高,造成图像细节显示受限甚至丢失，过低 mAs 会降低人工智能对结节的检出敏感度。

PU-3381
CT 影像组学在鉴别肺腺癌和鳞癌中的价值

王凯,张娜,李丽,武志峰,鄂林宁
山西医学科学院山西大医院

【摘要】目的探讨基于机器学习的 CT 影像组学方法在鉴别肺腺癌与鳞癌中的应用价值。 **材料与方法** 回顾性收集我院病理证实的 90 例腺癌患者和 84 例鳞状细胞癌患者。从每位患者的平扫及增强 CT 三期扫描图像中各提取出 1160 个定量影像组学特征用于建立影像组学鉴别诊断模型。在建模过程中，我们依次应用了 4 种机器学习算法，每个肿瘤基于 CT 平扫、动脉期和静脉期分别建立 3 个影像组学模型。根据受试者工作特征曲线下面积（AUC）评估每一期扫描的影像组学模型的鉴别诊断效能。 **结果** CT 平扫期影像组学模型鉴别肺腺癌和鳞癌的 AUC（95%CI）为 0.801（0.725,0.859）。动脉期和静脉期影像组学模鉴别效能的 AUC 分别为 0.834（0.763, 0.887）和 0.864（0.797, 0.912）。基于静脉期的影像组学模型的鉴别诊断效能最好，其灵敏度为 89.3%，特异性为 76.7%。**结论**基于机器学习的 CT 影像组学方法有助于提高鉴别肺腺癌与鳞状细胞癌的准确性，特别是在增强扫描静脉期建立的影像组学模型鉴别诊断效能最高。

PU-3382
MRI 影像组学评估肝细胞肝癌的病理分级

许露露,舒健
西南医科大学附属医院

目的：探讨 T2WI、DWI、ADC 图的影像组学特征诊断肝细胞肝癌的病理分级价值。**方法：**回顾性分析经病理证实的肝细胞肝癌患者 55 例，并分为高分化、中-低分化组。采用 MaZda 软件手工勾画 ROI，提取 DWI、T2WI 及 ADC 图纹理特征。利用 Fisher 系数、分类错误概率联合平均相关系数（POE+ACC）和交互信息（MI）的方法分别选择 10 种最佳纹理特征。应用 SPSS22.0 进行分别对提取出最佳纹理特征利用 t 检验或 Mann-Whitney U 检验进行组间比较，将各个序列组间比较有意义的纹理特征纳入二元 logistic 回归模型，并建立预测模型。为了评估预测模型的分类性能，本研究应用灵敏度、特异度、受试者工作特征曲线（ROC）的曲线下面积（AUC）大小评价诊断性试验的价值。**结果：**1.对于肝细胞肝癌病理分级，t 检验和 U 检验结果示 DWI 序列组间差异有统计学意义的纹理特征共 11 个。T2WI 序列组间差异有统计学意义的纹理特征共 2 个。ADC 图各纹理特征组间比较差异无统计学意义。2.二元 logistic 回归示 DWI 的 Teta3（P =0.02）、偏斜度（P =0.02）以及 T2WI 的高频垂直分量小波系数能量 s-5 （P =0.03)是中-低分化程度肝细胞肝癌的独立预测因素，这三者数值越大，患者为中-低分化的风险越高。3.结合 DWI 的 Teta3、偏斜度以及 T2WI 的高频垂直分量小波系数能量 s-5 建立肝细胞肝癌病理分化程度的预测模型，AUC 值 0.855，灵敏度为 70.0%，特异度为 86.7%。**结论：**MRI 影像组学可以一定程度区别高、中-低分化肝细胞肝癌，其影像组学预测模型的 ROC 曲线下面积为 0.855，灵敏度为 70.0%，特异度为 86.7%。

PU-3383
CT 纹理分析对结直肠癌肝转移灶侵袭性与 KRAS、BRAF 基因突变的相关性研究

郝晓一,刘屹
中国医科大学附属第一医院

目的：研究 CT 图像纹理分析对结直肠癌肝转移灶的侵袭性与 KRAS、BRAF 基因突变的相关性关系。
方法：回顾性收集 2013 年 1 月至 2018 年 4 月在我院行手术或肠镜确诊结直肠癌并且放化疗前进行增强 CT 检查的患者 90 例，并收集其 KRAS、BRAF 基因突变信息，按基因是否突变分为基因突变组 51 例，基因野生组 39 例。使用 ITK-SNAP 软件进行感兴趣区域勾画，分别使用 3 种方法在 CT 门脉期病灶最大横截面积层面进行二维勾画（方法 1 为病灶外延 2cm 和病灶区域，方法 2 为病灶外延 2cm 和内延 1cm 环形区域，方法 3 为病灶外延 2cm 环形区域）。使用 A.K 软件进行纹理特征提取、特征选择和模型建立。将患者随机分为训练组 62 例和验证组 28 例。使用 A.K 软件的方差分析与秩和检验（ANOVA+MW）、相关性分析和主成分分析（PCA）进行特征降维。使用 A.K 软件的 Bayes 和支持向量分类机模型建模。使用 AUC 曲线对模型诊断效能进行评价。
结果：三种方法提取纹理特征均得到 396 个特征，降维后方法 1 得到最相关的特征 6 个，方法 2 得到 8 个，方法 3 得到 3 个。方法 1 使用 Bayes 模型，得到训练集准确率、敏感性、特异性、AUC 值分别为 0.758、0.778、0.743、0.895；方法 2 使用 Bayes 模型，得到训练集准确率、敏感性、特异性、AUC 值分别为 0.732、0.760、0.710、0.817；方法 3 使用 C-支持向量分类机（C-SVC）模型，得到训练集准确率、敏感性、特异性、AUC 值分别为 0.871、0.852、0.886、0.853。三种方法得到的训练集 AUC 值均大于 0.8，准确率、敏感性、特异性均大于 0.7，其中方法 3 表现更优异。
结论：利用三种方法进行的 CT 图像纹理分析对诊断结直肠癌肝转移灶的侵袭性与 KRAS、BRAF 基因是否突变有较好价值。

PU-3384

CT 成像影像组学特征对胸腺上皮肿瘤危险预测

张卉
吉林大学第一医院

目的：利用增强 CT 图像中提取的影像组学特征，用于术前预测胸腺上皮肿瘤的危险分类。
材料和方法：收集 2016 年 2 月至 2019 年 2 月经手术切除或穿刺活检，并病理证实的 149 例胸腺上皮肿瘤患者 CT 二期增强图像进行回顾性分析，通过病理类型分为低危组和高危组，对图像进行重采样预处理，再从感兴趣区中提取 254 个放射学特征，对数据进行预处理，之后进行数据划分：训练组所占比例 0.7，验证组 0.3，然后，采用 ANOVA+MW、ANOVA+MW、Lasso: cross validation，进一步建立特征选择和放射学特征。用 ROC 曲线分析评价放射组学特征的预测性能，采用 SVW 建立模型。
结果：在鉴别高低危胸腺上皮肿瘤时，以 SVM 为选择方法的放射组学特征的敏感性 0.786、特异性 0.857、AUC 0.913、精确度 0.821。
结论：CT 增强图像放射组学特征可作为鉴别高低危胸腺上皮肿瘤的无创的、有效的手段。放射组学特征作为一种定量方法，可以为胸腺上皮患者提供更多的诊断信息。

Radiomics in diagnosis of small size lung nodules on unenhanced CT images with different reconstruction algorithms

Qingle Wang[1],Min Ji[2],Yuntao Yu[2],Xingwei Zhang[1],Zhiyong Zhang[1],Mengsu Zeng[1]
1.Zhongshan Hospital Fudan University, China
2.United Imaging Healthcare

Objectives: To investigate whether the reconstruction algorithm can influence the diagnosis accuracy.
Methods: 80 small lung nodules consisting of 26 benign nodules and 54 adenocarcinomas are analyzed. The raw data of each lesion was reconstructed with filter back projection (FBP) and model-based iterative reconstruction (MBIR) algorithm. The texture analysis model,model was trained and validated by retrospective study without CT raw data. Diagnostic accuracy for FBP and MBIR was assessed.
Results: Four features (the average: F3=-0.03804, F10=0.018913, F7= 0.017125, F1=0.014683) have obvious difference between FBP and MBIR algorithm both on benign nodules and adenocarcinoma. All these four texture features are important for differential diagnosis. The AUC calculated with MBIR algorithm (AUC=0.800) is higher than the one from FBP algorithm (AUC=0.775).
Conclusions: The CT images with MBIR algorithm provide more information of structure details, which can bring benefits for radiomics analysis in small lung nodules and improve diagnosis accuracy.

机器学习在青少年肌阵挛癫痫多模态功能成像研究中的应用

胡万均,刘光耀,张静
兰州大学第二医院

目的：探讨机器学习在青少年肌阵挛癫痫（juvenile myoclonic epilepsy ，JME）静息态功能指标（alff、reho、dc、功能连接等）与年龄、性别、病程、以及正常对照特征分类中的临床应用。
方法：对 45 名 JME 患者以及 30 名性别、年龄相匹配的正常对照组分别计算其低频振幅（alff）局部一致性（reho）度中心度（dc）功能指标并将双样本 T 检验后（通过 FDR 矫正）JME 与正常对照组异常区域选为功能连接种子点进行 ROI-Wise 水平功能连接，基于 PRONTO 机器学习软件包对四种功能指标进行特征提取、模型构建、模型评估使用留一交叉验证方法，最后使用 ROC 曲线计算 AUC（曲线下面积），AUC 越大，其相应功能指标分类性能越好。
结果：基于机器学结果表明 reho 以及 dc 在 JME 与正常对照识别种具有较高一致性，其特异性分别为 80%、75%；敏感性分别为 79%、%82；准确度分别为 80%、81%；而基于功能连接的机器学习特征分类表明：功能连接在 JME 与正常对照组中的特征分类效能最好，特异性为 84%；敏感性为 79%；准确度为 84%。

A New Approach to Predict Grades of Non-functional Pancreatic Neuroendocrine Tumors ≤2 cm: the Portal Rad-score

Yun Bian,Li Wang,Jianping Lu
Department of Radiology， Changhai Hospital， The Second Military Medical University， Shanghai，China

Context Non-invasive preoperative grading of non-functional pancreatic neuroendocrine tumors (NF-pNETs) ≤2 cm is challenging, critical for successful surgical outcomes, and currently relies on endoscopic ultrasound-guided fine needle aspiration, which has limitations.
Objective We aimed to construct the rad-score using radiomics features of multi-slice spiral CT (MSCT) images to predict preoperative grades of NF-pNETs ≤2 cm.
Methods In this retrospective study, 158 patients with surgically resected, pathologically confirmed NF-pNETs underwent MSCT from January 2014 to January 2016. Radiomic features were extracted from portal venous CT scans. The least absolute shrinkage and selection operator method was used to select the features. Multivariate logistic regression models were utilized to analyze the association between the rad-score and grades of NF-pNETs. The rad-score performance was determined by its discrimination and clinical usefulness. The rad-score was internally validated in 43 consecutive patients with NF-pNETs 2cm between February 2016 and December 2018.
Results The rad-score, which consisted of 6 selected features, was significantly associated with grades of NF-pNETs (p <0.0001). It showed good discrimination in the training cohort [area under the curve (AUC), 0.86; 95% confidence interval (CI), 0.79-0.92] and in the NF-pNETs ≤2 cm cohort (AUC, 0.81; 95% CI, 0.68-0.91). The best cut

point was -0.66. For a threshold probability of >4.8% for a doctor or patient, DCA indicated greater net benefit from use of the rad-score than from the alternative "treat all" or "treat none" strategies.
Conclusions The portal rad-score, is a potentially valuable noninvasive tool for accurate preoperative prediction of grades for NF-pNETs ≤2 cm.

Machine Learning-Based Radiomics to Predict the Expression of S100 in Gliomas in Different Grades

Min Gao,Siying Huang,Ru Yang,Jun Liu
The Second Xiangya Hospital of Central South University

Background T1-weight contrast material-enhanced MRI is the current standard for initial imaging of patients with head tumor. We aimed to develop and validate a set of deep learning algorithms for automated detection of the S100 status of glioma from the MRI scan in vivo.

Methods We retrospectively collected a dataset containing 465 subjects with gliomas together with their pathological reports and head MRI scans from a single-institution between Oct 1, 2013, and Mar 1, 2019. Overall, 249 subjects, including 122 cases of high-grade gliomas and 127 cases of lower-grade gliomas with preoperative MRI, histology, S100 status were included. We proposed a multidimensional analysis of machine-learning model, including SVM, decision tree, bagged trees and random forest, based on original contrast material-enhanced axial T1-weighted spin-echo sequences to predict S100 status of glioma. An independent dataset with 50 glioma subjects was further collected to verify the model performance.

Results The S100 status of gliomas can be predicted by radiomics and machine-learning approaches, with areas under ROC curves above 0.728 and mean accuracies above 90% estimated on the training dataset. All P values were less than 0.05. As the malignant degree of glioma increased, the expression level of S100 decreased.

Conclusions The MR radiomics-based method provides a reliable alternative to predict the expression of S100 in different grades of gliomas. It may help in classifying patients for surgery.

Low-dose scan imaging of 256-slice spiral CT of lower extremity superficial varices

Peng Wang
1.Wuxi No.3 People's Hospital
2.Affiliated Hospital of Jiangnan University

Objective To Patients with lower extremity varices need to undergo extensive CT or X-ray angiography before and after treatment, and the radiation dose is higher. This study is to evaluate the value of low-dose CT enhanced scan for lower extremity varicose vein imaging. Data and methods prospective selection Forty patients with clinically diagnosed superficial varicose veins were randomly divided into 4 groups according to different scanning parameters: group I (standard group): 120 kV, 250 mAs; group II: 120 kV, 100 mAs Group III: 100 kV, 200 mAs; Group IV.: 80 kV, 300 mAs. Evaluation of effective dose (ED), signal-to-noise ratio (SNR), contrast-to-noise ratio (CNR), and image quality. Results 1I to IV There was no significant difference in age, body mass index and height between the two groups (P>0.05). The difference of ED between the two groups was statistically significant (P<0.05). The SNR and CNR of the 3I～IV groups were statistically significant. Significance (F=3.7, 3.6, P<0.05). All images can meet the diagnostic requirements. Conclusion Apply lower tube voltage and higher tube current (80 kV, 300 mAs) to reduce the radiation dose while image quality Less affected, able to meet clinical diagnostic requirements, can be used as a routine scan for patients with lower extremity superficial varices Parameters.

Purpose

Age is an important risk factor for disease. The study goal is to establish a mean value of the size of lung parenchyma (SLP) and the cardiothoracic ratio (CTR) of healthy population in Southern China using a large-scale chest radiograph (CXR) dataset as baseline for different ages and genders. The result is used to generate prediction models for biological lung or heart age to monitor aging processes and early detect lung or heart diseases.

Material and methods

A large PA/AP CXR dataset was acquired from six sources in Southern China, from 2012 to 2018, including 249,858 and 222,011 CXRs for SLP and CTR, respectively. All cases were confirmed by at least one radiology report, EKG, or other clinical report to exclude abnormal SLP and pre-existing heart conditions.

CXR image was first resized and converted into PNG format. An adaptive histogram equalization was applied to improve the contrast. A deep learning artificial intelligence (AI) technique was trained and applied to automatically segment the left and right lung, and the heart area with a very high accuracy (DICE value<0.017). The left and right SLP was calculated for different ages and genders. The CTR was calculated for each age and gender by dividing the transverse cardiac diameter by the maximum internal thoracic diameter.

Results

The mean right and left SLP increased with age until it peaked at gender specific maturity age. Figures 1 and 2 show the SLP and CTR profiles for each age, referred as lung and heart age, with a 95% confidence level. The mean SLPs of the study population were 399, 368, and 435 cm^2, and the mean CTRs of the study population were 0.417, 0.420, and 0.413, for general, female, and male population, respectively.

Conclusion

This is the first large-scale study on radiological lung and heart age measured using PA/AP CXR images. The study generated prediction models and obtained the averaged biological lung and heart age using deep learning AI and radiomics. The trend of lung and heart age profiles are similar to various reported disease risks and growth trends.

PU-3391

Preoperative prediction of extracapsular extension based on radiomics signature: comparison of five different predictive models and the visual assessment to stage prostate cancer

Shuai Ma,Huihui Xie,Huihui Wang,Xiaodong Zhang,Xiaoying Wang
Peking University First Hospital

Objective: To compare five different radiomics-based machine-learning models and the visual assessment for preoperative prediction of extracapsular extension (ECE) in patients with prostate cancer (PCa).

Methods: Preoperative magnetic resonance imaging data from 238 patients with PCa was studied. Patients enrolled were randomized in a two-to-one ratio into the training (n = 165) and validation (n = 73) cohorts. A total of 1619 radiomics features were extracted from T2-weighted images (T2WI). Radiomics signature was built via dimension reduction, feature selection based on the least absolute shrinkage and selection operator (LASSO) method. A radiomics nomogram comprised of radiomics signature, MR-reported ECE status, and independent clinicopathologic risk factors was constructed using multivariable logistic regression. In addition, four other machine-learning

models (tradition support vector machine (SVM) method, radial-basis-function based SVM (RBF-SVM), decision tree and random forest were conducted. The ECE status of the same images were also evaluated by three radiologists by using the Likert 5-point scale method. The predictive performance of these models and the radiologists' interpretations were compared by using receiver operating characteristic curves based on the validation cohort.

Results: A radiomics signature consisting 22 selected features was significantly associated with pathologic ECE status ($P < .001$ for both training and validation cohorts). The radiomics nomogram comprising radiomics signature, lesion location, prostate specific antigen (PSA) level, and MR-reported ECE status demonstrated best performance, with an area under the curve (AUC) of 0.874 and 0.846 in training and validation cohort, respectively. The AUC of SVM, RBF-based SVM, decision tree and random forest were 0.808, 0.840, 0.801 and 0.829, respectively, which were all outperformed radiologists' visual assessment alone (AUC = 0.644)

Conclusion: The proposed predictive models outperformed visual assessment for the prediction of ECE status.

PU-3392

Automatic Lung Nodule Follow-up Assessment with Semantic-Aware Registration

Shengping Wang[1], Xiaohuan Cao[1,2], Weijun Peng[1]
1. Department of Radiology, Fudan University Shanghai Cancer Center, Department of Oncology, Shanghai Medical College, Fudan University, Shanghai, China
2. Shanghai United Imaging Healthcare Co., Ltd.

Purpose:

A longitudinal image registration approach is developed for robust image alignment, accurate lesion correspondence matching and efficient lung nodule follow-up assessment using CT images under large anatomical variation, surgical-absence organ and pathological lesion progression conditions.

Method/Materials:

Lung nodules are automatically detected and quantified by applying a convolutional neural network model on CT images of each subject. For patients who need follow-up, a longitudinal semantic-aware registration is performed by 2 steps: 1) detecting landmarks with salient anatomy and 2) performing longitudinal registration via landmark and image information. Then, a bi-directional matching strategy is performed to accurately establish the nodule correspondences longitudinally by considering their locations and shapes. A hybrid distance metric is designed by not only considering the nodule center distances but also calculating shape similarities across the temporal domain. Finally, after the robust lesion matching, follow-up quantitative assessment is automatically performed according to the RECISTS 1.1 guidelines.

We have 5500 chest CT images from a cohort of health screening patients, trained (80%) and tested (20%) our CNN models for lung nodule detection and quantification. Then, we performed a pilot study on 20 subjects with multiple follow-ups (time interval: 2.2 ± 1.7 months). The baseline for comparison follow-up assessments were performed by one radiologist and verified by another.

Result:
The CNN-based lung nodule detection was proved to be sensitive for the testing dataset (95.1%). Average registration errors for the pilot study are 4.8±3.6 mm evaluated on landmarks. While manual assessment took >14 minutes for each patient, including nodule quantification, it took <1.5 minutes for the proposed method, which is at least 9 times faster. Statistical analysis showed that correct nodule correspondence rates and quantification results were not significantly different from manual assessments based on RECISTS 1.1.
Conclusion：
Experimental results showed the semantic-aware registration is more effective while generating comparable results as compared to manual assessment from radiologists. This algorithm is also robust to anatomical and pathological variations, which facilitates automatic follow-up image assessment in clinics.

PU-3393

MRI 对脑干海绵状血管瘤的诊断价值及临床分析

郭会利
河南省洛阳正骨医院（河南省骨科医院）

摘要： 目的 探讨脑干海绵状血管瘤的 MRI 诊断价值及临床、病理特征。**方法** 对 12 例经手术病理证实且临床及 MRI 资料完整的脑干海绵状血管瘤进行分析；其中 7 例还做过 MRA 检查，8 例做过全脊髓血管造影，9 例曾做过 CT 检查。本组 12 例均经后背正中直切口显微手术治疗。 结果 临床发作方式分为：突然发作和静止发作两种类型。MRI 表现：T_1WI 为等或低信号占 79.8%，T_2WI 为等或高信号占 87.2%；T_1WI、T_2WI 呈混杂信号占 36.5%；T_2WI 上瘤周有低信号环占 17.3%；Gd-DTPA 扫描显示轻度强化或不强化。形态大多为类圆形占 89.5%，部分可见典型的桑椹样或网络样结构占 10.5%。病灶发生于中脑 5 例，桥脑 5 例，延髓 2 例。组织病理学表现：大多具有复合性的病理改变，3 例可见瘤血管腔内存在弹性纤维；2 例可见引流静脉和供血动脉。MRA 及全脊髓血管造影未见异常血管。 结论 脑干海绵状血管瘤的临床表现与病灶的部位及大小密切相关；MRI 表现与病程及病变构成有关；部分组织病理学具有与其它血管畸形重叠的特点。MRI 是脑干海绵状血管瘤
术前诊断及制定手术方案的最佳检查方法。

Construction of Prognostic Prediction Model for Chemoradiotherapy of Small Cell Lung Cancer Based on CT Texture Analysis

Yanping Su[1], Chenying Lu[1], Jiansong Ji[1], Peipei Pang[2]
1.Lishui central hospital
2.GE Healthcare

Purpose: Synchronous chemoradiotherapy is a common treatment for small cell lung cancer (SCLC), but recurrence and metastasis are prone to occur in a short time after treatment, and this performance is unpredictable. The purpose of this study was to establish a prognostic prediction model for SCLC after chemoradiotherapy by texture analysis of preoperative computed tomography (CT) images.
Method and Materials: This study retrospectively collected 69 patients with SCLC who were diagnosed and treated at Lishui Hospital of Zhejiang University from July 2013 to August 2018. All patients were confirmed to be SCLC by needle biopsy, and CT scan and laboratory examination were performed before treatment. All the enrolled patients underwent chemoradiotherapy and divided into two groups according to the presence or absence of recurrence 6 months after treatment, which were recurrence group (n=39) and control group (n=30). The AK (Analysis Kit, GE Healthcare) software was used to delineate the volume of interest of the lesions based on the preoperative CT images and extract a total of 396 quantitative texture parameters. All pre-normalized (Z-score) feature values were dimension reduction by Kruskal-Wallis (K- W) one-way ANOVA test, univariate logistic regression, and LASSO algorithm and selected the most useful features. The selected imaging features were further combined with clinical laboratory indicators (NSE, CYFRA21-1 and Pro-GRP) to construct the predictive model.
Results: Eight characteristic parameters with highly correlation with prognosis were selected, which were used to form the Rad-score. The Rad-score and clinical laboratory indicators were applied for modeling, and found that the area under the ROC curve was 0.846, the sensitivity and specificity were 0.846 and 0.700, respectively. A prognostic nomogram was further developed based on Rad-score and clinical indicators, providing a more intuitive reference for prognostic prediction.
Conclusion: A nomogram has been developed that can be used to predict the probability of recurrence within 6 months after chemoradiotherapy for SCLC, which may be useful for patient counseling and patient follow-up planning.

PU-3395
基于动态增强扫描 DCE-MRI 的前列腺良恶性疾病鉴别模型研究

李春雨
武汉大学中南医院

目的：前列腺癌（PCa）是男性生殖系统最常见的恶性肿瘤，MRI 动态增强扫描（Dynamic Contrast Enhencement, DCE）对前列腺癌的诊断、分期和判断预后价值较大。本研究通过一系列灌注参数，容积转移常数（Ktrans）、运动速度常数（Kep）、血管外细胞外容积分数（Ve）等，提取特征值，与患者的病理结果对应分析，建立一个前列腺良恶性疾病分类模型，为诊断提供更多依据。
方法：通过 DCE 图像，拟合多种已知的药物动力学模型，得到 Ktrans、Kep、Ve 的计算方法，勾画病灶区，计算得到该区域的灌注参数图，并提取参数图的 SIFT（Scale-invariant feature transform）特征和 HOG（Histogram of Oriented Gradient）特征，与病理结果（包括分级、评分、抗原等）进行相关性分析，建立一个用于前列腺良恶性疾病分类鉴别的人工神经网络模型。
结果：本研究基于 DCE 获得的一系列血管渗透性参数建立的前列腺良恶性分类鉴别模型能够有效地对前列腺增生和肿瘤做出分类，分类结果与病理结果一致性高达 85%。

结论：DCE-MRI 对前列腺疾病的诊断鉴别有很大意义，前列腺良恶性疾病的血管渗透性参数是有显著差异的，因此可以通过提取参数图特征运用人工智能方法去探寻它们的内在联系。

Automated nodule segmentation in CT images based on improved U-Net architecture

Yineng Zheng,Zhigang Chu,Fajin Lv
The First Affiliated Hospital of Chongqing Medical University

Purpose: This study aims to develop CAD systems for automated nodule segmentation that can avoid tedious manual processing and reduce inter-observer variability between different radiologists.
Method: The public Lung Image Database Consortium and Image Database Resource Initiative (LIDC-IDRI) dataset which contains 1018 cases were used in our study. we propose a network architecture based on U-Net for lung nodule segmentation. The dense connection branches into the U-Net architecture to improve segmentation performance was introduced. Meanwhile, a hybrid loss function was designed to address the class imbalance problem between foreground and background. Finally, we apply the fully connected Conditional Random Field (CRF) model as the final post-processing to eliminate some spurious areas.
Result: The proposed method was compared with several state-of-the-art methods and the segmentation results, and it can be observed that our method achieves the mean DSC, PPV and sensitivity of 82.59 3.81%, 89.47 2.04% and 84.71 2.68%, respectively.
Conclusion: Our model achieves the overall best performance in the lung nodule segmentation and could be used for computer-aided diagnosis in clinical.

PU-3397

基于 MR 影像组学分析预测直肠癌病理分化程度的可行性研究

郭小芳[1],周明宇[2],杨倩[1],袁子龙[1],牛晓辉[2],刘玉林[1]
1.湖北省肿瘤医院
2.华中农业大学信息学院

目的：探讨基于 MR 影像组学分析预测直肠癌病理分化程度的可行性研究。
方法：回顾性分析 127 例直肠癌患者的 MR 图像及病理资料，使用 3D-Slicer 软件，在 T1WI 横轴位增强图像上选择直肠癌灶最大层面区域勾画感兴趣区并提取影像组学特征，利用 SMOTE 算法对预处理后的数据进行平衡处理；利用 LASSO、随机森林、弹性网三种特征选择算法进行最优特征子集的选择；利用支持向量机，基于选择的特征对样本进行分类，建立预测模型，使用 ROC 曲线评估模型预测直肠癌病理分化程度的性能。
结果：本研究 127 例直肠癌患者，男性 82 例，女性 45 例，根据病理分化程度分为三组：低分化组 22 例，中分化组组 77 例，高分化 28 例。共提取 7 大类 110 个有效特征。通过建立两次二分类模型，三种不同的特征选择方法均能预测直肠癌的病理分化程度，所有二分类模型中最小的 AUC 值为 0.76。第一个二分类模型“高-不高”模型中，在三个最优特征子集中均出现的特征有 7 个，基于弹性网特征选择后的预测模型的 AUC 值最高，为 0.79；第二个二分类预测模型“中-低”模型中，

在三个最优特征子集中均出现的特征有 11 个，基于随机森林算法特征选择后的预测模型的 AUC 值最高，为 0.9。
结论：基于 MR 影像组学分析方法，通过两次二分类模型的建立，能够区分直肠癌高、中、低分化程度。基于 MR 影像组学分析方法可以作为一种预测直肠癌病理分化程度的方法，是一种比较稳定的、无创的方法，也使得直肠癌 MRI 检查在临床上具有更大的价值。

PU-3398

Image quality of 30-pass and 15-pass CTP with a new reconstruction algorithm:CNN based on SegNet

Jianing Tian,Dan Tong
The first hospital of Jilin University

PURPOSE: we use Convolutional Neural Networks (CNN) based on SegNet reconstruction algorithm to obtain 15-pass CTP data. The aim of this study was to evaluate the image quality and clinical decision-making when using 30-pass and 15-pass CTP.
MATERIALS AND METHODS: A total of 40 patients with acute stroke onset≦9-hour were enrolled.30-pass CTP data were obtained from Brilliance iCT 256 (Philips).15-pass CTP data were created by using the new reconstruction algorithm. Perfusion parameters (CBF, CBV) and color maps were calculated by using PMA-Asist(JAPAN) for 30-pass and 15-pass CTP. CTP image quality were estimated by peak signal to noise ratio(PSNR) and structural similarity measure(SSIM).To exam Penumbra(Penu.) and Ischemic core(IC) lesion,adapted absolute CBF/CBV were applied. CBF(Penu.) and CBV (IC) CTP lesion scores were derived from the CBF and CBV color maps respectively and the data were statistically compared.
RESULTS: CTP image quality was similar for 30-pass versus 15-pass ($PSNR_{avg}$=51.73,$SSIM_{avg}$=0.9946，$PSNR_{std}$=1.4666,$SSIM_{std}$=0.0018) . Corresponding penumbra lesions were slightly smaller at 15-pass versus 30-pass (P <.05), whereas corresponding Ischemic core showed excellent agreement. Therapeutic decisions would have remained the same in all patients.
CONCLUSIONS: 15-pass CTP are typically still diagnostic, and therapy would be the same. However, with regard to perfusion quantitation and image quality, our study indicates that 30-pass is preferable to 15-pass.

PU-3399

Towards a clinic-radiologic-biopsy based predictive model for the detection of pelvic lymph node invasion in patients with prostate cancer before surgery

Ying Hou
The First Affiliated Hospital with Nanjing Medical University

Abstract
Purpose:

To develop a predictive model, based on preoperative clinical characteristics, MRI image features and biopsy findings, to detect whether pelvic lymph nodes invasion (LNI) exist or not in patients with prostate cancer (PCa) undergoing standard pelvic lymph node dissection (PLND).

Materials and methods:

248 consecutive patients underwent standard prostate 3T MRI before radical prostatectomy (RP) and standard pelvic lymph node dissection (PLND) were enrolled. Image analysis was performed by two independent readers blinded to any clinical information. Histopathologic examination served as the standard of reference. Predictive models were developed from 16 clinicoradiologic features and 3 biopsy findings to assess the prevalence of LNI, using a logistic regression (LR) and support vector machine (SVM) analysis, respectively.

Results:

Total 59/248 (23.8%) LNI patients were identified at surgery. Conventional radiologic-lymph node (LN) report had high specificity (97.9%) and low sensitivity (39.0%) for diagnosis of LNI. SVM model, consisting of 6 most important clinic-radiologic-biopsy predictors, yielded significantly higher area under ROC curve (0.94, 95 confidence intervals [CI], 0.92-0.95 vs 0.90, 95% CIs, 0.88-0.91), higher sensitivity (93.2% vs 84.7%) and higher specificity (86.1% vs 78.8%) than LR model. In radiologic LN-negative subgroup, SVM and LR model identified 33/36 (91.7%) and 27/36 (75%) additional positive cases, respectively.

Conclusion:

The designed predictive model is better than conventional radiologic reporting way for predicting LNI in patients with PCa. The utility of this approach can be viewed in terms of enhancing both the diagnosis and treatment processes.

PU-3400

The value of Radiomics in Predicting the Recurrence and Metastasis of T3 Rectal Cancer

Shengnan Mou,Huimao Zhang
The First Hospital of Jilin University

Objective:

To assess the value to predict recurrence and metastasis of T3 rectal cancer by radiomics.

Method:

A retrospective study of 87 patients with T3 rectal cancer at the First Hospital of Jilin University from January 2011 to December 2013. All the patients underwent contrast-enhanced abdominal CT within 2weeks before surgery, including arterial phase and vein phase. Clinical factors, such as gender, age, bloody stool, tumor differentiation, lymph node metastasis, carcinoembryonic antigen (CEA), carbohydrate antigen 72-4 (CA72-4), carbohydrate antigen 199 (CA199) and CT datasets were obtained. The radiology group cloud platform (http://www.radcloud.cn) was used to map ROI of the lesion and 1029 radiographic features were extracted. All patients were assigned to

two groups: analysis group (n=44) and verification group (n=43). Using analysis group data for univariate analysis, select radiomic features associated with recurrence and metastasis, significantly. Then establishment a predictive model for recurrence and metastasis by Cox analysis. Apply verification group data to verify the predictive model by Kaplan-Meier curves and evaluate the difference between clinical predictive model and final predictive model by Log-rank test.

Results:

There was no significant difference in clinical factors between the analysis group and the verification group. Seven arterial phase radiomic features and nine venous phase radiomic features predict the recurrence and metastasis of T3 rectal cancer after surgery strongly (CI > 0.60 and FDR < 5%). The radiomic features that were finally selected into the predictive model were wavelet HHH-GLRLM-short run high gray level emphasis, and the arterial phase and venous phase had the same results. Among the clinical factors, histological grade and lymph node metastasis were included in the predictive model (Log-Rank test, $p < 0.1$). Compared with the CI index of the predictive model using clinical factors alone, the CI index of the final predictive model of radiomic features of arterial phase increased from 0.69 to 0.76, and the CI index of the final predictive model of radiomic features of venous phase increased from 0.69 to 0.74.

Conclusion:

For predicting recurrence and metastasis of T3 rectal cancer, the addition of radiomic features can improve the prognostic ability of a model compared to one using clinical factors alone.

PU-3401

Development of a multiparametric radiomics combined T2WI and DWI to staging rectal cancer

Daguang Wen[1], Chunchao Xia[1], Zhenlin Li[1], Xin Li[2], Xinrong Wang[2]
1.West China Hospital Of Sichuan University
2.Translational Medicine Team, GE Healthcare, Shanghai, China

Purpose: To explore whether radiomics analysis in T2-weighted imaging (T2WI) and Readout-segmented echo-planar diffusion-weighted imaging (DWI) can help to predict the pathologic staging in rectal cancer.

Material and methods: This study prospectively enrolled 430 patients (age:25~94,male) with rectal cancer staging N0 or N1-2. According to 10-fold cross validation, 70% of this cohort (300 patients) was set as the training cohort, and the others (130 patients) was set as the validation cohort. 2231 radiomics features were extracted from T2WI and DWI. On the one hand, the features of the three modal images are extracted respectively and then model is respectively calculated. The final model was determined by voting on the results of the three models. On the other hand, the data of three kinds of images are combined to build the model. Compare the effectiveness of the two methods.

Results. Three weak models were identified. By setting the voting weight, integration learning of three models reaches a higher distinction between staging N0 and N1-2

(Train:AUC:0.900,Sensitivity:0.907,Specificity:0.797;Test:AUC:0.862,Sensitivity:0.861, Specificity:0.725).
Conclusion: Multiparametric radiomics of rectal cancer, which combined T2WI with DWI, showed a fairly high accuracy in staging of N rectal cancer.

PU-3402

Abnormal nodes characteristics in whole-brain functional networks of long-term abstinence of methamphetamine: A Resting-State fMRI Study

Lidan Fan,Zhixue Zhang,Junjiao Hu,Shixiong Tang,Huabing Li,Zhong He,Weijun Situ,Jianning Sun,Zishu Zhang,Zishu Zhang,Zhifeng Kou,Jun Zhang,Jun Liu,Ru Yang
The second Xiangya Hospital， Central South University

Background: Neuroimaging studies have shown that methamphetamine (MA) abusers have abnormalities in widespread local regions of the brain. However, little is known about whether the long-term abstinent MA abusers (AMD) have abnormal nodes characteristics in whole-brain functional networks. **Materials and Methods:** 35 AMD (abstinent at least 14 months) and 32 healthy controls (HC) were recruited in the study. The age of the first use of MA, grams of monthly MA consumption, total time of MA use and abstinence of the AMD were recorded. Data Processing Assistant for Resting-State fMRI (DPARSF) was used to measure the mean nodal efficiency and degree centrality of 90 brain regions in the automated anatomic labeling atlas. Comparisons of the two nodes characteristics of the 90 nodes between the two groups were performed with the independent-sample t-tests. Spearman's correlation analysis was performed between the abnormal nodal characteristics and MA use characteristics. **Results:** Compared with the HC, the AMD had significantly decreased nodal efficiency in the left supramarginal gyrus, right precuneus, and had significantly increased nodal efficiency in the right superior temporal gyrus, middle temporal gyrus, and inferior temporal gyrus. Compared with HC, the AMD also had significantly decreased nodal degree centrality in the left middle frontal gyrus, orbital part, supramarginal gyrus, right precuneus, and had significantly increased nodal degree centrality in the right superior temporal gyrus, middle temporal gyrus, inferior temporal gyrus. Moreover, the nodal efficiency and degree centrality of the right precuneus were all positively correlated with the age of the first use of MA. And the nodal degree centrality of the left supramarginal gyrus was negatively correlated with the grams of monthly MA consumption. **Conclusions:** The study showed that the nodal efficiency and degree centrality of some brain regions were abnormal in the AMD. The study provided imaging evidences for abnormal nodes characteristics in whole-brain functional networks of AMD.

Influence of CT effective dose and convolution kernel on the detection of pulmonary nodules in different artificial intelligence software systems: A phantom study

Binjie Fu[1], Guoshu Wang[1], Mingyue Wu[2], Zhigang Chu[1], Wangjia Li[1], Yineng Zheng[1], Fajin Lv[1]
1.the first affliated hospital of Chongqing mecical university
2.Chongqing medical university

Abstract
Objective: To investigate the effective dose (E) and convolution kernel's effects on the detection of pulmonary nodules in different artificial intelligence (AI) software systems.
Materials and methods: Simulated nodules of various sizes and densities in the Lungman phantom were computed tomography (CT) scanned at different levels of E (3-5, 1-3, 0.5-1, and <0.5 mSv) and were reconstructed with different kernels (B30f, B60f, and B80f). The number of nodules and corresponding volumes in different images were detected by four AI software systems (A, B, C, and D). Sensitivity, error rate (ER), and relative volume error (RVE) were calculated and compared to the aspects of the E and convolution kernel.
Results: System B had the highest median sensitivity (100%). The median ER of systems B (6.25%) and D (7.14%) was lower than A (56.07%) and C (31.25%). System D had the smallest RVE (13.12%). When the E was <0.5 mSv, system D's sensitivity decreased, while the ER of systems A and B increased significantly ($P < 0.05$ each). When the kernel was changed from B80f to B30f, the ER of system A decreased (33.57%), while that of system C increased (58.84%), and the RVE of systems A, B, and C increased ($P < 0.05$).
Conclusions: AI software systems B and D have high detection efficiency under normal or low dose conditions and show better stability. However, the detection efficiency of systems A and C would be affected by the E or convolution kernel, but the E would not affect the volume measurement of four systems.

基于静息态因果-机器学习模型对 BECTS 分类的脑网络机制的研究

戴西件[1,2], 张继辉[1], 张志强[2], 卢光明[2]
1.香港中文大学
2.东部战区总医院

目的：首次利用静息态动态因果模型(rs-DCM)分析方法探讨支持向量机(SVM)机器学习分类方法对伴中央颞区棘波的良性儿童癫痫（BECTS）和正常健康儿童的鉴别能力，以及潜在的特征性网络模型。
方法：本研究共纳入 246 例儿童被试，包括我院神经内科门诊就诊并确诊为 BECTS 的 67 例首诊未用药患儿（女性 30 例，男性 37 例；平均年龄，8.74 ± 2.25 岁）和 67 例健康正常对照儿童（女

性 31 例，男性 36 例；平均年龄，9.29 ± 2.41 岁），以及外院 56 例 BECTS 患儿（女性 24 例，男性 32 例；平均年龄，9.49 ± 2.48 岁）和 56 例健康正常对照儿童（女性 23 例，男性 33 例；平均年龄，10.12 ± 3.3 岁）。SVM 用于 BECTS 两个亚组的分类。
结果：rs-DCM-SVM 机器学习方法用于区分 BECTS 患儿和正常健康儿童获得较高的分类正确率（85.82%），相应 AUC 值为 0.88。外部单位数据同样得到近似分类正确率（82.14%）和 AUC 值（0.81）。其中，84 条正性效应连接边和 86 条负性效应连接边作为有效特征用于 BECTS 的诊断。这些连接边所在脑区对区分 BECTS 组和正常健康儿童组的贡献权重最高的脑区分别为左侧语言相关脑区、双侧 Rolandic 区、双侧中央前回、右侧 IPS、右侧 EFE、左侧 IPC、左侧丘脑，这些脑区对应的网络分别为感觉运动网络、语言网络、右侧 DAN 及皮层下网络。
结论：rs-DCM-SVM 可能能作为一个较好的生物学指标用于 BECTS 诊断。这些脑网络之间的高兴奋性环路和高抑制性环路可能介导癫痫的发生。本研究结果为我们对 BECTS 发生、发展的病理生理学机制的理解提供新的视角。

PU-3405
双能量 CT 多种重建技术在消除后颅窝伪影中的应用

崔晓
昆明医科大学第一附属医院

目的 评价双能量技术多种重建方式在减轻后颅窝伪影方面的应用价值。
方法 选取 2013-2014 行头颅 CT 平扫并且后颅窝有伪影的成人患者 40 例，扫描参数：双能扫描模式， Sn140/80 kV，有效电流 111 和 222 mAs，开启 Care Dose 4D。准直 128×0.6 mm，矩阵 512×512，自动重组层厚 10.0mm，螺距 0.4 脑窗（窗宽 100HU，窗位 30HU）。机器自动生成三组图像为 140 kV，80kV 及相当于 120kV 混合能量图。分别采用不同后处理方式减轻后颅窝伪影。A 组卷积核 D30，B 组卷积核 D24，C 组卷积核 D34，D 组为 A 组行 SAFIRE3 级重建后图像 Q3，E 组为 A 组行单能谱软件处理后的 16 组图像，F 组为 D 组行单能谱软件处理后的 16 组图像。分别评价 A-D 组及 E、F 组中 16 个亚组图像的后颅窝伪影，并对各感兴趣区域伪影指数和对比噪声比进行分析。**结果** 六组三个部位(内听道、桥脑中心及小脑白质)的平均 CT 值均无统计学意义（$P>0.05$），SD 值有统计学意义（$P<0.05$），且 F 组 80keV 时最小，SNR 有统计学差异（$P<0.05$），且 F 组 80keV 时最大。采用多个独立样本比较的秩和检验，六组伪影评分差异有统计学意义（$P<0.05$），除 A、C 两组、B、D 两组及 D、E、F 三组之间无统计学意义外，其他各两组之间有统计学意义（$P<0.05$）。伪影评分：F 组>D 组>E 组>B 组>A、C 组，即 D30 经 SAFIRE 3 级重建和单能谱 80keV 处理后图像的伪影评分最大。**结论** 单纯卷积核 D24 图像最佳；D30 经 SAFIRE 3 级重建后的图像，减轻伪影效果较好；D30 图像经 SAFIRE 3 级和单能谱软件再处理后的图像，减轻伪影效果更佳。推荐临床使用 D30 经 SAFIRE 3 级重建后的图像，因其简单、方便操作效果亦较好。

PU-3406
基于 CT 影像组学预测局部进展期直肠癌新辅助治疗疗效的研究

李华秀
云南省肿瘤医院/昆明医学院第三附属医院

【目的】探讨 CT 影像组学在治疗前预测局部进展期直肠癌新辅助治疗疗效的价值。**【资料与方法】**回顾性入组 168 例经肠镜取材、临床诊断为局部进展期直肠癌并行新辅助治疗和根治手术的患者，根据术后病理肿瘤退缩分级分为疗效反应良好组和反应不良组，并收集患者治疗前临床及 CT

资料。利用 A.K.软件提取 CT 影像组学特征并构建影像组学标签。再通过多变量 Logistic 回归筛选疗效预测因子并构建诺莫图模型。采用 ROC 曲线评价预测模型的诊断效能，并对联合预测模型进行外部验证及校准。最后，采用决策曲线评价预测模型的临床价值。**【结果】**每位患者各提取了 396 个 CT 影像组学特征，降维后筛选出三类（6 个）与局部进展期直肠癌新辅助治疗疗效高度相关的特征。联合独立预测因子影像组学标签、升高的 CEA（≥3.4ng/mL）和临床 T 分期（cT4）构建的诺莫图模型 ROC 曲线下面积（0.881）高于影像组学标签（0.791）（P<0.05），且具有较高的校准度（P>0.05），外部验证一致性也较高（P<0.05）。决策曲线证明两个预测模型均具有临床应用价值。**【结论】**基于治疗前 CT 资料构建的无创、个体化预测局部进展期直肠癌新辅助治疗疗效的影像组学标签、诺莫图模型均具有较高的预测效能，且联合预测模型预测效能优于影像组学标签。

PU-3407
管电压对增强 CT 影像组学特征影响的体模研究

胡奎
湖北省肿瘤医院

【摘要】 目的：探讨管电压对不同浓度对比剂增强 CT 影像组学特征的影响。方法：用蒸馏水与碘帕醇注射液溶液配比成不同浓度溶液模拟不同强化程度增强图像，蒸馏水与碘帕醇注射液比例分别为(0:1)、(3:1)、(5:1)、(7:1)、(9:1)、(10:1)、(30:1)、(50:1)、(70:1)、(90:1)、(100:1)、(300:1)、(500:1)、(700:1)、(900:1)、(1000:1)和(1:0)共 17 种浓度溶液，浓度越低代表强化越弱。将溶液装入自制体模中，应用西门子 64 排 Siemens definition AS^{+} CT 对体模进行头部序列扫描，使用 Caredose4D，层厚 5mm，软组织重建算法，千伏分别为 70kV、80kV、100kV、120kV、140kV，FOV 为 300*300 mm。在基于 ITK4.3.2/VTK5.10.1/Qt2013.12.00 的 GE AK 影像组学平台上进行目标勾画，然后提取灰度直方图特征(Histogram)42 个、灰度区域矩阵特征(Gray Level Size Zone Matrix, GLSZM)11 个、Haralick 特征(Haralick)10 个、灰度运程矩阵特征(Gray Level Run Length Matrix, RLM)共 180 个，采用变异系数（Coefficient of Variation，CV）评价特征的稳定性。**结果：**浓度(7:1)- (1:0)稳定的特征个数分别为 151、147、135、95、97、49、45、42、33、34、33、33、33、32 个，在一定强化范围内，稳定的特征个数随着强化程度的升高而增加，但部分浓度溶液某些特征的稳定性基本不受管电压影响。**结论：**本研究表明管电压对增强 CT 图像的影像组学特征影响很大，强化程度的变化会导致部分特征对管电压的敏感性改变，高强化程度的增强 CT 图像能提供更多的稳定特征。

PU-3408
基于人工智能的冠脉 CTA 智能辅助诊断系统在冠心病诊断中的应用

杨丽萍,王可铮
哈尔滨医科大学附属肿瘤医院（黑龙江省肿瘤医院）

目的：探讨基于人工智能的冠脉 CTA 智能辅助诊断系统在冠心病诊断中的应用价值。
材料与方法：前瞻性纳入本院 2019 年 1 月至 3 月期间临床疑诊的冠心病患者 60 例，对所有患者常规进行 320 排冠脉 CTA 检查。将扫描获得的原始图像传输至 Vitrea 6.6 后处理工作站，由两名高年资影像科医师手动进行冠状动脉图像三维重建后处理，并判断右冠状动脉、左前降支和回旋支有无斑块及位置、斑块性质、冠脉有无狭窄及狭窄严重程度分级，完成报告书写。同时由冠脉 CTA 智能辅助诊断系统自动重建出三维图像、自动完成图像的分析并生成诊断报告。评价高年资影像科医

师和人工智能系统诊断冠心病的阳性预测价值、阴性预测价值、敏感度和特异度，并记录图像重建和患者等待报告的时间。
结果：人工智能冠脉ＣＴＡ诊断系统能清晰显示所有患者的冠脉主干及主要分支血管，高年资医师平均图像重建时间约 6.2 分钟，人工智能所需时间平均约 0.8 分钟。与高年资医师相比，人工智能诊断冠心病的阳性预测值为 90%，阴性预测值为 75%，敏感度为 90%，特异度为 75%。人工智能对冠脉病变定位识别的敏感度和特异度分别为 89.4%、92.5%。人工智能对斑块性质判断的敏感度和特异度分别为 86.5%、89.6%。在冠脉管腔狭窄程度的诊断中，人工智能和高年资医生对冠脉狭窄的总检出率分别为 40.6%、42.3%，两者间无统计学差异（P>0.05），人工智能对冠脉病变管腔狭窄程度识别的敏感度和特异度分别为 84.7%、88.3%。另外，人工智能冠脉ＣＴＡ诊断系统使得患者等待报告的时间大大缩短（4.8 分钟 VS 27.4 分钟）。
结论：人工智能冠脉ＣＴＡ诊断系统在诊断有无斑块及位置、斑块性质、冠脉有无狭窄及狭窄严重程度分级方面与高年资影像科医师间相比并无统计学差异，但却极大的缩短了图像重建时间和患者等待报告的时间，明显提高了影像科医师的工作效率，具有良好的临床应用价值。

PU-3409
胃癌在影像组学与组织病理学特征中的对照性研究

张广凤[1],刘屹[1]
1.中国医科大学附属第一医院
2.山东大学齐鲁儿童医院

目的：本文探讨胃腺癌患者动脉期及门脉期六种机器学习模型在术后病理免疫组化与术前胃癌纹理特征中对照研究诊断方面的价值。
材料与方法：回顾性收集我院胃腺癌患者 254 例。导出患者动脉、门脉期图像。两名放射科医生根据组织病理学结果确定肿瘤边界，在 ITK-snap 软件上结合术后病变位置，手动逐层绘制形成三维 ROI，基于 AK 软件，提取 396 个纹理参数。将 254 例患者按 7：3 随机分成训练集和验证集。去除冗余特征，分别提取血管受侵与否动脉、门脉期 18、17 个特征值；淋巴管受侵与否动脉、门脉期 18、15 个特征值；神经受侵与否未提取出可鉴别的特征值；HER2 阳性、阴性动脉及门脉期 1、9 个特征值。提取的特征分别基于支持向量机（1.C_SVC&LINEAR 2.C_SVC&RBF 3.C_SVC&sigmoid），逻辑回归(Logistic Regression)、K 邻近（K Nearest Neighbor, K-NN）、朴素贝叶斯（Naive Bayesian, NB）六种机器学习模型进行训练，得到最优机器学习模型。同时得到准确度、敏感性、特异性、ROC 曲线、ROC 曲线下面积（AUC）。
结果：六种机器学习中血管组最优模型是 Logistic Regression，AUC 值动脉期为 0.707，门脉期为 0.724，门脉期高于动脉期，分类效果好 ；淋巴组最优模型是 C_SVC&LINEAR，动脉期 AUC 值为 0.737，门脉期为 0.700，分类效果好 ；神经组未能提取有意义的鉴别特征；HER2 组动脉期只有一个特征可做鉴别，故没有较好的机器模型，门脉期最优模型是 Logistic Regression，AUC 值为 0.720，分类较好。
结论：基于对比增强 CT 图像纹理特征建立机器学习模型，在鉴别胃腺癌各个组织病理类型及 HER2 表达中有较好的分类效果，这有望为术前优化胃癌患者治疗方案及评价预后提供重大参考价值。

PU-3410

Application reseach of computer-aided detection and diagnosis based on CT in pneumonia

Wang Du
Beijing Hospital

Purpose: Pneumonia is a common disease. In the diagnosis of pneumonia, imaging examination should not only find the lesion, but also distinguish it from other diseases. By developing an assisted diagnosis system for pneumonia based on artificial intelligence technology, we established a work mechanism. Using information technology such as artificial intelligence auxiliary ascension pneumonia disease diagnosis level, lay a foundation for grading diagnosis and treatment system, improve grassroots medical institutions in patients with respiratory medical experience, for the majority of patients with convenient, quality health care services.

Methods and Materials: 242 patients with pulmonary infection treated and 124 healthy in the Beijing Hospital from Oct.2018 to Feb.2019 were enrolled in the study. There were 149 males and 93 females, with an average age of 65.539.80 years(28 to 95 years). CT images (pneumonia: 242, healthy: 124) of volunteers with manually marked lesion locations as gold standard (508 pneumonia lesions, ground-glass opacity: 294, consolidation: 74, Patch: 226). Size distribution of lesions: 0-49(mm):130, 50-99:146, 100-149:96, 150-199:75, 200-249:29, 250-299:19, 300-349:10, 350-400:3. The slice thickness of CT images was interpolated to 1 mm to reduce variance. The algorithm adopted multi-scale feature pyramid structure with 3D convolution neural network to overcome the scale variance in pneumonia lesion. Meanwhile, a multi-scale image pyramid strategy was adopted to save computation resources. A multi-stage cascade detection method was introduced to further elevate the performance and generate region of interest (ROI).

Result: the proposed algorithm performed well in pneumonia detection with great efficient (1 second per patient). One third of the CT images were chosen for test the algorithm, which consists of 170 pneumonia lesions. The algorithm detected 139 pneumonia out of 170, with detection rate 81.7 and 9.2 false positive per patient.

Conclusion: This system adopts intelligent technologies such as computer neural network, machine learning and pattern recognition to design and develop an intelligent auxiliary diagnosis system for pneumonia.The proposed method detected most of the pneumonia cases with high efficient. It provides scientific reference for doctors' clinical medical decisions and assists doctors to make the best diagnosis. However, the great variety in texture and the blur boundary of lesion caused the algorithm to generate some false positive samples.

CLINICAL RELEVANCE/APPLICATION:Pneumonia is by far one of the most common lung diseases around the world with certain fatality rate . It is necessary to use artificial intelligence auxiliary technology ascension pneumonia disease diagnosis level, provides scientific reference for doctors' clinical medical decisions and assists doctors to make the best diagnosis. It improve grassroots medical

institutions in patients with respiratory medical experience, for the majority of patients with convenient, quality health care services.

On the intrinsic amplitudes basis of individual differences in sleep-deprived human brain

Lei Gao[1],Lijun Bai[3],Honghan Gong[2],Haibo Xu[1]
1.Department of Radiology, Zhongnan Hospital of Wuhan University, Wuchang District, Wuhan City, 430071, Hubei Province, China;
2.Department of Radiology, the First Affiliated Hospital of Nanchang University, Nanchang, 330006, Jiangxi Province, China
3.The Key Laboratory of Biomedical Information Engineering, Ministry of Education, Department of Biomedical Engineering, School of Life Science and Technology, Xi'an Jiaotong University, Xi'an, 710049, China

Objective: Individual vulnerability to sleep deprivation (SD) appear to be stable within individual but vary across individuals. Such reliability and variability may be deeply rooted in each individual brain's intrinsic activity. Here, we used repeated measures resting-state fMRI to explore the intra-subject reliability and inter-subject variability in both static and dynamic amplitudes of low-frequency fluctuations (ALFF) in the SD.
Methods: Sixteen healthy participants were assessed three times to measure the reproducibility of their performance on a semantic working memory task and of their resting fMRI activity: once after a normal night of sleep in the rested wakefulness (RW) condition and the other two after approximately 24 hours of total SD at an interval of two weeks (named SD 1 and SD 2 conditions).
Results: Behavioral performances were reliable between the two SD time points. The changes in the intrinsic brain activity from RW to SD also remained generally stable and have a specific topographic distribution, with the heteromodal association cortex and the limbic/paralimbic cortices showing relatively higher variability and the unimodal and primary regions showing the least variability.
Conclusions: Our results suggested that the within-subject' s reliability in response to sleep loss is rooted the primary cortices especially the sensory and unimodal association cortices, the inter-subject variability in the heteromodal and transmodal regions, and the variability may be partially interpreted by temporal variations and propagations of intrinsic fMRI signals.

PU-3412

Differentiation between Pilocytic astrocytoma and Oligodendrogliomas: a contrast-enhanced MRI-derived quantitative radiomic features

Yajing Zhao
Huashan Hospital Affiliated to Fudan University

Purpose: To assess whether a machine-learning model based on texture analysis could yield a more accurate diagnosis in differentiating Pilocytic astrocytoma from Oligodendrogliomas.
Materials and Methods: The study population consisted of 200 patients enrolled between October 2014 and January 2019 from our institution. All patients diagnoses were confirmed by pathological examination. Preoperative enhanced MRI images were collected. 395 features in total were known to be effective. Four Grandient Boosted Trees classifiers were built, one based on clinical features and three based on texture features from MRI sequences after feature selection. Predictive accuracy, sensitivity and specificity were used to assess model performance.
Results: There were significant differences in age and gender distribution between the two diseases. Compared with OG, PA has a predilection for younger male patients. The AUC of the enhanced T1WI-based classifier was 0.92, significantly higher than that of T1-based, T2-based or T2-FLAIR-based classifiers (0.9,0.78 and 0.86).The AUC of the Grandient Boosted Trees classifier based on clinical and radiomic features was 0.99.
Conclusion: Our study showed the potential use of radiomics features in differentiating PA from OG. This model provides an additional tool for improving diagnostic accuracy to differentiate PA from GBM, and it may be especially helpful for those cases that are difficult to distinguish by conventional interpretation approaches.

PU-3413

Respiratory motion correction for liver contrast-enhanced ultrasound by automatic selection of a reference image

Ji Zhang
1.Zhongnan Hospital of Wuhan University
2.Department of Radiology

Purpose: Respiratory motion correction is necessary for the quantitative analysis of liver contrast-enhanced ultrasound (CEUS) image sequences. Most respiratory motion correction methods are based on the dual mode of CEUS image sequences, including contrast and grayscale image sequences. Due to free-breathing motion, the acquired 2-dimensional (2D) ultrasound cine might show the in-plane and out-of-plane motion of tumors. The registration of an entire 2D ultrasound contrast image sequence based on out-of-plane images is ineffective. For the respiratory motion correction of CEUS sequences, the reference image is usually considered the standard for the deletion of any out-of-plane images. Most methods used for the selection of the reference image are subjective in nature. Here, a quantitative method for the selection of an optimal reference image from CEUS image sequences in the B and contrast modes was explored.

Methods: The original high-dimensional ultrasound grayscale image data were mapped into a two-dimensional space using Laplacian Eigenmaps (LE), and K-means clustering was adopted. The center image of the larger cluster with a near-peak contrast intensity was considered the optimal ultrasound reference image. In the ultrasound grayscale image sequence, the images with the maximum correlations to the reference image in the same time interval were selected as the corrected image sequence. The effectiveness of this proposed method was then validated on 18 CEUS cases of VX2 tumors in rabbit livers.
Results: Correction smoothed the time-intensity curves (TICs) extracted from the region of interest of the CEUS image sequences. Before correction, the average of the total mean structural similarity (TMSSIM) and the average of the mean correlation coefficient (MCC) from the image sequences were 0.45±0.11 and 0.67±0.16, respectively, and after correction, the average TMSSIM and MCC increased (P<0.001) by 31% to 0.59±0.11 and by 21% to 0.81±0.11, respectively. The average deviation value (DV) index of the TICs from the image sequences prior to correction was 92.16±18.12, and correction reduced the average to 31.71±7.31. The average TMSSIM and MCC values after correction using the mean frame of the reference image (MBMFRI) were clearly lower than those after correction using the proposed method (P<0.001). Moreover, the average DV after correction using the MBMFRI was obviously higher than that after correction using the proposed method (P<0.001).
Conclusions: The breathing frequency of rabbits is notably faster than that of human beings, but the proposed correction method could reduce the effect of the respiratory motion in the CEUS image sequences. The reference image was selected quantitatively, which could improve the accuracy of the quantitative analysis of rabbit liver CEUS sequences using the reference image method based on the current standard of manual selection and the MBMFRI. This easy-to-operate method can potentially be used in both animal studies and clinical applications.

PU-3414

The value of CT Imaging radiomics features in the diagnosis of pure ground glass nodules

Qiqi Cao,Wenjie Yang
Ruijin Hospital

Objective: To study the qualitative diagnosis value of radiomics features in pure ground-glass nodules of the lung in chest non-enhanced CT. Methods: A retrospective analysis of 171 pure ground-glass nodules with 5-20mm in diameter showed in non-enhanced CT image and confirmed by surgical pathology from July 2014 to March 2019, including 22 benign nodules, 28 pre-invasive lesions (including 15 atypical adenomatous hyperplasia and 13 adenocarcinoma in situ), and 121 invasive lesions (including 66 minimally invasive adenocarcinoma and 55 invasive adenocarcinoma). All patients were examined with dual-source CT or Philips Brilliance ICT for chest non-enhanced CT scan. It’s a redundant work to review all the 1752 features, selecting the statistically different features can be a great help to define which class the nodule is. We applied data mining methods to clean our data first, including replaced

missing values with the average values of the corresponded features and normalizing the data by removing the mean value of each feature, then scale it by dividing non-constant features by their standard deviation. Then we applied L1-based SVM and Extra-Tree Classifier models, which are the powerful algorithm for feature selection, to perform important features. At last, T-test was applied to select statistically significant features with significant level 0.05. Results: For benign and 'AAH&AIS&MIA&IAC', there are six significant radiomics features also displayed significant difference for group benign and "AAH&AIS", for benign and "MIA&IAC", the six significant radiomics features also display significant difference(all $P<$ 0.05), including original_Shape_Maximum3D Diameter and wavelet_HHH_FirstOrder_Kurtosis. There are two significant different radiomics features between "AAH&AIS" and "MIA&IAC"($P<0.05$). Conclusions: Radiomics features showed potential value in the differentiation between benign and malignant pure ground-glass nodules. The presence of the two significant radiomics features in pure ground-glass nodules indicates the high risk of invasive adenocarcinoma.

PU-3415

Development and Validation of a Radiomics Nomogram Based on 18-Fluorodeoxyglucose Positron Emission Tomography/Computed Tomography and Clinicopathological Predictors to Predict the Survival of Patients with Non-small Cell Lung Cancer

Bin Yang[1], Guangming Lu[1], Shaofeng Duan[2]
1. Jinling Hospital, Medical School of Nanjing University
2. GE Healthcare China, Shanghai

Abstract

Purpose

The purpose of this study was to develop and validate a radiomics nomogram by combining the optimized radiomic signatures extracted from computed tomography (CT), positron emission tomography (PET) and positron emission tomography/computed tomography (PET/CT) images and clinicopathological predictors to assess the overall survival of patients with non-small cell lung cancer (NSCLC).

Patients and methods

The training cohort of 252 and validation cohort of 63 consecutive NSCLC patients were enrolled in this study. 1680 radiomic features were extracted from CT, PET and PET/CT images using a Radiomics prototype. Least absolute shrinkage and selection operator (LASSO) cox regression was used to select radiomic features and construct radiomic score (R-score). R-score and clinicopathological predictors were combined to construct the Cox proportional hazard (CPH) for CT, PET, PET/CT respectively. The independent risk factors analysis and Kaplan-Meier were performed for PET/CT modality. R-score and clinicopathological predictors were combined to construct a

multimodality nomogram for PET/CT modality and was cross-validated. Finally, validation and calibration curves were generated and evaluated.

Results
144 /315(45.71%) females and 171/315 (54.29%) males of patients with NSCLC were enrolled in this study. The C-index of CPH of R-score in the prediction of overall survival (OS) for CT, PET and PET/CT were 0.658,0.611,0.661and combined with clinicopathological predictors were 0.749,,0.718,0.756 respectively.[Lymph node metastasis(Hazard ratio[HR],2.08),Distant Metastasis (HR,2.51)] were independent risk factors for NSCLC patients.It can well distinguish between high and low risk groups. The validation curve showed agreement between predicted and actual values for the 5-year survival prediction. The calibration curve showed predicted survival time was very close to the actual one.

Conclusion
Development and validation of a radiomics nomogram based on 18-Fluorodeoxyglucose positron emission tomography/computed tomography and clinicopathological predictors had a good predictive performance to the survival for NSCLC patients. Our study may provide a little guidance for the improvement of prognosis evaluation and treatment strategies for NSCLC patients and advances in precision medicine.

2.Department of Radiology, The Affiliated Hospital of Southwest Medical University, 25 Taiping Street, Luzhou, 646000, Sichuan, China.
3.Department of Hepatobiliary Surgery, The Affiliated Hospital of Southwest Medical University, 25 Taiping Street, Luzhou, 646000, Sichuan, China.
4.School of Information and Software Engineering, University of Electronic Science and Technology of China, No. 4, Section 2, North Jianshe Road, Chengdu, 610054, Sichuan, China
5.Department of Ultrasound, The Affiliated Hospital of Southwest Medical University, 25 Taiping Street, Luzhou, 646000, Sichuan, China.

Objective To develop a radiomics model based on magnetic resonance imaging (MRI) features analysis and machine learning classifiers to preoperatively predict Differentiation Degree (DD) and Lymphatic Node Metastasis (LNM) of Extrahepatic Cholangiocarcinoma (ECC).
Methods A group of 100 ECC patients treated from January 2011 to December 2018 were included in this study, diagnosed with perihilar cholangiocarcinoma or distal cholangiocarcinoma. The ECC status of all patients were confirmed by pathology (high DD (n = 36), medium-low DD (n = 64); LNM positive (n = 27), LNM negative (n = 73)).

All patients took MRI scanning. A total of 1,200 radiomics features were extracted from four sequences including T1-precontrast, T2-weighted imaging (T1WI, T2WI), diffusion weighted imaging (DWI), and apparent diffusion coefficient (ADC) images. A systematical framework considering combinations of eight feature selection methods and ten machine learning classification algorithms (classifiers) was developed and investigated. The predictive capabilities for DD and LNM were evaluated in terms of area under curves (AUC), accuracy (ACC), sensitivity, and specificity.
Results In the DD prediction, the combination of the feature selection method Pearson's Correlation Coefficient (PCC) and Decision Tree Classifier (DTC) achieved the best performance (AUC = 0.76, ACC = 0.78, sensitivity = 0.78, and specificity = 0.78), and the radiomics signature was composed of 15 selected features. For LNM prediction, the combination of the feature selection method Joint Mutual Information (JMI) and AdaBoosting Classifier (ADAC) achieved the best performance (AUC = 0.85, ACC = 0.87, sensitivity = 0.70, and specificity = 0.93), and the radiomics signature was composed of 5 selected features.
Conclusions
MRI radiomics analysis based on certain combinations of feature selection methods and machine learning classifiers could demonstrate good predictive accuracies for DD and LNM of ECC. This also shed new light on noninvasive diagnosis of ECC.

PU-3417

Cholangiocarcinoma's evaluation of imaging and artificial intelligence

Chunmei Yang, Jian Shu
Department of Radiology, The Affiliated Hospital of Southwest Medical University, 25 Taiping Street, Luzhou, 646000, Sichuan, People's Republic of China.

Cholangiocarcinoma(CCA) is a relatively rare biliary system malignant tumour, and yet, it represents the second most common primary hepatic neoplasm, following hepatocellular carcinoma. Regardless of the type, location or aetiology, the survival prognosis of these tumour remains poor. The only curable method for CCA is complete surgical resection, but part of patients with complete resection are still subject to local recurrence or distant metastasis. Over the last several decades, our understanding of the molecular biology of CCA has increased tremendously, diagnostic and evaluative techniques have evolved, and novel therapeutic approaches have been established. This review provides an overview of preoperative imaging evaluations of CCA. Furthermore, relevant information about artificial intelligence(AI) in medical imaging is discussed, as well as the development of AI on CCA treatment.

PU-3418

Prediction of Prostate Cancer Invasiveness with a Combination of Radiomics and Machine Learning-Based Analysis of Dynamic Contrast-Enhanced MRI

Bo Liu[1], Jie Cheng[2], Yan Zeng[1]
1. The Third Affiliated Hospital of Chongqing Medical University (Gener Hospital)
2. Basic Medical College of Chongqing Medical University

Objective: *To investigate whether the combination of radiomics and automatic machine learning-based classification of original images from multiphase DCE-MRI can predict prostate cancer (PCa) aggressiveness.*
Methods: *From January 2016 to May 2019, sixty biopsy-confirmed PCa patients were included. Biopsy was performed within 4 weeks after the DCE-MRI examinations. According to the time signal intensity curve, lesion segmentation was performed on the first and on the strongest phase of tumor enhancement on the original DCE-MR images, and 1000 quantitative radiomics features were automatically calculated from each lesion. These features can be grouped into four categories, first order statistics features, shape- and size-based features, textural features and higher order statistics features, wherein there were three datasets available (Dataset-F, Dataset-S and Dataset-FS). The variance threshold method, select k-best method and Least absolute shrinkage and selection operator (LASSO) algorithm were used to reduce the feature dimensions and the optimal feature subsets for each dataset were filtered out. Five machine learning approaches leveraging cross-validation were employed, and the clinical value of each model was evaluated by area under the curve (AUC). Correlation analysis was performed between the features of the machine learning model that achieved the best classification performance and the Gleason score (GS) of the PCa lesion.*
Results: *8, 4 and 16 features were selected as optimal subsets in Dataset-F, -S and -FS, respectively. Among all three datasets, LR-based analysis with Dataset-FS had the highest predication efficacy (AUC = 0.93). Ten features in Dataset-FS showed significantly positively correlation with GS. The model performance of Dataset-F was generally better than that in Dataset-S.*
Conclusion: *Combination of radiomics and machine learning-analysis based analysis of the union of the first and strongest phases of tumor of original DCE-MR images can predict PCa aggressiveness noninvasively, accurately and automatically.*

PU-3419

Investigating the effects of subjective factors on quantitative CT perfusion parameters towards more robust, reliable and reproducible imaging biomarkers in patients with acute ischemic stroke

Zhongping Chen, Tong Dan
the first hospital of Jilin university

Purpose: To investigate the reproducibility of quantitative CT perfusion (CTP) parameters generated from different postprocessing methods. To assess the relative contributions of subjective factors to overall robustness of the biomarkers in acute ischemic stroke (AIS).

Materials and Methods: Eighty CTP datasets from patients with unilateral MCA occlusion or transient ischemic attack were retrospectively postprocessed, which was implemented on ISP and CK software by different observers using different Arterial Input Function (AIF) fitting methods with different segmentation margins. CTP parameters derived from 10 Parenchymal regions of interests were compared. Student t test and ROC curve was used to identify valuable biomarkers in differentiating AIS. Intraclass correlation coefficients (ICCs) were used to assess the reproducibility between different methods and Spearman correlation test was used to detect the potential relationships.
Results: MTT derived from single-input model located in the putamen (ROI 5) showed good diagnostic performance with AUC 0.811, significantly higher than using dual-input model. Inter-observer and inter-segmentation margins agreements were both good with 80% ICCs >0.80. Inter-software and inter-AIF fitting methods agreements were bad with 80% ICCs <0.62 and <0.56, respectively.
Conclusions:
CTP parameters were stable when measured by different readers with different segmentation margins but varied between different AIF fitting models and different softwares. To evaluate ischemic stroke based on different clinical goals, different input models need to be selected while ensuring consistent of software.

PU-3420
Machine learning-based radiomics strategy for prediction of cell proliferation in non-small cell lung cancer

Qianbiao Gu[1,2], Zhichao Feng[2], Peng Liu[1], Jianbin Liu[1], Pengfei Rong[2]
1. Department of Radiology, The People's Hospital of Hunan Province, The First Hospital Affiliated of Hunan Normal University, Changsha 410005, China
2. Department of Radiology, The Third Xiangya Hospital of Central South University, Changsha 410013, China

Purpose: To explore the feasibility and performance of machine learning-based radiomics classifier to predict the cell proliferation(Ki-67)in non-small cell lung cancer (NSCLC).
Methods: 245 histopathological confirmed NSCLC patients who underwent CT scans were retrospectively in-cluded. The Ki-67 proliferation index (Ki-67 PI) were measured within 2 weeks after CT scans. A lesion volume of interest (VOI) was manually delineated and radiomics features were extracted by MaZda software from CT images. A random forest feature selection algorithm (RFFS) was used to reduce features. Six kinds of machine learning methods were used to establish radiomics classifiers, subjective imaging feature classifiers and com-

bined classifiers, respectively. The performance of these classifiers was evaluated by the receiver operating
characteristic curve (ROC) and compared with Delong test.
Results: 103 radiomics features were extracted and 20 optimal features were selected using RFFS. Among the
radiomics classifiers established by six machine learning methods, random forest-based radiomics classifier
achieved the best performance (AUC= 0.776) in predicting the Ki-67 expression level with sensitivity and
specificity of 0.726 and 0.661, which was better than that of subjective imaging classifiers (AUC= 0.625,
P < 0.05). However, the combined classifiers did not improve the predictive performance (AUC= 0.780,
P > 0.05), with sensitivity and specificity of 0.752 and 0.633.
Conclusions: The machine learning-based CT radiomics classifier in NSCLC can facilitate the prediction of the
expression level of Ki-67 and provide a novel non-invasive strategy for assessing the cell proliferation.

PU-3421

Malignant Signs Identification for Pulmonary Nodules on Chest CT by Using Graph Convolutional Network

Lu Qiu[1],Xiangming Fang[1],Xiuli Li[2],Hongwei Chen[1]
1.Department of radiology, Wuxi People's Hospital, Nanjing Medical University, Wuxi, Jiangsu, 214023, China.
2.Deepwise AI Lab

Purpose:
To present a graph convolutional network model for automatic and accurate malignant signs identification for pulmonary nodules.
Materials and methods:
The train dataset contains 1154 nodules from 1054 patients, 72.10% of which are malignant tumors. And each of them was annotated by three senior doctors in terms of lung cancer signs. The signs with at least two doctors annotated are selected for training. In this paper, a graph convolutional neural network is designed with a 3D DenseNet backbone and a multi-task multi-class classification loss, aiming to identify the existence of each sign. Moreover, we take the correlation and dependence among these signs into account, by constructing an adjacency matrix and feeding it into the network, leading to a comparable performance of the proposed method compared with professional doctors. Five common malignant signs of lung nodules are selected, including speculation, vascular embedding, pleural traction, vascular notch and air bronchogram.
Results:

The present method was evaluated on a test dataset, with a total of 144 nodules from 139 patients, 75% of which are malignant tumors. Considering each nodule as an individual sample and all signs of each nodule as a feature, therefore a matrix with 144 rows and 5 columns can be naturally computed. In order to assess the consistency among doctors and our method, Pearson correlation coefficient (PCC) is calculated for each two matrices. Experimental results show that the PCCs between each two doctors are 0.3516, 0.3858 and 0.3730 respectively, while the PCCs between the proposed method and three doctors are 0.4168, 0.3594 and 0.4185. To further verify the results, ground truth is generated by each one of the doctors' annotation and accuracy can be calculated for another two doctors and our method, the result presents that our method has high similarity with doctors (Table1).

Conclusion:

We present a graph convolutional neural network and demonstrate the effectiveness of the proposed method with respect to identify lung malignant signs, and the performance of the proposed method is comparable with senior doctors.

PU-3422

Nuclear grading of renal cell carcinoma using a radiomics approac

Haixia Mao,Xiangming Fang
wuxi people's hospital

purpose: *Nuclear grade of clear cell renal cell carcinoma* (ccRCC) usually is confirmed by invasive methods. Radiomics is a noninvasive examination and can make full use of the texture feature of the image to speculate whether the heterogeneity of ccRCC could make an independent prediction of tumor nuclear grade. A radiomics approach was used to analyze the association between nuclear grades of ccRCC and CT images.

Methods: *This was a retrospective analysis of 247 patients with clear cell renal cell carcinoma who were diagnosed between 2008 and 2016. A feature set containing clinical and radiomics features was extracted from the pre-therapy non-enhanced, corticomedullary and nephrographic phase CT imaging. Maximizing independent classification information criteria function (MICI) and recursive feature elimination with cross-validated (RFECV) were used to select effective features. Random forests were used to classify clear cell renal cell carcinoma grades.*

Results: *This experiment was based on a training set of 124 patients and a validation set of 123 patients. We found that radiomics features can effectively distinguish four nuclear grades with AUC = 0.71, 0.73, 0.81, and 0.80, respectively. Radiomics features complemented the predictive values of clinical features obtaining a more stable result (AUC = 0.77, 0.75, 0.79, and 0.85, respectively).*

Conclusion: Using radiomics methods, CT images can reflect the differences in the grades of clear cell renal cell carcinoma. Radiomics methods can effectively assist physicians in preoperative classification of renal cancer.

PU-3423

Differential diagnosis of chromophobe renal cell carcinoma and renal oncocytoma based on clinical and radiomic features

Haixia Mao,Xiangming Fang
wuxi people's hospital

Purpose To evaluate the differential diagnostic efficiency of radiomics models based on the clinical and radiomic features of ChRCC and RO.
Materials and Methods The preoperative images and clinical data of 35 and 17 patients with ChRCC and ROrespectively from March 2015 to November 2018,were retrospectively collected, and features that were significant differently different between the patients with the two conditions were identified. The differential diagnostic efficiencies of the imaging features were compared. We randomly selected 70% of the ChRCC and RO patients to train the radiomics model and and 30% to the test it; significant radiomic features were extracted, selected, and classified. The differential diagnostic efficiencies of the radiomic features were assessed. Finally, the radiomic features were combined with imaging features to establish a combined model, and the differential diagnosis efficiency of the combined model was assessed. The area under the receiver operating curve (AUC) was used to evaluate the differential diagnosis efficiency of the image features, the radiomics model, and the combined model.
Results The authors analyzed52patients (median age, 51.8 ± 13.9 years; 30 men). Among the imaging signs, the location of the lesion's center and the degree of enhancement in the corticomedullary phase (CMP) performed well in differentiating the lesions types (AUC = 0.638 and 0.753, respectively). While the radiomics model showed efficiency in differentiating ChRCC from RO (AUC = 0.77), the combined model was superior (AUC = 0.92).
Conclusion
Radiomics can help to improve the differential diagnosis of ChRCC and RO. When combined with imaging feature, the radiomics model becomes more efficient.

PU-3424

Study on the optimized scanning project of 320CT pulmonary ground glass nodules which based on artificial intelligence diagnosis

Yinglan Shu
Second affiliated hospital of chongqing medical university

[Abstract] **Objective** To investigate the effect of low dose and conventional dose CT on the detection efficiency of pulmonary ground glass nodules in artificial intelligence system. **Methods** A total of 40 patients who have tested pulmonary glass-like nodules with the size of 3-10mm from June 2018 to June 2019 in the second affiliated hospital of chongqing medical university were collected, including 28 males and 12 females, aged 45-69 years, with an average age of 54.3 years and the BMI from 18.5 to 23.9. All subjects underwent high-resolution target scanning of pulmonary nodules in the same area of the lung with different CT radiation doses in Toshiba 320-slice CT Aquilion ONE and they were divided into 5 groups. Group A was the conventional dose group, while group B, C, D and E were the low-dose groups, and the milliamps of examination reduce in order. Scan conditions for groups are that group A (120 kv, 180 ma), group B (120 kv, 140 ma), group C (120 kv, 100 ma), group D (120 kv, 60 ma), group E (120 kv, 20 ma), matrix 1024 * 1024, 18 cm, vision collimating pitch is 1.25, the remaining parameters are the same. All of the scanning imagines are imported into the deep farce medical artificial intelligence software based on deep learning model (Deepwise healthcare, V190120) for testing. **Results** The detection efficiency of ground glass nodules in AI in the conventional dose group and the low dose group was 94.1% vs 94.7%, $P > 0.05$); Groups A and C (94.1% vs 91.4%, $P > 0.05$); Groups A and D (94.1% vs 63.2%, $P < 0.001$); Groups A and E (94.1% vs 21.1%, $P < 0.001$). **Conclusion** While ensuring the diagnostic efficiency of AI, reducing the tube current can greatly reduce the radiation dose. However, we should avoid that increasing the noise index due to the pursuit of low dose, resulting in limited or even lost image details. Too low mAs will reduce the sensitivity of artificial intelligence to the detection of nodules.

PU-3425

Texture Analysis on T1WI to Differentiate Low- and High-Stage Clear Cell Renal Cell Carcinoma: Can the two-dimensional be an alternative to three-dimensional tumor analysis

Jinggang Zhang
First People Hospital of Changzhou

Background: Texture analysis is becoming more popular in tumor diagnosis, but the selection of regions of interest is controversial. Purpose: To determine if there is a difference between two-dimensional (2D) and three-dimensional (3D) texture analysis in distinguishing low- from high-grade clear cell renal cell carcinomas (CCRCCs) Material and Methods: 96 patients with CCRCCs proved by pathology were included. All tumors were staged into low- and high-grade CCRCCs according to the Fuhrman criteria. Axial T1WI images were contoured manually by 2 independent readers. Texture parameters included the volume, area, kurtosis, skewness, entropy, sum entropy, grey-level

nonuniformity, and run-length nonuniformity, and so on. Parameters were compared using Mann-Whitney U tests. Differences in the area under the receiver operating characteristic curve (AUC) between the two methods were evaluated. Results: The high-grade CCRCCs had statistically significant higher entropy, sum entropy, grey-level nonuniformity and run-length nonuniformity than the low-grade CCRCCs ($P < 0.0001$). The low-grade CCRCCs had statistically significant higher difference entropy and angular second moment ($P < 0.0001$). However, there was no difference between the 3D and 2D texture parameters including the entropy, sum entropy, difference entropy, angular second moment grey-level nonuniformity and run-length nonuniformity ($P > 0.05$). Inter-reader concordance correlation coefficients ranged from 0.89 to 0.99. Conclusion: No difference was found between 2D and 3D texture analysis in differentiating low grade from high grade CCRCCs.

PU-3426

Automated detection and classification of the neck of femur fractures by using deep learning algorithm

Lin Mu[1],Yun Pei[1]
1.The First Hospital of Jilin University
2.Jilin University

Objective To identify the feasibility of using a deep convolutional neural network (DCNN) for the detection and localization of the neck of femur fractures on plain frontal pelvic radiographs (PXRs).
Methods DCNNs (ResNet) was trained using 640 PXRs between January 2016 and May 2019. The accuracy, sensitivity, false-negative rate, and area under the receiver operating characteristic curve (AUC) were evaluated on 160 independent PXRs acquired in the same institution, then those were evaluated on 200 independent PXRs acquired in another institution. The authors also used the visualization algorithm gradient-weighted class activation mapping (Grad-CAM) to confirm the validity of the model.
Results The algorithm achieved an accuracy of 89%, a sensitivity of 94%, a false-negative rate of 2%, and an AUC of 0.89 for identifying the neck of femur fractures. In the external validation, The algorithm achieved an accuracy of 79%, a sensitivity of 90%, a false-negative rate of 4%, and an AUC of 0.80 for identifying hip fractures. The visualization algorithm showed an accuracy of 95.3% for lesion identification.
Conclusions A DCNN not only detected the neck of femur fractures on PXRs with a low false-negative rate but also had high accuracy for localizing fracture lesions. The DCNN also have a good performance in external validation .The DCNN might be an steady , efficient and economical model to help clinicians make a diagnosis without interrupting the current clinical pathway.

PU-3427

Influence of CT effective dose and convolution kernel on detection of pulmonary nodule in different artificial intelligence software: a phantom study

Fajin Lv,Binjie Fu
The First Affiliated Hospital of Chongqing Medical University

Background: Lung cancer, the morbidity and mortality of which keep the primary among all cancers. Since 2016, many artificial intelligence (AI) software for diagnosing pulmonary nodule based on deep learning has been available, but the effectiveness and accuracy remain controversial, so this study aims to investigate effects of effective doses and convolution kernel on detection of pulmonary nodule in different AI software, in order to validate the applicability of AI software for clinical imaging diagnosis, and provide the direction for optimization of AI algorithms.
Materials and methods: A commercial chest phantom containing various nodules (3, 5, 8, 10 and 12mm; +100, -630 and -800HU) was scanned with CT at 120kVp, 100kVp and 80kVp with different tube current-time. Each CT was reconstructed with the convolution kernel of B30f, B60f and B80f. Automated detection was performed by two radiologists with four commercial AI pulmonary nodule detection software named A, B, C and D at all CT datasets. Number of the nodules and corresponding volume detected by AI software respectively were acquired. We calculated the sensitivity and false positive rate (FPR) of these softwares. The relative error was calculated for volume. Sensitivity, FPR and relative volume error (RVE) of four AI groups were analyzed by Kruskal-Wallis test. The effects of radiation dose and convolution kernel on sensitivity, FPR and the RVE in different AI software were analyzed with repeated measured ANOVA.
Results: The sensitivity, FPR and RVE of different AI pulmonary nodule detection software were uneven in comparison with the performance in general, and the effects of radiation dose and convolution kernels on various softwares were inconsistent. The sensitivity of System C and the FPR and RVE of System D were not statistically associated with CT effective dose and convolution kernels.
Conclusions: AI softwares has a high detection rate at doses >0.5 mSv in our study. Detection of some AI pulmonary nodule systems may be influenced by radiation does or convolution kernel. Algorithms and computational power need to optimized and there is still a long way to go before AI software is used in clinical practice.

PU-3428

A generative adversarial networks methods normalize the computer tomography images from different imaging protocols

Xiaomei Wu,Yajun Li
Guangdong Provincial People's Hospital

Purpose: To correct the difference produced by imaging protocols by a generative adversarial networks (GAN) methods.
Material and Methods: In this study, we employed a GAN method to normalize the computer tomography (CT) images from different imaging protocols. The model was trained on the dataset #1, the evaluation of model in aligning the distribution of features was performed on the dataset #2 (tuning) and #3 (validating), and the performance of model in improving the radiomics study was assessed in the dataset #4. We defined the images in a certain imaging protocol as one domain. Four different CT imaging protocols were included in our study. The dataset #1 consisted of four subsets corresponding to four domains, and each subset included ten thousand 2D CT images sampled from sixty CT volumes of patient. The dataset #2 and #3 both included 40 CT images for each domain, and every CT image contained the largest cross section of spleen of patient. The dataset #4 included 98 CT images from three different scanners, and each CT image contained the largest cross section of colorectal tumor of each patient.
Results: After the normalization, the aligned number of features between the domains that needed to be normalized and target domain increase from 10 % (8/77), 18 % (14/77), 36% (28/77) to 90% (69/77), 92% (71/77) and 80% (62/77). The average increment of AUC in the results of cross-validation achieved 11%, the maximum increment was 20%, and the minimum one was 3%.
Conclusion: In this study, we implemented a GAN method to successfully normalize the CT images for different imaging protocols.

PU-3429

Radiomics analysis of multi-subregions for detection of biomarkers in Parkinson’s disease motor subtypes

Dong Sun,Xiao jia Wu,Chuanming Li,Xiaoyan Zhao,Wei Zhang,Zhiming Zhou,Ting Chen
Second Affiliated Hospital of Chongqing Medical University， China

OBJECTIVE: The purpose of this study was to to detect sensitive morphometric biomarkers from
T1 high-resolution structural magnetic resonance (MR) images in Parkinson’s disease (PD) motor subtypes using machine learning method.
MATERIALS AND METHODS: 135 PD patients and 99 normal controls (NCs). from the Parkinson’s Progressive Marker Initiative (PPMI) database were enrolled in the study, including 92 tremor dominant (TD)subtype, 43 postural instability gait dominant (PIGD) subtype. Datasets were randomly divived intointo two sets including a training set (~70%) and a validation set(~30%). A total of 5358 imaging features were extracted from different 18 subregions, Select K Best and the least absolute shrinkage and selection operator (Lasso) was used to select the optimal features.The support vector machine (SVM) classifiers were constructed. Receiver operating curve (ROC), sensitivity and specificity were used to illustrate the prediction performance of the model. Both feature selction and models construction were firtstly performed in the training set, then were further tested in the validation set by the same thresholds.

RESULTS: Eight optimal features were obtained from 92 TD patients and 43 PIGD patients. The support vector machine (SVM) model demonstrated that radiomic features allowed us to distinguish PIGD from TD with an accuracy of 86.75% (specificity = 88.89% ,sensitivity = 84.21%).The most sensitive biomarkers between PIGD patients and TD patients are mainly ROI-based features in hippocampal, striatum, thalamus and caudate region.

PU-3430

Measure Cerebral Microstructure Alterations in SVD and BVD Using Diffusion Kurtosis Imaging and Investigate the Correlation with Cognitive Impairment

Wenjing Lan,Shuang Xu,Yang Liu
Department of Radiology, the First Hospital of Jilin University

Purpose

To observe alterations of cerebral microstructure in brain small vessel disease (SVD) and big vessel disease (BVD) using magnetic resonance imaging (MRI) diffusion kurtosis imaging (DKI), to provide pathogenesis information of these diseases from the perspective of radiography, and to investigate the correlation between these diseases and cognitive impairment.

Material and Methods

Forty-four patients (33 males and 11 females) diagnosed with brain SVD were recruited as the SVD patient group, twenty-four patients (19 males and 5 females) diagnosed with brain BVD were recruited as the BVD patient group, and 16 age- and education-level matched healthy volunteers (12 males and, 4 females) were recruited as the normalcontrol group(NC). Routine MR scan were performed on a whole body 3T scanner (Ingenia, Philips Healthcare) with a 16-channel dS head coil. Kurtosis images were acquired with the following parameters: TE = 91 ms, TR = 1000 ms, number of slices = 18, maximum b value = 2000 andnumber of directions =32. DKE (Version 2.5.1) was employed to generate kurtosis related parameters (Figure 1). The mean kurtosis (MK), the fractional anisotropy (FA), and the mean diffusion coeficient (MD) of cerebral white matter were compared with T test between each patient group and the control group in basal ganglia, thalamus, corona radiata, centrum ovale, and the locations beside lateral ventrical, pons and callosum.

Results and Discussions

There was significant difference of FA value in the right caudate nucleus between the SVD and BVD groups with the same degree of cognitive impairment (Figure 2). The MD values increased in both SVD and BVD groups, indicating that the infarction reason is angiogenic edema, not cytotoxic edema as before. This is consistent with the pathological change of cerebral ischemia and infarction in the chronic latent progress of SVD and the absence state of large acute arterial occlusion in the ROI. In SVD group, MD values of left thalamus is different from those in BVD (P=0.026), suggesting special diffusion movements of free water molecules in the left thalamus . And the

three groups of parameters show consistency. Moreover, MK value decreased in SVD and BVD groups, indicating the structural complexity of the corresponding brain tissue which was damaged in the pathological state. Specially, MK value of left pons in SVD group decreased more obviously than in BVD group (P =0.036) (Figure3). The RK and AK values of the left side of the bridge brain in SVD and BVD groups were dramatically decreased compared to control group, while these values remain closed between the two patient groups. DKI derived parameters and cognitive evaluation scores are linearly correlated (Figure 4.5). The results suggested that DKI could indicate sensitive developmental changes of local microstructures in brain SVD and BVD. The conventional diffusion parameters were estimated using the mono-exponential model, where the derived values depended on the selection of b values. As an extension of DTI model, DKI required at least two non-zero b values in more than 15 independent directions. With a second-order polynomial model, DKI could provide a b-value-independent estimation of the diffusion and kurtosis parameters. Therefore, DKI may be an ideal technique for estimating the restricted diffusion process in *in vivo* study, especially in detecting the pathological alterations in neural tissues.

Conclusion

In conclusion, DKI could provide sensitive developmental changes of local microstructures in brain SVD and BVD. In addition, DKI-derived diffusion parameters were sensitive to alterations in white matter regions with complex fiber arrangements. The atrophy may exist in white matter fiber. Moreover, DKI can reflect the degree of cognitive impairment caused by cerebral vessel diseases, which is useful in early diagnosis and chose of monitoring strategy, as well as dynamic observation and prognostic assessment.

PU-3431

CT-Based Radiomics Signature for the Preoperative Discrimination Between Head and Neck Squamous Cell Carcinoma Grades

Wenli Wu[1], Junyong Ye[2], Qi Wang[3], Jin Luo[2], Shengsheng Xu[3]

1.The First Affiliated Hospital of Chongqing Medical University, Chongqing

2.Key Laboratory of Optoelectronic Technology and Systems of the Ministry of Education, Chongqing University.

3.Department of Information, The First Affiliated Hospital, Chongqing Medical University.

Objective: Radiomics has been widely used to non-invasively mine quantitative information from medical images and could
potentially predict tumour phenotypes. Pathologic grade is considered a predictive prognostic factor for head and neck squamous
cell carcinoma (HNSCC) patients. A preoperative histological assessment can be important in the clinical management of patients.
We applied radiomics analysis to devise non-invasive biomarkers and accurately differentiate between well-differentiated (WD)
and moderately differentiated (MD) and poorly differentiated (PD) HNSCC.

Methods: This study involved 206 consecutive HNSCC patients (training cohort: n=137; testing cohort: n=69). In total, we extracted
670 radiomics features from contrast-enhanced computed tomography (CT) images. Radiomics signatures were constructed with a
kernel principal component analysis (KPCA), random forest classifier and a variance-threshold (VT) selection. The associations
between the radiomics signatures and HNSCC histological grades were investigated. A clinical model and combined model were also
constructed. Areas under the receiver operating characteristic curves (AUCs) were applied to evaluate the performances of the
three models.
Results: In total, 670 features were selected by the KPCA and random forest methods from the CT images. The radiomics signatures
had a good performance in discriminating between the two cohorts of HNSCC grades, with an AUC of 0.96 and an accuracy of 0.92.
The specificity, accuracy, sensitivity, positive predictive value (PPV), and negative predictive value (NPV) of the abovementioned
method with a VT selection for determining HNSCC grades were 0.83, 0.92, 0.96, 0.94, and 0.91, respectively; without VT, the
corresponding results were 0.70, 0.83, 0.88, 0.80, and 0.84. The differences in accuracy, sensitivity and NPV were significant
between these approaches ($p<0.05$). The AUCs with VT and without VT were 0.96 and 0.89, respectively ($p<0.05$). Compared to the
combined model and the radiomics signatures, The clinical model had a worse performance, and the differences were significant
($p<0.05$). The combined model had the best performance, but the difference between the combined model and the radiomics
signature weren’ t significant ($p>0.05$).
Conclusions: The CT-based radiomics signature could discriminate between WD and MD and PD HNSCC and might serve as a
biomarker for preoperative grading.

PU-3432

3D Deep Learning-Based Prior Medical Knowledge Integration Predicts lymph node metastasis in Clinical Stage T1 Lung Adenocarcinoma

Xiang Wang,Yi Xiao,QingChu Li,ShiYuan Liu
Changzheng Hospital

Abstract
Background:
To develop and evaluate a deep learning system named DensePriNet based on 3D convolutional neural networks (CNNs) predicting lymph node metastasis in Clinical Stage T1 Lung Adenocarcinoma on CT images.
Method:

The model we proposed named DensePriNet based on 3D convolutional neural networks and prior medical knowledge, which can perfectly fuse the information of image and semantics and automatically predict lymph node metastasis. We used 401 cases as the development set to train and validate our model, and test it on the 100 cases. The performance was also compared with the traditional radiomics and two radiologists with different experience judgement. Outperformance was measured in terms of AUC, sensitivity, specificity and MCC. The Grad-Cam was used to visualize the areas of the image most indicative of the LN metastasis.
Findings:
The proposed deep learning system achieved the best classification performance than the traditional radiomics and radiologists' prediction results. The AUC, sensitivity, specificity, MCC of the proposed model achieved 0.957, 0.963, 0.89 and 0.80 respectively. The senior radiologist performance was better than the junior radiologist, whose sensitivity, specificity, MCC were 0.296, 0.973 and 0.398 respectively. The radiomics using random forest classifier had the best performance with AUC of 0.930, sensitivity of 0.852, specificity of 0.822 and MCC of 0.623.
Interpretations:
The model we proposed can achieve best performance which could help doctors work efficiently and facilitate the application of precision medicine.

PU-3433

The Application of 1H-MRS in the diagnose of common intracranial tumors

Boyu Kong
The first hospital of Jilin University

The types of intracranial tumors are of great variety, and the classification of whose is very complex. And there have a world of differents in the aspect of cure method and prognosis by the different type and different level neoplasm. The routine examination of CT and MRI can merely show the preliminary diagnosis to aim directly at location, morphous and size of tumors, but can hardly determine their nature. MRS as the only noninvasive examination can observe the change of the cellular metabolism continuous, and carry out the qualitative analysis with the metabolism, biochemistry and chemical compound ingredients of the tumors. Accordingly, MRS could provide more quantity and more precise information of neoplasm, could provide liable theory in making out treatment perscription and evaluating therapeutic efficacy.

The change of routine MRI and MRS which has showed by the 99 cases of intracranial tumors of different types were analyzed retrospectively. The purpose of this investigation is to evaluate the diagnostic and differential diagnosis value of MRS in the intracranial tumors. The results can provide evidence to diagnose more accuratly, confirm level and boundary of tumors, understand the characteristics of neoplasm, it also play a key role in the prognose of clinical process.

Methods: All case were performed by SIEMENS 1.5T Avanto MR system, use the phased-array coil to complete MR scanning. At first, routine MR: transverse section scan included T1WI、T2WI、FLAIR, sagittal T1WI and coronal T1WI scan. Scan series

and parameters: transverse, sagittal and coronal T1WI scan use SE series: TR/TE=400/7.8ms; transverse T2WI scan use TSE series: TR/TE=3250/99ms; transverse FLAIR series: TR/TE=9000/109ms, TI=2500ms. the slice thickness was 6mm, the slice interval was 1.2mm, the matrix was 256×256, FOV: 230mm×230mm. MR enhancement scanning: GD-DTPA was injected through vein, dosage: 0.1mmol/kg, and then take the transverse, sagittal and coronal T1WI scaning. ^{1}H proton Magnetic reconance spectroscopy used chemical shift imaging (CSI) methord: TR/TE=1500/135ms, FOV:160mm×160mm，VOI: 80mm×80mm, stimulated time: 4, acquisition time: 7min12s. Compared the ratio of NAA/Cho, NAA/Cr, Cho/Cr with region of tumors, perienhancement and normal regions.

Results: Routine MR plain scan in T1WI intracranial tumors usually manifest equal or lower signal, and uniform or nonuniform higher signal in T2WI, nonhydropsia or different level hydropsia surrounding tumors. Enhancement scanning: neoplasm can manifest non-enhancement, uniform or nonuniform enhancement, so there has some difficulty in the classfication of intracranial tumors, can hardly make qualitative diagnose preoperation. The tumors' $^{1}H-MRS$ is obviously different with normal brain tissue. The ratio of NAA/Cr，NAA/Cho cut down, the ratio of Cho/Cr step up. The NAA/Cr ratio in the region of glioma enhancement is obviously different with meningioma and metastasis($P<0.05$). Analyzing perienhancement feature of MRS in further step, the metabolism ratio in perienhancement of glioma is obviously different with normal tissue($P<0.05$). But meningioma and metastasis do not have the feature($P>0.05$). The diversity of NAA/Cho ratio in the perienhancement of 3 different tumors has statistics sense($P<0.05$). At last, compared the metabolism ratio with tumors and perienhancement of different types of tumors, the ratio of NAA/Cho in meningioma have obviously cut down to the perienhancement, and Cho/Cr ratio step up($P<0.05$).

Conclusion:

1、Routine MR plain scan in T1WI, tumors in brain usually manifest equal or lower signal, and nonuniform higher signal in T2WI, accompainied with different level hydropsia surrounding tumors and enhancement, so there has some difficulty in the classfication of intracranial tumors.

2、The tumors' $^{1}H-MRS$ is obviously different with normal brain tissue. The ratio of NAA/Cr, NAA/Cho cut down, the ratio of Cho/Cr step up.

3、$^{1}H-MRS$ could classified different type of intracranial tumors in molecular level, so it can retrieve the defect of routine MR in clinic.

4、$^{1}H-MRS$ could provide quantitative and semiquantitative method to assay the grade of malignacy, supply consult information for pathology classify, for overall and accurate evaluation with tumors pre-operated, for formulating reasonable treatment perscription.

5、The evaulation of perienhancement by multi-voxel $^{1}H-MRS$ is very valuable for the classification of glioma meningioma and metastasis and the designation of tumors' infiltrating extent.

PU-3434

A novel multimodal(MR/CT) radiomics model for predicting the lymphovascular invasion of rectal cancer

Yiying Zhang,Huimao Zhang
The First Hospital of JiLin University

Abstract

Objectives This study was performed to develop and validate a multimodal model based on MR and CT images for predicting preoperative lymphovascular invasion (LVI) of rectal cancer.

Methods This retrospective study consisted of 94 consecutive patients with rectal cancer who underwent both MRI and CT before surgery within 2 weeks. They were randomly divided into the training cohort (69 patients) and the validation cohort (25 patients). The regions of interest (ROIs) were outlined on T2WI,DWI and contrast enhanced CT images on each slice of the tumor. A total 1188 radiomics features were extracted from every patients. Radiomics features were selected to build a radiomics score. We were constructed two fusion models A and B respectively. A fusion radiomics signature was finally developed using logistic regression modelling. Area under the curve (AUC) was plotted to compare and select the fusion models with good performance and stability, and then establish a nomogram. In the validation cohort, the prediction efficiencies of the best models were evaluated qualitatively by calibration curves and decision curves .

Results By comparing AUC values, the prediction accuracy in the validation cohort was good for the fusion A model ,which achieved (AUC 0.876).It also had a higher sensitivity (0.929) and specificity (0.800). In the validation cohort, the AUC, calibration curves and decision curves indicated that the A model provided greater benefits.

Conclusion The MR and CT-based fusion model can effectively predict the lymphovascular invasion of rectal cancer and the radiomics nomogram demonstrated great potential in the preoperative prediction.

CT Radiomic Nomogram for Preoperative Prediction of Extrathyroidal Extension in Papillary Thyroid Carcinoma

Wei Lu[1],Lianzhen Zhong[2,3],Bin Chen[1],Di Dong[2,3],Jie Tian[2,3,4],Jianjun Zheng[1],Yinhua Jin[1]
1.Hwa Mei Hospital, University of Chinese Academy of Sciences
2.CAS Key Laboratory of Molecular Imaging, Institute of Automation, Chinese Academy of Sciences
3.University of Chinese Academy of Sciences
4.Beijing Advanced Innovation Center for Big Data-Based Precision Medicine, School of Medicine, Beihang University

Abstract

Objectives

Determining the presence of extrathyroidal extension (ETE) is important for patients with papillary thyroid carcinoma (PTC) in selecting the proper surgical approaches. This study aimed to explore a radiomic model for preoperative prediction of ETE in patients with PTC.

Methods

The study included 624 PTC patients (without ETE, n = 448; with minimal ETE, n = 52; with gross ETE, n = 124) whom were divided randomly into training (n = 437) and validation (n = 187) cohorts; all data were gathered between January 2016 and November 2017. Radiomic features were extracted from computed tomography (CT) images of PTCs. Key radiomic features were identified and incorporated into a radiomic signature. Combining the radiomic signature with clinical risk factors, a radiomic nomogram was constructed using multivariable logistic regression. Delong test was used to compare different receiver operating characteristic curves.

Results

Five key radiomic features were incorporated into the radiomic signature, which were significantly associated with ETE ($p < 0.001$ for both cohorts) and slightly better than clinical model integrating significant clinical risk factors in the training cohort (area under the receiver operating characteristic curve (AUC), 0.791 vs. 0.778; F_1score, 0.729 vs. 0.714) and validation cohort (AUC, 0.772 vs. 0.756; F_1score, 0.710 vs. 0.692). The radiomic nomogram significantly improved predictive value in the training cohort (AUC, 0.837, $p < 0.001$; F_1score, 0.766) and validation cohort (AUC, 0.812, $p = 0.024$; F_1score, 0.732).

Conclusions

The radiomic nomogram significantly improved the preoperative prediction of ETE in PTC patients. It indicated that radiomics could be a valuable method in PTC research.

PU-3436

Diagnostic classification of primary insomnia using statistically significant features in resting-state functional MR brain image based on logistic regression method

NING YANG
Guangdong No.2 People's Hospita

Purpose: To investigate whether or not amplitude of low frequency fluctuations(ALFF), regional homogeneity(ReHo) and functional connectivity(FC) features could be used as potential biomarker for classification of primary insomnia (PI) by using the machine learning method -- logistic regression (LR).

Materials and Methods: In this study, 49 PI patients and 47 Healthy controls(HC) were included. Voxel-wise features, such as amplitude of low frequency fluctuations(ALFF), regional homogeneity(ReHo) and functional connectivity(FC), were extracted from the resting-state functional MR brain image. Respectively analyze these features between primary insomnia(PI) patients and healthy control(HC) using two-sample t-test (multiple comparison correction—GRF, p-voxel<0.001,p-cluster<0.05)and obtain

statistically significant features for classification of PI in patients and HC based on logistic regression(LR) method.
Results: Primary insomnia patients had higher ALFF values mainly in superior temporal gyrus. For seed voxels selected in Frontal_Sup_Orb_R(superior frontal gyrus, orbital part), PI patients had significantly descended FC values in right Rolandic operculum, frontal lobe and right postcentral gyrus. For seed voxels selected in Rolandic_Oper_L(Rolandic operculum), PI patients had significantly descended FC values in left postcentral gyrus, left supramarginal gyrus, frontal lobe and parietal lobe. For seed voxels selected in Frontal_Mid_Orb_L(superior frontal gyrus, medial orbital), PI patients had significantly descended FC values in occipital lobe, lingual gyrus, calcarine fissure and surrounding cortex. It also found that PI patients had descended functional connectivity between Frontal_Sup_Medial_L(medial superior frontal gyrus) and parietal lobe, precuneus, median cingulate, paracingulate gyrus. Significantly descended FC values between Cingulum_Ant_L(anterior cingulate and paracingulate gyrus) and middle frontal gyrus, Cingulum_Mid_R(median cingulate and paracingulate gyrus) and middle temporal gyrus, Precuneus_R (precuneus) and parietal lobe, angular gyrus, supramarginal gyrus were found in PI patients. Difficulty in falling asleep was also associated with descended functional connectivity between Cingulum_Mid_L (median cingulate and paracingulate gyrus) and other sensory regions such as supramarginal gyrus, parietal lobe and angular gyrus. Both Cingulum_Post_L(posterior cingulate gyrus), Angular_L(angular gyrus) and Temporal_Mid_L(middle temporal gyrus) had significantly descended functional connectivity with medial superior frontal gyrus in PI patients. For seed voxels selected in Cerebellum_Superior Cerebelum_6_R, PI patients had significantly increased FC values in occipital lobe, left cerebrum and lingual gyrus. However, ReHo features showed no statistically significant brain region in PI patients and NC. With the statistically significant features above, logistic regression(LR) is used for the classification of the group PI-NC. These features showed good discrimination with accuracy of 94.44%, sensitivity of 100%, specificity of 88.89% and AUC of 94.44%.
Conclusion: The present study added information to limited studies on functional specialization and provided an effective and precision means for diagnosis of insomnia.

PU-3437

Validation and Diagnostic Performance of a Computational Fluid Dynamics Method Based on Multi-detector MRI for Diagnosis of Aortic Coarctation

Weiyuan Lin
Guangdong Provinvial People's Hospital

Background: The clinical diagnosis of coarctation of the aorta (CoA) constitutes a clinical challenge, with the use of the peak systolic pressure gradient (PSPG) being

the reference method. Multi-detector MRI-based computational fluid dynamics (CFD) has been hypothesized to afford accurate and noninvasive PSPG measurement.
Objective: The aim of this study was the validation of a CFD method that utilizes MRI imaging data for CoA diagnosis.
Methods: The study included 75 pediatric patients divided into a training set (n = 50;25 with CoA and 25 without CoA) and a testing set (n = 25). Effectiveness of the CFD method for distinguishing between patients with and without CoA was illustrated by using the training set, while the testing set was used to analyze the diagnostic performance of CFD. All the patients underwent cardiac catheterization for confirmation of CoA or any other congenital heart disease. The utilized CFD models were developed from MRI imaging data. The PSPG determined by CFD(PSPGCFD) was compared with that determined by cardiac catheterization (PSPGCC) to validate the CFD method. The employed diagnostic performance indices included the PSPG, average peak systolic wall shear stress (APSWSS), and peak systolic velocity (PSV), which were analyzed by receiver operating characteristic (ROC) curves.
Results: PSPGCFD agreed excellently with PSPGCC in both the training and testing sets ($R2$ = 0.969 and 0.900, and bias = 1.152 and 0.182 mmHg, respectively; $p <$ 0.001). In addition, PSPGCFD, the CFD-based APSWSS (APSWSSCFD), and the CFD-based PSV (PSVCFD) all exhibited good predictive performance in both the training set (AUC = 0.987, 0.978, and 0.931, respectively) and testing set (AUC =0.953, 0.947, and 0.823, respectively).
Conclusions: The noninvasive MRI-based CFD method can accurately diagnose CoA

PU-3438

Radiomics for Diagnosis of Dual-phenotype Hepatocellular Carcinoma using Gd-EOB-DTPA-enhanced MRI and Patient Prognosis

Xialing Huang[1],Liling Long[2]
1.Guangxi Medical University
2.The First Affiliated Hospital of Guangxi Medical University

Purpose: To describe the clinical characteristics and outcomes of patients with dual-phenotype hepatocellular carcinoma (DPHCC) and investigate the use of radiomics to establish an image-based signature for preoperative differential diagnosis.
Methods: This study included 50 patients with a postoperative pathological diagnosis of DPHCC (observation group) and 50 patients with CK7- and CK19-negative HCC (control group) who attended our hospital between January 2015 and December 2018. All patients underwent Gd-EOB-DTPA-enhanced MRI within one month before surgery. Arterial phase (AP), venous phase (VP), delayed phase (DP) and hepatobiliary phase (HP) images were transferred into a radiomics platform. Volumes of interest covered the whole tumor. The dimensionality of the radiomics features were reduced using LASSO. Four classifiers, including Multi-Layer Perceptron (MLP), Support Vector Machines (SVM), Logistic Regression (LR) and K-Nearest neighbor (KNN) were used to distinguish DPHCC from CK7- and CK19-negative HCC. Kaplan-Meier survival analysis was used to assess

one-year disease-free survival (DFS) and overall survival (OS) in the observation and control groups.
Results: The sensitivity, specificity and accuracy of LR and MLP varied with imaging phase such that the best preoperative diagnostic power for DPHCC will likely be derived from a combination of different phases and classifiers (VP, DP and HP with LR and VP with MLP). The 1-year DFS and OS of the patients in the observation group were 69% and 78%, respectively. The 1-year DFS and OS of the patients in the control group were 83% and 85%, respectively. Kaplan-Meier survival analysis showed no statistical difference in DFS and OS between groups (P=0.231 and 0.326), but DFS and OS were numerically lower in patients with DPHCC.
Conclusion: A radiomics signature with features extracted from Gd-EOB-DTPA-enhanced MR images was used to distinguish DPHCC from CK7- and CK19-negative HCC. DPHCC is more likely to recur and cause death than HCC, suggesting that active postoperative management of patients with DPHCC is required.

PU-3439

Effect of the PixelShine Deep Learning System on Image Quality of Kidney: An Anthropomorphic Phantom Study

yiwei qi,Yijun Liu,Wei Wei,Anliang Chen,Zijing Zhang,Shuai Hu
The 1st hospital of Dalian medical university

PURPOSE
To evaluate the effect of the PixelShine deep learning system on the renal image quality enhancement in Anthropomorphic phantom.

METHOD AND MATERIALS
CT scans were performed with Revolution CT(GE, America) on an anthropomorphic phantom(IRCU48,FangTuo,China) under 120KV,with 4 different tube currents(250, 300, 350, 400mA).The original data ,with slice thickness of 5mm ,with the FBP method reconstruction condition was set to the A0 group, and the data of 50% ASIR-V reconstruction was set to the V0 group. The PixelShine system(V1.2, AlgoMedica,America) reconstruction intensity A1, A3, A5, A7, and A9 were respectively selected to deal with the A0 data.A1 (FBP+A1), A3(FBP+A3), A5(FBP+A5), A7(FBP+A7), A9(FBP+A9) group were acquired. In the same rule, V1 (50%Asir-V+A1), V3(50%Asir-V+A3), V5(50%Asir-V+A5), V7(50%Asir-V+A7), V9(50%Asir-V+A9) groups were sequentially obtained. Three round ROIs(d=10mm)were placed on the same slice of kidney. The CT values, SD values, SNR values and CNR values were recorded. A nonparametre test Kruskal-Wallis was used($p<0.05$).
RESULTS
1.No significant differences were found on the CT values obtained using different reconstruction intensity($p>0.05$).
2.
There were significant differences among the groups on SD value.
There were differences among V0, A0 and A1 group ($p<0.05$).
There were no significant differences among V0,A3, A5, A7, A9 ,V1 and V3.

There were differences between V0, V5, V7 and V9.
The differences among V5, V7, V9 were not obvious.
V0<A0 ,V0< A1; V5<V0;V5<A5.
3.
There were differences among the groups on SNR value (p=<0.05).
There were differences among V0, A0, A1 group (p<0.05).
There were no significant differences among V0, A3 A5, A7 A9, V1 and V3.
There were differences among V0, V5,V7,V9.
There were no significant differences among V5, V7 V9.
V0 >A0, V0 >A1; V5>V0; V5 > A5.
The V5 group improved the SNR values by 48.6% , 40.1% and 138.8% compared with the A5 group, the V0 group and the A0.

CONCLUSION

The PixelShine deep learning system could enhance the renal image, but not unlimited. combining with the ASIR-V reconstruction algorithm the PixelShine system could achieve better image enhancement.

CT 影像组学术前预测胃肠道间质瘤 ki67 表达的研究

冯湛[1],雷贞妮[2]
1.浙江大学医学院附属第一医院
2.杭州市中医院

目的

胃肠道间质瘤(GIST)在胃肠道系统中是发病率最高的间叶源性肿瘤。传统采用美国国立卫生署(NIH)危险度分级系统进行 GIST 患者预后的预测，但 NIH 危险度分级不适用于野生型 GIST 患者(1)。Ki67 作为细胞增殖相关抗体判断肿瘤的增殖活性(2)，有研究表明 Ki67 阳性指数截断值 5%%可以作为 GIST 患者无复发生存的独立预后因子(3)。因此本研究通过对 GIST 的 CT 影像组学特征的提取，建立术前预测 Ki67 表达的模型。

方法

回顾性分析 2017 年 1 月至 2018 年 12 月经手术病理证实的 132 例 GIST 患者的 CT 增强影像资料，以 Ki67 阳性指数(截断值 5%)分为高低表达两组（高表达 41 例，低表达 91 例）。首先将数据按 7:3 的比例分割为训练组与验证组，再采用基于 Matlab 的 IBEX 影像组学软件包提取 CT 增强图像的影像组学特征，包括直方图参数、灰度共生矩阵、游程检验、形态等参数，随后使用最大相关最小冗余算法进行特征降维，最后使用 Logistics 回归结合赤池信息量准则筛选最佳预测模型。在验证数据集使用 ROC 曲线、校正曲线及决策曲线对预测模型进行全面评估。

结果

经过特征降维与模型筛选，其中基于长行程灰度优势、最大概率、高斯方差及相关互信息 4 个纹理特征构建的 Ki67 阳性表达 Logistics 预测模型表现优异，训练组中 ROC 曲线下面积为 0.89，验证组中为 0.83。校正曲线显示预测概率与观察频率之间一致性良好。决策曲线显示该模型在概率阈值为 5－80%之间获得不错的净获益。

结论

CT 影像组学有助于术前预测 GIST 的 Ki67 表达水平，而且具有较高的效能，可为评估肿瘤侵袭性和预后情况提供一种无创性技术手段。

PU-3441

Clinical validation and assessment of aortic hemodynamics using computational fluid dynamics simulations from computed tomography angiography

Qiyang Lu
Guangdong Provincial People's Hospital

Abstract
Background: Hemodynamic information including peak systolic pressure (PSP) and peak systolic velocity (PSV) carry an important role in evaluation and diagnosis of con-
genital heart disease (CHD). Since MDCTA cannot evaluate hemodynamic information directly, the aim of this study is to provide a noninvasive method based on a computational fluid dynamics (CFD) model, derived from multi- detector computed tomography angiography (MDCTA) raw data, to analyze the aortic hemodynamics in infants with CHD, and validate these results against echocardiography and cardiac catheter measurements.
Methods: This study included 25 patients (17 males, and 8 females; a median age of 2 years, range: 4 months－4 years) with CHD. All patients underwent both transthoracic echocardiography (TTE) and MDCTA within 2 weeks prior to cardiac catheterization. CFD models were created from MDCTA raw data. Boundary conditions were confirmed by lumped parameter model and transthoracic echocardiography (TTE). Peak systolic velocity derived from CFD models (PSV CFD) was compared to TTE measurements (PSV TTE), while the peak systolic pressure derived from CFD (PSP CFD) was compared to catheterization (PSP CC). Regions with low and high peak systolic wall shear stress
(PSWSS) were also evaluated.
Results: PSV CFD and PSP CFD showed good agreements between PSV TTE ($r = 0.968$, $p < 0.001$; mean bias = − 7.68 cm/s) and PSP CC ($r = 0.918$, $p < 0.001$; mean bias = 1.405 mmHg). Regions with low and high PSWSS) can also be visualized. Skewing of velocity or helical blood flow was also observed at aortic arch in patients.
Conclusions: Our result demonstrated that CFD scheme based on MDCTA raw data is an accurate and convenient method in obtaining the velocity and pressure from aorta and displaying the distribution of PSWSS and flow pattern of aorta. The preliminary results from our study demonstrate the capability in combining clinical imaging data and novel CFD tools in infants with CHD and provide a noninvasive approach for diagnose of CHD such as coarctation of aorta in future.

人工智能对不同类型骨折检出效能的对比研究

赵艳红,张晓文,苏治祥,何维恒,梁玉玉
宁夏回族自治区人民医院

目的：探讨基于深度学习的人工智能（AI）诊断系统对完全骨折、不完全骨折及陈旧性肋骨骨折检出效能的差异。
资料与方法：收集具有胸部外伤病史的患者 76 例，所有患者均进行胸部 CT 检查，所有患者均利用 Lung 重建算法进行图像重建。利用基于深度学习的人工智能（AI）诊断系统（InferRead CT Bone research，Infervision，Beijing）进行肋骨骨折的检出。由两位有 15 年以上胸部诊断经验的医师结合 AI 最终讨论做出肋骨骨折的金标准。骨折分为完全骨折，不完全骨折及陈旧性骨折。记录人工智能对不同类型骨折的检出数，利用卡方检验比较人工智能对不同类型骨折检出的灵敏度。
结果： 76 例患者中共有 1822 根肋骨（其中两根发育不全），金标准检出骨折 329 根，其中完全骨折 118 处，不完全骨折 103 处，陈旧性骨折 108 处，AI 共检测出骨折 331 处，真阳性骨折 289 处，其中完全骨折 113 处，不完全骨折 84 例，陈旧性骨折 92 处，AI 对肋骨骨折检查的敏感性为 87.84%，假阳性率为 2.81%。AI 对完全骨折/不完全骨折/陈旧性骨折的检出率分别为 95.76%/81.55%/85.19%，对三种骨折检查的敏感性差异具有统计学意义（P=0.003<0.05），AI 对完全性骨折检出的诊断效能优于不完全性骨折及陈旧性骨折。
结论：人工智能对完全骨折、不完全骨折及陈旧性骨折检出的效能有所差异，对完全骨折检出的诊断效能优于不完全骨折及陈旧性骨折。

Convolution Kernel and Iterative Reconstruction Affect the Diagnostic Performance of Radiomics and Deep Learning in Lung Adenocarcinoma Pathological Subtypes

Wei Zhao[1],Ming Li[2],Jun Liu[1],Yuzhi Wu[1],Wei Zhang[3]
1.Department of Radiology， Second Xiangya Hospital， Central South University， Changsha， China
2.Department of Radiology， Huadong Hospital Fudan University， Shanghai， China
3.Diannei Technology， Shanghai 200050 P.R. China

Background: The aim of this study was to investigate the influence of convolution kernel and iterative reconstruction on the diagnostic performance of radiomics and deep learning (DL) in lung adenocarcinomas.
Methods: We included 183 patients with 215 lung adenocarcinomas in this study. All the CT imaging data was reconstructed with three reconstruction algorithms (ASiR at 0%, 30%, 60% strength), each with two convolution kernels (bone and standard). 171 nodules were selected as training-validation set, whereas 44 nodules were selected as testing set. Logistic regression and a DL framework-DenseNets were selected to tackle the task. Three logical experiments were implemented to fully explore the influence of the studied parameters on the diagnostic performance. The receiver operating characteristic curve (ROC) was used to evaluate the performance of constructed models.
Results: In Experiment_A and _B, no statistically significant results were found in radiomic method, whereas 2 and 6 pairs were statistically significant (P<0.05) in DL method. In Experiment_C, 1 and 4 models were found significant differences in radiomics and DL method respectively. Moreover, models constructed with standard convolution kernel data outperformed that constructed with bone convolution kernel data in all studied ASiR levels in DL method. In DL method, B0 and S60 performed best in bone and standard convolution kernel respectively.

Conclusion: The results demonstrated that DL was more susceptible to CT parameter variability than radiomics. Standard convolution kernel images seem to be more appropriate for imaging analysis. Further investigation with a larger sample size is needed.

PU-3444
Application of Radiomics in Predicting the Expression of Ki-67 in Non-Small-Cell Lung Cancers

Lihua Fan,Dong Han,Wei Wei,Yongjun Jia,Yuxin Lei,Nan Yu,Chuangbo Yang
Affiliated Hospital of Shaanxi University of Chinese Medicine

Objective: To develop CT image feature-based radiomics signature to estimate the expression level of Ki-67 in non-small cell lung cancers.
Methods: 107 non-small cell lung cancer patients who underwent contrast-enhanced CT had confirmed histopathologically and tested for Ki-67 expression into 2 levels: low expression (n=58) and high expression (n=49). Patients were divided into training (n=75) and validation cohorts (n=32). The arterial phase images were imported into the ITK-SNAP to manually delineate volume of interest (VOI) of the entire-tumor. Each VOI produced 396 radiomics features including Histogram, GLCM, GLSZM, RLM, Form Factor and Haralick. LASSO regression was used for feature screening to generate a radiomics score. Then multivariate logistic regression analysis (MLRA) was used combining clinical information to screen out independent risk factors for predicting Ki-67 expression level. The predictive accuracy of radiomics was quantified by the area under curve (AUC) of a ROC curve in both cohorts. The calibration degree (CD) of the radiomics was evaluated by Hosmer-Lemeshow test. The clinical usefulness of the radiomics was assessed by decision curve analysis (DCA).
Results: Eleven radiomics features with non-zero coefficients were chosen to build a radiomics model that significantly correlated with Ki-67 expression level with an AUC, sensitivity, specificity and CD of 0.856, 94%, 70% and 0.588 in training cohort; and 0.842, 91%, 79% and 0.175 in validation cohort, respectively. The gender difference between the high and low Ki-67 expressions was significant ($P<0.05$), and there were no significant differences in age and pathological type ($P>0.05$). Radiomics were considered to be independent predictor of Ki-67 expression level in non-small cell lung cancer, and if the threshold probability was between 8% and 99%, using radiomics to predict Ki-67 expression level added more benefit than treating either all or no patients.
Conclusions: The radiomics is helpful to predict the expression of Ki-67 in non-small cell lung cancers, providing a non-invasive technique for assessing the invasiveness and prognosis for non-small cell lung cancers.

PU-3445

Value of CT-based radiomics signature for the prediction of Metachronous liver metastasis after Radical Resection in Locally advanced gastric cancer

陈佳,王铮,李丽娅,金观桥,苏丹柯
广西医科大学附属肿瘤医院

Objective: To investigate value of radiomics for CT in prediction of metachronous liver metastasis after radical resection for gastric cancer.
Methods: The imaging and clinical data of 80 patients without liver metastasis and 40 patients with liver metastasis admitted to Guangxi Medical University Cancer Hospital from 2015 to 2019. Patients underwent CT before radical resection. 492 radiomics features were extracted from portal venous phase to build a radiomics signature. We used ICC and the LASSO regression method to select features, the model evaluated with receiver operating characteristics curve (ROC).
Results: The radiomics signature model showed a diagnostic accuracy of 82.23% (AUC, 0.826; sensitivity, 65.33%; specificity, 96.28%).
Conclusion: Radiomics analysis has the potential to predict metachronous liver metastasis in gastric cancer.

Feasibility of a Magnetic Resonance Imaging Based Radiomics Signature for the Prediction of Occult Lymph Node Metastasis in Early Stage Oral Tongue Squamous Cell Carcinoma

Ying Yuan, Jiliang Ren, Xiaofeng Tao
Shanghai Ninth People's Hospital, Shanghai Jiao Tong University School of Medicine

Objectives: To investigate whether preoperative magnetic resonance imaging (MRI)-cased radiomics could accurately predict occult cervical lymph node (LN) metastasis in the early stage oral tongue squamous cell cancer (OTSCC).
Methods: We retrospectively enrolled 76 patients with early stage OTSCC (cT1-2N0) who had been surgically treated by tumor excision and elective neck dissection. For each patient, we extracted 198 features from preoperative T2 weighted imaging (T2WI) and contrast enhanced T1 weighted imaging (CE-T1WI). The Mann-Whitney U test and recursive feature elimination were then used to select optimal features. We applied logistic regression method to create a radiomics signature with optimal features. The predictive accuracy of our radiomics signature was quantified by creating a receiver operator characteristic curve (ROC) and determining the area under the ROC curve (AUC).
Results: Occult LN metastasis was detected pathologically in 42.1% (32/76) of the patients. No significant association was identified with regards to patient gender, age, histological grade, tumor size or clinical T stage when comparing between pathologically node-positive and node-negative patients. The radiomics signature, featuring 12 optimal features, yielded favorable predictive efficacy, with an AUC of 0.87 and 0.93 in the training and validation cohorts respectively. In the validation cohort, the predictive sensitivity, specificity, and accuracy were 100%, 80%, and 87%, respectively.
Conclusions: The current study offers a feasible tool for quantifying the risk of LN metastasis in early stage OTSCC. These preliminary results are worth to be validated in a multicenter external validation study to obtain high-level evidence for clinical applications in subsequent studies.

Can texture analysis preoperatively predict perineural invasion of head and neck adenoid cystic carcinoma?

Ying Yuan, Jiliang Ren, Xiaofeng Tao
Shanghai Ninth People's Hospital, Shanghai Jiao Tong University School of Medicine

Objective To determine whether texture features derived from pretreatment T2-weighted imaging (T2WI) and contrast-enhanced MRI (CE-MRI) could predict the perineural invasion (PNI) of head and neck adenoid cystic carcinoma.

Materials and Methods Preoperative MR images were retrieved and texture features were calculated. Boruta algorithm was used to select the most important features that independently associated with PNI, by taking histopathologically confirmed PNI as the reference. Texture models were built using support vector machine (SVM) and logistic regression (LR) methods, assessed by ten-fold cross-validation.
Results Totally, 38 patients with ACC were evaluated in the current study and PNI was confirmed in 23 cases. For T2WI and CE-MRI, respectively four and three texture features were selected showing significant difference between ACC tumors with and without PNI, and the models were built upon the selected features. The AUCs of the T2WI based models derived using SVM and LR were 0.716 and 0.655, respectively. For CE-MRI, the AUCs were 0.812 and 0.716, respectively. The texture model derived from CE-MRI using SVM method showed the best performance (AUC, 0.812; accuracy, 78.7%).
Conclusion This study suggests a noninvasive technique for predicting PNI in head and neck ACC, which help planning individualized treatment strategy for patients with ACC in the future.

PU-3449

MRI-based radiomics nomogram for predicting overall survival in patients with head and neck squamous cell carcinoma

Ying Yuan, Jiliang Ren, Xiaofeng Tao
Shanghai Ninth People's Hospital, Shanghai Jiao Tong University School of Medicine

Purpose To develop a magnetic resonance imaging (MRI)-based radiomics signature and radiomics nomogram for predicting prognosis in head and neck squamous cell carcinoma (HNSCC) patients.
Methods In a retrospective analysis of patients treated for HNSCC at our institution, a radiomics signature was generated using features derived from T2-weighted MR images. The potential association of the radiomics signature with overall survival (OS) of patients was assessed. A multivariate Cox proportional hazards model was used to identify independent predictors from the radiomics signature and clinical characteristics. A radiomics nomogram incorporating the radiomics signature and any independent clinical predictors was then constructed. The incremental value of the radiomics signature in the areas of discrimination, calibration, and clinical usefulness was assessed.
Results A total of 170 patients with HNSCC were included. The radiomics signature, which comprised 7 selected features, was associated with OS (training cohort, $P < 0.0001$; testing cohort, $P = 0.0013$). The radiomics signature and TNM stage were independently associated with OS and therefore were incorporated to generate the radiomics nomogram. The radiomics nomogram showed a better discrimination capability, than stage in the training cohort (C-indexes 0.76 and 0.63, respectively; $P = 0.005$) and the testing cohort (C-indexes 0.72 and 0.61, respectively; $P = 0.01$). The calibration curves of the nomograms demonstrated good agreement between the estimation based on the radiomics nomogram and actual observation. The decision curve analysis

indicated that the radiomics nomogram had a higher overall net benefit than the traditional staging system.

Conclusion The radiomics nomogram could potentially improve clinical prognostic ability in HNSCC patients, providing a noninvasive means of quantifying imaging features and monitoring patient prognosis in clinical practice.

平扫与增强 CT 影像组学特征诊断肺腺癌浸润性的应用研究

高晨[1,2],叶剑锋[1],吴林玉[1],陈愿君[3],王世威[1,2],许茂盛[1,2]
1.浙江中医药大学附属第一医院
2.浙江中医药大学第一临床医学院
3.通用电气药业（上海）有限公司

目的 采用平扫与增强 CT 图像的影像组学特征对比分析探讨其鉴别肺腺癌浸润性的应用价值。方法 收集 42 例（46 个病灶，其中 17 个纯磨玻璃结节，15 个混合磨玻璃结节，14 个实性结节）在本院手术病理证实肺腺癌病例（浸润性肺腺癌 25 个，原位腺癌 13 个，微浸润性腺癌 8 个），并在术前接受层厚≤1mm CT 薄层平扫及增强扫描。使用 Analysis Kit（AK）分析软件定量提取影像组学特征；在 R 软件中用 lasso 和逐步回归的方法降维并建模。采用 ROC 曲线比较运用平扫和增强图像的相关模型性能。结果 运用 AK 软件获取 385 个影像组学特征，平扫和增强图像影像组学特征经降维后参与建模的特征分别为 3 个和 2 个，建模后验证 logistic 回归模型得到 ROC 曲线下面积分别为 0.839 和 0.893，P 值为 0.700。结论 在影像组学纹理特征区分肺腺癌的浸润性，薄层平扫与增强 CT 图像的价值均较高且较为接近。

PU-3451

A comparative study on the detection efficiency of solid lung nodules between intern using Artificial Intelligence (AI) pulmonary nodule screening software and resident without AI in radiology department

Tingting Sun
The Affiliated Zhongshan Hospital of Dalian University

MOTIVATION: To compare the detection efficiency of interns who assume great amount of diagnostic workload while inexperienced with AI software and residents who are experienced without using AI in radiology department for the detection of solid nodules.

METHOD AND MATERIALS: A total of 158 patients were collected. One senior radiologist with more than 10 years' experience read CT images based on the initial diagnosis of another senior radiologist with similar experience and a final decision was subsequently conducted by deputy chief radiologist with more than 15 years' experience to determine the ground truth solid lung nodules. All readings were performed on 1 mm slice thickness CT images with the assistance of AI software (InferRead CT Lung Research, Infervision, Beijing, China). The 158 CT images were interpreted by two groups of doctors to label lung nodules with different experience: group A (intern with 4 months of chest CT experience use AI) and group

B (residents with more than 3 years' experience without using AI). The number of solid nodules, long-axis diameter, location and labeling time were recorded. The number of true positive solid nodules and false positive solid nodules in group A and B were obtained by comparing with the gold standard solid nodules. Finally, statistical analysis was conducted to compare the difference of sensitivity and false positive rate between the two groups.

RESULTS: Group A detected 682 solid nodules including 596 true positive solid nodules and 86 false positive solid nodules with a sensitivity of 0.78±0.26 and a false positive rate of 0.54 per CT scan (86/158). Group B detected 477 solid nodules including 400 true positive solid nodules and 77 false positive solid nodules with a sensitivity of 0.54±0.29 and a false positive rate of 0.49 per CT scan (77/158). The sensitivity in group A was 24% higher than that in group B ($p<0.05$) and the false positive rate in group A and B have no statistical significant difference ($p>0.05$).

CONCLUSION: Compared with resident without AI, intern equipped with AI could achieve much higher diagnostic sensitivity and similar misdiagnosis (false positive rate) for solid nodule detection.

CLINICAL RELEVANCE/APPLICATION:

It is recommended to use AI to assist intern who are inexperienced to achieve desirable detection rate for solid nodules which could potentially enhance early lung cancer detection due to missed nodule findings.

PU-3452

低年资规培医师结合 AI 与高年资规培医师对长径＜4mm 肺结节检测效能的比较研究

孙婷婷
大连大学附属中山医院

目的：研究低年资规培医师使用人工智能（AI）软件能否达到或超过高年资规培医师独立诊断长径＜4mm 肺结节的检测效能。

方法：收集 2019 年 1 月 1 日到 2019 年 1 月 31 日期间在我院行胸部 CT 检查的患者 200 例，所有病例均由 2 名从事影像诊断工作 8 年以上的医师结合 AI 辅助软件（SCHOLAR,infervision）共同阅片，意见不同时由第 3 名从事影像诊断工作 15 年以上的医师进行会诊，最后做出一致诊断定为金标准。高低年资规培医师在标注结节前均进行统一培训,由 4 名具有 4 个月胸部 CT 工作经验的低年资影像规培医师借助 AI 对上述病例图像进行结节标注(A 组,每人各检测 50 例)，另由 2 名高年资影像规培医师（从事影像诊断工作 3 年及以上）独立标注上述病例图像结节(B 组，每人各 100 例)，记录结节数目、大小、位置及标注时间。将 A、B 两组检测的结节分别与金标准进行比对，记录真阳结节数、假阳结节数、假阴结节数，采用配对样本 t 检验比较两组间阅片时间、敏感度、假阳性率的差异，p ＜0.05 为差异有统计学意义。

结果：A 组的平均阅片时间为 324.30±150.33，B 组的平均阅片时间为 369.34±97.16，两组间差异无统计学意义(P=0.069,P ＜0.05)；A 组检出＜4mm 结节 309 个，其中真阳性结节 267 个，假阳性结节 42 个，敏感度为 0.59±0.26，假阳性率为 0.69；B 组检出结节 167 个，其中真阳性结节 147 个，假阳性结节 20 个，敏感度为 0.35±0.25，假阳性率为 0.33，A 组较 B 组敏感度提高 68%，差异具有统计学意义（$p=0.00, p$ ＜0.05）。

结论：低年资规培医结合 AI 对长径＜4mm 肺结节的检测效率及敏感度高于高年资规培医师，而假阳性率低于高年资规培医师。低年资规培医结合 AI 更优于高年资规培医师独立诊断长径＜4mm 肺结节的检测效能。

PU-3453

Investigation on the detection capability of AI assisted software in detecting pulmonary nodules by resident in radiology department

Tingting Sun
The Affiliated Zhongshan Hospital of Dalian University

MOTIVATION: To evaluate the detection capability of artificial intelligence (AI) assisted software in the detection of pulmonary nodules by resident.
METHOD AND MATERIALS: A total of 169 patients were collected. One senior radiologist with more than 10 years' experience read CT images based on the initial diagnosis of another senior radiologist with similar experience and a final decision was subsequently conducted by deputy chief radiologist with more than 15 years' experience to determine the ground truth lung nodules. All readings were performed on 1 mm slice thickness CT images with the assistance of AI software (InferRead CT Lung Research, Infervision, Beijing, China). One resident read the images without AI software (group A). After two weeks washout period, the same resident read CT images again with AI software (group B). The number of nodules, long-axis diameter, location and labeling time were recorded. The number of true positive nodules, false positive nodules in group A and B were obtained by comparing with the gold standard nodules.
RESULTS: The labeling time of group B (170.40±58.27s) was shorter than that in group A (352.81±100.31 s) (p<0.05). Group A detected 711 nodules, including 605 true positive nodules and 106 false positive nodules with a sensitivity of 0.53±0.22 and a false positive rate of 0.62 per CT scan 106/171); Group B detected 1101 nodules including 1044 true positive nodules and 57 false positive nodules, with a sensitivity of 0.84±0.18 and a false positive rate of 0.33 per CT scan 57/171). The sensitivity in group B was 31% higher than that in group A (p<0.05) and the false positive rate in group B was 29% lower than that in Group A(p<0.05).
CONCLUSION: Compared with resident without AI, the AI-assisted resident could achieve much higher diagnostic efficiency of pulmonary nodules while much faster.
CLINICAL RELEVANCE/APPLICATION:
It is recommended to use AI in clinical practice to potentially expedite workflow, reduce missed diagnosis rate and misdiagnosis rate of pulmonary nodules to enhance earlier detection of lung cancer.

PU-3454

Exploring detection efficiency difference of subsolid nodules between intern using Artificial Intelligence (AI) pulmonary nodule screening software and resident without AI in radiology department

Tingting Sun
The Affiliated Zhongshan Hospital of Dalian University

BACKGROUND: Subsolid nodules including pure ground-glass nodules and semi-solid nodules have higher risk of malignancy than solid nodules.
MOTIVATION: To compare the detection efficiency of interns who assume great amount of diagnostic workload and inexperienced with AI software and residents who are experienced without using AI in radiology department for the detection of subsolid nodules.
METHOD AND MATERIALS: A total of 109 patients who underwent routine chest CT examinations at Zhongshan Hospital affiliated to Dalian University from January 1, 2019 to January 31, 2019 were collected. One senior radiologist with more than 10 years' experience read CT images based on the initial diagnosis of another senior radiologist with similar experience and a final decision was subsequently conducted by deputy chief radiologist with more than 15 years' experience to determine the ground truth lung nodules. All readings were performed on 1 mm slice thickness CT images with the assistance of AI software (InferRead CT Lung Research, Infervision, Beijing, China). The 109 CT images were interpreted by two groups of doctors to label lung nodules: group A (intern with 4 months of chest CT experience use AI) and group B (residents with more than 3 years' experience without using AI). The number of nodules, long-axis diameter, location and labeling time were recorded. The number of true positive nodules, false positive nodules in group A and B were obtained by comparing with the gold standard nodules. Finally, nodule detection sensitivity and false positive rate were calculated and compared for statistical analysis between group A and B.
RESULTS: Group A detected 298 subsolid nodules including 231 true positive subsolid nodules and 67 false positive subsolid nodules with a sensitivity of 0.80±0.35 and a false positive rate of 0.62 per CT scan (67/109). Group B detected 134 subsolid nodules including 112 true positive subsolid nodules and 22 false positive subsolid nodules with a sensitivity of 0.40±0.39 and a false positive rate of 0.18 per CT scan (20/109). The sensitivity in group A was 40% higher than that in group B (p<0.05) and the false positive rate in group A was 44% higher than that in Group B (p<0.05).
CONCLUSION: Compared with resident without AI, intern equipped with AI achieve considerably higher diagnostic sensitivity for subsolid nodule detection although false positive rate compromised.
CLINICAL RELEVANCE/APPLICATION:
It is recommended to use artificial intelligence (AI) to assist intern who are inexperienced to achieve desirable detection rate for subsolid nodules which are commonly associated with early pulmonary adenocarcinoma.

PU-3455

Establishment and prediction Efficacy analysis of IDH1 gene expression type diagnostic Random Forest model based on volumetric ADC texture parameters of glioma and peritumoral edema

wenting Lan[1],Zhang Feng[2]
1.NingBo First hospital Zhejiang province
2.The First affiliate hospital of Zhejiang University Medical College

AIM: To establish a model for predicting glioma Isocitrate Dehydrogenase 1 (IDH1) gene mutation by analyzing texture features of tumor parenchyma ADC value and peritumoral edema in preoperative brain glioma and to evaluate the prognostic value of texture analysis.

MATERIALS AND METHODS: A total of 146 patients (77 males and 69 females) with histologically confirmed anaplastic glioma were reviewed retrospectively. Among them, 60 were IDH1 mutants while 86 patients were IDH1 wild type. The data were divided into training group and validation group according to the ratio of 7:3. The training group consisted of 102 patients (42 IDH1 mutants and 60 wild type) and validation group included 44 patients (18 IDH1 mutants and 26 wild type). Conventional MRI features of two independent samples (IDH1-mutant and wild type) were evaluated by the Visually Accessible Rembrandt Images (VASARI) scoring system, *Pearson's Chi-Square* test was used for ranking data, and *t* test for classification variables. Texture analysis (TA) of ADC map based on the entire tumour volume and peritumoral edema was compared between two samples using Principal component analysis (PCA) to screen texture feature parameters. Random forest diagnosis models (VASARI+$Tumor_{ADC}$、VASARI+$Tumor_{ADC}$+$Edema_{ADC}$) were constructed on the bases of morphological single-factor variables, texture labels of tumor ADC images and texture labels of peritumoral edema ADC map.. The accuracy and diagnostic efficiency of the models were evaluated by validation datasets, sensitivity and specificity of the two prediction models were evaluated by drawing dynamic ROC curves. The AUC statistical indicators were used to quantify the predictive efficiency of the two models.The stability of the random forest model was evaluated by using the classification error rate of the model under different outcomes and the classification error rate of the out of bag (OOB) data.

RESULTS: Significant statistical differences in VASARI features were signi peritumoral edema, cystic degeneration and enhancement parameters ($P < 0.01$). Eight kinds of eigenvectors: Gradient OrientHistogram: (InterQuatile Range, Kurtosis), Graylevelcooccurence Matrix (Auto-correlation, Cluster Prominence, Contrast) Sum Entropy Information Measurement Norm (Inverse Differential Norm) were characteristic texture parameter variables were observed by using mean clustering classification. The accuracy of ROC curve of VASARI+Tumor ADC random forest diagnosis model was 71.5%, the specificity was 75.40%, and with areas under the ROC curve (AUC) of 0.769. The diagnostic accuracy of the random forest diagnosis models (VASARI+$Tumor_{ADC}$+preitumoral $edema_{ADC}$) was 80.9%, the specificity was 79.5%, and the AUC was 0.819 which was slightly higher than that of the conventional random forest

diagnosis model (VASARI+TumorADC), and the diagnostic accuracy was improved. About 1/3 of the out-of-pocket data generated in the modeling data are verified repeatedly. The error rate of model classification and random forest out-of-pocket data classification is stable at 10% in the end under different outcomes which indicated that the accuracy of the model was stable.

CONCLUSIONS:

In conclusion, The texture parameters of the ADC image of peritumoral edema were non-invasive markers to predict IDH1 mutational status and they have played a certain role in improving the efficiency of dignostic model.

PU-3456

The value of MRI image texture analysis in determining non-alcoholic fatty liver and its severity.

Wei Chen
The Third Affiliated Hospital of Medical University Of Chongqing, Yubei District (Jill hospital)

Objective:

To determine non-alcoholic fatty liver and its severity by comprehensive MRI image texture analysis and a series of related index

Materials and methods:

We have conducted a retrospective analysis of MRI images from 344 patients (non-alcoholic fatty liver disease patients, including 64 mild cases, 20 moderate cases, 46 severe cases, and 214 normal cases) who had been performed both abdominal CT and MRI from June 2015 to March 2019.In order to determine non-alcoholic fatty liver or not and its severity, we extracted 302 texture features through analyzing each T2 weighted images by MaZda, screened these texture features by Fisher algorithm, classification error rate + average correlation coefficient (POE + ACC, PA) and mutual information algorithm, and established Artificial Neural Network (ANN) by texture feature dimension reduction.

Results:

During this identification of fatty liver, there are a series of valuable characteristics, including S(0,1) Correlat, 45dgr_GLevNonU, S(4,0) Correlat, S(3,-3) Correlat, Tetal, S(4,-4) SumAverg, GrSkewness, S(2,2) Correlat, GrVariance and Skewness.Sensitivity, specificity, positive predictive value and negative predictive value were 90.3%, 90.1%, 85.5% and 93.5%,respectively.In the judgment of severity of nonalcoholic fatty liver, valuable structural characteristics include S(0,1)Correlat, 45dgr_GLevNonU, S(4,0)Correlat, wavenlh_s-2, S(2,-2)Correlat, GrKurtosis, Teta4, Tetal,S(0,4)Correlat,Skewness.Mild sensitivity, specificity, positive predictive value, and negative predictive value are 82.1%, 89.3%, 72.7%, and 93.5%, respectively.Moderateand sensitivity, specificity, positive predictive value, and negative predictive value are 58.8%,93.5%,58.8%and93.5%, respectively.Severe of sensitivity, specificity, positive predictive value, and negative predictive value are 68.2%,100%,100%and93.5%, respectively.

Conclusion:

It is very useful and valuable to evaluate the severity of non-alcoholic fatty liver through the MRI image texture features obtained by MaZda and established ANN model. It can provide a great deal of related reference to formulate treatment strategies for clinical doctors, enjoying a high promotion value.

Pretreatment prediction of response to neoadjuvant chemotherapy in patients with nasopharyngeal carcinoma by radiomic base on MRI

Junqi Sun[1,2],Feifei Shan[1],Jie Ding[2],Yi Kang[1],Xiaoting Tang[1],Chuan Huang[2]
1.yuebei people hospital
2.Stony Brook University Medicine

Purpose
Neoadjuvant chemotherapy (NAC) has been shown to improve the survival rates in patients with nasopharyngeal carcinoma (NPC). However, for patients not responding to NAC, such treatment would cause complications and prolong treatment time. This study aimed to develop a non-invasive radiomic model to predict the response to cisplatin-based NAC in NPC patients using pretreatment contrast-enhanced T1w MRI (CET1).
Materials and Methods
This prospective study was approved by local IRB and written consent was obtained. Currently we have response data from 76 NPC patients who received the cisplatin-based NAC. Forty-five patients showed response to NAC (by RECIST). Their pretreatment CET1 images were used for radiomic analysis. Regions-of-interest covering the whole tumor were manually delineated by a radiologist, and a total of 105 radiomic features were extracted for each patient, including shape, texture and Laws features. The dataset was randomly separated into a training set (~67%) and a validation set (~33%). The training set was used to select predictive features (Mann Whitney U-test $p<0.05$), redundant features with high correlation were removed and the prediction model was generate using LASSO with 3-fold cross-validation. The prediction performance was then evaluated in the independent validation set. The receiver operating characteristic (ROC) analysis was performed in both sets with the optimal threshold determined by maximizing the Youden index in the training set.
Results
In the training set, two radiomic features were selected for the prediction model, with area under the ROC curve (AUC)=0.78, sensitivity=0.93, specificity=0.62. The corresponding results on the independent validation set were 0.66, 0.73, 0.70, respectively.
Conclusion
This study demonstrates the potential of using routine pretreatment CET1 MRI to predict NPC patients' response to cisplatin-based NAC. The current radiomic model shows promising performance and will be further improved by expanding the dataset and adding features extracted from multiple MRI contrasts.
Clinical relevance/application

Pretreatment prediction of the response to NAC could benefit NPC patients, especially for nonresponders, helping them avoid the serious side effects and receive radiation therapy at an earlier time.

PU-3458

Comparison of radiomics by different classifiers and feature selection for assessing the deep myometrial invasion of endometrial cancer

Bicong Yan
Jinshan Hospital of Fudan University

Abstract

Objective: The deep myometrial invasion of endometrial cancer had worse prognosis and need to expand the extent of surgery or adjuvant therapy. We aimed to identify radiomics methods for assessing preoperatively of deep myometrial invasion (DMI) in endometrial cancer (EC) based on 3D multi-parameters MRI features.

Methods: A total of 259 patients were divided into a primary set (179 patients) and a validation set (80 patients) from Januray 2014 to July 2019. multi-parameters MRI (T2-weighted, diffusion weighted, apparent diffusion coefficient maps and contrast enhanced images) was used to select the radiomics features in assessing DMI in EC. Three feature selection methods (least absolute shrinkage and selection operator (LASSO), recursive feature elimination (RFE) and Boruta of Random Forest (RF)) combined with three classification methods (logistics regression (LR), support vector machines (SVM) and convolution neural network (CNN)), were compared for their diagnostic performance in assessing the DMI of EC. And the diagnostic performance of the radiomics models were presented via area under the receiver-operating characteristic curve (AUC).

Results: From a total of 3152 features, 6, 16 and 10 features were selected by LASSO, RFE and RF method respectively to assess the DMI. And all the selected features were from the T2WI sequence. The selection method RFE with classifier LR had the highest AUC (AUC = 0.85 in the primary set and 0.74 in the validating set), followed by Boruta of RF with LR (AUC = 0.82 in the primary set and 0.76 in the validation set) and Boruta of RF with SVM (AUC = 0.82 in the primary set and 0.75 in the validation set). In feature selection methods aspect, the Boruta of RF had better performance in each classifier. In classification methods aspect, the LR had better performance.

Conclusions: Our study demonstrated multi-parameters MRI features performed well in diagnosing the DMI of EC. The selection method RFE with classifier LR had the best performance in assessing DMI of EC, which could enhance the application of radiomics methods in EC and guide the treatment in preoperative.

基于深度学习的阴道镜图目标区域检测

李良伟[1],李松[1],郑煌杰[1],王清瑶[1],彭梓睿[1],陈忆[2],吴丹[2],陆佳亮[1]
1.上海交通大学
2.上海交通大学医学院附属国际和平妇幼保健院

宫颈癌是目前最常见的女性恶性肿瘤之一，根据临床数据估计，从感染 HPV 病毒到发展为子宫颈浸润癌需要一定的癌前转变过程，因此及时诊断发现宫颈癌的早期征兆具有非常重大的意义。在目前众多的宫颈癌诊断方式中，宫颈阴道镜检测是最为重要的检测手段之一。主流的做法是通过肉眼对于宫颈阴道镜图像进行识别，找到可能存在病变的区域，进而将可能病变的区域送至活检，确定最终的病变类型。该检测手段具有较强的可操作性和实时性。然而这种手段具有一种非常重要的不足，那就是为了获取准确的诊断结果，需要经验丰富的医生花费大量的时间和精力完成肉眼筛选的过程。我们受到计算机辅助治疗的启发，借助于计算机视觉技术，将肉眼诊断这一过程用计算机代替人类医生执行。在这篇文章当中，我们开发了一套检测并识别阴道镜图中异常区域的模型——富特征医疗目标区域检测器。除此之外，我们还开发了一套阴道镜图数据标注软件，方便后续研究使用。通过这一软件，我们与上海交通大学医学院附属国际和平妇幼保健院的医生进行合作，标注了 400 余例病人的阴道镜图数据。在我们提出的这一数据集上，富特征医疗目标区域检测器在特定场景上的表现（转化区的识别）已经达到人类医生的水平。

18-Fluordeoxyglucose Positron Emission Tomography/Computed Tomography Based Radiomic Features for Prediction of Epidermal Growth Factor Receptor Mutation Status and Prognosis in Lung Adenocarcinoma

Bin Yang,Guangming Lu
Jinling Hospital, Medical School of Nanjing University

Abstract

Purpose

To investigate whether the radiomic features of 18-fluordeoxyglucose positron emission tomography/computed tomography (^{18}F-FDG PET/CT) could predict the epidermal growth factor receptor (EGFR) mutation status and prognosis in lung adenocarcinoma.

Methods

174 consecutive patients with lung adenocarcinoma who received ^{18}F-FDG PET/CT scan and EGFR gene test were retrospectively analyzed between July 2009 and August 2016. 1672 radiomic features were extracted from PET/CT images, which combined with the clinicopathological factors to construct a Random Forest (RF) model to identify EGFR mutant from wild type. The mutant/wild model was trained on a set of 139 patients and validated on an independent validation group (n=35) using the area under the receiver operating characteristic (ROC) curve. A subset of 105 patients with EGFR mutation were further analyzed. The second RF classifier to predict 19/21 mutation site [training group (n=80) and test group (n=25)] was also built and evaluated in EGFR mutation subset. Radiomic scores (R-scores) was calculated and 5 clinicopathological factors were integrated into a multivariate Cox proportional hazard (CPH) model for the prediction of overall survival (OS). C-index was calculated to evaluate the performance of the model. The prognosis of targeted therapy and chemotherapy in different EGFR mutation status was compared.

Results

109/174 (62.6%) of patients showed EGFR mutation. EGFR mutation of 21L858R was the most common mutation type (55.9%, 61/109). We identified mutant/wild model in the training group (AUC=0.77) and the validation group (AUC=0.71). The second model for the identification of 19/21 mutation site had AUC of 0.82 and 0.73 in the training group and validation group, respectively. The C-index of CPH model for the prediction of OS was 0.757. It was significant difference in survival time between targeted therapy and chemotherapy for EGFR mutation patients(p= 0.03).It was no significant difference in survival time between 19DEL and 21L858R after for targeted therapy (p= 0.40).It was no significant difference in survival time between EGFR mutation and EGFR wild after for chemotherapy (p= 0.30).

Conclusion

Our result show that radiomic features based on the ^{18}F-FDG PET/CT combining with clinicopathological factors could reflect the genetic difference and predict EGFR mutation type and prognosis.

PU-3462
定量 CT 纹理分析评估肾透明细胞癌 Fuhrman 分级的价值

严立,程琦
安徽医科大学附属省立医院

目的 定量 CT 纹理分析评估肾透明细胞癌（clear cell renal cell carcinoma，ccRCC）核分级的可行性。 **方法** 回顾性分析 78 例病理已经证实为 ccRCC 并且 Fuhrman 分级明确的患者资料，其中Ⅰ级 15 例，Ⅱ级 37 例，Ⅲ级 17 例，Ⅳ级 9 例，依照 Fuhrman 分级，将Ⅰ、Ⅱ级作为低级别组（共 52 例），Ⅲ、Ⅳ级作为高级别组（共 26 例），运用 Matlab 2014a 软件对所有患者的增强 CT 皮质期与髓质期图像进行纹理分析，提取 4 个灰度直方图特征参数（平均值、标准差、峰度、偏度）及 4 个灰度共生矩阵特征参数（对比度、相关度、能量、一致性），并对所有参数值进行分析、比较。 **结果** 不同 Fuhrman 分级患者间平均值、标准差和相关度的差异有统计学意义（$P<0.05$），余 5 个特征（峰度、偏度、对比度、能量、一致性）差异无统计学意义（$P>0.05$）；8 个纹理特征参数（平均值、标准差、峰度、偏度、对比度、相关度、能量、一致性）与 Fuhrman 分级相关性分析显示，仅相关度有较大的临床应用价值，$|r|$值为 0.382（$P<0.05$）；ccRCC 高级别组的相关度高于低级别组，差异有统计学意义（$P=0.001$），余特征值之间差异无统计学意义（$P>0.05$）。相关度鉴别高、低级别肾透明细胞癌 ROC 曲线下面积为 0.753，诊断敏感度与特异度分别为 76.92%、71.15%；各 CT 纹理特征间相关系数$|r|$值为 0.241～0.975，48.89%（22/45）纹理特征间有明显相关性（$|r|\geq0.5$），其中标准差与平均值的相关性最高（$|r|=0.975$），平均值与能量、偏度与峰值的相关性也较高（$|r|$值分别 0.948、0.954）。 **结论** 定量 CT 纹理分析在术前对肾透明细胞癌 Fuhrman 分级评估具有较高的临床应用价值，为患者的治疗方案制定及预后评估提供了依据。

探究人工智能辅助诊断系统对厚层胸部 CT 图像中肺亚实性结节的检出效能

汤敏,伍建林
大连大学附属中山医院

目的 由于医院 PACS 系统存储容量有限，基层医院常使用厚层胸部 CT 图像（如 5mm/7mm）进行日常影像诊断。因此，本研究探讨人工智能辅助诊断系统对厚层胸部 CT 图像中肺亚实性结节的检出效能。 **方法** 使用第 2 代双源 CT 前瞻性收集行常规胸部 CT 检查的门诊患者共计 120 例，将扫描图像进行厚层（5mm/7mm）图像重建，利用人工智能辅助诊断软件建立的厚层（5mm/7mm）模型，检测 2 组层厚 CT 图像中肺亚实性结节的数目。由 1 名影像诊断专家及 2 名高年资放射科医师通过 1mm 薄层 CT 图像及人工智能辅助诊断软件最终确定肺亚实性结节金标准数目。使用灵敏度及假阳性率评估人工智能辅助诊断系统对厚层胸部 CT 图像中肺亚实性结节的检出效能。**结果** 人工智能辅助诊断软件分别在 5mm，7mm 层厚的胸部 CT 图像中检测到 98、65 个肺亚实性结节，其中分别有 58、33 个与金标准一致，假阳性结节数分别为 40、32 个。肺亚实性结节检出的敏感度分别为 0.188±0.323，0.120±0.274，差异有统计学意义（$p<0.001$）。 5mm 及 7mm 两组间假阳性率分别为 0.333 / CT、0.275 / CT。**结论** 人工智能辅助诊断系统对厚层（5mm/7mm）胸部 CT 图像中肺亚实性结节检出的假阳性率均较低，且 5mm 层厚组检出效能明显优于 7mm 组。

MR-Based Radiomics of Rectal Cancer: Predict Metachronous Liver Metastasis

Fu Shen,Jianping Lu
Radiology Department， Changhai Hospital， Shanghai， China

Purpose
The purpose of this study was to investigate the value of high resolution T2-weighted-based radiomics in prediction of metachronous liver metastasis (MLM) in patients with rectal cancer.
Materials and Methods
This study retrospectively analyzed 113 patients with rectal cancer (31 in MLM group and 82 in non-metastases group) who underwent rectal MR imaging in our hospital on a 3T scanner (MAGNETOM Skyra, Siemens Healthcare, Erlangen, Germany). We used Radcloud (Huiying Medical Technology Co., Ltd, Beijing, China) to manage imaging data, clinical data, and subsequent radiomics statistics analysis. Lesions were delineated on the high resolution T2-weighted MR images manually by radiologist who was blinded to the clinical information of the patients. Features were extracted on the Radcloud platform, then the optimal features were selected by least absolute shrinkage and selection operator (LASSO) method to best predict the MLM. Computer-generated random numbers were used to assign 80% of the VOIs to the training data set and 20% of VOIs to the validation data set. Four machine learning algorithms of Logistic Regression (LR), Random Forest (RF), Decision Tree (DT) and K-nearest neighbor (KNN) were utilized for predictive model constructing. The prediction performance of the models was evaluated by receiver operating characteristic (ROC) curves with area under the curve (AUC), sensitivity and specificity, and compared by DeLong test.
Results
1409 quantitative imaging features were extracted from MR images firstly, and 10 optimal features related to the MLM prediction were selected with LASSO algorithm finally. The AUC, specificity and specificity for validation set of RF model was 0.943 (95% CI: 0.883 - 0.978), 90.32% and 92.68%, respectively. Compared to these four models, the RF model showed significantly better prediction performance (P_{LR-RF} < 0.0001, P_{KNN-RF} = 0.0036, and P_{DT-RF} = 0.0104). There were no significant differences among LR, KNN and DT Model (P > 0.05).
Conclusion
Our study demonstrated that the high resolution T2-weighted MR-based radiomics with RF model can serve as a quantitative tool to predict MLM of rectal cancer. The radiomics as imaging biomarker has important values in identifying tumor heterogeneity.

基于高分辨 T2WI 的影像组学对直肠癌新辅助治疗疗效的评估研究

刘明璐
海军军医大学第一附属医院（上海长海医院）

目的 探讨基于磁共振高分辨 T2WI 图像的影像组学方法对评估直肠癌新辅助治疗疗效的价值。
方法 回顾性分析 2018 年 1 月至 2018 年 12 月期间在我院经手术病理证实，新辅助治疗前后均接受高分辨磁共振成像的 46 例直肠癌患者。在两次扫描图像上分别勾画病灶的 VOI 并提取影像组学特征。根据肿瘤退缩分级(tumor regression grade，TRG)将 TRG 0、1 级分为疗效良好组，将 TRG 2、3 级分为疗效不良组。根据 TRG 分组利用 LASSO 算法选择特征。建立逻辑式回归、随机森

林、决策树、K 近邻机器学习分类器模型，进行 ROC 分析，计算曲线下面积（AUC），并比较模型间差异。**结果** 纳入的 46 例患者中 TRG 0 级 4 例，TRG 1 级 15 例，TRG 2 级 17 例，TRG 3 级 10 例，其中疗效良好组 19 例，疗效不良组 27 例。共提取 1029 个影像组学特征，降维得到与 TRG 分组相关的组学特征 3 个。建立的逻辑式回归、随机森林、决策树、K 近邻 4 种分类器模型测试集的 AUC 分别为 0.828，0.922，0.883，0.964。其中随机森林、决策树、K 近邻这三种模型的诊断效能优于逻辑式回归模型（P<0.05）。**结论** 基于磁共振 T2WI 高分辨率图像的影像组学模型能够判断直肠癌新辅助治疗后的肿瘤退缩程度并对直肠癌新辅助治疗的疗效具有一定的评估价值。

Nomogram Based on 18-Fluordeoxyglucose Positron Emission Tomography/ Computed Tomography for Prediction of Survival in Lung Adenocarcinoma Patients with EGFR Mutation Status and Guidance for Individualized Treatment

Bin Yang[1],Guangming Lu[1],Shaofeng Duan[2]
1.Jinling Hospital, Medical School of Nanjing University
2.GE Healthcare China, Shanghai

Abstract

Purpose

To investigate whether the nomogram based on 18-fluordeoxyglucose positron emission tomography/computed tomography (18F-FDG PET/CT) radiomic features combined with clinical pathological can predict the survival in lung adenocarcinoma patients with EGFR mutation status. And prognostic analysis was performed in order to guide individualized precision medicine.

Patients and methods

This study consisted of 174 (training cohort (n= 114), validation cohort (n = 60)) consecutive lung adenocarcinoma patients with different epidermal growth factor receptor (EGFR) mutation status (109 mutate-type and 65 wild-type). 1672 radiomic features were extracted from PET/CT images using a Radiomics prototype. Least absolute shrinkage and selection operator (LASSO) cox regression was used to select radiomic features and construct radiomic score (R-score). R-score and clinicopathological features were combined to construct the survival nomogram using another LASSO cox regression. The nomogram was validated in 174 patients with lung adenocarcinoma and 109 patient subset with EGFR mutations. Kaplan-Meier were performed in both training and validation cohorts and its calibration and discrimination were evaluated. The independent risk factors and treatment methods for patients with EGFR mutations were also analyzed.

Results

81 /174(46.65%) females and 109/174 (62.64%) of patients with EGFR mutation. The C-index of nomogram for the prediction of overall survival (OS) for 174 lung adenocarcinoma patients and 109 EGFR mutation patients were 0.83 and 0.80 respectively. It can better distinguish between high and low risk groups. The calibration curve showed good agreement between predicted and observed 5-year survival

probabilities. [Age(Hazard ratio [HR],1.04), Stage(HR,2.02), carcinoembryonic antigen (CEA) (HR,1.00), maximal standard uptake value(SUVmax)(HR,0.89)]and[Treatment(HR,4.08),Stage(HR,2.24),CEA(HR,1.00)]were independent risk factors for 174 lung adenocarcinoma patients and 109 EGFR mutation patients respectively. Targeted therapy is the main treatment method for patients with high-risk EGFR mutations, while two therapies prognoses were similar in low-risk group. The 19del is more likely to benefit from targeted therapy than the 21L858R.

Conclusion

The development of nomogram based on ^{18}F-FDG PET/CT radiomic features combined with clinical pathological has a good predictive performance to the survival in lung adenocarcinoma patients with EGFR mutation status, it can also guide the treatment of patients with EGFR mutations, which is conducive to individualized precision medicine.

Multivariate Pattern Classification of Primary Insomnia Using Three Types of Functional Connectivity Features

mengshi dong,Chao Li,Ke Xu*,Lina Zhang*
The First Hospital Of China Medical University

Objective: To explore whether or not functional connectivity (FC) could be used as a potential biomarker for classification of primary insomnia (PI) at the individual level by using multivariate pattern analysis (MVPA).

Methods: Thirty-eight drug-naive patients with PI and 44 healthy controls (HC) underwent resting-state functional MR imaging. Voxel-wise functional connectivity strength (FCS), large-scale functional connectivity (large-scale FC) and regional homogeneity (ReHo) were calculated for each participant. We used support vector machine (SVM) with the three types of metrics as features separately to classify patients from healthy controls. Then we evaluate its classification performances. Finally, FC metrics with significant high classification performance were compared between the two groups and were correlated with clinical characteristics, i.e., Insomnia Severity Index (ISI), Pittsburgh Sleep Quality Index (PSQI), Self-rating Anxiety Scale (SAS), Self-rating Depression Scale (SDS) in the patients' group.

Results: The best classifier could reach up to an accuracy of 81.5%, with sensitivity of 84.9%, specificity of 79.1% and area under the receiver operating characteristic curve (AUC) of 83.0% (all $P < 0.001$). Right fronto-insular cortex, left precuneus and left middle frontal gyrus showed high classification weights. In addition, right fronto-insular cortex and left middle frontal gyrus were the overlapping regions between MVPA and group comparison. Correlation analysis showed that FCS in left middle frontal gyrus and head of right caudate nucleus were correlated with PSQI and SDS respectively.

Conclusion: The current study suggests abnormal FCS in right fronto-insular cortex and left middle frontal gyrus might serve as a potential neuromarkers for PI.

PU-3468

磁共振影像组学对直肠癌术前 T 分期的诊断价值

马晓璐,沈浮,王敏杰,陆建平
海军军医大学第一附属医院（上海长海医院）

目的：探讨基于磁共振高分辨 T2 加权成像的影像组学在直肠癌术前 T 分期中的应用价值。
方法：回顾性分析 2018 年 6 月至 2019 年 6 月期间，在上海长海医院经手术病理证实，术前接受 3T 磁共振成像的直肠癌患者，记录术后病理 T 分期结果。在高分辨 T2WI 图像上手动勾画病灶 VOI 后提取影像组学特征，之后采用 LASSO（least absolute shrinkage and selection operator）算法进行特征值降维，选择出对病理 T 分期最有价值的特征。使用降维后的特征样本随机分为训练集（80%）与测试集（20%）进行机器学习，建立极限梯度增强树（extreme gradient boosting, XGBoost）分类器模型，获得 ROC（receiver operating characteristic）曲线，计算曲线下面积（area under the curve，AUC）、敏感度、特异度及 95%置信区间。
结果：纳入 190 例直肠癌患者，其中男性 114 例，女性 76 例，年龄 15～78 岁，平均年龄 57±11 岁。T1 19 例(10%)，T2 61 例(32.1%)，T3 103 例(54.2%)，T4 7 例(3.7%)。提取得到 1029 个影像组学特征，降维得到与 T 分期相关的特征 7 个。XGBoost 分类器模型对 T1-4 分期的 AUC 分别为：0.927、0.904、0.895、0.970。
结论：基于磁共振高分辨 T2WI 的影像组学对直肠癌的术前 T 分期具有价值，有助于辅助临床制定治疗方案。

平扫和增强 CT 图像影像组学特征对鉴别肺部病灶良恶性价值的研究

高晨[1,2],叶剑锋[1],吴林玉[1],陈愿君[3],王世威[1,2],许茂盛[1,2]
1.浙江中医药大学附属第一医院
2.浙江中医药大学第一临床医学院
3.通用电气药业（上海）有限公司

目的 对比平扫和增强 CT 中获取的影像组学特征在区分肺部病灶良恶性的价值。**方法** 收集 62 例肺部病灶病例，均使用层厚≤1mmCT 薄层平扫及增强扫描分别逐层勾画病灶，将勾画的感兴趣区用 AK 软件进行影像组学特征的提取并建模，观察分别来自平扫和增强扫描图像对相关模型性能的影响。**结果** 在 62 例鉴别肺部病灶良恶性方面，由平扫 CT 图像特征和增强 CT 图像特征用逻辑回归，SVM，KNN 方法构建的模型得出的 AUC 分别都为 0.95 及 0.917，用 Rtree 方法构建的模型得出的 AUC 分别是 0.967 及 0.833。**结论** 在鉴别肺部病灶良恶性方面，来自平扫 CT 图像的影像组学特征经过 4 种方法形成的模型性能均优于增强 CT 图像。

基于 CT 图像纹理分析鉴别肾透明细胞癌分化程度 WHO/ISUP 简化分级

韩冬[1,2],于勇[1,2],贺太平[1,2],党珊[1],郭炎兵[1],任嘉梁[3],田欣[1]
1.陕西中医药大学附属医院
2.陕西中医药大学
3.GE（中国）医疗

目的：基于 CT 图像纹理分析鉴别肾透明细胞癌(ccRCC)分化程度 WHO/ISUP 简化分级
方法：收集本机构经病理证实的 ccRCC 患者 113 例。其中将 I、II 级分为低级别(81 例)，III、IV 级分为高级别(32 例)。将肾癌的皮质期图像被导入 ITK-SNAP 软件中勾画肾癌 3D-ROI 用于提取纹理特征，共提取纹理特征 42 个。采用 LASSO 回归进行数据降维，构建纹理风险评分。以 WHO/ISUP 简化分级为金标准，将纹理评分和临床资料纳入二元 *Logistics* 回归。绘制 ROC 评价各参数的诊断效能，并计算 C 统计量。采用决策曲线分析纹理分析、临床资料和两者联合的患者净获益情况。
结果：低级别 ccRCC 纹理分析风险评分为-1.30±0.70，高级别-0.40±0.77，两组差异有统计学意义(t=-5.98,p<0.001)。多因素二元 *Logistics* 回归结果表明纹理分析风险评分和区域淋巴结肿大是鉴别低、高级别 ccRCC 的独立危险因素，OR 值分别为 4.445(95%CI:1.928-10.248)及 5.012(95%CI:1.807-13.899)。AUC 分别为 0.811(95%CI:0.730-0.891)和 0.745(95%CI:0.638-0.852)。两者联合 AUC 为 0.854(95%CI:0.783-0.926)。纹量分析风险评分、区域淋巴结肿大及两者联合的诊断效能经两两比较(Delong 法)，联合诊断的 AUC 与区域淋巴结肿大差异有统计学意义(Z=3.60,p<0.001），与纹理分析差异无统计学意义(Z=1.71,p=0.088)。决策曲线分析结果表明联合诊断的决策曲线在 0.21～0.77 概率阈值范围内高于纹理分析结果，可使患者净获益提高。
结论：纹理分析风险评分联合区域淋巴结肿大对于 ccRCC 的 WHO/ISUP 简化分级效能较高，可使患者净获益提高。

PU-3471
基于能谱 CT 影像组学构建肾透明细胞癌分化程度的预测模型：对比常规增强 CT

韩冬[1,2],党珊[1],于勇[1,2],贺太平[1,2],田欣[1],任嘉梁[3],陈媛媛[1]
1.陕西中医药大学附属医院
2.陕西中医药大学
3.GE（中国）医疗

目的：比较基于能谱 CT 影像组学及常规增强 CT 对肾透明细胞癌(ccRCC)分化程度的预测模型
材料与方法：119 例 ccRCC 患者采用分层抽样分为开发队列和验证队列。根据 2016 版肾癌 WHO/ISUP 分级将 I 级及 II 级定义为低级别组，III 级及 IV 级定义为高级别组。常规增强 CT 的影像征象被两名放射科医师重新评估用于构建常规增强 CT 预测模型。CT 增强扫描皮质期图像用于构建影像组学的预测模型。两模型分别在验证组队列进行验证。进一步比较两个预测模型的区分度、校准度、净重新分类指数和综合判别指数。采用决策曲线分析两个预测模型不同概率阈值下的患者净获益情况。
结果：在开发队列中，影像组学预测模型的 AUC 大于常规增强 CT 的预测模型，且有统计学显著性（Z=2.47,p<0.05）。净重新分类指数 NRI=9.52%，具有统计学显著性(Z=3.14，p<0.01)。综合判别指数 IDI=21.6%，具有统计学显著性(Z=3.30，p<0.01)。在验证队列中，影像组学预测模型的 C-statistics 大于常规增强 CT 的预测模型，但差异无统计学意义（Z=1.81,p=0.07）。NRI=14.29%，且有统计学显著性（Z=4.64，p<0.01）。IDI=33.7%，且具有统计学显著性

（Z=2.70，p<0.01）。验证队列决策曲线分析显示，在 3%～81%范围影像组学预测模型对患者的净获益始终大于常规增强 CT 的预测模型。
结论：基于 ccRCC 能谱 CT 增强扫描皮质期图像的影像组学构建的预测模型，对预测高、低级别具有一定的临床价值，可为患者术前治疗及预后提供参考依据。

GE Revolution GSI 模式虚拟单能量成像联合 MARS 技术在下肢 CTA 检查中去除金属植入物伪影和改善金属植入物周围血管可视化效果的应用评估。

顾耕
上海市第六人民医院

摘要 目的：评估 GE Revolution GSI 模式虚拟单能量成像技术联合 MARS 在下肢血管去除金属伪影和改善金属植入物周围下肢血管的效果，并获得图像质量最佳单能量图像。
方法：回顾性分析 20 例下肢有金属植入物患者下肢 CTA 影像资料，均采用 GSI 扫描技术。重建后的影像数据均用 AW4.7 工作站进行后处理，重建得到 1 组 100kvp-like 混合能量图像，40kev~140kev 以 10kev 为间隔的共 11 组 Monochromatic 图像和 11 组 Monochromatic+Mars 图像。每组图像随机选择 1 个伪影最严重和 1 个无伪影的感兴趣区域（ROI），测出各自的 SD 值，计算出各自伪影指数（artifacts index，AI），并对各自图像进行主观评分（0~3 分）结果：2 种成像方式的 AI 在 40~70kev 无统计学意义（p>0.05）,在 80~140kev 存在明显统计学差异（P<0.05）,且 Monochromatic+Mars 图像的 AI 值在 100kev 最低。结论：GE Revolution GSI 模式虚拟单能量成像联合 Mars 技术可以有效改善下肢 CTA 检查患者金属植入物造成的伪影并能同时有效的显示金属植入物附近的下肢血管，对金属植入物术后患者，进行下肢 CTA 检查的影像诊断有重要意义。

PU-3473
基于常规 MR 图像纹理分析术前区分脑胶质瘤高低级别的临床应用研究

李开
中国科学院大学附属肿瘤医院（浙江省肿瘤医院）

目的：探讨一二阶（直方图及 GLCM 灰度共生矩阵）纹理分析在脑胶质瘤术前分级中的临床应用；
方法：选取手术病理结果为高级别（WHO,Ⅲ--Ⅳ）24 例；低级别（WHO, Ⅰ--Ⅱ）14 例，手术前均做 MRI 脑增强检查，导出常规 T2WI 序列，Dicom 保存图像，将图像导入 ITK-SNAP 软件上进行手动勾画 ROI，ROI 选取病灶最大层面（不包含囊变水肿等区域），不明确病灶时参考增强图像，将保持好的 ROI 导入图像纹理分析软件 AI-Kit（Artificial Intelligence Kit，AI kit），进行纹理分析计算，其中直方图 42 个纹理参数，灰度共生矩阵 144 个纹理参数（步长为 1、4、7）；对所算结果进行独立样本 t 检验，找出有统计学差异的纹理参数，运用 ROC 曲线判断有差异的纹理参数的诊断效能；结果：直方图纹理参数统计学分析差异的有 9 个，GLCM31 个，直方图纹理参数 ROC

曲线下面积最大参数为偏度（skewness），面积为 0.78，敏感度为 0.714、特异性 0.75，诊断界值为 0.128，GLCM 纹理参数最大面积为能量（energy）135 角、步长为 1，面积为 0.708，敏感度为 0.739、特异性 0.786，诊断界值为 0.0099；结论：基于 T2WI 图像纹理分析术前区分脑胶质瘤高低级别一二阶纹理参数分别为偏度和能量，二者诊断效果中等，给术前确定肿瘤分级提供了新的指标。

Frontier ASPECTS 自动评分软件提高了初级放射科医生在评估早期急性缺血性脑卒中的表现

李玲,陈英敏,暴云峰,贾秀川,王宇航,左天姿,朱凤英
河北省人民医院

目的:本研究旨在比较 Frontier ASPECTS 自动评分软件与不同专业水平放射科医生在评估早期急性缺血性脑卒中患者 CT 扫描中的表现，并评价该软件能否有助于提高经验较少的放射科医生评分的准确性。
方法：回顾性分析 55 例急性大脑中动脉缺血患者的头颅 NCCT。Frontier ASPECTS 自动评分软件、两位高级放射科医师（二十年以上）、两位初级放射科医师（三年以下）分别在不知患者临床信息的情况下对患者出现症状 6h 内的头颅 NCCT 图像进行 ASPECT 评分。随后初级放射科医师结合 Frontier ASPECTS 自动评分软件再次进行评分。以另两位高级放射科医师对发病 24h 后的随访 CT 图像所做的协商评分作为参考标准，各组间进行比较，通过组内相关系数分析（ICC）和 Bland-Altman 图进行统计分析。
结果： Frontier ASPECTS 自动评分评分软件、高级放射科医师协商评分与参考评分间一致性均较高（分别为 r=0.842 和 0.803），而初级放射科医师协商评分与随访评分间一致性较差（r =0.680）。同时 Bland-Altman 图分析显示，初级放射科医师组平均 ASPECT 差异和标准差差异（平均差异=1.35；SD = 1.42）与 Frontier ASPECTS 自动评分软件和高级放射医师组相比差异更大（平均差异=0.16，0.22；SD = 1.24，1.13 ）。但在 Frontier ASPECTS 自动评分软件帮助下，初级放射科医师组评分协商值与随访评分间一致性得到提高（r =0.852），平均 ASPECT 差异和标准差差异减小（平均差异= 0.20；SD = 1.11）。
结论：Frontier ASPECTS 自动评分软件评分与高级放射科医师组的 ASPECTS 评分结果有很高的一致性。而且，Frontier ASPECTS 自动评分软件可以为经验不足的放射科医师评估急性缺血性卒中患者评分提供重要参考价值。

Predicting the invasiveness of pulmonary ground-glass nodules by machine learnings

Xing Xue[1],Linpeng Yao[1],Yuan Hong[2],Feng Chen[1]
1.The First Affiliated Hospital， College of Medicine， Zhejiang University.
2.School of Mathematics Sciences， Zhejiang University

Background: As a promising method, machine learning has been widely used in medical field. In this study, The machine learnings waere used to predict the pathological infiltration of ground-glass nodules in chest CT images. Materials and Methods: In this study, there were 270 ground-glass nodules were collected from 269 patients.

There were 101 atypical adenomatous hyperplasia, in situ adenocarcinoma and mininvasive adenocarcinoma, and 169 invasive adenocarcinoma. The clinical features, CT morphological features and quantitative features based on CT texture analysis were collected. All cases were divided into training group and validation group.In training group, there were 220 GGNs, and in the validation group,there were 50 GGN (20 cases of lung invasive adenocarcinoma and 30 cases of invasive lesions). In the training group, the imaging method, the random forest method and the convolution neural network method were used to study the characteristics of the case. In the validation group, the above methods were used to diagnose and predict the GGN. The prediction efficiency is evaluated by ROC curve analysis.
Results：In the validation group, The area under the ROC curve is 0.836, the specificity and sensitivity are about 80.8 and 68.5, the accuracy of random forest method is about 78.2 and the area under the ROC curve is about 0.807, the specificity and sensitivity are about 84.3 and 71.5, and the convolution nerve is respectively. The area under the ROC curve is about 0.874, and the specificity and sensitivity are about 83.85.0 and 75.0, respectively. Among the three methods, convolution neural network has the best predictive accuracy.
Conclusion：The method based on machine learning has high accuracy in the diagnosis of pathological invasion of GGN lung adenocarcinoma, and the convolution neural network method based on deep learning is the most accurate.

基于基于深度学习的计算机辅助诊断系统对颅内血肿的体积测量研究

贾永军,于楠,陈静
陕西中医药大学附属医院

目的：探索基于深度学习的计算机辅助诊断系统对脑出血规则和不规则形态血肿体积测量的准确性与实用性。
方法：收集符合纳入标准的脑出血患者 120 例，根据 CT 图像上血肿最大层面的形态分为两组：规则组 60 例和不规则组 60 例，分别采用 itk-snap 软件手工勾画、2/3Sh 法、多田公式法及计算机辅助诊断系统进行血肿体积测量，以 itk-snap 软件手工勾画作为血肿体积的金标准，采用两两配对 t 检验比较各种方法测量血肿体积。
结果：种方法对规则血肿及不规则血肿的测量结果比较，差异均有明显统计学意义，且对不规则血肿差异较大。对于规则血肿，相对于 itk-snap 软件手工勾画测得血肿的平均体积 2/3Sh 法平均误差为 7.58%，多田公式法平均误差为 13.15%，计算机辅助诊断系统平均误差为 4.11%；对于不规则血肿，相对于 itk-snap 软件手工勾画测得血肿的平均体积，2/3Sh 法平均误差为 8.37%，多田公式法平均误差为 30.99%，计算机辅助诊断系统平均误差为 6.05%。
结论：基于深度学习的计算机辅助诊断系统对颅内规则和不规则血肿体积测量的结果较 2/3Sh 法、多田公式法更为准确，能减少血肿测量误差。

A Radiomics Nomogrom for prediction of bone metastasis in newly diagnosed prostate cancer patients

Wenjie Zhang[1],Ning Mao[2],Bin* Wang[1]
1.Binzhou Medical University
2.Yantai Yuhuangding Hospital

Purpose: To develop and validate a radiomics nomogram for prediction of bone metastasis (BM) in patients with newly diagnosed prostate cancer (PCa).
Materials and Methods: One-hundred and sixteen patients (training cohort: n =81; validation cohort: n =35) who underwent Prostate MR imaging and confirmed by pathology with newly diagnosed PCa from January 2014 to January 2019 were enrolled. Radiomic features were extracted from diffusion-weighted (DWI), axial T2-weighted fat suppression (FST2-w) and dynamic contrast-enhanced T1-weighted (DCE T1-w) MRI of each patient. Least absolute shrinkage and selection operator (LASSO) regression was used for data dimension reduction, feature selection, and radiomics feature construction. Combined with independent clinical risk factors, a radiomics nomogram was established by a multivariate logistic regression model. Nomogram calibration and discrimination was evaluated in training set and verified in the validation set. Finally, decision curve analysis was performed to estimate the clinical usefulness of the nomogram.
Results: The radiomics signature consisting of 12 selected features was significantly associated with bone status (P<0.001 for both training and validation sets). The radiomics nomogram combined a radiomics signature from Multiparametric MR images with independent clinic risk factors. The model showed good discrimination and good calibration in the training cohort (AUC 0.93, 95%IC, 0.86 to 0.99) and the validation cohort (AUC 0.92, 95%IC, 0.84 to 0.99). Decision curve analysis also demonstrated the clinical utility of the radiomics nomogram.
Conclusion: The radiomics nomogram which incorporates the Multiparametric MRI-based radiomics signature and clinical risk factors, can be conveniently used to facilitate the individualized prediction of bone metastasis in patients with newly diagnosed prostate cancer.

疲劳状态的放射科规培医师在 AI 软件辅助下对＜4mm 肺结节检测效能的研究

许迪,吴非
大连大学附属中山医院

目的：疲劳状态的放射科规培医师在 AI 肺结节检测软件辅助下对＜4mm 肺结节检测效能提升的研究。
方法：收集西门子双源 CT 扫描的胸部病例 179 例。放射科规培医师分别在三种不同阅片模式进行阅片：正常状态下（A 组）、疲劳状态下（即一天日常工作满 8 小时以上）独立阅读（B 组）、疲劳状态下结合 AI 辅助软件进行阅片（C 组），三种阅片模式均间隔洗脱期（大于 15 天），并记录＜4mm 结节位置、大小、数目。最终，将 3 次肺结节检测结果与金标准（由 2 名从事影像诊断工作

8 年及以上的医师结合 AI 辅助软件共同阅片，意见不同时由第 3 名从事影像诊断工作 15 年及以上的医师进行会诊，最后做出一致诊断）进行比对，记录正确、误诊、漏诊结节数，用敏感度及假阳性率评价三种模式的检测效能。

结果：试验共纳入 995 个结节，三组检出真阳性结节数为；658、531、847，误诊结节数为 233、168、84，三组均有统计学差异($p<0.05$），三组敏感性分别为 42.71%，36.48%，76.68%,假阳性率分别为 1.48/CT、0.56/CT、0.44/CT ($p<0.05$)；B 组（疲劳状态下阅片）比 A 组（正常状态下阅片）肺结敏感性降低了 6.23%($p<0.05$)，C 组（疲劳状态结合 AI 辅助软件）敏感度最高（76.68%），假阳性率最低（0.44/CT）。

结论：疲劳状态降低了放射科规培医师对＜4mm 肺结节的检测效能，然而，在 AI 辅助下，疲劳状态下的放射科规培医师能够达到比非疲劳状态下更高的肺结节检测效能。对于容易漏诊的＜4mm 肺结节，疲劳状态的放射科规培医师在 AI 肺结节检测软件辅助下能够到达较高的检测效能。

PU-3479

Study on the detection capability of AI assisted software in detecting Perivascular Pulmonary nodules by resident

Zhenjie Cui,Qing Zhang,Jianlin Wu
The Affiliated Zhongshan Hospital of Dalian University

PURPOSE: To evaluate the detection capability of artificial intelligence (AI) assisted software in the detection of perivascular pulmonary nodules by residents.**METHOD AND MATERIALS:** A total of 120 patients with perivascular pulmonary nodules who underwent chest CT examination were collected. One senior radiologist with more than 10 years' experience read CT images based on the initial diagnosis of another senior radiologist with similar experience and a final decision was subsequently conducted by deputy chief radiologist with more than 15 years' experience to determine the perivascular pulmonary nodules with the assistance of AI software. All readings were performed on 1 mm slice thickness CT images with the assistance of AI software (InferRead CT_Lung 6.0, Infervision, Beijing, China). One resident read the images without AI software and recorded the perivascular pulmonary nodules (group A). After two weeks washout period, the same resident read CT images again with AI software (Group B). The number of perivascular pulmonary nodules, length-diameter, location and labeling time were recorded. The number of true positive nodules, false positive nodules and false negative nodules in group A and B were compared with the gold standard to calculate sensitivity, false positive rate.**RESULTS:** A total of 235 perivascular pulmonary nodules with the distance between the edge of pulmonary nodules and the adjacent vascular edge ≤ 2mm were found as gold standard. Group A detected 170 perivascular pulmonary nodules, including 159 true positive nodules, 11 false positive nodules and 75 false negative nodules with a sensitivity of 71.74 ±3.25% and a false positive rate of 0.09/CT. Group B detected nodules 261,including true positive nodules 233, false positive nodules 28, false negative nodules 2,sensitivity of 99.31 ±0.50, false positive rate of 0.23/CT. The sensitivity of group B was higher than that of group A ($p<0.05$). The false positive rate of group A was lower than that of group B . The

labeling time of group B (264.07 ±6.31s) was shorter than that in group A (491.92 ±4.30s) with statistically significant difference ($p<0.01$).
CONCLUSION：Compared with resident without AI software, the AI-assisted residents achieved higher detection sensitivity and diagnostic accuracy of perivascular pulmonary nodules with reduced reading time while false positive rate compromised.

PU-3480

Assessment of AI-assisted lung nodule detection software using different reconstruction kernels

Dandan Sun, Jing Yu
Affiliated Zhongshan Hospital of Dalian University

Objective: To evaluate the performance of AI-assisted detection of lung nodules using different reconstruction kernels.
Method And Materials: A total of 183 patients who underwent routine chest CT examinations at Zhongshan Hospital affiliated to Dalian University from January 1, 2019 to January 31, 2019 were collected. The raw data were reconstructed with high resolution kernel (B70f) and standard kernel (B30f) to obtain DICOM images and they were transferred to the AI server (InferRead CT Lung Research, Infervision, Beijing, China) for automated nodule detection. The number of nodules, long-axis diameter and locations were recorded. One senior radiologist with more than 10 years' experience read CT images based on the initial diagnosis of another senior radiologist with similar experience and a final decision was subsequently conducted by deputy chief radiologist with more than 15 years' experience to determine the ground truth lung nodules. All readings for ground truth were performed on 1 mm slice thickness CT images with the assistance of AI software. The number of true positive nodules, false positive nodules under different reconstruction kernels were compared with the gold standard to calculate sensitivity and false positive rate. Finally, statistical analysis was conducted to compare the difference of sensitivity and false positive rate between the two reconstruction kernels.
Results: A total of 1264 nodules were confirmed to be gold standard nodules. The number of true positive nodules in B70f group and B30f group were 1047 and 898, respectively. The numbers of false positive nodules were 283 and 440, respectively. The sensitivity for lung nodule detection were 0.889±0.25 and 0.75±0.429 for B70f and B30f groups, respectively with statistically significant difference. The false positive rates were 1.55 per CT scan and 2.40 per CT scan, respectively for B70f and B30f groups, respectively with statistically significant difference.
Conclusion: The sensitivity for AI-assisted lung nodules detection was higher for B70f reconstruction than B30f. The false positive rates for AI-assisted lung nodules detection was lower for B70f reconstruction than B30f.

PU-3481

AI 辅助软件对住院医师在血管旁肺结节检测价值的研究

崔振杰, 于晶, 伍建林
大连大学附属中山医院

目的：探讨住院医师应用人工智能(Artificial Intelligence，AI)辅助软件对血管旁肺结节检测的临床应用价值。**材料与方法**：随机收集本院使用 2 代炫速双源 CT 行胸部 HRCT 检查的 120 例患者胸部薄层（层厚为 1mm）图像，共收集 235 例血管旁肺结节（肺结节边缘与临近血管边缘距离≤2mm）。所有胸部图像由 2 名高年资胸部放射医师分别进行肺结节标注，再由 1 名主任医师审核，意见不一致时讨论并最终确定金标准，并记录血管旁肺结节的位置、大小及属性。由 1 名住院医生在不借助 AI 辅助软件条件下，独立阅片并记录血管旁肺结节及阅片时间；经过 2 周洗脱期后，此名住院医师使用 AI 辅助软件（推想 6.0 版）再次阅片并记录。将独立阅片（A 组）及 AI 辅助下阅片（B 组）两组结果与金标准比对，分别记录两组血管旁肺结节数并计算血管旁肺结节检出灵敏度与平均阅片时间，并对两组数据进行统计学分析，P＜0.05 为有统计学意义。
结果：A、B 两组检出真阳性结节分别为共 159 个、233 个，假阳性结节分别为 11 个、28 个，假阴性结节分别为 75 个、2 个，平均假阳性结节分别为 0.09/CT、0.23/CT，B 组较 A 组平均假阳性结节多 0.14/CT，两组差异有统计学意义（*P*＜0.05）。A、B 两组血管旁肺结节检出灵敏度分别为 71.74±3.25%、99.31±0.50%，B 组灵敏度较 A 组提高 27.57%，两组差异有统计学意义（*P*＜0.001）。A、B 两组阅片时间分别为 491.92±4.30s、264.07±6.31s,B 组阅片时间较 A 组减少 227.85s,阅片效率较 A 组提高 46.32%。两组差异有统计学意义（*P*＜0.001）。
结论：AI 辅助下住院医师阅片较独立阅片假阳性血管旁肺结节数增加，但 AI 辅助下住院医师阅片对血管旁肺结节的检测灵敏率明显提高并显著减少阅片时间，有较高的临床应用价值。

PU-3482
Automatic kidney segmentation using deep learning: 2D or 3D?

Yingpu Cui,Xiaodong Zhang,Xiaoying Wang
peking university first hospital

Purpose: to compare two methods' effects of segmenting kidney in CT images. **Materials and Methods:** The two compared models for kidney segmentation are 2D U-Net and a cascaded application of two 3D U-Net. The 2D U-Net's input is every single slice of CT scan, whereas the first 3D U-Net's input is the down-sampled CT scans and the following 3D U-Net's input is the cropped located kidney images acquired from the first 3D U-Net model, making use of spatial and local information at the same time. 100 abdomen CT scans were collected from hospital for the period from January 2018 through July 2018. The two models were trained and estimated with dice coefficient on the small training dataset(30) and held-out test data set(30), on the larger training dataset(70) and held-out test data set(30), respectively. In addition, we also compare the contour and boundary of the two segmented kidneys with the original labelled kidney. Results: The 2D U-Net and 3D U-Net trained on the larger training dataset achieved a mean dice coefficient of 0.95 and 0.96 in the held-out test dataset, whereas the 2D and 3D models trained on the smaller training dataset achieved a mean dice coefficient of 0.95 and 0.78, respectively. Segmentation out of the kidney's boundary occurred much less in 3D U-Net model compared with the 2D U-Net model. **Conclusion:** 2D U-Net model can perform well with a small training dataset, while the cascaded 3D U-Net model performed better with an adequate training dataset.

PU-3483

Hybrid Deep CNN Model based on Pluralistic Medical Features for Lung Nodule Diagnosis and False Positives Elimination

Ailing De[1], Jianlin Wu[1], Qing Zhang[1], Fengyu Cong[2]
1. Affiliated Zhongshan Hospital of Dalian University
2. Dalian University of Technology

Purpose: Artificial Intelligence (AI) is making a strong comeback with its applications in CAD. Recently reported AI models for early detection and diagnosis of lung nodules show that False Positives (FPs) is a severer obstruction for precise diagnosis. The paper proposes a medical cognition assisted AI model based on hybrid deep CNN and pluralistic features to address that problem.
Materials and Methods: The overall scheme is granting medical cognition to a well performed computing model, by introducing thinking ability of radiologist to AI model (FPs can be easily eliminated by radiologists with his/her cognition). Firstly, pluralistic features (image feature, clinical feature, CT characteristics feature) are extracted from CT scan, patient information, clinical test. Then, by imitating thinking pattern of radiologist, we introduce a CNN for clinical and CT characteristics features, three 3D-CNN for image feature to establish a hybrid system, and a RF classifier is used to finalize the diagnosis. Finally, a ternary classification (benign, malignant, FPs) instead of binary classification is carry out, to eliminate FPs.
Results: The proposed system is tested on public dataset of LIDC-IDRI to confirm stability and validity. After sample selection and expansion, 9024 benign samples, 14000 malignant samples, 13444 non-nodule samples are used. FPs are nearly totally eliminated. Sensitivity, specificity, accuracy, AUC of benign/malignant classification are 96.5%, 93.1%, 95.2%, 96.2%. ROC and FROC of our work outperform those of other related works. For clinical application, 340 cases of CT data with pGGN (pure ground-glass nodule) are collected from cooperating hospitals. After FPs elimination, accuracy of ternary classification (AIS, MIA, IA) of malignant pGGN is 90.97%. Sensitivity, specificity, accuracy, AUC of IA identification (binary classification) are 93.7%, 91.4%, 94.1%, 93.6%.
Conclusion: The proposed AI model obtains promising diagnosis precision, due to its high computational power and professional medical cognition. By solving FPs problem, the outcome is improved further.
Clinical Applications: Our work shows great advantages, especially in identifying stages of malignant GGN. Clinically, the model can be used to provide diagnostic information, guide surgery, and manage follow-ups.

PU-3484

基于影像组学模型鉴别结节/肿块型肺隐球菌与肺腺癌、肺结核

樊梦思[1], 赵红[1], 曹捍波[2], 邹立巍[1]

1.安徽医科大学第二附属医院
2.浙江大学舟山医院放射诊断中心

目的 探讨影像组学预测模型鉴别结节/肿块型肺隐球菌病与肺腺癌、肺结核的可行性。**方法** 回顾性分析 28 例结节/肿块型肺隐球菌病和 30 例肺腺癌、26 例结核病人的 CT 扫描资料，应用 GE Artificial Intelligence Kitl 软件计算纹理特征，通过 ANOVA+MW、spearman 相关系数、Lasso 回归三种方法联合筛选主要纹理参数，通过随机森林构建模型，并采用 ROC 曲线评估模型鉴别效能。**结果** 肺隐球菌病和肺腺癌组筛选出 7 个纹理特征进行建模，验证集 AUC 为 0.96［95%CI（0.87-1）］，灵敏度 100%，特异度 77.78%，准确率 88.89%；肺隐球菌病和肺结核组筛选出 4 个纹理特征进行建模，验证集 AUC 为 0.99［95%CI（0.93-1）］，灵敏度 87.50%，特异度 88.89%，准确率 88.24%。**结论** CT 平扫图像影像组学可以用于结节/肿块型肺隐球菌病与肺腺癌、结核的鉴别。

PU-3485

Influence of tube voltage and reconstruction slice thickness on quantitative CT texture analysis: a reproducibility study on kidney stones

Gumuyang Zhang[1], Lihui Meng[1], Lili Xu[1], Balaji Ganeshan[2], Hao Sun[1], Huadan Xue[1], Zhengyu Jin[1]
1.Peking Union Medical College Hospital
2.Feedback Plc， Cambridge， England， UK

Purpose: Recent evidence suggests that texture features vary with different acquisition parameter. This study aims to determine the possible influence of tube voltage and slice thickness on CT texture analysis (CTTA) for kidney stone evaluation.
Methods: This retrospective study included 93 patients with 120 kidney stones. All the patients underwent unenhanced renal CT with both regular (120kV) and low-dose (Sn150kV) protocols with 1mm and 5mm reconstruction slice thickness on a third-generation dual-source CT. On the basis of stone size, stones were divided into four groups (size≥10mm, 5-10mm, 3-5 mm, <3mm) with 30 stones in each group. For each stone, 3D segmentation was performed manually by using Stonechecker software (www.stonechecker.com part of IQAI Ltd., UK). Regions of interest (ROI) covering the entire stone were delineated on each slice. The agreement of the texture parameters from CTTA analysis of two protocols was assessed by intra-class correlation coefficients (ICC) and further visualized using Bland-Altman plots.
Results: For stones<5mm, texture parameters of Mean, SD, Entropy and MPP are generally reproducible between different kVs on 1mm images with high ICC (0.8-1.0) at fine texture scales. For stones range between 5-10mm, Mean, SD, Entropy and MPP are also reproducible between different kVs on both 1mm and 5mm images with high ICC (0.8-1.0) at fine and medium texture scales. For stones larger than 10mm, Mean, SD, Entropy, MPP, Skewness and Kurtosis are generally reproducible between different kVs on both 1mm and 5mm images with ICC range between 0.7-1.0 at all texture scales. Mean, SD, Entropy, and MPP also showed good to excellent degree of reliability between different slice thickness on 120kV and Sn150kV images.

Conclusion: Texture parameters of Mean, SD, Entropy and MPP showed good reproducibility between protocols with different tube voltages and slice thickness no matter the size of kidney stone.

PU-3486

3D Context-aware Deep learning System in detection of pleural effusion: A Preliminary Study

Jian Dong
Capital Medical University affiliated Beijing Shijitan Hospital

Purpose To explore the feasibility and reliability of 3D context-aware deep learning (DL) system in detection and lobe-level localization of pleural effusion by comparisons with radiologists. **Method and Materials** Based on 2722 plain chest CT scanning dataset, We built Context-aware DL network for detection of pleural effusion based on deep learning, with 2601 slice-level annotations confirmed by experienced radiologists. This network took seven consecutive slices from axil CT as input and employed 3D convolution to properly model 3D context. Lesion position is further determained by a 3D convolution based lobe segmentation network. Then, all the chest CT examinations were analyzed by Context-aware automatic pleural effusion (CAPE) from January to March of 2019 as group A, and the results in reporting system were classified as group B. Two experienced radiologists reviewed all the CAPE results and made evaluations as th gold standard. **Results** A total of 504 CT scans were tested, with 347 pleural effusion detected in group A, including 175 true positive cases and 172 false positive cases. While 198 pleural effusion were detected for group B, including 177 true positive cases and 22 false positive cases. With the CAPE results as reference, all 218 pleural effusion were detected by radiologists. **Conclusions** 3D Context-aware Deep learning System demonstrated feasibility in detecting pleural effusion and localizing lung lobes, and the detection rate increased for radiologists with the help of CAPE, but the false positive rate needs improvement.

PU-3487

Correlations Between P53 Mutation Status and Texture Features of CT Images For Hepatocellular Carcinoma

Hongzhen Wu,Xinqing Jiang,Xinhua Wei
Guangzhou First People’s Hospital

Objectives: To investigate the performance of texture analysis in characterizing P53 mutations of hepatocellular carcinomas (HCCs) based on computed tomography (CT). Methods: 63 HCCs patients underwent CT scans and were tested for P53 mutations. Patients were divided into two groups of P53(-) and P53(+) according to the P53 scores. First- and second-order texture features were computed from the CT images and compared

between groups using independent Student’s t-test. A Spearman’s correlation coefficient was used for correlations to assess the relationship between the different P53 sores and CT data. The performance of texture features in differentiating the P53 mutations of HCC was assessed using receiver operating characteristic (ROC) analysis. Results: The mean values of angular second moment(ASM) (mean=0.001) and Contrast (mean=194.727) for P53(-) were higher than those of P53(+). Meanwhile the mean values of Correlation (mean=0.735), Sum variance (mean=1111.052), inverse difference moment (IDM) (mean=0.090), and Entropy (mean=3.016) for P53(-) were lower than those of P53(+).Significant correlations were found between P53 scores and ASM(r=-0.439),Contrast(r=-0.263), Correlation(r=0.551), Sum of squares (r=0.282), sum variance(r=0.417),IDM (r=0.308) and Entropy(r=0.569). Five texture parameters (ASM, Contrast, Correlation, IDM and Entropy) were predictive of P53 mutation status, with AUCs ranging from 0.621 to 0.792.
Conclusions: There was a direct relationship between P53 mutations and gray-level co-occurrence matrix (GLCM), but not with histograms for HCC patients. Correlation and Entropy seemed to be the most promising in differentiating P53 (-) from P53(+).

PU-3488
肺部影像人工智能系统在肺结节复查患者中的应用价值分析

李俊
重庆三峡中心医院

目的：分析人工智能系统在胸部 CT 肺结节患者中的应用价值，提高肺结节复查患者诊断准确性及复查对比价值。
方法：选取肺结节患者行 2 次胸部 CT 检查 40 例，分为 2 组，每组 20 例，一组为肺部影像人眼观察组，另一组为肺部影像人工智能分析组，两组分别对患者 2 次胸部 CT 检查肺部影像进行分析观察肺结节数目、大小、形态及复查对比变化等情况。
结果：肺部影像人眼观察组容易遗漏病变、两次检查结果未对比分析或存在一定差异；肺部影像人工智能组能准确反映出细小病变，不易遗漏病变且两次结果具有较高的一致性，能很好的进行对比分析。
结论：肺部影像人眼观察组观察肺结节受人的主观限制容易遗漏细小病变，两次人眼观察不一定是同一个人，有一定主观判断误差，对肺结节复查患者对比分析价值不高；人工智能对同一患者不同时期检查肺部影像能准确分析定位到每一个细微病变，对结节的数目、大小、形态都有准确的检出且两次结果具有较高的一致性，能很好的进行对比分析，对肺结节复查患者能够清楚的反映病灶是否增多、减少、增大、缩小等敏感问题，具有较高的对比分析价值。

冠脉 AI 在冠状动脉 CT 血管成像图像后处理以及诊断价值的初步评估

胡小丽,向守洪,余娜,周代全
重庆医科大学附属第三医院

目的：探讨冠脉 AI 在冠状动脉 CT 血管成像图像后处理的优劣势及以及诊断价值初步评估。

方法：从重庆医科大学附属第三医院自 2019 年 4 月 15 日至 2019 年 6 月 19 日就诊的可疑冠心病患者中，随机选取使用数坤科技冠脉 AI 诊断工具进行图像重建及报告，同期与人工重建以及报告进行对比，共 50 名患者。分别从从冠脉图像质量、后处理 VR、VR-tree、拉直对比进行统计分析以及 AI 报告诊断报告 进行分析。

结果：后处理方面：研究发现冠脉 AI 后处理图像较人工处理相比，冠脉分支显示更长、冠脉管壁更加光滑、细节更加出色，同时拉直对比血管对比更加清晰，并且能够准确定位狭窄部位及分析狭窄程度，自动判定支架。共 50 名患者，其中后处理合格 45 名，有 5 名不合格，后处理合格率 90%，其重建错误的原因主要包括冠脉伪影、冠脉截断、血管截断导致的分割遗漏，并且无法自动识别肌桥。报告诊断方面：冠脉 AI 能够部分补充弥补人工报告缺陷（发现轻微钙化及轻度狭窄）。45 名后处理合格患者中，4 名患者报告不合格，报告诊断合格率 91%，其报告错误主要包括伪影、错层造成的软斑误报，管腔密度不均匀导致的钙斑误报，以及血管壁毛糙造成的误报。

结论：冠脉 AI 在图像后处理及报告书写上较人工有部分优势，并且能够完善后处理结果以及补充人工报告的遗漏，但是目前仍存在部分缺陷，冠脉 AI 的报告质量仍需要人工进行把控，冠脉 AI 是放射科工作人员的一项有效辅助工具。

重建层厚对计算机辅助工具肺结节检出准确性的影响

邵亚军[1],郭佑民[2]
1.宝鸡市中心医院
2.西安交通大学第一附属医院

目的 通过对 149 个不同重建层厚的 SPN 容积数据进行分析，探求计算机辅助工具对 1mm、5mm 重建层厚数据 SPN 的检出效能，进一步研究其重建层厚对肺结节检出的影响作用

资料与方法

收集“数字肺”项目数据库内自 2014 年 6 月至 2015 年 7 月所有 SPN 孤立性肺结节病例，均有完整的病史资料及 CT 影像资料。根据纳入及排除标准，将符合条件的 149 个 SPN 容积数据行 1mm 及 5mm 重建，验证计算机辅助工具对不同层厚的数据检出 SPN 效能以及不同直径的 SPN 对其检测结果的影响。

结果

（1）根据参考标准共检出了 149 个真结节，1mm 层厚 CAD 检出的结节检出 130 个，5mm 层厚检出结节为 121 个；误检结节 1mm 层厚时 10 个，5mm 层厚时 4 个。（3）149 个真性结节分布如下：54%(81/149)的结节位于右肺，46%的结节(68/149)位于左肺；上、中、下肺叶分别分布有 52%(78/149)、3%(5/149)、45% (66/149) 的结节。本组数据 149 个 SPN，其中 0-9mm 结节 78 个，10mm-19mm 39 个，20-29mm 结节 32 个，采用 5mm 层厚时 0-9mm 结节检出率为 74%，采用 1mm 层厚时 SPN 检出率为 84.6%。

结论

1、计算机辅助检测系统检出 SPN 还存在着一定的假阴性、假阳性，计算机辅助工具对 SPN 检测的敏感性尚可,但特异性不足,假阳性标记数太多,因此在使用计算机辅助工具时还需人工甄别。
2、在使用计算机辅助工具对 SPN 检出中，层厚 1mm 时敏感性高于层厚 5mm，但是特异性较之略低，因此使用 1mm 数据时可以更好的检出 SPN，加以人工甄别，检出效能最佳。3.计算机辅助检查工具在分割技术上存在不确定性，部分磨玻璃影存在分割不准确，在输出数据中部分实性结节的直径与人工测量行相关性分析发现依从性较好，进一步的结节分析中应用部分实性结节的直径更为可靠。

PU-3491

基于 CAD 量化技术对良恶肺结节相关性参数研究

邵亚军[1],郭佑民[2]
1.宝鸡市中心医院
2.西安交通大学第一附属医院

目的 收集数字肺病例库中 114 例已知病理结果的 SPN，探讨各项测量指标与良恶性的相关性，以便于指导临床诊断。

资料与方法

收集“数字肺”项目数据库内自 2014 年 6 月至 2015 年 7 月所有 SPN 孤立性肺结节病例，均有完整的病史资料及 CT 影像资料。根据纳入及排除标准，将符合条件 114 个已知病理结果的 SPN 孤立性肺结节的基本信息及结节测量各指标项的量化值依次录入 Excel 数据库，研究 SPN 测量数据与病变性质（良恶性）之间的相关性，以上数据经整理后采用 SPSS19.0 统计分析软件进行统计学分析。

结果

（1）通过排除及纳入标准， 入选人数 109 人 114 个结节，年龄 21-81，均值 55.58±12.59 岁。其中男 57 人，女 56 人，良性 33 例，恶性 81 例，左肺 54 个，右肺 60 个，右肺上叶 35 个，右肺中叶 3 个，右肺下叶 22 个，左肺上叶 35 个，左肺下叶 19 个。（2）良性结节平均体积小于恶性结节（良性=7.05，恶性=14.15）。良性结节的得分均值低于恶性（良性=1.23，恶性=1.36），年龄良性小于恶性（良性=53，恶性=56.63）。性别与良恶性之间无显著差异（P=0.327 p＞0.05 ），但恶性病变男性患病率高于女性。（3）SPN 的良恶性与体积、表面积、平均密度、最大直径、平均直径、实性部分平均直径采用 Pearson 相关分析，上述指标项均与 SPN 良恶性显著相关；体积 r 值 0.247，平均密度 r 值-0.194，面积 r 值 0.259，最大直径 r 值 0.271，平均直径 r 值 0.281，平均直径（实）r 值 0.249。

结论

（1）SPN 的良恶性与体积、表面积、平均密度、最大直径、平均直径、实性部分平均直径都存在相关性；良性结节平均体积明显小于恶性结节，结节体积越大，密度越实，恶性的可能性越大。（2）SPN 的分布中，男性多于女性，而且男性恶性比率要高于女性，这与男性患者生活习惯密切相关，尤其是吸烟史。

PU-3492

Radiomic signature as a diagnostic factor for classification of histologic subtype in lung cancer

Xiang Yao,Ke Ren
The Xiang’an Hospital of Xia Men Uneversity

Abstract

Objectives: To discuss the application of radiomics in Computerized Tomography (CT) scan analysis, for the purposes of improving their the diagnostic efficacy in lung cancer-specifically in distinguishing Squamous Cell Carcinoma (SCC), Lung Adenocarcinoma (ADC), and Small Cell Lung cancer (SCLC).

Materials and Methods: Research findings that identified 189 cases of lung cancer by pathology were analyzed retrospectively (60 patients with SCC, 69 patients with lung ADC and 60 patients with SCLC). A neural network was used to determine whether the pulmonary window or the mediastinal window was selected to extract effective radiomic features. The key features of radiomic signature were retrieved by a Least Absolute

Shrinkage and Selection Operator (LASSO) multiple logistic regression model. Afterwards, a receiver operating characteristic curve and Area Under the Curve (AUC) analysis were used to evaluate the performance of the radiomic signature in both training and validation cohorts (129 in the training cohort and 60 in the independent validation cohort).

Results: About 295 features were extracted from a manually outlined tumor region. Features extracted from mediastinal window CT scans had a better prognostic ability than pulmonary window scans. The average accuracy for mediastinal window scans was 0.933. Multivariate analysis revealed that the radiomic features extracted from mediastinal window scans had the potential to build a prediction model for distinguishing between SCC, lung ADC, and SCLC. The performance of the radiomic signature to diagnose SCC and SCLC in validation cohorts proved effective, with an AUC values of 0.869 and 0.859, respectively.

Conclusions: A unique radiomic signature was constructed for use as a diagnostic factor in different lung cancer histologic subtypes. Patients with lung cancer will benefit from the proposed radiomic signature.

PU-3493

CT Radiomics Features Analysis for Evaluation of Perihematomal Edema in Basal Ganglia Hemorrhage

Xiang Yao,Ke Ren
The Xiang' an Hospital of Xia Men Uneversity

Abstract

Objectives: To evaluate the edema area around basal ganglia hemorrhage by the application of CT-based radiomics as a prognostic factor and improve the diagnosis efficacy, for the purposes of improving their the diagnostic efficacy in edema area around basal ganglia hemorrhage.

Materials and Methods: A total of 120 cases with basal ganglia hemorrhage were analyzed retrospectively. The texture analysis software Mazda3.3 was used to preprocess the CT images and manually sketch the region of interest(ROI) to extract the texture features. The extracted texture features were selected by Fisher coefficient, POE+ACC(probability of error and average correlation coefficients) and MI(mutual infoamation). The texture discriminant analysis uses the B11module in the Mazda3.3 software. The data were randomly divided into a training dataset (67%) and test dataset (33%). To further study the texture features, the training dataset can be divided into groups according to the median of GCS score, NIHSS score and maximum diameter of hematoma. Random forest model, support vector machine model and neural network model were built. Area under the curve (AUC) of the receiver operating characteristics curve was used to assess the performance of models with test dataset.

Results: Among all texture post-processing methods, the lowest error rate was 2.22% for the POE+ACC/NDA(Nonlinear discriminant). For the maximum diameter of hematoma, GCS score and NIHSS score group, the lowest error rate were 26.66%, 23.33% and 30.00%

respectively. The values of AUCs were 0.87, 0.81 and 0.76, for random forest model, support vector machine model and neural network model in the test dataset, respectively.
Conclusions: Radiomic method with proper model may have a potential role in predicting the edema area around basal ganglia hemorrhage. It can be used as a secondary group in the diagnosis of edema area around basal ganglia hemorrhage.

PU-3494
基于治疗前 CT 影像组学评估肺腺癌化疗疗效的研究

余业洲[1],赵红[1],王龙胜[1],邹立巍[1],段绍峰[2]
1.安徽医科大学第二附属医院
2.GE Healthcare China

目的 探讨基于 CT 软窗的影像组学对肺腺癌化疗疗效的评估价值。**方法** 回顾性搜集 105 例经病理证实的肺腺癌患者的影像及病例资料，根据半年化疗后的疗效，按 RECIST 标准将患者分为缓解组（35 例）和未缓解组（70 例），其中未缓解组分为稳定组（35 组）及进展组（35 组）。提取所有患者的化疗前 CT 软窗图像，通过影像组学方法，在 CT 软窗图像上提取病灶的特征，采用 Lasso 降维和 RTree 建模。采用受试者工作特征曲线（ROC）计算缓解组与未缓解组间比较的模型评估化疗疗效的诊断效能。**结果** 基于缓解组与未缓解组的图像，其训练组相应的 AUC、诊断敏感度和特异度分别为 0.80、0.68 和 0.80，验证组的 AUC、诊断敏感度和特异度分别为 0.74、0.70 和 0.81。影像组预测模型决策曲线在 0.18-0.76 较大的阈值范围内，具有良好的临床实用性。**结论** 基于治疗前 CT 软窗的影像组学可在化疗前对肺腺癌的疗效作出较准确评估。

多层螺旋 CT 肋软　平扫与肋软骨后处理重建技术对全肋隆鼻术的应　研究

江蕾
南京明基医院

目的 探讨 GE64 排 128 层 CT 扫描肋软骨成像及三维后处理重建技术对整形外科全肋隆鼻术的 应用价值的研究。
方法 回顾性选取 2019 年 5　-7　　全肋隆　术受检者 100 例，年龄 20-35 岁女性，进　多层螺旋 CT 肋软骨扫描。
使　用机型:GE64 排 128 层 Qptima660，扫描参数:120-140Kv，Aotu time，Scan (Helical)，Rotation Time(0.6)，Rotation Length(Full)，Shuttle Mode(off)。重建 参数:Recon(stand)，Recon Option(350/40)(ss40)。扫描完成后原始图像自动导　ADW4.6 后处理工作站，利用软件 Fast VR 进行 VRT、MIP 图像后处理。并由两位影像 科主诊医师、两位整形外科医师对图像进　分析、评价，以横断位原始图像与后处理 VRT、 MIP 三维图像进　对　评价。
结果 原始图像经 Fast VR 三维重建后均能良好并直观显示肋软骨钙化情况。
结论 GE64 排 128 层肋软骨CT 扫描，经后处理重建技术 VRT、MIP，能较好的显示肋软骨实际钙化情况，为中国整形外科　全肋隆　术提供术前有效影像评估，具有重要临床意义。

基于 PACS 系统的多元化教学模式在放射科教学中的应用

张贺诚,赵天佐,冀春亮,李小圳,刘磊,周桂娟,付超,朱建钢
北京中医药大学东直门医院

目的：探讨利用 PACS 系统结合多元化教学模式在放射科教学工作中的应用效果。**方法：**选取我校临床医学专业的本科学生 100 名作为研究对象，将其随机分为多元组和对照组。其中多元组采用基于 PACS 系统的多元教学法（LBL+PBL+CBL），对照组则采用传统教学方法（LBL），单元授课结束后，对比两组的教学考试成绩和学生对教学的满意度，从而判断基于 PACS 系统的多元化教学法所具备的教学优势。**结果：**多元组学生的理论成绩、阅片成绩和总成绩、以及学生和教师对教学方法的满意度均高于对照组学生，数据差异对比具有统计学意义（P ＜ 0.05）。**结论：** 与传统教学方法相比，基于 PACS 的多元化教学法教学效果更为显著，且更受学生和老师们的接受，增强学生对医学影像学的学习能力，能够明显提高教学质量。

PU-3497
Preoperative cervical cancer MR Imaging-based on Texture model for Prediction of lymph node status——A Preliminary Analysis

Linxu Xie,Gang Ning
West China Second Hospital of Sichuan University

Purpose To analyze the texture features of the whole tumor in preoperative cervical cancer MR images and to determine the mathematical model that may predict the pelvic lymph node status.
Methods A retrospective analysis of preoperative 1.5T pelvic MR images of 86 patients with cervical cancer confirmed by surgery and pathology between January 2016 to March 2019. The median age of the patients was 49 years. International Federation of Gynecology and Obstetrics (FIGO) stage of the patients is included IB_1 (n=33), IB_2(n=8), IIA_1 (n=34), IIA_2 (n=9), and II B(n=2). There were 25 patients with lymph node metastasis. The region of interest (ROI) was manually delineated along the margin of tumor on each slice of the sagittal T_2 image and the apparent diffusion coefficient (ADC) image with ITK-SNAP software. Stratified sampling determined 60 samples for training and 26 samples for testing. IFoundry (Intelligence Foundry 1.1, GE Healthcare) software performs image omics texture analysis, extracting a total of 5988 features, calculating the Sprearman correlation coefficient to remove high correlation features with a threshold of 0.85, and then Least absolute shrinkage and selection operator (LASSO) regression was utilized to select 5 features for random forest modeling, which five fold cross-validation was used to adjust the parameters. The area under the receiver's operating characteristic curve (AUC), accuracy, sensitivity, and specificity were calculated. A P value of ≦0.05 was statistically significant.
Results Using the random forest prediction model, the AUC, accuracy, sensitivity and specificity of training set were 0.97, 95%, 88.2%, 97.7%, and the test set of them were 0.83, 84.6%, 75%, 88.9%.

Conclusion A random forest classification model based on MR imaging texture analysis of preoperative cervical cancer has certain value for predicting the presence of pelvic lymph node metastasis.

PU-3498

Study on the detection capability alteration of AI assisted software in detecting subsolid pulmonary nodules by resident in radiology department

Tingting Sun, Jianlin Wu
The Affiliated Zhongshan Hospital of Dalian University

BACKGROUND: Subsolid nodules (SSN) including pure ground-glass nodules and part-solid nodule have a high probability of lung cancer.
MOTIVATION: To evaluate the detection capability of artificial intelligence (AI) assisted lung nodule diagnostic software in the detection of subsolid pulmonary nodules by resident.
METHOD AND MATERIALS: A total of 105 patients were collected in our hospital. One senior radiologist with more than 10 years' experience read CT images based on the initial diagnosis of another senior radiologist with similar experience and a final decision was subsequently conducted by deputy chief radiologist with more than 15 years' experience to determine the ground truth lung nodules. All readings were performed on 1 mm slice thickness CT images with the assistance of AI software (InferRead CT Lung Research, Infervision, Beijing, China).One resident read the images without AI software (group A) and the same resident read CT images with AI software (group B) after two weeks' washout period.The number of subsolid pulmonary nodules and location were recorded. The number of true positive nodules and false positive nodules in group A and B were compared with the gold standard nodules to calculate sensitivity and false positive rate.
RESULTS: Group A detected 132 nodules including 112 true positive nodules and 20 false positive nodules with a sensitivity of 0.341±0.36. Group B detected 246 nodules including 231 true positive nodules and 15 false positive nodules with a sensitivity of 0.774±0.47. The sensitivity of group B was 43.3% higher than that of group A (p<0.001).The false positive rate of group A(=0.190,20/105) and B (0.142,15/105) have no statistical difference(p>0.001).
CONCLUSION: Compared with resident without AI software, the AI-assisted resident achieved higher detection sensitivity and equal false positive rate of the subsolid pulmonary nodules.
CLINICAL RELEVANCE/APPLICATION:
It is recommended to use AI to assist resident to achieve desirable detection rate for subsolid nodules which are the most common imaging manifestations of early lung cancer.

基于深度学习的肺结节检测和相关量化参数分析

张正华,蔡雅倩,韩丹,黄益龙,闵蕊,李浚利
昆明医科大学第一附属医院

目的：探讨基于深度学习的人工智能（AI）在肺结节检测和相关量化测量的临床应用价值。方法：收集胸部 CT 平扫 250 例，以 2 位高年资主治医师的判读为标准，共检出 2230 个结节，比较 A 组（住院医师医）、B 组（AI）、C 组（主治医结合 AI）对肺结节检出的误诊率、漏诊率、敏感度、阳性预测值和平均诊断时间。将经手术病理证实的 170 例 184 个结节分成实性结节组（100 个）和磨玻璃结节（GGN）组（84 个），分别比较两组良、恶性结节的 AI 量化参数差异，对有统计学差异的参数行 ROC 曲线分析，再以病理结果为因变量，各参数为自变量行 Logistic 回归分析。结果：B 组误诊率明显高于 A、C 两组，阳性预测值明显低于 A、C 两组，A 组漏诊率明显高于 B、C 组，敏感度明显低于 B、C 组，B 组平均诊断时间短于 A、C 组，实性良、恶性结节的长径、最大面积、体积、最小 CT 值及恶性概率均差异有统计学意义(P<0.05)，Logistic 回归分析显示恶性概率是实性结节恶变的独立危险因素。GGN 良、恶性结节长径、最大面积、体积、平均 CT 值、最大 CT 值和恶性概率均有统计学差异(P<0.05)，Logistic 回归分析显示长径是 GGN 恶变的独立危险因素。结论： AI 辅助影像医师阅片可明显提高肺结节检出的敏感性并减少误诊和漏诊率，对良恶性的预判也具有一定参考价值。

PU-3500

床旁 x 线摄影体会

许萍,崔智元
山西医科大学第一医院

目的：移动 DR 设备在临床使用越来越多，DR 床旁摄影实现了 x 线影像的数字化采集、处理、传输、显示和存储的一体化。院内部分患者因病情严重、术后病情差，身处重症监护室等，不能直接前往放射科，需床旁摄片。床旁摄片具有自身优点和局限性。
方法：一般资料　　收集 2017 年我科室床旁胸片摄影 220 例。设备威高 YDR-YD-4。
　　摄影方法　　体位主要采用仰卧位，少数患者采取坐位或半坐位。将探测器放置患者背部，高出肩部 2cm，包括两侧胸壁，无滤线器，中心线对准胸骨角与剑突连线的中点垂直射入，摄影距离 110cm。
摄影条件　　70--90kv　25--40mAs
结果：89％满足影像诊断要求，少数胸片质量不理想：体位不正，摄影条件不当，图像层次不够丰富，对比度，清晰度差，体外异物（如
电极片，引流管等）。
结论：1.1DR 床旁摄影为年老体弱、行动不便危重患者，术后患者，骨折牵引患者等提供了方便，同时为危重病人的诊治与急救赢得时间。
1.2 DR 床旁摄影后处理功能强大，大大提高了图像质量，易满足临床诊断需求。

2.1 床旁摄影受检者大多病情危重，很难配合检查，易造成体位不正，部位丢失等，易造成误诊，漏诊等。
2.2 实行有效的防护困难。
2.3 检查环境受限，病房通道狭窄，重症监护室及手术室常有心电监护、呼吸机等装置，设备难以到位，床旁摄影技术非常困难。

2.4 设备能力有限，输出容量不大，不适用滤线栅，图像质量及诊断效果有限。
由于床旁胸片检查对象的特殊性，需要工作人员有高度责任心，认真负责，又要有娴熟的投照技能， 合理掌握床旁胸片摄影技术，才能照出优质的图像，是病人得到及时诊治。

基于小型化指静脉识别系统的设计

冯国胜
山西医科大学第一医院

到目前为止，身份识别逐渐由外物识别过度到生物特征识别，最常见的生物特征识别包含面部识别和指纹识别。对于指纹识别，人们已经掌握了非常熟悉的技术，但其弊端也是显而易见的。我们最常遇到的问题是，如果指头受伤或者指纹不清晰，则无法进行指纹识别。而且指纹膜极易复制，指纹识别的安全性得不到保障。因此，人们发展出指静脉识别技术来代替指纹识别。指静脉识别是指利用近红外激光照射指部，静脉里的血红蛋白成像从而实现识别的作用。目前市面上的指静脉识别仪都比较庞大，本文旨在对小型化指静脉识别系统进行分析、研究，设计小型化的指静脉光学采集系统，给出光学系统参数分析结果以及具体的设计方案。具体内容包括近红外激光的光学参数测试，CMOS 成像参数测试，光路的模拟和仿真。在这样的基础上，通过微调光路系统的尺寸等参数，对设计进行优化调整，对不同指静脉光学采集设备的差异进行辨别和分析，评估其对指静脉成像质量的影响；研究反射镜、折射棱镜、光路结构尺寸、焦距、物距、成像面积等参数，评估其对指静脉成像的影响；建立多光谱光源、多种光学器件、多种光路设计、多种打光方式、多种光线环境、多种温度环境的综合测试平台。最终设计一套高灵敏，小型化的指静脉识别系统。

PU-3502

刀锋伪影校正技术与传统技术在精神疾病患者海马 MRI 检查中的对比研究

邵丹丹,潘自来,陈克敏
上海交通大学医学院附属瑞金北院

目的 探讨磁共振刀锋伪影校正（BLADE）技术在改善精神疾病患者海马 MRI 检查中图像质量的作用。**方法** 对 43 例精神疾病患者行 3.0T-MRI 常规海马斜冠状位扫描，常规扫描序列包括 T2WI TSE、T2WI FlAIR，以及结合了 BLADE 技术的 BLADE T2WI TSE、BLADE T2WI FlAIR 序列。患者的图像由 2 名放射科医师采用 5 分法对运动伪影、搏动伪影、颗粒度、海马图像质量进行评价。在本研究中，运动伪影为因患者配合欠佳时运动所造成相位编码偏移，搏动伪影为动静脉搏动、脑脊液流动所致伪影，颗粒度反应主观噪声，海马图像质量为显示海马形态、边缘、灰白质的能力。采用 Wilcoxon’s 符号秩检验分析 BLADE 序列与传统序列在显示运动伪影、搏动伪影、颗粒度及海马图像质量主观评价指标中的差异。P＜0.05 为差异有统计学意义。**结果** 在图像的运动伪影、搏动伪影、海马图像质量方面，结合 BLADE 技术序列与传统序列相比表现更优(P＜0.05)；在图像颗粒度方面，传统序列表现更优(P＜0.05)。**结论** BLADE 技术的应用能够改善海马 MRI 检查图像的运动伪影、搏动伪影，提高图像质量，推荐应用于不合作的精神疾病患者海马检查中。

Fatty acid binding protein 5 (FABP5) regulates proliferation via the PI3K/AKT signaling pathway in clear cell renal cell carcinoma cell lines

Qi Lv,Peijun Wang
Tongji Hospital, Tongji University

Kidney is the one of most important organs which participates in whole body’s homeostasis. The urine-producing function unit in kidney is nephron, which includes a renal corpuscle and renal tubules. Kidney cancer, also named renal cancer, originates from the cells in kidney. The two common types of renal cancer are renal cell carcinoma (RCC) and urothelial cell carcinoma (UCC). Clear cell renal cell carcinoma (ccRCC) has been associated with the highest mortality rates. Fatty acid binding proteins (FABPs) are a kind of 14~15 kD proteins which are present in high abundance in the cytosol of most tissues. In this report, we found that FABP5 is upregulated and correlates with poor survival in ccRCC patients. Moreover, our research results indicated that FABP5 executed a pro-proliferative role in ccRCC cells, including Caki-1 and 7860. Silencing of FABP5 significantly inhibited ccRCC cells proliferation in vitro; while overexpression of FABP5 promotes cells proliferation; and FABP5 expression was significantly correlated with neoplasm stage and regulated the tumor growth in nude mice. Furthermore, the LY294002 attenuated the pro-proliferative effect of FABP5 in both Caki-1 and 7860 cells, implying that the PI3K/AKT signaling pathway, at least partly, involves in the FABP5-induced ccRCC cells proliferation. Taken together, we found FABP5 was higher expressed in patients with ccRCC, and patients with higher FABP5 showed a decreased survival level. Furthermore, we found the FABP5 regulated proliferation ccRCC cell lines by regulating PI3K/AKT signaling pathway. These results suggested that FABP5 may be a potential prognostic biomarker and provide a new perspective of FABPs in tumor biology.our results indicating that FABP5 was associated with malignant progression and might play an important role in tumorigenesis in ccRCC cells.

PU-3504

Dow-regulation of CTBP2 inhibits proliferation, migration and invasion of Caki-1 cells in vitro

Qi Lv,Peijun Wang
Tongji Hospital, Tongji University

Clear cell renal cell carcinoma (ccRCC) has been associated with the highest mortality rates. CtBP2 is a member of CtBP family, which works as a transcription regulator protein and is identified because of its interaction of C-terminus of the adenovirus E1A oncoprotein. CtBP2 modulates several tumorigenic processes, including growth, proliferation, and invasion in a variety of cancer cells. Over-expression of CtBP2 is associated with tumorigenesis and poor clinical outcome of prostate cancer, and low-

expression of CtBP2 inhibited the proliferation of prostate cancer cells. In this report, the expression of CtBP2 in human ccRCC cell line Caki-1 was down-regulated by using RNAi lentivirus in vitro. The growth of Caki-1 cells was assessed by using CCK-8 and clone formation assays; the cell cycle was determined by FACS analysis, and the number of cells in S-phase was also accessed using an EdU assay. After 72 h, 96 h, and 120 h of culturing in 96-well plates, OD450nm values of the CtBP2-RNAi cells were significantly lower than those of the control group. The clone forming efficiency of the CtBP2-RNAi group was significantly decreased compared to that in control group. The proportion of cells in S-phase in the CtBP2-RNAi group was lesser than that in the control group, while the proportion of cells in G2/M-phase in the CtBP2-RNAi group was greater than that in the control group. Down-regulation of CtBP2 also impeded cell migration and invasion, as determined using wound healing and cell invasion assays. These results indicated that down-regulation of CtBP2 inhibited the cell proliferation ability and arrested the cell cycle at G2/M-phase, also lead to decreased migration, and invasion of Caki-1 cells in vitro, and CtBP2 might be a potential target to suppress tumorigenesis of ccRCC.

PU-3505

Comprehensive analysis of circular RNA profiles in patients with clear cell renal cell carcinoma

Qi Lv,Peijun Wang
Tongji Hospital, Tongji University

Circular RNAs (circRNAs), a novel class of endogenous noncoding RNAs, are involved in a variety of diseases, including several types of cancers. We hypothesized that circRNAs are involved in the tumorigenesis and development of clear cell renal cell carcinoma (ccRCC). To verify our hypothesis, we explored the circRNA expression profiles in ccRCC tissues via microarray analysis in 4 ccRCC tissues and their adjacent non-carcinoma tissues. The microarray data showed 1988 circRNAs were significantly dysregulated circRNAs, including 1033 upregulated and 955 downregulated ones in the ccRCC tissues. Hsa_circ_0005875 was confirmed to be significantly upregulated in the ccRCC tumor tissues. Further analysis revealed that hsa_circ_0005875 might play a role in the pathogenesis of ccRCC by functioning as a miRNA sponge; we then performed bioinformatics analysis of the predicted circRNA-miRNA-mRNA (hsa_circ_0005875 - miR-145-5p - ZEB2) networks. Moreover, we found that hsa_circ_0005875 expression was associated with tumor size, pathological TNM stage, histological differentiation, and lymphatic metastasis. These data indicate that hsa_circ_0005875 might play a role in promoting tumor growth and metastasis and be a potential biomarker of ccRCC.

急诊 CT 在腹部外伤致肠及肠系膜损伤的临床治疗决策中指导价值的研究

李旭[1],陈卫霞[2]
1.邛崃市医疗中心医院
2.四川大学华西医院

背景：肠及肠系膜损伤作为腹部损伤的重要类型之一，有着容易漏诊、病情可迅速进展等特征。急诊 CT 可为临床医师提供及时、准确、清晰的图像，为肠及肠系膜损伤的临床诊断及临床治疗提供重要依据，为患者的临床诊断及临床治疗提供重要依据。
目的：探讨急诊 CT 在外伤致肠及肠系膜损伤的临床治疗决策中的指导价值。
材料与方法：2016 年 4 月-2018 年 11 月我院收治的经急诊 CT 提示为肠及肠系膜损伤患者共 79 例，纳入该研究。综合其 CT 征像及临床症状和体征选择治疗方案。
结果： 10 例为单纯性肠系膜血管损伤（12.86%），34 例为单纯肠壁损伤（43.04%），22 例为肠壁损伤合并肠系膜血管损伤（27.85%），13 例肠及肠系膜损伤合并脾、肝损伤或骨折（16.46%）。接受手术治疗共 58 例，保守治疗 21 例。疗效：79 例腹部外伤致肠及肠系膜损伤患者总有效率 96.20%。
结论：急诊 CT 用于腹部外伤致肠及肠系膜损伤的诊断，征象典型、清晰，对下一步临床治疗决策的指导作用价值较高，值得临床推广应用。

CircAGAP1 acts as sponge of miR-15 to promote renal cell carcinoma progeression through regulating EIF4E expression

Qi Lv,Peijun Wang
Tongji Hospital, Tongji University

Background: In recent years, circular RNAs (circRNAs), a new star of non-coding RNA, have been emerged as vital regulators and gained much attention for involvement of initiation and progression of diverse kinds of human diseases, especially cancer. However, the regulation and function of renal cell carcinoma (RCC) circRNAs remain largely unknown.

Methods: Here we generated circRNA microarray data from four RCC tissues and paired non-cancerous matched tissues, and detected circular RNA-AGAP1 up-regulated and correlated with tumor grade and poor survival rate of BC patients. We subsequently performed functional analyses in cell lines and an animal model to support clinical findings. Mechanistically, we demonstrated that AGAP1 could directly bind to miR-15a and relieve suppression for target EIF4E expression.

Results: We found that circAGAP1 was evidently up-regulated in RCC, and its level was correlated with clinical stage, pathological grade and poor prognosis of patients with RCC. The results indicated that circAGAP1 could promote RCC cell proliferation, apoptosis and invasion. Finally, we found that circAGFG1 acts as a competing endogenous RNA (ceRNA) for miR-15a to regulate RCC expression on its target EIF4E. Conclusions: circAGAP1 may exert regulatory functions in RCC and serve as a new diagnostic marker or target for treatment of RCC patients

PU-3508
2 型糖尿病及合并微血管病变的骨骼肌超声造影研究

宋烨,李园,陆雯
同济大学附属同济医院

目的 探讨超声造影在评价 2 型糖尿病及合并微血管病变的骨骼肌微循环障碍中的应用价值。**方法** 收集正常对照组 30 例、2 型糖尿病（type 2 diabetes mellitus, DM)组 30 例、2 型糖尿病合并微血管病变（type 2 diabetes mellitus with microvascular complications ，DM+MC）组 28 例，超声造影观察小腿骨骼肌血流灌注情况，选择性观察其中的小动脉、肌肉组织和小静脉，运用数学模型分析时间-强度曲线，获取各自灌注参数：造影剂到达时间、造影剂渡越时间，造影剂渡越时间定义为造影剂到达时间的差值。同时所有研究对象均空腹测血糖及全血粘度、C-反应蛋白值等血液流变参数。**结果** 动脉到静脉、肌肉到静脉的造影剂渡越时间 DM+MC 组显著比 DM 组及对照组延长，组间比较有统计学意义（P<0.05）。全血粘度 DM+MC 组比 DM 组及对照组延长，组间比较有统计学意义（P<0.05）。全血粘度与血糖、C-反应蛋白有高度相关性（P<0.01）。**结论** 超声造影一定程度上可以评价骨骼肌微循环障碍，微循环障碍可能与血液流变参数异常有关。

PU-3509
超声检查跖腱膜厚度和回声的信度研究

宋烨
同济大学附属同济医院

目的 超声评价者内和评价者间在测量跖腱膜厚度和回声的信度研究。 **方法** 2012 年 1 月至 2013 年 1 月收集 22 例(42 足)临床诊断为跖腱膜炎患者和 28 例（56 足）正常对照组，应用超声分别在纵切面和横切面观察和测量跖腱膜厚度及回声，同时用灰阶 Histgram 软件定量评价足底跖腱膜感兴趣区的平均亮度，由 2 位医师双盲检查。正常对照组 1 周后被同一医师再次检查。 **结果** 在对照组中评价者内和评价者间纵切面和横切面测量跖腱膜厚度的组内相关系数（ICC）为 0.82～0.95；在病例组中评价者间纵切面和横切面测量跖腱膜厚度 ICC 分别为 0.80、0.56；灰阶 Histgram 软件定量评价病例组中评价者间纵切面和横切面测量跖腱膜平均亮度 ICC 分别为 0.74、0.53；在病例组中评价者间横切面与纵切面评价低回声有或无的 Kappa 值分别为 0.34、0.35。 **结论** 在纵切面超声测量跖腱膜厚度与灰阶软件定量评价平均亮度有较高的信度，超声可作为评价跖腱膜的有效的诊断工具。

PU-3510
超声介导微泡爆破促进 ASCs 归巢改善糖尿病小鼠下肢缺血的研究

宋烨
同济大学附属同济医院

目的 探讨超声介导微泡爆破是否能促进静脉移植脂肪干细胞归巢，并改善糖尿病小鼠下肢缺血。

方法和结果 制作 db/db 小鼠右下肢缺血模型，分为 5 组：PBS 组、Sham 组、超声+微泡组、超声+微泡+ASCs 组、ASCs 组。超声造影灌注成像显示术后所有组缺血下肢血流量与对侧非缺血下肢血流量的比值均随着时间的推移而增加，以 US+MB+ASCs 组增加最为显著，与 PBS 组比较差异有统计学意义（P＜0.01），与其他对照组比较，差异有统计学意义。（*P*＜0.01）。下肢肌肉免疫荧光染色 BS-1 凝集素标记微血管密度、α-平滑肌动蛋白标记小动脉密度，均提示 US+MB+ASCs 组高于 US+MB 组，与 PBS 组比较差异有统计学意义（P＜0.01），与其他对照组比较，差异有统计学意义（P＜0.01）。Masson 染色显示 US+MB+ASCs 组肌纤维化程度低于 US+MB 组。治疗后 3 天和 7 天酶联吸附实验、RT-PCR 显示 VEGF、P 选择素、ICAM-1、SDF-1 值 US+MB+ASCs 组高于 US+MB 组，与 PBS 组比较差异有统计学意义（P＜0.01），与其他对照组比较，差异有统计学意义（P＜0.01）。治疗后 3 天和 7 天 Western- blot 分析显示 PP13K、P-AKT、VEGF、P 选择素、ICAM-1、SDF-1 蛋白含量 US+MB+ASCs 组高于 US+MB 组，与 PBS 组比较差异有统计学意义，与其他对照组比较差异有统计学意义（P＜0.01）（P＜0.01）。

结论 通过超声微泡介导爆破产生的生物学效应上调炎性因子表达，提高了干细胞的靶向归巢及黏附能力，脂肪干细胞通过旁分泌效应促进并改善糖尿病小鼠下肢缺血。

PU-3511
超声空化微泡效应促进糖尿病小鼠下肢缺血骨骼肌血管新生的机制

宋烨
同济大学附属同济医院

目的：探讨超声空化微泡效应促进糖尿病小鼠缺血骨骼肌血管新生的作用和可能机制。 **方法：**制作 db/db 小鼠右下肢缺血模型术后 3 天随机分为 4 组：糖尿病对照组（Control）、超声组（US）、微泡组（MB）、超声加微泡组（US+MB）四组，治疗后即取右下肢肌肉 HE 染色，其余小鼠治疗后 7 天同时行 RT-PCR、Western-Blot 检测 P 选择素、ICAM-1、VEGF 表达及免疫组化骨骼肌 VEGF 表达。**结果** 骨骼肌 HE 染色：超声+微泡组：骨骼肌间隙有较多红细胞漏出，肌纤维轻度水肿，无肌溶解。骨骼肌免疫组化 VEGF 表达，超声+微泡组明显高于其他三组，有较多新生血管，同时 VEGF、P-选择素、ICAM-1 的 mRNA、蛋白量也高于其他组，对照组、超声组和微泡组，骨骼肌 VEGF 表达较少，VEGF、P-选择素、ICAM-1 的 mRNA、蛋白量也较少。

结论 超声介导微泡破坏引起局部组织间质毛细血管内皮细胞的轻微损伤，进而在内皮细胞上产生短暂性炎症反应，引起内皮细胞的活化，从而导致 P-选择素、ICAM-1 表达的上调，促进内源性 VEGF 分泌，以促进下肢血管新生。

PU-3512
下肢动脉硬化闭塞症骨骼肌灌注异常与侧枝循环相关性的超声造影研究

宋烨
同济大学附属同济医院

目的 探讨超声造影评价下肢动脉硬化闭塞症（Lower extremity arterial disease，LEAD）致骨骼肌灌注障碍与侧枝循环的相关性。 **方法** 收集 LEAD 组和对照组各 80 例，超声造影观察小腿骨骼肌血流灌注情况，运用数学模型分析时间强度曲线，获取反映组织血流灌注参数达峰时间（time

to peak intensity，TTP）。同时 CT 血管造影评估 LEAD 组侧枝循环。**结果** 时间强度曲线显示对照组平均 TTP38.6s，LEAD 组平均 TTP59.1s，两组比较差异有统计学意义（$P<0.01$），不同超声检查者读取 TTP 平均差异是 0.29S,受试者操作曲线下面积为 0.92。TTP 为 47.5S 诊断点时,阳性预测值为 91%。LEAD 组中侧枝循环丰富组平均 TTP50.4s，侧枝循环差组平均 TTP 为 67.9s，两组比较差异有统计学意义（$P<0.01$）。 **结论** 超声造影可评价小腿骨骼肌灌注障碍，它与侧枝循环程度有很好的相关性。

PU-3513
下肢动脉硬化疾病的骨骼肌微循环障碍的超声造影研究

宋烨
同济大学附属同济医院

目的 探讨超声造影在评价下肢动脉硬化疾病（Lower extremity arterial disease,LEAD ）的骨骼肌微循环障碍的应用价值。方法 收集 45 例正常对照组和 45 例 LEAD 病人，用超声造影观察小腿骨骼肌血流灌注情况，运用数学模型分析时间-强度曲线，得出灌注参数达峰时间（time to peak intensity，TTP）。结果 时间-强度曲线显示在静息时对照组 TTP38s（19-65s），LEAD 组 TTP84s（39-142s），两组比较差异有统计学意义（$P<0.01$），小腿运动试验后，正常对照组 TTP11s（9- 22 s），LEAD 组 TTP52s（27-105s），两组比较差异有统计学意义（$P<0.01$），年龄校正后 $P<0.01$。TTP 和踝肱指数、年龄均无明显相关性。结论 超声造影是一种评价骨骼肌微循环的新型的诊断方法。

PU-3514
Effects of different concentration and duration time of isoflurane on acute and long-term neurocognitve function of young adult C57BL/6 mouse

Jianhui Liu
Tongji Hospital of Tongji University

Postoperative cognitive dysfunction (POCD) is a decline in cognitive performance after a surgery with anaesthesia. The exact reasons of surgery and/or anaesthesia resulting in POCD are unclear. The aim of this study is to investigate the effects of different concentration and duration time of isoflurane anaesthesia on cognitive performance and cellular mechanisms involved in learning and memory function. In present work, young adult male C57BL/6 mice (age: 8 weeks) were anaesthetized by different concentration isoflurane in 100% oxygen for different duration time (Mice in group I 1received 0.7% isoflurane 0.5 h, mice in I2 received 0.7% isoflurane 2 h, mice in I3 received 1.4% isoflurane 2 h, and mice in I4 received 1.4% isoflurane 4 h). Non-anaesthetized mice served as control group (I0). Spatial learning was assessed at 10 days post-anesthesia in Morris water maze (MWM). Hippocampal protein expressions of activated caspase 3, NMDA receptor subunit NR2B, and extracellular-signal regulated kinase (ERK) 1/2 were evaluated 24 hours and 2 weeks post anesthesia. Protein expression of activated caspase3 was detected acute elevated in I3(24 h post-anesthesia) and acute and long-

term elevated in I4(24 hours and 2 weeks post-anesthesia). There was no significant difference between I1, I2 and control group. Protein expressions of NR2B showed an acute and long-term increasement in I1and I2, decreasement in I4, and an acute decline, then returned to normal in I3 compared to control group. The ratio of phosopho-ERK1/2 to total-ERK showed an acute increasement in I1and I2, then came to normal 2 weeks post anesthesia compared to control group, meanwhile, we detected an acute and long-term decline in I3and I4. In MWM test, mice in I1and I2showed cognitive improvement, mice in I3 showed similar to control group, while mice in I4 demonstrated cognitive impairment, which were approximately corresponding to the changes of protein expression of NR2B and activation of ERK1/2. The present data suggested the following: (1) Isoflurane may cause neurotoxicity by inducing caspase activation and apoptosis with the anesthetic concentration increased and duration prolonged. (2) Low concentration of isoflurane in 2 hours can induce a hippocampus-specific elevation of NR2B subunit composition and ratio of p-ERK1/2 to total ERK1/2, produce hippocampal-dependent cognitive improvement. While high concentration of isoflurane exceeding 4 hours may induce a decline of NR2B and ratio of pERK1/2 to ERK1/2, then result in cognitive impairment.

PU-3515

Effects of Sevoflurane on Young Male Adult C57BL/6 Mice Spatial Cognition

Jianhui Liu
Tongji Hospital of Tongji University

Inhalation anesthetics are reported to affect cognition in both animals and humans. The influence of inhalation anesthetics in learning and memory are contradictory. We therefore investigated the effects of sevoflurane anesthesia with different durations on cognitive performance and the levels of NMDA receptor subunit NR2B, phosphorylated ERK1/2 (pERK1/2) and activated caspase3 in mouse hippocampus. We anaesthetized eight-week old male C57BL/6 mice with 2.5% sevoflurane for durations ranging from one to four hours. Non-anaesthetized mice served as controls. Mice exposed to sevoflurane for one to three hours showed improved performance, whereas mice with exposure up to four hours displayed similar behavioral performance as control group. NR2B was increased both at 24h and at two weeks post sevoflurane exposure in all groups. The p-ERK1/2: total ERK1/2 ratio increased at 24h in all anesthesia groups. The ratio remained elevated at two weeks in groups with two- to four-hour exposure. Activated caspase3 was detected elevated at 24h in groups with two- to four-hour exposure. The elevated trend of activated caspase3 was still detectable at two weeks in groups with three- to four-hour exposure. At two weeks post anesthesia, the typical morphology associated with apoptotic cells was observed in the hippocampus of mice exposed to four hours of sevoflurane. Our results indicate that 2.5% sevoflurane exposure for one to three hours improved spatial cognitive performance in young adult mice. The cognitive improvement might be related to the increase of NR2B, the p-ERK1/2: total ERK1/2 ratio in hippocampus. However, exposure to sevoflurane for four hours caused neurotoxicity due to caspase3 activation and apoptosis.

PU-3516
不同浓度不同时间七氟醚麻醉对小鼠认知 功能的影响

刘建慧
同济大学附属同济医院

目的 评价不同浓度不同时间七氟醚麻醉对小鼠认知功能的影响。方法 成年雄性 C57BL／6 小鼠 50 只，体重 20～24 g，10 周龄，采用随机数字表法，分为 5 组(n=10)：正常对照组(C 组)、吸人 1．3%七氟醚 0.5 h 组(S1 组)、吸人 1．3%七氟醚 2．0 h 组(S2 组)、吸入 2，5%七氟醚 2．0 h 组(S3 组)和吸入 2．5%七氟醚 4．0 h 组(S4 组)。麻醉后 2 周进行 Morris 水迷宫实验，记录逃避潜伏期和穿越平台次数，水迷宫实验结束后处死，取海马组织，检测含 2B 亚基的 NMDA 受体和活化的 caspase3 表达水平。**结果** 与 c 组比较，S1 组、S2 组和 S3，组逃避潜伏期缩短，穿越平台次数增加，S4 组逃避潜伏期延长，S1 组、S2 组、S3 组和 S4 组海马组织含 2B 亚基的 NMDA 受体表达上调，S3 组和 S4 组海马组织活化的 caspase3 表达上调(P<0．05 或 0．01)。**结论** 七氟醚麻醉对小鼠认知功能影响不同的原因与浓度和时间有关。

PU-3517
An Experimental Study on Cisplatin-loaded Magnetic Nanoparticles against HepG2 Cells

Xiaolong Gao
Tongji Hospital of Tongji University,

Objective: To prepare a drug carrier (Fe_3O_4/PAA-PEI) and drug-loaded magnetic nanoparticles (Fe_3O_4/PAA-PEI-DDP) for effective killing of hepatocellular carcinoma (HCC) cells, thus providing experimental clues for developing drug-loaded particles for the treatment of HCC. **Methods:** Highly water-soluble Fe_3O_4/PAA nanoparticles were prepared by one-step high-temperature hydrolysis, and Fe_3O_4/PAA-PEI nanoparticles were prepared under catalization of coupling agents. Cisplatin and Fe_3O_4/PAA-PEI nanoparticles were mixed to prepare drug-loaded compound nanoparticles for characterization measurement and drug-loading estimation. Different intervention groups and HCC HepG2 cells were co-cultured for in vitro cell experiments in three groups: pure cisplatin group (group D), drug-loaded nanoparticle group (MPD group), and drug carrier group (MP). Post-intervention survival of HepG2 cells was detected by MTS method. **Results:** The size of the drug carrier (Fe_3O_4/PAA-PEI) and the drug-loaded magnetic naoparticles (Fe_3O_4/PAA-PEI-DDP) was uniform and Zeta potential was stable. The cisplatin-loading rate of the nanoparticles was about 79%. There was no significant cytotoxicity when the drug-carrier concentration was ≤280μg/ml. Survival of HCC HepG2 cells decreased with the increase of the drug-loaded compound nanoparticles. **Conclusion:** Cytotoxocity of the drug carrier (Fe_3O_4/PAA-PEI) was low. The drug-loaded magnetic nanoparticles (Fe_3O_4/PAA-PEI-DDP) can be released retardedly, providing an effective and persistent killing effect on HCC cells.

PU-3518
不同浓度维甲酸预处理对 NSCs 增殖及向胆碱能神经元分化的影响

顾国军
同济大学附属同济医院

目的 探讨不同浓度维甲酸（RA）预处理对小鼠神经干细胞（NSCs）的增殖及向胆碱能神经元分化的影响。
方法 取孕 14 天 C57BL/6J 小鼠胎鼠脑组织体外分离培养 N SCs，通过细胞免疫组化染色鉴定 NSCs，第 2 代 N SCs 诱导培养基中分别加入 0，0.1，0.5，1.0，5.0，10 mM/ml RA 进行预处理 5 天，通过绘制细胞生长曲线及 WST-1 细胞增殖及细胞毒性检测试剂盒检测不同浓度 RA 预处理对 NSCs 活性及增殖能力的影响，RA 预处理的 NSCs 在多聚赖氨酸包被的盖玻片上自由分化，通过胆碱乙酰转移酶（ChAT）免疫荧光染色检测胆碱能神经元并比较各组 NSCs 向胆碱能神经元分化比例。
结果 NSCs 具有自我更新及表达巢蛋白及分化为神经元及胶质细胞的能力；10 mM/ml RA 组 NSCs 第 1、3、5、7 天的细胞计数及增值能力均较其他组显著增加；随着 RA 浓度升高，ChAT 阳性细胞比例也逐渐增高，10 mM/ml RA 组 ChAT 阳性细胞百分比为 93.5±4.2%，较其他组明显升高，差异具有统计学意义（均有 $p<0.01$）。
结论 不同浓度 RA 均具有促进 NSCs 增殖及诱导 NSCs 分化为胆碱能神经元的能力，且随着 RA 浓度的增加而增强。

PU-3519
神经干细胞移植对 APP/PS1 小鼠突触形成的影响

顾国军
同济大学附属同济医院

目的 探讨神经干细胞(Neural stem cells, NSCs)移植对阿尔茨海默病(Alzheimer’s disease, AD)小鼠突触形成的影响。
方法 9 月龄 20 只 APP/PS1 双转基因 AD 小鼠随机分为 2 组，每组 10 只，一组进行 NSCs 移植，即 NSC 组，另一组给予等量磷酸盐缓冲液(phosphate buffer saline, PBS)作为阴性对照组(PBS 组)，移植部位为双侧海马区，10 只野生型(Wild type) 小鼠作为阳性对照组(WT 组)。移植 8 周后采用荧光免疫组化法和 Western 印迹检测 AD 小鼠海马区突触素(synaptophysin,SYN)和生长相关蛋白-43 (growth associated protein-43, GAP-43)表达的变化；透射电镜观察移植区突触的形态和数量。
结果 (1)荧光免疫组化显示 NSCs 移植分化的神经元高表达 SYN 和 GAP-43 蛋白；(2)Western 印迹显示 NSC 组小鼠海马区 SYN、GAP-43 表达明显增加，高于 PBS 组($F=58.367$, $P<0.001$；$F=75.296$, $P<0.001$)，SYN 表达与 WT 组小鼠相比较无明显差异($P>0.05$)，但是 NSC 组小鼠 GAP-43 表达高于 WT 组($P<0.01$)； (3)超微结构显示 NSC 组海马区突触数量增加(12.13±2.11)，多于 PBS 组(6.63±1.78) ($F=15.981$, $P<0.001$)，与 WT 组(11.05±1.45)相比较无明显差异($P>0.05$)。
结论 NSCs 移植分化的神经元通过增加突触素、GAP-43 表达来增加突触的数量，进而建立新的突触连接来改善 AD 小鼠的症状。

PU-3520

ASL MRI 在 MCI、AD 患者早期诊断中的应用

郭屹
同济大学附属同济医院

目的 利用 ASL MRI 技术探讨 MCI 及 AD 患者脑血流灌注随时间变化情况，为 AD 的早期诊断及病情监测提供影像学依据。
方法 研究对象均来自 ADNI 数据库，根据厂家、磁场强度及成像参数相同的标准，选择西门子公司 3.0T MRI 扫描仪脉冲式 ASL 序列和 3D- MPRAGE。据患者认知程度的不同，分为正常老年组（NC 组，55 例）、轻度认知障碍组（MCI 组，106 例）、阿尔兹海默症组（AD 组，26 例）；其中 MCI 组分为早期轻度认知障碍组（EMCI 组，54 例）和晚期轻度认知障碍组（LMCI 组，52 例）。以 NC 组影像资料为基线，利用动脉自旋标记灌注磁共振成像信号处理工具包和统计参数图 12 对各组图像进行预处理及统计分析，双样本 T 检验分别比较各组间全脑平均血流灌注的差异。
结果 AD 组、EMCI 组、LMCI 组及 NC 组间脑灌注结果：（1）EMCI 组与 NC 组间 CBF 值比较，EMCI 组在右侧颞中回、颞下回、颞上回、颞枕叶交界处、顶下小叶较 NC 组脑灌注减低，以颞叶为著(P<0.05)。（2）LMCI 组与 NC 组间 CBF 值比较，LMCI 组在右侧颞下回、颞中回、内侧颞叶、海马旁回、颞上回、海马较 NC 组脑灌注减低，以颞叶为著(P<0.05)。（3）AD 组与 NC 组间 CBF 值比较，LMCI 组在右侧颞下回、颞中回、内侧颞叶、海马、海马旁回，以颞叶为著(P<0.05)。（4）EMCI 组与 LMCI 组间 CBF 值比较，两组间脑灌注差异无统计学意义(P>0.05)。（5）AD 组与 EMCI 组间 CBF 值比较，AD 组在右侧额顶叶、缘上回、颞下回、颞中回较 EMCI 组脑灌注减低，以右侧额叶为著(P<0.05)。（6）AD 组与 LMCI 组间 CBF 值比较，两组间脑灌注差异无统计学意义(P>0.05)。
结论 ASL MRI 有助于鉴别 MCI 及 AD 患者，以颞中/下回、缘上回具有代表性；基于性别的不同对 AD 发病机制及影像改变的研究应当是一个不容忽视的关键点。

PU-3521

320 排 CT 灌注检查对早期急性轻症胰腺炎肝脏损伤情况的评估价值

江虹
同济大学附属同济医院

目的 探讨 320 排 CT 灌注成像技术对急性轻症胰腺炎（MAP）早期患者肝脏损伤情况的评估价值。
方法 收集我院 2012 年 6 月～2014 年 3 月期间临床诊断为急性胰腺炎并经 Balthazar 评分为 A～B 级的患者 28 例（男 17 例，女 11 例），平均年龄 53 岁（31～75 岁），于发病 48 小时内行 320 排 CT 上腹部平扫及灌注成像检查。临床上无胰腺疾病的患者 25 例（男 10 例，女 15 例）作为对照组，平均年龄 58 岁（29～80 岁）。对 CT 平扫图像观察指标包括胰腺形态、大小、密度的改变、胰周脂肪改变及肾前（后）筋膜等情况。上腹部动态容积扫描原始数据传入东芝 Aqulion one 320 排 CT 机配备的腹部灌注软件，利用最大斜率模型生成上腹部脏器灌注参数伪彩图。在肝脏左叶、右叶分别选取感兴趣区 ROI 获取相关的灌注参数值，每个部位共选取 3 次 ROI 并取其平均值为测量值，单位为 mL min-1 100mL-1；ROI 直径为 2 mm 以上，同时避开脏器边缘、大血管等。记录患者检查时由 CT 机自动生成剂量长度乘积（DLP），根据国际放射防护委员会提出的公式计算出有效剂量。应用 SPSS16.0 统计软件包对数据进行分析，所有数据表示为均数±标准差。以方差分析比较组间及组内胰腺及肝脏各部位参数，两两组间比较采用 LSD 法，P<0.05 为差异有统计学意义。
结果 MAP 患者的肝左叶及右叶 HAP 分别为 60.85±17.72 mL min-1 100mL-1、54.93±14.33 mL min-1 100mL-1，均较对照组升高，差别有统计学意义；肝左叶及右叶 HPP 分别为 164.36±30.25

mL min-1 100mL-1、212.18±38.51 mL min-1 100mL-1，与对照组比较差别无统计学意义。CT 灌注的有效剂量为 16.8 mSv。

结论 320 排 CT 灌注成像有助于了解和评估胰腺炎症对肝脏损伤的情况，可作为常规增强检查的辅助手段。

PU-3522
CT 血管造影对肺癌合并上腔静脉综合征的诊断价值

江虹
同济大学附属同济医院

目的 探讨肺癌合并上腔静脉综合征(SVCS) 的 CT 血管造影表现及其诊断价值。**材料和方法** 收集 2007 年 7 月至 2011 年 6 月间 23 例经纤维支气管镜、肺穿刺、转移肿大的淋巴结穿刺、胸水及痰液脱落细胞学等病理检查确诊为肺癌并伴有上腔静脉梗阻及 SVCS 继发病变的 23 例影像及临床资料，回顾性分析其螺旋 CT 血管造影的特征。

结果 (1)原发疾病特征：肺癌位于右肺上叶 7 例、右肺中叶 3 例、右肺下叶 5 例、右全肺 2 例、左肺上叶 2 例、左肺下叶 4 例。小细胞肺癌 9 例，非小细胞肺癌 14 例。(2)上腔静脉梗阻征：主要症状包括上肢、头颈部及颜面部肿胀，颈静脉怒张，胸壁、上腹壁皮下静脉曲张，紫绀，呼吸困难等。参照 William Standford 法将上腔静脉阻塞程度分为 3 度。轻～中度：上腔静脉部分阻塞(<90%)；重度：上腔静脉几乎完全闭塞(>90%)；上腔静脉完全闭塞。三者例数分别为 10，9，4。根据上腔静脉与周围病变的关系，其梗阻形态可表现为：单侧压迫 5 例、半环状包埋 5 例、环状包埋 6 例、夹心状包埋 3 例、完全闭塞 4 例；(3)继发病变征：按其位于胸壁的前、后分为 2 组，前组侧枝血管包括胸廓内静脉、胸外侧静脉、膈下静脉、心包膈静脉、肋间前静脉、胸腹壁静脉和左上肋间静脉；后组侧枝血管包括奇静脉、椎静脉丛、后肋间静脉、肩背部静脉、半奇静脉和副半奇静脉。本组 23 例病例中出现侧枝循环的有 13 例，胸壁肿胀 15 例、二者均有的 9 例、二者均无 4 例。**结论** CT 血管造影检查能全面、准确诊断肺癌合并 SVCS，为临床诊断和治疗提供更丰富的影像学信息。

PU-3523
非痴呆型血管性认知功能障碍患者静息态功能磁共振研究

江虹
同济大学附属同济医院

目的 采用静息态功能磁共振（fMRI）技术，探讨低频振幅（ALFF）分析方法在非痴呆型血管性认知功能障碍（VCIND）中的价值。

方法 以 2013 年 11 月～2014 年 8 月同济大学附属同济医院神经内科收治的 VCIND 患者 16 例，男 10 例，女 6 例；年龄 54～74 岁，平均（62.31）岁；受教育年限 6～17 年，平均（10.94）年。同期征集医院所在地附近社区的正常成人志愿者 17 例作为对照组，男 9 例，女 8 例；年龄 52～70 岁，平均（61.76）岁；受教育年限 6～16 年，平均（11.18）年。由同一位执业超过 10 年的神经内科医师对两组受试者进行简易智能状态检查量表（MMSE）、蒙特利尔认知评估量表（MoCA）、临床痴呆评定量表（CDR）、Hachinski 缺血量表（HIS）等神经心理学量表检查和静息态脑功能磁共振成像。利用 ALFF 算法对两组全脑静息态数据进行对比分析，观察 VCIND 患者与正常对照 ALFF 有显著差异的脑区。

结果 VCIND 组和对照组性别、年龄、受教育程度等方面的差异无统计学意义（P>0.05）。VCIND 组 MMSE 总分为 24～29 分，平均 26.43±1.31 分，MoCA 总分 15～24 分，平均 20.06±2.32 分，HIS 总分 8～11 分，平均 9.93±1.48 分；对照组 MMSE 总分为 27～30 分，平均 29.29±0.85 分，MoCA 总分为 26～30 分，平均 27.29±1.16 分。2 组 MMSE 及 MoCA 总分差异均有统计学意义（P＜0.01＝静息态 fMRI 结果显示：与对照组比较，VCIND 组 ALFF 减弱的区域主要包括边缘叶、两侧梭状回、左侧海马旁回、左侧颞叶等。

结论 静息状态下，VCIND 患者存在某些脑区的活动减低，反映其脑功能失调的病理变化，为临床从大脑神经活动层面进一步了解 VCIND 认知功能损伤及其代偿过程提供了客观依据。

80kVp 联合像素闪烁算法在直接法下肢静脉 CT 血管成像中的应用

郁仁强[1],吕发金[1],周旸[1],彭刚[1],张志伟[1],褚志刚[1],潘聚东[2]
1.重庆医科大学附属第一医院
2.加州大学旧金山分校放射和生物影像科

目的：评价 80kVp 联合像素闪烁（pixel shine，PS）算法在直接法下肢静脉 CT 血管成像的辐射剂量和图像质量。方法：采用直接法下肢静脉 CT 血管成像，将 41 例临床诊断为下肢静脉曲张患者随机分为实验组（80kV）和对照组（100kV），对照组采用滤波反投影（filtered back projection，FBP）算法重建，实验组采用 PS 算法重建。比较两种成像技术的容积 CT 剂量指数（$CTDI_{vol}$）和剂量面积乘积(DLP)。分别选取腰 5 锥体层面图像、股骨头层面图像和腘窝层面图像，由两位放射科医师对以上图像的图像质量和噪声做主观评分，并测量、计算静脉血管 CT 值、图像噪声、信噪比（signal-to-noise ratio，SNR）和对比噪声比（contrast-to-noise ratio，CNR）。结果：实验组的 $CTDI_{vol}$ 和 DLP 明显低于对照组（t=-89.95，P＜0.01；t=-35.83，P＜0.01）；两名医师的主观图像质量评价的一致性较好（Kappa 值=0.78，**P＜0.01**），两组图像主观质量评分在下腔静脉、股静脉和腘静脉的差异均无统计学意义（P=0.17，P=0.92，P=0.75）；两组患者在图像噪声方面无差异，但在血管 CT 值、SNR 和 CNR 上，实验组明显高于对照组（**P值均＜0.01**）。结论：80kVp 联合像素闪烁算法可以常规在直接法下肢静脉 CT 血管成像中使用，降低辐射剂量，提高血管增强 CT 值、SNR 和 CNR。

脾脏占位性病变 CT 诊断及鉴别诊断价值

江虹
同济大学附属同济医院

目的 探讨螺旋 CT 在脾脏占位性病变诊断及鉴别诊断中的价值。

方法 回顾性分析 25 例经病理和临床证实的脾脏占位性病变的螺旋 CT 增强检查资料及临床资料，分析脾脏占位性病变的 CT 特征。

结果：25 例脾脏占位性病变中，脾囊肿 6 例，血管瘤 5 例，脾脓肿 2 例，脾梗死 5 例，淋巴管瘤 1 例，淋巴瘤 2 例，转移瘤 4 例。脾脏囊肿、血管瘤及淋巴管瘤多为偶然发现，常无临床症状；脾脏脓肿临床表现有高热、腹痛、血象增高等，触诊可有左上腹压痛；脾梗死可无临床症状，亦可引起左上腹痛；脾淋巴瘤多有脾脏增大，有时可伴有左上腹疼，可有全身多处淋巴结肿大，白细胞和血小板可减少；转移瘤多有原发恶性肿瘤病史并伴有相应症状。脾脏占位性病变 CT 平扫表现为低密

度，少数可呈囊实性或因出血、坏死、钙化而表现为混杂密度。良性病灶多边界清楚，恶性病灶边缘多模糊，边界不清。CT 增强扫描囊肿、淋巴管瘤及脾梗死无强化；血管瘤呈渐进性强化，体积较小的血管瘤可表现为强化不明显；脓肿为边缘及分隔强化，脓腔无强化；淋巴瘤及转移瘤可有不同程度的强化。良性病变一般具有以下特征：1.脾脏可肿大或不大。CT 平扫表现为境界清楚低密度灶，病灶常较小，增强后明显强化或不强化。2.腹腔淋巴结无肿大。3.临床表现较轻或体检偶然发现。以囊肿和血管瘤为常见。恶性肿瘤：1.脾脏肿大明显，转移瘤脾脏可以不大。2.病灶常较大，边界清楚或不清楚，增强扫描多无或不均匀轻微强化。3.脾门、腹膜后淋巴结肿大。4.临床表现较重，常有左上腹疼痛不适或触及肿块，或伴有发热、消瘦、贫血、脾功能亢进等，可有相关恶性肿瘤病史。4.以恶性淋巴瘤和转移瘤最常见。

结论 螺旋 CT 扫描对脾脏占位性病变的诊断和鉴别诊断有一定的帮助，结合临床病史多可正确诊断。

AD 患者脑功能偏侧性改变的静息态 fMRI 研究

张乐乐
同济大学附属同济医院

目的 采用功能磁共振技术，探讨阿尔茨海默病（Alzheimer diseaseAD）患者静息状态下的脑功能偏侧性的改变。**方法** 实验数据均来自 ADNI（Alzheimer disease Neuroimaging Initiative）数据库，以 17 例右利手阿尔茨海默病（AD）患者为研究对象，19 例右利手正常老年人作为对照。将全脑灰质随机划分为左右半球对称的 256 对种子区，基于功能连接分析法计算偏侧性指数（Laterality laterality Index，LI），量化分析静息态下脑功能偏侧性程度；计算 0＜|LI|＜0.2、0.2≤|LI|＜0.4、0.4≤|LI|＜0.8、0.8≤|LI|四段阈值下的左偏 LI 之和及右偏 LI 之和，探索 AD 患者较正常老年人静息状态下的脑功能偏侧性是否存在改变。**结果** 对照组在 0＜|LI|＜0.2、0.2≤|LI|＜0.4、0.4≤|LI|＜0.8 阈值内左右半球偏侧性未见明显不同，在 0.8≤|LI|的阈值内表现出明显的差异，体现出显著的左侧优势（*P*=0.005）；与对照组比较，AD 患者在 0.8≤|LI|阈值内左侧优势消失（*P*=0.06），在 0.4≤|LI|＜0.8 阈值内出现显著的右侧优势（*P*=0.03）。**结论** 对照组静息态脑功能存在一定的偏侧性，该偏侧性主要体现在偏侧性较强范围内（0.8≤|LI|），表现为左侧优势；AD 组在偏侧性较强的范围内（0.8≤|LI|）左侧优势消失，可能是其特征性改变；AD 组在偏侧性较弱的范围内（0.4≤|LI|＜0.8）表现出右侧优势，可能是与认知有关的脑功能代偿所致。

肾脏光谱 CT 增强不同单能级图像评估

孟庆林,宗林雄,刘梦琦,陈志晔
中国人民解放军总医院海南医院

目的：光谱 CT 增强随着光谱单能级能级的减低可使单能级图像更加凸显图像增强程度，但同时会带来对病变强化程度的过度评估。因此，确定合适的单能级光谱 CT 增强图像具有一定的临床应用价值。本研究的目的是采用基于无水碘图碘浓度相关性分析的方法来评估肾脏不同单能级光谱 CT 增强图像。

方法：回顾性分析 50 例肾脏正常并行腹部增强光谱 CT 的受试者，基于无水碘图及不同单能级增强光谱图像测量肾皮质碘浓度及 CT 值，并进行相关性分析及 CT 值变异系数分析。

结果：相关性分析提示肾皮质 40Kev、50KeV、60KeV、70KeV、80KeV、90KeV 及 100KeV 能级 CT 值与碘浓度相关性系数分别为 0.994、0.994、0.993、0.987、0.976、0.960 及 0.938（P = 0.000）。相关系数比较 40KeV、50KeV 能级及 60KeV 能级相关系数均显著大于 70KeV 能级相关系数（$P_{40/50KeV-70KeV}$=0.007，$P_{60KeV-70KeV}$=0.03），40KeV 及 50KeV 能级与 60KeV 能级相关系数之间无显著统计学差异（P=0.59）。皮质期肾皮质在 40Kev、50KeV、60KeV 能级的变异系数分别为 0.21、0.20 及 0.19。

结论：本研究结果证实肾脏光谱 CT 增强图像皮质期最佳单能级为 60KeV。

PU-3528
基于 VBM 的轻度认识障碍患者脑灰质体积改变纵向研究*

刘浩
同济大学附属同济医院

目的 探讨轻度认知障碍患者随访 1 年后脑灰质体积改变。**方法** 利用体素的形态测量学（voxel-based morphometry,VBM）方法，对来自 ADNI（Alzheimer’s disease Neuroimaging Initiative）数据库的 70 例 MCI 患者及 44 例正常对照者基线及随访 1 年的脑灰质体积改变进行对比研究。首先，对两组人两次 3D 磁共振 T1 结构像进行预处理，得到平滑后的全脑灰质数据，运用双样本 t 检验，分别比较正常对照组前后 1 年脑灰质体积差异及 MCI 组前后 1 年脑灰质体积差异。**结果** 正常对照者在 1 年前后脑灰质体积无明显改变；MCI 组患者皮质脑灰质体积在随访 1 年后相关脑区有明显的萎缩（P<0.05，经校正），这些区域主要集中在：1、记忆相关的颞叶区域，包括左颞下回、左颞中回、右颞上回、左侧海马、右侧海马；2、语言功能及躯体感觉相关区域等，包括左侧岛叶、右楔叶、右中央后回。 **结论** MCI 患者在 1 年时间内脑灰质在与记忆相关的颞叶区域及与语言功能和躯体感觉相关区域有发生萎缩，可为阿尔茨海默病的早期诊断提供影像学依据。

多模态磁共振成像对宫颈癌化疗后早期效果评估的价值

刘忠柳
同济大学附属同济医院

目的 探索多模态磁共振成像对宫颈癌化疗后早期效果评估的价值

方法 收集同济大学附属同济医院 2015 年 4 月至 2016 年 4 月期间，经细胞学涂片或活检证实为宫颈癌且接受化疗的患者 15 例。所有患者在化疗前及化疗后 1 个月分别行多模态磁共振成像检查，成像序列包括常规 T1WI、T2WI、DWI、BOLD-MRI 及 DCE-MRI，并测得相关检查指标，包括肿瘤最大径 d_{max}、DWI 检查指标 ADC_{mean}；BOLD-MRI 检查指标 $R2^*$值；DCE-MRI 检查指标 K^{trans} 及 V_e 值。比较化疗前后肿瘤最大径 dmax 与多模态磁共振检查指标的变化；并比较分析化疗后肿瘤大小变化（肿瘤最大径变化率 Δdmax%）与化疗前多模态磁共振成像检查指标的相关性。

结果 （1）化疗后肿瘤最大径 d_{max} 较化疗前明显减小（P<0.05）；化疗后肿瘤 ADC_{mean} 较化疗前明显升高（P<0.05）；化疗后肿瘤 $R2^*$值较化疗前明显升高（P<0.05）；化疗后肿瘤 K^{trans} 较化疗前明显升高（P<0.05），而化疗后肿瘤 V_e 值较化疗前虽有所升高，但不具有明显统计学意义（P>0.05）；（2）化疗前后肿瘤最大径变化 Δd_{max}%与化疗前肿瘤基线 $R2^*$值呈明显负相关（r=- 0.742，P<0.05）；而与化疗前肿瘤 ADC_{mean}、K^{trans}、V_e 值无明显相关性（P<0.05）。

结论 多模态磁共振成像对宫颈癌化疗后早期效果评估具有一定价值。

PU-3530

多模态磁共振成像对宫颈癌诊断的价值

刘忠柳
同济大学附属同济医院

目的 探索多模态磁共振成像对宫颈癌诊断的价值

方法 收集同济大学附属同济医院 2015 年 4 月至 2016 年 4 月期间，经细胞学涂片或活检证实为宫颈癌且接受手术治疗的患者 17 例。所有患者在术前均行磁共振检查，成像序列包括常规 T1WI、T2WI、DWI、BOLD-MRI 及 DCE-MRI，并测得相关检查指标，包括 DWI 检查指标 ADC_{mean}；BOLD-MRI 检查指标基线 $R2^*$值；DCE-MRI 检查指标 K^{trans} 及 V_e 值。术后对宫颈癌标本进行评估，包括病理类型、分化程度、宫旁组织浸润情况、盆腔淋巴结转移情况、MVD 及 HIF-1α 表达情况，并比较分析多模态磁共振成像检查指标与病理特征的相关性。

结果 （1）K^{trans} 值在鳞状细胞癌和腺癌间的差异具有统计学意义（P<0.05）；（2）高/中分化组的 ADC_{mean} 明显高于低分化组，且高/中分化组的基线 $R2^*$值明显低于低分化组，差异具有统计学意义（P<0.05）；（3）多模态磁共振成像检查指标与宫旁组织浸润情况及盆腔淋巴结转移情况无明显相关性（P>0.05）；（4）宫颈癌组织内 MVD 水平与 K^{trans} 值存在弱强度正相关(r=0.313, P<0.05)，与其他检查指标无明显相关性（P>0.05）；（5）宫颈癌组织内 HIF-1α 表达水平与基线 $R2^*$值存在中等强度正相关（r=0.559，P<0.05），与其他检查指标无明显相关性（P>0.05）。

结论 多模态磁共振成像对宫颈癌的诊断具有一定价值。

PU-3531

3.0TMR 评估青年人群膝关节前交叉韧带损伤的危险因素

吕琦
同济大学附属同济医院

目的 探讨 3.0TMR 评估青年人前交叉韧带损伤的危险因素及其意义。
方法 回顾性分析已确诊前交叉韧带损伤的患者 69 例（其中男 35 例，女 34 例）及正常对照组 62 例(其中男 33 例，女 29 例）膝关节 3.0T MR 扫描资料，比较 MR 诊断前交叉韧带损伤的敏感性，特异性及准确性。测量损伤组与正常组的膝关节形态，测量参数包括：股骨髁间凹的宽度（NW）、股骨内外侧髁总长（BW）以及两者的比例即宽度指数（NWI），内侧髁至髁间凹的宽度 M、外侧髁至髁间凹的宽度 L 及两者的比值 L:M，所获得的数据采用 SPSS13.0 软件行统计分析。
结果 MRI 诊断前交叉韧带损伤的敏感性是 94.2%，特异性是 92.3%，准确性是 93.5%。68 例男性与 63 例女性比较， BW、L 及 NWI 差异有统计学意义（P<0.05），NW、M 及 L:M 差异无统计学意义（P>0.05）,青年男性与女性膝关节形态不同，男性膝关节的 NWI 较女性更小，在前交叉韧带损伤与未损伤男性人群中， BW、L:M 及 NWI 的差异有统计学意义（P<0.05）,损伤者的 NWI 更小，；而女性前交叉韧带损伤与未损伤组中，各参数差异均无统计学意义。所有参数在活动的强度及损伤部位（左右）之间差异无统计学意义（P>0.05）。

结论 较小的 NWI 很可能是男性前交叉韧带损伤的危险因素，BW 及 L：M 是影响青年男性膝关节动力学的重要因素。

PU-3532
CT 增强扫描及 DWI 在鉴别诊断肿块型胰腺炎与胰腺癌的价值

吕琦
同济大学附属同济医院

目的 探讨胰腺癌与肿块型胰腺炎特征性的 CT 表现，研究 CT 增强扫描及磁共振水分子扩散加权成像(diffusion-weighted imaging，DWI)在 2 种疾病鉴别诊断中的价值。
方法 回顾分析我院经多排 CT 诊断的 101 例肿块型胰腺病变的 CT 表现，并进行病理对照，计算多排 CT 诊断肿块型胰腺病变的敏感性、特异性、准确率、阳性预测值、阴性预测值。比较肿块型胰腺炎与胰腺癌的 CT 表现差异，分析病灶的大小、形态（强化情况、钙化、假囊肿形成、胰胆管扩张）、部位、肾周筋膜增厚、对胰周大血管的侵犯、是否合并转移及糖类抗原 CA199 水平。并于一周内对上述 2 组病例行胰腺 DWI(b 值 800mm2 / s)检查，并测量每组 ADC 值。应用 SPSS 11.5 统计软件进行数据分析。
结果 101 例中，病理诊断胰腺癌 59 例，肿块型胰腺炎 42 例，CT 诊断的敏感性 94.9%，特异性 88.1%，准确率 92.1%，阳性预测值 91.8%，阴性预测值 92.5%。增强前后的 CT 值、胰腺及胰管钙化、假囊肿、胰胆管的扩张、胰周血管的侵犯及是否合并转移及 CA199 水平对肿块型胰腺炎和胰腺癌的鉴别差异有统计学意义（$P<0.05$）。胰腺癌与肿块型胰腺炎的 ADC 值差异无统计学意义（$P>0.05$），两者与正常胰腺相比差异有统计学意义($P<0.01$)。
